

BMC SecOps Policy Service

Scale security and compliance to meet the demands of multi-cloud environments

PRODUCT DESCRIPTION

BMC SecOps Policy Service embeds compliance and security testing with automated remediation into service delivery and cloud operations by providing continuous verification, analytics, and governance.

BUSINESS CHALLENGE

As organizations accelerate innovation in the cloud, security, and compliance concerns are often overlooked. Violations can lead to costly security breaches, regulatory actions, and loss of brand equity. **Organizations require frequent security and compliance testing in production and throughout the development process to avoid the risks and costs associated with a security or compliance incident.** At the same time, security and compliance testing can't slow innovation or break the budget.

BMC SOLUTION

BMC SecOps Policy Service is a SaaS-based security and compliance service that applies a wide range of policy checks against cloud applications in production and development. This includes checking and enforcing critical configurations of cloud services as well as vulnerabilities in application libraries and web application components. The security of multi-cloud applications will depend on the proper configuration of hundreds of services across thousands of resources. BMC SecOps Policy Service helps detect and fix settings to minimize risk.

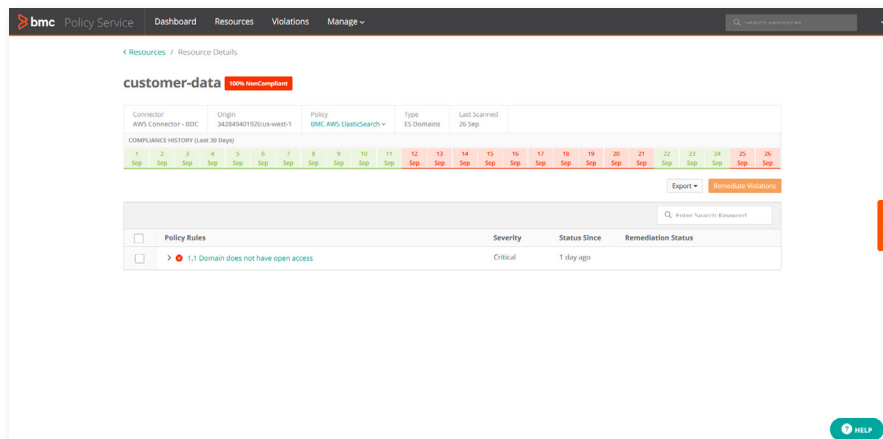

KEY FEATURES

BMC SecOps Policy Service is a cloud-based service that enables security and compliance testing of cloud settings and configurations, as well as application vulnerabilities.

- **Automation of key policies** including security and compliance checks
- **Embedded checks to identify issues** when they are the least costly to fix
- **Policy enforcement and visibility** without hindering innovation
- **Easy deployment and implementation** from the cloud

KEY BENEFITS

- **Avoid the risks and costs** associated with a security incident or compliance violation in multi-cloud environments
- **Scale security through automation** to handle growth in cloud applications and services
- **Find and fix security and compliance issues early** to reduce costs and ensure projects stay on schedule and within budget
- **Ensure consistent policy adherence** across all applications regardless of release methodology (e.g., traditional, cloud-native, agile, etc.)

◀ The Resource Details view within SecOps Policy Service provides information and a history of violations.

PRODUCT DETAILS

Multi-Cloud Support: Built from the ground up for flexibility and the ability to provide policy enforcement in multi-cloud environments where the lifespan of resources may be very short. This includes analyzing public cloud resources as well as containers.

SaaS-based Platform: Enables simplified deployment and the ability to easily scale testing up or down based on need without additional deployment considerations.

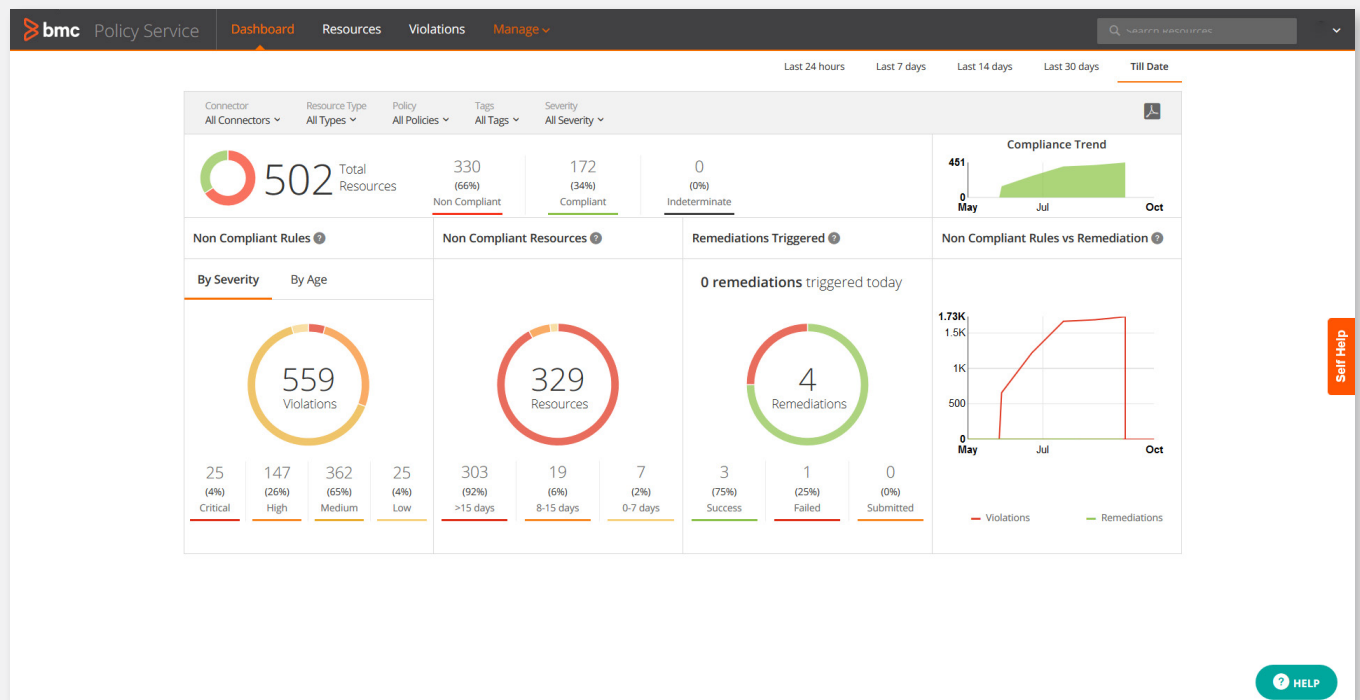

Intuitive Monitoring and Reporting: Provides key insights into policy violations with the ability to quickly understand which checks were performed, where policy violations exist, and which resources are affected.

Out-of-the-Box Policy Content: Included policy content makes setting up initial policies easy and enables faster time to value. Each policy is fully customizable, allowing the organization to tailor the policy depending on a specific environment or policy criteria.

Flexible Policies as Code: Create and enforce organizational policies with YAML-based policies as code. Easily check-in and check-out policies utilizing any source control manager.
