

BMC BladeLogic for Cisco Unified Computing System

PRE-PACKAGED MANAGEMENT AND AUTOMATION

BMC BladeLogic for Cisco Unified Computing System integrates with and leverages the Cisco Unified Computing System Manager to unify the Cisco computing infrastructure with BMC's unparalleled management and automation. The result is a virtual computing system that is dramatically more efficient to maintain and operate – enabling enterprises to deliver business services much more effectively and with uncompromising availability and performance.

BMC BladeLogic helps administrators with the initial installation and ongoing configuration of the Unified Computing System including:

- Setting up the Unified Computing System Manager
- Provisioning the full technology stack – network components, hardware resources, physical and virtual server instances, and business line applications

BMC BladeLogic provides the ability to provision and configure whole business services to deliver complete services to the business faster and with lower risk and cost. Our solution ensures that all changes meet security, operational and regulatory policies, and reduces the risk of change in a highly complex environment.

ACCELERATING THE DEPLOYMENT OF BUSINESS SERVICES

The foundation to a highly agile, business-driven IT environment starts with the implementation of the Cisco Unified Computing System and BMC BladeLogic.

BMC BladeLogic for Cisco Unified Computing System enables you to accelerate the deployment of new infrastructure resources and application services to support changing business needs in the most cost effective and efficient manner possible today.

With BMC BladeLogic, IT organizations can:

- Use one solution to define fully configured, customized service profiles with fully provisioned application environments, and then deploy them rapidly to meet business or computing requirements;
- Increase staff productivity and improve cost structure while supporting a complex and dynamic virtual environment;
- Create an environment that supports an extremely high rate of change while ensuring consistency and application stability, and where data center resources are easily repurposed and reallocated based on changing business needs

BALANCING AGILITY AND CONTROL

BMC BladeLogic for Cisco Unified Computing System helps IT balance agility and control to maximize the value of virtualization while significantly lowering the total cost of ownership. BMC BladeLogic leverages the proven best-practice processes and controls such as those outlined in ITIL® and COBIT. BMC BladeLogic optimizes these processes and controls for the Cisco Unified Computing System and applies them selectively to each activity performed. In this way, the solution provides exactly the right level of control, auditing, and reporting appropriate for each activity, ensuring compliance with corporate policies and government regulations — without hampering agility.

BMC BladeLogic maintains and increases agility by automating provisioning and configuration of the entire technology stack, including the network components, hardware resources, virtual infrastructure, guest virtual machines, and business applications. This eliminates a major source of cost and delay, and frees up your administrators for activities that contribute greater business value

WHY BMC BLADELOGIC

Only BMC BladeLogic:

- Delivers a unified platform for provisioning and compliance
- Provides configuration-level role-based access control
- Performs rules-based audits with automated remediation

With BMC BladeLogic, IT organizations can increase their staff productivity and reduce their operating costs while controlling a highly dynamic virtual environment.

BUSINESS RUNS ON IT. IT RUNS ON BMC SOFTWARE.

Business thrives when IT runs smarter, faster, and stronger. That's why the most demanding IT organizations in the world rely on BMC Software across both distributed and mainframe environments. Recognized as the leader in Business Service Management, BMC offers a comprehensive approach and unified platform that helps IT organizations cut cost, reduce risk and drive business profit. For the four fiscal quarters ended December 31, 2008, BMC revenue was approximately \$1.86 billion. Visit www.bmc.com for more information.
