

BMC Atrium Orchestrator

Eliminate manual work, manage change effectively, and reliably enforce governance with IT process automation

PRODUCT DESCRIPTION

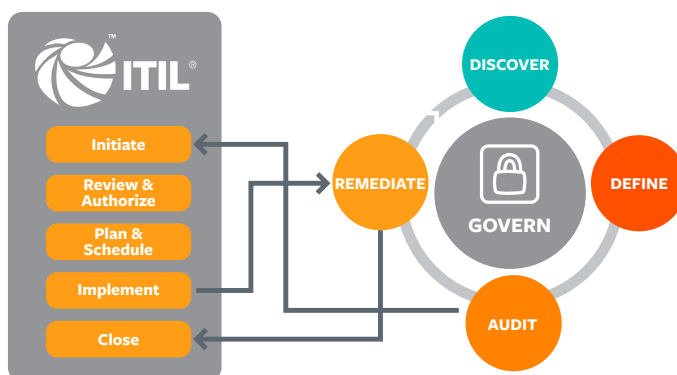

BMC Atrium Orchestrator is an IT process automation solution that allows IT personnel to create workflows across applications, platforms, and tools to orchestrate critical activities for compliance, security, and competitive edge.

BUSINESS CHALLENGE

Delivering business services at today’s pace is difficult enough for IT operations. Add in the complexity of multi-tier, hybrid application stacks, constantly changing industry regulations, and increased security threats, and it’s easy to see how IT staff are overwhelmed by labor-intensive, day-to-day operations. **The burden of repetitive, manual tasks affects productivity**—and innovation—of IT staff and business users alike.

BMC SOLUTION

Atrium Orchestrator lets IT staff look at the big picture and automate tasks via workflows that span multiple applications, systems, or infrastructure with fewer resources and higher-quality, predictable outcomes. A common scenario for business users is leveraging self-service features to execute typical IT service requests, such as new hire onboarding, password resets, or service provisioning or decommissioning. Service desk staff can automatically triage incidents, trigger remediation, or apply ITIL® governance to compliance enforcement processes for servers, networks, and databases. Atrium Orchestrator decreases errors or downtime caused by manual efforts or hand-written scripts that attempt to tie non-integrated systems together. The result: **greater stability and less change impact**, system-wide.

Digital Enterprise Management

KEY FEATURES

BMC Atrium Orchestrator increases productivity for IT and the business.

- **It’s visual** – visualize end-to-end business process automation
- **It’s fast** – let orchestration do the work and free up resources for more important tasks
- **It’s flexible** – have the freedom to make change in your environment without rewriting your workflows
- **It’s automatic** – eliminate work and reduce the need for human intervention

KEY BENEFITS

- **Lower the cost** of server, network, and database audits by 25%
- **Reduce the risk** of change and increase stability and availability
- **Speed remediation** and shorten windows of vulnerability
- **Reduce MTTR** for most common service problems by 35%
- **Reduce service desk ticket volume** by 30%
- **Cut manual work** by 90%
- **Empower business users** with self-service

Bring compliance enforcement and ITIL change management together.

PRODUCT DETAILS

Workflow design studio: Create workflows that replace human interactions or enable system-to-system business processes using an intuitive designer with versioning.

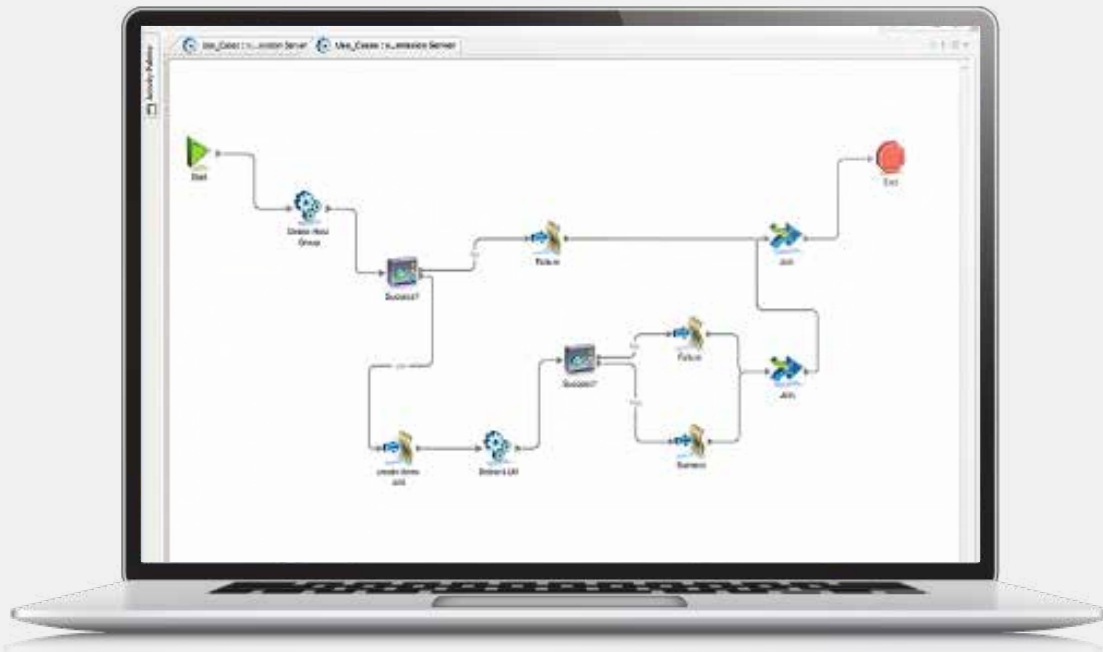

IT process automation platform: Peer-to-peer grid architecture based on open standards provides the scalability, resiliency, and security required by even the largest data centers. Process monitoring provides dashboards and reporting of the cross-domain automation effectiveness in your IT environment.

Integration framework: Leverage your existing infrastructure with over 50 out-of-the-box application adapters.

Pre-built content: Get started quickly with over 550 out-of-the-box operational modules and run books, such as continuous compliance for networks, servers, and databases.
