

# BMC Security Operations Solutions

Security and compliance automation for multi-cloud environments

## MULTI-CLOUD CHANGES EVERYTHING

As IT leaders strive to meet the demands of the business, they are facing several new realities. They are prioritizing their cloud adoptions strategies, with IDC predicting that \$1.2 trillion will be spent on public cloud in 2017. They also are embracing new trends like DevOps, with 74% of enterprises adopting DevOps in 2016. Traditional data centers continue to be the workhorse, with workloads expected to grow 2.6x from 2015 to 2020, per Cisco's Global Cloud Index. Organizations need to balance supporting growth in the traditional data center while accelerating their adoption of public cloud infrastructure and DevOps processes.

## CHALLENGES

Many organizations are turning to the cloud but quickly find that traditional approaches and tools fail with DevOps and multi-cloud environments. Cloud security operations tools are immature and heavily dependent on manual steps. **Using one set of approaches and tools for cloud and one for traditional data centers leaves organizations in a position where they lack visibility and cannot consistently enforce and ensure security and compliance.** Furthermore, the speed, scale, and complexity have gone far beyond human scale.

## BMC SOLUTION

BMC Security Operations solutions automate the prioritization and remediation of the most critical vulnerabilities or compliance violations. With BMC Security Operations solutions, you can ensure security, governance, and compliance across private and public cloud environments, while providing frictionless access to cloud resources.

BMC SecOps Response Service gives a holistic view of all known risks.

## FEATURES

### Service and Operational Analytics

- Address risks based on policy and impact to ensure the most critical issues are fixed first, uptime is protected, and stability is maintained

### Security View of Operational Plans

- Visualize how quickly risks will be eliminated with graphical views of planned operations actions, predictive SLAs, and burndowns

### Blind Spot Protection

- Identify assets that are unmonitored and potentially exposed, and automatically map dependencies

### Compliance Controls

- Ensure continuous compliance with a full cycle of system discovery, monitoring, remediation, and integrated change control

## BENEFITS

### Operational Intelligence

- Make security actionable with vulnerability information enriched by operational data to prioritize threats based on the impact within your specific operating environment

### Multi-Tier Remediation

- Drive consistency, scalability, and flexibility with automation that is capable of considering the application, the process, and the severity of the issue

### Continuous Security Monitoring

- Achieve security and compliance at the speed of DevOps by leveraging policies and best practices in pre-release scans, so you can make changes before you release

## BMC SECURITY OPERATIONS SOLUTIONS

### BMC SecOps Response Service

SecOps Response Service is a SaaS-based offering integrated with endpoint management systems, such as BladeLogic Server Automation and Microsoft SCCM, which enables security and operations teams to prioritize and remediate threats based on policy and risk to the business.

### BMC SecOps Policy Service

SecOps Policy Service embeds compliance and security testing into the service delivery process by providing continuous verification, analytics, and governance.

### BladeLogic Server Automation

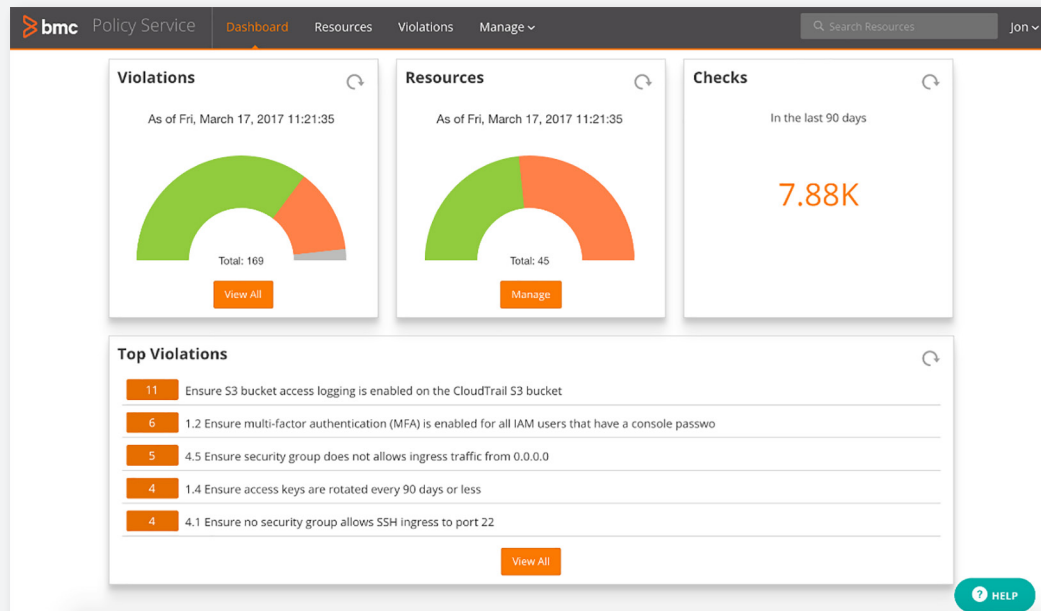

BladeLogic Server Automation quickly and securely provisions, configures, patches, and maintains physical, virtual, and cloud servers.

### Discovery

Continuously discover the hardware, applications, storage, databases, and other components that make up your data center and map the relationships between them automatically with agentless discovery.
