

BMC Control-M Jumpstart Service

Quickly and securely install BMC Control-M Workload Automation software in as few as five business days

BUSINESS CHALLENGE

Today's IT teams face contradictory trends: the need to manage more and more business services with less time to learn about the complexities of workload automation. As a result, workload automation costs are increasing, and quality of service is suffering.

Making an investment in a cutting-edge workload automation solution provides a number of advantages that reduce the cost and effort of managing the workload automation infrastructure. Once the initial investment is made, the next critical step is to ensure the solution is properly implemented in order to maximize the expected benefits for your organization.

Key questions to consider when assessing your implementation capabilities include:

- Does your staff have the expertise and resource availability to ensure a proper implementation?
- What are the ramifications to the business if service level agreements (SLAs) are not met?
- Can your IT staff maximize the solution benefits?

THE BMC SOLUTION

The BMC Control-M Jumpstart service provides a fully installed and configured BMC Control-M Workload Automation solution combined with the knowledge transfer and best practices to successfully roll out the solution into a full-scale production environment.

This service from BMC Consulting Services lets your team benefit from BMC's proven approach to value realization. Our experts provide the skills, methodologies, and resources necessary for a successful installation and deployment, specific to the scheduling needs of your environment. Working side by side with BMC Control-M Workload Automation experts, your team will gain insight to the solution architecture and learn how to support the application and schedule jobs quickly and effectively.

KEY ACTIVITIES

- Rapid installation and configuration of the BMC Control-M Workload Automation solution
- Comprehensive knowledge transfer for moderators and administrative users, resulting in a full understanding of product features, benefits, and functionality

KEY BENEFITS

- Reduce implementation time and consulting costs
- Achieve a faster return on investment with less disruption to key stakeholders
- Minimize risk and maximize key resources by leveraging formal methodologies and proven best practices

BMC's project team manages an optimal deployment strategy to produce tangible value from the BMC Control-M Workload Automation solution within five business days. No one knows BMC technology like the experts within the BMC Consulting Services organization. We are dedicated to providing the optimal customer experience while assisting with your critical business and IT objectives.

BMC CONTROL-M JUMPSTART PROJECT TEAM AND DELIVERABLES

The project team from BMC Consulting Services will include a project manager, solution architect, and technical consultant. The key deliverables will include solution design, product deployment, and knowledge transfer.

Whether you opt for the five-day service or the 10-day service, each BMC Consulting Services engagement is designed with flexibility in mind, as illustrated below.
