

# BMC Control-M Advanced File Transfer

Securely automate file transfers and improve data integrity, visibility, and control

## PRODUCT DESCRIPTION

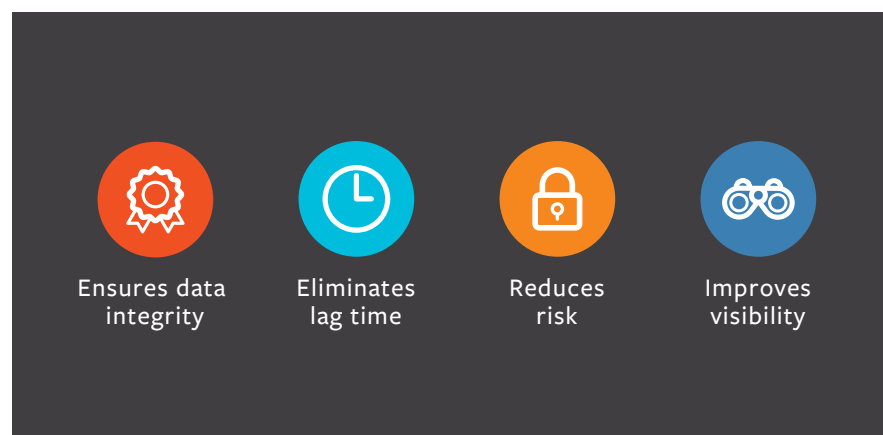

Control-M Advanced File Transfer lets you build, schedule, and manage FTP transfers intuitively, just like any other batch job. Combining batch jobs and file transfers in a single system prevents data errors and job failures while improving visibility and control.

## BUSINESS CHALLENGE

Modern enterprise operations are highly dependent on file transfers between different applications and systems. File transfers are typically managed through a combination of scripting, proprietary applications, and manual intervention. Each approach has its own risks and support requirements, and **using multiple methods prevents organizations from having fully integrated, automated operations.** These limitations prevent complete visibility into overall activity and are often the root cause of failed file transfers that disrupt business services.

## BMC SOLUTION

Control-M Advanced File Transfer puts you in control of file transfers with an **intuitive graphical user interface.** It **guides you through job definitions and ensures transfers are associated with a comprehensive automated workflow** or process when appropriate. It also **enhances security** by providing additional encryption options for FTP transfers and **reduces the risk of downtime and service disruptions** through automated monitoring and recovery features.

## Digital Enterprise Management

## KEY FEATURES

Control-M Advanced File Transfer securely automates enterprise file transfers and retains data integrity.

- **Centralizes and automates file transfers** and simplifies scheduling
- **Aligns file transfers** with business process flows
- **Adds security** to FTP and other file transfers with multiple encryption options, including SSL and PGP
- **Automatically restarts** unsuccessful jobs from the point of failure

## KEY BENEFITS

- **Automation ensures data integrity** and successful file transfers
- **Eliminates lag time** between file transfer and subsequent processing steps
- **Reduces risk** by automating file transfers, integrating business processes, and initiating recovery for disrupted jobs
- **Improves visibility** by integrating file transfers with business processes and displaying status along with all other batch workloads

◀ Key benefits of using BMC Control-M Advanced File Transfer to combine batch jobs and file transfers in a single system

## PRODUCT DETAILS

**Aligns file transfer and business processes:** Control-M Advanced File Transfer lets you build, schedule, and manage FTP transfers intuitively, just like any other batch job. Automated integration ensures that any related processes are triggered on schedule and that service levels are met.

**Convenient, comprehensive monitoring:** A dashboard for monitoring and managing file transfers lets you schedule secured file transfers with encryption and authentication, monitor run-time statistics (such as transfer rate and estimated remaining time), and quickly recover when file transfers fail.

**Secure file transfers:** Files can be transferred securely with either SFTP or FTP and SSL, plus the option to use PGP encryption. You can use Control-M Advanced File Transfer to set up accounts and provide credentials, ensuring that confidential information is secure when file transfer jobs are built or executed.

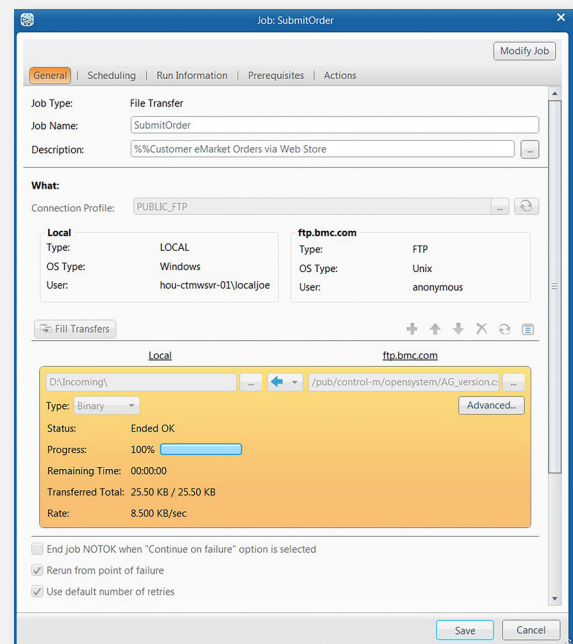

**Automatic recovery:** When network failures or outages cause a file transfer to fail, Control-M Advanced File Transfer can

automatically recover and restart the failed transfer from the point of failure or from the beginning. If multiple files are transferred within a single job and one file transfer fails, Control-M Advanced File Transfer is smart enough to recover or restart only the file or files that failed. Automated monitoring and scheduling ensure that dependent jobs can automatically adjust to the change in the scheduled processing time.
