Your use of this information is subject to the terms and conditions of the applicable End User License Agreement for the product and the proprietary and restricted rights notices included in this documentation.
Restricted rights legend

U.S. Government Restricted Rights to Computer Software. UNPUBLISHED -- RIGHTS RESERVED UNDER THE COPYRIGHT LAWS OF THE UNITED STATES. Use, duplication, or disclosure of any data and computer software by the U.S. Government is subject to restrictions, as applicable, set forth in FAR Section 52.227-14, DFARS 252.227-7013, DFARS 252.227-7014, DFARS 252.227-7015, and DFARS 252.227-7025, as amended from time to time. Contractor/Manufacturer is BMC SOFTWARE INC, 2101 CITYWEST BLVD, HOUSTON TX 77042-2827, USA. Any contract notices should be sent to this address.

Customer support

You can obtain technical support by using the BMC Software Customer Support website or by contacting Customer Support by telephone or e-mail. To expedite your inquiry, see “Before contacting BMC.”

Support website

You can obtain technical support from BMC 24 hours a day, 7 days a week at http://www.bmc.com/support. From this website, you can:

- Read overviews about support services and programs that BMC offers
- Find the most current information about BMC products
- Search a database for issues similar to yours and possible solutions
- Order or download product documentation
- Download products and maintenance
- Report an issue or ask a question
- Subscribe to receive proactive e-mail alerts when new product notices are released
- Find worldwide BMC support center locations and contact information, including e-mail addresses, fax numbers, and telephone numbers

Support by telephone or e-mail

In the United States and Canada, if you need technical support and do not have access to the web, call 800 537 1813 or send an e-mail message to customer_support@bmc.com. (In the subject line, enter SupID:<yourSupportContractID>, such as SupID:12345). Outside the United States and Canada, contact your local support center for assistance.

Before contacting BMC

Have the following information available so that Customer Support can begin working on your issue immediately:

- Product information
  - Product name
  - Product version (release number)
  - License number and password (trial or permanent)
- Operating system and environment information
  - Machine type
  - Operating system type, version, and service pack or other maintenance level such as PUT or PTF
• System hardware configuration
• Serial numbers
• Related software (database, application, and communication) including type, version, and service pack or maintenance level

▪ Sequence of events leading to the issue
▪ Commands and options that you used
▪ Messages received (and the time and date that you received them)
  ▪ Product error messages
  ▪ Messages from the operating system, such as file system full
  ▪ Messages from related software

License key and password information
If you have questions about your license key or password, contact BMC as follows:

▪ (USA or Canada) Contact the Order Services Password Team at 800 841 2031, or send an e-mail message to ContractsPasswordAdministration@bmc.com.

▪ (Europe, the Middle East, and Africa) Fax your questions to EMEA Contracts Administration at +31 20 354 8702, or send an e-mail message to password@bmc.com.

▪ (Asia-Pacific) Contact your BMC sales representative or your local BMC office.

Third party Software
For the provisions described in the BMC License Agreement and Order related to third party products or technologies included in the BMC Product, see https://docs.bmc.com/docs/display/workloadautomation/Control-M+Workload+Automation+Documentation and click Third-party software (TPS).

About this Messages Manual

This manual contains all INCONTROL messages, arranged by prefix, in ascending order. The format of the message code is

\[ \text{prefix}\_\text{identifier}\_\text{suffix} \]

where

- **prefix** is a prefix used to identify the component that produced the message
  - The prefix usually consists of three or more characters.
- **identifier** is the identifier for the message
  - The identifier usually consists of three numerals.
- **suffix** is a 1-character suffix identifying the severity of the message
  - Valid suffixes are:
    - A – Action
    - E – Error
    - I – Information
    - S – Severe
    - W – Warning

Message descriptions contain the following:

- **Explanation:** Description of the cause of the message, and other related information.
- **Corrective Action:** Recommended actions to correct the problem.

When the same message code is used by more than one message or product, each message is listed separately.

Italicized text in messages and in explanatory paragraphs indicates a variable.

This manual also includes an appendix that includes abends and other types of messages for INCONTROL products.
A - CTA

This group includes messages for the Control-D (including Control-D/Image and Control-D/Page on Demand), Control-M for z/OS (including Control-M/Assist, Control-M/Links for z/OS Control-M/Rerun), Control-M/Analyzer, Control-O, and IOA (infrastructure) products.

ACI messages

This group includes messages for the Control-O product.

Messages ACIF00 through ACIFxx

This group includes messages for the Control-O product.

ACIF40I ACIF PRINTING INTERFACE STARTED

**Explanation:** This information message indicates that the Control-D ACIF Interface Facility has started for a report being processed by the Printing Mission that issued the message.

A report destined for PC file transfer that was decollated with the ACIF CDAM parameter set to YES will be converted by ACIF into AFP Category 5 data stream format.

The Printing Mission begins initialization of the ACIF Interface Facility.

**Corrective Action:** No action is required.

ACIF41I ACIF PRINTING INTERFACE COMPLETED SUCCESSFULLY

**Explanation:** This information message indicates that the Control-D ACIF Interface Facility has successfully converted a report being processed by the Printing Mission that issued the message.

A report destined for PC file transfer that was decollated with the CDAM ACIF parameter set to YES was converted by ACIF into AFP Category 5 data stream format.

The Printing Mission terminates processing of the ACIF Interface Facility and completes processing of the report.

**Corrective Action:** No action is required.

ACIF42E ACIF PRINTING INTERFACE ENDED IN ERROR

**Explanation:** The Control-D ACIF Interface Facility encountered an error condition while attempting to convert a report being processed by the Printing Mission that issued the message.

This message is followed by the ACIF43E and ACIF44E messages that describe the cause of the error. The Printing Mission terminates processing of the ACIF Interface Facility and ends in error.

**Corrective Action:** Examine the ACIF43E and ACIF44E messages to determine why the Control-D ACIF Interface Facility ended in error and correct the problem accordingly.
ACIF43E CODE= err_cod, R15= reg_15, R0= reg_0, R1= reg_1

**Explanation:** The Control-D ACIF Interface Facility encountered an error condition while attempting to convert a report being processed by the Printing Mission that issued the message. This message displays the Control-D internal error code and the contents of registers 15, 0, and 1 at the time of error.

The variables in this message are:
- `err_cod` - the Control-D internal error code
- `reg_15` - the contents of register 15
- `reg_0` - the contents of register 0
- `reg_1` - the contents of register 1

The Control-D ACIF Interface Facility issues this message in combination with the ACIF44E message to describe the error and to assist in diagnosing its cause.

The Control-D ACIF Interface Facility terminates processing of the report. The Printing Mission ends in error.

**Corrective Action:** Examine the ACIF44E message for a description of the problem encountered.

ACIF44E descr

**Explanation:** The Control-D ACIF Interface Facility encountered an error condition while attempting to convert a report being processed by the Printing Mission that issued the message. This message displays a text description of the error encountered.

The Control-D ACIF Interface Facility issues this message in combination with the ACIF43E or ACIF4BE message to describe the error and to assist in diagnosing its cause.

The Control-D ACIF Interface Facility terminates processing of the report. The Printing Mission ends in error.

**Corrective Action:** Use the information displayed in this message and in the ACIF43E or ACIF4BE message to determine the cause of the error and correct the problem. If the problem persists, contact your INCONTROL administrator.

ACIF45I MAXIMUM CONCURRENT ACIF/CCI PRINTING MISSIONS ALREADY EXECUTING

**Explanation:** This information message indicates that the Control-D ACIF Interface Facility is temporarily unavailable because, within a Print monitor address space, the maximum number of Printing Missions that can concurrently use the facility has been reached.

The Control-D ACIF Interface Facility limits the total number of ACIF subtasks that can execute at the same time. This limit is defined using customization setting WD2375. The wait interval is defined using customization setting WD2377.

When the time specified in the wait interval has elapsed, the Printing Mission again tries to access the Control-D ACIF Interface Facility.

**Corrective Action:** No action is required.
ACIF46I WAITING FOR AN EXECUTING ACIF/CCIF PRINTING MISSION TO COMPLETE

Explanation: This information message indicates that the Printing Mission detected that the maximum number of ACIF subtasks permitted to execute simultaneously has been reached.

The Control-D ACIF Interface Facility limits the total number of ACIF subtasks that can execute at the same time. This limit is defined by means of customization setting WD2375. The wait interval is defined by means of customization setting WD2377.

When the time specified in the wait interval has elapsed, the Printing Mission again tries to access the Control-D ACIF Interface Facility.

Corrective Action: No action is required.

ACIF47E MAXIMUM RETRIES LIMIT TO START AN ACIF/CCIF PRINTING MISSION REACHED

Explanation: The Printing Mission failed to access the Control-D ACIF Interface Facility after making the maximum number of attempts allowed.

The Control-D ACIF Interface Facility was being used by the maximum number of ACIF subtasks allowed to execute concurrently. The Printing Mission tried to access the Control-D ACIF Interface Facility without success more than the maximum retry value specified using customization setting WD2378.

Corrective Action: Increase the maximum retry value specified using customization setting WD2378 and/or increase the wait interval value specified using customization setting WD2377. Reorder the Printing Mission. If the problem persists, contact your INCONTROL administrator.

ACIF48W ACIFPARM MEMBER memName NOT FOUND - SEARCHING FOR MEMBER $$$$DFLT

Explanation: No matching member was found in the Control-D ACIFPARM library for the report being processed by the Control-D ACIF Interface Facility.

Control-D failed to find an ACIFPARM library member memName with a name matching either the job, Printing Mission or Recipient name of the job. The member name search convention used is determined by the setting of optional wish WD2376. The default is J for job name.

Control-D will attempt to obtain default ACIF execution parameters from the ACIFPARM member $$$$DFLT.

Corrective Action: Check the setting for optional wish WD2376. Add a member to the ACIFPARM library with the appropriate name or verify that the default ACIF execution parameters in ACIFPARM member $$$$DFLT are appropriate for the report.

ACIF49W ACIF ISSUED WARNING MESSAGES - PROCESSING CONTINUES

Explanation: The Control-D ACIF Interface Facility has detected that ACIF completed processing with a noncritical return code of 4.

The Control-D ACIF Interface Facility has successfully completed converting the report to AFP Category 5 data stream format. However, a warning condition was detected by ACIF that may affect the contents of the data stream.
Corrective Action: Inspect the ACIF message output to determine the cause of the warning and whether or not its effect on the report data stream can be ignored.

ACIF4BE CTVINDEX STATEMENT SYNTAX ERROR

Explanation: The Control-D ACIF Interface Facility encountered syntax that is invalid for the CTVINDEX parameter in ACIFPARM library member.

The Control-D ACIF Interface Facility issues this message together with the ACIF44E message, which describes the error.

The Printing Mission terminates processing of the ACIF Interface Facility and ends in error.

Corrective Action: Examine the ACIF44E message for a description of the problem.

AES messages

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

Messages AES100 through AES1xx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

AES171S BLDL/LOAD FAILED FOR MODULE "CTMLIB"

Explanation: The CTMLIB module cannot be loaded.

This error message is issued by the CTMAES or CTMJ DS utility, which performs an AutoEdit simulation that is used to test the syntax of the AutoEdit control statements. This error message is due to one of the following:

- The module does not appear in the load module search list.
- There is insufficient memory to load the program.

Submission simulation stops.

Corrective Action: Do one of the following:

- Verify whether CTMLIB appears in the IOA Load library or any other concatenated load module library of the CTMAES or CTMJ DS utility.
- Increase the region size of the CTMAES or CTMJ DS utility.

AES172S OPEN OF INPUT CARDS FILE FAILED. DDNAME "DASIM"

Explanation: Open of control statements file failed (the DD statement DASIM).

This error message is issued by the CTMAES or CTMJ DS utility, which performs an AutoEdit simulation that is used to test the syntax of the AutoEdit control statements. This error message is due to one of the following:
DD statement DASIM is missing.

The data set described by DD statement DASIM does not exist, or cannot be opened for sequential read, or the record length is not 80.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL for the job (or the CLIST) and run it again.

AES173S BLDL/ATTACH FOR MODULE "CTMSUB" FAILED

**Explanation:** The Control-M submission simulation utility (CTMAES or CTMJ DS) failed while loading the CTMSUB module.

The CTMSUB (Control-M submitter) module is activated as part of the simulation. The failure could be due to one of the following:

- There is insufficient memory.
- The module is not in the STEPLIB/Linklist libraries.

Program execution stops with a condition code of 08.

**Corrective Action:** Look for system messages on the job log related to the problem. Verify whether CTMSUB appears in the IOA Load library, and that the library is defined in the STEPLIB of the CTMAES or CTMJ DS utility.

AES174S CTMSUB ABENDED CODE= abCode MEMBER memName LIBRARY lib

**Explanation:** The Control-M submitter module (CTMSUB) abended with the abend code abCode while trying to submit the memName member from the lib library.

CTMSUB was called by the Control-M CTMAES or CTMJ DS utility.

Submission simulation stops with a condition code of 08.

**Corrective Action:** Check the JOBLOG for additional system messages related to the problem. If you can resolve the problem by responding to previous messages, do so. If the problem is not resolved, or seems to be with the Control-M AutoEdit submit simulation, call your INCONTROL administrator.

AES175I JOB SUBMISSION SIMULATION STARTED

**Explanation:** This information message indicates that the Control-M submission simulator has started.

The Control-M CTMAES or CTMJ DS utility produces this message.

**Corrective Action:** No action is required.

AES176I JOB SUBMISSION SIMULATION ENDED

**Explanation:** This information message indicates that the Control-M submission simulator has ended normally. The Control-M CTMAES or CTMJ DS utility produces this message.

**Corrective Action:** No action is required.
AES177I SUBMISSION SIMULATION OF MEMBER memName LIBRARY lib
STARTED

**Explanation:** This information message indicates that the submission simulation of the memName member in the lib library has started. The Control-M CTMAES or CTMJ DS utility produces this message.

**Corrective Action:** No action is required.

AES178I SUBMISSION SIMULATION OF MEMBER memName LIBRARY lib
ENDED

**Explanation:** This information message indicates that the submission simulation of the memName member in the lib library has ended normally. The Control-M CTMAES or CTMJ DS utility produces this message.

**Corrective Action:** No action is required.

AES179E MISSING PARAMETER DURING MEMBER memName

**Explanation:** A missing parameter for member submission simulation. The Control-M CTMAES or CTMJ DS utility produces this message. Submission simulation stops with a condition code of 08.

**Corrective Action:** Correct the parameters and try again.

AES180E INVALID COMMAND

**Explanation:** An invalid command or parameter was supplied to the Control-M CTMAES or CTMJ DS utility.

The invalid line appears before this message. This message precedes the AES181I message, which presents the valid commands.

The command is ignored, and processing continues.

**Corrective Action:** Use one of the valid commands specified in the AES181I message.

AES181I COMMANDS ARE: cmds

**Explanation:** This information message indicates valid commands for the Control-M CTMAES or CTMJ DS utility.

**Corrective Action:** Reissue one of the valid commands specified in the message.

AES182E INVALID SUB-COMMAND VALUE

**Explanation:** Invalid subcommand value in an AutoEdit simulation control statement.

This error message is issued by the CTMAES or CTMJ DS utility that is used to test the syntax of the AutoEdit control statements. For more details regarding command syntax, see the Control-M for z/OS User Guide.

The command is ignored, and processing continues.

**Corrective Action:** Correct the subcommand or command parameter.
AES183I TEN (10) INTERVAL UNITS PASSED

**Explanation:** This information message indicates that the AutoEdit simulation submitter task did not return control for over 10 seconds.

The AutoEdit simulation works as two tasks. As it can also be used to check the Control-M submission user exit (CTMX002), there is a chance of getting suspended if there is a bug in the exit.

**Corrective Action:** If the message continually appears, the CTMSUB task is likely to be either suspended or in a loop. You should cancel the job with a DUMP.

AES184E REDUNDANT INFORMATION IN LINE /lin

**Explanation:** There is irrelevant data in the parameters line of the CTMAES or CTMJ DS utility. The redundant data is ignored and processing continues.

**Corrective Action:** Correct the /lin line, usually columns 73 through 80, to prevent the messages from appearing.

AES187E INTERNAL ERROR PROCESSING MASKS FOR MASK mask FOR MEMBER memName

**Explanation:** The Control-M CTMAES or CTMJ DS utility failed to process a member name `memName` containing mask characters, due to an internal error.

The CTMAES or CTMJ DS utility does not perform a simulation for the requested member or members, and processing continues with the next simulation request.

**Corrective Action:** Contact your INCONTROL administrator.

AES188E MEMBER CONTROL CARD WAS NOT SPECIFIED

**Explanation:** No member name was specified in the input for the Control-M CTMAES or CTMJ DS utility. The MEMBER statement is obligatory.

The CTMAES or CTMJ DS utility does not perform a simulation for the requested member or members, and processing continues with the next simulation request.

**Corrective Action:** Correct the input and rerun the job.

AES189E JOB jobName NOT FOUND IN SCHEDULING TABLE tableName

**Explanation:** The `jobName` job that was specified in the input parameters as belonging to the `tablename` scheduling table was not found in that table.

The program terminates the current simulation request and proceeds to the next input statement.

**Corrective Action:** Correct the job name or specify a different table name.
AES190I jobName RETRIEVED FROM TABLE tableName IN SCHEDULING LIBRARY lib

**Explanation:** This information message indicates that the jobName job that was specified in the input parameters as belonging to the tableName table in the lib scheduling library was successfully retrieved from the table, and will be processed by the AutoEdit Simulation utility.

**Corrective Action:** No action is required.

**Messages AESL00 through AESLxx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

AESL45S DD STATEMENT "DASIM" IS EMPTY. UTILITY TERMINATED.

**Explanation:** There are no input parameters when running the CTMJ DS or CTMAESIM utilities. The utility terminates.

**Corrective Action:** Correct the input parameters and rerun the utility.

AESL46S MANDATORY "SUBMIT" PARAMETER IS MISSING. UTILITY TERMINATED.

**Explanation:** The SUBMIT parameter is missing when running the CTMJ DS utility. The utility terminates.

**Corrective Action:** Correct the input parameters and rerun the utility.

AESL47I ‘cmd’ Control-STATEMENT FOUND - {JCL | SCHEDULING} LIBRARY MODE USED

**Explanation:** This information message indicates that the program found the cmd control statement, and based the processing mode on its type, as follows:

- If a SCHEDLIB control statement is found, the AutoEdit Simulation program uses Scheduling Library Mode, in which the statements SCHEDLIB, TABLE, and JOB are valid.
- If a LIBRARY or MEMBER control statement is found, the AutoEdit Simulation program uses JCL Library Mode, in which the statements LIBRARY and MEMBER are valid.
- The two modes cannot be mixed in the same input stream.

**Corrective Action:** No action is required.

AESL48E Control-STATEMENT INVALID FOR CURRENT MODE. STATEMENT IGNORED

**Explanation:** The program found a control statement which did not match the processing mode currently used.

Valid statements are:
in Scheduling Library Mode, SCHEDLIB, TABLE, and JOB statements

in JCL Library Mode, LIBRARY and MEMBER statements

The two modes cannot be mixed in the same input stream.

The program terminates the current simulation request and proceeds to the next input statement.

Corrective Action: Correct the control statement and rerun the job.

AESL49E SCHEDLIB Control-STATEMENT NOT SPECIFIED OR INVALID

Explanation: A SCHEDLIB control statement was not specified in Scheduling Library Mode, or the control statement specified was rejected because of an error. In Scheduling Library Mode, the SCHEDLIB, TABLE, and JOB statements are required.

The program terminates the current simulation request and proceeds to the next input statement.

Corrective Action: Add the missing control statement and rerun the job.

AESL50E TABLE Control-STATEMENT NOT SPECIFIED OR INVALID

Explanation: A TABLE control statement was not specified in Scheduling Library Mode, or the control statement specified was rejected because of an error. In Scheduling Library Mode, the SCHEDLIB, TABLE, and JOB statements are required.

The program terminates the current simulation request and proceeds to the next input statement.

Corrective Action: Add the missing control statement and rerun the job.

AESL51E JOB Control-STATEMENT NOT SPECIFIED OR INVALID

Explanation: A JOB control statement was not specified in Scheduling Library Mode, or the control statement specified was rejected because of an error. In Scheduling Library Mode, the SCHEDLIB, TABLE, and JOB statements are required.

The program terminates the current simulation request and proceeds to the next input statement.

Corrective Action: Add the missing control statement and rerun the job.

AESL52I jobName NOT FOUND IN OVERLIB LIBRARY - MEMLIB LIBRARY WILL BE USED

Explanation: This information message indicates that the jobName job that was designated by the user was not found in the library specified in the OVERLIB job scheduling definition field.

The library specified in the MEMLIB field is accessed instead.

Corrective Action: No action is required.

AESL53I jobName RETRIEVED FROM MEMLIB/OVERLIB LIBRARY lib

Explanation: This information message indicates that the library that contained the job that was to be processed by the AutoEdit Simulation utility was retrieved.

The variables in this message are:
• `jobName` - the job that was to be processed by the AutoEdit simulation utility
• `lib` - the library that contained the `jobName` job

**Corrective Action:** No action is required.

AESL54I OWNER `owner` RETRIEVED FROM JOB SCHEDULING DEFINITION `jobName`

**Explanation:** This information message indicates that the owner ID to be used by the AutoEdit Simulation utility was retrieved from the job scheduling definition.

The variables in this message are:
• `owner` - the owner ID to be used by the AutoEdit simulation utility
• `jobName` - the identity of the job scheduling definition from which `owner` was retrieved.

**Corrective Action:** No action is required.

AESL55I APPLICATION `applId` RETRIEVED FROM SCHEDULE DEFINITION `jobName`

**Explanation:** This information message indicates the application ID to be used by the AutoEdit Simulation utility was retrieved from the schedule definition.

The variables in this message are:
• `applId` - the identity of the application to be used by the AutoEdit simulation utility
• `jobName` - the identity of the job scheduling definition from which `applId` was retrieved.

**Corrective Action:** No action is required.

**ALI messages**

This group includes messages for the Control-O product.

**Messages ALI 300 through ALI 3xx**

This group includes messages for the Control-O product.

ALI 360S AUTOMATION LOG DYNAMIC ALLOCATION ERROR `rc/rsn/dsn`

**Explanation:** SVC 99 failed during allocation or deallocation of the Automation Log file. The CTOALI program uses SVC 99 to dynamically allocate and deallocate the Automation Log file.

For explanations of the return code (`rc`) and reason code (`rsn`) displayed as part of this message, see the IBM manual *MVS Programming: Authorized Assembler Services Guide*.

The CTOALI program ends with a return code of 08.

**Corrective Action:** No action is required.
ALI361S ERROR WHILE LOADING MODULE IDCAMS

Explanation: Loading of the IDCAMS module failed. The CTOALI program failed to link to IDCAMS to define a VSAM linear data set.

The CTOALI program ends with a return code of 08.

Corrective Action: Determine why the IDCAMS module cannot be loaded from STEPLIB or LINKLST, correct the problem, and resubmit the job.

ALI362S INVALID PARAMETERS PASSED TO THE PROGRAM

Explanation: The CTOALI program was called with invalid parameters, either using the PARM parameter in the JCL, or using the program that called the CTOALI program.

The CTOALI program ends with a return code of 08.

Corrective Action: Call your system programmer for assistance. If the problem is not resolved, contact your INCONTROL administrator.

ALI363S NO PARAMETERS PASSED TO THE PROGRAM

Explanation: The CTOALI program was called with null parameters, either using the PARM parameter in the JCL, or using the program that called the CTOALI program.

The CTOALI program ends with a return code of 08.

Corrective Action: Call your system programmer for assistance. If the problem is not resolved, contact your INCONTROL administrator.

ALI364S ERRORS IN IDCAMS PROCESSING

Explanation: The IDCAMS module ended with a non-zero return code. The CTOALI program links to IDCAMS to define VSAM linear data sets.

The CTOALI program ends with a return code of 08.

Corrective Action: Check the job printout to see why IDCAMS did not end successfully. It may be necessary to edit the DIVSKEL member in the INSTWORK library to change the MODELM statements of the IDCAMS SYSIN. Correct and resubmit the job.

ALI365S VOLUME PARAMETER MUST BE SPECIFIED FOR DIV DATASETS

Explanation: The volume was not specified for a VSAM linear data set.

The CTOALI program ends with a return code of 08.

Corrective Action: Specify a volume and resubmit the job.

ALO messages

This group includes messages for the Control-O CMEM product.
Messages ALO200 through ALO2xx

This group includes messages for the Control-O CMEM product.

ALO290I {CONTROL-O | CTMCMEM} AUTOMATION LOG STARTED

**Explanation:** This information message indicates that the Automation Log subtask began.

**Corrective Action:** No action is required.

ALO291E AUTOMATION LOG ERROR WHILE PROCESSING REQUESTS

**Explanation:** The Automation Log subtask detected an error while processing requests.

The subtask and the Control-O or CMEM monitor shut down. Before shutting down, the Control-O or CMEM monitor attempts to start a new Control-O or CMEM monitor to replace itself. If it does not succeed after a few attempts, Control-O or CMEM ceases trying.

**Corrective Action:** Contact your INCONTROL administrator.

ALO292S {CONTROL-O | CTMCMEM} AUTOMATION LOG TERMINATION ERROR

**Explanation:** The Automation Log subtask terminated after an error was detected.

The subtask and the Control-O or CMEM monitor shut down. Before shutting down, the Control-O or CMEM monitor attempts to start a new Control-O or CMEM monitor to replace itself. If it does not succeed after a few attempts, Control-O or CMEM ceases trying.

**Corrective Action:** Contact your INCONTROL administrator.

ALO293I CONTROL-O AUTOMATION LOG ENDED

**Explanation:** This information message indicates that the Automation Log subtask terminated successfully.

The subtask and the monitor shut down.

**Corrective Action:** No action is required.

ALO294E OPEN OF AUTOMATION LOG FAILED. LOG SWAPPED

**Explanation:** The Automation Log subtask attempted to open the Automation Log file but failed.

Control-O continues working but now works as if AUTOMLOG was set to N in the CTOPARM member. Subsequent traces of rules are written to the DAACTLOG sysout of the Control-O monitor.

**Corrective Action:** Do the following:

- Check the CTOPARM member in the Control-O installation library.
- Check to see if the Automation Log file exists for this CPU.

ALO295S OPEN OF DAACTLOG FAILED

**Explanation:** The Automation Log subtask failed to open the file referenced by the DAACTLOG DD statement.
The subtask and the Control-O or CMEM monitor shut down. Before shutting down, the Control-O or CMEM monitor attempts to start a new Control-O or CMEM monitor to replace itself. If it does not succeed after a few attempts, Control-O or CMEM ceases trying.

**Corrective Action:** Check the JCL of your Control-O or CMEM starting procedure to verify that the DD statement DAACTLOG exists. If the problem is not resolved, contact your INCONTROL administrator.

**ALO296E** ERROR DETECTED DURING ADDF. LOG SWAPPED

**Explanation:** The Automation Log subtask was unable to write to the Automation Log file.

Control-O continues working but now works as if AUTOMLOG was set to N in the CTOPARM member. Subsequent traces of rules are written to the DAACTLOG sysout of the Control-O monitor.

**Corrective Action:** Contact your INCONTROL administrator.

**ALO297I** AUTOMATION LOG STATUS CHANGE COMPLETED

**Explanation:** This information message indicates that the Automation Log subtask completed the change of Automation Log status.

This message is displayed in response to the operator command `F CONTROLO,AUTOLOG=YES/NO`.

The Automation Log subtask writes to the new destination.

**Corrective Action:** No action is required.

**ALO298E** ERROR DETECTED DURING ENQ. LOG SWAPPED

**Explanation:** The Automation Log subtask detected an error while trying to ENQUEUE the Automation Log file.

Control-O continues working but now works as if AUTOMLOG was set to N in the CTOPARM member. Subsequent traces of rules are written to the DAACTLOG sysout of the Control-O monitor.

**Corrective Action:** Contact your INCONTROL administrator.

**ALO299E** ERROR DETECTED DURING DEQ. LOG SWAPPED

**Explanation:** The Automation Log subtask detected an error while trying to dequeue the Automation Log file.

Control-O continues working but now works as if AUTOMLOG was set to N in the CTOPARM member. Subsequent traces of rules are written to the DAACTLOG sysout of the Control-O monitor.

**Corrective Action:** Contact your INCONTROL administrator.

**Messages ALO300 through ALO3xx**

This group includes messages for the Control-O CMEM product.

**ALO303S** {CONTROL-O | CTMCMEM} AUTOMATION LOG INITIALIZATION ERROR

**Explanation:** The Automation Log subtask detected an error while initializing.
The subtask and the Control-O or CMEM monitor shuts down. Before shutting down, the Control-O or CMEM monitor attempts to start a new Control-O or CMEM monitor to replace itself. If it does not succeed after a few attempts, Control-O or CMEM ceases trying.

**Corrective Action:** Contact your INCONTROL administrator.

ALO304S CONTROL-O AUTOMATION LOG SWAPPING ERROR

**Explanation:** The Automation Log subtask detected a problem when swapping the log.

If the subtask handled the problem, Control-O continues to work as if AUTOMLOG was set to N in the CTOPARM member. Subsequent traces of rules are written to the DAACTLOG sysout of the Control-O monitor.

If the subtask could not handle the problem, the subtask and the monitor may shut down. Before shutting down, the Control-O monitor attempts to start a new Control-O monitor to replace itself. If it does not succeed after a few attempts, Control-O ceases trying.

**Corrective Action:** Contact your INCONTROL administrator.

ALO305S {CONTROL-O | CTMCMEM} AUTOM. LOG SEVERE ERROR ID= *err*

**Explanation:** The Automation Log subtask detected an internal logic problem.

In this message, *err* is the identifying number of the error.

The subtask and the Control-O or CMEM monitor shut down. Before shutting down, the Control-O or CMEM monitor attempts to start a new Control-O or CMEM monitor to replace itself. If it does not succeed after a few attempts, Control-O or CMEM ceases trying.

**Corrective Action:** Report the value of *err* to your INCONTROL administrator.

ALO306S ERROR DETECTED DURING LOGGING

**Explanation:** The Automation Log subtask detected an internal error while logging a record.

The subtask continues to work, but some records may be lost from the Automation Log.

**Corrective Action:** Contact your INCONTROL administrator.

ALO307E PROBLEMS WITH WRITEF. LOG SWAPPED

**Explanation:** The Automation Log subtask detected a problem while trying to commit changes in the Automation Log file.

Control-O continues to work as if AUTOMLOG was set to N in the CTOPARM member. Subsequent traces of rules are written to the DAACTLOG sysout of the Control-O monitor.

**Corrective Action:** Contact your INCONTROL administrator.

ALO308E AUTOMATION LOG I/O ERROR. RC = *rc*

**Explanation:** The Automation Log subtask detected an I/O error while trying to perform an operation on the Automation Log file.

In this message, *rc* is the return code generated by the error.
If the subtask handled the problem, Control-O continues to work as if AUTOMLOG was set to N in the CTOPARM member. Subsequent traces of rules are written to the DAACTLOG sysout of the Control-O monitor.

If the subtask cannot handle the problem, the subtask and the monitor may shut down. Before shutting down, the Control-O monitor attempts to start a new Control-O monitor to replace itself. If it does not succeed after a few attempts, Control-O ceases trying.

**Corrective Action:** Check operating system messages detailing the return code (rc) and the cause of the error, for example, disk failure, incorrect data set, or incorrect name or allocation parameters. Correct the cause of the error accordingly.

**ALU messages**

This group includes messages for the Control-O product.

**Messages ALU300 through ALU3xx**

This group includes messages for the Control-O product.

**ALU370I COPY OF CONTROL-O AUTOMATION LOG STARTED**

**Explanation:** This information message indicates that the CTOALOCP utility has begun copying the Automation Log file.

**Corrective Action:** No action is required.

**ALU371I COPY OF CONTROL-O AUTOMATION LOG ENDED**

**Explanation:** This information message indicates that the CTOALOCP utility has successfully completed copying the Automation Log file.

**Corrective Action:** No action is required.

**ALU372S COPY OF CONTROL-O LOG ENDED WITH ERRORS**

**Explanation:** The CTOALOCP utility abended. This message follows a message describing the cause of the error detected.

The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** The previous message identifies the cause of the error. Correct the problem, and resubmit the job.

**ALU373S ERROR OPENING SOURCE FILE**

**Explanation:** The CTOALOCP utility was unable to open the source Automation Log file.

The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** Check and correct the JCL. If the source file is a sequential file, ensure that the DASOURCE DD name is specified.
ALU374S ERROR OPENING TARGET FILE

Explanation: The CTOALOCP utility was unable to open the target Automation Log file because it received a non-zero return code while opening the target file.

The CTOALOCP utility ends with a return code of 08.

Corrective Action: Check and correct the JCL. If the target file is a sequential file, ensure that the DATARGET DD name was specified.

ALU375S NON-ZERO RETURN CODE RECEIVED: "pgm"

Explanation: The CTOALOCP utility received a non-zero return code from the program whose name (pgm) appears in the text of the message. The CTOALOCP utility calls other programs to perform various tasks.

The CTOALOCP utility ends with a return code of 08.

Corrective Action: Check and correct the JCL. Check the job printouts for relevant messages about the problem.

ALU376S INVALID TIME

Explanation: An invalid TIME parameter was specified for CTOALOCP utility.

The CTOALOCP utility ends with a return code of 08.

Corrective Action: Check and correct the STARTTIME and ENDTIME parameters. Resubmit the job.

ALU377S INVALID DATASET NAME

Explanation: An invalid data set name was specified for the CTOALOCP utility.

The CTOALOCP utility ends with a return code of 08.

Corrective Action: Check and correct the FROMDSN and TODSN parameters. Resubmit the job.

ALU378S INVALID FILE TYPE

Explanation: An invalid data set type was specified for the CTOALOCP utility.

The CTOALOCP utility ends with a return code of 08.

Corrective Action: Check and correct the FROMTYPE and TOTYPE parameters. Resubmit the job.

ALU379S INVALID VOLUME

Explanation: An invalid volume was specified for the CTOALOCP utility.

The CTOALOCP utility ends with a return code of 08.

Corrective Action: Correct the TOVOLUME parameter and resubmit the job.

ALU380S INVALID UNIT

Explanation: An invalid unit was specified for the CTOALOCP utility.

The CTOALOCP utility ends with a return code of 08.
**Corrective Action:** Specify a valid value for the **TOUNIT** parameter and resubmit the job.

**ALU381S** SOURCE AND TARGET CANNOT BOTH BE SEQUENTIAL

**Explanation:** Type S (Sequential) files were specified for both the source and the target Automation Log files.

At least one of the files must be nonsequential.

The **CTOALOCP** utility ends with a return code of 08.

**Corrective Action:** Specify a nonsequential file for the source file, or the target file, or both. Resubmit the job.

**ALU382S** VOLUME IS REQUIRED WHEN DIV LOG IS USED

**Explanation:** No value was specified for the **TOVOLUME** parameter.

This parameter must be specified for a VSAM linear data set definition.

The **CTOAL** program ends with a return code of 08.

**Corrective Action:** Specify a valid value for the **TOVOLUME** parameter and resubmit the job.

**ALU383S** INVALID NUMBER OF RECORDS

**Explanation:** An invalid number of records was specified in the **TORECNUM** parameter.

The **CTOALOCP** utility ends with a return code of 08.

**Corrective Action:** Specify a valid number of records for the **TORECNUMV** parameter and resubmit the job.

**ALU384S** AUTOM. LOG SEQ. DYNAMIC ALLOCATION ERROR **rc/rsn/dsn**

**Explanation:** Dynamic allocation (SVC 99) of a sequential Automation Log file failed. The **CTOALOCP** utility uses SVC 99 to dynamically allocate and deallocate the **dsn** file, which is a sequential source or target Automation Log file.

For explanations of the return code (**rc**) and reason code (**rsn**) displayed as part of this message, see the IBM manual *MVS Programming: Authorized Assembler Services Guide*.

The **CTOALOCP** utility ends with a return code of 08.

**Corrective Action:** Examine the return and reason codes and take appropriate corrective action.

**ALU385S** ERROR READING RECORD 0 FROM SOURCE FILE

**Explanation:** The **CTOALOCP** utility detected an internal error while reading record 0 from the source Automation Log file. The **CTOALOCP** utility reads source file attributes (for example, number of records) from source data set record 0.

The **CTOALOCP** utility ends with a return code of 08.

**Corrective Action:** Contact your **INCONTROL** administrator.
ALU3865 MINIMAL IS NOT ALLOWED WITH SEQUENTIAL FILE

**Explanation:** The MINIMAL parameter was specified for a copy operation using sequential files. The MINIMAL parameter is only allowed when source and target files are both nonsequential.

The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** Do one of the following:
- Remove the MINIMAL parameter.
- Designate nonsequential source and target files.

ALU3875 TARGET DATASET NAME IS MANDATORY

**Explanation:** No data set name was specified for the target Automation Log file. The data set name must be specified when copying a file to a nonsequential data set.

The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** Specify a valid value for the TODSN parameter and resubmit the job.

ALU3885 ERROR READING THE SOURCE FILE

**Explanation:** The CTOALOCP utility detected an internal error while reading the source Automation Log file.

The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** Contact your INCONTROL administrator.

ALU3895 ERROR WRITING THE TARGET FILE

**Explanation:** The CTOALU program detected an internal error while writing the target Automation Log file.

The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** Contact your INCONTROL administrator.

Messages ALU400 through ALU4xx

This group includes messages for the Control-O product.

ALU4015 ERROR DURING WRITEF

**Explanation:** The CTOALOCP utility detected an internal error while writing the target Automation Log file.

The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** Contact your INCONTROL administrator.

ALU4025 SOURCE AND TARGET DSN CANNOT BE THE SAME

**Explanation:** The same data set name was specified for both the source and the target Automation Log files. Source and target files must have different data set names.
The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** Specify valid data set names and resubmit the job.

**ALU403S MINIMAL ALLOCATION REQUIRES DATE/TIME LIMIT**

**Explanation:** The MINIMAL parameter was specified without a DATE/TIME limit. Values must be specified for at least the STARTDATE and ENDDATE parameters. The format for these parameters is yymmdd.

The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** Specify valid values for the STARTDATE and ENDDATE parameters and resubmit the job.

**ALU404S FROM TIME LIMIT REQUIRES FROM DATE LIMIT**

**Explanation:** A DATE limit was not specified. When a copy operation is set to start at a specific time, the date must also be specified.

The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** Specify a valid DATE limit and resubmit the job.

**ALU405S TO TIME LIMIT REQUIRES TO DATE LIMIT**

**Explanation:** A TODATE limit was not specified. When a copy operation is set to end at a specific time, the date must also be specified.

The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** Specify a valid value for the TODATE parameter and resubmit the job.

**ALU406S NO RECORDS FOUND BETWEEN DATE/TIME LIMITS**

**Explanation:** No records were found within the specified DATE or TIME limits (or both) set for the copy operation.

The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** Check the DATE and TIME limits specified in the JCL. Correct them and resubmit the job if necessary.

**ALU407S DATE LIMITS ARE EQUAL. TIME IS INCORRECT**

**Explanation:** The specified TIME limits are incompatible with the specified DATE limits. When you specify a copy operation starting and ending on the same day, the ending time must be later than the starting time.

The CTOALOCP utility ends with a return code of 08.

**Corrective Action:** Correct the values for the STARTDATE, STARTTIME, ENDDATE, and ENDTIME parameters. Resubmit the job.
APA messages

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

Messages APAF00 through APAFxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

APAF20I COPYING APAPARM LI BRARY TO LI BRARY WITH RECFM VARIABLE STARTED

**Explanation:** This information message indicates that the CTDCNVAP utility started copying the APAPARM library to a library with variable RECFM.

**Corrective Action:** No action is required.

APAF21I COPYING APAPARM LI BRARY TO LI BRARY WITH RECFM VARIABLE ENDED OK

**Explanation:** This information message indicates that the CTDCNVAP utility successfully finished copying the APAPARM library to a library with variable RECFM.

**Corrective Action:** No action is required.

APAF22S COPYING APAPARM LI BRARY TO LI BRARY WITH RECFM VARIABLE ENDED WITH ERRORS

**Explanation:** When attempting to copy the APAPARM library to a library with variable RECFM, the CTDCNVAP utility ended with errors.

**Corrective Action:** Notify your INCONTROL administrator.

APAF23I MEMBER *memName* IS TRANSFERRED TO VARIABLE BLOCKED LI BRARY

**Explanation:** This information message indicates that the CTDCNVAP utility copied the *memName* member from the APAPARM library to a library with variable RECFM.

**Corrective Action:** No action is required.

APAF24S UNABLE TO READ DIRECTORY. INSUFFICIENT STORAGE

**Explanation:** The CTDCNVAP utility could not copy the APAPARM library to a library with variable RECFM because of insufficient storage.

**Corrective Action:** Notify your INCONTROL administrator.
APAF26S UNABLE TO READ A MEMBER FROM THE APAPARM LIBRARY

**Explanation:** Due to an internal error while attempting a read operation, the CTDCNVAP utility could not copy a member from the APAPARM library to a library with variable RECFM.

**Corrective Action:** Notify your INCONTROL administrator.

APAF27S UNABLE TO PUT A MEMBER TO THE NEW APAPARM LIBRARY

**Explanation:** Due to an internal error while attempting a write operation, the CTDCNVAP utility could not copy a member from the APAPARM library to a library with variable RECFM.

**Corrective Action:** Notify your INCONTROL administrator.

APAF28S INPUT APAPARM LIBRARY IS EMPTY

**Explanation:** The CTDCNVAP utility could not copy a member from the APAPARM library to a library with variable RECFM because the input library is empty.

**Corrective Action:** Notify your INCONTROL administrator.

API messages

This group includes messages for the Control-O product.

Messages API0 through API0xx

This group includes messages for the Control-O product.

API000E PRINT FILE OPEN FAILED

**Explanation:** The print file cannot be opened. IOAAPI continues to run, but no messages are printed.

**Corrective Action:** Find and correct the error. Usually, a DD statement is missing.

API001I IOA API STARTED

**Explanation:** This information message indicates that the IOAAPI program has started.

**Corrective Action:** No action is required.

API002I IOA API ENDED

**Explanation:** This information message indicates that the IOAAPI program has ended.

**Corrective Action:** No action is required.

API003I REQ= requestText

**Explanation:** This information message shows the text of the request (requestText) as passed to IOAAPI.

The message will be processed.
Corrective Action: No action is required.

API 004I RC= rc
Explanation: This information message shows the return code (rc) issued on processing the request.
Corrective Action: No action is required.

API 005E STOPPED ON ERROR
Explanation: The IOAAPi program stopped running because a return code was issued indicating an error. The error code is shown in the API 004I message.
Corrective Action: Correct the error and run IOAAPi again.

API 006I CONDITION IS {TRUE | FALSE}
Explanation: This message is issued after the THEN or ELSE part of an IF statement. It shows whether the condition value is TRUE, in which case the requests are honored, or FALSE, in which case the requests are ignored.
Corrective Action: No action is required.

API 007E ERROR IN "IF" STATEMENT
Explanation: There is an error in an IF statement. The IOAAPi program stopped.
Corrective Action: Correct the error and run IOAAPi again.

API 008E SERVICE_TYPE NOT RECOGNISED serviceType
Explanation: The service type requested is not recognized. The recognized service types are COND, MAIL and LOG.
In this message, serviceType is the unrecognized service type.
Corrective Action: Correct the error and run IOAAPi again.

API 010E xxxx SERVICE IS NOT SUPPORTED AS xxxx
Explanation: The MAIL and LOG services can only be used in batch or API runs.
Corrective Action: Correct the error and run IOAAPi again.

Messages API 500 through API 5xx
This group includes messages for the Control-O product.

API 560I ENVIRONMENT INITIALIZATION COMPLETE
Explanation: This information message is issued when the Control-O API first connects with the Control-O or CMEM monitor and completes the initialization process.
Corrective Action: No user action is required.
API 561E REQUESTED FUNCTION NOT SUPPORTED

**Explanation:** The requested function is not in the list of supported Control-O API functions. The Control-O API returns a return code of 08 to the calling routine. The final System Action depends on the calling environment.

**Corrective Action:** Check the syntax and spelling of the requested function. If necessary, contact your INCONTROL administrator.

API 563E IOA SUBSYSTEM subsys INACTIVE. INTERFACE CANNOT BE USED

**Explanation:** A request has been received through the Control-O API that needs the Control-O or CMEM monitor, but Control-O or CMEM is not active. The requested activity is aborted.

**Corrective Action:** Check why Control-O or CMEM is not active. Once the Control-O or CMEM monitor is active again, re-issue the request.

API 565E SETOLOC/SETOGLB ERROR CODE= rc REASON= rsn, TEXT= text

**Explanation:** The Control-O API is unable to execute the AutoEdit request. The API detected an error while trying to resolve or set an AutoEdit expression. The Control-O API returns a return code of 16 to the calling routine. The final System Action depends on the calling environment.

**Corrective Action:** Ensure that the AutoEdit expression in the SETOLOC, SETOGLB or RESOLVE functions is correctly written.

The following table shows possible values for the error code (rc) and reason code (rsn), with the explanation of each:

<table>
<thead>
<tr>

</table>

**API 566E IOA SUBSYSTEM **`subsys` **NOT RESPONDING TO REQUESTS**

**Explanation:** The IOA subsystem `subsys` did not terminate rule execution within the expected time frame. The XAM requester, or the Control-O API, waits up to two minutes for the termination of the rule through a DORULE request.

The XAM interface, or the Control-O API, returns a return code of 16 to the calling routine. The final system action depends on the calling environment.

**Corrective Action:** Review the rule execution results for errors and rectify as appropriate.
API 567E IOA SUBSYSTEM subsys INACTIVE

**Explanation:** The requested service cannot be provided because the subsys IOA subsystem is not up.
The Control-O API returns a return code of 16 to the calling routine. The final system action depends on the calling environment.

**Corrective Action:** Start the Control-O or CMEM monitor.

---

API 568E IOA SUBSYSTEM subsys DETECTED AN ERROR

**Explanation:** An internal error was detected by the subsys IOA subsystem during the execution of a Control-O API request.
The Control-O API returns a return code of 16 to the calling routine. The final System Action depends on the calling environment.

**Corrective Action:** Do the following:
1. Check the Control-O or CMEM JOBLOG or SYSLOG for error messages.
2. Collect information about the functions requested by the Control-O API.
3. Determine whether or not the Control-O monitor is properly running for ongoing automation which is not related to the Control-O API.

---

API 569E IOA SUBSYSTEM subsys RETURNED AN INVALID RETURN CODE

**Explanation:** Due to an internal error, an invalid return code was returned by the subsys subsystem during the execution of a request issued through the Control-O API.
The Control-O API returns a return code of 16 to the calling routine. The final System Action depends on the calling environment.

**Corrective Action:** Do the following:
1. Collect information about the functions requested by the Control-O API.
2. Determine whether or not the Control-O or CMEM monitor is properly running for ongoing automation which is not related to the Control-O API.

---

API 56AE ERROR IN INAREA FIELDS ADDR= add1, add2 LENGTH len DATA= data_val

**Explanation:** This diagnostic error message appears when an error has occurred while calling an AutoEdit variable service.
The system action is aborted.

**Corrective Action:** Contact your INCONTROL administrator.
API 56BE ERROR IN RESULT FIELDS ADDR= add, LENGTH len DATA= data_val

**Explanation:** This diagnostic error message appears when an error has occurred while calling an AutoEdit variable service.

The system action is aborted.

**Corrective Action:** Contact your INCONTROL administrator.

API 56CE INAREA LENGTH+RESULT= xxxx+ xxxx= xxxx > 255

**Explanation:** This diagnostic error message appears when an error has occurred while calling an AutoEdit variable service.

The system action is aborted.

**Corrective Action:** Contact your INCONTROL administrator.

API 56EE CHECKPOINT GLOBAL VARIABLE DATABASE ioavar TIMED OUT AFTER num SECONDS

**Explanation:** CHECKPOINT was requested in order to save disk changes made in memory to the ioavar variable database. A timeout occurred while the request was being processed.

The CHECKPOINT request is terminated before completion. However, the changes made to the ioavar database are retained in memory, and a subsequent CHECKPOINT request will write them to disk.

**Corrective Action:** No user action is required.

API 56FE CHECKPOINT GLOBAL VARIABLE DATABASE ioavar ENDED WITH ERROR. RC=16

**Explanation:** CHECKPOINT was requested in order to save disk changes made in memory to the ioavar variable database. An error occurred while the request was being processed.

The CHECKPOINT request is terminated before completion. However, the changes made to the ioavar database are retained in memory, and a subsequent CHECKPOINT request will write them to disk.

**Corrective Action:** No user action is required.

API 570I INITIALIZATION ENVIRONMENT COMPLETED

**Explanation:** This information message indicates that Control-O API initialization finished.

**Corrective Action:** No user action is required.

API 573E IOA SUBSYSTEM subsys INACTIVE. INTERFACE CANNOT BE USED

**Explanation:** A request that requires the Control-O or CMEM monitor was issued through Control-O API, but the monitor is not active.

The action is aborted.

**Corrective Action:** Activate the Control-O or CMEM monitor, and reissue the request.
API 575E SETOLOC/SETOGLB ERROR CODE = rc REASON = rsn, TEXT = text

**Explanation:** A request to set a local or global variable failed. The action is aborted.

**Corrective Action:** Check the return code (rc) and reason code (rsn) in the following tables to determine the reason for the failure. Correct the symbol in the rule definition, and reorder the table. If the return code or reason code is not listed, the error is an internal error, and you should notify BMC Software Customer Support.

</table>

**API576E IOA SUBSYSTEM subsys NOT RESPONDING TO REQUESTS**

**Explanation:** A request from the Control-O or CMEM monitor using the Control-O API failed due to timeout, but the subsystem is active.

The action is aborted.

**Corrective Action:** Check the status of the Control-O or CMEM monitor. If the timeout was the result of a termination process, the problem can be ignored. Otherwise, check for other error messages in the monitor JOBLOG, SYSPRINT or IOALOG, and respond accordingly.

**API577E IOA SUBSYSTEM subsys INACTIVE**

**Explanation:** A request from the Control-O or CMEM monitor failed, because the Control-O or CMEM monitor is not active.

The action is aborted.

**Corrective Action:** Start the Control-O or CMEM monitor and reissue the request.

**API578E IOA SUBSYSTEM subsys DETECTED AN ERROR**

**Explanation:** A request from the Control-O or CMEM monitor failed, because the CTOWTO Control-O or CMEM executor module detected an error. The request was issued using the Control-O API.

The action is aborted.

**Corrective Action:** Check the Control-O or CMEM job log or syslog for error messages, and correct accordingly.

**API579E IOA SUBSYSTEM subsys RETURNED AN INVALID RETURN CODE**

**Explanation:** A request from the Control-O or CMEM monitor failed, because the CTOWTO Control-O or CMEM executor module returned an invalid return code. The request was issued by means of the Control-O API.

The action is aborted.

**Corrective Action:** Contact BMC Software Customer Support.
API57AE ERROR IN INAREA FIELDS ADDR= add1, add2 LENGTH len DATA= value

Explanation: An internal error occurred in the INAREA fields while calling an API service. The action is aborted.

Corrective Action: Notify BMC Software Customer Support.

API57BE ERROR IN RESULT FIELDS ADDR= add, LENGTH len DATA= value

Explanation: An internal error occurred in the RESULTS fields while calling an API service. The action is aborted.

Corrective Action: Notify BMC Software Customer Support.

API57CE INAREA LENGTH length3 + RESULT LENGTH length2 > 255

Explanation: Due to an internal error, the sum of the INAREA LENGTH and the RESULT LENGTH exceeded the maximum allowable data length of 255 characters when calling the API service. The action is aborted.

Corrective Action: Notify BMC Software Customer Support.

API57EE CHECKPOINT GLOBAL VARIABLE DATABASE dbName ENDED DUE TO TIMEOUT AFTER num SECONDS

Explanation: A timeout occurred during checkpoint processing of the Global Variables database. The checkpoint request terminated.

Corrective Action: Check the job log of the Control-O or CMEM monitor for additional messages that explain the cause of the problem. If the request ended OK after the timeout occurred, ignore the problem. Otherwise, respond accordingly.

ARC messages

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

Messages ARCA00 through ARCAxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

ARCA01E CTDX004: ERROR IN CTMMEM RC=rc READING SKELETON

Explanation: The restore skeleton that is used for restoring reports converted to Control-D from other products, such as: CA-View, CA Dispatch, and the like, cannot be read from the SKL library. The restore request ends NOTOK.
Corrective Action: Proceed according to the CTMMEM return code displayed in the message. The CTMMEM return codes are described in the DOCIMEM member in the IOA DOC library. After correcting the action, request restore of the problematic report.

ARCA03E CTDX004: ERROR IN GETMAIN FOR SKELETON

Explanation: There is insufficient memory to read the restore skeleton that is used for restoring reports converted to Control-D from other products, for example, CA-View, CA Dispatch. The current restore request ends NOTOK.

Corrective Action: Increase the REGION size of the online environment.

ARCA04E CTDX004: UNABLE TO DYNAMICALLY ALLOCATE INTRDR rc

Explanation: Dynamic allocation of the internal reader (INTRDR) by a Control-D command failed during an attempt to submit a restore job for reports converted to Control-D from other products such as CA-View, CA Dispatch. In this message, rc is the return code of the failed dynamic allocation. The restore job is not submitted. The current restore request ends NOT OK.

Corrective Action: Refer to the IBM manual that deals with information returned from an SVC 99. Take appropriate action based on the return code displayed in the message.

ARCA05E CTDX004: ERROR IN GETMAIN FOR SYSDATA RECORD

Explanation: There is insufficient memory for the SYSDATA record that is needed to restore reports converted to Control-D from other products such as CA-View, CA Dispatch. The current restore request ends NOTOK.

Corrective Action: Increase the REGION size of the Online environment.

BAO messages

This group includes messages for the Control-M/Analyzer product.

Messages BAO500 through BAO5xx

This group includes messages for the Control-M/Analyzer product.

BAO501I CTBBAO STARTED

Explanation: This information message signals the normal start of program CTBBAO. The Control-M/Analyzer Online Facility produces this message when it orders or forces a balancing mission to the Active Balancing file.

Corrective Action: No action is required.
BAO502S OPEN OF SCHEDULE DATA FAILED. DDNAME "DABAL"

**Explanation:** Open of Control-M/Analyzer BALMIS library failed.

Possible causes are:

- The DABAL DD statement is missing.
- Either the data set referenced by the DAJOB DD statement cannot be opened for sequential read, or its record length is not 80.

The CTBBAO program ends with errors.

**Corrective Action:** Consult your INCONTROL administrator.

BAO505S PREVIOUS RUN OF CTBBAO DID NOT FINISH OK

**Explanation:** A previous run of the CTBBAO program did not finish OK. This program is usually activated as part of the New Day procedure.

`date_2` and `date_3` (or `date_4` and `date_5`) of the Date Control Record are not equal. Possible causes are:

- The previous run of the CTBBAO program did not finish OK.
- The contents of the User Date Control Record (the DACHK DD statement) have been manually modified.

The CTBBAO program ends with errors.

**Corrective Action:** Set `date_3` (or `date_5`), positions 25 through 30 (or 50 through 55) in the Date Control Record (the DACHKK DD statement), to the values of `date_2` (or `date_4`). To rerun the same New Day procedure, change all the dates to the value of the previous day.

**Note:**

When rerunning the New Day procedure, do not order the same mission twice on the same day. First delete previously ordered missions from the Active Balancing file, and then rerun the New Day procedure.

BAO510S SEVERE ERROR IN THE BALANCING DATA. PLEASE NOTIFY THE IOA ADMINISTRATOR

**Explanation:** A severe error was detected in the scheduling data. This message is issued by the New Day procedure. This message is produced when any scheduling mission (pointed to by the DABAL DD statement) contains erroneous data.

Possible causes are:

- The contents of the mission were incorrectly modified, using an editor or program, and the format of the mission is invalid.
- There was an internal error in Control-M/Analyzer.

The New Day procedure terminates with a condition of code 08.

**Corrective Action:** Do the following:
Try to restore the mission to its original state. If you cannot, have your IOA administrator call BMC Software Customer Support.

If the mission is a batch New Day procedure using a permanent Date Control Record, correct the contents of the Date Control record before running the New Day procedure again.

For more information, see the BAO505S message.

BAO511I ID= orderId TASK= taskName PLACED ON THE ACTIVE BALANCING FILE - desc

Explanation: This information message indicates that a mission order was placed on the Active Balancing file. The task is now on the Active Balancing file in Wait Schedule state.

Corrective Action: No action is required.

BAO513I SCHEDULE FAILED FOR num CONTROL-M/ANALYZER CATEGORIES

Explanation: This information message displays the number of Control-M/Analyzer balancing missions categories that were not found in the library allocated to the DABAL DD statement. In this message, num is the number of balancing missions categories that were not found. The Control-M/Analyzer New Day procedure continues processing.

Corrective Action: Examine the IOA Log file for the failed categories and associated reasons for failure.

BAO514S INSUFFICIENT STORAGE FOR THE BALANCING MISSION

Explanation: There is insufficient storage for processing the mission order. The CTBBAO program of the New Day procedure terminates with a condition code of 08.

Corrective Action: Increase the REGION size of the New Day procedure.

BAO515S ERROR IN SCHEDULING DATA - TOO MANY STATEMENTS FOR ONE MISSION

Explanation: The scheduling mission contains too many statements. Scheduling data describing the mission order is too large to be processed by Control-M/Analyzer. The mission order is not placed on the Active Balancing file. The New Day procedure terminates with a condition code of 08.

Corrective Action: Check the contents of the mission order using the Online Scheduling Facility and omit unnecessary scheduling data. Report this to your INCONTROL administrator.

BAO516S ERROR IN SCHEDULING DATA - FIRST STATEMENT SHOULD START WITH "B"

Explanation: Invalid scheduling data was detected in the first data set pointed to by the DABAL DD statement. The first statement of a valid balancing mission should start with B.

The error could be due to one of the following:
The data set pointed to by the DABAL DD statement is not a Balancing Mission.
The Balancing Mission has been manually modified incorrectly.
The CTBBAO program ends with errors.

Corrective Action: Check that the DABAL DD statement refers to a valid Balancing Mission definition.

BAO524S CTBBAO ENDED WITH ERRORS

Explanation: The CTBBAO program ended with errors. It is activated as part of the New Day procedure.
The New Day procedure finishes executing with a condition code of 08. The IOA Log File contains one or
more prior messages concerning the errors.
Corrective Action: Examine the IOA Log File for the errors. If necessary, correct the Date Control
Record date-3 and date-5 manually for the next run of the New Day procedure.

BAO525I CTBBAO ENDED

Explanation: This information message indicates that the CTBBAO terminating program, which is
activated as part of the New Day procedure, has terminated.
Corrective Action: No action is required.

BAO528I MEMBER memName1 ID= orderld ODATE odate PLACED ON
ACTIVE BALANCING FILE - description

Explanation: This information message indicates that a mission order was placed on the Active
Balancing file in WAIT SCHEDULE state.
Corrective Action: No action is required.

BAO532S OPEN OF CONTROL-M/ANALYZER ACTIVE BALANCING FILE
FAILED. DDNAME "DAABF"

Explanation: Open of Control-M/Analyzer Active Balancing file failed. This error message is issued by the
CTBBAO program, which is usually activated as part of the New Day procedure.
Possible causes are:
- The DAABF DD statement is missing.
- The data set pointed to by the DAABF DD statement is not the Control-M/Analyzer Active Balancing
  file.
- The data set pointed to by the DAABF DD statement is a Control-M/Analyzer Active Balancing file from
  a different version of Control-M/Analyzer.
Program execution stops with a condition code of 08.
Corrective Action: Correct the JCL for the mission or CLIST and rerun it.
BAO534S SEVERE ERROR ON CONTROL-M/ANALYZER ACTIVE BALANCING FILE. NOTIFY THE IOA ADMINISTRATOR

**Explanation:** Severe error on the Control-M/Analyzer Active Balancing file. This error message is issued by the CTBBAO program, which is usually activated as part of the New Day procedure.

Possible causes are:

- An I/O error.
- The file allocated to the DAABF DD statement is not the Control-M/Analyzer Active Balancing file.
- The Active Balancing file has been corrupted.

The CTBBAO Control-M/Analyzer program ends with errors.

**Corrective Action:** Ask your IOA administrator to check whether the Active Balancing File has been updated from two computers without global ENQ control, or by an unauthorized program.

BAO535S CONTROL-M/ANALYZER ACTIVE BALANCING FILE IS BEING FORMATTED. TRY AGAIN LATER

**Explanation:** The New Day procedure is currently formatting the Control-M/Analyzer Active Balancing file. This message is issued by the CTBBAO program which is usually activated as part of the New Day procedure.

**Corrective Action:** Try again later.

BAO536W THE CONTROL-M/ANALYZER ACTIVE BALANCING FILE IS NEARLY FULL

**Explanation:** The Control-M/Analyzer Active Balancing file is over 90% full. It contains all the missions to be executed during the night. If it becomes full, it will be impossible to add new missions to Control-M/Analyzer for execution.

**Corrective Action:** Contact your INCONTROL administrator immediately. It may be necessary to compress the Active Balancing file, or to increase its size.

BAO537S INTERNAL ERROR IN ROUTINE CTBRSV

**Explanation:** Internal error in the CTBRSV routine. The CTBBAO program ends with errors.

**Corrective Action:** Ask your INCONTROL administrator to notify BMC Software Customer Support.

BAO538S LOADING OF CONTROL-M/ANALYZER INSTALLATION PARAMETERS FAILED

**Explanation:** Loading of Control-M/Analyzer Installation Parameters, which are in the CTBPARM member in the IOA PARM library, failed.

Possible causes are:
There is insufficient memory to load the IOA Installation Parameters.

The CTBPARM member does not exist in the IOA PARM library.

The IOA PARM library was updated while you were working and the position of the CTBPARM member has changed.

The requested function is terminated.

**Corrective Action:** Look in the system log for additional related messages. Try one of the following:

- If loading failed because of lack of memory: increase the REGION size for batch missions; for TSO, try to log on again using a larger SIZE parameter.
- If you are using many IOA screens concurrently, try to exit a few using the END command. This releases memory used by the screens.
- If the PARM library has been modified and you are working under TSO, try to log on again. If you are working under ROSCOE, you may have to shut down ROSCOE and bring it up again.

**BAO539S ERROR IN CONTROL-M/ANALYZER INSTALLATION PARAMETERS - INVALID DATETYP**

**Explanation:** Invalid DATETYP Control-M/Analyzer installation parameter. The DATETYP parameter specifies date format used at installation.

Valid values are:

- A (mmddyy)
- W (ddmmyy)
- J (yymmdd)

For more information, see the operational parameters section in the IOA installation chapter in the *INCONTROL for z/OS Installation Guide*.

The requested function is terminated.

**Corrective Action:** Contact your INCONTROL administrator. Set the DATETYP parameter in the IOAPARM member to a valid value.

**BAO540S CONTROL-M/ANALYZER ACTIVE BALANCING FILE IS FULL. NOTIFY THE IOA ADMINISTRATOR**

**Explanation:** Highlighted, unrollable message.

The Control-M/Analyzer Active Balancing file is full. There is no more space in the Active Balancing file for new missions.

The mission order is not placed in the Active Balancing file.

**Corrective Action:** Contact your IOA administrator immediately. It may be necessary to increase its size. Compress the Active Balancing files.
BAT messages

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

Messages BAT900 through BAT9xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

BAT9A3I BUILDING OF CONTROL-D ACTIVE TRANSFER FILE STARTED

Explanation: This information message indicates that the CTDBAT program, which formats the Active Transfer file, started.

Corrective Action: No action is required.

BAT9A4I BUILDING OF CONTROL-D ACTIVE TRANSFER FILE ENDED

Explanation: This information message indicates that the CTDBAT program, which is used for formatting the Active Transfer file, has ended normally.

Corrective Action: No action is required.

BAT9A5S CONTROL-D ACTIVE TRANSFER FILE WAS NOT BUILT

Explanation: An error occurred during the formatting of the Active Transfer file (the CTDBAT program). Formatting is terminated.

Corrective Action: Check the system log for a previous message regarding the error. Correct the problem, and reformat the file.

BAT9A6S OPEN OF CONTROL-D ACTIVE TRANSFER FILE FAILED

Explanation: The probable cause is a missing DAATF DD statement. Formatting is terminated.

Corrective Action: Check and correct the DAATF DD statement.

BAT9A7S CONTROL-D ACTIVE TRANSFER FILE WRITE ERROR

Explanation: The format routine received an I/O error when accessing the Active Transfer file. An I/O error was encountered by the CTDBAT program when accessing the Active Transfer file.

Possible causes are:

- A hardware failure may have occurred.
- The Active Transfer file specification contains invalid parameters.

Formatting is terminated.

Corrective Action: Do one of the following:
After the hardware problem has been resolved, reformat the file.

Check and correct the DCB parameters specified in the DAATF DD statement, then reformat the file.

**BAT9A8S OPEN OF IOA LOG FILE FAILED**

**Explanation:** The IOA Log file is unavailable for processing.

Formatting is terminated.

**Corrective Action:** Check and correct the DALOG DD statement, then reformat the Active Transfer file.

**BAT9A9S NUMBER OF RECORDS IN ACTIVE TRANSFER FILE IS LESS THAN 3**

**Explanation:** The CTDBAT program determines the number of records for the Active Transfer file from the ATFBLK installation parameter in the CTDPARM member. This value cannot be less than 3.

Formatting is terminated.

**Corrective Action:** Correct the CTDPARM member, then reformat the Active Transfer file.

**BCL messages**

This group includes messages for the IOA (infrastructure) product.

**Messages BCL300 through BCL3xx**

This group includes messages for the IOA (infrastructure) product.

**BCL306S ERROR WHILE READING PARAMETERS - CALENDAR NOT BUILT**

**Explanation:** There was an error in the parameters for the IOABLICAL utility, or no parameters were specified.

The IOABLICAL utility returns a condition code of 12. The calendar is not built.

**Corrective Action:** Correct the parameters and rerun the utility.

**BCL307S INVALID SYNTAX IN THE PARAMETER CARD - CALENDAR NOT BUILT**

**Explanation:** There was an error in the parameters for the IOABLICAL utility, or no parameters were specified.

The IOABLICAL utility returns a condition code of 12. The calendar is not built.

**Corrective Action:** Correct the parameters and rerun the utility.

**BCL308S INVALID/MISSING OPERATOR - CALENDAR NOT BUILT**

**Explanation:** An operator is missing between the calendars.

Valid operators for the IOABLICAL utility are:
The IOABLCAL utility returns a condition code of 12. The calendar is not built.

**Corrective Action:** Correct the parameters and rerun the utility.

BCL309S CALENDAR *calName* DOES NOT CONTAIN THE YEAR *yr*

**Explanation:** The *yr* year does not appear in the second calendar (*calName*), but it appears in the first calendar in the IOABLCAL utility. All years that are defined in one calendar must be defined in the other calendar as well.

The variables in this message are:
- *calName* - the name of the second calendar that does not contain *yr*
- *yr* - the year that does not appear in *calName*

The IOABLCAL utility returns a condition code of 12. The calendar is not built.

**Corrective Action:** Either add the year to the second calendar, or delete unnecessary years from the first calendar.

BCL311S MEMBER *memName* IS NOT A VALID CALENDAR

**Explanation:** The specified member (*memName*) is not a calendar in the IOABLCAL utility.

The IOABLCAL utility returns a condition code of 08. The calendar is not built.

**Corrective Action:** Specify a valid calendar name.

BCL312I CALENDAR *calName* HAS BEEN BUILT AND SAVED

**Explanation:** This information message indicates that the IOABLCAL utility has successfully built the calendar.

**Corrective Action:** No action is required.

BCL313S BUILDING A CALENDAR ENDED WITH ERRORS

**Explanation:** An error occurred during the execution of the IOABLCAL utility.

**Corrective Action:** A previous message should describe the error.

BCL314E RELATIVE CALENDAR CAN APPEAR ONLY AS THE SECOND CALENDAR

**Explanation:** The calendar specified as the first in a calculation formula in the IOABLCAL utility is a relative calendar.

The IOABLCAL utility returns a condition code of 08. The calendar is not built.

**Corrective Action:** Correct the calendar calculation formula.
BCL315E CALENDAR2 MUST HAVE SAME NUMBER OF YEARS AS CALENDAR1

Explanation: A shift operation was specified (, W, W,), but calendar_1 and calendar_2 both contain the same years in chronological order.

The calendar is not built. The IOABLCAL utility returns a condition code of 12.

Corrective Action: Adjust both calendars so that they contain the same years in chronological order.

BKC messages

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

Messages BKC400 through BKC4xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

BKC490I CHECKING OF RESULTS OF MISSION misName ODATE= modate TIMESTAMP= misTime

Explanation: This information message indicates that the backup (migration) mission began checking of the results of the backup (migration) utility run.

The variables in this message are:

- misName - the name of the backup or migration mission
- modate - the original scheduling date of the backup or migration mission
- misTime - the time stamp of the backup or migration mission

Corrective Action: No action is required.

BKC491E INVALID PARAMETERS FOR BACKUP/MIGRATION ANALYZE PROGRAM

Explanation: An invalid parameter is specified in the ANALYZE job step of the generated backup (migration) job.

This may occur because the backup (migration) job skeleton was incorrectly modified by a user.

The backup (migration) mission ends NOTOK.

Corrective Action: Call your INCONTROL Administrator.
BKC492W MISSING VOLUME SERIAL NUMBERS FOR DDNAME "TAPE"

**Explanation:** The backup job could not find the volume serial numbers (volsers) of the backup tapes. The first step of the backup job backs up the compressed data sets on tapes specified by the DD name TAPE. The second step of the backup job executes the CTDBKC program, which analyzes the output of the backup process. The second step failed to retrieve volume serial numbers from the JFCB control block. The volser is required for subsequent restores.

Possible causes are:

- The user-tailored JCL of the backup job may contain errors.
- An error occurred during processing of the first step.
- The site backup and restore facility does not use standard label tapes. This is not an error situation.

For information about the correct JCL, refer to the section on backup mission management in the INCONTROL for z/OS Administrator Guide.

**Corrective Action:** If there is an error in the JCL of the backup job, correct the JCL skeleton and rerun the backup job. If an error occurred during processing of the first step of the job, refer to earlier messages generated by the first step, correct the problem, and rerun the job.

BKC493E CDAM FILE WAS NOT BACKED UP: dsname BY MISSION misName ODATE= modate TIMESTAMP= misTime

**Explanation:** The backup utility is unable to backup the dsname data set.

The variables in this message are:

- dsname - the data set name
- misName - the name of the backup mission
- modate - the original scheduling date of the backup mission
- misTime - the time stamp of the backup mission

Possible causes are:

- The data set may have been deleted or uncataloged.
- An I/O error was encountered when backing up the data set.

The backup mission ends NOTOK.

**Corrective Action:** Check the output of the backup utility.

BKC494E OPEN OF BACKUP/MIGRATE UTILITY MESSAGES FILE FAILED

**Explanation:** The open of the SYSIN DD statement failed. This message is produced by the ANALYZE step of the backup or migration job.

Possible causes are:
The SYSIN DD statement has been deleted or its JCL has been modified incorrectly.
The data set referenced by the SYSIN DD statement cannot be opened for sequential read.
The requested backup or migration is not performed. The status of the Backup or Migration Mission is changed to ENDED NOTOK.

**Corrective Action:** Do the following:
1. Check the ANALYZE step of the backup or migration job in the library referenced by the DADSKL DD statement.
2. For the correct format for SYSIN JCL, see the BKPDFDSS sample skeleton job in the Control-D or Control-V SKL library.
3. Modify the JCL as required.
4. Rerun the Backup or Migration Mission.

**BKC495E** NO PENDING BACKUP/MIGRATION MISSION FOUND BY BKPRESET IN ACTIVE MISSION FILE

**Explanation:** This message indicates that BKPRESET utility did not find any pending backup or migration mission in the Active User file.
The utility resets status of all SYSDATA records pending in backup to WAITING FOR BACKUP.

**Corrective Action:** No action is required.

**BKC496E** OPEN OF ACTIVE MISSIONS FILE FAILED. DDNAME "DAAMF"

**Explanation:** Open of the Active Missions file failed. This file is referenced by the DAAMF DD statement.
This message is produced by the ANALYZE step of the backup or migration job. This step executes the CTDBKC program, which analyzes the output of the backup or migration process.

Possible causes are:
- The DAAMF DD statement is missing.
- The data set referenced by the DAAMF DD statement is not the Active Missions file.
- The data set referenced by the DAAMF DD statement is the Active Missions file for another Control-D or Control-V monitor or a different version of Control-D or Control-V.

Backup or migration of the requested data sets is not performed. The status of the backup or migration mission remains BACKUP or MIGRATE IN PROCESS. This status will change to ENDED OK after the backup or migration job is corrected and rerun.

**Corrective Action:** Do the following:
1. Check the ANALYZE step of the backup or migration job in the library referenced by the DADJOB DD statement.
2. Modify or add the DAAMF DD statement.
3. Rerun the job.
4. To prevent a recurrence of this problem, make the same modification to the backup or migration skeleton JCL in the library referenced by the DADSKL DD statement.
BKC497E UNABLE TO UPDATE STATUS OF MISSION \textit{misName} ODATE= \textit{misoDate} TIMESTAMP= \textit{misTime} (RC= \textit{rc})

**Explanation:** where \textit{rc} is the return code of the Active Mission file service.

Backup or migration job cannot update, in the Active Mission file, the status of the mission indicated in the message.

The mission remains in status IN PROCESS.

**Corrective Action:** Use the appropriate utility (BKPRESET or MIGRESET) to reset the mission status. If the problem recurs, prepare the IOA LOG and contact BMC Customer Support.

BKC498I RESULT OF MISSION \textit{misName} ODATE= \textit{modate} TIMESTAMP= \textit{misTime} IS OK

**Explanation:** This information message indicates that the backup (migration) mission has finished successfully.

The variables in this message are:

- \textit{misName} - the name of the backup (migration) mission
- \textit{modate} - the original scheduling date of the backup (migration) mission
- \textit{misTime} - the time stamp of the backup (migration) mission

**Corrective Action:** No action is required.

BKC499E RESULT OF MISSION \textit{misName} ODATE= \textit{modate} TIMESTAMP= \textit{misTime} IS NOT OK

**Explanation:** This message indicates that an error was encountered in the backup (migration) mission execution. The detailed description of the error is given in the previous printed messages.

The variables in this message are:

- \textit{misName} - the name of the backup (migration) mission
- \textit{modate} - the original scheduling date of the backup (migration) mission
- \textit{misTime} - the time stamp of the backup (migration) mission

The backup (migration) mission ends NOTOK.

**Corrective Action:** Check the report of mission execution in the IOALOG and in the output of the backup (migration) job.

BKC49BE CDAM FILE WAS NOT MIGRATED : \textit{dsname} BY MISSION \textit{misName} ODATE= \textit{modate} TIMESTAMP= \textit{misTime}

**Explanation:** The migration utility was unable to migrate the \textit{dsname} data set.

The variables in this message are:
INCONTROL for z/OS Messages Manual

- `dsname` - the data set name
- `misName` - the name of the migration mission
- `modate` - the original scheduling date of the migration mission
- `misTime` - the time stamp of the migration mission

Possible causes are:
- The data set may have been deleted or uncataloged.
- An I/O error was encountered when migrating the data set.

The migration mission ends NOTOK.

**Corrective Action:** Check the output of the migration utility.

_BKC49CE INDEX FILE WAS NOT MIGRATED: dsname BY MISSION misName ODATE= modate TIMESTAMP= misTime_

**Explanation:** The migration utility was unable to migrate the `dsname` data set.

The variables in this message are:
- `dsname` - the data set name
- `misName` - the name of the migration mission
- `modate` - the original scheduling date of the migration mission
- `misTime` - the time stamp of the migration mission

Possible causes are:
- The data set may have been deleted or uncataloged.
- An I/O error was encountered when migrating the data set.

The migration mission ends NOTOK.

**Corrective Action:** Check the output of the migration utility.

_BKC49DS INVALID THIRD PARAMETER WAS SUPPLIED IN PARM FOR ANALYZE. PRIMARY OR SECONDARY MUST BE SPECIFIED_

**Explanation:** During a generated migrating reports job, an invalid parameter was found in the PARM field of the ANALYZE job step.

The reports migration fails.

**Corrective Action:** Call your INCONTROL administrator.

_BKC49ES ERROR WHEN ISSUING CTDBKC ENQ. RC: rc_

**Explanation:** While backing up reports or performing a reports migration mission, an internal error occurred.

In this message, `rc` is the internal return code of the error.
The backing up or reports migration mission fails.

**Corrective Action:** Call your INCONTROL administrator.

**BKC49FS MIGRATION JOB RERUN IS NOT ALLOWED**

**Explanation:** This message is issued when the user tries resubmit the primary or secondary migration job from the CTD JOB library after this job has already been run.

The migration job fails with a return code of 20.

**Corrective Action:** Check if the previous run of this job ended successfully.

- If the job ended successfully, do not rerun this job but run the secondary job if this is primary or the primary job if this is secondary.
- If the job has not ended successfully before and it is necessary rerun it, perform following steps:
  - Run the MIGRESET utility several times until the BKC495E message is issued.
  - Rerun the migration mission from the Active Missions screen.

**BKC49GS SECONDARY RUN IS REQUIRED AND SECPREF= IS NOT DEFINED IN IOASPRM**

**Explanation:** This message identifies an internal error that occurred during a reports migration mission.

The reports migration mission fails.

**Corrective Action:** Call your INCONTROL administrator.

**BKC49HE mig_stage WAS NOT SUBMITTED - ERROR**

**Explanation:** An error occurred during a reports migration mission, and the mission failed.

In this message, `mig_stage` identifies the migration stage at which the mission failed. Valid values are:

- PRIMARY
- SECONDARY

**Corrective Action:** Call your INCONTROL administrator.

**BKC49JI mig_stage ENDED [NOT] OK**

**Explanation:** This information message indicates that a reports migration mission stage has ended.

In this message, `mig_stage` identifies the migration stage.

Valid values are:

- PRIMARY
- SECONDARY

**Corrective Action:** If the message indicates that the reports migration mission ended NOT OK, call your INCONTROL administrator.
**BKC49KE** INDEX FILE WAS NOT BACKED UP: *dsname* BY MISSION *misName* ODATE= *modate* TIMESTAMP= *mTime*  

**Explanation:** The backup utility was unable to back up the *dsname* data set.  
The variables in this message are:  
- *dsname* - the data set name  
- *misName* - the name of the backup mission  
- *modate* - the original scheduling date of the backup mission  
- *mTime* - the time stamp of the backup mission  

Possible causes are:  
- The data set may have been deleted or uncataloged.  
- An I/O error was encountered when backing up the data set.  
The backup mission ends NOTOK.  

**Corrective Action:** Check the output of the backup utility.

**BKC49ME** NO PENDING MISSION WITH TIMESTAMP= *mTime* FOUND IN ACTIVE MISSION FILE  

**Explanation:** This message indicates that the backup (migration) job did not find the related pending backup (migration) mission in the Active Mission file.  
This may occur because the backup (migration) mission was removed from the Active Mission file or was reset by the BKPRESET utility before the job finished.  
In this message, *mTime* is the time stamp of the backup (migration) mission.  
The backup (migration) job only prints the LOG of the backup (migration) utility.  

**Corrective Action:** Check the IOALOG.

**BKC49NI** {BACKUP | PRIMARY | SECONDARY} MISSION *misName* ODATE= *modate* TIMESTAMP= *mTime* IS RESET  

**Explanation:** This information message indicates that the BKPRESET utility successfully reset the backup (or primary migration or secondary migration) mission in the Active Mission file.  
The variables in this message are:  
- *misName* - the name of the backup (migration) mission  
- *modate* - the original scheduling date of the backup (migration) mission  
- *mTime* - the time stamp of the backup (migration) mission  

**Corrective Action:** No action is required.
BKC49PS DUE TO SEVERE ERROR POINTED ABOVE NEITHER SYSDATA NOR INDEX RECORD IS COPIED TO HISTORY/MIGRATION FILE

**Explanation:** Due to a severe error that occurred during the backup (migration) job execution, neither the SYSDATA nor INDEX record was copied to the History (Migration) User file.

This message is displayed with the previous messages in the backup (migration) job's output.

The backup (migration) job only prints the LOG of the backup (migration) utility.

**Corrective Action:** Check the output of the backup (migration) job.

BKC49QE UNABLE TO UPDATE STATUS OF MISSION *misName* ODATE= *misoDate* TIMESTAMP= *misTime* (UPDATE QUEUE OVERFLOW)

**Explanation:** Backup or migration job cannot update, in the Active Mission file, the status of the mission indicated in the message because of overflow of the update queue in the Active Mission file service.

The mission remains in status IN PROCESS.

**Corrective Action:** Use the appropriate utility (BKPRESET or MIGRESET) to reset the mission status. If the problem recurs, prepare the IOA LOG and contact BMC Customer Support.

BKP messages

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

Messages BKP400 through BKP4xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

BKP475I BACKUP/MIGRATE TASK STARTED

**Explanation:** This information message indicates that a backup or migration task is starting.

**Corrective Action:** No action is required.

BKP476I MISSION {STARTED | RESTARTED} WITH TIMESTAMP= *misTime*

**Explanation:** This information message indicates which backup (migration) mission is starting or restarting, and its time stamp.

In this message, *misTime* is the identity of the backup (migration) mission that is starting or re-starting.

**Corrective Action:** No action is required.
BKP477E INSUFFICIENT STORAGE TO COMPLETE THIS bkup/migrate MISSION

Explanation: There is insufficient storage to complete the bkup/migrate backup or migration mission.

The status of this mission is set to ENDED NOTOK.

Corrective Action: Increase the REGION size for the Control-D or Control-V monitor and rerun the backup or migration mission. If the REGION size cannot be increased, make sure the backup or migration mission does not run concurrently with other missions. If the problem persists, contact your INCONTROL administrator.

BKP478I bkup/migrate MISSION ENDED OK

Explanation: This information message indicates that a backup or migration mission finished executing with status ENDED OK.

In this message, bkup/migrate is the identity of the backup or migrate mission that has ended.

Corrective Action: No action is required.

BKP479E bkup/migrate MISSION ENDED NOT OK

Explanation: This message indicates that a backup or migration mission finished executing with status ENDED NOTOK. The IOA Log file and the backup or migration job should contain one or more messages indicating the reason.

In this message, bkup/migrate is the identity of the backup or migrate mission that has ended.

Corrective Action: No action is required.

BKP47BI {BACKUP | PRIMARY | SECONDARY} jobId SUBMITTED WITH TIMESTAMP= misTime

Explanation: This information message indicates that the backup (migration) job generated by the backup (migration) mission is submitted for execution.

The variables in this message are:
- jobId - the system identifier of the submitted job.
- misTime - the identity of the backup (migration) mission. It is copied to the generated job.

Corrective Action: No action is required.

BKP47CI {BACKUP | PRIMARY | SECONDARY} JOB PLACED IN CONTROL-D JOB LIBRARY WITH TIMESTAMP= misTime

Explanation: This information message indicates that the backup (or the migration) job generated by the backup (or the migration) mission is placed to the Control-D JOB library.

In this message, misTime is the identity of the backup (migration) mission. It is copied to the generated job.

Corrective Action: No action is required.
BKP480E NO REPORTS TO BE BACKED UP/ MIGRATED BY THIS MISSION

**Explanation:** The Active User Report List file was searched for backup or migration requests. No backup or migration request with this mission name was waiting to be executed.

The status of this mission is set to ENDED NOTOK.

**Corrective Action:** No action is required.

BKP481E INVALID RETURN CODE rc FROM USER EXIT CTDX010 - missionName STOPPED

**Explanation:** The Control-D or Control-V exit CTDX010 ended with a return code of rc.

Possible values of rc are:

<table>
<thead>
<tr>
<th>rc</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>Submit the backup or migration job.</td>
</tr>
<tr>
<td>4</td>
<td>Do not submit the backup/migration job.</td>
</tr>
</tbody>
</table>

The status of this mission is set to ENDED NOTOK.

**Corrective Action:** Do the following:

1. Correct the problem in the CTDX010 exit.
2. Assemble and link-edit this exit.
3. Rerun the backup or migration mission. Control-V will call the new version of the exit automatically.

BKP482E INVALID RETURN CODE rc FROM CTMMEM - missionName STOPPED

**Explanation:** Control-D or Control-V received a return code of rc from the CTMMEM internal module, while trying to update the backup or migration job JCL library referenced by the DADJOB DD statement. The member name is the same as the name of the backup or migration mission.

The variables in this message are:

- rc - the return code from the CTMMEM module
- missionName - the identity of the problematic backup or migration mission

Possible return codes and their causes are:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>12</td>
<td>DSN referenced by the DADJOB DD statement is not in the DADSKL member. This can occur when trying to read or write the data set.</td>
</tr>
<tr>
<td>Return Code</td>
<td>Meaning</td>
</tr>
<tr>
<td>-------------</td>
<td>---------</td>
</tr>
<tr>
<td>16</td>
<td>DSN referenced by the DADJ OB DD statement is not a partitioned data set.</td>
</tr>
<tr>
<td>20</td>
<td>DSN referenced by the DADJ OB DD statement contains a record format which is not fixed.</td>
</tr>
<tr>
<td>24</td>
<td>DSN referenced by the DADJ OB DD statement contains a record length which is not 80.</td>
</tr>
<tr>
<td>32</td>
<td>The DADJ OB DD statement is missing.</td>
</tr>
<tr>
<td>36</td>
<td>DSN referenced by the DADJ OB DD statement is not in the catalog.</td>
</tr>
<tr>
<td>56</td>
<td>Library referenced by the DADJ OB DD statement is full or an abend occurred.</td>
</tr>
</tbody>
</table>

The status of this mission is set to ENDED NOTOK.

**Corrective Action:** Do the following:
1. Look for additional messages in the IOA Log file.
2. Correct the problem with the library.
3. Shut down Control-D or Control-V and reactivate it.
4. Rerun the backup or migration mission.

**BKP483E INVALID RETURN CODE rc FROM CTDCND - missionName STOPPED**

**Explanation:** Control-D or Control-V received the invalid return code rc from the CTDCND internal Control-D module while trying to add the %COND% prerequisite condition to the IOA Conditions file.

The variables in this message are:
- rc - the return code from the CTDCND module
- missionName - the identity of the problematic mission

The status of this mission is set to ENDED NOTOK.

**Corrective Action:** Note the return code (rc) and the mission name (missionName). Contact your INCONTROL administrator.

**BKP484W ONLY number DATASETS WILL BE BACKED UP.**

**Explanation:** The number of data sets selected by the backup mission exceeded the maximum number of data sets that can be handled within one mission execution.

In this message, number is the specified number of data sets to be backed up.
Only number data sets will be backed up during the current mission execution.

**Corrective Action:** Order an additional appropriate backup mission (or order the same backup mission once again) to back up the remaining data sets.

**BKP487S MIGRATION FILE WAS FORMATTED WITH INCORRECT COMPRESSION TABLE**

**Explanation:** A migration file was opened for multistage migration, but the migration file was formatted with an old compression table.

A multistage migration mission stores log data about the last three migration stages in the SYSDATA record. If a migration file formatted with an old compression table is used, this data is lost.

The migration mission ends NOTOK.

**Corrective Action:** Do the following:

1. Use the CTDUFDFUL job from the Control-D JCL library to unload the migration file.
2. Reformat the migration file.
3. Use the CTDUFRST job from the Control-D JCL library to reload the migration file.

**BKP488W MIGRATION OF "cdamName" FROM OSS TO OSS REJECTED**

**Explanation:** While building a migration mission, the Control-D monitor found a request to migrate a CDAM file from one OSS media to another OSS media, but this type of migration is not allowed.

In this message, cdamName is the identity of the CDAM file that was to be migrated.

The cdamName CDAM file is deleted from the list of CDAM files to be migrated.

**Corrective Action:** Change the migration path of the problematic migration mission.

**BKP489I SHUT DOWN UPON REQUEST OF MAIN TASK**

**Explanation:** This information message indicates that the Control-D monitor is shutting down. The Control-D internal backup task is run upon request of the Control-D main task.

The Control-D monitor shuts down.

**Corrective Action:** No action is required.

**BKP48AE skelName SKELETON MEMBER missionName NOT FOUND IN SKL LIBRARY**

**Explanation:** The specified backup or migration skeleton is not in the DADSKL member of the Control-D or Control-V monitor. For each backup and migration mission, a unique skeleton job (member) with the same name must exist in the DADSKL member.

The variables in this message are:

- skelName - the identity of the problematic skeleton
- missionName - the identity of the problematic mission

The problematic mission does not run.
Corrective Action: Rename the problematic mission, or create the required mission skeleton. Resubmit the mission.

BKP48BE CONTROL-D JOB LIBRARY FULL, COMPRESS THE JOB LIBRARY AND RERUN THE MISSION

Explanation: Control-D discovered that its JOB library was full when trying to backup, migrate or restore a file.

The file is not backed up, restored, or migrated.

Corrective Action: Compress the Control-D job library and rerun the backup, migrate, or restore mission.

BKP48CE BACKUP MISSION WAS CHANGED FROM GENERATION TO NUMBER OF DAYS TO KEEP

Explanation: When running a backup job, the user changed the backup mission fields from NUMBER OF GENERATIONS TO KEEP to NUMBER OF DAYS TO KEEP. When at least one backup has been executed, the user cannot change the type of backup in this way.

The backup is not executed.

Corrective Action: Define a new backup mission specifying the NUMBER OF DAYS TO KEEP.

BKP48DE SECONDARY MIGRATION SKELETON skel WAS NOT SUBMITTED RC rc - MISSION CONTINUES

Explanation: An error occurred during the generation of a secondary migration job.

More information about the error is provided in accompanying messages.

The variables in this message are:

- skel - the name of the problematic migration job skeleton
- rc - the return code of the error

The secondary migration job is not submitted.

Corrective Action: Call your INCONTROL administrator.

BKP48EE SECONDARY MIGRATION SKELETON skel DOES NOT CONTAIN %LEVEL% PARAMETER

Explanation: The skeleton of a secondary migration mission job does not contain the mandatory %LEVEL% parameter.

In this message skel is the name of the problematic migration mission job skeleton.

The secondary migration mission job is not submitted.

Corrective Action: Call your INCONTROL administrator.
BKP48FE INVALID SKELETON MEMBER *skel*

**Explanation:** A long line (more than 80 characters) is built by resolving variables in the *skel* skeleton member.

The problematic mission does not run.

**Corrective Action:** Fix the skeleton member and then resubmit the migration mission.

---

**BKR messages**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

**Messages BKR300 through BKR3xx**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

**BKR340I BACKUP/MIGRATION RESET STARTED**

**Explanation:** This information message indicates the start of the backup or migration reset process.

**Corrective Action:** No action is required.

**BKR341E INVALID PARAMETERS FOR BACKUP/MIGRATION RESET PROGRAM**

**Explanation:** This message is issued by the backup/migration reset utility. An invalid parameter was specified for the utility.

A backup/migration reset is not performed.

**Corrective Action:** Correct the parameters in the backup/migration reset utility job, and rerun the job.

**BKR342W BACKUP/MIGRATION JOB OF MISSION misName ODATE= modate TIMESTAMP= misTime IS RUNNING. THE MISSION WILL NOT BE RESET.**

**Explanation:** This message is issued by the backup/migration reset utility. The message warns that the indicated mission has reached the stage of checking the data sets’ backup/migration results, and the mission is therefore not affected by the utility.

The variables in this message are:

- `misName` - the name of the backup/migration mission
- `modate` - the original scheduling date of the backup/migration mission
- `misTime` - the time stamp of the backup/migration mission

The backup/migration reset utility does not affect the indicated mission.
Corrective Action: Perform the appropriate action as described in the utility log.

BKR343E CDAM dsname OR A RELATED FILE HAS NOT BEEN BACKED UP BY MISSION misName ODATE= modate TIMESTAMP= misTime

Explanation: This message is issued by the backup/migration reset utility. The message indicates that the dsname CDAM file, or its related Control-V index file, has not been backed up by the indicated backup mission.

If the utility is running in RESET mode, it resets the backup status of the corresponding report to WAITING FOR BACKUP.

Corrective Action: Rerun the indicated mission.

BKR344I BACKUP/MIGRATION RESET ENDED WITH RC= rc

Explanation: This information message indicates that the backup/migration reset utility has ended with a return code of rc. If the indicated return code is non-zero, the preceding messages explain the reason.

Corrective Action: Perform the appropriate action as noted in the preceding messages.

BKR345E NO PENDING MISSION misName ODATE= modate TIMESTAMP= misTime FOUND IN ACTIVE MISSION FILE

Explanation: This message is issued by the backup/migration reset utility when it is invoked with the MISNAME, MISTIME and MISODATE parameters, and the specified pending mission is not located in the Active Mission File.

A reset of the backup/migration is not performed.

Corrective Action: Correct the mission specification, and rerun the utility if needed.

BKR346E OPEN OF ACTIVE MISSIONS FILE FAILED. DDNAME=DAAMF

Explanation: The backup/migration reset utility was unable to open the Active Mission File. The utility terminates execution.

Corrective Action: Check the messages in the utility log, and correct the situation accordingly.

BKR347E UNABLE TO UPDATE STATUS OF MISSION misName ODATE= modate TIMESTAMP= misTime (RC= rc)

Explanation: This message is issued by the backup/migration reset utility. The message indicates that the utility was unable to reset the status of the indicated mission, due to an internal error.

Corrective Action: Processing of the indicated mission is skipped, and the utility continues processing the remaining missions. Contact your INCONTROL representative.

BKR348I RESULT OF MISSION misName ODATE= modate TIMESTAMP= misTime IS OK

Explanation: This information message is issued by the backup/migration reset utility, and indicates that the utility found no report waiting for a completion of the indicated mission.
When running in RESET mode, the backup/migration utility sets the status of the indicated mission to ENDED OK.

**Corrective Action:** No action is required.

**BKR349E RESULT OF MISSION misName ODATE= modate TIMESTAMP= misTime IS NOT OK**

**Explanation:** This message is issued by the backup/migration reset utility. The utility found a report waiting for completion of the indicated mission. The corresponding CDAM's data set name is displayed in the preceding messages.

When running in RESET mode, the backup/migration reset utility sets the status of the indicated mission to ENDED NOTOK.

**Corrective Action:** Rerun the indicated mission.

**BKR34AI MISSION misName ODATE= modate TIMESTAMP= misTime IS RESET**

**Explanation:** This information message is issued by the backup/migration reset utility while running in RESET mode. The message indicates that the status of the indicated mission is reset.

**Corrective Action:** Rerun the indicated mission if it ENDED NOTOK, or order another instance of the mission.

**BKR34BE CDAM dsname OR A RELATED FILE HAS NOT BEEN PRIMARILY/SECONDARILY MIGRATED BY MISSION misName TIMESTAMP= misTime**

**Explanation:** This message is issued by the backup/migration reset utility. The dsname CDAM file, or its related Control-V index file, has not been migrated by the indicated migration mission.

If the utility is running in RESET mode, it resets the status of the corresponding report to WAITING FOR MIGRATION.

**Corrective Action:** Rerun the indicated mission.

**BKR34CE UNABLE TO UPDATE STATUS OF MISSION misName ODATE= modate TIMESTAMP= misTime (SECURITY VIOLATION)**

**Explanation:** This message is issued by the backup/migration reset utility. The utility was unable to update the status of the indicated mission in the Active Mission File due to security reasons. The mission remains pending.

**Corrective Action:** Contact the security administrator to correct the problem, and then rerun the utility.

**BKR34DI UNABLE TO UPDATE STATUS OF MISSION misName ODATE= modate TIMESTAMP= misTime (MISSION DELETED)**

**Explanation:** This information message is issued by the backup/migration reset utility. The utility was unable to update status of the indicated mission because the mission was deleted from the Active Mission File during the utility execution.
Corrective Action: Order another instance of the mission if its result is NOTOK.

**BKR34EE ERROR IN PARAMETER MISNAME**

**Explanation:** This message is issued by the backup/migration reset utility when the MISNAME parameter is not specified or is specified incorrectly. 
The backup/migration reset is not performed.

**Corrective Action:** Correct the MISNAME parameter’s specifications and rerun the utility.

**BKR34FE ERROR IN PARAMETER MISTIME**

**Explanation:** This message is issued by the backup/migration reset utility when the MISTIME parameter is mandatory, but either it is not specified or it is specified incorrectly. 
The backup/migration reset is not performed.

**Corrective Action:** Correct the MISTIME parameter’s specifications and rerun the utility.

**BKR34GE ERROR IN PARAMETER MISODATE**

**Explanation:** This message is issued by the backup/migration reset utility when the MISODATE parameter is mandatory, but either it is not specified or it is specified incorrectly. 
The backup/migration reset is not performed.

**Corrective Action:** Correct the MISODATE parameter’s specifications and rerun the utility.

**BKR34HI {BACKUP | MIGRATION} MISSION misName ODATE= misoDate TIMESTAMP= misTime IS ALLOWED FOR START**

**Explanation:** This information message is issued by the backup/migration reset utility. It means that the utility has detected the start of processing of the indicated mission, and will not affect it during the execution.

**Corrective Action:** No action is required.

**BKR34SE UNABLE TO UPDATE STATUS OF MISSION misName ODATE= misoDate TIMESTAMP= misTime (UPDATE QUEUE OVERFLOW)**

**Explanation:** The BKPRESET or MIGRESET utility cannot reset the status of the mission indicated in the message because of overflow of the update queue in the Active Mission file service. 
The mission remains in status IN PROCESS.

**Corrective Action:** Rerun the utility. If the problem recurs, prepare the IOA LOG and contact BMC Customer Support.

**BLD messages**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.
Messages BLD900 through BLD9xx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

BLD971S OPEN OF CONTROL-M {ACTIVE | HISTORY} JOBS FILE FAILED

**Explanation:** Either the FORMCKP utility, which allocates and formats the Active Jobs file, or the FORMHST utility, which allocates and formats the Active History file, failed to open the file for formatting.

Possible causes are:

- The DACKPT DD statement (for the Active Jobs file) is missing.
- The DAHIST DD statement (for the History Jobs file) is missing.
- There is insufficient memory for the job.

The utility ends with a condition code of 08.

**Corrective Action:** If a DD statement is missing, add the correct DD statement and rerun the job. If the problem is memory, specify a higher value for the REGION parameter.

BLD972I BUILDING OF CONTROL-M {ACTIVE | HISTORY} JOBS FILE STARTED

**Explanation:** This information message indicates the normal start of one of the following Control-M utilities:

- the FORMCKP utility that allocates and formats the Active Jobs file
- the FORMHST utility that allocates and formats the History Jobs file

**Corrective Action:** No action is required.

BLD973I BUILDING OF CONTROL-M {ACTIVE | HISTORY} JOBS FILE ENDED

**Explanation:** This information message indicates the normal termination of one of the following Control-M utilities:

- the FORMCKP utility that allocates and formats the Active Jobs file
- the FORMHST utility that allocates and formats the History Jobs file

**Corrective Action:** No action is required.

BLD974S CONTROL-M {ACTIVE | HISTORY} JOBS FILE WAS NOT BUILT.

**Explanation:** Either the FORMCKP utility, which allocates and formats the Active Jobs file, or the FORMHST utility, which allocates and formats the Active History file, failed.

**Corrective Action:** Check the previous error messages which describe the type of error, and correct the problem accordingly.
BLD975S CONTROL-M {ACTIVE | HISTORY} JOBS FILE WRITE ERROR

**Explanation:** An I/O error occurred while formatting the Control-M Active Jobs file or History Jobs file. This error may be caused by an incompatibility between the installation parameters, which are contained in CTMPARM, that define the Active Jobs file or the History Jobs file, and the JCL SPACE and DCB parameters.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct either the JCL or the Installation Parameters file.

BLD976S OPEN OF IOA LOG FILE FAILED

**Explanation:** The FORMCKP utility, which is used to allocate and format the Active Jobs file, could not open the IOA Log.

Possible causes are:

- The DALOG DD statement is missing.
- The file allocated to the DALOG DD statement is not the IOA Log file.
- The file allocated to the DALOG DD statement is the IOA Log file, but it is from a different version or a different IOA installation.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job. For more information about the FORMCKP utility, see the *INCONTROL for z/OS Utilities Guide*.

BLG messages

This group includes messages for the IOA (infrastructure) product.

Messages BLG900 through BLG9xx

This group includes messages for the IOA (infrastructure) product.

BLG961S IOA LOG FILE MUST CONTAIN MORE THAN 100 RECORDS

**Explanation:** The value of the LOGSIZE IOA Installation Parameter is less than 100.

The utility stops executing with a condition code of 08.

**Corrective Action:** Do the following:

1. Enter the INCONTROL Installation and Customization Engine (ICE).
2. Redo the space calculation for the LOG file and save the parameters.
3. Rerun the utility.

BLG962S OPEN OF IOA LOG FILE FAILED

**Explanation:** The Log file format program failed to open the file for formatting. A possible cause is that the DALOG DD statement is missing.
The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

**BLG963S FORMATTING IOA LOG - WRITE I/O ERROR**

**Explanation:** An I/O error occurred while formatting the IOA Log file. This error may occur when there is incompatibility between the definition of the Log file in the Installation Parameters (IOAPARM) and the JCL SPACE and DCB parameters.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct either the JCL or the Installation Parameters.

**BLG964I FORMATTING OF IOA LOG FILE STARTED**

**Explanation:** This information message indicates that the IOA Log file format process has started.

**Corrective Action:** No action is required.

**BLG965I FORMATTING OF IOA LOG FILE ENDED**

**Explanation:** This information message indicates that the IOA Log file format process has terminated normally.

**Corrective Action:** No action is required.

**BLG966S IOA LOG FILE WAS NOT BUILT**

**Explanation:** Formatting of the IOA Log file failed.

**Corrective Action:** Look in the job log or SYSPRINT for error messages that describe the type of error.

**BLG967S IOA LOG FILE RECFM IS NOT F OR FB**

**Explanation:** The Record format parameter specified in the DALOG DD statement is not F (fixed) or FB (fixed blocked).

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

**BLG968S IOA LOG FILE BLOCK SIZE MUST BE A MULTIPLE OF 200**

**Explanation:** The block size specified in the DALOG DD statement must be a multiple of 200, which is the Log file record length.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

**BLG969S IOA LOG FILE ALLOCATION IS TOO SMALL. USE ICE TO CALCULATE THE IOA LOG FILE SIZE**

**Explanation:** The space allocated for the IOA Log file cannot contain the number of records specified in the LOGSIZE IOA installation parameter.
The utility stops executing with a condition code of 08.

**Corrective Action:** Do the following:
1. Enter the INCONTROL Installation and Customization Engine (ICE).
2. Redo the space calculation for the LOG file and save the parameters.
3. Rerun the job with the new value calculated by ICE.

**BLG96AW IOA LOG FILE IS TOO LARGE. ONLY numBlocks BLOCKS WILL BE FORMATTED**

**Explanation:** The space allocated for the IOA Log file is greater than the space required to hold the number of records specified in the LOGSIZE IOA installation parameter.

In this message, *numBlocks* is the number of blocks that will be used.

The utility formats the file according to the LOGSIZE specification and ends with a condition code of 04. Some of the space in the file will not be used.

**Corrective Action:** To reformat the file with the correct space allocation, do the following:
1. Enter the INCONTROL Installation and Customization Engine (ICE).
2. Redo the space calculation for the LOG file and save the parameters.
3. Rerun the job with the new value calculated by ICE.

**BLG96BS serviceName FAILED WITH RETURN CODE rc AND REASON CODE rsn**

**Explanation:** A service invoked by the Log format utility failed.

The variables in the message are:
- *serviceName* - the name of the service.
- *rc* - the return code returned by the service.
- *rsn* - the reason code returned by the service.

The utility stops executing with a condition code of 08.

**Corrective Action:** Save the job’s SYSOUT and have your system programmer call your IOA representative for assistance.

**BLG96CS IOA LOG FILE BLKSIZE MUST BE EQUAL TO LRECL WHEN RECFM=F IS USED**

**Explanation:** The DCB attributes specified in the DALOG DD statement are incorrect.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job:
- RECFM can be either F or FB
- When RECFM=F, LRECL and BLKSIZE should be 200 or a multiple of 200.
- When RECFM=FB, LRECL must be 200 and BLKSIZE must be a multiple of 200.

**BLG96DS I OA LOG FILE LRECL MUST BE EQUAL TO 200 WHEN RECFM=FB IS USED**

**Explanation**: The DCB attributes specified on the DALOG DD statement are incorrect. The utility stops executing with a condition code of 08.

**Corrective Action**: Correct the JCL and rerun the job:
- RECFM can be either F or FB
- When RECFM=F, LRECL and BLKSIZE should be 200 or a multiple of 200.
- When RECFM=FB, LRECL must be 200 and BLKSIZE must be a multiple of 200.

**BLT messages**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**Messages BLT800 through BLT8xx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**BLT893I CURRENT TABLE tableName LIBRARY lib**

**Explanation**: This information message is produced by the CTMBLT Control-M utility. It accompanies other messages that identify
- the actual error condition
- the data in the input stream that caused the error

The variables in this message are:
- `tableName` - the name of the table in which the error occurred
- `lib` - the name of the library in which the error occurred

Processing continues, and terminates with a nonzero return code.

**Corrective Action**: Correct the error and rerun the job.

**BLT894I JOB =jobName**

**Explanation**: This information message is produced by the CTMBLT Control-M utility. It accompanies other messages that identify
- the actual error condition
- the data in the input stream that caused the error
- In this message, jobName is the name of the job that was being processed when the error occurred. If no value is given for jobName, the problematic parameter may be job-independent, for example, a global or super-global parameter.

Processing continues, and terminates with a nonzero return code.

Corrective Action: Correct the error and rerun the job.

BLT895I JOB =jobName, KEYWORD =keywd (reason)

Explanation: This information message is produced by the CTMBLT or CTMTLB Control-M utility. It usually accompanies other messages that identify
- the actual error condition
- the data in the input stream that caused the error

The variables in this message are:
- jobName - the name of the job (MEMNAME) that was being processed when the error occurred
- keywd - the problematic keyword parameter
- reason - this can be one of the following values:
  - For the CTMBLT utility, if GLOBAL appears in the message text, the keyword parameter is either a global or super-global parameter.
  - For the CTMTLB utility, when NOSUPP appears in the message text, the field in the job scheduling definition designated by the keyword parameter is not supported when producing the XML file. The field may either be ignored by the utility or may require the user to modify the job scheduling definition. See the INCONTROL Utilities Guide and the User Response (below) for further information.

Processing continues, and terminates with a nonzero return code.

Corrective Action: Correct the error, if necessary, and rerun the job.

If the error is a result of executing one of the Control-M conversion tools, then the following scenario occurred: The conversion created a distributed job definition, but included in the definition a parameter which is not supported in the Control-M distributed platform.

For example, if the non-supported keyword is PREV_DAY, then the conversion determined that the job definition requires a SAC parameter (the equivalent of PREV_DAY on the mainframe platform) to properly schedule the job, because of a Control-M NEWDAY time that differs from midnight. However, the PREV_DAY parameter is not valid for distributed job definitions, so the user must either manually adjust the job's scheduling criteria or change the site's NEWDAY time and rerun the conversion.

BLT896I JOB =jobName, KEYWORD = keywd (GLOBAL), VALUE = val

Explanation: This information message is produced by the CTMBLT Control-M utility. It accompanies other messages that identify
the actual error condition
• the data in the input stream that caused the error

The variables in this message are:
• jobName - the name of the job that was being processed when the error occurred
• keywd - the problematic keyword parameter
• val - the value that caused the error
• GLOBAL - When GLOBAL appears in the text of the message, the keyword parameter is either a global or super-global parameter.

Processing continues, and terminates with a nonzero return code.

Corrective Action: Correct the error and rerun the job.

BLT897E MANDATORY PARAMETER parm IS MISSING

Explanation: A mandatory parameter statement (parm) is missing.

Processing continues, and terminates with a nonzero return code.

For ON-CAPTURE blocks, the message contains the following text:
PARAMETER INTO/SEARCH parm IS MISSING

Where parm is the value of the ON-CAPTURE parameter (block header ID or *END) that caused the previous block to be evaluated.

Note that "INTO/SEARCH" is an abbreviation for "CAPT-INTO or CAPT-SEARCH".

Corrective Action: Add the missing statement or statements, and rerun the job.

BLT898E KEYWORD= keywd, VALUE= val INVALID

Explanation: A CTMBLT utility keyword input statement is incorrect for one of the following reasons:
• the keyword input statement does not specify a valid parameter
• the value specified for val is too long
• no value is specified for val
• the value specified for val contains invalid characters

The values in this message are:
• keywd - the problematic keyword input statement
• val - the problematic value

The keywd keyword input statement is not processed. Processing continues and the utility ends with a return code of 08.

Corrective Action: Correct the keyword input statement and rerun the job.
INCONTROL for z/OS Messages Manual

BLT899E MISPLACED KEYWORD PARAMETER *keywd*

**Explanation:** The *keywd* keyword parameter is incorrectly placed within the run stream of the CMTBLT Control-M utility control statement.

Many keyword parameters in CTMBLT control statements are location-sensitive, meaning that they must be placed in the correct position within the control statement.

This error is sometimes caused by a prior error.

Processing continues, and terminates with a nonzero return code.

**Corrective Action:** Correct the error and rerun the job.

BLT89AI TABLE *tableName* action IN LIBRARY *lib* BY *userId*

**Explanation:** The CTMBLT or CTMTBUPD Control-M utility has added/replaced or updated the *tableName* table in the *lib* library. The action was performed by the *userId* user or job.

For the CTMBLT utility, ignore this message if it is displayed when both the following conditions exist:

- a scheduling table is being ordered or forced
- this scheduling table is not being saved into a scheduling library

This can occur, for example, if MEM-OVERWRITE is set to ORDER or FORCE.

For the CTMTBUPD utility, the table remains unchanged if the jobs selected in the table are not affected by the update criteria (for example, if the update criteria specifies IN or OUT but no IN or OUT condition in the job definitions match).

**Corrective Action:** No action is required.

BLT89BI TOTAL NUMBER OF TABLES PROCESSED= *num*

**Explanation:** The CTMBLT or CTMTBUPD Control-M utility added or replaced *num* tables in the job scheduling library that was specified in the LIBRARY control statement (CTMBLT only) or the DASCHD DD statement.

For the CTMTBUPD utility, there are runs after which one or more of the replaced tables appear unchanged. For more information, see message BLT89AI.

**Corrective Action:** No action is required.

BLT89CW JOB SCHEDULING DEFINITION VERSION INCOMPATIBLE - MODEL VERSION USED.

**Explanation:** In the CTMBLT utility, the MODEL parameter has specified a job scheduling definition which was created in a version earlier than 6.2.0. The utility creates the scheduling table using that earlier scheduling definition format (earlier than 6.2.0) of the job in the MODEL parameter. This may potentially cause corruption in the newly created scheduling table due to format differences.

The utility continues, but ends with a return code of 8.

**Corrective Action:** To prevent this error, ensure that all jobs specified in the MODEL parameter are in version 6.2.0 format.
BLT89DI NO JOB DEFINITIONS SELECTED BY "SEL" CRITERIA

**Explanation:** In the CTMTBUPD utility, the SEL selection criteria did not cause any job definitions to be selected.

The job ends with a return code specified by the NOUPDRC control parameter (default 0).

**Corrective Action:** No action is necessary.

BMS messages

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

Messages BMS900 through BMS9xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

BMS971S OPEN OF CONTROL-D ACTIVE MISSIONS FILE FAILED

**Explanation:** The CTDFRAMS Control-D utility, which is used to allocate and format the Active Missions file, failed to open the file for formatting.

Possible causes are:

- The DAAMF DD statement is missing.
- There is insufficient memory for the job.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

BMS972I BUILDING OF CONTROL-D ACTIVE MISSIONS FILE STARTED

**Explanation:** This information message indicates that the CTDFRAMS utility, which allocates and formats the Active Missions file, has started.

**Corrective Action:** No action is required.

BMS973I BUILDING OF CONTROL-D ACTIVE MISSIONS FILE ENDED

**Explanation:** This information message indicates that the CTDFRAMS utility, which allocates and formats the Active Missions file, has ended normally.

**Corrective Action:** No action is required.

BMS974S CONTROL-D ACTIVE MISSIONS FILE WAS NOT BUILT

**Explanation:** The CTDFRAMS utility failed.

**Corrective Action:** Look for additional clarification messages on the IOA Log.
BMS975S CONTROL-D ACTIVE MISSIONS FILE WRITE ERROR

**Explanation:** I/O error while formatting the Control-D Active Missions file.
This error may occur when there is incompatibility between the definition of the Active Missions file in one or more of the following:

- the installation parameters (CTDPARM)
- the JCL SPACE parameter
- the DCB parameters

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct either the JCL or the installation parameters.

BMS976S OPEN OF IOA LOG FILE FAILED

**Explanation:** The CTDFRMS utility, which is used to allocate and format the Active Missions file, could not open the IOA Log.
Possible causes are:

- The DALOG DD statement is missing.
- The file allocated to the DALOG DD statement is not the IOA Log file.
- The file allocated to the DALOG DD statement is the IOA Log file, but it is from a different version or a different IOA installation.
- The IOAFRLOG utility, which allocates and formats the IOA Log, has not yet been run, or did not finish executing normally.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

BNR messages

This group includes messages for the IOA (infrastructure) product.

Messages BNR900 through BNR9xx

This group includes messages for the IOA (infrastructure) product.

BNR941S OPEN OF IOA LOG FILE FAILED

**Explanation:** The CTMFRNRS utility, which allocates and formats a new Conditions file, could not open the IOA Log.

Possible causes are:
The DALOG DD statement is missing.

- The file allocated to the DALOG DD statement is not the IOA Log file.
- The file allocated to the DALOG DD statement is the IOA Log file, but it is of a different version or of a different IOA monitor.
- The CTMFRLLOG utility that allocates and formats the IOA Log was not yet run or did not finish executing normally.

The utility stops executing with a condition code of 08.

**Corrective Action:** Do one of the following:

- Correct the JCL and rerun the job.
- If the IOA Log is not yet formatted, run the CTMFRLLOG utility, then rerun the job.

### BNR943S OPEN OF IOA MANUAL CONDITIONS SYNCHRONIZATION FILE FAILED

**Explanation:** The IOAFRNRS utility, which is used to allocate and format the file, failed to open the file for formatting.

Possible causes are:

- The DACKPT DD statement is missing.
- There is insufficient memory for the job.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL, and rerun the job.

### BNR944I BUILDING OF IOA MANUAL CONDITIONS FILE STARTED

**Explanation:** This information message indicates that the IOAFRNRS utility started.

The IOAFRNRS utility allocates and formats the Manual Conditions file.

**Corrective Action:** No action is required.

### BNR945I BUILDING OF IOA MANUAL CONDITIONS FILE ENDED

**Explanation:** This information message indicates that the IOAFRNRS utility, which allocates and formats the Manual Conditions file, ended normally.

**Corrective Action:** No action is required.

### BNR946S IOA MANUAL CONDITIONS FILE WAS NOT BUILT

**Explanation:** The IOAFRNRS utility failed.

**Corrective Action:** Look for previous error messages which will describe the type of the error.
BRS messages

This group includes messages for the IOA (infrastructure) product.

Messages BRS900 through BRS9xx

This group includes messages for the IOA (infrastructure) product.

BRS981S OPEN OF IOA LOG FILE FAILED

**Explanation:** The IOAFRRES utility, which is used to allocate and format the Control-M Resources file, could not open the IOA Log.

Possible causes are:

- The DALOG DD statement is missing.
- The file allocated to the DALOG DD statement is not the IOA Log file.
- The file allocated to the DALOG DD statement is the IOA Log file, but it is of a different version or of a different IOA monitor.
- The IOAFRLOG utility that allocates and formats the IOA Log was not yet run or did not finish executing normally.

The utility stops executing with a condition code of 08.

**Corrective Action:** Do one of the following:

- Correct the JCL and rerun the job.
- If the Log is not yet formatted, run the CTMFROG utility, then rerun the job.

BRS982S OPEN OF IOA CONDITIONS FILE FAILED

**Explanation:** The IOAFRRES IOA utility, which is used to allocate and format the IOA Conditions file, failed to open the IOA Conditions file for formatting.

Possible causes are:

- The DARESC DD statement is missing.
- There is insufficient memory for the job.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

BRS983S OPEN OF IOA SYNCHRONIZATION FILE FAILED

**Explanation:** The IOAFRRES IOA utility, which is used to allocate and format the Control-M Resources Synchronization file, failed to open the Resources Synchronization file for formatting.

Possible causes are:
The DASINC DD statement is missing.

There is insufficient memory for the job.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

---

**BRS984I BUILDING OF IOA CONDITIONS FILE STARTED**

**Explanation:** This information message indicates that the IOAFRRES utility, which allocates and formats the IOA Conditions file, has started.

**Corrective Action:** No action is required.

---

**BRS985I BUILDING OF IOA CONDITIONS FILE ENDED**

**Explanation:** This information message indicates that the IOAFRRES utility, which allocates and formats the IOA Conditions file, has ended normally.

**Corrective Action:** No action is required.

---

**BRS986S IOA CONDITIONS FILE WAS NOT BUILT**

**Explanation:** The IOAFRRES utility failed.

**Corrective Action:** Look for previous error messages that describe the type of error.

---

**BSD messages**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

---

**Messages BSD300 through BSD3xx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

---

**BSD314I ADDING SMF ID smfid WAS SUCCESSFUL**

**Explanation:** This information message indicates that a new SMF ID (smfid) was added successfully to the CMEM monitor, to the M2S subsystem file, by the FORMSUB3 job.

**Corrective Action:** To make the definition active, stop and restart the Control-M monitor and the Control-O or CMEM monitor on the system with the SMF ID.

---

**BSD315I {BUILDING | UPDATING} OF SUBSYSTEM COMMUNICATION DATASETS STARTED**

**Explanation:** This information message indicates that the FORMSUB1 and FORMSUB2 utilities, which allocate and format Console Subsystem communications files, have started.

**Corrective Action:** No action is required.
BSD316I {BUILDING | UPDATING} OF SUBSYSTEM COMMUNICATION DATASETS ENDED

**Explanation:** This information message indicates that the FORMSUB1 and FORMSUB2 utilities, which allocate and format Console Subsystem communications files, have ended normally.

**Corrective Action:** No action is required.

BSD317S {BUILDING | UPDATING} OF SUBSYSTEM COMMUNICATION DATASETS FAILED

**Explanation:** The FORMSUB1 or the FORMSUB2 utility failed.

**Corrective Action:** Look for a previous error message which describes the cause of the error.

BSD318S OPEN OF DDNAME `ddName` FAILED

**Explanation:** Open of the `ddName` DD statement failed.

Possible causes are:
- The `ddName` DD statement is missing.
- The `ddName` DD statement does not define a valid communication file.

**Corrective Action:** Correct the JCL of the formatting job.

BSD319S I/O ERROR OCCURRED WHILE BUILDING THE SUBSYSTEM COMMUNICATION DATASETS

**Explanation:** An I/O error occurred while the FORMSUB1 or the FORMSUB2 utility was formatting a subsystem communication file.

Possible causes are:
- The utility loaded old and incorrect IOACPRM installation parameters.
- The JCL references an invalid data set.
- The file size defined in the IOACPRM parameters member is different from the size that was defined in the JCL.

**Corrective Action:** Check the JCL of the formatting job, and the location and content of the IOACPRM member.

BSD325S SMFID `smfid` IS NOT DEFINED IN IOA INSTALLATION PARAMETERS

**Explanation:** The FORMSUB1 or the FORMSUB2 utility is running under a CPU that was not defined in the IOACPRM parameters member.

Possible causes are:
- The CPU in which the utility was run was not defined in IOACPRM.
- The utility loaded an incorrect copy of the IOACPRM member.
- The computer in which the utility was run is a multi-CPU computer, and the SID parameter in the SMFPRM \( xx \) member in SYS1.PARMLIB does not define all of the CPUs correctly.

**Corrective Action:** Do the following:
- Check what CPUs were defined in IOACPRM.
- Check where the IOACPRM member was placed.
- If the IOACPRM definition seems to be correct, check the SMF ID that was defined in SYS1.PARMLIB.
- In a multi-CPU computer, issue the MVS command D M=CPU from the console to get a listing of all CPU serial numbers, and compare them with the PARMLIB definitions.

**BSD326E** **MISSING/INVALID SUBSYSTEM PARAMETERS IN IOACPRM**

**Explanation:** The FORMSUB1 or the FORMSUB2 utility encountered one or more subsystem-related parameters in the IOACPRM member that were defined incorrectly or were not defined at all.

**Corrective Action:** Check the following parameter definitions in the IOACPRM member, and correct them if needed:
- SUBSYS
- CTM2SBS
- CPUS.

**BTR messages**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

**Messages BTR0 through BTR0xx**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

**BTR001S** **UNABLE TO OPEN BUNDLE TRACKING FILE**

**Explanation:** The CTDTBTR (Bundle Tracking System screen) program failed to open the Bundle Tracking file.

The CTDTBTR program ends.

**Corrective Action:** Check the messages in the sysout of the program, and correct the problem accordingly. Return to the Bundle Tracking System screen (DT screen).
BTR002E SPECIFIED TIME IS INVALID

**Explanation:** An invalid TIME parameter was specified in the Bundle Tracking System screen (DT screen) SHOW option.

**Corrective Action:** Specify a valid time.

BTR003E "UNTIL TIME" IS EARLIER THAN "FROM TIME"

**Explanation:** The UNTIL TIME specified in the SHOW window of the Bundle Tracking System screen (DT screen) is earlier than the FROM TIME.

**Corrective Action:** Change the value of either the UNTIL TIME or the FROM TIME appropriately.

BTR004E FIELD MUST BE NUMERIC

**Explanation:** A non-numeric symbol was entered into the JOBID field in the SHOW window of the Bundle Tracking System screen (DT screen).

**Corrective Action:** Replace the non-numeric symbol with a numeric one.

BTR005S INTERNAL ERROR 1. REQUESTED OPTION CANNOT BE PERFORMED

**Explanation:** Internal error occurred while processing an option in the BTR screen. The requested option is not processed.

**Corrective Action:** Refer the problem to the INCONTROL administrator, who must check the system and IOA logs for further messages, and correct the problem accordingly.

BTR007E PROGRAM FAILED TO READ BUNDLE TRACKING FILE

**Explanation:** A record was deleted from the bundle tracking file.

**Corrective Action:** Reenter the BTR screen.

BTR008E ENTRY IS IN USE. TRY AGAIN LATER

**Explanation:** The CTDTBTR program tried to read a record which was being used by another program.

**Corrective Action:** Try again later.

BTR009E THIS ENTRY WAS CHANGED BY ANOTHER USER

**Explanation:** The entry was changed by another user just before the current user tried to update it. Before the CTDTBTR program updates a record, it reads the record with exclusive ENQ to allow updating of the record by another user during its processing. This message is issued when the CTDTBTR program detects that the record was changed between the last READ function and READ with ENQ.

**Corrective Action:** Try again later.
BTR010S ERROR UPDATING BUNDLE TRACKING FILE. REASON \textit{rsn}

\textbf{Explanation:} An error occurred when updating the Bundle Tracking file.

In this message, \textit{rsn} is the reason code issued by the File Access program.

The update of the current bundle fails.

\textbf{Corrective Action:} Refer the problem to your INCONTROL administrator who should check the system and IOA logs for further messages, and correct the problem accordingly.

BTR011E CANNOT PERFORM ZOOM DUE TO STORAGE ALLOCATION FAILURE

\textbf{Explanation:} There was not enough memory available to perform the zoom function.

\textbf{Corrective Action:} Increase the region size for this environment.

BTR012I BUNDLE \textit{bundleName} SUCCESSFULLY UPDATED

\textbf{Explanation:} This information message indicates that the \textit{bundleName} bundle was successfully updated.

\textbf{Corrective Action:} No action is required.

BTR013E INVALID VALUE. SPECIFY "B" OR "U"

\textbf{Explanation:} An incorrect character was specified in the SORT OPTION field in the SHOW window of the Bundle Tracking System screen (DT screen). The only valid values are "B" or "U".

\textbf{Corrective Action:} Specify "B" or "U."

Messages BTR200 through BTR2xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

BTR200I CTDCBTR STARTED

\textbf{Explanation:} This information message indicates that the CTDCBTR Control-D utility has started.

\textbf{Corrective Action:} No action is required.

BTR201I CTDCBTR ENDED OK

\textbf{Explanation:} This information message indicates that the CTDCBTR Control-D utility has ended normally.

\textbf{Corrective Action:} No action is required.

BTR202S CTDCBTR ENDED WITH ERRORS

\textbf{Explanation:} The CTDCBTR Control-D utility ended with errors. The utility stops executing.
Corrective Action: Check the job sysout for any error messages, and correct the problem accordingly. Rerun the job.

BTR203S DELETE FAILED FROM BTR FILE
Explanation: The CTDCBTR utility failed to delete a record from the Bundle Tracking (BTR) file. The CTDCBTR utility terminates.
Corrective Action: Check for other messages relating to this problem, and correct accordingly. Rerun the utility.

BTR204S PROBLEM DETECTED IN UTILITY CTDCBTR PARAMETERS
Explanation: A problem was detected in the input parameters of the CTDCBTR utility. This message can be triggered by a number of causes, such as no parameters at all being specified, or the DABTRIN DD statement being absent.
The CTDCBTR utility ends.
Corrective Action: Do the following:
- Check the parameters specified for the utility.
- Check for a DABTRIN DD statement.
- Correct the input as appropriate.
- Rerun the job.

BTR205I NUMBER OF DELETED RECORDS: num
Explanation: This information message indicates the number of records deleted by the CTDCBTR utility. In this message, num is the number of deleted records.
Corrective Action: No action is required.

BTR206I INPUT CARDS: input_cards
Explanation: This information message displays the input parameters that were specified in the JES log of the job for the CTDCBTR utility.
In this message, input_cards consists of the specified input parameters.
Corrective Action: No action is required.

BTR207E REDUNDANT PARAMETER: input_card
Explanation: A superfluous parameter was specified for the CTDCBTR utility.
In this message, input_card is the superfluous parameter.
The CTDCBTR utility ends.
Corrective Action: Remove the superfluous input parameter and rerun the utility.
CAJ messages

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

Messages CAJ A00 through CAJ Axx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CAJA30I OLD JOBS FILE NEEDED # recs RECORDS FOR # jobs JOBS

Explanation: The AJF conversion utility issues this information message to show the number of jobs on the old Active Jobs file, and the number of old Active Jobs file records that were needed to store these jobs.

The variables in this message are:
- #recs - the number of old AJF records required to store #jobs
- #jobs - the number of jobs on the old AJF

Corrective Action: No action is required.

CAJA31I NEW JOBS FILE NEEDS #recs RECORDS FOR #jobs JOBS

Explanation: The AJF conversion utility issues this information message to show the number of jobs on the new Active Jobs file, and the number of new Active Jobs file records that are now needed to store these jobs.

The variables in this message are:
- #recs - the number of new AJF records required to store #jobs
- #jobs - the number of jobs on the new AJF

Corrective Action: No action is required.

CAJA32I PERCENTAGE OF RECORDS RELEASED IN NEW JOBS FILE: nn%

Explanation: The AJF conversion utility issues this information message to show the percentage of unused records in the new Active Jobs file (AJF).

In this message, nn% is the percentage of unused records in the new AJF.

Corrective Action: No action is required.

CAJA33I AVERAGE NUMBER OF RECORDS PER JOB IN NEW JOBS FILE: nn.nn

Explanation: The AJF conversion utility issues this information message to show the average number of records used to store one job on the new Active Jobs file.

In this message, nn.nn is the average number of records.
**Corrective Action:** No action is required.

**CAJA34I AVERAGE NUMBER OF FREE BYTES PER JOB IN NEW JOBS FILE: #bytes**

**Explanation:** The AJF conversion utility issues this information message to show the average number of unused bytes (#bytes) in the records used to store one job on the new Active Jobs file.

In this message, #bytes is the average number of unused bytes.

**Corrective Action:** No action is required.

**CAJA3AS OLD STEPLIB AND NEW STEPLIB ARE THE SAME**

**Explanation:** The CTMCAF utility cannot convert the file from one version to another because only one Load library was indicated. The STEPOLD DD statement should point to the Load library of the previous version, but it points to the Load library of the new version.

The CTMCAF utility terminates with a return code of 08.

**Corrective Action:** Correct the STEPOLD DD statement so that it points to the Load library of the previous version, and rerun the job.

**CAJA3BS SIZE OF OLD JOBS FILE DIFFER FROM SIZE OF NEW ONE**

**Explanation:** The CTMCAF utility cannot convert the file from one version to another because the CKP file sizes are not identical. The conversion requires the same size files for the new version and the old version. The file size should match the size specified in CTMPARM.

The CTMCAF utility terminates with a return code of 08.

**Corrective Action:** Correct the file sizes so they are identical for both versions, and rerun the job.

**CAJA3CS LOAD MODULE CTMLOGR FAILED**

**Explanation:** An internal error occurred during the load of the CTMLOGR module.

The CTMCAF utility terminates with a return code of 08.

**Corrective Action:** Have your INCONTROL administrator record the return code, prepare the Control-M monitor full output, and contact BMC Customer Support.

**CAJA3DS DELETE MODULE CTMLOGR FAILED**

**Explanation:** An internal error occurred during deletion of the CTMLOGR module.

The CTMCAF utility terminates with a return code of 08.

**Corrective Action:** Have your INCONTROL administrator contact your INCONTROL administrator.

**CAJA40I JOBS FILE CONVERSION STARTED**

**Explanation:** This information message indicates that the process of converting or copying an Active Jobs file has started.

**Corrective Action:** No action is required.
CAJA41S OPEN OF OLD JOBS FILE FAILED. DDNAME "DAOLDAJF"

Explanation: The Active Jobs file (AJF) conversion utility failed to open the input Control-M AJF. The conversion is terminated. No changes are made to the output file.

Corrective Action: Look at the JCL for the specific file and see if it contains a valid Control-M AJF. If it does not, correct and rerun the job.

CAJA42S OPEN OF NEW JOBS FILE FAILED. DDNAME "DANEWAJF"

Explanation: The Active Jobs file (AJF) conversion utility failed to open the output Control-M AJF. The conversion is terminated. No changes are made to the output file.

Corrective Action: Look at the JCL for the specific file and see if it contains a valid Control-M AJF. If it does not, correct and rerun the job.

CAJA43S FILE ALLOCATED TO DD STATEMENT "DAOLDAJF" IS NOT AN OLD FORMAT JOBS FILE

Explanation: The Active Jobs file (AJF) conversion utility opened the input Control-M AJF and found its format invalid. The conversion is terminated. No changes are made to the output file.

Corrective Action: Check the JCL for the specific file and see if it contains a valid Control-M file from an earlier release. If it does not, correct and rerun the job.

CAJA44S NEW DAY PROCEDURE IS CURRENTLY WORKING ON THE OLD JOBS FILE

Explanation: The Active Jobs file (AJF) conversion utility opened the input Control-M AJF and found that it was being formatted by the Control-M New Day procedure, or that a previous run of the New Day procedure has failed. The conversion is terminated. No changes are made to the output file.

Corrective Action: Check whether the New Day procedure is currently running. After it finishes executing, shut down the old Control-M and rerun the job.

CAJA45S FILE ALLOCATED TO DD STATEMENT "DANEWAJF" IS NOT A NEW FORMAT JOBS FILE

Explanation: The Active Jobs file (AJF) conversion utility opened the output Control-M AJF and found its format invalid. The conversion is terminated. No changes are made to the output file.

Corrective Action: Look at the JCL for the specific file and see if it contains a valid Control-M AJF from a current or new release. If it does not, correct and rerun the job.
CAJA47S FILE ALLOCATED TO DD STATEMENT "DANEWAJF" IS NOT EMPTY

**Explanation:** The Active Jobs file (AJF) conversion utility opened the output Control-M AJF and found it not to be empty.

The conversion is terminated. No changes are made to the output file.

**Corrective Action:** The file must be empty. Format the new file using the FORMCKP utility.

CAJA48E FILE ALLOCATED TO DD STATEMENT "DAOLDAJF" IS EMPTY

**Explanation:** The Active Jobs file (AJF) conversion utility opened the input Control-M AJF and found it to be empty.

The conversion is terminated. No changes are made to the output file.

**Corrective Action:** Look at the JCL for the specific file and see if it contains the right AJF. If it does, no conversion is necessary.

CAJA49S OPEN OF OLD STEPLIB FAILED

**Explanation:** Open of the library allocated to the STEPOLD DD statement failed.

Possible causes are:

- The STEPOLD DD statement is missing.
- The file allocated to the STEPOLD DD statement is not a load module library.

The conversion program terminates with a condition code of 08.

**Corrective Action:** Check that the STEPOLD DD statement is allocated to a load module library.

CAJA50S I NTERNAL ERROR WHILE CONVERTING RESOURCES

**Explanation:** The Active Jobs file (AJF) conversion utility started executing but encountered an invalid format of job entries in the input file.

The conversion program has encountered a job which has invalid entries in the Control-M AJF.

The conversion is terminated at the job definitions which are invalid.

**Corrective Action:** Do the following:

1. Look in the new AJF for the last job converted. The next job in the old AJF is the problem job.
2. Supply your INCONTROL administrator with a dump of the old AJF, stating the job on which the error occurred.
3. Delete the job entry using the Control-M Online Facility.
4. Compress the old AJF.
5. Rerun the job.
CAJA51S QNAME PARAMETER DOES NOT FIT QNAME IN JOBS FILE

**Explanation:** The IOAPARM of the old or new version does not fit the Active Jobs file of that version. The probable cause is that STEPLIB (or STEPOLD) does not point to the library containing the appropriate CTMPARM, or that the file allocated to the DAOLDAJF or DANEWAJF DD name is not of the correct version.

The conversion program terminates with a condition code of 08.

**Corrective Action:** Check that the library allocated to the DAOLDAJF or DANEWAJF DD name contains the correct IOAPARM, and check that the file allocated to the DAOLDAJF or DANEWAJF DD name is the correct file.

CAJA52S INTERNAL ERROR OCCURRED DURING CONVERSION. RC=rc

**Explanation:** An internal error has occurred during the execution of the conversion program.

The conversion program terminates with a condition code of 08.

**Corrective Action:** Notify your INCONTROL administrator.

CAJA53I CONVERSION OF JOBS FILE ENDED WELL

**Explanation:** This information message indicates that the process of converting or copying the Active Jobs file ended OK.

**Corrective Action:** No action is required.

CAJA54S CONTROL-M/RESTART WAS INSTALLED IN PREVIOUS VERSION, AND IS NOT INSTALLED NOW

**Explanation:** Control-M/Restart was installed in the old version, but not in the newly defined version. The conversion program terminates with a condition code of 08.

**Corrective Action:** Check why Control-M/Restart is not installed in new version, and make sure that it is installed before rerunning the conversion program.

CAL messages

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

Messages CAL200 through CAL2xx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CAL295I BUILDING JOB CALENDARS STARTED

**Explanation:** This information message indicates that the CTMRCAL utility started to create the calendars. Calendars will be built for each job in the table, according to its date scheduling criteria.
Corrective Action: No action is required.

CAL296I BUILDING JOB CALENDARS ENDED OK
Explanation: This information message indicates that the CTMRCAL utility finished creating the calendars.
Corrective Action: No action is required.

CAL297E INVALID RETYPE PARAMETER VALUE - ‘S’ SUBPARAMETER REQUIRED
Explanation: The CTMRCAL utility ran with an invalid value for the RETYPE parameter. Valid values for the RETYPE parameter in the CTMRCAL utility are 0S, 1S or 2S.
The utility terminates with a return code of 16.
Corrective Action: Correct the value of the RETYPE parameter, and rerun the CTMRCAL utility.

CAP messages
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

Messages CAP900 through CAP9xx
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CAP906I REFRESH OF PERMANENT USER FILE FROM THE ACTIVE USER FILE STARTED
Explanation: This information message indicates that the CTDCA2P utility is copying the list of reports from the Active User Report List file to the Permanent User Report List file. This is the normal start message of the CTDCA2P utility.
Corrective Action: No action is required.

CAP907I REFRESH OF PERMANENT USER FILE FROM THE ACTIVE USER FILE ENDED OK
Explanation: This information message is the normal end message for the CTDCA2P utility. It indicates that the CTDCA2P utility successfully finished copying the list of reports from the Active User Report List file to the Permanent User Report List file.
Corrective Action: No action is required.
CAP909S REFRESH OF PERMANENT USER FILE FROM THE ACTIVE USER FILE ENDED WITH ERRORS

**Explanation:** An error occurred during the execution of the CTDCA2P utility.

**Corrective Action:** An earlier message describes the error.

CAP90AI COPIED TO PERMANENT FILE `userName jobName cat fromUser reportName`

**Explanation:** This information message indicates that a record from the Active Report List file was successfully copied to the Permanent Report List file. The CTDCA2P utility issues this message for each record successfully copied from the Active Report List file.

**Corrective Action:** No action is required.

CAP90BI TOTAL NUMBER OF RECORDS COPIED TO PERMANENT FILE IS: `num`

**Explanation:** This information message displays the number of records copied from the Active Report List file to the Permanent Report List file. This message is issued by the CTDCA2P utility.

**Corrective Action:** No action is required.

CAP90CI ACTION USER JOB CATEGORY FROM USER REPORT NAME

**Explanation:** This information message is issued by the CTDCA2P utility as a heading line for message CAP90AI.

**Corrective Action:** No action is required.

CAP90DI `userName jobName reportName cat`

**Explanation:** This information message is issued by the CTDCA2P utility.

The variables in this message relate to the record copied from the Active User file to the Permanent user file, as follows:

- `userName` - the identity of the user
- `jobName` - the identity of the job
- `reportName` - the identity of the report
- `cat` - the category

**Corrective Action:** No action is required.

**CCU messages**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.
Messages CCUF00 through CCUFxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

**CCUF00I ctrl_stmt_text**

**Explanation:** This information message is issued by the CTDCCU utility. It displays the input control statement of the CTDCCU utility.

**Corrective Action:** No action is required.

**CCUF01I CDAM CLEAN-UP UTILITY STARTED**

**Explanation:** This information message indicates the normal start of the CTDCCU Control-D utility. This utility identifies CDAM files that can be deleted from disk because they are no longer referenced by the Active User Report List file.

**Corrective Action:** No action is required.

**CCUF02I CDAM CLEAN-UP UTILITY ENDED OK**

**Explanation:** This information message is the normal end message of the CTDCCU Control-D utility. This utility identifies CDAM files that can be deleted from disk because they are no longer referenced by the Active User Report List file.

**Corrective Action:** No action is required.

**CCUF03S CDAM CLEAN-UP UTILITY ENDED WITH ERRORS**

**Explanation:** The CTDCCU Control-D utility ended with errors. The job-name SYSOUT should contain other messages detailing the reasons.

The utility stops executing with a return code which depends on the severity of the error.

**Corrective Action:** Check the previous error message or messages, correct the problem and rerun the job.

**CCUF04E OPEN OF HISTORY USER REPORT LIST FILE FAILED. DDNAME "DAVHST"**

**Explanation:** Open of the Control-D History User Report List file failed (the DAVHST DD statement). This error message is issued by the CTDCCU Control-D utility, which identifies CDAM files that are no longer referenced by the Active User Report List file.

Possible causes are:

- The DAVHST DD statement is missing.
- The data set pointed to by the DAVHST DD statement is not the Control-D History User Report List file.
- The data set pointed to by the DAVHST DD statement, is the Control-D History User Report List file, but is of another Control-D monitor, or of a different version of Control-D.

The utility stops executing with a condition code of 08.
Corrective Action: Correct the JCL and rerun the job.

CCUF05E OPEN OF INPUT FILE FAILED. DDNAME "DACCUIN"

Explanation: Open of the file containing input parameters failed (the DACCUIN DD statement). This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file.

Possible causes are:
- The DACCUIN DD statement is missing.
- The DNAME pointed to by the DACCUIN DD statement cannot be opened for sequential read.

The utility stops executing with a condition code of 08.

Corrective Action: Correct the JCL and rerun the job.

CCUF06E INVALID PARAMETER: - parm

Explanation: An invalid parameter was specified in the input for the CTDCCU Control-D utility.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file. For more information, see the CTDCCU utility in the INCONTROL for z/OS Utilities Guide.

The utility stops executing with a condition code of 08.

Corrective Action: Correct the input and rerun the job.

CCUF07E ONLY ONE PARAMETER parm ALLOWED

Explanation: More than one DATE or SIMULATION parameter was specified in the input for the CTDCCU Control-D utility.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file. For more information, see the CTDCCU utility in the INCONTROL for z/OS Utilities Guide.

The utility stops executing with a condition code of 08.

Corrective Action: Correct the input and rerun the job.

CCUF08E INVALID DATE VALUE

Explanation: An invalid date format was used in a DATE parameter for the CTDCCU Control-D utility.

Valid date formats are:
- ddmmyy
- mmddyy
- ymmddd

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file. For more information, refer to the CTDCCU utility in the INCONTROL for z/OS Utilities Guide.

The CTDCCU Control-D utility stops executing with a condition code of 08.
Corrective Action: Correct the date format and rerun the job.

CCUF09E TODATE SHOULD NOT BE AFTER RUN DATE MINUS ONE

Explanation: An invalid value was set for TODATE in the input for the CTDCCU Control-D utility. The latest date which may be specified for TODATE is the day before the run date.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file. For more information, see the CTDCCU utility in the INCONTROL for z/OS Utilities Guide.

The utility stops executing with a condition code of 08.

Corrective Action: Set a valid value for TODATE and rerun the job.

CCUF0AE MISSING VALUE FOR PARAMETER parm

Explanation: The parm parameter was specified with no value.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file. For more information, refer to the CTDCCU utility in the INCONTROL for z/OS Utilities Guide.

The utility stops executing with a condition code of 08.

Corrective Action: Enter the missing parameter value and rerun the job.

CCUF0BI WAITING FOR CTDDELRP OR RESTORE JOB TO TERMINATE

Explanation: This information message indicates that the CTDCCU utility is waiting for a CTDDELRP job or a restore job to terminate before the utility can resume executing.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file.

Note:
To ensure data integrity, do not run the CTDCCU utility concurrently with a CTDDELRP job or a restore job.

When the contending job terminates, the CTDCCU utility resumes processing.

Corrective Action: No action is required.

CCUF0CE SPECIFIED PREFIX IS LONGER THAN 23 CHARACTERS

Explanation: An attempt has been made to invoke the CTDCCU Control-D utility, but the data set name prefix that was specified consisted of more than 23 characters. The length of a data set name prefix must not exceed 23 characters.

This error message is issued by the CTDCCU Control-D utility, which is used to identify

- CDAM files that are no longer referenced by the Active User Report List file
- Control-V index files that are not referenced by the Active User Report List file or the Migrate User Report List file

For more information, see the CTDCCU utility in the INCONTROL for z/OS Utilities Guide.
The utility stops executing with a return code of 08.

**Corrective Action:** Correct the value of PREFIX and rerun the job.

**CCUF0EE Missing Date or Prefix Parameter**

**Explanation:** A DATE or PREFIX parameter for the CTDCCU Control-D utility is missing. At least one DATE and one PREFIX parameter must be specified, for the utility to execute. More than one PREFIX parameter may be specified.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file. For more information, see the CTDCCU utility in the *INCONTROL for z/OS Utilities Guide*.

The utility stops executing with a condition code of 08.

**Corrective Action:** Enter the missing parameter and rerun the job.

**CCUF0FE Invalid Value for Parameter parm. Value should be "YES" or "NO"**

**Explanation:** An invalid value was specified for a VERIFY or SIMULATION parameter for the CTDCCU Control-D utility.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file. For more information, refer to the CTDCCU utility in the *INCONTROL for z/OS Utilities Guide*.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the input and rerun the job.

**CCUF10E Open of Sort File Failed. DDNAME ddName**

**Explanation:** The site SORT utility, which was invoked by the CTDCCU Control-D utility, failed to open the data set pointed to by the `ddName` DD statement. This error message is issued by the CTDCCU Control-D utility, which identifies CDAM files that are no longer referenced by the Active User Report List file.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

**CCUF11E Invalid Return Code from Sort. RC=rc**

**Explanation:** The site SORT utility, which was invoked by the CTDCCU Control-D utility, has ended with errors.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file.

The utility stops executing with a condition code of 08.

**Corrective Action:** Refer to the SORT messages of the job and to the user guide for the SORT facility used at your site. If necessary, call your system programmer for assistance.
CCUF12E INVALID RETURN CODE FROM IDCAMS

**Explanation:** The site IDCAMS program, which was invoked by the CTDCCU Control-D utility, has ended with errors. The usual cause is corrupted data in the system catalog.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file.

The utility stops executing with a condition code of 08.

**Corrective Action:** Use the TSO command LISTC LVL (prefix) HISTORY to produce more detailed messages about the problem and correct accordingly.

CCUF13E OPEN OF WORK FILE FAILED. DDNAME "DAWORK"

**Explanation:** The CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file, failed to open the Work List file (the DAWORK DD statement).

Possible causes are:
- The DAWORK DD statement is missing.
- The data set pointed to by the DAWORK DD statement cannot be opened for sequential write.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

CCUF14E INVOCATION OF PROGRAM *pgm* FAILED. PROGRAM COULD NOT BE ACCESSED

**Explanation:** Invocation of the *pgm* program ended with errors. This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file.

The utility stops executing with a condition code of 08.

**Corrective Action:** Look for previous error messages which describe the type of error. If necessary, call your system programmer for assistance.

CCUF15I DATASET *dsn* WILL BE DELETED

**Explanation:** This information message indicates that the *dsn* CDAM data set was added to the Scratch List file (list of data sets to be scratched). If SIMULATION was set to NO, the data set is deleted in the next step of the job.

This message is issued by the CTDCCU utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file, and may therefore be deleted from the disk.

**Corrective Action:** No action is required.

CCUF16W JOB *jobName* JOBID *jobId* DATASET *dsn* NOT IN CATALOG

**Explanation:** The Active User Report List file contains a reference to a CDAM file that is not in the VSAM catalog. The *dsn* data set, which was created by the *jobName* *jobId* job, is referenced by the Active User Report List file, but does not have an entry in the VSAM catalog.
This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file.

The utility continues executing, but will terminate with a condition code of 04.

**Corrective Action:** No action is required.

**CCUF18W ONLY ONE VERIFY PARAMETER ALLOWED. RECORD IGNORED**

**Explanation:** More than one VERIFY parameter was specified for the CTDCCU Control-D utility.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file. For more information, see the CTDCCU utility in the *INCONTROL for z/OS Utilities Guide*.

The utility continues executing, but terminates with a condition code of 04. Only the first VERIFY parameter in the input is processed, and all others are ignored.

**Corrective Action:** No action is required.

**CCUF19W NO DATASET OR SYSDATA RECORD WAS FOUND MATCHING THE SELECTION CRITERIA**

**Explanation:** The CTDCCU utility did not find any data set or SYSDATA record matching the specified selection criteria.

This warning message is issued by the CTDCCU utility, which is used to identify CDAM or Control-V index files that are no longer referenced by the Control-D/V database.

For more information, see the CTDCCU utility in the *INCONTROL for z/OS Utilities Guide*.

The utility stops executing with a condition code of 04.

**Corrective Action:** If necessary, correct the selection criteria and rerun the job.

**CCUF20E OPEN OF SCRATCH FILE FAILED. DDNAME "DASCRLST"**

**Explanation:** The CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file, was unable to open the Scratch List file (the DASCRLST DD statement).

Possible causes are:

- The DASCRLST DD statement is missing.
- The data set pointed to by the DASCRLST DD statement cannot be opened for sequential write.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

**CCUF21I DATA SET dsn NOT FOUND. SYSDATA {JOBNAME=jobName, COUNT='key'} WILL BE DELETED**

**Explanation:** This message is issued by the CTDCCU utility when it is called with the DELSYSDATA parameter set to YES and when it detects an orphan SYSDATA record in the Active User Report file. The variables in the message identify the problematic record.
The variables in this message are

- **dsn** - the name of the CDAM data set
- **jobName** - the name of the job to which the problematic SYSDATA record relates
- **key** - the unique key of the problematic SYSDATA record

If the CTDCCU utility is running in simulation mode, the problematic SYSDATA record remains in the Active User Report file. Otherwise, the record is deleted.

**Corrective Action:** No action is required.

**CCUF22E INCORRECT DSNAME OF THE MIGRATED INDEX FILE ON $INDEX RECORD {JOBNAME=jobName, COUNT='key', I CNT='seqNumber'}**

**Explanation:** This message is issued by the CTDCCU utility when an error occurs during the evaluation of the data set name of a migrated index file.

The variables in this message are

- **jobName** - the name of the job to which the data set name relates
- **key** - the unique key of the relevant SYSDATA record
- **seqNumber** - the sequence number of the problematic INDEX record

The problematic index file is ignored, but the utility is forced to run in Simulation mode.

**Corrective Action:** Contact your INCONTROL administrator.

**CCUF23W SIMULATION=YES IS FORCED**

**Explanation:** The CTDCCU utility issues this message when it is called with the SIMULATION parameter set to NO if during execution an error occurs of a type that may cause a risk of data loss. Accompanying messages describe the error that occurred.

The utility continues execution in Simulation mode.

**Corrective Action:** Examine the accompanying messages, and take action accordingly.

**CCUF25I TAPE DATA SET dsn HAS NO REFERRING $INDEX RECORD**

**Explanation:** This information message is issued by the CTDCCU utility and indicates that the **dsn** index data set migrated to a tape is no longer referred to by any $INDEX record, that is, it has been "orphaned" in terms of the utility.

Since the utility is only able to remove DASD data sets, this data set will not be deleted.

**Corrective Action:** Uncatalog and scratch this data set using standard system tools, if needed.

**CDS messages**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.
Messages CDS0 through CDS0xx
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CDS012E LOGICAL DESTINATION dest IS NOT FOUND. CHOOSE A NEW ONE

Explanation: A user has specified a Delivery Server External Destination that does not exist.

Corrective Action: In this message, dest is the non-existent Destination.

The External Destination screen is opened. Either choose (from the External Destination list) an External Destination that is valid, or define a new External Destination.

CDS020I RECORD FOR DEST dest MODIFIED

Explanation: This information message indicates that the External Destination record relating to the Delivery Server External Destination dest was modified.

Corrective Action: No action is required.

CDS021I TYPE LOGICAL DESTINATION AND DESCRIPTION FOR THE FIRST CTDS RECORD

Explanation: The Delivery Server External Destination list is empty.

Corrective Action: Add one or more External Destination records.

Messages CDGS00 through CDGSxx
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CDGS19E CANNOT COPY TO THE SAME DEST

Explanation: In the COPY Option prompt window, the user has specified the External Destination to which the record belongs.

You can use the COPY Option to provide a copy of a record to another External Destination, but not to the External Destination to which the record already belongs.

Corrective Action: Either type another External Destination in the COPY Option prompt window, or cancel the COPY request by typing N (for NO) in the CONFIRM field in the COPY Option prompt window.

CDGS20I RECORD FOR DEST dest COPIED TO dest

Explanation: This information message indicates that the dest record has been copied, using the COPY Option (option C) of the External Destination List screen.

Corrective Action: No action is required.
Messages CDSU00 through CDSUxx
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CDSU10E USER DATA BASE ERROR
Explanation: At this site, the Delivery Server External Destinations are contained in the user’s own database, instead of the PERMANENT file. While processing a simulation request, the Control-D User Exit 26 found an error in the user’s database.
Processing of the request is terminated.
Corrective Action: Correct the error in the user’s Delivery Server External Destinations database.

CDT messages
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

Messages CDTA00 through CDTAxx
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CDTA51W NO RESTORE RECORDS FOUND ON HISTORY FILE.
Explanation: The ANALYZE step of the restore job found no restore control records in the History User Report List file to process.
The CTDRC ANALYZE step program was invoked either by a restore job or the RSTRESET job but did not find any restore control records in the History User Report List file for the restore Mission specified in the PARM field.
The CTDRC program terminates with a return code of 08.
Corrective Action: No action is required.

CHK messages
This group includes messages for the Control-M for z/OS and Control-D products.

Messages CHK400 through CHK4xx
This group includes messages for the Control-M for z/OS, and Control-D products.
CHK422S OPEN OF USER DATE CONTROL-RECORD FAILED - DDNAME "DACHK"

**Explanation:** Open of the file containing the User Date Control Record failed (the DACHK DD statement). Issued by the CTMCHK, CTDCHK, or CTBCHK programs, which are usually activated by the New Day procedure.

Possible causes are:
- The DACHK DD statement is missing.
- The data set (member) described by the DACHK DD statement does not exist.

The CTMCHK, CTDCHK, or CTBCHK program ends with errors.

**Corrective Action:** Correct the JCL for the job or CLIST.

CHK423S OPEN OF IOA LOG FILE FAILED

**Explanation:** Open of IOA Log file failed (the DALOG DD statement). This error message is issued by the CTMCHK, CTDCHK, or CTBCHK programs, which are activated as part of the New Day procedure.

Possible causes are:
- The DALOG DD statement is missing.
- The data set or member described by the DALOG DD statement is not the IOA Log file.
- The data set described by the DALOG DD statement is the IOA Log file, but of a different IOA installation or of a different version.

The CTMCHK, CTDCHK, or CTBCHK program ends with errors.

**Corrective Action:** Correct the JCL for the job or CLIST.

CHK424S INVALID ORIGINAL SCHEDULING DATE IN USER DATES CONTROL-RECORD (POSITIONS 1-6)

**Explanation:** Invalid original scheduling date in the User Date Control Record (positions 1 through 6). This date should be earlier than the current installation working date.

Valid formats are:
- ddmmyy
- mmddyy

Possible causes are:
- The previous run of the CTDCHK or CTMCHK program did not finish OK.
- Someone has incorrectly modified the contents of the User Date Control Record (the DACHK DD statement).

For more information, see the *INCONTROL for z/OS Administrator Guide*.

The New Day procedure ends with errors.

**Corrective Action:** Correct your Date Control Record (the DACHK DD statement).
CHK425S INVALID POST DATE IN USER DATES CONTROL RECORD (POSITIONS 67-72)

**Explanation:** The contents of the Date Control Record for this Daily are invalid.

Valid formats are:
- ddmmyy
- mmddyy

This message usually indicates that the User Date Control Record was incorrectly modified. The date should be earlier than or equal to the original scheduling date defined in positions 1 through 6.

The New Day procedure ends with errors.

**Corrective Action:** Correct the Date Control Record (the DACHK DD statement).

CHK426W \{GENERAL | dailytype\} "DAILY" DID NOT RUN FOR nnn DAYS

**Explanation:** Highlighted, unrollable message.

The difference between the current working date and the original scheduling date (positions 1 through 6 in the Date Control Record) is more than one day. The New Day procedure has not run for nnn days. A New Day procedure is expected to run once a day.

Probable causes are:
- The computer has not been working for at least one day.
- The Control-M or Control-D monitor has not been working for over 24 hours.
- The contents of the Date Control Record were incorrectly modified for this Daily.
- In the case of the New Day procedure, the computer may have been IPLed with the wrong date.
- In the case of a User Daily, the User Daily has not run for a few days.

The value of dailytype can be GENERAL for the New Day procedure or the job name of a regular User Daily job.

For User Daily jobs, processing continues. Missions are selected according to the RETRO parameter.

For the New Day procedure, this message appears highlighted on the operator console, together with either the CTM427W or CTD427W and CTM428W or CTD428W message. If the operator answers YES, processing continues, taking the RETRO parameter of each job into consideration. If the operator answers NO, the New Day procedure stops executing with an error message.

**Corrective Action:** If the computer was IPLed with the wrong date, answer NO, correct the problem, and then activate the New Day procedure manually. Control-M or Control-D will not work until the problem is resolved.

CHK427W IS IT TRUE? (ANSWER "YES" OR "NO")

**Explanation:** Highlighted, unrollable message.

The last run of the New Day procedure was more than 24 hours ago. This message appears together with the CHK426W, CTM426W, or CTD426W and CHK428W, CTM428W, or CTD428W messages. For more details, see the CHK426W message.
The New Day procedure waits for the operator response.

**Corrective Action:** If the computer was IPLed with the wrong date, answer NO, correct the problem, and then activate the New Day procedure manually. Control-M or Control-D will not work until the problem is resolved.

CHK428W YOUR ANSWER IS:

**Explanation:** Highlighted, unrollable message.

The last run of the New Day procedure was more than 24 hours ago. This message appears together with the CHK426W, CTM426W, or CTD426W and CHK427W, CTM427W, or CTD427W messages. For details, see the CHK426W message.

The New Day procedure waits for the operator response.

**Corrective Action:** If the computer was IPLed with the wrong date, answer NO, correct the problem, and then activate the New Day procedure manually. Control-M or Control-D will not work until the problem is resolved.

CHK429S {CTMCHK | CTDCHK | CTBCHK} ENDED WITH ERRORS

**Explanation:** The CTMCHK, CTDCHK, or CTBCHK program ended with errors. It is activated as part of the New Day procedure. The IOA Log should contain an earlier message about the error.

The New Day procedure finishes executing with a condition code of 08.

**Corrective Action:** Check the IOA Log for error messages. If necessary, manually correct the Date Control Record (date-3 and date-5) to allow the next run of the User Daily job. For more information, see the INCONTROL for z/OS Administrator Guide.

CHK430E POSSIBLE ABEND OF PREVIOUS DAILY RUN!

**Explanation:** A previous run of the same New Day procedure probably abended.

The New Day procedure terminates with errors.

**Corrective Action:** Correct the Date Control Record and rerun the New Day procedure. As a result of the last abend, dates 2, 3 and dates 4, 5, in the Date Control Record are not identical - they should be. If you correct them to the values of date 3 or date 6, a rerun of the New Day procedure schedules all the jobs in the New Day procedure for the days after dates 2 through 5 until the date designated in date 1 (the current original scheduling date). Do not schedule the same job twice.

For more information, see the Control-M for z/OS User Guide or the Control-D and Control-V User Guide.

CHK431I {CTMCHK | CTDCHK | CTBCHK} STARTED

**Explanation:** This information message indicates that the CTMCHK, CTDCHK, or CTBCHK program, which is activated by the New Day procedure, started executing.

**Corrective Action:** No action is required.

CHK432I {CTMCHK | CTDCHK | CTBCHK} ENDED

**Explanation:** This information message indicates that the CTMCHK, CTDCHK, or CTBCHK program, which is activated by the New Day procedure, ended normally.
Corrective Action: No action is required.

CHK433S DIFFERENCE BETWEEN CURRENT AND LAST RUN OF THIS DAILY IS NEGATIVE BY numDays

Explanation: The current working date in the computer is before the last original scheduling date of this New Day procedure.

This message is issued by the New Day procedure as a result of incorrect dates in the Date Control Record. For more information, see the Control-M for z/OS User Guide or the Control-D and Control-V User Guide.

The New Day procedure stops executing with an error message.

Corrective Action: Correct the contents of the Date Control Record, and rerun the Daily. If this problem occurs under the New Day procedure, call your system programmer. The problem should be resolved immediately as the Control-M or Control-D monitor will not be able to operate. Check whether the computer has been IPLed with the correct date.

CHK434W THIS DAILY HAS ALREADY BEEN RUN TODAY

Explanation: The same New Day procedure has already been run today. The current working date in the computer is equal to the last original scheduling date - positions 1 through 6 in the Date Control Record (the DACHK DD statement).

For more information, see the Control-M for z/OS User Guide or the Control-D and Control-V User Guide.

Processing terminates with a return code of 8.

Corrective Action: Check the result of the run carefully for possible errors. If the Control-M or Control-D monitor is up and running, there is no need to run the New Day procedure. It was probably started by accident. In any case, have your INCONTROL administrator look at the problem. It is possible that the computer was IPLed with the wrong date.

CHK435S OPERATOR RESPONDED "NO"

Explanation: The operator answered NO to the CH428W, CTM428W, or CTD428W message.

The New Day procedure stops executing.

Corrective Action: Correct the problem, which is usually date-related, and rerun the New Day procedure.

CHK436S USER DATES CONTROL RECORD IS EMPTY

Explanation: The data set described by the DARCHK DD statement is empty (the New Day procedure).

The New Day procedure terminates with errors.

Corrective Action: Correct the JCL for the job and rerun it.
CHK437I date control record content

Explanation: This informational message is issued when Newday processing is initiated. In place of *date control record content*, it displays the contents of the first record of the DATEREC member in the CTM PARM library pointed to by ddname DACHK in the Newday procedure. For explanations of the dates displayed, see the *INCONTROL for z/OS Administrator Guide*, “CTM,” “Date Control Records and Enhanced Daily Checkpointing.”

Corrective Action: No action is required.

CHK438W REPLY 'U' TO UPDATE DATEREC TO CURRENT DAY EXECUTION OR 'E' TO END

Explanation: Highlighted, unrollable message.

An error condition is detected while processing the first record of the DATEREC member in the CTM PARM library pointed to by ddname DACHK in the Newday procedure. This message is usually preceded by another error message detailing the error encountered. Some reasons that this message might be issued are:

- Invalid date *date1* (see message CHK424S).
- Invalid dates *date2* - *date7* (see message CHK43BE).
- The difference between the current working date and the date on which Newday was last run (*date7*) is negative (see message CHK433S).
- The current working date is equal to *date1* (Newday was already run--see message CHK434W).
- The DATEREC member is empty (see message CHK436S).
- An attempt was made to run the New Day procedure twice in the same day (see message FRM454E).
- *date7* is later than *date1* (see message FRM455S).
- *date7* is more than 28 days in the past (see message FRS476S or JOB50S).
- For an explanation of the dates in question, see *INCONTROL for z/OS Administrator Guide*, “CTM,” “Date Control Records and Enhanced Daily Checkpointing.”

The Newday procedure waits for operator response.

Corrective Action: Review the preceding error messages to determine the actions necessary to correct the problem. If the problem can be corrected by setting the dates in the DATEREC record to the current working date, enter *U*. After Control-M automatically updates the DATEREC record, Newday processing resumes.

Otherwise, enter *E* and then correct the problem manually. For example, if the computer was IPLed with the wrong date, enter *E*, correct the computer date, and then reactivate Newday manually.

CHK439W REPLY 'C' TO CONTINUE, 'U' TO UPDATE DATEREC TO CURRENT DAY EXECUTION, OR 'E' TO END

Explanation: Highlighted, unrollable message.

Following initiation of the Newday procedure, Control-M issued message CHK426W (warning that more than a day has passed since the previous run of Newday).
The Newday procedure waits for operator response.

**Corrective Action:** Review the explanation of message CHK426W to determine if this is an error situation. If this is not an error situation, enter `C`; Newday proceeds using the existing dates in the DATEREC record. If this is an error situation and the problem can be corrected by setting the dates in the DATEREC record to the current working date, enter `U`. After Control-M automatically updates the DATEREC record, Newday processing resumes.

Otherwise, enter `E` and then correct the problem manually. For example, if the computer was IPLed with the wrong date, enter `E`, correct the computer date, and then reactivate Newday manually.

**CHK43AI** NEWDAY EXECUTION CONTINUING WITH ODATE `odate`

**Explanation:** This informational message is issued when the response to message CHK438W or CHK439W was `U`. It informs the user that Newday processing continues, using `odate` as the current working date.

The Newday procedure resumes.

**Corrective Action:** No action is required.

**CHK43BE** DATE CONTROL RECORD CONTAINS AN INVALID DATE AT POSITION `col`

**Explanation:** During Newday initiation, an invalid date was detected in the first record of the DATEREC member in the CTM PARM library pointed to by ddname DACHK. The date in error is in column `col` of the record. (For explanations of the dates displayed, see the INCONTROL for z/OS Administrator Guide, “CTM,” “Date Control Records and Enhanced Daily Checkpointing.”)

Message CHK438W is generated.

**Corrective Action:** Respond to message CHK438W as instructed.

**CHK43CI** CONTENTS OF DATE CONTROL RECORD:

**Explanation:** This message serves as a header for message CHK437I, which follows.

**Corrective Action:** No action is required.

**CHK43DW** REQUESTED ODATE IS `odate`

**Explanation:** Highlighted, unrollable message.

This message is issued in response to any of the following operator commands:

- `F CONTROLM,NEWDAY=hhmm [,date]`
- `F CONTROLM,NEWDAY= hhmm ,ORDERONLY [,date]`
- `F CTMTROLM,NEWDAY= hhmm ,RERUN`
- `S CTMTDAY,NEWDAY=date`
- `S CTMTDAY,NEWDAY='ORDERONLY, date'`

For more information, see the INCONTROL for z/OS Administrator Guide, “CTM,” “Special Newday Parameters.”
Message CHK43GW is issued.

**Corrective Action:** Respond to message CHK43GW as instructed.

**CHK43GW REPLY 'C' TO CONTINUE OR 'E' TO END**

**Explanation:** Highlighted, unrollable message.

Upon entry of the `F CONTROLM,NEWDAY=hhmm,DATE` command, message CHK43DW displayed the ODATE entered. The current message asks the operator to either confirm that the Newday procedure continue with the specified ODATE or not continue.

The Newday procedure waits for operator response.

**Corrective Action:** One of the following responses:

- **C** -- confirm Newday execution using the ODATE displayed by message CHK43DW. (Dates in the first record of the DATEREC member in the CTM PARM library pointed to by ddname DACHK are not modified.)
- **E** -- cause the NEWDAY command to be ignored.

**CLH messages**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

**Messages CLH900 through CLH9xx**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

**CLH943W TOO MANY DATASETS/TAPES HAVE TO BE SCRATCHED, THE CLEANING IS PARTIAL ONLY. RUN THE UTILITY ONCE MORE.**

**Explanation:** This message is issued by the CTDCLHST utility and indicates that the total number of expired CDAM and index files or the number of expired backup tapes exceeds the limit that the utility can process within one execution.

The utility does the following within its limit:

- deletes the expired CDAM and index files
- lists the expired backup tapes
- removes the corresponding records from the History User Report List file.

The rest of the expired files and tapes will be processed in the next execution of the utility. When this message is issued, the CTDCLHST utility finishes with a return code of 08.

**Corrective Action:** Run the utility again.
CLH944I CLEANING OF HISTORY USER REPORTS LIST FILE STARTED

Explanation: This information message is the normal start message of the CTDCLHST utility, which clears entries from the History User Report List file.

Corrective Action: No action is required.

CLH945I CLEANING OF HISTORY USER REPORTS LIST FILE ENDED OK

Explanation: This information message is the normal end message of the CTDCLHST utility, which clears entries from the History User Report List file.

Corrective Action: No action is required.

CLH946E CLEANING OF HISTORY USER REPORTS LIST FILE ENDED WITH ERRORS RC = rc

Explanation: The CTDCLHST utility, which clears entries from the History User Report List file, ended with errors. Earlier messages describe the problem.

The utility ends with a return code of rc.

Corrective Action: Check the previous error messages, correct the problem, and rerun the job.

CLH947I TAPE volser - EXPIRED

Explanation: This is information message is displayed by the CTDCLHST utility, and indicates that a backup tape has been found whose retention period has expired. The utility scans entries in the History User Report List file for reports whose retention period has expired, based on the # OF DAYS TO KEEP parameter or on the # OF GENERATIONS TO KEEP parameter specified in the Backup Mission Definition screen.

This tape may be added to the list of expired tapes.

Corrective Action: Return the expired tape to the Global Tape Pool.

CLH948E INSUFFICIENT MEMORY, THE CLEANING PROCESS STOPPED. INCREASE THE DATA VALUE IN WD2403.

Explanation: There is insufficient memory for the CTDCLHST utility to complete cleaning of the History User Report List file. The situation is caused by a non-zero value that is too small, which has been specified in the DATA parameter in the definition of optional wish WD2403. It must not be smaller than the number of the SYSDATA records in the History User Report List file with the same job name.

The utility stops processing with no change being made to the History User Report List file, and finishes with a return code of 08.

Corrective Action: Increase the value of the DATA parameter appropriately in the definition of optional wish WD2403, or set it to zero. Increase the REGION size for the utility job, if needed, and rerun the utility.

CLH949I number USER RECORDS READ.

Explanation: This information message indicates how many USER records have been read by the CTDCLHST utility from the History User Report List file.
**Corrective Action:** No action is required.

**CLH94AI number SYSDATA RECORDS READ.**

**Explanation:** This information message indicates how many SYSDATA records have been read by the CTDCLHST utility from the History User Report List file.

**Corrective Action:** No action is required.

**CLH94BI number NOTEPAD RECORDS READ.**

**Explanation:** This information message indicates how many NOTE records have been read by the CTDCLHST utility from the History User Report List file.

**Corrective Action:** No action is required.

**CLH94CI number $INDEX RECORDS READ.**

**Explanation:** This information message indicates how many INDEX records have been read by the CTDCLHST utility from the History User Report List file.

**Corrective Action:** No action is required.

**CLH94DI number RECORDS DELETED IN TOTAL**

**Explanation:** This information message indicates how many records have been deleted by the CTDCLHST utility from the History User Report List file.

**Corrective Action:** No action is required.

**Messages CLHD00 through CLHDxx**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

**CLHD73E INVALID RETURN CODE FROM SORT, RC=rc**

**Explanation:** A failure was detected in the SORT utility phase of the CTDCLHST utility. The main program (CTDCLH) of the CTDCLHST utility received a return code (rc) higher than 4 from the SORT utility phase.

The program terminates with a return code of 08.

**Corrective Action:** Additional information is in the Job log and the SORT messages. Correct all reported problems, and rerun the CTDCLHST utility.

**CLHD75I WAITING FOR ANOTHER CTDCLHST JOB TO TERMINATE**

**Explanation:** This information message indicates that the Control-D CTDCLHST utility is waiting for another CTDCLHST job to terminate. The Control-D utility clears unnecessary entries from the History User Report List file. To maintain data integrity, the CTDCLHST utility cannot run two or more jobs concurrently.

When the first job terminates, the CTDCLHST utility resumes processing.
**Corrective Action:** No action is required.

**CLHD76E** INVALID PARAMETER, VALID PARAMETER: MODE=TEST OR MODE=PROD

**Explanation:** An invalid value for the MODE parameter was specified by the CTDCLHST utility call. The CTDCLHST utility ends with a return code of 12.

**Corrective Action:** Correct the MODE parameter to either TEST or PROD, and rerun the utility.

**CLHD77I** *** PARM=TEST SPECIFIED - SIMULATION MODE ***

**Explanation:** This information message indicates that the CTDCLHST utility ran in simulation mode. In this mode, messages are generated that indicate what actions would normally be performed. These actions are not performed, nor are any files changed.

**Corrective Action:** Check the SYSOUT of the CTDCLHST utility before running it in production mode.

**CLHD78I** NUMBER OF USER RECORDS TO BE DELETED =number

**Explanation:** This information message indicates how many USER records will be deleted by the CTDCLHST utility.

**Corrective Action:** No action is required.

**CLHD79I** NUMBER OF SYSDATA RECORDS TO BE DELETED =number

**Explanation:** This information message indicates how many SYSDATA records will be deleted by the CTDCLHST utility.

**Corrective Action:** No action is required.

**CLHD7AI** NUMBER OF NOTEPAD RECORDS TO BE DELETED =number

**Explanation:** This information message indicates how many notepad records will be deleted by the CTDCLHST utility.

**Corrective Action:** No action is required.

**CLHD7BI** NUMBER OF $INDEX RECORDS TO BE DELETED =number

**Explanation:** This information message indicates how many index records will be deleted by the CTDCLHST utility.

**Corrective Action:** No action is required.

**CLHD7EW** SYSDATA RECORD jobName ID jobld ODATE=odate HAS NO BACKUP DATE. THE DECOLLATION DATE IS ASSUMED.

**Explanation:** The CTDCLHST utility discovered a SYSDATA record in the History User Report List file with a zero backup date.

The variables in this message are:
INCONTROL for z/OS Messages Manual

- `jobName` - the name of the job to which the SYSDATA record belongs
- `jobId` - the MVS identifier of the job to which the SYSDATA record belongs
- `odate` - the originating date of the report to which the SYSDATA record belongs

The CTDCLHST utility assumes the record decollation date as its backup date, and processes the record accordingly.

**Corrective Action:** No action is required.

**CLHD7FW SYSDATA RECORD `{jobName recordId}` HAS AN INVALID BACKUP DATE, RELATED REPORT WILL BE HELD.**

**Explanation:** The CTDCLHST utility discovered a SYSDATA record in the History User Report List file with an invalid backup date.

The variables in this message are:
- `jobName` - the name of the job to which the SYSDATA record belongs
- `recordId` - the unique key of the SYSDATA record

Neither the SYSDATA record nor the related report will be removed from the History User Report List file.

**Corrective Action:** Investigate the cause of this occurrence, and correct the problematic SYSDATA record.

**CLHD7GI SELECTION PASS OVER THE HISTORY FILE.**

**Explanation:** This information message indicates that the CTDCLHST utility started the selection pass over the History User Report List file.

**Corrective Action:** No action is required.

**CLHD7HI CHECK FOR ORPHANED SYSDATA RECORDS.**

**Explanation:** This information message indicates that the CTDCLHST utility started the check for “orphaned” SYSDATA records.

**Corrective Action:** No action is required.

Messages CLHG00 through CLHGxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

**CLHG85E INVALID INPUT PARAMETER NOSYS=.**

**Explanation:** An invalid value was specified in the NOSYS parameter of the EXEC JCL statement activating the CTDCLHST utility, and was passed to the program. The only valid values are N, Y, or S.

The utility ends with a return code of 12.

**Corrective Action:** Correct the JCL, and rerun the job.
CLHG87I READING BACKUP CONTROL RECORDS.

Explanation: This information message indicates that the CTDCLHST utility started reading backup control records.

Corrective Action: No action is required.

CLHG88I READING SYSDATA RECORDS.

Explanation: This information message indicates that the CTDCLHST utility started reading SYSDATA records.

Corrective Action: No action is required.

CLHG89I number SYSDATA RECORDS READ.

Explanation: This information message indicates the number of SYSDATA records read by the CTDCLHST utility from the History User Report List file.

Corrective Action: No action is required.

CLHG8BI DELETION OF THE SELECTED RECORDS.

Explanation: This information message is issued by the CTDCLHST utility when it runs in PROD mode, and indicates that the utility started deleting selected records.

Corrective Action: No action is required.

CLHG8C1 USER RECORD NOT FOUND FOR NOTEPAD RECORD userid jobName ODATE=odate RID=recordId

Explanation: The CTDCLHST utility discovered a notepad record in the History User Reports List file without a matching USER record.

The variables in this message are:

- `userid`  
- `jobName`  
- `odate`  
- `recordId`

The notepad record is deleted.

Corrective Action: Investigate the cause of this occurrence. It should not happen in a proper Control-D operation.

CLHG8DI SYSDATA RECORD NOT FOUND FOR USER RECORD userid jobName ODATE=odate RID=recordId

Explanation: Unless NOSYS=N is requested in the CTDCLHST utility call, the utility scans all USER records in the History User Reports file and for each USER record, checks if there is a matching SYSDATA record. If a SYSDATA record is not found, this message is issued and the USER record is deleted.
The variables in this message are:

- `userId`
- `jobName`
- `odate`
- `recordId`

The USER record is deleted.

**Corrective Action:** Investigate the cause of this occurrence. It should not happen in a proper Control-D operation.

**CLHG8E1** SYSDATA RECORD NOT FOUND FOR INDEX RECORD `jobName`

**Explanation:** Running with parameter NOSYS=Y or NOSYS=S, the CTDCLHST utility scans all INDEX records in the History User Report List file and for each INDEX record, checks if there is a matching SYSDATA record in the file. This message indicates that the utility did find an INDEX record with no matching SYSDATA record. Such “orphan” INDEX records may appear in the History User Report List file as the result of situation described in message CLH943W.

The variables in this message are:

- `jobName`
- `odate`
- `recordId`

The INDEX record and its related index file are deleted.

**Corrective Action:** Investigate the cause of this occurrence. It should not happen in a proper Control-D operation, except for the situation described in message CLH943W.

**CLHG8F1** USER RECORD NOT FOUND FOR SYSDATA RECORD `jobName` `jobId`

**Explanation:** Running with parameter NOSYS=S, the CTDCLHST utility found an “orphan” SYSDATA record in the History User Report List file. This means that a SYSDATA record is not referred to by any USER record in the file.

The variables in this message are:

- `jobName` - the name of the job to which the orphaned SYSDATA record belongs
- `jobId` - the MVS identifier of the job to which the orphaned SYSDATA record belongs
- `odate` - originating date of the report to which the orphaned SYSDATA record belongs
- `recordId` - the unique key of the orphaned SYSDATA record

The orphaned SYSDATA record will be removed from the History User Report List file in the next utility execution.

**Corrective Action:** No action is required.
CMP messages

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

Messages CMP500 through CMP5xx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CMP541E DATASET dsn IS NOT CATALOGED

Explanation: The dsn data set specified in the PDS parameter in the scheduling table is not cataloged.

This message is issued by the New Day procedure.

The job or mission order is not issued. Processing continues to the next job or mission.

Corrective Action: Correct the parameters for this job or mission.

CMP542E DATASET dsn DOES NOT EXIST ON VOLUME

Explanation: The dsn data set specified in the PDS parameter in the scheduling table appears in the catalog, but is not on the volume.

This message is issued by the New Day procedure.

The job or mission order is not issued. Processing continues to the next job or mission.

Corrective Action: Check the catalog, and recatalog the data set according to the current volume.

CMP543E DATASET dsn IS NOT A LIBRARY OR IS NOT MOVABLE

Explanation: The dsn data set specified in the PDS parameter in the scheduling table is not a movable partitioned data set.

This message is issued by the New Day procedure.

The job or mission order is not issued. Processing continues to the next job or mission.

Corrective Action: Correct the parameters of this job or mission.

CMP545E NEGATIVE FREE SPACE FOUND FOR DATASET dsn

Explanation: An error has occurred in the calculation of free space in the library specified in the PDS parameter.

This message is issued by the New Day procedure.

Possible causes are:

- VTOC error
- Control-M or Control-D error

The job or mission order is not issued. Processing continues to the next job or mission.
Corrective Action: Use some other means to check the free space in the library. If necessary, have your system programmer call your INCONTROL administrator.

CMP547E ERROR IN SCHEDULE DATA - INVALID "MINIMUM"

Explanation: The MINIMUM parameter contained nonnumeric characters. The production parameters have probably been incorrectly modified by an editor or by a program.

This message is issued by the New Day procedure.
The job or mission order is not issued. Processing continues with the next job or mission.

Corrective Action: Correct the parameters of the job or mission.

CND messages

This group includes messages for the IOA (infrastructure) product.

Messages CND600 through CND6xx

This group includes messages for the IOA (infrastructure) product.

CND630S OPEN OF PARAMETER LIST FAILED. DDNAME "DACNDIN"

Explanation: Open of control statements file failed (the DACNDIN DD statement in the IOACND utility or program).

Possible causes are:

- The DACNDIN DD statement is missing.
- The data set described by the DACNDIN DD statement does not exist, or cannot be opened for sequential read, or has a record length that is not 80.

Program execution stops with a condition code of 08.

Corrective Action: Correct the JCL for the job or the CLIST, and run it again.

CND631S INVALID FORMAT OF INPUT PARAMETERS

Explanation: Severe syntax error in the parameters to the IOACND or CTMRELRS utilities.

The utility stops executing with a condition code of 12. The condition is not added, deleted, or released.

Corrective Action: Correct the parameters and reactivate the utility.

CND632S INVALID DATE FORMAT

Explanation: There is an invalid date format in an ADD COND or DELETE COND statement, utility or the IOACND program. The date format should be mmdd or ddmm, depending on your site standard.

The utility stops executing with a condition code of 12. The condition is not added or deleted.

Corrective Action: Correct the parameters and reactivate utility.
CND633S INTERNAL ERROR IN IOACND. NOTIFY THE IOA ADMINISTRATOR

**Explanation:** Internal error in the IOACND and CTMRELRS utilities.
The utility stops executing with a condition code of 12. The condition is not added, deleted, or released.

**Corrective Action:** Call your IOA administrator for assistance.

CND634S OPEN OF PRINT FILE FAILED. DDNAME "DAPRINT"

**Explanation:** Open of messages file failed (the IOACND and CTMRELRS utilities). Possible causes are:
- The DAPRINT DD statement is missing.
- The data set allocated to the DAPRINT DD statement cannot be opened for sequential write.

The utility stops executing with condition code of 12.

**Corrective Action:** Correct the JCL for the job or the CLIST and run it again.

CND635E INVALID FUNCTION. USE ADD/DELETE/CHECK

**Explanation:** An invalid function was passed to the IOACND utility.
Valid functions are:
- ADD
- DELETE
- CHECK

The utility stops executing with a condition code of 12. The condition is not added, deleted, or released.

**Corrective Action:** Correct the parameter syntax and reactivate.

CND636E INVALID FUNCTION OR FUNCTION NOT SUPPORTED YET

**Explanation:** An attempt has been made to add or delete a Quantitative Resource or Control Resource using the IOACND utility. These are privileged operations for Control-M or Control-D support personnel.
The utility stops executing with a condition code of 12.

**Corrective Action:** Correct the parameter syntax and reactivate.

CND637E LOAD OF PROGRAM "CTMRS0" FAILED

**Explanation:** An attempt to load the CTMRS0 program failed.

**Corrective Action:** Check that the name of the load library is correct. If that does not solve the problem, contact your INCONTROL Administrator.

CND638E FUNCTION "RDIF" OF PROGRAM "CTMRS0" FAILED

**Explanation:** The IOACND utility failed in one of the initialization steps of the Control-M Resources file. Either the file accessed is not a valid Resources file, or the Resources file is being formatted.
The utility stops with a return code of 16.
Corrective Action: Ensure that the DARESF DD statement points to a valid resource file, and that the file is not corrupted.

CND639E ADD REQUESTED FOR AN EXISTING RESOURCE resource
Explanation: The IOACND utility was activated with a request to add a quantitative or control resource, but the resource already exists in the file.
The ADD request is not performed.
Corrective Action: Ensure that the utility is only activated with valid requests.

CND63BI WISH WI2232 IS ENABLED - UPPERCASING CONDITION NAME
Explanation: This information message is generated by the IOACND utility when optional wish WI2232 is applied.
The IOACND utility translates a condition name from the PARM= parameter in the EXEC card of this utility to upper case.
Corrective Action: No action is required.

CNV messages
This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

Messages CNVS00 through CNVSxx
This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CNVST1I CONTROL-M STATISTICS FILE CONVERSION STARTED
Explanation: This information message indicates that the conversion of the Control-M Statistics file for version 6.3 and later has begun.
Corrective Action: No action is required.

CNVST2I CONTROL-M STATISTICS FILE CONVERSION ENDED
Explanation: This information message indicates that the conversion of the Control-M Statistics file for version 6.3 and later has ended.
Corrective Action: No action is required.

CNVST3I STATISTICS FILE HAS BEEN SUCCESSFULLY CONVERTED
Explanation: This information message indicates that the Control-M Statistics file has been successfully converted from version 6. y.xx to version 6.3 format.
In this message, valid values for y are 0, 1, or 2.
Corrective Action: No action is required.

CNVST4E VSAM ERROR: DDNAME=ddName RC=rc REASON=rsn
FUNCTION=func

Explanation: A VSAM error occurred while attempting to convert the Control-M Statistics file to version 6.3 format. Consult the IBM manual Macro Instructions for Data Sets for an explanation of the return codes and reason codes.

Corrective Action: Correct the error and rerun the job.

CNVST5E STATISTICS FILE ALREADY CONVERTED

Explanation: The CTMCVSTT utility has been run against a Control-M Statistics file that is already in version 6.3 format.

Corrective Action: Do not run the CTMCVSTT utility.

COM messages

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

Messages COMG00 through COMGxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

COMG84I OPERATION WILL BE RE-ATTEMPTED

Explanation: The system will try again to perform an operation that failed.

This message follows other messages that provide details about an error that occurred.

Normal processing continues, and the system tries repeatedly to perform the operation until it succeeds, or until the retry limit is reached. When the retry limit is reached, the system tries to recycle the SNA channel only.

Corrective Action: No action is required.

COMG85I OPERATION WILL BE RE-ATTEMPTED AFTER ONE MINUTE

Explanation: A failed operation will be retried until the retry limit is reached. This message follows other messages that provide details about an error that occurred.

The failed operation is retried. When the retry limit is exceeded, an attempt is made to recycle communication.

Corrective Action: No action is required.
COMG89W APPCCMD appccmd FAILED. APPLID=applId R15=r15 R0=r0 RPL6RC=rc PARTNER LU=partner_lu

Explanation: An APPC command has failed. The reason for the failure may be temporary, such as a shortage of storage.

This message is followed by the COMG84I message, indicating the action that will be taken by the Control-M NJE Gateway.

This message may be preceded by another message that provides more information about the error that occurred.

The following information in this message is for the VTAM system programmer:

- **appccmd** - the command that failed
- **applId** - the identity of the application that issued the command that failed
- **r15** - the value in Register 15 returned by VTAM
- **r0** - the value in Register 0 returned by VTAM
- **rc** - the RPL6RC return code returned by VTAM

The following fields are documented in the *VTAM Programming for LU 6.2 Manual*:

- **APPCCMD** - in the section on LU 6.2 macro instruction syntax and operands
- **RPL6RC** - in the appendix on return codes
- **R0 and R15** - in the section on handling errors

Corrective Action: If a second message gives a probable cause for the error, proceed according to the User Response recommended in that message. Otherwise, contact your VTAM system programmer.

COMG90E APPCCMD appccmd FAILED. APPLID=applId R15=r15 R0=r0 RPL6RC=rc PARTNER LU=partner_lu

Explanation: An APPC command failed.

This message is followed by a message indicating the action that will be taken by the Control-M NJE Gateway.

This message may be preceded by another message that provides more information about the error that occurred.

The following information in this message is for the VTAM system programmer:

- **appccmd** - the command that failed
- **applId** - the identity of the application that issued the command that failed
- **r15** - the value in Register 15 returned by VTAM
- **r0** - the value in Register 0 returned by VTAM
- **rc** - the RPL6RC return code returned by VTAM

The following fields are documented in the *VTAM Programming for LU 6.2 Manual*:
INCONTROL for z/OS Messages Manual

- APPCCMD - in the section on LU 6.2 macro instruction syntax and operands
- RPL6RC - in the appendix on return codes
- R0 and R15 - in the section on handling errors

**Corrective Action:** If a second message gives a probable cause for the error, proceed according to the User Response recommended in that message. Otherwise, contact your VTAM system programmer.

Messages COMF00 through COMFxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**COMF51I LOC SNDR loc_sendr INIT SESSION WITH RMT RCVR rmt_recvr**

**Explanation:** The *loc_sendr* local sender is trying to initiate a session with the *rmt_recvr* remote receiver.

A session starts when the remote Gateway comes up.

**Corrective Action:** No action is required.

**COMF52I LOC RCVR loc_recvr AWAITING SESSION WITH RMT SNDR rmt_sendr**

**Explanation:** The *loc_recvr* local receiver is waiting for a session to be initiated with the *rmt_sendr* remote sender.

A session starts when the remote Gateway comes up.

**Corrective Action:** No action is required.

**COMF53I LOC SNDR loc_sendr NOW IN SESSION WITH RMT RCVR rmt_recvr**

**Explanation:** The *loc_sendr* local sender is now in a session with the *rmt_recvr* remote receiver. Communication is established.

**Corrective Action:** No action is required.

**COMF54I LOC RCVR loc_recvr INIT SESSION WITH RMT SNDR rmt_sendr**

**Explanation:** The *loc_recvr* local receiver is now in a session with the *rmt_sendr* remote sender. Communication is established.

**Corrective Action:** No action is required.

**COMF55E SERVER TYPE x FAILED IN yyy. RC = rc**

**Explanation:** An Application Server of type *x* has failed to perform service *yyy*.

The variables in this message are:
INCONTROL for z/OS Messages Manual

- $x$ - the type of Application Server
- $yyy$ - the problematical service Valid values are:
  - PUT
  - GET
- $rc$ - the return code A value of 28 indicates communication recovery and is allowed. All other return codes are indicative of internal errors.

**Corrective Action:** If the value of $rc$ is not 28, consult your INCONTROL administrator.

CON messages

This group includes messages for the Control-O product.

Messages CON200 through CON2xx

This group includes messages for the Control-O product.

**CON220I** CONTROL-O ALLOCATED $num$ SUBSYSTEM CONSOLES

**Explanation:** During Control-O initialization, Control-O allocated $num$ subsystem consoles for use by the DO COMMAND with WAITRESP Y. The number $num$ must be equal to the value of the NUMCONS parameter in the CTOPARM member in the IOA PARM library.

Control-O acquires the allocated subsystem consoles and uses them for the DO COMMAND with RESPMODE set to Y.

**Corrective Action:** If the value of $num$ is less than the value defined in CTOPARM by the NUMCONS=$num$ statement, define more subsystem consoles in the system. For information on how to do this, see the description of the NUMCONS parameter in CTOPARM and subsystem consoles in the Control-O Installation chapter of the INCONTROL for z/OS Installation Guide.

**CON221I** CONTROL-O RELEASED THE SUBSYSTEM CONSOLES

**Explanation:** This information message is the normal message issued during Control-O termination if subsystem consoles were allocated.

The subsystem consoles that were allocated to Control-O are freed during termination of the Control-O monitor.

**Corrective Action:** No action is required.

**CON222W** NO SUBSYSTEM CONSOLES ARE AVAILABLE FOR CONTROL-O

**Explanation:** Control-O could not allocate subsystem consoles during initialization, as specified in the NUMCONS parameter in the CTOPARM member.

No subsystem consoles are allocated.
CON223W INSUFFICIENT NUMBER OF CONSOLES ARE AVAILABLE FOR CONTROL-O

Explanation: Control-O attempted to allocate subsystem consoles during initialization, but not enough consoles are available.

All the available subsystem consoles are allocated by Control-O. This message is followed by the CON220I message, which details how many consoles were allocated for Control-O use.

Corrective Action: Decrease the number of consoles required for Control-O (the NUMCONS parameter in CTOPARM), or define a sufficient number of consoles for Control-O use in MVS. If other products use a subsystem console, calculate the number of subsystem consoles required for all products. For more information, see the chapter on Control-O installation in the INCONTROL for z/OS Installation Guide, and the relevant MVS manuals.

CON224E ERROR IN SUBSYSTEM CONSOLE SERVICE ROUTINE. FUNCTION=func RC=rc. A SNAP IS PRODUCED

Explanation: Control-O attempted to perform an OBTAIN or RELEASE function on a subsystem console. The subsystem console service routine failed to perform the requested function.

The system action varies, depending on whether Control-O was initializing or terminating at the time of its issue, as follows:

- If the message was issued during Control-O initialization, Control-O does not use subsystem consoles.
- If the message was issued during Control-O termination, Control-O stops releasing the subsystem consoles. If not all the subsystem consoles were released, they remain allocated until a new Control-O monitor is started or until an IPL is performed.

In either event, snap dumps are produced with the relevant control blocks.

Corrective Action: Save the snap dumps and call your INCONTROL administrator for assistance.

CON225E INSUFFICIENT STORAGE FOR THE CONSOLE func FUNCTION

Explanation: There is insufficient storage in the Control-O address space to perform the OBTAIN or RELEASE subsystem console function.

The system action varies, depending on whether Control-O was initializing or terminating at the time of its issue, as follows:

- If the message was issued during Control-O initialization, Control-O does not use subsystem consoles.
- If the message was issued during Control-O termination, Control-O stops releasing the subsystem consoles. If not all the subsystem consoles were released, they remain allocated until a new Control-O monitor is started or until an IPL is performed.

Corrective Action: Increase the region size specified in the Control-O procedure.
CON226E INSUFFICIENT STORAGE IN (EXTENDED) CSA. CANNOT ALLOCATE SUBSYSTEM CONSOLES

**Explanation:** This message is issued during Control-O initialization when there is insufficient space in CSA or ECSA for Control-O console-related control blocks.

Control-O initialization continues without using subsystem consoles.

**Corrective Action:** Check if the storage defined for CSA or ECSA is large enough. If not, increase the CSA or ECSA size.

CON227E ERROR IN SUBSYSTEM CONSOLE PROCESSING.
REQUEST=\texttt{reqCode} FUNCTION=\texttt{func} ERRCODE=\{\texttt{abCode}|\texttt{rsn}\}

**Explanation:** The subsystem console service routine abended when attempting to perform the OBTAIN or RELEASE function for a subsystem console, and the function was not performed or was performed partially.

The system action varies, depending on whether Control-O was initializing or terminating at the time of its issue, as follows:

- If the message was issued during Control-O initialization, Control-O will not use subsystem consoles.
- If the message was issued during Control-O termination, Control-O stops releasing the subsystem consoles. If all the subsystem consoles were not released, they remain allocated until a new Control-O monitor is started or until an IPL is performed.

Abend and snap dumps are produced.

**Corrective Action:** Save the abend and snap dumps and call your INCONTROL administrator for assistance.

CON228I CONTROL-O ALLOCATED num EMCS CONSOLES

**Explanation:** This information message indicates that Control-O allocated a total of \texttt{num} EMCS CONSOLES according to the definitions in the CTOPARM member.

**Corrective Action:** No action is required.

CON229I CONTROL-O ALLOCATED num EMCS CONSOLES WITH MIG IDS

**Explanation:** This information message indicates that Control-O allocated a total of \texttt{num} EMCS CONSOLES with migration IDs according to the definitions in the CTOPARM member.

**Corrective Action:** No action is required.

CON22AE CONTROL-O ALLOCATED EMCS CONSOLE ERROR. IOAMCS RC=\texttt{rc} REASON=\texttt{rsn} CONSOLE=\texttt{consoleName}

**Explanation:** Control-O failed to allocate an EMCS CONSOLE. The MCSOPER service ended with an error. When this happens, Control-O attempts to allocate an EMCS CONSOLE in order to issue a command or message. However, the attempt failed.

Control-O ignores the console.

**Corrective Action:** Do the following:
1. Record the return code (rc), reason number (rsn), and console name (consoleName). For information about MCSOPER, see the manual for the IBM authorized macro services.

2. Correct the definitions of the EMCS CONSOLE in the CTOPARM EMCSCONS.

3. STOP the Control-O monitor and start a new monitor.

CON22BE CONTROL-O ALLOCATED EMCS CONSOLE ERROR. CONVCON
RC=rc REASON=rsn CONSOLE=consoleName

**Explanation:** Control-O failed to allocate an EMCS CONSOLE. The CONVCON service ended with an error. When this happens, Control-O tries to allocate an EMCS CONSOLE in order to issue a command or message. However, the attempt failed.

Control-O ignores the console.

**Corrective Action:** Do the following:

1. Record the return code (rc), reason number (rsn), and console name (consoleName). For information about CONVCON, see the manual for the IBM authorized macro services.

2. Correct the definitions of the EMCS CONSOLE in the EMCSCONS parameter in the CTOPARM member.

3. STOP the Control-O monitor and start a new monitor

**COP messages**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**Messages COP0 through COP0xx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**COP040S OPEN OF NEW ACTIVE JOBS FILE FAILED**

**Explanation:** The CTMCAJF Control-M utility, which is used to copy the Active Jobs file to a new file, failed to open the file.

Possible causes are:

- The DACKPTN DD statement is missing.
- There is insufficient memory for the job.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

**COP041I NEW ACTIVE JOBS FILE SUCCESSFULLY CREATED**

**Explanation:** This information message indicates that the CTMCAJF utility has successfully copied the Active Jobs file.
Corrective Action: No action is required.

COP042S OPEN OF PARAMETERS FILE FAILED. DDNAME "DACOPPRM"

Explanation: Open of the utility parameters file failed for the DACOPPRM DD statement, the CTMCAJF utility.

Possible causes are:
- The DACOPPRM DD statement is missing.
- The data set described by the DACOPPRM DD statement cannot be opened for sequential read.

The simulation stops executing with a condition code of 08.

Corrective Action: Correct the JCL for the job.

COP043S REQUIRED OPERATION CANNOT BE PERFORMED BECAUSE THE CONTROL-M MONITOR IS ACTIVE

Explanation: An attempt has been made to run the CTMCAJF utility or an AJF update function in utility IOAVERIFY (DIAGNOSE CORRECT, ZAP, VERIFY ENQ) while the Control-M monitor is active. Maintenance of the Control-M Active Jobs file can be performed only when the Control-M monitor is not active.

A Control-M monitor is determined to be active by utilizing the enqueue management mechanism to enquire whether the QNAME of the monitor is in use. If the QNAME is not in use, the monitor is down.

Corrective Action: Shut down the Control-M monitor. Read the instructions for the utilities CTMCAJF and IOAVERIFY (whichever applies) in the Control-M for z/OS User Guide.

COP044S YOU CANNOT COPY THE ACTIVE JOBS FILE TO ITSELF

Explanation: The input and output DD statements point to the same Active Jobs file. The user attempted to copy the Active Jobs file to itself.

The CTMCAJF utility ends with an error.

Corrective Action: Correct the JCL and rerun utility.

COP049I NEW HISTORY JOBS FILE SUCCESSFULLY CREATED

Explanation: This information message indicates that the CTMH Cop utility successfully created a new History Jobs file from the old one.

Corrective Action: No action is required.

Messages COPB00 through COPBxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

COPB40S OPEN OF NEW ACTIVE MISSION FILE FAILED

Explanation: The CTDCAMF Control-D utility, which is used to copy the Active Missions file to a new file, failed to open the file.
Possible causes are:

- The DAAMFN DD statement is missing.
- There is insufficient memory for the job.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

**COPB41I** NEW ACTIVE MISSION FILE SUCCESSFULLY COPIED

**Explanation:** This information message indicates that the CTDCAMF utility has successfully copied the Active Missions file.

**Corrective Action:** No action is required.

**COPB42S** OPEN OF PARAMETERS FILE FAILED. DDNAME "DACOPPRM"

**Explanation:** Open of the utility parameters file failed (the DACOPPRM DD statement). This message is issued by the CTDCAMF utility.

Possible causes are:

- The DACOPPRM DD statement is missing.
- The data set described by the DACOPPRM DD statement cannot be opened for sequential read.

The simulation stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

**COPB43S** REQUIRED OPERATION CANNOT BE PERFORMED BECAUSE THE CONTROL-D MONITOR IS ACTIVE

**Explanation:** An attempt was made to run the CTDCAMF utility while the Control-D monitor was active. Maintenance of the Control-D Active Missions file can be performed only when the Control-D monitor is not active.

The utility terminates with a condition code of 08.

**Corrective Action:** Shut down the Control-D monitor. If you are using the COPY function, refer to the description of the CTDCAMF utility in the Control-D and Control-V User Guide.

**COPB44S** YOU CANNOT COPY THE ACTIVE MISSION FILE TO ITSELF

**Explanation:** The CTDCAMF utility is attempting to copy the Active Missions file to itself.

The utility terminates with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

**COPB45I** CONTROL-D ACTIVE MISSIONS FILE IS COPIED TO BACKUP FILE

**Explanation:** This information message is the normal start message of the CTDCAMF utility for the COPY option.

**Corrective Action:** No action is required.
COPB46I COMPRESSING OF CONTROL-D ACTIVE MISSIONS FILE STARTED

**Explanation:** This information message is the normal start message of the CTDCAMF utility for the COMPRESS option.

**Corrective Action:** No action is required.

COPB47I COMPRESSING OF CONTROL-D ACTIVE MISSIONS FILE ENDED

**Explanation:** This information message is the normal termination message of utility CTDCAMF for the COMPRESS option.

**Corrective Action:** No action is required.

COPB48S ERROR WHILE COMPRESSING ACTIVE MISSIONS FILE, FILE WAS NOT COMPRESSED

**Explanation:** The CTDCAMF Control-D utility failed.

Possible causes are:
- The DAAMF DD statement is missing.
- The data set described by the DD statement is not the Control-D Active Missions file.
- The data set described by the DAAMF DD statement is the Control-D Active Missions file, but for another Control-D monitor or from a different Control-D version.
- The DABKUP DD statement is missing.
- The SYSPRINT DD statement is missing. See the CTM913S message.

Utility terminates with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

Messages COPC00 through COPCxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

COPC56S PREVIOUS FORMAT OF ACTIVE JOBS FILE ABENDED

**Explanation:** The source Active Jobs file is either currently being formatted, or an abend occurred during the previous formatting.

The Active Jobs file is formatted daily as part of the New Day process. It may also be formatted by the CTMCAJF utility.

The copy program terminates with a condition code of 08.

**Corrective Action:** If the Active Jobs file is currently being formatted, wait until the formatting is completed. If the previous formatting abended, determine the reason. Resubmit the copy job only after successful formatting.
COPC57S TARGET ACTIVE JOBS FILE IS NOT A NEWLY FORMATTED FILE

Explanation: The target Active Jobs file should not be used before it is formatted by the FORMCKP procedure.

The copy program terminates with a condition code of 08.

Corrective Action: Format the Active Jobs file using the FORMCKP procedure.

COPC58S TARGET ACTIVE JOBS FILE IS NOT LARGE ENOUGH

Explanation: The target Active Jobs file is not large enough to contain the source Active Jobs file.

The copy program terminates with a condition code of 08.

Corrective Action: Reallocate and reformat the new Active Jobs file.

COPC59I num JOBS WERE DELETED FROM THE ACTIVE JOBS FILE

Explanation: This information message displays the number of jobs deleted from the Active Jobs file during a run of the CLEANUP function of the CTMCAJF utility. The CLEANUP function of the CTMCAJF utility deletes jobs from the Active Jobs file according to the same criteria as the New Day procedure.

Corrective Action: No action is required.

COPC67I jobName DELETED FROM THE ACTIVE JOBS FILE

Explanation: This information message identifies a job that was deleted from the Active Jobs file during a run of the CLEANUP function of the CTMCAJF utility. The CLEANUP function of the CTMCAJF utility deletes jobs from the Active Jobs file according to the same criteria as the New Day procedure. Whenever a job is deleted, this message is issued.

The Control-M/Enterprise Manager (Control-M/EM) Mainframe Gateway shuts down.

Corrective Action: Correct the JCL for the Control-M/EM Gateway and restart it.

COPC69S EXECUTION STOPS DUE TO CONTROL-M MONITOR NOT RUNNING

Explanation: The CLEANUP function of the CTMCAJF utility stops because the Control-M monitor is not running. The CLEANUP function of the CTMCAJF utility can run only when the Control-M monitor is running.

The CTMCAJF utility terminates.

Corrective Action: BMC Software recommends the following:

- If Control-M is down, run the CTMCAJF utility with the COMPRESS function.
- If Control-M is up, run the CTMCAJF utility with the CLEANUP function.

COPC70S ACTIVE JOBS FILE (CKP) SIZE - PARM TABLE MISMATCH

Explanation: The value for the CKPSIZE parameter being used by the CTMCAJF utility is different from the CKPSIZE value used to format the Active Jobs file. The parameter is defined in the CTMPARM member in the IOA PARM library. The values used must be identical.
The CTMCAJF utility terminates. The requested action is not done.

**Corrective Action:** Ask your INCONTROL administrator to determine the cause of the discrepancy in the CKPSIZE value, and correct the error.

**COPC75S COMPRESS AND CLEANUP ARE NOT ALLOWED FOR HISTORY FILE PROCESSING**

**Explanation:** The COMPRESS and CLEANUP parameters may not be specified when using the CTMHCOP procedure to copy or expand the History Jobs file. Only the COPY parameter can be used.

The CTMHCOP utility terminates with a return code of 8.

**Corrective Action:** Use the COPY parameter to copy or expand the History Jobs file.

**COS messages**

This group includes messages for the Control-O product.

**Messages COS600 through COS6xx**

This group includes messages for the Control-O product.

**COS620I CONTROL-O COSMOS INITIALIZATION STARTED. CTOCOS release APAR apar**

**Explanation:** Control-O issues the message when starting the Control-O Status Monitoring System (COSMOS) and displays the version and the level of the COSMOS main module CTOCOS.

**Corrective Action:** No action is required.

**COS621I CONTROL-O COSMOS STARTED**

**Explanation:** This information message indicates that the Control-O Status Monitoring System (COSMOS) has been started in response to an operator command or as part of the Control-O startup process.

**Corrective Action:** No action is required.

**COS622S CONTROL-O COSMOS TERMINATION ERROR**

**Explanation:** COSMOS terminated after an error was detected. This message is accompanied by other messages which explain the cause of the error.

COSMOS ends with errors.

**Corrective Action:** Examine the accompanying messages for the cause of the problem, and correct it as appropriate.
COS623I CONTROL-O COSMOS ENDED

Explanation: This information message indicates COSMOS terminated in response to an operator command or as part of the Control-O shutdown process.

Corrective Action: No action is required.

COS624S OPEN OF DDNAME ddName FAILED

Explanation: COSMOS was unable to open the file referenced by the ddName DD statement.

Possible causes are:
- The ddName DD statement is misspelled.
- The data set (member) described by the ddName DD statement does not exist.

COSMOS ends with errors.

Corrective Action: Check the Control-O starting procedure JCL to verify that the DD statement and the file referenced by it exist.

COS625S READ ERROR FOR ddName

Explanation: COSMOS is unable to read the file referenced by the ddName DD statement.

Possible causes are:
- The ddName DD statement is misspelled.
- The data set (member) described by the ddName DD statement does not exist.

COSMOS ends with errors.

Corrective Action: Check that the appropriate file name is referenced correctly.

COS626S CONTROL-O COSMOS INITIALIZATION ERROR

Explanation: An error was detected during COSMOS initialization. This message is accompanied by other messages that describe the error that occurred.

COSMOS shuts down.

Corrective Action: Examine the accompanying messages for more information about the initialization error.

COS627S CONTROL-O COSMOS MISSING OBJECT PLB

Explanation: The pool of AutoEdit variables containing the Objects cannot be found. A search is made for this pool during COSMOS initialization.

COSMOS shuts down.

Corrective Action: Check if the object pool defined in the COSMOLST member was defined in DAGLBLST and exists in memory.
COS628S CONTROL-O COSMOS MISSING METHOD PLB

**Explanation:** The pool of AutoEdit variables containing the Methods cannot be found. A search is made for this pool during COSMOS initialization.

COSMOS shuts down.

**Corrective Action:** Check if the method pool defined in the COSMOLST member was defined in DAGLBLST and exists in memory.

COS629S CONTROL-O COSMOS MISSING PREREQ PLB

**Explanation:** The pool of AutoEdit variables containing the Prerequisites cannot be found. A search is made for this pool during COSMOS initialization.

COSMOS shuts down.

**Corrective Action:** Check if the prerequisites pool defined in the COSMOLST member was defined in DAGLBLST and exists in memory.

COS630S CONTROL-O COSMOS GETMAIN ERROR FOR CDT

**Explanation:** COSMOS failed to acquire storage for the CDT control block. CDT is a required internal control block for COSMOS.

COSMOS shuts down.

**Corrective Action:** Check if the storage defined for the ECSA (Extended Common Service Area) is large enough. If not, increase the ECSA size.

COS631S CONTROL-O COSMOS GETMAIN ERROR FOR RETEXT

**Explanation:** COSMOS subtask failed to allocate a working area.

COSMOS terminated. Control-O continues to operate.

**Corrective Action:** Check MVS GETMAIN messages that appear in the SYSLOG and try to solve the problem.

COS632S CONTROL-O COSMOS POOL poolname WAS NOT LOADED GLOBAL VARIABLE DATABASE.

**Explanation:** COSMOS subtask tries to initiate the COSMOS environment but the pool was not loaded.

COSMOS terminated. Control-O continues to operate.

**Corrective Action:**

1. Check that the pool name is correct in COSMOLST and if not, correct it. If the pool name is missing, add it to the DAGLBLST, then load the pool name.

2. Check that pool name is in the DAGLBLST and its characteristics are correct.

If the pool name's characteristics are incorrect stop and start the Control-O monitor. After correcting the error you can restart COSMOS.
COS633S CONTROL-O COSMOS POOL poolname MAX ROW IS ZERO.

**Explanation:** COSMOS subtask tries to initiate the COSMOS environment but the pool cannot be used by COSMOS because it cannot contain any data.

COSMOS terminated. Control-O continues to operate.

**Corrective Action:** Correct the pool definition in IOA Global Variable Database then load it again using LOADGLOBAL=poolname modify command.

COS634I CONTROL-O COSMOS HEADER MODE=mode PRE-REQUISITE=poolname OP-FLAGS=flags FSM-FLAGS=flags

**Explanation:** COSMOS subtask displays record type "H" from COSMOLST.

**MODE=mode** - default status of COSMOS' objects

**PRE-REQUISITE=poolname** - name of prerequisite pool

**OP-FLAGS=flags** - COSMOS operation flags

**FSM-FLAGS=flags** - COSMOS control flags

For details on the flags, refer to the Control-O/COSMOS User Guide

**Corrective Action:** No action is required.

COS635I CONTROL-O COSMOS OBJECTS source_pool-operating_pool METHOD method MODE=mode UP=up DOWN=down UNKNOWN=unknown

**Explanation:** COSMOS subtask displays record type "T" from COSMOLST.

**OBJECTS source_pool-operating_pool** - name of COSMOS source and its operating pool name

**METHOD method** - method's pool name for objects of this pair of pools

**MODE=mode** - default mode for objects of this pair of pools

**UP=up** - the code used in this pool pair to represent the UP state

**DOWN=down** - the code used in this pool pair to represent the DOWN state

**UNKNOWN=unknown** - the code used in this pool pair to represent the UNKNOWN state

**Corrective Action:** No action is required.

COS636I CONTROL-O COSMOS SYSTEMS a b c d e f g

**Explanation:** COSMOS subtask displays record type "C" from COSMOLST.

a-g are the system names in the record

**Corrective Action:** No action is required.
COS637S CONTROL-O COSMOS SYSTEM system IS NOT IN COSMOS SYSTEMS LIST

Explanation: COSMOS subtask displays the started system whose name is not included in record type "C" from COSMOLST.

COSMOS terminated. Control-O continues to operate.

Corrective Action: Add the started system to record type "C" in COSMOLST. Start COSMOS again.

Messages COSF00 through COSFxx

This group includes messages for the Control-O product.

COSFSM xx CONTROL-O/COSMOS Internal Message

Explanation: This is an internal message used by the Control-O/COSMOS rule with the same name as the message ID. For more information about the relevant rule, see the component details chapter of the Control-O/COSMOS User Guide.

Corrective Action: No action is required.

CPA messages

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

Messages CPA800 through CPA8xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CPA881I COPYING PERMANENT USER FILE TO ACTIVE USER FILE STARTED WITH ODATE=odate

Explanation: This information message indicates that the CTDCP2A utility is copying the list of reports from the Permanent User Report List file to the Active User Report List file.

Corrective Action: No action is required.

CPA882I COPYING PERMANENT USER FILE TO ACTIVE USER FILE ENDED OK

Explanation: This information message indicates that the CTDCP2A utility has finished copying the list of reports from the Permanent User Report List file to the Active User Report List file. This is a normal end message for the CTDCP2A utility.

Corrective Action: No action is required.
CPA884S COPYING PERMANENT USER FILE TO ACTIVE USER FILE ENDED WITH ERRORS

**Explanation:** An error occurred during the execution of the CTDCP2A utility.

**Corrective Action:** A previous message should describe the error.

CPA885E INVALID DATE SUPPLIED IN THE PARM FIELD

**Explanation:** The content of the date parameter passed to the CTDCP2A utility is invalid. The valid format is ddmmyy or mmddyy.

**Corrective Action:** Correct the date, and rerun the CTDCP2A utility.

CPA886I COPIED TO ACTIVE USER FILE userName jobName cat fromUser reportName

**Explanation:** This information message indicates that a record was successfully copied from the Permanent Report List file to the Active Report List file. The CTDCP2A utility issues this message for each record successfully copied from the Permanent Report List file.

**Corrective Action:** No action is required.

CPA887I TOTAL NUMBER OF RECORDS COPIED TO ACTIVE USER FILE IS: num

**Explanation:** This information message displays the total number of records copied from the Permanent User Report List file to the Active User Report List file. The CTDCP2A utility issues this message after copying all records that satisfy the selection criteria.

**Corrective Action:** No action is required.

CPA888I ACTION USER JOB CATEGORY FROM USER REPORT NAME

**Explanation:** This information message is issued by the CTDCA2P utility as a heading line for message CPA886I.

**Corrective Action:** No action is required.

CPA889I userName jobName reportName cat

**Explanation:** This information message is issued by the CTDCP2A utility.

The variables in this message relate to the record copied to the Active User file, as follows:
INCONTROL for z/OS Messages Manual

- `userName` - the identity of the user
- `jobName` - the identity of the job
- `reportName` - the identity of the report
- `cat` - the category

**Corrective Action:** No action is required.

**CPR messages**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**Messages CPR800 through CPR8xx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**CPR846S INSUFFICIENT SPACE FOR** `type cond odate`

**Explanation:** The output IOA Conditions file has insufficient space for all the prerequisite conditions from the input file. The combination of the LRECL parameter with the CNDREC# parameter is smaller in the output file than in the input file, and some prerequisite conditions in the input file could not be copied to the output file.

The variables in this message are:

- `type` - type of condition
- `cond` - condition name
- `odate` - original date

The conversion or copy of the file stops. The content of the output file is unpredictable.

**Corrective Action:** Create a larger output file and run the utility again.

**CPS messages**

This group includes messages for the Control-O product.

**Messages CPS400 through CPS4xx**

This group includes messages for the Control-O product.

**CPS421I CTOCPS STARTED**

**Explanation:** This information message indicates that the CTOCPS program, which compresses or verifies the Global AutoEdit library, started.
Corrective Action: No action is required.

CPS422S COMPRESS REQUIRED FOR GLOBAL AUTOEDIT VARIABLES LIBRARY

Explanation: The Global AutoEdit library needs to be compressed but automatic compression was disabled. Control-O does not automatically compress the Global AutoEdit library because N is specified for the GLBCOMP parameter in the CTOPARM member.

The library is not compressed. The WRITEGLOBAL command fails.

Corrective Action: Do one of the following:

- Use site compression procedures to compress the Global AutoEdit library.
- Ensure that the Global AutoEdit library is large enough to prevent D37 abends between periodic compressions.

For information on how to set automatic compression, see the Control-O chapter in the INCONTROL for z/OS Installation Guide.

CPS423S DYNAMIC ALLOCATION ERROR DURING COMPRESS, ERROR=rc/rsn/dsn

The variables in this message are:

- rc - the return code of the error
- rsn - the reason for the failure
- dsn - the name of the data set that cannot be allocated

The CTOCPS program ends with a return code of 08. The WRITEGLOBAL command fails.

Corrective Action: For an explanation of the return code (rc) and the reason code (rsn), see the IBM manual MVS Programming: Authorized Assembler Services Guide. Until this problem is resolved, use site compression procedures to compress the Global AutoEdit library.

CPS424I FIRST COMPRESSION PHASE STARTED - LIBRARY UNLOAD

Explanation: This information message indicates that the backup phase of the CTOCPS program has begun.

Corrective Action: No action is required.

CPS425I SECOND COMPRESSION PHASE STARTED - COMPRESS IN PLACE

Explanation: This information message indicates that the compress in place phase of the CTOCPS program has begun.

Corrective Action: No action is required.
CPS426I CTOCPS ENDED

**Explanation:** This information message indicates that the CTOCPS program has successfully completed compressing the Global AutoEdit library.

**Corrective Action:** No action is required.

CPS427S IEBCOPY RETURNED A NON-ZERO COMPLETION CODE

**Explanation:** IEBCOPY could not complete its task. IEBCOPY is invoked internally by the CTOCPS program to copy or compress a data set.

The CTOCPS program ends with a return code of 08. The WRITEGLOBAL command fails.

**Corrective Action:** If your system programmer can not resolve the problem, contact your INCONTROL administrator. Until this problem is resolved, use site compression procedures to compress the Global AutoEdit library.

CPS428S CTOCPS RECEIVED AN INVALID PARAMETER LIST

**Explanation:** The CTOCPS program received a parameter list with an unexpected format. This message indicates an internal error.

The CTOCPS program ends with a return code of 08. The WRITEGLOBAL command fails.

**Corrective Action:** Contact BMC Software Customer Support. Until this problem is resolved, use site compression procedures to compress the Global AutoEdit library.

CPS429S PREVIOUS COMPRESS FAILED. GLOBAL LIBRARY CANNOT BE RESTORED FROM BACKUP

**Explanation:** Compression cannot be performed because the Global AutoEdit library was corrupted during the last compression and no valid backup exists.

During CTOCPS processing, the $SCOMPST control member is repeatedly updated to track completed operations. The contents of this control member indicate that the last time CTOCPS ran, Control-O did not successfully compress the Global AutoEdit library. As a result, there is no usable backup. Therefore, the Global AutoEdit library cannot be restored.

Control-O stops loading Global variables.

**Corrective Action:** If you are unable to restore the Global AutoEdit library, run the NEWGLOB job, which renames the corrupted Global AutoEdit library, and creates a new one with the old name using Global variable information from memory. If necessary, you can use the TAILOR JOB option available from ICE by selecting MAINTAIN YOUR ENVIRONMENT => ICE REFRESH=> OPTION 3.

For more information, see the section on automatic compression of the global AutoEdit library in the INCONTROL for z/OS Administrator Guide.
CPS430S ERROR READING AUTO-COMPRESS CONTROL-MEMBER
$$COMPST

Explanation: The CTOCPS program was unable to read the $$COMPST control member. The $$COMPST control member is defined by the NEWGLOB job during installation of Control-O. The CTOCPS program checks the $$COMPST control member to determine if the last automatic compression was successfully completed.

The CTOCPS program ends with a return code of 08. The READGLOBAL and WRITEGLOBAL commands are ignored.

Corrective Action: Ensure that the $$COMPST control member exists in the Global AutoEdit library, and if the NEWGLOB job was not run during installation, submit this job. If the problem is not resolved, contact your INCONTROL administrator.

CPS431S ERROR WRITING AUTO-COMPRESS CONTROL-MEMBER
$$COMPST

Explanation: The CTOCPS program was unable to write the $$COMPST control member. The $$COMPST member is defined by the NEWGLOB job during installation of Control-O.

The CTOCPS program ends with a return code of 08.

Corrective Action: Ensure that the $$COMPST control member exists in the Global AutoEdit library, and if the NEWGLOB job was not run during installation, submit this job. If the problem is not resolved, contact your INCONTROL administrator.

CPS432I RESTORE OF GLOBAL VARIABLES LIBRARY STARTED

Explanation: This information messages indicates that the CTOCPS program has begun restoring the Global AutoEdit library. The CTOCPS program was unable to read the Global AutoEdit library, but the backup file is intact.

CTOCPS restores the Global AutoEdit library from the backup file.

Corrective Action: No action is required.

CPS433S ABEND abCode INTERCEPTED DURING COMPRESS

Explanation: The ESTAE recovery routine intercepted an abend during execution of a READGLOBAL or WRITEGLOBAL command.

The READGLOBAL or WRITEGLOBAL command is ignored.

Corrective Action: Check and correct the names of the Global AutoEdit library and the backup copy. If these libraries are corrupt (for example, by a disk crash), restore them from a backup.

CPS434I COMPRESS OF GLOBAL VARIABLES LIBRARY STARTED

Explanation: This information message indicates that the CTOCPS program has begun compressing the Global AutoEdit library.

Corrective Action: No action is required.
CRR messages

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

Messages CRR100 through CRR1xx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CRR101S LCT EXCEEDED MAXIMUM NUMBER OF ENTRIES (10000)

**Explanation:** An attempt was made to add an entry to the Local Command Table (LCT), an internal program table, but it already contains the maximum number of allowable entries.

Control-M Extended MCS tracking is stopped.

**Corrective Action:** Examine the SPY289E message, which always accompanies this message, and proceed accordingly.

CRR102S JNF EXCEEDED MAXIMUM NUMBER OF ENTRIES (10000)

**Explanation:** An attempt was made to add an entry to the Job Not Found Table (JNF), an internal program table, but it already contains the maximum number of allowable entries.

Control-M Extended MCS tracking is stopped.

**Corrective Action:** Examine the SPY289E message, which always accompanies this message, and proceed accordingly.

CRS messages

This group includes messages for the Control-O product.

Messages CRS900 through CRS9xx

This group includes messages for the Control-O product.

CRS931I CLEAN FOR IOA CONDITIONS FILE STARTED

**Explanation:** This information message indicates that the IOACLND utility started.

**Corrective Action:** No action is required.

CRS932I CLEAN FOR IOA CONDITIONS FILE ENDED

**Explanation:** This information message indicates that the cleaning of the IOA Conditions file by the IOACLND utility ended successfully.

**Corrective Action:** No action is required.
CRS933S FILE ALLOCATED TO DDNAME "DASINC" IS NOT IOA SYNCHRONIZATION FILE

**Explanation:** The data set described by the DASINC DD statement is not IOA Synchronization file. This message is produced by the IOACLCND IOA utility.

Possible causes are:

- The file allocated to the DASINC DD statement is not the Synchronization file.
- The file allocated to the DASINC DD statement is the Synchronization file, but it is of a different version or of a different IOA installation.

The utility stops executing.

**Corrective Action:** Correct the JCL for the job.

CRS934E INVALID PARAMETER: - parm

**Explanation:** An invalid parameter was passed to the IOACLCND utility. In this message, *parm* identifies the invalid parameter.

For a list of valid parameters, see the IOACLCND utility in the *INCONTROL for z/OS Utilities Guide*. The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the parameter line.

CRS935E MISSING PARAMETER AFTER: - parm

**Explanation:** A subparameter of a parameter to the IOACLCND utility is missing. A subparameter is expected after the *parm* parameter.

For valid syntax, see the IOACLCND utility in the *INCONTROL for z/OS Utilities Guide*. The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the parameter line.

CRS936E REDUNDANT PARAMETER: - parm

**Explanation:** There is a redundant parameter in a parameter line for the IOACLCND utility. For details, refer to the IOACLCND utility in the *INCONTROL for z/OS Utilities Guide*. The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the parameter line.

CRS937S IOA CONDITIONS FILE WAS NOT CLEANED

**Explanation:** This error is the result of a previous error in the IOACLRES utility. A previous message contains the reason for not cleaning the Conditions file.

The utility stops executing.

**Corrective Action:** Correct the problem and rerun the utility.
CRS938I CONDITION cond ODATE odate SCRATCHED

**Explanation:** This information message indicates that the specified condition was successfully deleted from the IOA Conditions file by the IOACLCND utility or by New Day processing.

**Corrective Action:** No action is required.

CRS939E DATE RANGE IS GREATER THAN ONE YEAR

**Explanation:** The date range specified in the FROM/TO parameter is greater than one year (the IOACLRES utility). The TO date is greater than the FROM date by more than a year. There is no way to IGNORE more than one year.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the parameters and rerun.

CSF messages

This group includes messages for the Control-O product.

Messages CSF300 through CSF3xx

This group includes messages for the Control-O product.

CSF321S ERROR OPENING REPORT FILE

**Explanation:** The CTOCSF program was unable to open the file specified in the SYSPRINT DD statement. The SYSPRINT DD statement is either not specified in the JCL, or is specified incorrectly.

The CTOCSF program ends with a return code of 08.

**Corrective Action:** Check and correct the JCL job.

CSF322S ERROR OPENING STATISTICS INPUT FILE

**Explanation:** The source Statistics file cannot be opened. The CTOCSF program is unable to open the file referenced by the DASTF DD name.

Possible causes are:

- The SMF ID of the current CPU does not match the SMF ID included as part of the name of the Statistics file.
- The Statistics file may have been corrupted or moved from the expected location.

The CTOCSF program ends with a return code of 08.

**Corrective Action:** Do either or both of the following:
Examine and correct the JCL.
Examine any associated MVS messages for additional information, and correct any errors they may disclose.

CSF323S INSUFFICIENT SPACE IN TARGET FILE

Explanation: The new Statistics file is not large enough to contain all the records listed in the source Statistics file.

The CTOCSF program ends with a return code of 08.

Corrective Action: Create a larger Statistics file and resubmit the job.

CSF324W ERROR CLOSING STATISTICS INPUT FILE

Explanation: An internal error was encountered while closing the source Statistics file referenced by the DD name DASTF.

The CTOCSF program ends with a return code of 08.

Corrective Action: Call your system programmer for assistance. If the problem is not resolved, contact your INCONTROL administrator.

CSF325S ERROR OPENING STATISTICS OUTPUT FILE

Explanation: Control-O was unable to open the target Statistics file specified in the CTOPARM member.

The CTOCSF program ends with a return code of 08.

Corrective Action: Check the JCL and the CTOPARM member for errors and resubmit the job.

CSF326S STATISTICS FILE DYNAMIC ALLOCATION ERROR rc/rsn/dsn

Explanation: Dynamic allocation of the dsn Statistics file failed with a return code of rc and a reason code of rsn.

The CTORSTM Statistics Report utility terminates with a return code of 08.

Corrective Action: Examine the IBM manual MVS Programming: Authorized Assembler Services Guide to determine the cause of the error, and correct the error accordingly. If not successful, contact your INCONTROL administrator.

CSF327W ERROR CLOSING STATISTICS OUTPUT FILE

Explanation: An internal error was encountered while closing the target Statistics file. This message may be accompanied by an MVS message explaining the error. If such a message is issued, your system programmer may be able to fix the problem.

The CTOCSF program ends with a return code of 08.

Corrective Action: Call your system programmer for assistance. If the problem is not resolved, contact your INCONTROL administrator.
CSF328I  COPY OF STATISTICS FILE ENDED OK

**Explanation:** This information message indicates that the Statistics file was successfully copied by the CTOCSF utility.

**Corrective Action:** No action is required.

CSF329I  COPY OF STATISTICS FILE STARTED

**Explanation:** This information message indicates that the CTOCSF utility has begun copying the Statistics file.

**Corrective Action:** No action is required.

CTA messages

This group includes messages for the Control-O product.

Messages CTA600 through CTA6xx

This group includes messages for the Control-O product.

CTA660I  ADDRESS SPACE *addrSpace* WILL BE PROCESSED NOW

**Explanation:** This information message indicates that the CTOCTA utility has begun processing the *addrSpace* address space. The CTOCTA utility will display all programs running.

**Corrective Action:** No action is required.

CTA661I  ADDRESS SPACE *addrSpace* IS SWAPPED OUT AND WILL BE SKIPPED

**Explanation:** This information message indicates that the CTOCTA utility attempted to get information from the *addrSpace* address space, but it failed because the address space is swapped out. An ALESERV function was invoked to analyze the address space, but failed.

The CTOCTA utility continues its analysis with the next address space.

**Corrective Action:** No action is required.

CTA662E  ALESERV ADD FAILED WITH RETURN CODE *rc*

**Explanation:** The CTOCTA utility was invoked to get information from the address space but failed with a return code of *rc*. An ALESERV function was invoked to analyze the address space, but failed.

The CTOCTA utility continues its analysis with the next address space.

**Corrective Action:** No action is required.
CTA663E ALESERV DELETE FAILED WITH RETURN CODE \textit{rc}

**Explanation:** The CTOCTA utility analyzed information from an address space but the attempt to disconnect from the address space failed. The DELETE ALESERV function was invoked to disconnect from the address space after analyzing it, but failed with a return code of \textit{rc}.

The CTOCTA utility continues its analysis with the next address space.

**Corrective Action:** No action is required.

CTA664I ADDRESS SPACE \textit{addrSpace} status

**Explanation:** This information message indicates that the \textit{addrSpace} address space is ACTIVE or INACTIVE. The CTOCTA utility displays the target address space and its status after completing its analysis of the system.

**Corrective Action:** No action is required.

CTA665E INPUT PARAMETER (ADDRESS SPACE NAME) ERROR DETECTED

**Explanation:** An input parameter is missing or is too large. Either the parameter is not present in the invocation JCL, or it is too large.

The CTOCTA utility terminates.

**Corrective Action:** Add or correct the input parameter and rerun the job.

CTA666I PROGRAM \textit{pgm} FOUND IN THE RB CHAIN

**Explanation:** This information message indicates that the CTOCTA utility found at least one task in the address space running the \textit{pgm} program.

**Corrective Action:** No action is required.

CTA667I SVC \textit{svcno} (TYPE 2 NUCLEUS SVC) FOUND IN AN SVRB

**Explanation:** This information message indicates that the CTOCTA utility found at least one task in the address space running the \textit{svcno} SVC number.

**Corrective Action:** No action is required.
CTB - CTD

This group includes messages for the Control-M/Analyzer, Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTB messages

This group includes messages for the Control-M/Analyzer product.

Messages CTB0 through CTB0xx

This group includes messages for the Control-M/Analyzer product.

CTB001I CONTROL-M/ANALYZER RUNTIME ENVIRONMENT STARTED -
MODE IS modeType SCOPE IS scope

Explanation: This information message indicates that the Control-M/Analyzer Runtime Environment has been invoked in modeType mode, and is executing using the identified scope.

The Control-M/Analyzer Runtime Environment can be invoked in STANDALONE mode (as a job step or as a call from a user program), or from within the Control-M or Control-D monitors.

In this message, scope is the type of call used to invoke the environment. Valid values are:

- UNSCHEDULED - a direct rule call
- SINGLE - a call through a balancing mission
- STEP - a call through a balancing mission
- JOB - a call through a balancing mission

For more information, see the SCOPE parameter in the Control-M/Analyzer User Guide.

Corrective Action: No action is required.

CTB002I CONTROL-M/ANALYZER RUNTIME ENVIRONMENT ENDED

Explanation: This information message indicates that the Control-M/Analyzer Runtime Environment terminated normally.

Corrective Action: No action is required.

CTB003S INTERNAL ERROR IN COMMAND DO cmd

Explanation: An internal error occurred while executing the DO command identified in the message. Earlier messages indicate the reason for the error.

The Control-M/Analyzer Runtime Environment terminates with an error.
Corrective Action: Ask your INCONTROL administrator to give the information contained in occurrences of the CTB200S message to BMC Software Customer Support.

CTB004E LEVEL SPECIFIED IN DO EXTRACT (lvl1) IS GREATER THAN HIGHEST EXISTING LEVEL (lvl2)

Explanation: Statement DO EXTRACT specified a level (lvl1) which exceeds the highest existing level (lvl2).

The DO EXTRACT level must refer to a preceding WHEN statement in the current sub-block. The WHEN statements of the sub-block are numbered starting from 1. The error occurred because the LEVEL parameter specified a non existing WHEN statement. For more information, see the WHEN statement in the Control-M/Analyzer User Guide.

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Correct the error and invoke Control-M/Analyzer again.

CTB005E LINE FROM WHICH TO EXTRACT (lin) NOT WITHIN THE LINE RANGE (fromline-toline) CURRENTLY IN MEMORY

Explanation: The line specified in statement DO EXTRACT must refer to a report line that exists in the current Control-M/Analyzer internal buffers, but it does not. Control-M/Analyzer currently has lines fromline to toline in memory.

Control-M/Analyzer keeps a number of pages from the currently processed report in memory. This is usually sufficient for backward and forward references of WHEN and DO EXTRACT statements.

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Ask your INCONTROL administrator to increase the number of pages Control-M/Analyzer stores in memory by changing the RTEBUF parameter in the CTBPARM member.

CTB006E LENGTH TO EXTRACT (charas) EXCEEDS THE MAXIMUM ALLOWABLE LENGTH (max_charas)

Explanation: The number of characters to extract that was specified in a DO EXTRACT statement exceeded the maximum number of characters that may be extracted.

A DO EXTRACT statement extracts values that are subsequently stored in a variable. The maximum length that may be extracted is the maximum length of the variable value.

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Correct the DO EXTRACT statement and invoke Control-M/Analyzer again.

CTB007E LINE TO FIND (lin) NOT WITHIN THE LINE RANGE (fromline-toline) CURRENTLY IN MEMORY

Explanation: The line specified in a WHEN statement must refer to a report line that exists in the current Control-M/Analyzer internal buffers, but it does not. Control-M/Analyzer currently has lines fromline to toline in memory.

Control-M/Analyzer keeps a number of pages from the currently processed report in memory. This is usually sufficient for backward and forward references of WHEN and DO EXTRACT statements.
The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Ask your INCONTROL administrator to increase the number of pages Control-M/Analyzer stores in memory by changing the RTEBUF parameter in the CTBPARM member.

**CTB008E FROM COL (fromcol) SHOULD BE GREATER THAN TO COL (tocol)**

**Explanation:** The FROM COL value exceeded the TO COL value in a DO EXTRACT statement. The specified FROM COL value must be less than or equal to the TO COL value.

The variables in this message are:
- `fromcol` - the FROM COL value in the DO EXTRACT statement
- `tocol` - the TO COL value in the DO EXTRACT statement

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the DO EXTRACT statement and invoke Control-M/Analyzer again.

**CTB009I GROUP-MODE IS modeType**

**Explanation:** This information message indicates that the Control-M/Analyzer Runtime Environment has been invoked using the `modeType` Group mode.

**Corrective Action:** No action is required.

**CTB00AI INVOKED RULE= memName [- lib]**

**Explanation:** This information message indicates that the Control-M/Analyzer Runtime Environment has been invoked with the `memName` rule member (from the `lib` library).

**Corrective Action:** No action is required.

**CTB00BI CONTROL-M/ANALYZER IS RUNNING IN "DEFINE" MODE (NO ACTIONS PERFORMED)**

**Explanation:** This information message indicates that the Control-M/Analyzer Runtime Environment has been invoked in Define mode.

In Define mode, Control-M/Analyzer does not perform any balancing activity. All calls to Control-M/Analyzer routines are immediately returned with status END OK and a return code of 0.

For more information, see Define mode in the *Control-M/Analyzer User Guide*.

**Corrective Action:** No action is required.

**CTB010E COMPILATION ERROR FOR RULE ruleName RC= rc**

**Explanation:** The Control-M/Analyzer Runtime Environment was invoked with a rule member that contains invalid syntax.

During execution, all invoked rules are checked (compiled) for valid syntax. Whenever invalid syntax is encountered, an error occurs.

The variables in this message are:
CTB011E MEMORY ALLOCATION ERROR WHILE LOADING RULE ruleName

Explanation: The Control-M/Analyzer Runtime Environment has insufficient memory to load a rule. The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Increase the REGION size and invoke Control-M/Analyzer again. If the problem persists, notify your INCONTROL administrator.

CTB012I WHILE PROCESSING COMMAND DO cmd

Explanation: This information message accompanies other error messages. It identifies the DO command that was in process when the error specified in the other message occurred.

In this message, cmd is the DO command in process when the error occurred.

Corrective Action: No action is required.

CTB013I ENDED result COMMITTED num VARIABLE(S) USER RC= rc

Explanation: This information message is a normal termination message of the Control-M/Analyzer Runtime environment. This message accompanies other normal termination messages.

The variables in this message are:

- result - the status when the Control-M/Analyzer Runtime environment ended Valid values are:
  - OK
  - TOLER
  - NOTOK
  - ABEND
- num - the number of variables committed
- rc - the return code

Corrective Action: No action is required.

CTB014E GROUP grp IS NOT DEFINED

Explanation: A non-existing group was specified when the Control-M/Analyzer Runtime Environment was invoked.

The Control-M/Analyzer Runtime Environment must be invoked with an existing group name. Groups can be defined and viewed using the Control-M/Analyzer Online Facility.

For information on the methods that can be used to specify the group under which Control-M/Analyzer is to run, see the Control-M/Analyzer chapter of the INCONTROL for z/OS Administrator Guide.
The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Specify an existing group and invoke Control-M/Analyzer again.

**CTB015E NO GROUP SPECIFIED FOR CONTROL-M/ANALYZER INVOCATION**

**Explanation:** No group name was specified when the Control-M/Analyzer Runtime Environment was invoked.

The Control-M/Analyzer Runtime Environment must be invoked with an existing group name. Groups can be defined and viewed using the Control-M/Analyzer Online Facility.

For information on the methods that can be used to specify the group under which Control-M/Analyzer is to run, see the Control-M/Analyzer chapter of the *INCONTROL for z/OS Administrator Guide*.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Specify an existing group, and invoke Control-M/Analyzer again.

**CTB016E BLOCK blk DOES NOT EXIST**

**Explanation:** The block identified in the message does not exist in the current rule. The rule contained a reference to a nonexisting block, such as the block specified as a parameter to the DATASTAMP function.

In this message, `blk` is the non-existing block specified in the rule.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the reference and invoke Control-M/Analyzer again.

**CTB017E COLUMN RANGE TO EXTRACT col1-col2 IS BEYOND LINE LENGTH len**

**Explanation:** The column range specified in statement DO EXTRACT referred to columns beyond the record length of the input source.

The variables in this message are:

- `col1` - the first column in the specified range
- `col2` - the last column in the specified range
- `len` - the record length of the input source

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Correct the column range or verify that the block refers to the correct input source.

**CTB020W NEGATIVE COLUMN VALUE (col_val) SPECIFIED WHEN SEARCHING FOR "string"**

**Explanation:** This warning message indicates that a WHEN statement was specified with a negative column number when searching for the string identified in the message.

WHEN statement column numbers can be relative to the location of previously found data in previous WHEN statements. The negative column number may be the result of such a reference.

The variables in this message are:
- `col_val` - the problematic column number
- `string` - the string that was being searched for

Control-M/Analyzer assumes a column number of 1 and continues execution.

**Corrective Action:** Make sure that this warning message is not the result of a rule definition error.

**CTB021E STRING IN WHEN DOES NOT FIT THE SPECIFIED COLUMN RANGE**

**Explanation:** The length of a WHEN statement search string exceeds the number of characters in the specified column range. Strings specified in the WHEN criteria are compared with the contents of the specified line and column range. The strings must not be longer than the specified column range.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Widen the column range or shorten the string which caused the problem.

**CTB022E FROM LINE (fromline) GREATER THAN TO LINE (toline) IN WHEN, LEVEL= lvl, SEARCH STRING="string"**

**Explanation:** The FROM LINE value exceeded the TO LINE value in a WHEN statement.

When WHEN statement line numbers are relative to previously found data in previous WHEN statements, the calculated FROM LINE value might be greater than the calculated TO LINE value.

The variables in this message are:
- `fromline` - the FROM LINE value
- `toline` - the TO LINE value
- `lvl` - the level
- `string` - the search string

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the reference and invoke Control-M/Analyzer again.

**CTB023E FROM COL (fromcol) GREATER THAN TO COL (tocol) IN WHEN, LEVEL= lvl, SEARCH STRING="string"**

**Explanation:** The FROM COL value exceeded the TO COL value in a WHEN statement. When WHEN statement line numbers are relative to previously found data in previous WHEN statements, the calculated FROM COL value might be greater than the calculated TO COL value.

The variables in this message are:
The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the reference and invoke Control-M/Analyzer again.

CTB024E FROM LINE (*fromline*) GREATER THAN TO LINE (*toline*) IN STOP, LEVEL=*lvl*, SEARCH STRING="*string*"

**Explanation:** The FROM LINE value exceeded the TO LINE value in a STOP statement. When STOP statement line numbers are relative to previously found data in previous STOP statements, the calculated FROM LINE value might be greater than the calculated TO LINE value.

The variables in this message are:
- *fromline* - the FROM LINE value
- *toline* - the TO LINE value
- *lvl* - the level
- *string* - the search string

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the reference and invoke Control-M/Analyzer again.

CTB025E FROM COL (*fromcol*) GREATER THAN TO COL (*tocol*) IN STOP, LEVEL=*lvl*, SEARCH STRING="*string*"

**Explanation:** The FROM COL value exceeded the TO COL value in a STOP statement. When STOP statement line numbers are relative to previously found data in previous STOP statements, the calculated FROM COL value might be greater than the calculated TO COL value.

The variables in this message are:
- *fromcol* - the FROM COL value
- *tocol* - the TO COL value
- *lvl* - the level
- *string* - the search string

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the reference and invoke Control-M/Analyzer again.

CTB026E NO DATA MATCHING WHEN CRITERIA

**Explanation:** The input data set does not contain lines that match the WHEN criteria.

**Corrective Action:** Verify that the WHEN criteria and the data source are correctly specified.
CTB030E DATABASE VARIABLE NOT FOUND: DB_ grp.var (GEN=generationNum DATE= date KEY= key)

Explanation: The Control-M/Analyzer Runtime Environment referenced the database, but could not find a variable matching the user-specified criteria. The user can optionally specify a generation number, date or key for the variable indicated in the message. Either the group or variable does not exist, or a variable generation with the specified generation number, date, or key does not exist, in the database.

The variables in this message are:
- grp - the group containing the variable that could not be found
- var - the variable that could not be found
- generationNum - the generation number of the variable that could not be found
- date - the date of the variable that could not be found
- key - the key of the variable that could not be found

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Correct the reference and invoke Control-M/Analyzer again.

CTB031E VARIABLE NOT FOUND: varName

Explanation: The specified local, system or AutoEdit variable does not exist in the Control-M/Analyzer Runtime Environment’s memory.

In this message, varName is the variable that did not exist.

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Correct the reference and invoke Control-M/Analyzer again.

CTB032E DATABASE VARIABLES ALREADY COMMITTED. RUN ID "runId" CANNOT BE SET

Explanation: An attempt was made to change the value of the SYSRUNID system variable, using a DO SET or DO EXTRACT statement, after database variables had already been committed.

The SYSRUNID system variable contains the run ID of the current Control-M/Analyzer run. The value of the run ID must be the same for all the database variables committed in this run. Therefore, the run ID cannot be changed during the run after a database variable has been committed.

In this message, runId is the run ID of the current Control-M/Analyzer run.

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Remove the problematic DO statement and invoke Control-M/Analyzer again.

CTB033E CANNOT SET SYSTEM VARIABLE varName

Explanation: An attempt was made to set a system variable that cannot be set.

Most system variables, such as SYSDATE and SYSTIME, cannot be set during Control-M/Analyzer execution because they receive their values only from the system. The Control-M/Analyzer User Guide contains a complete list of system variables, and identifies those that the user can set.
In this message, \textit{varName} identifies the variable that a user tried to set. The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the error and invoke Control-M/Analyzer again.

\textbf{CTB034E DATABASE VARIABLE DB\_ grp.var DOES NOT EXIST}

**Explanation:** A nonexisting database variable was specified in a DO SET or DO EXTRACT statement. Either the required database variable exists but its name was specified incorrectly, or the required database variable does not exist.

The variables in this message are:

- \texttt{grp} - the group of the problematic database variable
- \texttt{var} - the problematic database variable

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** If the database variable name was specified incorrectly, correct it and invoke Control-M/Analyzer again.

To create a database variable, either use the Control-M/Analyzer Online facility, or enable the Automatic Variable Creation Facility to dynamically create the nonexisting database variable during the rule's execution. For information about the Automatic Database Variable Creation facility, see the Control-M/Analyzer User Guide.

\textbf{CTB035E ERROR PARSING LINE " line". LINE SKIPPED}

**Explanation:** Control-M/Analyzer encountered an invalid data line while loading an AutoEdit member. AutoEdit member lines must have the format `%%%VAR=value`.

In this message, \textit{line} identifies the problematic line.

Control-M/Analyzer skips the problematic line, and continues to load the rest of the lines of the AutoEdit member.

**Corrective Action:** Correct the problematic line, and invoke Control-M/Analyzer again.

\textbf{CTB036E ERROR PARSING VARIABLE: VAR= varName VAL= " value"}

**Explanation:** While writing an AutoEdit member, the maximum number of output lines was exceeded. By default, Control-M/Analyzer can write a maximum of 1000 lines of variables in an AutoEdit member.

The variables in this message are:

- \texttt{varName} - the problematic variable
- \texttt{value} - the value from the line that exceeded the limit.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Notify the INCONTROL administrator.
CTB037E AUTOEDIT MEMBER lib (memName) ALREADY LOADED

Explanation: A DO GETMEM statement attempted to load the indicated AutoEdit member, but the member was already loaded in the Control-M/Analyzer Runtime Environment memory by a previous DO GETMEM statement. Loaded AutoEdit members remain in memory until unloaded by a DO PUTMEM statement.

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Correct the error and invoke Control-M/Analyzer again.

CTB038E AUTOEDIT MEMBER lib (memName) NOT PREVIOUSLY LOADED

Explanation: A DO PUTMEM statement attempted to unload the indicated AutoEdit member, but the member is not in the Control-M/Analyzer Runtime Environment memory.

An AutoEdit member cannot be written back to disk unless it exists in memory. An AutoEdit member is placed in memory when it is loaded using a DO GETMEM statement, or when it is created by using a DO ADDSYM statement to add variables to it.

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Correct the error and invoke Control-M/Analyzer again.

CTB03AI WHILE PROCESSING AUTOEDIT MEMBER lib (memName)

Explanation: This information message accompanies other error messages. This message identifies the AutoEdit member that was being processed when the error specified in any other message occurred.

Corrective Action: No action is required.

CTB03BW AUTOEDIT VARIABLE varName ALREADY EXISTS IN MEMBER lib (memName)

Explanation: An attempt was made, using a DO ADDSYM statement, to add a variable to the specified AutoEdit member, but the variable already exists in the AutoEdit member. Variables names must be unique within an AutoEdit member.

Control-M/Analyzer ignores the current DO ADDSYM statement and continues processing.

Corrective Action: Check whether the parameters of the DO ADDSYM statement are correct, and proceed accordingly.

CTB03CE AUTOEDIT VARIABLE varName ALREADY EXISTS IN ANOTHER MEMBER: memName

Explanation: An attempt was made to add an AutoEdit variable (varName) to a member but the variable already exists in the memName member. An AutoEdit variable can be stored in only one member.

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Do one of the following:
1. Store the variable only in the memName member.
2. Change the name of the variable.
3. Delete the variable in the memName member.

CTB03DE VARIABLE varName IS NOT AN AUTOEDIT VARIABLE. CANNOT PERFORM ADDSYM

Explanation: A DO ADDSYM statement specifies a variable that already exists as a non-AutoEdit variable. The name cannot refer to an existing variable.

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Rename either the existing variable or the variable to be added to an AutoEdit member.

CTB040E INVALID SEARCH CRITERIA FOR DATABASE VARIABLE

Explanation: An invalid variable reference statement was specified.

For information about variable reference statements, see the Control-M/Analyzer User Guide.

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Correct the error and invoke Control-M/Analyzer again.

CTB041S INTERNAL ERROR IN modName: OPT= optn RC= rc

Explanation: An error occurred in the module identified in the message when invoked with the reported option.

The variables in this message are:

- modName - the name of the module in which the error occurred
- optn - the option used when the module was invoked
- rc - the return code

The Control-M/Analyzer Runtime environment terminates with an error.

Corrective Action: Record the information in the message and notify your INCONTROL administrator.

CTB045E ERROR COMMITTING DB _grp.var

Explanation: An error occurred while the specified database variable was being committed. Preceding messages provide additional information regarding the error.

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Notify the INCONTROL administrator.

CTB046E DATABASE VARIABLE NOT PREVIOUSLY SET: DB_ grp.var

Explanation: A DO COMMIT statement is attempting to commit a database variable that was not previously set. A database variable cannot be committed unless it was previously given a value by means of a DO SET or DO EXTRACT statement.

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Correct the error and invoke Control-M/Analyzer again.
CTB047E ERROR CREATING DB_ grp.var

**Explanation:** An error occurred while trying to dynamically create a database variable using the Automatic Variable Creation Facility. Preceding messages provide additional information regarding the error.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Notify the INCONTROL administrator.

CTB048E UNABLE TO COMMIT var. VARIABLE WAS PASSED AS AN ARGUMENT TO THE BLOCK/RULE

**Explanation:** A database variable could not be committed using option DELETE or NOW because it was passed as an argument to the current block or rule.

In this message, *var* is the database variable that could not be committed.

When variables are passed as arguments in a DO BLOCK or RULE statement, their values are copied into BARGnn and RARGnn variables and restored upon block or rule completion. Committing a database variable deletes it from the runtime environment. A database variable passed as an argument cannot be committed using the DELETE or NOW option because it would be meaningless to restore its value after it is deleted.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Place the DO COMMIT statement outside the called block or rule.

CTB050E MEMORY ALLOCATION ERROR IN AUTOEDIT

**Explanation:** There was insufficient storage to resolve AutoEdit symbols. Subsequent messages provide additional information regarding the error.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Increase the REGION size and invoke Control-M/Analyzer again. If the problem persists, notify your INCONTROL administrator.

CTB051E UNRESOLVED AUTOEDIT SYMBOL: "string"

**Explanation:** A variable that could not be resolved was encountered while trying to resolve AutoEdit variables in the specified string. A reference was probably made to a variable that was not previously set, and, therefore, does not exist.

To resolve AutoEdit symbols in a string, the AutoEdit resolve mechanism searches for local or AutoEdit variables with the specified name. The %%% operator must not prefix a database variable. To use the value of a database variable in AutoEdit substitution, the value must first be set to a local variable.

In this message, *string* is the problematic string.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the error and invoke Control-M/Analyzer again.

CTB052E EMPTY AUTOEDIT SYMBOL: "string"

**Explanation:** A %%% AutoEdit operator was specified without an attached variable name.
A `%` AutoEdit operator cannot stand alone. A variable name must be appended to the `%` operator. In this message, `string` identifies the string containing the problematic `%` operator. The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the error and invoke Control-M/Analyzer again.

**CTB053E INVALID AUTOEDIT SYNTAX:** " `string`

**Explanation:** A syntax error was detected while trying to resolve the specified string. An invalid AutoEdit expression was specified. Control-M/Analyzer cannot continue resolving the AutoEdit symbols in the string.

In this message, `string` is the problematic string.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the error and invoke Control-M/Analyzer again.

**CTB054E RESOLVED AUTOEDIT STATEMENT EXCEEDS MAXIMUM LENGTH. ORIGINAL STATEMENT=**" `string`

**Explanation:** The outcome of the AutoEdit processing of the specified string results in a string that exceeds the maximum allowed length. Subsequent messages indicate the context in which the error occurred.

In this message, `string` is the problematic string.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the logical error and invoke Control-M/Analyzer again.

**CTB055E TOO MANY BLANKS TO RESOLVE IN AUTOEDIT:** " `string`

**Explanation:** An `nn` value greater than 99 was specified for the AutoEdit symbol `%BLANKnn`. Subsequent messages indicate the context in which the error occurred.

In this message, `string` is the problematic string.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the error and invoke Control-M/Analyzer again.

**CTB056S INTERNAL ERROR IN CTBCAE:** STRING= `string` RC= `rc`

**Explanation:** An internal error occurred while trying to resolve AutoEdit symbols in the specified string. The variables in this message are:
- `string` - the problematic string
- `rc` - the return code

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Do the following:
1. Collect any information contained in CTB200S messages that precede this message.
2. Ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB057W VALUE val OF varName DOES NOT FIT ITS FORMAT

Explanation: The format specified for variable varName in statement DO PRINT was not long enough to accommodate the value val. The value of the variable was larger than expected, or a minus sign caused the value to occupy more characters than expected.

A sequence of asterisks is printed instead of the variable's value. The number of asterisks indicates the specified format length.

Corrective Action: Check why the value of the variable did not fit within the varName variable. If necessary, lengthen the format specified for the varName variable.

CTB058E LENGTH HAS TO BE GREATER THAN PRECISION IN FORMAT OF varName

Explanation: The length specified in the format of the varName variable was less than or equal to the precision.

For numeric data, the precision field specifies the number of digits following the decimal character. If the precision is not zero, the entire figure should include the decimal character in addition to the digits that follow it. Therefore, the total length must be greater than the precision.

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Either lengthen the format of the variable or decrease the precision.

CTB060E INVALID GROUP NAME IN: " dbRefStatement"

Explanation: An invalid group name was found while parsing the dbRefStatement database reference statement.

A group name must be alphanumeric, and may not exceed 20 characters. For more information, see the Control-M/Analyzer User Guide.

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Correct the group name and invoke Control-M/Analyzer again.

CTB061E INVALID VARIABLE NAME IN: " dbRefStatement"

Explanation: An invalid variable name was found while parsing the dbRefStatement database reference statement.

The variable name must be alphanumeric and may not exceed 20 characters. For more information, see the Control-M/Analyzer User Guide.

The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Correct the variable name and invoke Control-M/Analyzer again.

CTB062E INVALID GENERATION ID IN: " dbRefStatement"

Explanation: An invalid generation number was found while parsing the dbRefStatement database reference statement.
The generation number must be an integer between 0 and 999. For more information, see the Control-M/Analyzer User Guide.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the generation number and invoke Control-M/Analyzer again.

CTB063E INVALID KEY VALUE IN: "dbRefStatement"

**Explanation:** An invalid key value was found while parsing the dbRefStatement database reference statement.

The key value must be alphanumeric and may not exceed 20 characters. For more information, see the Control-M/Analyzer User Guide.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the key value and invoke Control-M/Analyzer again.

CTB064E INVALID RUN ID IN: "dbRefStatement"

**Explanation:** An invalid run ID was found while parsing the dbRefStatement database reference statement.

The run ID must be alphanumeric and may not exceed 20 characters. For more information, see the Control-M/Analyzer User Guide.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the run ID value and invoke Control-M/Analyzer again.

CTB065E INVALID DATE IN: "dbRefStatement"

**Explanation:** An invalid date was found while parsing the dbRefStatement database reference statement.

The date must be in yymmdd format. For more information, see the Control-M/Analyzer User Guide.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the date and invoke Control-M/Analyzer again.

CTB066E A CATEGORY APPEARS TWICE IN: "dbRefStatement"

**Explanation:** A duplicate category was found while parsing the dbRefStatement database reference statement.

Valid categories in a database reference statement are group, variable name, generation, date, key, and run ID. No more than one of each of these categories may be specified in a database reference statement. For more information, see the Control-M/Analyzer User Guide.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the database reference statement and invoke Control-M/Analyzer again.
CTB067E INVALID PLACEMENT OF "." IN: "dbRefStatement"

**Explanation:** The period character (.) was found in an invalid location while parsing the `dbRefStatement` database reference statement.

The database reference statement can contain a period only between the group and variable name. For more information, see the *Control-M/Analyzer User Guide*.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the database reference statement and invoke Control-M/Analyzer again.

CTB068E SPECIFIED CATEGORY INVALID IN CURRENT CONTEXT.
STRING= "dbRefStatement"

**Explanation:** A category that is invalid in the current context was found while parsing the `dbRefStatement` database reference statement.

The validity of categories (components) in the database reference statement is determined by the context in which the statement is used. For example, if a database variable is assigned a value by a DO SET statement, the run ID should not be specified as part of the database reference statement because the run ID is taken from the SYSRUNID system variable. For more information, see the *Control-M/Analyzer User Guide*.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the database reference statement and invoke Control-M/Analyzer again.

CTB069E INVALID CATEGORY IDENTIFIER IN: "dbRefStatement"

**Explanation:** An invalid category identifier was found while parsing the `dbRefStatement` database reference statement.

Valid category identifiers are:
- G - Generation
- K - Key
- R - Run ID
- D - Date

Category identifiers must always be preceded by the character @. For more information, see the *Control-M/Analyzer User Guide*.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the database reference statement and invoke Control-M/Analyzer again.

CTB06AS INTERNAL ERROR. INVALID PREFIX IN: "dbRefStatement"

**Explanation:** An internal error occurred while parsing the `dbRefStatement` database reference statement.

The Control-M/Analyzer Runtime Environment terminates with an error.
Corrective Action: Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB06BS INTERNAL ERROR IN CTBCNMP: STRING= "dbRefStatement" RC= rc IS INVALID
Explanation: An internal error occurred while parsing the `dbRefStatement` database reference statement.
The Control-M/Analyzer Runtime Environment terminates with an error.

Corrective Action: Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB06CE USER MODULE `modName` NOT FOUND
Explanation: Control-M/Analyzer is unable to load a user routine specified in the CALLUSER command. Before Control-M/Analyzer can call a user routine, it must first load the routine. Control-M/Analyzer terminates with a runtime error.
Corrective Action: Check that a module with the name `modName` exists in the STEPLIB library or in the LINKLIST.

CTB070E SYNTAX ERROR IN EVALUATION ROUTINE (POS n), INPUT="expression"
Explanation: Control-M/Analyzer attempted to evaluate the expression identified in the message, but the expression syntax was invalid. For a detailed description of expression syntax, see the Control-M/Analyzer User Guide. The Control-M/Analyzer Runtime Environment terminates with an error.
Corrective Action: Correct the syntax error and invoke Control-M/Analyzer again.

CTB071E UNBALANCED PARENTHESES IN EVALUATION ROUTINE (POS n), INPUT="expression"
Explanation: While evaluating the expression identified in the message, Control-M/Analyzer encountered unbalanced parentheses. For a detailed explanation of expression syntax, see the Control-M/Analyzer User Guide. The Control-M/Analyzer Runtime Environment terminates with an error.
Corrective Action: Correct the syntax error and invoke Control-M/Analyzer again.

CTB072E SYMBOL ERROR IN EVALUATION ROUTINE (POS n), INPUT="expression"
Explanation: An internal evaluation error occurred while evaluating the expression identified in the message. The Control-M/Analyzer Runtime Environment terminates with an error.
**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

**CTB073E TOO MANY COMMAS IN EVALUATION ROUTINE (POS n), INPUT=" expression"**

**Explanation:** The expression identified in the message contains a function call that has too many commas. This means that too many arguments are passed to the function.

Each Control-M/Analyzer function has a defined number of arguments. For a description of expression syntax and Control-M/Analyzer functions, see the Control-M/Analyzer User Guide.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the syntax error and invoke Control-M/Analyzer again.

**CTB074E INVALID NUMBER OF COMMAS IN EVALUATION ROUTINE (POS n), INPUT=" expression"**

**Explanation:** The expression identified in the message contains a function call that has an invalid number of commas. This means that the number of arguments passed to the function is incorrect.

Each Control-M/Analyzer function has a defined number of arguments. For a description of expression syntax and Control-M/Analyzer functions, see the Control-M/Analyzer User Guide.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the syntax error and invoke Control-M/Analyzer again.

**CTB075E INTERNAL ERROR IN EVALUATION ROUTINE (ERR error), INPUT=" expression"**

**Explanation:** An internal evaluation error occurred while evaluating the expression identified in the message.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

**CTB076E VARIABLE NOT FOUND IN EVALUATION ROUTINE (POS num), INPUT= expr**

**Explanation:** The variable specified in the expr expression does not exist. Control-M/Analyzer can not evaluate an expression if one of the variables it contains does not exist.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Correct the expression or create the missing variable.

**CTB077E SCAN ERROR IN EVALUATION ROUTINE (POS n), INPUT=" expr"**

**Explanation:** Control-M/Analyzer attempted to evaluate the expression identified in the message (expr), but the expression syntax was invalid.
For a detailed description of expression syntax, see the Control-M/Analyzer User Guide.
The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the syntax error and invoke Control-M/Analyzer again.

CTB078E INTERNAL ERROR IN CTBEVAL: INPUT=" expr" RC= rc IS INVALID

**Explanation:** An internal evaluation error occurred while evaluating the expression identified in the message (`expr`).

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB079E MAXIMUM VARIABLE SIZE EXCEEDED (POS n), INPUT=" expr"

**Explanation:** While evaluating the expression identified in the message (`expr`), a calculation result that exceeded the maximum size was produced.

Evaluation results are stored in a variable. The length of the evaluation results cannot exceed the maximum allowable length of the value of the variable.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the error and invoke Control-M/Analyzer again.

CTB07AE UNABLE TO ALLOCATE MEMORY IN EVALUATION ROUTINE (POS n), INPUT=" expr"

**Explanation:** While evaluating the expression identified in the message (`expr`), the Control-M/Analyzer Runtime Environment had insufficient memory to continue with the evaluation.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Increase the REGION size and invoke Control-M/Analyzer again. If the problem persists, notify your INCONTROL administrator.

CTB07BE VARIABLE NOT FOUND IN EVALUATION ROUTINE (POS n), INPUT=" expr"

**Explanation:** The expression identified in the message (`expr`) contains a reference to a local variable that was not previously set, or to a database variable that does not exist in the Control-M/Analyzer database. The name of the nonexisting variable appears in a preceding message.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the error and invoke Control-M/Analyzer again.
CTB07CE VARIABLE NOT NUMERIC IN EVALUATION ROUTINE (POS n), INPUT="expr"

**Explanation:** The expression identified in the message (expr) contains a reference to a variable that should, but does not, contain a numeric value.

Some Control-M/Analyzer functions require that numeric arguments be supplied in predefined positions. For a description of expression syntax, see the Control-M/Analyzer User Guide. The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the error and invoke Control-M/Analyzer again.

CTB07DE ERROR WHILE EVALUATING EXPRESSION (POS n), INPUT="expr"

**Explanation:** Control-M/Analyzer encountered an error while evaluating one of the Control-M/Analyzer functions in the expression identified in the message (expr).

Probably one of the arguments passed to the function was incorrect. For a description of expression syntax and Control-M/Analyzer functions, see the Control-M/Analyzer User Guide. The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the error and invoke Control-M/Analyzer again.

CTB07EE DIVISION BY ZERO IDENTIFIED IN EVALUATION ROUTINE (POS n), INPUT="expr"

**Explanation:** The expression identified in the message (expr) required Control-M/Analyzer to divide by 0. The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Correct the arithmetic error and invoke Control-M/Analyzer again.

CTB07FS req IS AN INVALID REQUEST TO FUNCTION func

**Explanation:** The DBINFO or DDINFO function was called with an invalid request. For more information on the DBINFO and DDINFO functions, see the Control-M/Analyzer User Guide. The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Correct the request string.

CTB080S INTERNAL ERROR IN CTBXALC: RC= rc

**Explanation:** An internal error occurred in the CTBXALC routine. Control-M/Analyzer terminates with a runtime error.

**Corrective Action:** Ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB081E ALLOCATION ERROR IN CTBXALC: rc errCode infoCode

**Explanation:** A problem occurred during dynamic allocation of a file.
INCONTROL for z/OS Messages Manual

The variables in this message are:
- `rc` - IBM dynamic allocation error code
- `errCode` - IBM dynamic text unit error code
- `infoCode` - IBM dynamic text unit information code

For more information on the error and information codes, see the IBM manual *MVS Programming: Authorized Assembler Services Guide*.

Control-M/Analyzer terminates with a runtime error.

**Corrective Action:** Notify your INCONTROL administrator.

**CTB082S ALLOCATION ERROR IN CTBXALC: ABEND `abend`**

**Explanation:** The dynamic allocation program abended with the abend code `abend`.

Control-M/Analyzer terminates with a runtime error.

**Corrective Action:** For information about the abend, refer to IBM message and code documentation, and correct the problem accordingly. If you need assistance, ask your INCONTROL administrator to contact BMC Software Customer Support.

**CTB083S INTERNAL ERROR IN CTBXALC: RC `rc` INVALID**

**Explanation:** An internal error occurred. The return code issued is not valid.

Control-M/Analyzer terminates with a runtime error.

**Corrective Action:** Note the identity of this message and the invalid return code, and ask your INCONTROL administrator to contact BMC Software Customer Support.

**CTB084I DURING PROCESSING OF DSN= `dsn` DD= `ddName`**

**Explanation:** This information message accompanies other messages which indicate a problem. This message indicates the data set name and DD statement associated with any accompanying message.

**Corrective Action:** No action is required.

**CTB085E INVALID MEMBER NAME: `string`**

**Explanation:** The specified value is not valid for use as a member name.

Control-M/Analyzer terminates with a runtime error.

**Corrective Action:** Correct the member name and rerun the rule.

**CTB090S INTERNAL ERROR IN CTBXSI0: RC= `rc`**

**Explanation:** An internal error occurred.

Control-M/Analyzer terminates with a runtime error.

**Corrective Action:** Ask your INCONTROL administrator to contact BMC Software Customer Support.
CTB091E OPEN ERROR IN CTBXSI0

**Explanation:** Control-M/Analyzer was unable to open a sequential file. This message is accompanied by other messages which provide additional information.

Control-M/Analyzer terminates with a runtime error.

**Corrective Action:** Check the accompanying messages to determine the problem. Resolve accordingly.

CTB092S PROCESSING ERROR IN CTBXSI0: ABEND abend

**Explanation:** An abend occurred while performing I/O to a sequential file.

Control-M/Analyzer terminates with a runtime error.

**Corrective Action:** For information about the abend, refer to IBM message and code documentation and correct the error accordingly. If you need further assistance, ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB093S INTERNAL ERROR IN CTBXSI0: RC rc INVALID

**Explanation:** An internal error occurred. The return code issued (rc) is not valid.

Control-M/Analyzer terminates with a runtime error.

**Corrective Action:** Note the identity of this message and the invalid return code, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB094I DURING PROCESSING OF DD= ddName

**Explanation:** This information message accompanies other messages which indicate a problem. This message indicates the data set name and DD statement associated with any accompanying message.

**Corrective Action:** No action is required.

CTB095S INTERNAL ERROR err_num IN CTBXVSM: RC= rc REASON= rsn

**Explanation:** An error occurred while reading data in an ON VSAM statement.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** For the meaning of the return and reason codes, examine your IBM documentation for VSAM programming, and correct the problem accordingly.

CTB096E OPEN ERROR IN CTBXVSM: RC= rc REASON= rsn

**Explanation:** The VSAM file specified in an ON VSAM statement could not be opened.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** For the meaning of the return and reason codes, refer to your IBM documentation for VSAM programming, and correct the problem accordingly.

CTB097E FIRST KEY key1 IS GREATER THAN LAST KEY key2

**Explanation:** The first key was greater than the last key in the key range specified in statement ON VSAM.
The variables in this message are:

- **key1** - the first key in the key range
- **key2** - the last key in the range

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Correct the values specified for the FIRSTKEY and LASTKEY parameters as appropriate.

**CTB098S INTERNAL ERROR IN CTBXSPL: RC= rc**

**Explanation:** An internal error occurred while reading from the spool.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

**CTB099S INTERNAL ERROR IN CTBXSPL: RC= rc INVALID**

**Explanation:** An internal error occurred while reading from spool.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

**CTB09AI DURING PROCESSING OF PROC= proc PGM= pgm DD= ddName**

**Explanation:** This information message accompanies other error messages. This message identifies the sysout that was being processed when the error specified in any other message occurred.

**Corrective Action:** No action is required.

**CTB09BE REQUESTED SYSOUT NOT FOUND**

**Explanation:** The specified SYSOUT was not found during reading of the SYSOUT. Subsequent messages indicate the exact SYSOUT specification.

For a discussion of Control-M/Analyzer SYSOUT processing methods, see the Control-M/Analyzer chapter of the INCONTROL for z/OS Installation Guide and the Control-M/Analyzer User Guide.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Do the following:

1. Correct the error. Check the following matters:
   - The FREE parameter must be set to CLOSE in the DD statement that created the SYSOUT. If your site is a JES3 site, read the JES3 considerations in the INCONTROL for z/OS Installation Guide.
   - If ON_SYSOUT is in use, make sure that the required SYSOUT was created by the specified pgmstep or procstep. For information on the ON_SYSOUT parameter see the Control-M/Analyzer User Guide.
2. Invoke Control-M/Analyzer again.
INCONTROL for z/OS Messages Manual

CTB09CE RELEASE/NEW CLASS/NEW DEST FAILED

**Explanation:** The specified operation could not be performed. This message follows a more detailed message that identifies the problem.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Record the information in the accompanying message and consult your INCONTROL administrator.

CTB0A1S INTERNAL ERROR IN CTBCLCK: RC= rc INVALID

**Explanation:** Control-M/Analyzer Runtime environment could not lock a database variable or release a previously locked one.

A database variable is locked by the user accessing it to avoid simultaneous update by other users. Either a variable used in the rule or the whole Control-M/Analyzer database is currently in use.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Schedule the rule execution so that it does not conflict with other rules using the same database variables or with utilities using the entire database.

CTB0A5E INTERNAL ERROR IN CTBXLOG (SEE ERLG)

**Explanation:** An internal error occurred while processing the IOA log.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB0A6S INTERNAL ERROR IN CTBXLOG: RC= rc INVALID

**Explanation:** An internal error occurred while processing the IOA Log File.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB0A7E INTERNAL ERROR IN CTBXINI (SEE ERLG)

**Explanation:** An internal error occurred while initializing the Control-M/Analyzer environment.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB0A8S INTERNAL ERROR IN CTBXINI: RC= rc INVALID

**Explanation:** An internal error occurred while initializing the Control-M/Analyzer environment.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.
CTB0A9E INTERNAL ERROR IN CTBXWTO (SEE ERLG)

**Explanation:** An internal error occurred while performing a WTO operation. The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB0AAS INTERNAL ERROR IN CTBXWTO: RC= rc INVALID

**Explanation:** An internal error occurred while performing a WTO operation. The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB0ABE INTERNAL ERROR IN CTBXINF (SEE ERLG)

**Explanation:** An internal error occurred while gathering information from the system. The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB0ACS INTERNAL ERROR IN CTBXINF: RC= rc INVALID

**Explanation:** An internal error occurred while gathering information from the system. The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB0B1S INSUFFICIENT STORAGE. INCREASE JOB/STEP REGION SIZE PARAMETER

**Explanation:** Control-M/Analyzer could not run because of insufficient storage. The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Increase the value of the REGION parameter.

CTB0B2E MEMBER NOT FOUND

**Explanation:** The requested member is not found in the library.

Possible causes are:

- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Correct the library name for the rule or AutoEdit member and rerun the rule.
CTB0B3E DSN IS NOT A LIBRARY

**Explanation:** The requested member is not a partitioned data set.

Possible causes are:

- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Correct the library name for the rule or AutoEdit member, and rerun the rule.

CTB0B4E DSN IS NOT WITH FIXED DSORG

**Explanation:** The record format of the requested data set name (DSN) is not fixed. Probably the DSN does not refer to the correct file.

Possible causes are:

- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Ensure that the DSN points to the correct file. If it is already pointing to the correct file, determine why the file does not have a fixed format.

CTB0B5E LRECL IS NOT 80

**Explanation:** The record length of the requested data set is not 80. The probable cause is that the data set name (DSN) does not refer to the correct file.

Possible causes are:

- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Ensure that the DSN points to the correct file. If it is already pointing to the correct file, determine why the file does not have a record length of 80.

CTB0B6E DSN IS IN USE

**Explanation:** The data set is held exclusively by another user.

Possible causes are:

- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Try again.
CTB0B7S INTERNAL ERROR IN CTBXMEM

**Explanation:** A Control-M/Analyzer internal error occurred while trying to read a member from a library. Possible causes are:

- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Look for additional messages on the IOA Log that may clarify the situation. You or your INCONTROL administrator should refer to IBM message and code documentation for information about the abend, and make corrections accordingly. In any case, your INCONTROL administrator should contact BMC Software Customer Support.

CTB0B8E DSN IS NOT CATALOGED

**Explanation:** The requested data set name (DSN) is not in the catalog. Possible causes are:

- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Ensure that the DSN is cataloged. Rerun the rule.

CTB0B9E DYNAMIC ALLOCATION FAILED

**Explanation:** Dynamic allocation for the requested data set name (DSN) failed. Possible causes are:

- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing and Control-M/Analyzer terminates.

**Corrective Action:** Ask your INCONTROL Administrator to contact BMC Software Customer Support.

CTB0BAS INVALID REQUEST IN CTBXMEM

**Explanation:** Internal error while trying to read a member from a library. Possible causes are:

- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Ask your INCONTROL Administrator to contact BMC Software Customer Support.
CTB0BBE TOO MANY LINES TO READ

**Explanation:** There is insufficient storage to read a large member from the library.

Possible causes are:

- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Increase the REGION size or logon size, and try again.

CTB0BCS ERROR WHILE PROCESSING DIRECTORY

**Explanation:** A Control-M/Analyzer internal error occurred while trying to read a directory of a library. This message can appear under the Control-M/Analyzer Online Facility.

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Ask your INCONTROL Administrator to contact BMC Software Customer Support.

CTB0BDS ABEND OCCURRED IN CTBXMEM

**Explanation:** A Control-M/Analyzer internal error occurred while trying to read a member from a library.

Possible causes are:

- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Ask your INCONTROL Administrator to contact BMC Software Customer Support.

CTB0BEE MEMBER TO SAVE CANNOT BE FOUND

**Explanation:** You are trying to save an AutoEdit member which does not exist.

The AutoEdit member is not saved.

**Corrective Action:** Create the member.

CTB0BFE MEMBER ALREADY EXISTS

**Explanation:** You are trying to create an AutoEdit member which already exists.

The AutoEdit member is not created.

**Corrective Action:** Save the member.

CTB0C0S INTERNAL ERROR - INVALID TYPE IN CTBXMEM

**Explanation:** The record format of the library to be opened differs from the requested format.

Possible causes are:
- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Notify your INCONTROL administrator.

**CTB0C1S** INTERNAL ERROR IN CTBXMEM: RC rc

**Explanation:** Internal error while trying to read a member from a library.
Possible causes are:
- Control-M/Analyzer failed to read a rule
- the AutoEdit Facility failed to read an AutoEdit Symbols member

Rule processing stops and Control-M/Analyzer terminates.

**Corrective Action:** Ask your INCONTROL Administrator to contact BMC Software Customer Support.

**CTB0C2I** DURING PROCESSING OF DSN(memName), DD= ddName

**Explanation:** This information message accompanies other messages which indicate the problem.
The variables in this message are:
- memName - the name of the problematic data set
- ddName - the name of the problematic DD statement

**Corrective Action:** No action is required.

**CTB0D0E** INPUT TOO LONG FOR CTBCWRD. INPUT="string"

**Explanation:** An internal error occurred while trying to parse the string (string) identified in the message.
The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

**CTB0D1E** A WORD PARSED BY CTBCWRD EXCEEDS THE MAXIMUM ALLOWABLE LENGTH. INPUT="string"

**Explanation:** An internal error occurred while trying to parse the string (string) identified in the message. One of the resulting words was longer then the maximum allowable word length.
The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

**CTB0D2E** TOO MANY WORDS FOR CTBCWRD. INPUT="string"

**Explanation:** Control-M/Analyzer found too many arguments while parsing the argument list of a DO BLOCK, DO CALLUSER or DO RULE statement.
A maximum of 50 arguments can be passed in a DO BLOCK, DO CALLUSER or DO RULE argument list. The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Correct the error and invoke Control-M/Analyzer again.

CTB0D3S INTERNAL ERROR IN CTBCWRD: RC= rc INVALID

**Explanation:** An internal error occurred while parsing a string.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB0D8S PROBLEM DURING DB2 CONNECT. SUBSYSTEM ID = id

**Explanation:** The DB2 subsystem could not be connected.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Consult your DB2 administrator.

CTB0D9S PROBLEM DURING DB2 OPEN THREAD. SUBSYSTEM ID= id

**Explanation:** The DB2 subsystem could not be opened.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Consult your DB2 administrator.

CTB0DAW SQL WARNING. CODE= warningCode. SUBSYSTEM ID= id

**Explanation:** DB2 issued a warning code.

For the explanation of the warning code, refer to DB2 literature.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Try to correct the error on the information provided by the warning code and the DB2 literature. If necessary, consult your DB2 administrator.

CTB0DBE SQL ERROR, CODE= error, SUBSYSTEM ID= id

**Explanation:** DB2 issued a SQL error code.

For the explanation of the warning code, refer to DB2 literature.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Try to correct the error on the information provided by the warning code and the DB2 literature. If necessary, consult your DB2 administrator.

CTB0DCE NO VALID COLUMNS FOUND, SUBSYSTEM ID= id (rc=12)

**Explanation:** None of the arguments specified by the user in the SQL SELECT statement refer to a valid column in one of the selected DB2 tables.

The Control-M/Analyzer runtime environment terminates with an error.
Corrective Action: Include at least one column name belonging to one of the selected DB2 tables in the SQL statement in your rule.

CTB0DDE INVALID COLUMN TYPE. ERROR IN DB2 DATABASE SUBSYSTEM ID= id (rc=20)

Explanation: One of the columns specified in the SQL statement has an unrecognized column type as defined in the DB2 catalog.

Possible causes are:
- a DB2 catalog error
- a new version of DB2 that introduces new column types

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Do the following:
1. Make a list of the DB2 table names of the selected tables in the rule.
2. Have your DB2 database administrator generate a list of the columns and column types of these tables from the DB2 catalog.
3. Contact your INCONTROL administrator and provide this information.

CTB0DES PROBLEM DURING DB2 CLOSE THREAD, REASON CODE= rsn SUBSYSTEM ID= subId

Explanation: The DB2 CLOSE THREAD call did not succeed. The DB2 CONNECT, OPEN THREAD and SQL calls succeeded, but the CLOSE THREAD call did not. This indicates either a change in the availability of the DB2 subsystem or an internal error.

Possible causes are:
- the DB2 subsystem identified in the message is currently inactive
- an internal error in DB2

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Have your DB2 database administrator check the status of the DB2 subsystem identified in the message, and the status of the open threads under it. If necessary, close the thread for CTBDB2 manually.

CTB0DFS PROBLEM DURING DB2 DISCONNECT, REASON CODE= rsn SUBSYSTEM ID= subId

Explanation: The DB2 DISCONNECT call did not succeed.

Possible causes are:
- the DB2 subsystem identified in the message is currently inactive
- an internal error in DB2

The Control-M/Analyzer runtime environment terminates with an error.
Corrective Action: Have your DB2 database administrator verify that the DB2 subsystem identified in the message is active.

CTB0E0S INTERNAL ERROR IN CTBXCDM: RC= rc
Corrective Action: Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB0E1S INTERNAL ERROR IN CTBXCDM: RC= rc INVALID
Corrective Action: Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB0E2I DURING PROCESSING OF CDAM-CRT= cdam_crit
Explanation: This information message accompanies other error messages. In this message cdam_crit identifies the CDAM criteria that were being processed when the error specified in any other message occurred.
Corrective Action: No action is required.

CTB0E3E REQUESTED CDAM FILE NOT FOUND
Explanation: The requested CDAM file was not found. The error occurred while attempting to read the requested CDAM file. Subsequent messages indicate the CDAM criteria that were being used when the error occurred. The Control-M/Analyzer Runtime Environment terminates with an error.
Corrective Action: Correct the errors and invoke Control-M/Analyzer again.

CTB0E7S INTERNAL ERROR IN CTBXCKP: OPT= option RC= rc
Explanation: An internal error occurred while Control-M/Analyzer was accessing the Rule Activity File. The variables in this message are:
- option - the type of operation being performed when the error occurred
- rc - the return code
The Control-M/Analyzer Runtime Environment terminates with an error.
Corrective Action: Contact your INCONTROL administrator.

CTB0EAS INTERNAL ERROR IN CTBXREP: OPT= option RC= rc
Explanation: An internal error occurred while Control-M/Analyzer was accessing the Report file.
The variables in this message are:

- \textit{option} - the type of operation being performed when the error occurred
- \textit{rc} - the return code

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Contact your INCONTROL administrator.

\textbf{CTB0EBS REPORT FILE IS FULL. PLEASE RUN UTILITY CTBJ AFDL}

\textbf{Explanation:} Reports cannot be written to the Control-M/Analyzer report file because the file has become full.

The Control-M/Analyzer Runtime Environment continues executing, but a report for the current Control-M/Analyzer invocation is not created.

**Corrective Action:** Contact your INCONTROL administrator.

BMC Software recommends that you run the CTBJ AF DL Control-M/Analyzer utility periodically, to erase unneeded reports in the report file. For more information about this utility, see the \textit{INCONTROL for z/OS Utilities Guide}.

\textbf{CTB0EDS INTERNAL ERROR IN CTBXGRP: OPT= option RC= rc}

\textbf{Explanation:} An internal error occurred while Control-M/Analyzer was accessing the Group file. The error occurred while performing an operation of type \textit{option}.

The Control-M/Analyzer Runtime Environment terminates with an error.

**Corrective Action:** Contact your INCONTROL administrator.

\textbf{CTB0F0W CONDITION TO ADD ALREADY EXISTS: COND= cond ODATE= odate}

\textbf{Explanation:} This warning indicates that a condition \textit{cond} already exists in the IOA Conditions file. It does not usually indicate a problem.

The SYSRC system variable is set to 4 and processing continues.

The condition is not added to the IOA Conditions file.

**Corrective Action:** No action is required.

\textbf{CTB0F1W CONDITION TO DELETE DOES NOT EXIST. COND= cond ODATE = date}

\textbf{Explanation:} This message indicates that the \textit{cond} condition cannot be deleted because it does not currently exist in the IOA Conditions file. The \textit{cond} condition was previously deleted or never created.

The condition is not deleted again.

**Corrective Action:** No action is required.
CTB0F5S INTERNAL ERROR IN CTBXABF: OPT= option RC= rc

Explanation: An internal error occurred while Control-M/Analyzer was accessing the Active Balancing file, during an operation of type option.
The Control-M/Analyzer Runtime Environment terminates with an error.
Corrective Action: Contact your INCONTROL administrator.

CTB0F6S ACTIVE BALANCING FILE IS FULL. USE CTBFRM TO COMPRESS IT

Explanation: The Control-M/Analyzer Active Balancing file is full and needs to be compressed. It is not possible to order Control-M/Analyzer missions into the file, or run unscheduled Control-M/Analyzer invocations that also need to add an entry to this file.
The Control-M/Analyzer Runtime Environment terminates with an error.
Corrective Action: Contact your INCONTROL administrator.
Run the CTBFRM Control-M/Analyzer utility once a day to compress the Active Balancing file. If the Active Balancing file needs to be compressed more than once a day, it is advisable to enlarge the size of the file.

CTB0F7S INTERNAL ERROR IN SYSDATA: RC= rc

Explanation: An internal error occurred while Control-M/Analyzer was reading a Control-M SYSDATA data set.
The Control-M/Analyzer Runtime Environment terminates with an error.
Corrective Action: Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB0F8S INTERNAL ERROR IN SYSDATA: RC= rc INVALID

Explanation: An internal error occurred while Control-M/Analyzer was reading a Control-M SYSDATA data set.
The Control-M/Analyzer Runtime Environment terminates with an error.
Corrective Action: Collect any information contained in CTB200S messages that precede this message, and ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB0F9I DURING PROCESSING OF SYSDATA

Explanation: This information message follows a more detailed message issued when a problem occurs using ON SYSDATA.
Corrective Action: No action is required.

CTB0FAE REQUESTED SYSDATA FILE NOT FOUND

Explanation: Control-M/Analyzer could not find the requested Control-M/Analyzer SYSDATA data set.
The error occurred during an attempt to read the SYSDATA data set of the current job. Either Control-M or Control-M/Restart was not installed or ARCHIVE was not set to Y in the scheduling table.
The Control-M/Analyzer Runtime Environment terminates with an error.
Corrective Action: Correct the error and invoke Control-M/Analyzer again.

Messages CTB100 through CTB1xx
This group includes messages for the Control-M/Analyzer product.

CTB101E LINE lineNum. KEYWORD " keywd" IS REQUIRED
Explanation: During rule compilation or runtime an expected key word was missing in the specified line. Relevant text appears in an accompanying message.

The variables in this message are:
- lineNum - has one of the following meanings:
  - If the error occurred during rule compilation, lineNum identifies the line from which keywd was missing.
  - If the error occurred during runtime, lineNum identifies the line in the DD name file referenced by the MSUBSTMASK function from which keywd was missing.
- keywd - the missing key word

The system action depends on the point at which the error occurs, as follows:
- If the error occurs during rule compilation, the compiler continues processing at the next block, but issues syntax error messages when it ends.
- If the error occurs during runtime execution, Control-M/Analyzer stops executing and issues an error message.

Corrective Action: Correct all errors in the rule, or in the DD name referenced by MSUBSTMASK, and recompile.

CTB102E LINE lin. KEYWORD " keywd" MUST APPEAR ONCE AND ONLY ONCE IN THIS STATEMENT
Explanation: During rule compilation the keyword keywd was expected to appear once in the line lin. The keyword either was not found or was found more than once in the statement. Relevant text appears in an accompanying message.

The compiler continues processing the next block but terminates with syntax errors.

Corrective Action: Correct the errors in the rule member and recompile the rule.

CTB103E LINE lin. KEYWORD " keywd" CAN APPEAR ONLY ONCE IN THIS STATEMENT
Explanation: A syntax error was detected during rule compilation. Relevant text appears in an accompanying message. The keyword keywd was expected to appear once in the lin line, but was found more than once in the statement.

The compiler continues processing the next block but will terminate with syntax errors.

Corrective Action: Correct any errors in the rule member and recompile the rule.
INCONTROL for z/OS Messages Manual

CTB104E NUMERIC VALUE EXPECTED

**Explanation:** A syntax error was detected during rule compilation. Relevant text appears in an accompanying message. The parameter value should be, but is not, numeric.

The compiler continues processing the next block but will terminate with syntax errors.

**Corrective Action:** Correct the errors in the rule member and recompile the rule.

CTB105E EXPECTED PARAMETER MISSING IN LINE *lin*

**Explanation:** During rule compilation, a required parameter value was missing from the *lin* line. Relevant text appears in an accompanying message.

The compiler continues processing the next block but will terminate with syntax errors.

**Corrective Action:** Correct the errors in the rule member and recompile the rule.

CTB106E PARAMETER STARTING ON LINE *lin* IS TOO LONG

**Explanation:** During rule compilation, the length of a parameter that starts on the *lin* line exceeded the maximum length for this parameter. Relevant text appears in an accompanying message.

The compiler continues processing the next block but will terminate with syntax errors.

**Corrective Action:** Correct the errors in the rule member and recompile the rule.

CTB107E KEYWORD "*keyName1*" CANNOT FOLLOW "*keyName2*"

**Explanation:** During rule compilation, *keyName1* incorrectly follows *keyName2*. Relevant text appears in an accompanying message.

The compiler continues processing the next block but will terminate with syntax errors.

**Corrective Action:** Correct the errors in the rule member and recompile the rule.

CTB108E KEYWORD EXPECTED IN LINE: *lin* BEFORE "*string*"

**Explanation:** During rule compilation, a keyword was expected in the *lin* line before the *string* string, but the keyword was missing from the *lin* line. The probable cause is misspelling of a keyword. Relevant text appears in an accompanying message.

The compiler continues processing the next block but will terminate with syntax errors.

**Corrective Action:** Correct the errors in the rule member and recompile the rule.

CTB109I COMPILATION STARTED

**Explanation:** This information message indicates that the compiler has started compiling a rule.

**Corrective Action:** No action is required.

CTB110I COMPILATION COMPLETED SUCCESSFULLY

**Explanation:** This information message indicates that a rule was compiled without any errors. Warnings may have been issued.
Corrective Action: No action is required.

CTB111I HIGHEST ERROR CODE WAS code

Explanation: This information message indicates the highest error code issued during a rule compilation. The error code is 0 if the rule compiled without warnings. The error code is nonzero if warnings were issued or errors were detected.

Corrective Action: No action is required.

CTB112E STATEMENT line: IS INVALID IN THIS CONTEXT

Explanation: During rule compilation, the statement line was incorrect. Relevant text appears in an accompanying message. The compiler continues processing the next block but will terminate with syntax errors.

Corrective Action: Correct the errors in the rule member and recompile the rule.

CTB113I SKIPPING TO NEXT BLOCK

Explanation: This information message indicates that the compiler found a syntax error in the current block and is skipping to the next block before continuing with syntax checking.

Corrective Action: No action is required.

CTB114E MEMORY ALLOCATION FAILED

Explanation: Control-M/Analyzer could not allocate sufficient memory to compile a rule. Compilation is terminated immediately.

Corrective Action: Increase the REGION size of the job or the TSO session. If this does not help, ask your INCONTROL Administrator to contact BMC Software Customer Support.

CTB115E DUPLICATE BLOCK NAME blk AT LINE lin

Explanation: During rule compilation, a duplicate block name was found at the line indicated in the message. Block names within a rule must be unique. Relevant text appears in an accompanying message.

The variables in this message are:
- blk - the duplicate block name
- lin - the line in which the duplicate block name was found

The compiler continues processing the next block, but will terminate with syntax errors.

Corrective Action: Do the following:
1. Rename one of the blocks.
2. Correct any other errors in the rule member,
3. Recompile the rule.
CTB116E DUPLICATE LABEL \textit{label} BEFORE LINE \textit{lin}

\textbf{Explanation:} During rule compilation, a duplicate label name was found in the line indicated in the message. Label names within a rule must be unique. Relevant text appears in an accompanying message.

The variables in this message are:

- \textit{label} - the duplicate label name
- \textit{lin} - the line in which the duplicate label name was found

The compiler continues processing the next block but will terminate with syntax errors.

\textbf{Corrective Action:} Do the following:

1. Rename one of the labels.
2. Correct any other errors in the rule member.
3. Recompile the rule.

CTB117E UNRESOLVED REFERENCE FOR \textit{label} IN OR BEFORE LINE \textit{lin}

\textbf{Explanation:} During rule compilation, a DO GOTO statement references an undefined label or a DO BLOCK statement references a block that does not exist. Relevant text appears in an accompanying message.

The variables in this message are:

- \textit{label} - the problematic label or block
- \textit{lin} - the line in or before which either the problematic label was found, or in or before which the problematic block was found not to exist

The compiler terminates with syntax errors.

\textbf{Corrective Action:} Correct errors in the rule member. Recompile the rule.

CTB118E THE MAXIMUM OF \textit{num} "DO GOTO" STATEMENTS PER RULE HAS BEEN EXCEEDED

\textbf{Explanation:} During rule compilation, the maximum number of DO GOTO statements for a rule was exceeded. Relevant text appears in an accompanying message.

In this message, \textit{num} is the maximum number of DO GOTO statements for a rule.

The compiler terminates with syntax errors.

\textbf{Corrective Action:} Do the following:

1. Either reduce the number of DO GOTO statements in the rule, or split the rule into multiple rules.
2. Correct any other errors in the rule member.
3. Recompile the rule.
CTB119E THE MAXIMUM OF \textit{num} "DO BLOCK" STATEMENTS PER RULE HAS BEEN EXCEEDED

\textbf{Explanation:} During rule compilation, the indicated maximum number of DO BLOCK statements for a rule was exceeded. Relevant text appears in an accompanying message.

In this message, \textit{num} is the maximum number of DO BLOCK statements for a rule.

The compiler terminates with syntax errors.

\textbf{Corrective Action:} Do the following:

1. Either reduce number of DO BLOCK statements in the rule, or split the rule into multiple rules.
2. Correct any other errors in the rule member.
3. Recompile the rule.

CTB120E LABEL \textit{label} MUST OCCUR WITHIN THE SAME BLOCK AS THE REFERENCE TO IT

\textbf{Explanation:} During rule compilation, a DO GOTO statement referenced a label outside the block in which it occurs. A DO GOTO statement can only reference labels within the same block. Relevant text appears in an accompanying message.

In this message, \textit{label} identifies the problematic label.

The compiler continues processing the next block, but terminates with syntax errors.

\textbf{Corrective Action:} Correct the errors in the rule member and recompile the rule.

CTB121E MAXIMUM LENGTH OF THE PARAMETER OF KEYWORD \textit{keyName} IS \textit{num}

\textbf{Explanation:} During rule compilation, the value specified for the \textit{keyName} keyword exceeded the indicated maximum length. Relevant text appears in an accompanying message.

The compiler continues processing the next block, but terminates with syntax errors.

\textbf{Corrective Action:} Correct the errors in the rule member and recompile the rule.

CTB122W WARNING: RECURSIVE CALL TO BLOCK: "\textit{blk}" IN OR BEFORE LINE \textit{lin}

\textbf{Explanation:} The rule being compiled has a block that calls itself. This is a warning, that there might be a problem.

The variables in this message are:

- \textit{blk} - the problematic block
- \textit{lin} - the line in or before which block appears

\textbf{Corrective Action:} Check the rule to verify that it does what you intend it to do.
CTB123E UNEXPECTED END OF SOURCE AFTER LINE lin

**Explanation:** During rule compilation, there was an unfinished command at the end of the source member, or the source did not contain any blocks. Relevant text appears in an accompanying message. The compiler terminates with syntax errors.

**Corrective Action:** Correct the errors in the rule member and recompile the rule.

CTB124E SYNTAX ERROR ENCONTERED IN LINE lin

**Explanation:** A syntax error occurred during rule compilation or runtime. In this message, the variable lin has two possible meanings:

- During rule compilation, lin identifies the line in the rule in which the error occurs.
- During runtime, lin identifies the line in the DD name referenced by the MSUBSTMASK function in which the error occurs.

The system action varies according to the stage at which the error occurs, as follows:

- If the error occurs during rule compilation, the compiler continues compiling at the next block, but issues syntax errors when it ends.
- If the error occurs during runtime execution, Control-M/Analyzer stops executing and issues an error.

**Corrective Action:** Correct all errors in the rule, or in the DD name referenced by MSUBSTMASK, and recompile.

CTB125E NO BLANK CHARACTERS ALLOWED IN PARAMETER: " parm"

**Explanation:** During rule compilation, the parm parameter contained embedded blanks. Embedded blanks are not permitted in this parameter. Relevant text appears in an accompanying message.

The compiler continues processing the next block but will terminate with syntax errors.

**Corrective Action:** Correct the errors in the rule member and recompile the rule.

CTB126E FIRST CHARACTER MUST BE ALPHABETIC. SYNTAX ERROR IN LINE lin

**Explanation:** During rule compilation, the first character of the parameter in the lin line should be, but was not, alphabetic. Relevant text appears in an accompanying message.

The compiler continues processing the next block but will terminate with syntax errors.

**Corrective Action:** Correct the errors in the rule member and recompile the rule.

CTB127E CHARACTERS MUST BE ALPHANUMERIC. SYNTAX ERROR IN LINE lin

**Explanation:** During rule compilation, a non-alphanumeric character was found in the parameter in the lin line. The parameter must be alphanumeric. Relevant text appears in an accompanying message.

The compiler continues processing the next block but will terminate with syntax errors.
Corrective Action: Correct the errors in the rule member and recompile the rule.

CTB128I SRC: " lirt"
Explanation: This information message prints rule source lines that are rejected by the compiler. This message accompanies compilation error messages.
Corrective Action: No action is required.

CTB129I SRC: " lirt"
Explanation: This information message prints rule source lines that are rejected by the final syntax checker.
Corrective Action: No action is required.

CTB129W EXIT exitName WAS NOT LOADED
Explanation: Control-M failed to load the exitName user exit. Common reasons for failure are:
- The IOA Load library is in the Linklist, and someone has updated the library without performing a refresh for the LLA.
- The last assembly or linkage of the exit failed.
- There is insufficient memory to load the new exit.
Control-M will continue to run, bypassing the exit.
Corrective Action: Check the computer Log for the cause of the failure.

CTB130I INTERNAL ERROR. SHOW THE FOLLOWING INFORMATION TO YOUR LOCAL IOA REPRESENTATIVE.
Explanation: This message indicates that a Control-M/Analyzer internal error occurred.
The rule is not saved.
Corrective Action: Do the following:
1. Perform a screen print of the information shown.
2. Ask your IOA administrator to report the information to BMC Software Customer Support.
3. Press PF03/PF15(END) to return to the editing screen.
4. Change the rule so that it can be saved.

CTB131I ADDR: info
Explanation: This information message accompanies the CTB130I message.
Corrective Action: Ask your INCONTROL administrator to report the information in this message to BMC Software Customer Support.
CTB132E ERR: *asterisks*

**Explanation:** This information message accompanies the message containing the text of the line in error. This message places an asterisk directly under the error in the text line.

**Corrective Action:** No action is required.

CTB133E NUMERIC VALUE MUST BE LESS THAN 256

**Explanation:** During rule compilation, the numeric value indicated in the accompanying message must be less than 256. Relevant text appears in an accompanying message.

The compiler continues processing the next block, but will terminate with syntax errors.

**Corrective Action:** Correct the errors in the rule member and recompile the rule.

CTB134E NUMERIC VALUE MUST BE LESS THAN 4000

**Explanation:** During rule compilation, the numeric value indicated in the accompanying message should be, but is not, less than 4000. Relevant text appears in an accompanying message.

The compiler continues processing the next block but will terminate with syntax errors.

**Corrective Action:** Correct the errors in the rule member and recompile the rule.

CTB135E VALID VALUES FOR URGENCY ARE R, U AND V

**Explanation:** During rule compilation, the value of the URGENCY parameter in the SHOUT statement was found to be invalid.

Valid values for the URGENCY parameter are:

- R - Regular
- U - Urgent
- V - Very Urgent

Relevant text appears in an accompanying message.

The compiler continues processing the next block but will terminate with syntax errors.

**Corrective Action:** Correct the errors in the rule member and recompile the rule.

CTB136E ABSOLUTE COLUMN NUMBER MUST BE NONZERO

**Explanation:** During rule compilation, the value zero was specified for a column number. Column number values are absolute and must be greater than zero. Relevant text appears in an accompanying message.

The compiler continues processing the next block but will terminate with syntax errors.

**Corrective Action:** Correct the errors in the rule member and recompile the rule.

CTB137E LINE NUMBER MUST BE RELATIVE

**Explanation:** During rule compilation, a non-relative line number was specified. Relevant text appears in an accompanying message.
A line number must be relative, and must start with plus (+) or minus (-).
The compiler continues processing the next block but will terminate with syntax errors.
Corrective Action: Correct the errors in the rule member and recompile the rule.

CTB138E SUBSYSTEM ID MUST BE ALPHANUMERIC, @, $, OR #. FIRST CHARACTER MUST NOT BE A DIGIT
Explanation: The subsystem ID contains invalid characters.
The Control-M/Analyzer runtime environment terminates with an error.
Corrective Action: Correct the specification of the subsystem ID.

CTB139E VALID VALUES FOR THIS FIELD ARE Y AND N
Explanation: The value of the field in error was neither Y nor N. This field must contain Y for choosing a certain feature or N (or blank) for not choosing it.
The Control-M/Analyzer runtime environment terminates with an error.
Corrective Action: Specify Y or N in the field, or leave it blank.

CTB13AE NUMERIC VALUE MUST NOT EXCEED 100
Explanation: The specified value exceeded 100. The value specified in the field in error cannot exceed 100.
The Control-M/Analyzer runtime environment terminates with an error.
Corrective Action: Specify a value of 100 or less.

CTB13BE NUMERIC VALUE MUST BE POSITIVE
Explanation: The specified value was zero. The value specified in the field in error cannot be zero.
The Control-M/Analyzer runtime environment terminates with an error.
Corrective Action: Specify a positive number for the value.

CTB13CE VALID VALUES FOR DATASTAMP ARE 1, 2, AND BLANK
Explanation: The DATASTAMP parameter contained an invalid value. Valid values for the DATASTAMP parameter are blank, 1 and 2, depending on whether or not a data stamp should be calculated and on the calculation technique that should be used.
The Control-M/Analyzer runtime environment terminates with an error.
Corrective Action: Assign a valid value to the DATASTAMP parameter.

CTB13DE VSAM FILE TYPE MAY BE KSDS, RRDS OR ESDS
Explanation: The VSAM file type specified in statement ON VSAM was invalid.
The TYPE parameter in an ON VSAM statement specifies the VSAM file type. Valid values are:
Messages CTB200 through CTB2xx

This group includes messages for the Control-M/Analyzer product.

CTB200S ERLG AT loc (HEX- xxxx) INFO= nn

**Explanation:** The general system Error Logger detected an error which occurred at a certain location. This message is issued when rare or unexpected errors occur.

The variables in this message are:

- **loc** - the location within the Control-M/Analyzer runtime environment where the error occurred
- **xxxx** - the hexadecimal equivalent of loc
- **nn** - a number used for tracing the error

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Record the content of this message and consult your INCONTROL administrator.

CTB201S ERLG AT name LINE lin, INFO= nnn

**Explanation:** The general system Error Logger detected an error which occurred at the location indicated in the message (name and line). This message is issued when rare or unexpected errors occur.

The variables in this message are:

- **name** - the location in the Control-M/Analyzer runtime environment where the error occurred
- **lin** - the line in the Control-M/Analyzer runtime environment where the error occurred
- **nn** - a number used for tracing the error

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Record the content of this message and consult your INCONTROL administrator.

CTB210E VARIABLE NAME varName TOO LONG (num CHARACTERS).
MAXIMUM: maxNum CHARACTERS

**Explanation:** The resolved length of the variable name exceeds the maximum valid length. The variable name was specified using AutoEdit symbols.

The variables in this message are:
varName - the first twenty characters of the resolved variable name
num - the length of the resolved variable name
maxNum - the maximum valid length of the resolved variable name

Corrective Action: Correct the problem and rerun the rule.

CTB211E LIBRARY NAME lib TOO LONG (num CHARACTERS). MAXIMUM: maxNum CHARACTERS

Explanation: The resolved length of the library name exceeds the maximum valid length. The library name was specified using AutoEdit symbols in a DO GETMEM, PUTSYM, or ADDSYM statement.

The variables in this message are:
- lib - the first 44 characters of the resolved library name
- num - the length of the resolved library name
- maxNum - the maximum valid length of the resolved library name

Corrective Action: Correct the problem and rerun the rule.

CTB212E MEMBER NAME memName TOO LONG (num CHARACTERS). MAXIMUM: maxNum CHARACTERS

Explanation: The resolved length of the member name exceeds the maximum valid length. The member name was specified using AutoEdit symbols in a DO GETMEM, PUTSYM, or ADDSYM statement.

The variables in this message are:
- memName - the first eight characters of the resolved member name
- num - the length of the resolved member name
- maxNum - the maximum length of the resolved member name

Corrective Action: Correct the problem and rerun the rule.

CTB214E VALUE val for VARIABLE varName TOO LONG (num CHARACTERS). MAXIMUM: maxNum CHARACTERS

Explanation: The resolved length of the variable exceeds the maximum valid length. The variable was specified using AutoEdit symbols in a DO SET or EXTRACT statement.

The variables in this message are:
varName - the first 100 characters of the resolved variable name  
num - the length of the resolved variable name  
maxNum - the maximum valid length of the resolved variable name

Control-M/Analyzer terminates.  
**Corrective Action:** Correct the problem and rerun the rule.

CTB215I AUTOEDIT MEMBER *lib(memName)* WAS READ BUT NOT WRITTEN  
**Explanation:** This information message indicates that a DO GETMEM statement, but not a DO PUTMEM statement, was requested and performed for an AutoEdit member. This could, but does not necessarily, indicate a problem.  
**Corrective Action:** If this is not what you intended correct the rule.

CTB216I RUN-TIME ERROR OCCURRED. VARIABLES NOT COMMITTED FOR RULE *rule_name*  
**Explanation:** This information message indicates that, because Control-M/Analyzer encountered an error during rule processing, variables not explicitly committed by a DO COMMIT NOW statement will not be committed.  
This message follows other messages that describe the error.  
Control-M/Analyzer terminates. Variables not explicitly committed by statement DO COMMIT NOW are not committed.  
**Corrective Action:** Using the information provided in the other messages, correct the problem and rerun the rule.

CTB217E VARIABLE NAME CANNOT CONTAIN BLANKS. VARIABLE="*varName*"  
**Explanation:** The resolved variable name contains embedded blanks. The variable name was specified using AutoEdit symbols. Its resolved value should not, but does, contain embedded blanks.  
In this message, *varName* is the first 20 characters of the problematic variable name.  
Control-M/Analyzer terminates.  
**Corrective Action:** Correct the problem and rerun the rule.

CTB218E VARIABLE "*varName*" IN DO RULE/BLOCK/CALLUSER NOT INITIALIZED  
**Explanation:** An attempt was made to pass a variable to a rule, block or user routine without previously initializing the variable.
The variable name may be incorrectly specified in the DO RULE, BLOCK, or CALLUSER statement and the intended variable name was used. Before a variable can be passed to another rule, block, or user routine, or used in a DO RULE, BLOCK, or CALLUSER statement, the variable must be used at least once in the rule.

Control-M/Analyzer terminates.

**Corrective Action:** Correct the variable name if it is in error. Ensure that the variable name is initialized, that is, specified in a DO SET statement, prior to its usage in a DO RULE or BLOCK or CALLUSER statement.

**CTB219E VALUE IS NOT NUMERIC: val**

**Explanation:** A value extracted by a DO EXTRACT statement for averaging or summing is not numeric. The extracted value must be numeric. This message is accompanied by either the CTB220E message or the CTB221E message.

Control-M/Analyzer terminates.

**Corrective Action:** Correct the problem and rerun the rule.

**CTB220E WHILE AVERAGING VARIABLE varName**

**Explanation:** This message accompanies the CTB219E message and indicates precisely which operation was being attempted when the error occurred.

Control-M/Analyzer terminates.

**Corrective Action:** Correct the problem and rerun the rule.

**CTB221E WHILE SUMMING VARIABLE varName**

**Explanation:** This message accompanies the CTB219E message and indicates precisely which operation was attempted when the error occurred.

Control-M/Analyzer terminates.

**Corrective Action:** Correct the problem and rerun the rule.

**CTB222E ERROR WHILE PROCESSING VALUE: val. PROCESS: procName**

**Explanation:** The requested process cannot be applied to the value obtained by the DO EXTRACT statement.

The variables in this message are:

- **val** - the value obtained by the DO EXTRACT statement
- **procName** - the process that was requested, but that cannot be applied to **val**

For information about permitted processes and valid input for processes, see the *Control-M/Analyzer User Guide*.

Control-M/Analyzer terminates.

**Corrective Action:** Correct the problem and rerun the rule.
CTB223E AUTOMATIC CREATION OF DATABASE VARIABLES IS NOT ENABLED. CHANGE VARCRET TO "Y" IN CTBPARM

Explanation: An attempt was made to use a database variable not previously defined in the database. Control-M/Analyzer allows you to automatically create new database variables only if the VARCRET parameter in the CTBPARM member is set to Y.

Corrective Action: If the variable name was specified incorrectly, correct it and rerun the rule. To create a new database variable, set the VARCRET parameter in the CTBPARM member to Y and rerun the rule.

CTB224E NUMBER OF GENERATIONS FOR SYSDBVGENS SYSTEM VARIABLE IS TOO HIGH: num. MAXIMUM IS 1000

Explanation: An attempt was made to set the SYSDBVGENS parameter to a value higher than the maximum allowed. The SYSDBVGENS parameter determines the number of generations of automatically generated database variables. The maximum number allowed is 1000.

Corrective Action: Correct the problem and rerun the rule.

CTB225E INVALID NUMBER OF GENERATIONS FOR SYSDBVGENS SYSTEM VARIABLE: num

Explanation: An attempt was made to set the value of the SYSDBVGENS parameter to a nonnumeric value.

The SYSDBVGENS parameter is used to determine the number of generations of automatically generated database variables. Its value must be numeric.

Corrective Action: Correct the problem and rerun the rule.

CTB226S INTERNAL ERROR IN CTBVARS: RC= rc INVALID

Explanation: An internal error occurred while processing variables.

Corrective Action: Ask your INCONTROL administrator to call BMC Software Customer Support.

CTB227E PROCESS procName HAS INVALID LENGTH (invalidNum). LENGTH SHOULD BE validNum

Explanation: The input variable is not the correct length for the selected DO EXTRACT statement process.

The following DO EXTRACT statement processes require variables with the lengths indicated:
BBINF - variable length 4
BBINH - variable length 2
BBINC - variable length 1

Control-M/Analyzer terminates.

**Corrective Action:** Correct the problem and rerun the rule.

CTB229E UNKNOWN [BUILT-IN] PROCESS *procName*

**Explanation:** The requested process is unknown to Control-M/Analyzer. The process name was incorrectly specified. The type descriptor BUILT-IN appears in the message only if the process is a BUILT-IN process.

Control-M/Analyzer terminates.

**Corrective Action:** Correct the process name and rerun the rule.

CTB22AE AUTOMATIC CREATION OF DATABASE VARIABLES IS ALLOWED ONLY FOR THE CURRENT GROUP

**Explanation:** An attempt was made to use a database variable that was one of the following:
- not previously defined in the database
- assigned to a group that is not the current group

Control-M/Analyzer allows you to automatically create new database variables within the group of the current rule if the VARCRET parameter in the CTBPARM member is set to Y.

Control-M/Analyzer terminates.

**Corrective Action:** If the variable was specified incorrectly, correct it and rerun the rule. Otherwise, predefine the variable and rerun the rule.

CTB22BE ACCESS TO VARIABLE DATABASE DENIED. OPERATION= *opn*

**Explanation:** The Control-M/Analyzer security interface does not permit you to perform the requested operation (*opn*) on the Control-M/Analyzer database.

Control-M/Analyzer terminates.

**Corrective Action:** If you think you should be authorized to perform the requested operation, contact your security administrator.

CTB22CE YOU ARE NOT AUTHORIZED TO USE THIS GROUP. GROUP= *grp*

**Explanation:** The Control-M/Analyzer security interface does not permit you to use the *grp* group.

Control-M/Analyzer terminates.

**Corrective Action:** If you think you should be authorized to use the specified group, contact your security administrator.
CTB22DE VALUE \textit{val} IS ILLEGAL FOR SYSTEM VARIABLE \textit{varName}

\textbf{Explanation:} An invalid value (\textit{val}) was assigned to the \textit{varName} system variable. The \textit{varName} system variable can have only certain values.

The Control-M/Analyzer runtime environment terminates with an error.

\textbf{Corrective Action:} Consult the Control-M/Analyzer User Guide for information about the \textit{varName} system variable.

CTB22EE VARIABLE \textit{varName} IS NOT ALLOWED AS A DO RULE/BLOCK/CALLUSER ARGUMENT BECAUSE OF ITS TYPE

\textbf{Explanation:} The AutoEdit variable or System variable \textit{varName} was specified as an argument in a DO RULE, BLOCK, or CALLUSER statement.

AutoEdit and System variables may not be passed as arguments to DB2.

The Control-M/Analyzer runtime environment terminates with an error.

\textbf{Corrective Action:} Assign the value of the argument in error to a user variable and pass that user variable to DB2 instead.

CTB22FE UNABLE TO CREATE VARIABLE \textit{varName}, THE PREFIX OF ITS NAME IS INVALID

\textbf{Explanation:} The name (\textit{varName}) of a variable to be created has the prefix of a variable that the DO SET command cannot create. The DO SET command can create user and AutoEdit variables only. In this case, a prefix was specified which marks another type of variable, for example, a system variable.

The Control-M/Analyzer runtime environment terminates with an error.

\textbf{Corrective Action:} Correct the variable name.

CTB230I NO MATCHING MISSION IN ACTIVE BALANCING FILE. MISSION: \textit{missionName}

\textbf{Explanation:} This message indicates that the Active Balancing file does not contain the \textit{missionName} mission specified in the call to Control-M/Analyzer.

Control-M/Analyzer terminates.

\textbf{Corrective Action:} Either correct the name of the mission, or order the mission to the Active Balancing file. Rerun the Control-M/Analyzer rule.

CTB231E COULD NOT ADD AN ENTRY TO THE ACTIVE BALANCING FILE

\textbf{Explanation:} Control-M/Analyzer was unable to add information to the Active Balancing file. This message usually indicates that the Active Balancing file is full.

Control-M/Analyzer terminates.

\textbf{Corrective Action:} Contact your INCONTROL administrator.
CTB232E  

$dsn$ FILE IS FULL. UNABLE TO ADD $recordType$

**Explanation:** Control-M/Analyzer failed to add a record to the file identified in the message because it was full.

The variables in this message are:

- $dsn$ - the name of the data set that was found to be full
- $recordType$ - the type of record that failed to be added to $dsn$

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Increase the size of the data set referenced by the $dsn$ DD statement.

CTB233E  

$dsn$ FILE FORMATTED WITH A ZERO-LENGTH KEY

**Explanation:** The $dsn$ Control-M/Analyzer database index file could not be opened. Index files must have a positive key length.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Reformat the data set referenced by the $dsn$ DD statement and rerun the job.

CTB234E UNABLE TO OPEN FILE $dsn$. CONFLICTING INSTALLATION PARAMETER QNAME

**Explanation:** The QNAME specified in the $dsn$ Control-M/Analyzer database file was different than the expected QNAME. The version of the Control-M/Analyzer runtime environment is different than the version of the utility which was used to format the file.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Verify that the correct Control-M/Analyzer database was allocated and rerun the job.

CTB235S ENQUEUE PROBLEM IN FILE $dsn$

**Explanation:** Control-M/Analyzer could not lock the database file for update.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Check the reason for the conflict and rerun the Control-M/Analyzer job after the current applications have finished running.

CTB236S DUAL DATABASE PROBLEM IN FILE $dsn$. RC= $rc$

**Explanation:** Control-M/Analyzer failed due to an integrity error in the $dsn$ mirror database file.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Disable the mirror database installed for this particular file. Record the content of this message and report it to your INCONTROL administrator. If the situation allows, the Control-M/Analyzer job can be rerun.

CTB237E  

$opn$ FAILED FOR FILE $ddName$ INDEX OR DATA. RC= $rc$

**Explanation:** An error occurred while performing an operation on the specified file.
The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Provide the syslog and contents of this message to your INCONTROL administrator.

**CTB239S opn FAILED FOR FILE ddName. RC= rc**

**Explanation:** An error occurred while performing the operation on the `ddName` file.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Record the contents of this message and consult your INCONTROL administrator.

**CTB23AS LINK OF IOADBF FAILED IN IOADBS**

**Explanation:** The IOADBF load module cannot be found.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Check the concatenated load libraries referenced by the DDNAME STEPLIB statement and rerun the Control-M/Analyzer job.

**CTB23BE dsn FILE IS FORMATTED INCORRECTLY. KEY LENGTH SHOULD BE ZERO**

**Explanation:** The data component of the `dsn` Control-M/Analyzer database file was formatted with a positive-length key. Data files must not be keyed.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Reformat the data set referenced by the `dsn` DD statement and rerun the job.

**CTB23CE ddName FILE IS FORMATTED INCORRECTLY. key/record LENGTH SHOULD BE len**

**Explanation:** A length of a key or record specified when formatting the file was incorrect. Each Control-M/Analyzer database file must adhere to specific length specifications.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Reformat the data set referenced by the `ddName` DD statement and rerun the job.

**CTB240E ON blk BLOCK CANNOT BE USED UNDER environmt**

**Explanation:** The specified ON block cannot be used in the specified environment. ON blocks are restricted to specific environments, as follows:

- If Control-M/Analyzer is running standalone, neither ON PAGE nor ON SYSDATA statements can be used in the rule.
- If Control-M/Analyzer is running under Control-M, ON PAGE, ON SYSOUT, ON CLASS and ON DSN statements cannot be used in the rule.
- If Control-M/Analyzer is running under Control-D, ON SYSDATA, ON SYSOUT, ON CLASS and ON DSN statements cannot be used in the rule.

Control-M/Analyzer terminates.
Corrective Action: Correct the error, and rerun the rule.

CTB241E posn MUST BE NUMERIC

Explanation: The record offset (for RRDS files) or the RBA (for ESDS files) specified in the FIRSTKEY or the LASTKEY parameter was not numeric.

The format of the record offset or RBA format is C nnn, where nnn is any 3-digit numeric string.

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Set the FIRSTKEY or the LASTKEY parameter to a value in the format C nnn, where nnn is any 3-digit numeric string.

CTB242E VSAM CRITERIA crit DOES NOT COMPLY WITH THE REQUIRED FORMAT

Explanation: The criteria specified in either the FIRSTKEY or the LASTKEY parameter, or both these parameters, of the ON VSAM statement were not in the correct format.

The values of the FIRSTKEY and LASTKEY parameters must be in the format C cccc ,X x xxx ,... for all VSAM file types.

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Correct the values of the FIRSTKEY and LASTKEY parameters into the required format.

CTB243E FILE fileName WAS NOT FOUND

Explanation: The fileName file specified in an ON statement was not found.

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Correct the file name specification. If it includes AutoEdit variable substitution, make sure the variables have valid values.

CTB248E NON-NUMERIC OR ZERO n SPECIFIED IN PROCESS BW n

Explanation: The character specified after BW in a DO EXTRACT statement was not a positive integer.

The n in the BW n process in a DO EXTRACT statement specifies the number of the word to be extracted, and must be a positive integer.

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Verify that only a positive integer follows BW in the BW n specification.

CTB249W WORD COUNT (num) SMALLER THAN nnn IN PROCESS BW n (SYSRC SET TO 4)

Explanation: The number of words in the text to be examined was less than the value of n specified in the BW n process in a DO EXTRACT statement. This message may indicate either an error in specifying the BW n process, or unexpectedly short data.

The SYSRC system variable is set to 4, and processing continues.
Corrective Action: Examine all the following and ensure that they are correct:

- the EXTRACT column limits
- the BW \( n \) process specification
- the supplied input data

**CTB24AE VARIABLE SYSEXTUPROC FOR EXTRACT PROCESS BUPROC IS NOT DEFINED**

Explanation: The SYSEXTUPROC system variable was not assigned a value when the BUPROC process was requested in a DO EXTRACT statement. The BUPROC process in a DO EXTRACT statement requires the SYSEXTUPROC system variable to be defined.

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Use a DO SET statement to store the desired user-defined process in the SYSEXTUPROC system variable prior to specifying the BUPROC process.

**CTB24BE INVALID COMBINED PROCESS NAME procName. USE BCPROC\( n \) WITH \( n = 1 \) to 10**

Explanation: The user-defined combined EXTRACT process name was not in the format BCPROC \( n \), where \( n \) is an integer from 1 to 10.

The combined EXTRACT process invokes a sequence of processes specified in the SYSCPROC \( n \) system variable. This variable can be defined only when \( n \) is an integer from 1 through 10.

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Set the combined EXTRACT process name in the format BCPROC \( n \), where \( n \) is an integer from 1 through 10.

**CTB24CE VARIABLE SYSCPROC\( n \) DOES NOT EXIST FOR PROCESS procName**

Explanation: The combined EXTRACT process referred to an undefined system variable (SYSCPROC \( n \)).

The combined EXTRACT process BCPROC\( n \) invokes a sequence of processes specified in the SYSCPROC \( n \) system variable. This system variable must be defined before executing an EXTRACT statement that refers to it.

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Set the SYSCPROC \( n \) system variable to a sequence of EXTRACT processes or change the reference in the EXTRACT statement to a defined system variable.

**CTB250E FILE ddName CANNOT BE OPENED**

Explanation: During a Control-M/Analyzer run, the file referenced by the \( ddName \) DD statement could not be opened.

Probable causes are:
The `ddName` DD statement is missing.

The data set referenced by the `ddName` DD statement cannot be accessed.

Execution continues. If the error occurred during a DO PRINT statement, then output to the file referenced by the `ddName` DD statement is rerouted to the file referenced by SYSUSERDD statement.

**Corrective Action:** Correct the JCL and rerun the job.

CTB250S FILE `ddName` CANNOT BE OPENED

**Explanation:** During a Control-M/Analyzer run, the file referenced by the `ddName` DD statement could not be opened.

Probable causes are:

- The `ddName` DD statement is missing.
- The data set referenced by the `ddName` DD statement cannot be accessed.

The Control-M/Analyzer runtime environment ends with an error.

**Corrective Action:** Correct the JCL and rerun the job.

CTB255E OCCURRENCE MUST BE POSITIVE IN `func`

**Explanation:** An occurrence specified in the func function was zero or negative.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Specify a positive occurrence value.

CTB256E WORD NUMBER MUST BE POSITIVE IN FUNCTION WORD

**Explanation:** The word number specified in the WORD function was zero or negative.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Specify a positive word number.

CTB257E ENTRY NUMBER MUST BE POSITIVE IN DDINFO

**Explanation:** The data set entry number specified in the DDINFO function was zero or negative.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Specify a positive data set entry number.

CTB258E STARTING OCCURRENCE MUST NOT EXCEED ENDING OCCURRENCE IN `func`

**Explanation:** The starting occurrence exceeds the ending occurrence in the specified occurrence range.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Set the occurrence range in the `func` function to begin with the lower occurrence.
CTB259W WORD NUMBER num REQUESTED BUT INPUT STRING CONTAINS ONLY nnn WORDS (SYSRC SET TO 4)

Explanation: The number of words in the input string to the WORD function was smaller than the requested word number.

This message may indicate either an error in coding the call to the WORD function or an unexpectedly short input string.

The SYSRC system variable is set to 4 and processing continues.

Corrective Action: Ensure that the parameters of the WORD function are specified correctly.

CTB25AE DDNAME ddName WAS NOT FOUND IN STEP procStep, pgmStep (SYSRC SET TO 4)

Explanation: The DD name (ddName) specified in the DDNUM or the DDINFO function was not found. There is no DD statement with the ddName DD name in the procStep.pgmStep job step.

The SYSRC system variable is set to 4 and processing continues.

Corrective Action: Verify that the parameters specified in the DDNUM or DDINFO function are correct.

CTB25BE INFORMATION FOR DATASET NUMBER num1N DD STATEMENT ddName WAS REQUESTED BUT ONLY nn DATASETS ARE ALLOCATED (SYSRC SET TO 8)

Explanation: The number of data sets allocated to the ddName DD statement is less than the requested entry number in the DDINFO function.

The SYSRC system variable is set to 8 and processing continues.

Corrective Action: Specify a smaller data set entry number or verify that the JCL is correct.

CTB25CE UNABLE TO GET NUMBER OF LINES OF MEMBER mem1N LIBRARY lib - ISPF STATISTICS DO NOT EXIST

Explanation: The MEMLINES function failed to retrieve the number of lines of a member, because ISPF statistics did not exist for the member. The MEMLINES function obtains the member line-count from the ISPF statistics of the member. When the statistics are missing, the MEMLINES function cannot obtain the line-count.

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Save the member using ISPF so that statistics for it are created.

CTB260E IN THIS MODE, GROUP grp CANNOT READ VARIABLE varName

Explanation: A DO SET expression could not read a database variable belonging to the grp group, due to group mode differences between the specified group and the current group. Control-M/Analyzer determines if it can read database variables belonging to other groups based on the modes of the groups.
When the current group is in ACTIVE mode, Control-M/Analyzer can read variables belonging to other groups in ACTIVE mode. It cannot read variables belonging to other groups in SIMULATION or DEFINE mode.

When the current group is in SIMULATION mode, Control-M/Analyzer can read variables from other groups in ACTIVE or SIMULATION mode. It cannot read variables belonging to other groups in DEFINE mode.

This message follows the CTB262I message, which specifies the name and mode of the group that Control-M/Analyzer attempted to access in order to read the variable. For more information about group modes, see the Control-M/Analyzer User Guide.

Corrective Action: Ensure that the groups which Control-M/Analyzer attempts to access for a read operation are in an appropriate mode. Invoke Control-M/Analyzer again.

CTB261E IN THIS MODE, GROUP grp CANNOT SET VARIABLE varName

Explanation: The indicated database variable belonging to the grp group could not be set, due to group mode differences between that group and the current group. Control-M/Analyzer determines if it can set database variables belonging to other groups based on the modes of the groups.

When the current group is in ACTIVE mode, Control-M/Analyzer can set variables belonging to other groups that are in ACTIVE mode. It cannot set variables belonging to other groups in SIMULATION or DEFINE mode.

When the current group is in SIMULATION mode, Control-M/Analyzer can set variables belonging to other groups in SIMULATION mode. It cannot set variables belonging to other groups in ACTIVE or DEFINE mode.

This message follows the CTB262I message, which specifies the name and mode of the group that Control-M/Analyzer tried to access to set the variable. For more information about group modes, see the Control-M/Analyzer User Guide.

Control-M/Analyzer terminates.

Corrective Action: Ensure that the groups which Control-M/Analyzer attempts to access for a set operation are in an appropriate mode. Invoke Control-M/Analyzer again.

CTB262I GROUP grp IS IN modeType MODE

Explanation: This information message indicates the name and mode of the group that Control-M/Analyzer tried to access for either a read or a set operation.

This message accompanies the CTB260E message or the CTB261E message, issued when the requested operation could not be performed because of mode differences between the group to be accessed and the current group.

Corrective Action: No action is required.

CTB270W THE VARIABLE SET varset IS EMPTY (SYSRC SET TO 8)

Explanation: No variables were found whose names belong to the specified set. This message is issued by the SUM, HOWMANy, and NEXTVAR functions when no variable names match the name-mask arguments or the database criteria.
The HOWMANY and SUM functions return zero. The NEXTVAR function returns a blank string. The SYSRC system variable is set to 8.

**Corrective Action:** Verify that this situation is not a result of improper coding or improper input data.

**CTB271E NON-NUMERIC VALUES WERE FOUND IN THE VARIABLE SET**

**Explanation:** One of the variables in the set contains a nonnumeric value. The SUM function expects a name-mask or database criteria that specifies only numeric variables.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Eliminate non-numeric values from the variable set in one of the following ways:

- Verify that only numeric values are assigned to the variables in the set specified in the SUM function.
- Redefine the set accordingly.
- Rename the non-numeric variables so that they will not be included in the set.
- Verify that all the variables in the set specified in the SUM function contain numeric values.

**CTB272E VARIABLE startvar IS NOT IN varset OR DOES NOT EXIST**

**Explanation:** The startvar starting variable specified in the NEXTVAR function does not belong to the varset set, or the startvar variable was not found. The startvar starting variable specified in the NEXTVAR function must exist, and it must belong to the identified variable set.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Verify that the startvar variable is contained in the varset set. Either respecify the criteria or change the startvar variable name.

**CTB282I** text (userId)

**Explanation:** Highlighted, unrollable message.

This information message is activated by the SHOUT facility.

In this message, userId is the user ID of the job order requesting the SHOUT.

**Corrective Action:** No action is required.

**CTB284I** NEW DYNAMIC DESTINATION TABLE LOADED

**Explanation:** This information message indicates that a new Dynamic Destination Table has been loaded by the IOA Runtime environment. This message is also generated when the SHOUT Facility is initialized under the IOA Runtime environment.

**Corrective Action:** No action is required.

**CTB285W** DYNAMIC DESTINATION TABLE NOT LOADED

**Explanation:** Loading of the Dynamic Destination Table by the IOA Runtime Environment failed. This could be due to one of the following:
insufficient memory for loading the table

- the IOADEST table does not exist in the IOA PARM library

If the failure occurs during the initialization of the IOA Runtime Environment, SHOUT notifications will not be controlled by the Dynamic Destination Table.

**Corrective Action:** Check the MVS Log for the reason for the failure (probably a system abend code). Correct the problem and then run the job again.

**Messages CTB300 through CTB3xx**

This group includes messages for the Control-M/Analyzer product.

**CTB303E** FILL IN THE REQUIRED FIELD

**Explanation:** A required field has not been filled in. The cursor points to the required field.

**Corrective Action:** Fill in the required field.

**CTB304E** FIELD MUST BE num DIGITS IN LENGTH

**Explanation:** The value in the field is not the required length. The field must contain num digits.

**Corrective Action:** Correct the field value.

**CTB305E** FILL IN THE LINE/COL RANGE

**Explanation:** Line/column range data has not been specified.

**Corrective Action:** Fill in the line/column range.

**CTB306E** "ON DATA" STATEMENT CANNOT BE REPLACED BY ANOTHER "ON" STATEMENT

**Explanation:** The user attempted to overwrite the ON DATA statement with another ON statement. After an ON DATA statement has been specified, it cannot be overwritten by another ON statement. It can be replaced by an empty ON statement. Then a new ON statement can be defined in its place.

For more information, see the ON DATA statement in the Control-M/Analyzer User Guide.

**Corrective Action:** Delete the keyword DATA from the ON DATA statement and press Enter. Then define the desired ON statement.

**CTB307E** "ON DATA" STATEMENT CANNOT REPLACE ANOTHER "ON" STATEMENT

**Explanation:** The user attempted to overwrite an existing ON statement with an ON DATA statement. After an ON statement is specified, it cannot be overwritten by an ON DATA statement. The ON statement can be replaced by an empty ON statement. Then an ON DATA statement can be defined in its place.

**Corrective Action:** Delete the keyword from the ON statement and press Enter. Then define the ON DATA statement.
CTB308E FIELD MUST BE NUMERIC OR BLANK

**Explanation:** The field contains nonnumeric data. The field must be blank or contain numeric data. If numeric values are used, then no trailing and leading blanks are not allowed.

**Corrective Action:** Correct the value in the field.

CTB309E FIRST CHARACTER CANNOT BE NUMERIC

**Explanation:** The first column in the field contains a numeric value. It should be alphabetic.

**Corrective Action:** Correct the value in the field.

CTB310E INVALID NAME

**Explanation:** The field contains characters not permitted in a name specification, for example, - s, +, !.

**Corrective Action:** Correct the name.

CTB311I PLEASE PLACE CURSOR WITHIN AN "ON" BLOCK

**Explanation:** This information message indicates that the user attempted to open an empty comment line outside of an ON block. A comment line can only be placed within an ON block.

**Corrective Action:** Open the comment line within an ON block.

CTB312E VALID VALUE IN THIS POSITION IS "+" OR "- "

**Explanation:** The value specified at the cursor position must be either + or -. The cursor points to the position requiring the + or - value.

**Corrective Action:** Correct the value at the cursor position.

CTB313E INVALID FORMAT

**Explanation:** The value in the field referenced by the cursor has an invalid format.

**Corrective Action:** Refer to the Control-M/Analyzer User Guide to determine the correct format for the field. Correct the value in the field.

CTB314E INVALID VALUE. SPECIFY "OK", "NOTOK", "TOLER", OR "ABEND"

**Explanation:** The field does not contain a valid value.

Valid values are:

- OK
- NOTOK
- TOLER
- ABEND

**Corrective Action:** Correct the value in the field.
CTB315E I N V A L I D VALUE

Explanation: The field pointed to by the cursor does not contain a valid value.
Corrective Action: Refer to the Control-M/Analyzer User Guide to determine valid values for the field. Correct the value.

CTB316E T O O M A N Y C O N T I N U A T I O N L I N E S

Explanation: The maximum number of continuation lines for the line type has been exceeded.
The cursor points to the first extra line.
Corrective Action: Delete the extra line.

Explanation: A DO EXTRACT action was specified within an ON DATA block. This action is not permitted in an ON DATA block.
Corrective Action: Remove the DO EXTRACT statement from the ON DATA block.

CTB318E "D O G O T O" P E R M I T T E D O N L Y I N "O N D A T A" B L O C K

Explanation: A DO GOTO action was specified outside an ON DATA block. This action is only permitted within an ON DATA block.
Corrective Action: Remove the invalid DO GOTO statement.

Explanation: The = character is missing from the DO SET statement. The = character is required to separate the variable value from the variable name.
Corrective Action: Correct the DO SET statement.

Explanation: Statement DO SET contains blanks immediately following the = character. The variable value, which follows the = character, cannot contain leading blanks. Trailing blanks are permitted in the variable value.
Corrective Action: Remove the leading blanks in the variable value.

Explanation: The abbreviation specified in the DO/ON line is ambiguous. There is more than one statement type starting with this abbreviation.
Corrective Action: Specify a longer, unique statement name.

CTB322E I N V A L I D F O R M A T . S H O U L D B E " +/- N N N"

Explanation: The value specified is not in a valid format. The value must consist of a 3-digit number preceded by either a + or - character.
**Corrective Action:** Specify the value using the correct format.

**CTB323E VALID OPTIONS ARE "C", "D", "N" AND "R"**

**Explanation:** An invalid value is specified in the OPT field in the DO SYSOUT statement. The OPT field in the DO SYSOUT statement can accept only the values listed in the message.

**Corrective Action:** Correct the contents of the OPT field accordingly.

**CTB324E INVALID CLASS. SHOULD BE BETWEEN A-Z OR 0-9**

**Explanation:** An invalid value is specified in the FRM field in the DO SYSOUT statement. The FRM field in the DO SYSOUT statement can accept only the values listed in the message.

**Corrective Action:** Correct the contents of the FRM field accordingly.

**CTB325E FOR OPTIONS "R" AND "D" FIELD MUST BE BLANK**

**Explanation:** A value is specified in the PRM field in the DO SYSOUT. The PRM field in the DO SYSOUT statement must remain empty when the user specifies either R or D in the OPT field.

**Corrective Action:** Delete the value in the PRM field.

**CTB326E FIRST CHARACTER MUST BE ALPHABETIC OR "$","#","@" SIGNS**

**Explanation:** The parameter or variable contains invalid characters.
The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Correct the subsystem parameter or variable specification.

**CTB327E DUPLICATE LABEL NAMES NOT ALLOWED. PLEASE CHANGE IT**

**Explanation:** The LABEL field on which the cursor is positioned contains a name that already appears in the rule definition.

**Corrective Action:** Change the label name.

**CTB328E INVALID OPTION (USE "R", "L" OR BLANK)**

**Explanation:** The value specified for the field on which the cursor is positioned is invalid.

**Corrective Action:** Specify either R, L, or leave the field empty.

**CTB329E INVALID OPTION (USE "Y" OR "N")**

**Explanation:** Y or N is not specified in the field on which the cursor is positioned.

**Corrective Action:** Specify either Y or N.

**CTB330E INVALID LENGTH. SHOULD BE BETWEEN 1-133**

**Explanation:** The length specified in the LEN field is invalid.
The length can only be in the range from 1 to 133.

**Corrective Action:** Specify a value within the range from 1 to 133.
CTB331E PRECISION MUST BE LESS THAN LENGTH

Explanation: The value specified in the PREC field exceeds the value specified in LEN field. The precision cannot be greater than the length.

Corrective Action: Correct the value of the PREC field.

CTB332E FILL IN AT LEAST ONE FORMAT PARAMETER

Explanation: No value is specified in the OUTDD or the FORMAT VAR fields. At least one of the OUTDD or the FORMAT VAR fields appearing on the screen must have a value.

Corrective Action: Specify a value in either the OUTDD or the FORMAT VAR fields.

CTB333E INVALID OPTION (USE "1", "2" OR BLANK)

Explanation: value specified for the field on which the cursor is positioned is invalid.

Corrective Action: Specify 1 or 2, or leave the field empty.

CTB334E INVALID FILE TYPE (USE "KSDS", "RRDS" OR "ESDS")

Explanation: The value specified for the FILE TYPE field is invalid.

Corrective Action: Specify KSDS, RRDS, or ESDS.

CTB335E INVALID VARIABLE NAME. NO BLANKS IN THE VARIABLE NAME ARE ALLOWED

Explanation: The ARG field of a DO RULE, DO BLOCK or DO CALLUSER statement contains one or more blanks in a variable name. Trailing blanks are not allowed in the ARG field of a DO RULE, BLOCK, or CALLUSER statement, and blanks are not allowed in a variable name.

Corrective Action: Correct the invalid variable name.

CTB336E FIRST CHARACTER MUST BE ALPHABETIC (A-Z)

Explanation: The variable name begins with a non-alphabetical symbol.

Corrective Action: Correct the invalid variable name.

CTB337E TOO MANY ARGUMENTS. A MAXIMUM OF 50 ARGUMENTS EXCEEDED

Explanation: The ARG field in a DO RULE, DO BLOCK or DO CALLUSER contains more than 50 arguments. A maximum of 50 arguments can be specified.

Corrective Action: Decrease the number of arguments specified.

CTB350E OPTION "D" CANNOT BE USED WITH OTHER OPTIONS

Explanation: An attempt has been made to use the D option with other options. Option D cannot be mixed with other options.

Corrective Action: Perform the D option, and then perform other options.
CTB351E WHEN OPTION "C" OR "I" IS USED, ONLY ONE OPTION IS ALLOWED

Explanation: User tried to specify more than one Option C or Option I. Multiple occurrences of Option C or Option I are not permitted, nor can these options be specified with other options.

Corrective Action: Perform Option C or Option I alone.

CTB352S UNABLE TO INITIALIZE THE "C" ENVIRONMENT

Explanation: The Control-M/Analyzer Online Facility is unable to initialize the C language environment. The C language environment must be initialized when entering the Rule Definition screen.

Corrective Action: Ask your INCONTROL administrator to call BMC Software Customer Support.

CTB353E RULE COMPILATION UNSUCCESSFUL

Explanation: The rule could not be compiled because it contains invalid data. The rule was prepared by means of the ISPF editor. Its contents do not conform to Control-M/Analyzer standards. Compilation error messages are displayed.

Corrective Action: Use the ISPF editor to correct the rule.

CTB354E NONZERO RC FROM THE FINAL SYNTAX CHECK

Explanation: Errors were detected in the rule definition during the final syntax check. Although the rule was prepared using the Control-M/Analyzer Online Facility, due to an internal error its contents do not conform to Control-M/Analyzer standards. Error messages from the final syntax check are displayed.

Corrective Action: Use the Control-M/Analyzer Online Facility to correct the rule.

CTB355E SELECTED MEMBER IS NOT A VALID RULE MEMBER

Explanation: The selected member is not a valid Control-M/Analyzer rule member. The message could result from one of the following:

- The member requested is not a rule.
- The member requested is a rule, but the rule has been incorrectly modified by means of an editor or program, and now its contents do not conform to Control-M/Analyzer standards.

Corrective Action: Enter a valid Control-M/Analyzer rule. If the specified rule has been incorrectly modified, try to restore it to its original state or correct it.

CTB356E ERROR IN RULE MEMBER. ZOOM SCREEN CANNOT BE BUILT

Explanation: The rule contains invalid data.

The rule contains invalid data. Possible causes are:
The member requested is not a rule, although its structure is similar to one.

The member requested is a rule, but the rule has been incorrectly modified by means of an editor or program, and now its contents do not conform to Control-M/Analyzer standards.

Corrective Action: If the contents of the rule have been modified, try to restore the rule to its original state. If you cannot or if this is not the problem, ask your INCONTROL administrator to call BMC Software Customer Support.

CTB357E INSUFFICIENT STORAGE TO LOAD RULE MEMBER

Explanation: Insufficient storage to load the rule member.

Corrective Action: Do one of the following:

- Log on again using a larger SIZE parameter.
- If you are using many IOA screens concurrently, exit some of them using the END command.
- Split the rule into two rules.

CTB358E INSUFFICIENT STORAGE TO SHOW RULE DETAILS

Explanation: Insufficient storage to display the rule on the ZOOM screen.

Corrective Action: Do one of the following:

- Log on again using a larger SIZE parameter.
- If you are using many IOA screens concurrently, exit some of them using the END command.

CTB359E INSUFFICIENT STORAGE TO PROCESS CHANGES TO RULE PARAMETERS.

Explanation: There is insufficient storage to process the changes to rule parameters in the Zoom screen.

All changes to the rule are ignored. The Rule List screen is displayed.

Corrective Action: Do one, or both, of the following:

- If you are using many IOA screens concurrently, exit some of them using the END command. Then, try to save the rule.
- Log on again using a larger SIZE parameter.

CTB360E RULE IS IN USE BY ANOTHER USER

Explanation: Another Control-M/Analyzer user is currently working on the rule. Two users cannot work on the same rule simultaneously. The other user may be using the rule either by means of the Control-M/Analyzer Online Facility or by means of the ISPF editor.

Corrective Action: Try again later.

CTB361E NO RULES FOUND IN THE LIBRARY. PLEASE ENTER RULE NAME

Explanation: The library is empty. Control-M/Analyzer did not build the rule list as no rules were found in the library.
Corrective Action: Specify a new rule name.

CTB362E PLEASE FILL IN RULE NAME
Explanation: No value was specified in the RULE field. The RULE field is obligatory.
Corrective Action: Specify the name of the rule member in the RULE field.

Messages CTB400 through CTB4xx
This group includes messages for the Control-M/Analyzer product.

CTB401E INTERNAL PROGRAM ERROR - INVALID FUNCTION
Explanation: An internal error has occurred. The requested function is not performed.
Corrective Action: Ask your INCONTROL administrator to call BMC Software Customer Support.

CTB402E INSUFFICIENT STORAGE FOR INVOCATION LIST
Explanation: There is insufficient storage to perform the requested action.
Corrective Action: Either ask your INCONTROL administrator to call BMC Software Customer Support, or adjust the selection criteria so that fewer records are selected.

CTB403E INTERNAL PROGRAM ERROR IN ROUTINE CTBCKP
Explanation: An internal error occurred. The requested action is not performed.
Corrective Action: Ask your INCONTROL administrator to call BMC Software Customer Support.

CTB405E OPEN OF DDNAME ddName FAILED. RC= rc
Explanation: Control-M/Analyzer was unable to open the file referenced by the ddName DD statement. The requested action is not performed.
Corrective Action: Check that the ddName DD statement exists and refers to the correct file. Check the system log for messages which indicate the reason that the open failed. If you are unable to solve the problem, report the contents of the message to your INCONTROL administrator.

CTB406E DISPLAY TYPE " type" NOT FOUND
Explanation: The user specified a display type (type) which has not been defined. Valid display types are defined in the $$JBL member.
Corrective Action: Specify a valid display type.

CTB407E PLEASE SPECIFY A GROUP NAME, OR "*" FOR ALL GROUPS
Explanation: A value was not specified in the GROUP field. GROUP is a required field.
Corrective Action: Specify a group name (or * for all groups).

CTB408E REPORT NOT FOUND FOR THIS JOB
Explanation: The report for this invocation cannot be located in the report file. The report file is not synchronized with the Active Balancing file.
The requested action is not performed.
Corrective Action: Notify your INCONTROL administrator.

CTB409E REPORT NOT CREATED FOR THIS JOB
Explanation: No report was created for this invocation of Control-M/Analyzer. Either the report file is full, or an internal error occurred in the early stages of Control-M/Analyzer invocation.
The requested action is not performed.
Corrective Action: Notify your INCONTROL administrator.

CTB40AI NO VARIABLES WERE COMMITTED FOR THIS ENTRY
Explanation: This information message indicates that the mission did not commit any variables.
Corrective Action: No action is required.

CTB40BE INVALID RETURN CODE FROM modName RC = rc FUNCTION func
Explanation: An internal error occurred.
The requested action is not performed.
Corrective Action: Ask your INCONTROL administrator to call BMC Software Customer Support.

CTB40CI ROLLBACK COMPLETED SUCCESSFULLY
Explanation: This information message indicates that rollback was performed successfully.
Corrective Action: No action is required.

CTB40DE ROLLBACK DENIED BY SECURITY EXIT
Explanation: This information message indicates that you are not authorized to roll back this invocation.
Corrective Action: If you think you should be authorized to roll back this invocation, contact your security administrator.

CTB40EI ALL COMMITTED VARIABLES HAVE BEEN OVERWRITTEN
Explanation: This information message indicates that all the variables that were committed by this invocation have been overwritten.
Corrective Action: No action is required.
CTB40FI PRINT REQUEST COMPLETED SUCCESSFULLY

**Explanation:** This information message indicates that the requested report has been sent to the spool or to a file.

**Corrective Action:** No action is required.

CTB410S SYSOUT ALLOCATION FAILED, RC= rc, ERROR= error

**Explanation:** Control-M/Analyzer was unable to perform the dynamic allocation required to print your report.

**Corrective Action:** Refer to the IBM manual MVS Programming: Authorized Assembler Services Guide. If you still cannot solve the problem, ask your INCONTROL administrator to call BMC Software Customer Support.

CTB411S SYSOUT OPEN FAILED

**Explanation:** SYSOUT could not be opened for report printing.

**Corrective Action:** Notify your INCONTROL administrator.

CTB413E COP# MUST BE 3 DIGITS (001-255)

**Explanation:** An invalid number of copies of the report was requested. The number of copies of a report must be a three digit number between 001 and 255.

**Corrective Action:** Correct the request and try again.

CTB414E SECOND PART OF DESTINATION AND WRITER NAME CANNOT BE MIXED

**Explanation:** A value was specified in both the WTR field and the second part of the destination field. Values for both cannot be used together; they are mutually exclusive.

**Corrective Action:** Specify either value, but not both values.

CTB415E YOU ARE NOT AUTHORIZED TO PERFORM THIS ACTION

**Explanation:** The security exit prevents you from performing the action you have requested.

**Corrective Action:** If you think you should be authorized to perform this action, contact your security administrator.

CTB416E DATASET NAME CANNOT BE BLANK

**Explanation:** A data set name was not specified with the request to print a file. If you choose to print a file, you must specify a data set name.

**Corrective Action:** Specify the data set name if you want to print the file.

CTB417S FILE OPEN FAILED

**Explanation:** While processing the print request, Control-M/Analyzer was unable to open the specified file.
The requested action is not performed.

**Corrective Action:** Check that the data set is cataloged. Check the system log for error messages which may indicate a reason for the problem, and correct accordingly.

**CTB418S UNABLE TO PRINT REPORT**

**Explanation:** This error occurs when there are no lines to be printed.

**Corrective Action:** Notify your INCONTROL administrator.

**CTB419S INSUFFICIENT FREE SPACE IN THE OUTPUT FILE**

**Explanation:** Control-M/Analyzer was unable to print the report because there was insufficient space in the output file.

**Corrective Action:** Enlarge the output file and try again.

**CTB41AI THIS INVOCATION HAS ALREADY BEEN ROLLED BACK**

**Explanation:** This information message indicates that a roll back request was made for an invocation that has already been rolled back.

**Corrective Action:** No action is required.

**CTB41BE REQUESTED FILE IS NOT CATALOGED**

**Explanation:** Control-M/Analyzer was unable to open the specified file.

The requested operation is not performed.

**Corrective Action:** Make sure the data set is cataloged.

**CTB41CE REQUESTED FILE IS NOT SEQUENTIAL**

**Explanation:** The user specified a nonsequential file for the online print option. Control-M/Analyzer cannot print the balancing report into nonsequential file.

**Corrective Action:** Correct the DSN specified in the Print Option panel.

**CTB484I POST DAILY CHECKPOINT WRITTEN**

**Explanation:** This information message indicates that Post-daily checkpoint was written and that the New Day procedure ended normally.

**Corrective Action:** No action is required.

Messages **CTB500 through CTB5xx**

This group includes messages for the Control-M/Analyzer product.
CTB501I CTBBAO STARTED

**Explanation:** This information message signals the normal start of the CTBBAO program. The Control-M/Analyzer Online Facility produces this message when it orders or forces a balancing mission to the Active Balancing file.

**Corrective Action:** No action is required.

CTB502S OPEN OF SCHEDULE DATA FAILED. DDNAME "DABAL"

**Explanation:** Open of Control-M/Analyzer BALMIS library failed.

Failure is due to one of the following:

- The DABAL DD statement is missing.
- Either the data set pointed to by the DAJOB DD statement cannot be opened for sequential read, or its record length is not 80.

The CTBBAO program ends with errors.

**Corrective Action:** Consult your INCONTROL administrator.

CTB503S OPEN OF USER DATE CONTROL RECORD FAILED - DDNAME "DACHK"

**Explanation:** Open of the file containing the User Date Control Record failed (the DACHK DD statement).

This message is issued by the CTMJOB program, which is usually activated by the New Day procedure.

Possible causes are:

- The DACHK DD statement is missing.
- The data set (member) described by the DACHK DD statement does not exist.

The CTMJOB program ends with errors.

**Corrective Action:** Correct the JCL for the job/CLIST.

CTB504S USER DATE CONTROL RECORD IS EMPTY

**Explanation:** The data set described by the DACHK DD statement is empty.

The CTMJOB program ends with errors.

**Corrective Action:** Correct the JCL for the job/CLIST.

CTB505E VALID VALUES ARE "I" or "H"

**Explanation:** An invalid value was specified for the GEN TYPE (generation type) field. Valid values for the GEN TYPE field are

- I (Independent)
- H (Hierarchical)

**Corrective Action:** Specify a valid value, or use the CANCEL command to exit without saving the database variable definition.
CTB505S PREVIOUS RUN OF CTBBAO DID NOT FINISH OK

**Explanation:** A previous run of the CTBBAO program did not finish OK. This program is usually activated as part of the New Day procedure.

date-2 and date-3 (or date-4 and date-5) of the Date Control Record are not equal. Possible causes are:

- The previous run of the CTBBAO program did not finish OK.
- The contents of the User Date Control Record (DD statement DACHK) have been manually modified.

The CTBBAO program ends with errors.

**Corrective Action:** Set date-3 (or date-5), positions 25-30 (or 50-55) in the Date Control Record (the DACHK DD statement), to the values of date-2 (or date-4). To rerun the same New Day procedure, change all the dates to the value of the day before.

**Note:**
Do not order the same mission twice on the same day when rerunning the New Day procedure. First delete previously ordered missions from the Active Balancing file, and then rerun the New Day procedure.

CTB506S SCHEDULING FAILED FOR MEMBER *memName*

**Explanation:** Scheduling failed for the *memName* member. This error message is issued by the CTMJOB program which is usually activated as part of the New Day procedure.

The IOA Log or the output of the job should contain an additional message concerning the reason for failure.

The job order of member is not placed in the Active Jobs file. Depending on the severity of the problem, the New Day procedure will continue to the next job order or terminate with a condition code of 08.

**Corrective Action:** Check the IOA Log or the job’s output for the reason.

CTB507S LAST MONTHLY SCHEDULING DATE GREATER THAN THE CURRENT ORIGINAL SCHEDULING DATE

**Explanation:** Invalid last monthly Scheduling Date.

The last monthly Scheduling Date (positions 18-23) in the User Date Control Record is greater than the current original Scheduling Date (positions 1-6). Possible causes are:

- The previous run of the CTMJOB program did not finish OK.
- Someone has modified the contents of the User Date Control Record (the DACHK DD statement).

For more details refer to the *INCONTROL for z/OS Administrator Guide.*

The CTMJOB program ends with errors.

**Corrective Action:** Correct the User Date Control Record (the DACHK DD statement).

CTB508S LAST MONTHLY SCHEDULING DATE WAS MORE THAN 28 DAYS AGO, CHECK IT

**Explanation:** The last monthly scheduling date is more than 28 days ago.

Possible causes are:
The User New Day procedure has not been used for more than 28 days. Correct the dates in the record to “yesterday.”

Someone has modified the contents of the General Date Control Record incorrectly.
For more details refer to the INCONTROL for z/OS Administrator Guide.
Program execution stops with a condition code of 08.

**Corrective Action:** Correct the dates in the User Date Control Record (the DACHK DD statement).

---

**CTB510S SEVERE ERROR IN THE BALANCING DATA. NOTIFY THE IOA ADMINISTRATOR**

**Explanation:** A severe error was detected in the scheduling data. This message is issued by the New Day procedure. This message is produced when a scheduling mission (pointed to by the DABAL DD statement) contains erroneous data.

Possible causes are:

- The contents of the mission were incorrectly modified using an editor or program, and the format of the mission is invalid.
- Internal error in Control-M/Analyzer.

The New Day procedure terminates with a condition code of 08.

**Corrective Action:** Try to restore the mission to its original state. If you cannot, have your IOA administrator call BMC Software Customer Support for assistance. If the mission is a batch New Day procedure using a permanent Date Control Record, correct the contents of the Date Control record before running the New Day procedure again. For more information, see the BAO505S message.

---

**CTB513E ONLY TRAILING BLANKS ALLOWED IN FIELD**

**Explanation:** The name specified in the field contains leading or embedded blanks. Only trailing blanks are valid in this field. The cursor points to the invalid value.

**Corrective Action:** Specify a valid value, or use the CANCEL command to exit without saving the database variable definition.

---

**CTB513I SCHEDULE FAILED FOR num CONTROL-M/ANALYZER CATEGORIES**

**Explanation:** This information message displays the number of Control-M/Analyzer balancing missions categories that were not found in the library allocated to the DABAL DD statement.

In this message, num is the number of balancing missions categories that were not found.

The Control-M/Analyzer New Day procedure continues processing.

**Corrective Action:** Examine the IOA Log file for the failed categories and associated reasons for failure.

---

**CTB514S INSUFFICIENT STORAGE FOR THE BALANCING MISSION**

**Explanation:** There is insufficient storage for processing the mission order.

The CTBBAO program (of the New Day procedure) terminates with a condition code of 08.
Corrective Action: Increase the REGION size of the New Day procedure.

CTB515E FIELD MUST START WITH AN ALPHA CHARACTER
Explanation: The value specified in the field does not start with an alphabetic character. The first character in the value must be alphabetic. The cursor points to the invalid value.
Corrective Action: Specify a valid value, or use the CANCEL command to exit without saving the database variable definition.

CTB515S ERROR IN SCHEDULING DATA - TOO MANY STATEMENTS FOR ONE MISSION
Explanation: The scheduling mission contains too many statements. Scheduling data describing the mission order is too large to be processed by Control-M/Analyzer.
The mission order is not placed on the Active Balancing file. The New Day procedure terminates with a condition code of 08.
Corrective Action: Check the contents of the mission order using the Online Scheduling Facility and omit unnecessary scheduling data. Report this to your INCONTROL administrator.

CTB516E FIELD MUST CONTAIN ONLY ALPHANUMERIC CHARACTERS
Explanation: The value specified in the field contains non-alphanumeric characters. Only alphanumeric characters are valid in this field. The cursor points to the invalid value.
Corrective Action: Specify a valid value, or use the CANCEL command to exit without saving the database variable definition.

CTB516S ERROR IN SCHEDULING DATA - FIRST STATEMENTS SHOULD START WITH "B"
Explanation: Invalid scheduling data was detected in the first data set pointed to by the DABAL DD statement. The first statement of a valid balancing mission should start with B.
The error could be due to one of the following:
- The data set pointed to by the DABAL DD statement is not a Balancing Mission.
- The Balancing Mission has been manually modified incorrectly.
The CTBBAO program ends with errors.
Corrective Action: Check that the DABAL DD statement refers to a valid Balancing Mission definition.

CTB517E MAXIMUM NUMBER OF GENERATIONS MUST BE BETWEEN 1 AND 1000
Explanation: An invalid number of generations was specified. Values for the MAXIMUM ACTIVE GENERATIONS field must be from 1 through 1000.
Corrective Action: Specify a valid value, or use the CANCEL command to exit without saving the database variable definition.
CTB517S SCHEDULING DATA NOT AVAILABLE

**Explanation:** The DD statement pointing to the job scheduling tables is empty or missing.
The program ends with errors.

**Corrective Action:** Correct the JCL for the job or CLIST.

CTB518S INVALID YEAR IN USER DATE CONTROL RECORD

**Explanation:** Invalid year in the User Date Control record used by the New Day procedure.
This year is not supported by the release of Control-M you are using.
The CTMJOB program ends with errors.

**Corrective Action:** Correct the YEAR field (the DACHK DD statement).

CTB519S INVALID PREVIOUS WEEKLY SCHEDULING DATE IN USER DATE CONTROL RECORD (POSITIONS 43-48)

**Explanation:** Invalid previous weekly Scheduling Date in the User Date Control record (positions 43-48).
This error message is issued by the CTMJOB program, which is usually activated as part of the New Day procedure.
This date (date-4 of User Date Control record) might not be equal to date-5 (positions 50-55) or in invalid format. Valid format is ddmmyy or mmdyyyy. Possible causes are:

- The previous run of the CTMJOB program did not finish OK.
- Someone has incorrectly modified the contents of the User Date Control Record (the DACHK DD statement).

For more details refer to the *INCONTROL for z/OS Administrator Guide*.
The New Day procedure will end with errors.

**Corrective Action:** Correct your Date Control Record (the DACHK DD statement) and rerun the New Day procedure.

CTB520E NAME MUST BE SPECIFIED

**Explanation:** No name was specified for the variable. The NAME field is mandatory in the Variable Definition screen.

**Corrective Action:** Specify a valid name, or use the CANCEL command to exit without saving the database variable definition.

CTB521E UPDATE OF VARIABLE DEFINITION FAILED

**Explanation:** An error occurred while attempting to update a variable in the database Variable Definition screen. The database variable definition is not updated.

**Corrective Action:** Ask your INCONTROL administrator to call BMC Software Customer Support.
CTB522E INTERNAL ERROR IN CTBDBV#

**Explanation:** An error occurred while attempting to update or create a variable in the database Variable Definition screen.

The database variable definition is not updated.

**Corrective Action:** Ask your INCONTROL administrator to call BMC Software Customer Support.

CTB522S INVALID ORIGINAL SCHEDULING DATE IN USER DATE CONTROL RECORD (POSITIONS 1-6)

**Explanation:** Invalid original scheduling date in the User Date Control Record (positions 1-6). This error message is issued by the CTMJOB program which is usually activated as part of the New Day procedure.

Valid format is ddmmyy or mmdyy. The message may be due to one of the following:

- The previous run of the CTMJOB program did not finish OK.
- Someone has incorrectly modified the contents of the User Date Control Record (the DACHK DD statement).

For more details, refer to the *INCONTROL for z/OS Administrator Guide*.

The New Day procedure will end with errors.

**Corrective Action:** Correct your Date Control Record (the DACHK DD statement) and rerun the New Day procedure.

CTB523E PLEASE FILL IN A SPECIFIC GROUP NAME, OR OMIT THE VARIABLE NAME

**Explanation:** A database variable name was specified in the database Entry Panel, but a specific group name was not specified.

There are four possible system actions:

- If the VARIABLE field is filled in on the database Entry Panel, and the GROUP field is blank or contains a prefix value, the database Variable Definition screen is displayed.
- If the GROUP and VARIABLE fields in the Entry Panel are both blank, the Group List is displayed.
- If a prefix is specified in the GROUP field, and the VARIABLE field is blank, an abbreviated Group List, listing only groups matching the prefix, is displayed.
- If a specific group name is specified, and the VARIABLE field is blank, the database Variable List is displayed.

**Corrective Action:** Specify a group name or delete the database variable name.

CTB523S INVALID PREVIOUS MONTHLY SCHEDULING DATE IN USER DATE CONTROL RECORD (POSITIONS 18-23)

**Explanation:** Invalid previous monthly scheduling date in the User Date Control Record (positions 18-23). This error message is issued by the CTMJOB program, which is usually activated as part of the New Day procedure.
This date (date-2 of User Date Control Record) should be equal to date-3 (positions 24-29) or in valid format. The valid format is ddmmyy or mmddyy.

Possible causes are:

- The previous run of the CTMJOB program did not finish OK.
- Someone has incorrectly modified the contents of the User Date Control Record (the DACHK DD statement).

For more details refer to the INCONTROL for z/OS Administrator Guide.

Corrective Action: Correct your Date Control Record (the DACHK DD statement) and rerun the New Day procedure.

CTB524E OPERATION FAILED. ERROR DURING FILE ACCESS RC=rc, FUNCTION=func

Explanation: An error occurred during an attempt to open or read the Control-M/Analyzer database. The error occurred during online processing from a screen under Main Menu option BV (database Variables).

No information is retrieved. The screen is exited.

Corrective Action: Ask your INCONTROL administrator to notify BMC Software Customer Support of the error message, return code and function.

CTB524S CTBBAO ENDED WITH ERRORS

Explanation: The CTBBAO program ended with errors. It is activated as part of the New Day procedure.

The New Day procedure finishes executing with a condition code of 08. The IOA Log File contains one or more prior messages concerning the errors.

Corrective Action: Examine the IOA Log File for the errors. If necessary, correct the Date Control Record (date-3 and date-5) manually for the next run of the New Day procedure.

CTB525E VARIABLE ALREADY EXISTS. IT CANNOT BE CREATED.

Explanation: An attempt was made to create a variable, but a variable with the same name already exists in the group. The variable cannot be created because it already exists. It cannot be saved because it was specified using the Insert command.

The Exit Option Window is closed. The database Variable Definition screen remains displayed.

Corrective Action: Either specify a database variable name that does not currently exist in the group, or use the CANCEL command to exit without saving the database variable definition.

CTB525I CTBBAO ENDED

Explanation: This information message indicates that the CTBBAO terminating program, which is activated as part of the New Day procedure, has terminated.

Corrective Action: No action is required.
CTB526E SAVE CAN ONLY BE PERFORMED FOR ALREADY-EXISTING VARIABLES

Explanation: A request was made to save a database variable which was not yet created in the group. After inserting a variable in a group and exiting, the Exit Option Window is displayed. The SAVE option in the window is valid only for existing database variables. The CREATE option must be used to create new database variables.

Corrective Action: Either specify option CREATE to create the database variable, or press the RESET key (PF04) to close the window without saving the database variable.

CTB527E ONE (AND ONLY ONE) EXIT OPTION MUST BE MARKED AS "Y" OR "N"

Explanation: More than one option was specified in the Exit Option Window. When exiting the database Variable Definition screen, the Exit Option Window is opened. It contains two options: SAVE and CREATE. A value can be specified for only one of the exit options. Valid values are Y (Yes) or N (No).

Corrective Action: Specify Y or N for either SAVE or CREATE (but not both), or press the RESET key (PF04) to close the window without saving the database variable.

CTB528E VALID VALUES ARE "N" OR "Y"

Explanation: An invalid value was specified in the CREATE or UPDATE field in the Group Window. Valid values for CREATE or UPDATE in the Group Window are

- Y (Yes - create or update the group)
- N (No - do not create or update the group).

Corrective Action: Specify Y or N in the CREATE or UPDATE field.

CTB529E SPECIFIED GROUP NAME IS INVALID OR MISSING

Explanation: An invalid value was specified in the GROUP field in the New Group Window. When inserting a new group in the Group List, the GROUP field in the New Group Window must contain an alphanumeric value with no leading blanks.

Corrective Action: Specify a valid name in the GROUP field.

CTB529S LAST WEEKLY SCHEDULING DATE GREATER THAN THE CURRENT ORIGINAL SCHEDULING DATE

Explanation: The last weekly scheduling date in the Date Control Record is greater than the current original scheduling date.

This error message is issued by the CTMJOB program, which is usually activated as part of the New Day procedure. Date-4 (positions 43-48) should not be greater than date-1 (positions 1-6) in the Date Control Record. The message may be due to one of the following:

- The previous run of the CTMJOB program did not finish OK.
- Someone modified the contents of the User Date Control Record (the DACHK DD statement).

For more details, refer to the INCONTROL for z/OS Administrator Guide.
Program execution stops with a condition code of 08.

**Corrective Action:** Correct the User Date Control Record (the DACHK DD statement) and rerun the New Day procedure.

**CTB530E SPECIFIED GROUP NAME ALREADY EXISTS**

**Explanation:** A group with the name specified in the New Group Window already exists. Group names must be unique. When inserting a new group, the name of an existing group cannot be specified in the GROUP field of the New Group Window.

**Corrective Action:** Specify a unique group name, or cancel the create request by specifying N (No) in the CREATE field of the window.

**CTB530S LAST WEEKLY SCHEDULING DATE WAS MORE THAN 28 DAYS AGO, CHECK IT**

**Explanation:** The last weekly scheduling date is more than 28 days ago.

Possible causes are:
- The User New Day procedure has not been used for more than 28 days. Correct the dates in the record to yesterday.
- Someone has modified the contents of the General Date Control Record incorrectly.

For more details, refer to the *INCONTROL for z/OS Administrator Guide.*

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the dates in the Date Control Record (the DACHK DD statement) and rerun.

**CTB531E INVALID OR MISSING GROUP MODE**

**Explanation:** An invalid value was specified in the GROUP MODE field in the Group Window.

Valid values for the GROUP MODE field in the Group Window are:
- D (Define)
- A (Active)
- S (Simulate)

**Corrective Action:** Specify a valid GROUP MODE value.

**CTB532I ADD/UPDATE COMPLETED SUCCESSFULLY**

**Explanation:** This information message indicates that a group was successfully updated or added to the database Group List.

**Corrective Action:** No action is required.
INCONTROL for z/OS Messages Manual

CTB532S OPEN OF CONTROL-M/ANALYZER ACTIVEBALANCING FILE FAILED. DDNAME "DAABF"

**Explanation:** Open of Control-M/Analyzer Active Balancing file failed. This error message is issued by the CTBBAO program, which is usually activated as part of the New Day procedure.

Possible causes are:
- the DAABF DD statement is missing.
- The data set pointed to by the DAABF DD statement is not the Control-M/Analyzer Active Balancing file.
- The data set pointed to by the DAABF DD statement is a Control-M/Analyzer Active Balancing file, from a different version of Control-M/Analyzer.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL for the mission/CLIST and rerun it.

CTB533E NO VARIABLES IN GROUP. ONLY "INSERT" IS VALID

**Explanation:** An option other than Insert was requested in an empty Group. If the Variables List for a group contains no variables, Insert is the only operation permitted. Insert is the first operation which should be performed in a new group, in order to insert the first variable and to add it to the list of variables.

**Corrective Action:** Either request option Insert, or exit the database Variable List screen.

CTB534E PLEASE FILL IN A DESCRIPTION

**Explanation:** The DESCRIPTION field in the New Group Window is empty. The DESCRIPTION field is mandatory when creating a new group.

**Corrective Action:** Fill in the DESCRIPTION field.

CTB534S SEVERE ERROR ON CONTROL-M/ANALYZER ACTIVE BALANCING FILE. NOTIFY THE IOA ADMINISTRATOR

**Explanation:** Severe error on Control-M/Analyzer Active Balancing file. This error message is issued by the CTBBAO program, which is usually activated as part of the New Day procedure.

Possible causes are:
- An I/O error.
- The file allocated to the DAABF DD statement is not the Control-M/Analyzer Active Balancing file.
- The Active Balancing file has been corrupted.

The CTBBAO Control-M/Analyzer program ends with errors.

**Corrective Action:** Ask your IOA administrator to check whether the Active Balancing File has been updated from two computers without global ENQ control, or by an unauthorized program.
CTB535I NO CHANGES PERFORMED

Explanation: This information message is issued when the database Variable Definition screen is exited without saving changes (for example, by specifying CANCEL, or by specifying N (No) in the SAVE or CREATE field in the Exit Option Window).

Corrective Action: No action is required.

CTB536E GROUP NAME DOES NOT EXIST IN THE DATABASE

Explanation: The name of the group specified in the database Entry Panel does not exist. Only names of existing groups can be specified in the Entry Panel. To define a new group, use the Insert option in the Group List.

Corrective Action: Either specify an existing group name, or clear the GROUP field and define the new group in the Group List.

CTB536S SEVERE ERROR IN SCHEDULING DATA CARDS

Explanation: Severe error was found in the scheduling data statements. This error message is issued by the CTMJOB program which is usually activated as part of the New Day procedure.

Scheduling fails for the job order. The CTMJOB program terminates with a condition code of 08.

Corrective Action: Look for additional messages concerning the error, correct the error and rerun.

CTB537I NO VARIABLES MATCH THE SPECIFIED PREFIX

Explanation: This information message indicates that a prefix was specified in the VARIABLE field in the database Entry Panel, but no matches were found in the specified group. A prefix specified in the VARIABLE field must match at least one existing database variable.

The database Variable Definition screen can be accessed directly from the database Entry Panel by specifying an existing group and an existing variable prefix. If only a group name is specified, the database Variable List for the group is displayed.

Corrective Action: Specify the prefix of an existing variable to display the database Variable Definition screen, or clear the VARIABLE field to display the database Variable List for the group.

CTB537S NO MORE INTERNAL WORK AREA. SEE MESSAGES AND CODES FOR REQUIRED ACTION

Explanation: Internal work areas of the New Day procedure have been exhausted.

The job order contains more data than can be handled by the current release of Control-M.

The New Day procedure terminates with a condition code of 08.

Corrective Action: Prepare the Control-M monitor full output and have your system programmer contact BMC Customer Support.

CTB538I NO GROUPS MATCH THE SPECIFIED PREFIX

Explanation: This information message indicates that a prefix was specified in the GROUP field in the database Entry Panel but no matches were found in the database. A prefix specified in the GROUP field must match at least one existing group. The matching Group List is then displayed.
If the GROUP and VARIABLE fields are both blank in the Entry Panel, the entire Group List is displayed.

**Corrective Action:** Specify the prefix of an existing group to display an abbreviated Group List, or clear the GROUP field to display the entire Group List.

**CTB538S LOADING OF CONTROL-M/ANALYZER INSTALLATION PARAMETERS FAILED**

**Explanation:** Loading of Control-M/Analyzer Installation Parameters, which are in the CTBPARM member in the IOA PARM library, failed.

Possible causes are:
- There is insufficient memory to load the IOA Installation Parameters.
- The CTBPARM member does not exist in the IOA PARM library.
- The IOA PARM library was updated while you were working and the position of the CTBPARM member has changed.

The requested function is terminated.

**Corrective Action:** Look in the system log for additional related messages. Try one of the following:
- If loading failed because of lack of memory: increase the REGION size for batch missions; for TSO, try to log on again using a larger SIZE parameter.
- If you are using many IOA screens concurrently, try to exit a few using the END command. This releases memory used by the screens.
- If the PARM library has been modified and you are working under TSO, try to log on again. If you are working under ROSCOE, you may have to shut down ROSCOE and bring it up again.

**CTB539S ERROR IN CONTROL-M/ANALYZER INSTALLATION PARAMETERS - INVALID DATETYP**

**Explanation:** Invalid DATETYP Control-M/Analyzer Installation Parameter. The DATETYP parameter specifies the date format used at installation.

Valid values are:
- A
- W
- J

For more details, see the section on operational parameters in the IOA installation chapter in the INCONTROL for z/OS Installation Guide.

The requested function is terminated.

**Corrective Action:** Contact your INCONTROL administrator. Set the DATETYP parameter in the IOAPARM member to a valid value.

**CTB540E VIEW OPTION FAILED**

**Explanation:** An attempt to view generations of database variables failed. Option V (View) was specified in the Variables List Panel to display all active generations of the selected specific database variable.
The View operation is not performed.

**Corrective Action:** Ask your INCONTROL administrator to call BMC Software Customer Support.

**CTB540S CONTROL-M/ANALYZER ACTIVE BALANCING FILE IS FULL. NOTIFY THE IOA ADMINISTRATOR**

**Explanation:** Highlighted, unrollable message.

Control-M/Analyzer Active Balancing file is full. There is no more space in the Active Balancing file for new missions.

The mission order is not placed in the Active Balancing file.

**Corrective Action:** Contact your IOA administrator immediately. It may be necessary to increase it size. Compress the Active Balancing files.

**CTB540W LOAD OF SECURITY MODULE modName FAILED. SECURITY CHECKING WILL BE BYPASSED**

**Explanation:** Loading of the specified IOA security module failed. Possible causes are:

- The installation is not using the specified user security module, and has erased the default IOA-supplied module.
- IOA Load library is not in the JOBs load modules search list (STEPLIB + Linklist).
- Insufficient memory.
- Another system oriented reason which can be found in the syslog.

As a result, no security checking is performed. For more details, refer to the sections on Security Interface Modules in the appropriate security guides.

**Corrective Action:** Notify the INCONTROL administrator. This is a potentially serious situation. Someone may be attempting to violate security.

**CTB541E DATABASE EMPTY. ONLY "INSERT" MAY BE SPECIFIED**

**Explanation:** An operation other than Insert was attempted although there are no groups in the database.

When the database is empty and there are no existing groups, the only operation permitted is Insert. Insert is the first operation that must be performed in the Group List. After the first group is created, Select and Update operations are also permitted.

**Corrective Action:** Specify an Insert operation, or exit the Group List screen.

**CTB542E INSUFFICIENT SPACE IN THE VARIABLES FILE**

**Explanation:** An attempt was made to Insert a new variable, but there is not enough space in the database. No new variables can be defined until sufficient space is provided.

The new variable is not created.
**Corrective Action:** It may be possible to create the variable by requesting fewer generations. In any case, more free file space should be provided. Use the CTBDBVCP utility to copy the file to a new enlarged file, or use the CTBDBVDL utility to compress the file. For more information, see the INCONTROL for z/OS Utilities Guide.

**CTB543E INSUFFICIENT SPACE IN THE MODELS FILE**

**Explanation:** An attempt was made to insert a new variable, but there is insufficient space in the database Variable Basic file. The file is full or nearly full. No new variables can be defined until sufficient space is provided.

The new variable is not created.

**Corrective Action:** You must provide more file space. Use the CTBDBVCP utility to copy the file to a new enlarged file, or use the CTBDBVDL utility to compress the file. For more information, see the INCONTROL for z/OS Utilities Guide.

**CTB544E INSUFFICIENT SPACE IN THE INDEX FILE**

**Explanation:** An attempt was made to insert a new variable, but there is insufficient space in the database Variable Basic Index file. The file is full or nearly full. No new variables can be defined until sufficient space is provided.

The new variable is not created.

**Corrective Action:** Use the CTBDBVCP utility to copy the file to a new enlarged file, or use the CTBDBVDL utility to compress the file. For more information, see the INCONTROL for z/OS Utilities Guide.

**CTB545E NO AUTHORIZATION FOR PERFORMING THIS OPERATION**

**Explanation:** The user is unauthorized to perform the requested Insert or Update on the variable.

The new variable is not created or updated.

**Corrective Action:** If you think you should be authorized to perform the attempted operation, contact your INCONTROL administrator.

**CTB546E GRAPH OPTION FAILED**

**Explanation:** The user attempted to view a graph of a specific variable, but the variable was empty, and as a result, the graph option failed. A variable must have a value to be viewed as a graph.

**Corrective Action:** Verify that the variable specified has a value.

**Messages CTB600 through CTB6xx**

This group includes messages for the Control-M/Analyzer product.

**CTB601S ERROR READING ACTIVE BALANCING FILE REASON rc**

**Explanation:** An error occurred while trying to read status information in the Active Balancing file. The Active Balancing Environment screen is not built. The IOA Primary Option Menu is displayed.
Corrective Action: If the reason code is 0012, more storage is required. Exit from screens which are not in use and increase the REGION size if necessary. For other reason codes, ask your INCONTROL administrator to notify BMC Software Customer Support of the problem and the reason code.

CTB602S UNABLE TO OPEN ACTIVE BALANCING FILE

Explanation: An error occurred while trying to open the Active Balancing file. Status information about balancing missions resides in the Active Balancing file.

The Active Balancing Environment screen is not built. The IOA Primary Option Menu is displayed.

Corrective Action: Make sure that the DAABF DD statement references the Active Balancing file. If the name was correct when the error occurred, ask your INCONTROL administrator to contact BMC Software Customer Support.

CTB603E OPTION CANNOT BE PERFORMED. INTERNAL ERROR

Explanation: An internal error occurred when trying to perform a line command on one of the balancing mission entries.

The requested line command is not performed.

Corrective Action: Ask your INCONTROL administrator to notify BMC Software Customer Support.

CTB604E UNABLE TO LOAD CTBTLOG

Explanation: The CTBTLOG load module cannot be found.

The Control-M/Analyzer runtime environment terminates with an error.

Corrective Action: Check the concatenated load libraries referenced by the DDNAME STEPLIB statement and rerun the Control-M/Analyzer job.

CTB605E LOG COMMAND FAILED. RC= rc

Explanation: The L (Log) line command could not be performed.

The requested line command is not performed.

Corrective Action: Ask your INCONTROL administrator to notify BMC Software Customer Support of the problem and the return code.

CTB606E ENTRY IS IN USE. PLEASE TRY opt OPTION AGAIN IN A FEW MOMENTS

Explanation: An attempt was made to HOLD, DELETE, or FREE a balancing mission that was in use. The balancing mission was being held to be updated by either another user, or by the Control-M/Analyzer Runtime Environment.

The requested status change of the balancing mission is not performed.

Corrective Action: Wait a few moments for the balancing mission to become free, and try again.
CTB607E CANNOT PERFORM opt DUE TO STORAGE ALLOCATION FAILURE

**Explanation:** Available storage is not sufficient to perform the opt HOLD, FREE or DELETE option on the balancing mission.

The requested status change of the balancing mission is not performed.

**Corrective Action:** Exit any screens which are not in use, and increase the REGION size if necessary.

CTB608I ENQ PROBLEM ON THE ACTIVE BALANCING FILE

**Explanation:** This information message indicates that an attempt to free a balancing mission failed during performance of a line command when an ENQ was made to the balancing mission.

**Corrective Action:** Solve the immediate ENQ/FREE problem by exiting Control-M/Analyzer entirely, and then reentering. Ask your INCONTROL administrator to notify BMC Software Customer Support of the problem.

CTB609E AN ENTRY MAY NOT BE DELETED DURING "BALANCING"

**Explanation:** A D (Delete) line command was specified for a balancing mission while the mission was balancing. A mission cannot be deleted during balancing.

The requested delete is not performed.

**Corrective Action:** When the mission is not balancing, place the mission in HELD status, and then delete it.

CTB60AE INTERNAL ERROR ACTIVATING "WHY" OPTION

**Explanation:** An error occurred while performing the requested ? (Why) line command.

The? (Why) line command is not performed.

**Corrective Action:** Ask your INCONTROL administrator to notify BMC Software Customer Support.

CTB60BE ACTIVE BALANCING FILE IS BEING FORMATTED

**Explanation:** The Active Balancing file cannot be read because it is being formatted. Status information about balancing missions resides in the Active Balancing file. When this file is being formatted, status information cannot be retrieved.

An empty Balancing Status screen is displayed.

**Corrective Action:** Every few moments press Enter until a non-empty Balancing Status screen is displayed.

CTB665E INPUT PARAMETER (ADDRESS SPACE NAME) ERROR DETECTED

**Explanation:** The PARM parameter is missing or is too large. The PARM input parameter is not present in the invocation JCL, or is too large.

The CTOCTA utility terminates.

**Corrective Action:** Add or correct the input parameter and rerun the job.
CTB666I PROGRAM pgm FOUND IN THE RB CHAIN

**Explanation:** This information message indicates that the CTOCTA utility found the address space running the *pgm* program.

The CTOCTA utility found at least one task in the address space running the *pgm* program.

**Corrective Action:** No action is required.

CTB667I SVC svcno (TYPE 2 NUCLEUS SVC) FOUND IN AN SVRB

**Explanation:** This information message indicates that the CTOCTA utility found the address space running the *svcno* SVC.

**Corrective Action:** No action is required.

Messages CTB700 through CTB7xx

This group includes messages for the Control-M/Analyzer product.

CTB701E PLEASE SPECIFY MISSION NAME, OR OMIT CATEGORY

**Explanation:** A category was specified, but a mission name is missing. A category can only be defined for a specified mission.

**Corrective Action:** Either fill in a mission name, or omit the category to get a list of missions in the library.

CTB718E NO MISSIONS FOUND IN THE LIBRARY. PLEASE ENTER THE MISSION NAME

**Explanation:** The library is empty. Control-M/Analyzer did not build the missions list because no missions were found in the library.

**Corrective Action:** Specify a new mission name.

CTB720E INVALID OPTION. USE "SINGLE", "STEP" OR "JOB"

**Explanation:** An invalid option was specified in the SCOPE field.

Valid options are:

- SINGLE
- STEP
- JOB
- ALL

**Corrective Action:** Specify a valid option.

Messages CTB800 through CTB8xx

This group includes messages for the Control-M/Analyzer product.
CTB800E PLEASE SPECIFY JOBNAME

**Explanation:** The JOBNAME field has not been filled in. The JOBNAME field is mandatory.

**Corrective Action:** Fill in the JOBNAME field.

CTB801E OPTION "opt" NOT ALLOWED IN THIS MODE

**Explanation:** The opt option is not valid. This message is usually issued during an attempt to update or delete a generation when viewing the variables related to a rule invocation. When the Variables screen is used under the Job Activity screen, it can only be used in browse mode.

**Corrective Action:** Specify another option.

CTB802E CANNOT PERFORM AN INSERT ON AN INSERTED LINE

**Explanation:** An attempt was made to insert a new record before entering the required information for the current record. Until all the required information has been entered for the current record, a new record cannot be inserted.

**Corrective Action:** Fill in the required fields in the inserted record before attempting to insert a new record.

CTB803E FORMAT MUST INCLUDE THE "GROUP" FIELD

**Explanation:** When defining the display type, the GROUP field was not included. GROUP is a mandatory field in all display type formats.

**Corrective Action:** Ask your INCONTROL administrator to correct the display type in the $$DBV member.

CTB804E THIS "GROUP" AND "VARIABLE" CANNOT BE INSERTED

**Explanation:** Due to an internal error, there is a problem with the GROUP and VARIABLE fields.

**Corrective Action:** Have your system programmer to call your INCONTROL administrator.

CTB805E FORMAT MUST INCLUDE THE "VARIABLE" FIELD

**Explanation:** When defining the display type, the VARIABLE field was not included. VARIABLE is a mandatory field in all display type formats.

**Corrective Action:** Ask your INCONTROL administrator to correct the display type in the $$DBV member.

CTB806E GROUP NAME AND/OR VARIABLE NAME CANNOT BE UPDATED

**Explanation:** An attempt was made to update the GROUP or VARIABLE (or both) fields. These fields cannot be updated.

The update is not performed.

**Corrective Action:** No action is required.
CTB807E A DELETED GENERATION CANNOT BE UPDATED
Explanation: An attempt was made to update a deleted generation.
The requested action is not performed.
Corrective Action: No action is required.

CTB808E FILE ERROR rc IN ACTION action
Explanation: An error occurred while the Control-M/Analyzer database was being accessed.
Corrective Action: Notify your INCONTROL administrator.

CTB809E GENERATION ALREADY DELETED
Explanation: An attempt was made to delete a generation that is already marked deleted. A deleted
generation cannot be deleted again.
The requested action is not performed.
Corrective Action: No action is required.

CTB810I GENERATION DELETED
Explanation: This information message indicates that the specified generation was deleted.
Corrective Action: No action is required.

CTB811I CREATION DATE/TIME OF RECORD HAS CHANGED
Explanation: This information message indicates that generation information in the file has been
updated since your screen was last refreshed. Since your request was based on outdated information on
the screen, Control-M/Analyzer did not perform your request.
The requested action is not performed.
Corrective Action: Refresh the screen. If you still want to perform the action, specify it again.

CTB812E CREATION DATE/TIME OF GENERATION 0 HAS CHANGED
Explanation: A new generation was created by another user since your screen was last refreshed. Since
your insert request is based on an older generation, Control-M/Analyzer does not perform your insert
request.
The requested insert is not performed.
Corrective Action: Refresh the screen. If you still want to perform the insert, specify it again.

CTB813E UNABLE TO OBTAIN ENQ ON VARIABLE. TRY AGAIN LATER
Explanation: The database variable is temporarily locked while in use by another user. The locking
mechanism prevents database corruption.
The requested action is not performed.
Corrective Action: Wait a short while and then try again.
CTB814E INSERT IS NOT ALLOWED IN THIS MODE

**Explanation:** Insert is only allowed under option BV. This message is most commonly issued when a user tries to insert a generation when viewing the variables related to a rule invocation. The Variables screen, when used under the Job Activity screen, can only be used in browse mode.

The requested insert is not performed.

**Corrective Action:** No action is required.

Messages CTB900 through CTB9xx

This group includes messages for the Control-M/Analyzer product.

CTB902E INVALID OPTION (TRY "Y", "N" OR BLANK)

**Explanation:** The user specified an invalid value in a field which may only contain Y (Yes), N (No) or blank.

**Corrective Action:** Correct the input field and press enter.

CTB912S ERROR IN CONTROL- x INSTALLATION PARAMETERS - INVALID DAYTIME

**Explanation:** The format of the DAYTIME Control- x Installation parameter is invalid. DAYTIME is the start time of the Control-M work day in your installation. Valid formats are +hhmm or -hhmm.

For more details see the section that describes installation parameters in the chapter for the appropriate products in the INCONTROL for z/OS Installation Guide.

The requested function terminates.

**Corrective Action:** Call your system programmer to correct the DAYTIME parameter in the CT x PARM member.

CTB913S OPEN OF DDNAME "SYSPRINT" FAILED

**Explanation:** The opening of a print file failed.

Possible causes are:

- The DD statement SYSPRINT is missing.
- The data set described by the DD statement SYSPRINT cannot be accessed for sequential write.

The program stops executing.

**Corrective Action:** Correct the JCL and submit again.

CTB971I CONTROL-M/ANALYZER UTILITY CTBJAFIG STARTED

**Explanation:** This information message indicates the normal start of the CTBJAFIG Control-M/Analyzer utility.

**Corrective Action:** No action is required.
CTB971S ERROR OPENING SYSPRINT

**Explanation:** This information message indicates that the CTBDIV Control-M/Analyzer utility failed to open the print file referenced by the SYSPRINT DD statement.

Possible causes are:
- The SYSPRINT DD statement is missing.
- The data set referenced by the SYSPRINT DD statement cannot be accessed for sequential write.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

CTB972I CHECKING OF THE JOB ACTIVITY FILE IN PROGRESS

**Explanation:** This information message indicates that CTBJAFG Control-M/Analyzer utility has begun checking the Control-M/Analyzer Rule Activity File.

**Corrective Action:** No action is required.

CTB973I CHECKING OF THE REPORT FILE IN PROGRESS

**Explanation:** The CTBJAFG Control-M/Analyzer utility has begun checking the Control-M/Analyzer report file.

**Corrective Action:** No action is required.

CTB974I LOGICAL RELATION BETWEEN THE JOB ACTIVITY AND THE REPORT FILES NOW BEING CHECKED

**Explanation:** This information message indicates that the CTBJAFG Control-M/Analyzer utility has begun checking the logical relation between the Job Activity and report files.

**Corrective Action:** No action is required.

CTB975E INVALID INPUT PARAMETER

**Explanation:** The CTBJAFG Control-M/Analyzer utility failed to analyze the FILE= *name* job input statement.

The utility stops executing with a condition code of 12.

**Corrective Action:** Correct the FILE input parameter and rerun the job.

CTB976S ERROR OPENING SYSPRINT

**Explanation:** The CTBJAFG Control-M/Analyzer utility failed to open the print file referenced by the SYSPRINT DD statement.

Possible causes are:
- The SYSPRINT DD statement is missing.
- The data set referenced by the SYSPRINT DD statement cannot be accessed for sequential write.

The utility stops executing with a condition code of 16.
Corrective Action: Correct the JCL and rerun the job.

CTB977S ERROR OPENING THE JOB ACTIVITY FILE

Explanation: The CTBJAFIG Control-M/Analyzer utility failed to open the Job Activity Data file referenced by the DAJAF DD statement.

Possible causes are:
- The DAJAF DD statement is missing.
- The data set referenced by the DAJAF DD statement is not the Control-M/Analyzer Job Activity Data file.
- An internal error occurred while the Control-M/Analyzer Job Activity Data file was being opened.

Corrective Action: Correct the JCL and rerun the job. If an error occurred while opening the file, notify your INCONTROL administrator.

CTB978S ERROR OPENING THE REPORT FILE

Explanation: The CTBJAFIG Control-M/Analyzer utility failed to open the report Data file referenced by the DAREP DD statement.

Possible causes are:
- The DAREP DD statement is missing.
- The data set referenced by the DAREP DD statement is not the Control-M/Analyzer Report Data file.
- An internal error occurred while the Control-M/Analyzer Report Data file was being opened.

The utility stops executing with a condition code of 16.

Corrective Action: Correct the JCL and rerun the job. If an error occurred while opening the file, notify your INCONTROL administrator.

CTB979S INSUFFICIENT STORAGE FOR PROCESSING THE REPORT FILE

Explanation: The CTBJAFIG Control-M/Analyzer utility requires more storage to check the Control-M/Analyzer Report Data file.

The utility stops executing with a condition code of 08.

Corrective Action: Increase the REGION size and rerun the job.

CTB97AS INSUFFICIENT STORAGE FOR PROCESSING THE JOB ACTIVITY FILE

Explanation: The CTBJAFIG Control-M/Analyzer utility requires more storage to check the Control-M/Analyzer Job Activity Data file.

The utility stops executing with a condition code of 08.

Corrective Action: Increase the REGION size and rerun the job.
CTB97BS INSUFFICIENT STORAGE FOR COMPARING THE JOB ACTIVITY AND REPORT FILES

**Explanation:** The CTB97BS Control-M/Analyzer utility requires more storage to check the logical relation between the Control-M/Analyzer Job Activity and Report Data files.

The utility stops executing with a condition code of 08.

**Corrective Action:** Increase the REGION size and rerun the job.

CTB97CS CORRECTION OF THE JOB ACTIVITY FILE FAILED

**Explanation:** The CTB97CS Control-M/Analyzer utility failed to correct errors detected in the Control-M/Analyzer Job Activity Data file.

The utility stops executing with a nonzero condition code.

**Corrective Action:** Notify your INCONTROL administrator.

CTB97DS CORRECTION OF THE REPORT FILE FAILED

**Explanation:** The CTB97DS Control-M/Analyzer utility failed to correct errors detected in the Control-M/Analyzer Report Data file.

The utility stops executing with a nonzero condition code.

**Corrective Action:** Notify your INCONTROL administrator.

CTB97ES CORRECTION OF THE LOGICAL RELATION BETWEEN THE JOB ACTIVITY AND REPORT FILES FAILED

**Explanation:** The CTB97ES Control-M/Analyzer utility failed to correct errors detected in the logical relation between the Job Activity and Report Data files.

The utility stops executing with a nonzero condition code.

**Corrective Action:** Notify your INCONTROL administrator.

CTB97FS INVALID RECORD TYPE IN THE JOB ACTIVITY FILE

**Explanation:** The CTB97FS Control-M/Analyzer utility detected an error in the Job Activity Data file. This message is followed by the CTB98FI message which displays the address of the invalid record.

The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

CTB980S INCORRECT NUMBER OF RECORDS IN THE JOB ACTIVITY FILE

**Explanation:** The CTB980S Control-M/Analyzer utility detected an error in the Job Activity Data file.

The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.
CTB981S INCORRECT NUMBER OF FREE RECORDS IN THE JOB ACTIVITY FILE

**Explanation:** The CTBjAF1G Control-M/Analyzer utility detected an error in the Job Activity Data file. The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

CTB982S ERROR IN INFO RECORD:

**Explanation:** The CTBjAF1G Control-M/Analyzer utility detected an error in a record in the Job Activity Data file. This message is followed by other messages which display information about the record in error. The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

CTB983S ERROR IN INVOCATION RECORD:

**Explanation:** The CTBjAF1G Control-M/Analyzer utility detected an error in a record in the Job Activity Data file. This message is followed by other messages which display information about the record in error. The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

CTB984S ERROR IN JOB RECORD:

**Explanation:** The CTBjAF1G Control-M/Analyzer utility detected an error in a record in the Job Activity Data file. This message is followed by other messages which display information about the record in error. The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

CTB985S INVALID RECORD TYPE IN THE REPORT FILE

**Explanation:** The CTBjAF1G Control-M/Analyzer utility detected an error in the Report Data file. The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

CTB986S INCORRECT NUMBER OF RECORDS IN THE REPORT FILE

**Explanation:** The CTBjAF1G Control-M/Analyzer utility detected an error in the Report Data file. The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

CTB987S INCORRECT NUMBER OF FREE RECORDS IN THE REPORT FILE

**Explanation:** The CTBjAF1G Control-M/Analyzer utility detected an error in the Report Data file. The utility continues executing.
Corrective Action: Notify your INCONTROL administrator.

CTB988S ERROR IN SECONDARY REPORT RECORD:
Explanation: The CTBJAFIG Control-M/Analyzer utility detected an error in a record in the Report Data file. This message is followed by other messages which display information about the record in error. The utility continues executing.
Corrective Action: Notify your INCONTROL administrator.

CTB989S ERROR IN PRIMARY REPORT RECORD:
Explanation: The CTBJAFIG Control-M/Analyzer utility detected an error in a record in the Report Data file. This message is followed by other messages which display information about the record in error. The utility continues executing.
Corrective Action: Notify your INCONTROL administrator.

CTB98AS INVOCATION RECORD FOR THIS REPORT DOES NOT EXIST
Explanation: While checking the logical relation between the Control-M/Analyzer Job Activity and Report Data files, The CTBJAFIG Control-M/Analyzer utility found a record in the Report Data file, but did not find the corresponding record in the Job Activity Data file.
This message is followed by a message that displays the address of the unmatched record. The utility continues executing.
Corrective Action: Notify your INCONTROL administrator.

CTB98BS REPORT RECORD FOR THIS INVOCATION RECORD DOES NOT EXIST
Explanation: While checking the logical relation between the Control-M/Analyzer Job Activity and Report Data files, the CTBJAFIG Control-M/Analyzer utility found a record in the Job Activity Data file, but did not find the corresponding record in the Report Data file.
This message is followed by a message that displays the address of the unmatched record. The utility continues executing.
Corrective Action: Notify your INCONTROL administrator.

CTB98CI INTEGRITY CHECKING ENDED WITH RETURN CODE rc
Explanation: This information message indicates normal termination of the CTBJAFIG Control-M/Analyzer utility.
Corrective Action: No action is required.

CTB98DE NO JOB RECORDS IN THE JOB ACTIVITY FILE
Explanation: The CTBJAFIG Control-M/Analyzer utility did not check the Job Activity Data file because it did not find any Job records in the file. It is likely that the file is empty.
The utility stops executing with a condition code of 32.

**Corrective Action:** Check whether or not the file is empty. If the file is empty, there is no problem. If the file is not empty, notify your INCONTROL administrator.

---

**CTB98EE NO PRIMARY REPORT RECORDS IN THE REPORT FILE**

**Explanation:** The CTBJAFIG Control-M/Analyzer utility did not check the Report Data file because it did not find any Primary Report records in the file. It is likely that the file is empty.

The utility stops executing with a condition code of 32.

**Corrective Action:** Check whether or not the file is empty. If the file is empty, there is no problem. If the file is not empty, notify your INCONTROL administrator.

---

**CTB98FI RBA = rba**

**Explanation:** This information message displays the address of the record when the CTBJAFIG Control-M/Analyzer utility detects a record in error. This message follows the error message which contains details about the error.

**Corrective Action:** No action is required.

---

**CTB990S INVALID REFERENCE TO THE FIRST ELEMENT IN THE SUB-SEQUENCE**

**Explanation:** A problem occurred while the CTBJAFIG Control-M/Analyzer utility was accessing the Job Activity or Report Data file.

The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

---

**CTB991S INVALID REFERENCE TO THE LAST ELEMENT IN THE SUB-SEQUENCE**

**Explanation:** A problem occurred while the CTBJAFIG Control-M/Analyzer utility was accessing the Job Activity or Report Data file.

The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

---

**CTB992S INVALID KEY OR BACK-POINTER IN THE SUB-SEQUENCE**

**Explanation:** A problem occurred while the CTBJAFIG Control-M/Analyzer utility was accessing the Job Activity or Report Data file.

The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

---

**CTB993S ERROR IN THE RECORD SUB-SEQUENCE**

**Explanation:** A problem occurred while the CTBJAFIG Control-M/Analyzer utility was accessing the Job Activity or Report Data file.
The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

**CTB994S INVALID BACK-POINTER IN THE RECORD**

**Explanation:** A problem occurred while the CTBJAFIG Control-M/Analyzer utility was accessing the Job Activity or Report Data file.

The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

**CTB995S INVALID RECORD TYPE IN THE RECORD SEQUENCE**

**Explanation:** A problem occurred while the CTBJAFIG Control-M/Analyzer utility was accessing the Job Activity or Report Data file.

The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

**CTB996S LOOP DETECTED IN INFO RECORD SEQUENCE**

**Explanation:** The CTBJAFIG Control-M/Analyzer utility detected a loop in the Information record sequence in the Job Activity Data file. This message is followed by the CTB98FI message, which displays the addresses of the records included in the loop.

The utility bypasses the loop and continues normal execution.

**Corrective Action:** Notify your INCONTROL administrator about the loop.

**CTB997S LOOP DETECTED IN INVO RECORD SEQUENCE**

**Explanation:** The CTBJAFIG Control-M/Analyzer utility detected a loop in the Invocation record sequence in Rule Activity File. This message is followed by the CTB98FI message, which displays the addresses of the records included in the loop.

The utility bypasses the loop and continues normal execution.

**Corrective Action:** Notify your INCONTROL administrator about the loop.

**CTB998S LOOP DETECTED IN SECONDARY REPORT RECORD SEQUENCE**

**Explanation:** The CTBJAFIG Control-M/Analyzer utility detected a loop in the Secondary Report record sequence in report file. This message is followed by the CTB98FI message, which displays the addresses of the records included in the loop.

The utility bypasses the loop and continues normal execution.

**Corrective Action:** Notify your INCONTROL administrator about the loop.

**CTB999S INVALID KEY FOUND IN RECORD**

**Explanation:** A problem occurred while the CTBJAFIG Control-M/Analyzer utility was accessing the Job Activity or Report Data file.

The utility continues executing.
Corrective Action: Notify your INCONTROL administrator.

CTB99AS JOB RECORD HAS NO INVOCATION RECORDS

Explanation: No Invocation records were found for the job record in the Job Activity Data file. The utility continues executing.

Corrective Action: Notify your INCONTROL administrator.

CTB99BI CORRECTION OF JOB ACTIVITY FILE IS IN PROGRESS

Explanation: This information message indicates that the CTBJAFIG Control-M/Analyzer utility has begun correcting the Control-M/Analyzer Job Activity Data file.

Corrective Action: No action is required.

CTB99CI CORRECTION OF REPORT FILE IS IN PROGRESS

Explanation: This information message indicates that the CTBJAFIG Control-M/Analyzer utility has begun correcting the Control-M/Analyzer Report Data file.

Corrective Action: No action is required.

CTB99DI LOGICAL RELATION BETWEEN THE JOB ACTIVITY AND REPORT FILES NOW BEING CORRECTED

Explanation: This information message indicates that the CTBJAFIG Control-M/Analyzer utility has begun correcting the logical relation between the Control-M/Analyzer Job Activity and Report Data files.

Corrective Action: No action is required.

CTB99EI JOB RECORD HAS BEEN DELETED record

Explanation: This information message indicates that the CTBJAFIG Control-M/Analyzer utility deleted the record job record from the Job Activity Data file because the record was in error. This message is followed by other messages that give additional information about the deleted record.

Corrective Action: No action is required.

CTB99FI INVOCATION RECORD HAS BEEN DELETED record

Explanation: This information message indicates that the CTBJAFIG Control-M/Analyzer utility deleted the record invocation record from the Job Activity Data file because the record was in error. This message is followed by other messages that give additional information about the deleted record.

Corrective Action: No action is required.

CTB9A1E INVALID STATEMENT IN CRITERIA DEFINITION

Explanation: The CTBDBVCP Control-M/Analyzer utility failed due to syntax errors in criteria definition input statements.

The utility stops executing with a condition code of 16.

Corrective Action: Correct the input statements and rerun the job.
CTB9A2E INVALID GROUP SPECIFIED IN CRITERIA DEFINITION

**Explanation:** The CTBDBVCP Control-M/Analyzer utility failed due to error in the GROUP input statement.

The utility stops executing with a condition code of 16.

**Corrective Action:** Correct the GROUP input statement and rerun the job.

CTB9A3E INVALID VARIABLE NAME SPECIFIED IN CRITERIA DEFINITION

**Explanation:** The CTBDBVCP Control-M/Analyzer utility failed due to an error in the VARIABLE input statement.

The utility stops executing with a condition code of 16.

**Corrective Action:** Correct the VARIABLE input statement and rerun the job.

CTB9A4S ERROR OPENING DATABASE

**Explanation:** The CTBDBVCP Control-M/Analyzer utility was unable to open the Control-M/Analyzer database.

Possible causes are:

- One of the DD statements DIMOD, DIVAR, DOMOD, or DOVAR is missing.
- One of the data sets referenced by the DD statements listed above cannot be opened for sequential read or write.

The utility stops executing with a nonzero return code.

**Corrective Action:** Correct the problem and rerun the job.

CTB9A5S INSUFFICIENT STORAGE TO RUN CONTROL-M/ANALYZER UTILITY CTBDBVCP

**Explanation:** The CTBDBVCP Control-M/Analyzer utility requires more storage in order to copy the requested entries from the source Control-M/Analyzer database.

The utility stops executing with a condition code of 12.

**Corrective Action:** Increase the REGION size and rerun the job.

CTB9A6S ERROR ACCESSING TARGET DATABASE

**Explanation:** The CTBDBVCP Control-M/Analyzer copy utility was unable to access the target Control-M/Analyzer database.

The utility stops executing with a nonzero return code.

**Corrective Action:** Notify your INCONTROL administrator.

CTB9A7S ERROR ACCESSING SOURCE DATABASE

**Explanation:** The CTBDBVCP Control-M/Analyzer copy utility was unable to access the source Control-M/Analyzer database.
The utility stops executing with a nonzero return code.

**Corrective Action:** Notify your INCONTROL administrator.

---

**CTB9A8I** CONTROL-M/ANALYZER UTILITY CTBDBVCP STARTED

**Explanation:** This information message indicates the normal start of the CTBDBVCP Control-M/Analyzer copy utility.

**Corrective Action:** No action is required.

---

**CTB9A9I** COPY PERFORMED: numVariables VARIABLES, numGroups GROUPS WERE COPIED

**Explanation:** This information message indicates the normal termination of the CTBDBVCP Control-M/Analyzer copy utility. This message includes statistics.

**Corrective Action:** No action is required.

---

**CTB9AAI** VARIABLE ALREADY EXISTS IN TARGET DATABASE GROUP: grp VARIABLE: varName

**Explanation:** This information message indicates that the CTBDBVCP Control-M/Analyzer utility did not copy the indicated variable because it already exists in the target database.

The utility continues executing.

**Corrective Action:** To replace the variable, rerun the job with the REPLACE parameter set to YES.

---

**CTB9ABI** GROUP: grp ALREADY EXISTS IN TARGET DATABASE

**Explanation:** This information message indicates that the CTBDBVCP Control-M/Analyzer utility did not copy the grp group because it already exists in the target database.

The utility continues executing.

**Corrective Action:** To replace the group, rerun the job with the REPLACE parameter set to YES.

---

**CTB9ACS** OPEN OF SYSIN FAILED. CHECK DD CARD "DACMD"

**Explanation:** The CTBDBVCP Control-M/Analyzer utility could not open the input file (the SYSIN DD statement).

Possible causes are:

- The SYSIN DD statement or the DACMD DD statement is missing.
- The data set referenced by the SYSIN DD statement cannot be accessed for sequential read.

The utility stops executing with a condition code of 36.

**Corrective Action:** Fix the problem and rerun the job.

---

**CTB9ADE** INVALID NUMGEN/FROMGEN/TOGEN STATEMENT DEFINITION

**Explanation:** The CTBDBVCP Control-M/Analyzer utility could not process the NUMGEN, FROMGEN, or TOGEN input statement.
The utility stops executing with a condition code of 40.

**Corrective Action:** Correct the input statements and rerun the job.

**CTB9AEE FROMGEN/TOGEN RANGE SIZE EXCEEDS NUMBER OF GENERATIONS REQUESTED FOR TARGET VARIABLE**

**Explanation:** The CTDBVCP Control-M/Analyzer utility was unable to process the input statements. The range of generations requested for copying to the newly created variable, exceeds the total number of generations requested for creation in the target database.

The utility stops executing with a condition code of 44.

**Corrective Action:** Increase the value specified in input statement NUMGEN= value, or decrease the range specified in statements FROMGEN= value and TOGEN= value. Rerun the job.

**CTB9AFS INITIALIZATION ERROR. UNABLE TO CONTINUE PROCESSING**

**Explanation:** The CTDBVDL Control-M/Analyzer utility failed to initialize processing.

The utility stops executing with a nonzero condition code.

**Corrective Action:** Notify your INCONTROL administrator.

**CTB9BOS ERROR OPENING SYSPRINT**

**Explanation:** The CTDBVCP Control-M/Analyzer utility failed to open the print file referenced by the SYSPRINT DD statement.

Possible causes are:

- The SYSPRINT DD statement is missing.
- The data set referenced by the SYSPRINT DD statement cannot be accessed for sequential write.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

**CTB9B1E INVALID STATEMENT IN CRITERIA DEFINITION**

**Explanation:** The CTDBVDL Control-M/Analyzer utility failed due to one or more errors in the criteria definition input statement.

The utility stops executing with a condition code of 16.

**Corrective Action:** Correct the input statement and rerun the job.

**CTB9B2E INVALID GROUP SPECIFIED IN CRITERIA DEFINITION**

**Explanation:** The CTDBVDL Control-M/Analyzer utility failed due to error in the GROUP input statement.

The utility stops executing with a condition code of 16.

**Corrective Action:** Correct the GROUP input statement and rerun the job.
CTB9B3E INVALID VARIABLE NAME SPECIFIED IN CRITERIA DEFINITION

**Explanation:** The CTDBVDL Control-M/Analyzer utility failed due to an error in the VARIABLE input statement.

The utility stops executing with a condition code of 16.

**Corrective Action:** Correct the VARIABLE input statement and rerun the job.

CTB9B4S ERROR OPENING DATABASE

**Explanation:** The CTDBVDL Control-M/Analyzer utility is unable to open the Control-M/Analyzer database.

Possible causes are:
- One of the DD statements DIMOD, DIVAR, DOMOD or DOVAR is missing.
- One of the data sets referenced by the DD statements listed above cannot be opened for sequential read or write.

The utility stops executing with a nonzero condition code.

**Corrective Action:** Correct the problem and rerun the job.

CTB9B5S ERROR OPENING SYSPRINT

**Explanation:** The CTDBVDL Control-M/Analyzer utility failed to open the print file referenced by the SYSPRINT DD statement.

Possible causes are:
- The SYSPRINT DD statement is missing.
- The data set referenced by the SYSPRINT DD statement cannot be accessed for sequential write.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

CTB9B6S I/O ERROR UPDATING DATABASE

**Explanation:** The CTDBVDL Control-M/Analyzer utility failed to update the Control-M/Analyzer database.

The utility stops executing with a nonzero condition code.

**Corrective Action:** Notify your INCONTROL administrator.

CTB9B7S I/O ERROR READING DATABASE RECORD

**Explanation:** The CTDBVDL Control-M/Analyzer utility failed to read the Control-M/Analyzer database.

The utility stops executing with a nonzero condition code.

**Corrective Action:** Notify your INCONTROL administrator.
CTB9B8I  CONTROL-M/ANALYZER UTILITY CTBDBVDL STARTED
Explanation: This information message indicates the normal start of the CTBDBVDL Control-M/Analyzer compression utility.
Corrective Action: No action is required.

CTB9B9I  UTILITY CTBDBVDL ENDED: num VARIABLES, num GROUPS WERE DELETED
Explanation: This information message indicates the normal termination of the CTBDBVDL Control-M/Analyzer compression utility. This message includes statistics.
Corrective Action: No action is required.

CTB9BAS  ERROR DURING CTBGRP CALL. OPERATION: opn
Explanation: The CTBDBVDL Control-M/Analyzer utility failed to execute the indicated operation on the Control-M/Analyzer Group file.
In most cases, this utility stops executing with a nonzero condition code. However, if the error occurs while deleting a group, processing continues with the next group.
Corrective Action: Notify your INCONTROL administrator.

CTB9BBS  ERROR DURING CTBDBV CALL. OPERATION: opn
Explanation: The CTBDBVDL Control-M/Analyzer utility failed to execute the indicated operation on the Control-M/Analyzer database.
The utility continues processing but it will end with a nonzero condition code.
Corrective Action: Notify your INCONTROL administrator.

CTB9BCE GROUP FILE CONTAINS NO RECORDS WHICH SATISFY THE SPECIFIED CRITERIA
Explanation: The CTBDBVDL or CTBDBVDL Control-M/Analyzer utility did not delete any records because no records matching the specification were found in the Control-M/Analyzer Group file.
The utility stops executing with a condition code of 04.
Corrective Action: Specify the correct group name or mask in the GROUP input statement and rerun the jobname.

CTB9BDE UNABLE TO DELETE THE REQUESTED GROUP. PLEASE SPECIFY ASTERISK (*) INSTEAD OF THE VARIABLE NAME
Explanation: The CTBDBVDL Control-M/Analyzer utility could not delete the requested record from the Control-M/Analyzer Group file because the specified group still contains variables.
The utility stops executing with a condition code of 20.
Corrective Action: Specify asterisk instead of the variable name in the VARIABLE input statement and rerun the job.
**CTB9BEE NO CRITERIA SPECIFIED. UNABLE TO CONTINUE PROCESSING**

**Explanation:** The CTDBDBVL Control-M/Analyzer utility is unable to continue processing because no input statements were specified.

The utility stops executing with a condition code of 28.

**Corrective Action:** Specify input statements and rerun the job.

**CTB9BFS OPEN OF SYSIN FAILED. CHECK DD CARD "DACMD"**

**Explanation:** The CTDBDBVL Control-M/Analyzer utility failed to open the input file referenced by the SYSIN DD statement.

This failure may be due to one of the following:

- The SYSIN DD statement or the DACMD DD statement is missing.
- The data set referenced by the SYSIN DD statement cannot be accessed for sequential read.

The utility stops executing with a condition code of 28.

**Corrective Action:** Correct the JCL and rerun the job.

**CTB9C0I CONTROL-M/ANALYZER ACTIVE BALANCING FILE FORMATTING STARTED**

**Explanation:** This information message indicates that the Control-M/Analyzer Active Balancing file is currently being formatted by the CTBFRM program, which is usually activated as part of the New Day procedure.

**Corrective Action:** No action is required.

**CTB9C1I Control-M/ANALYZER ACTIVE BALANCING FILE FORMATTING ENDED**

**Explanation:** This information message indicates that formatting of the Control-M/Analyzer Active Balancing file by the CTBFRM program ended successfully.

**Corrective Action:** No action is required.

**CTB9C2I PREVIOUS FORMAT RUN FAILED. BACKUP COPY WILL BE USED**

**Explanation:** This information message indicates that the Control-M/Analyzer New Day procedure is currently being rerun after abending which formatting the Active Balancing file.

The Active Balancing file is restored from the Active Balancing Backup file and processing continues normally.

**Corrective Action:** No action is required.
CTB9C3S OPEN OF CONTROL-M/ANALYZER ACTIVE BALANCING FILE FAILED. DDNAME "DAABF"

**Explanation:** Open of the Control-M/Analyzer Active Balancing file failed (the DAABF DD statement). This error message is issued by the CTBFRM program, which is usually activated as part of the New Day procedure, and is due to one of the following:

- The DAABF DD statement is missing.
- The data set referenced by the DAABF DD statement is not the Control-M/Analyzer Active Balancing file.

Program execution stops with a nonzero condition code.

**Corrective Action:** Correct the New Day procedure JCL and rerun the procedure.

CTB9C4S INTERNAL ERROR WHILE PROCESSING ACTIVE BALANCING FILE. FILE NOT FORMATTED

**Explanation:** Processing of the Control-M/Analyzer Active Balancing file failed. This error message is issued by the CTBFRM program, which is usually activated as part of the New Day procedure.

Program execution stops with a nonzero condition code.

**Corrective Action:** Notify your INCONTROL administrator.

CTB9C5S INTERNAL ERROR FROM THE CTBDBF ROUTINE. RC= rc

**Explanation:** Processing of the Control-M/Analyzer Active Balancing Backup file failed. This error message is issued by the CTBFRM program, which is usually activated as part of the New Day procedure. It is caused by an error during initialization of the Active Balancing file.

Program execution stops with a nonzero condition code.

**Corrective Action:** Notify your INCONTROL administrator.

CTB9C6S INTERNAL ERROR DURING INITIALIZATION. ACTIVE BALANCING FILE NOT FORMATTED

**Explanation:** Processing of the Control-M/Analyzer Active Balancing Backup file failed. This error message is issued by the CTBFRM program, which is usually activated as part of the New Day procedure. It is caused by an error during reading of the Control-M/Analyzer parameters.

One of the following may occur, depending on the situation:

- Program execution stops with a condition code of 16 indicating failure to load the CTBINFO routine.
- Program execution stops with a condition code of 20 indicating failure to load the CTBINI routine.
- Program execution stops with some other nonzero condition code.

**Corrective Action:** Notify your INCONTROL administrator.
CTB9C7S INSUFFICIENT MEMORY TO FORMAT THE
CONTROL-M/ANALYZER ACTIVE BALANCING FILE

Explanation: Insufficient memory is available for the CTBFRM program to format the Control-M/Analyzer
Active Balancing file. Clarification program CTBFRM is usually activated as part of the New Day procedure.
The utility stops executing with a condition code of 12.
Corrective Action: Increase the REGION size and rerun the New Day procedure.

CTB9C8S READING OF THE ACTIVE BALANCING BACKUP FILE FAILED

Explanation: An error occurred while reading the Control-M/Analyzer Active Balancing Backup file by the
CTBFRM program, which is usually activated as part of the New Day procedure.
The utility stops executing with a nonzero condition code.
Corrective Action: Notify your INCONTROL administrator.

CTB9C9S INVALID JOB ID IN ACTIVE BALANCING FILE RECORD: BLOCK= block
RECORD= record

Explanation: The CTBFRM program encountered an invalid job ID in a record in the Control-M/Analyzer
Active Balancing file. The CTBFRM program is usually activated as part of the New Day procedure.
The record that contains the error is deleted. The utility continues executing with the next record.
Corrective Action: Notify your INCONTROL administrator.

CTB9CAS INVALID ODATE IN ACTIVE BALANCING FILE RECORD: BLOCK= blk
RECORD= record

Explanation: The CTBFRM program encountered an invalid ODATE in a record in the Control-M/Analyzer
Active Balancing file. The CTBFRM program is usually activated as part of the New Day procedure.
The record that contains the error is deleted. The utility continues executing with the next record.
Corrective Action: Notify your INCONTROL administrator.

CTB9CBS CONTROL-M/ANALYZER DATE CONTROL RECORD IS EMPTY

Explanation: The CTBFRM program encountered an empty Date Control Record. The CTBFRM program
is usually activated as part of the New Day procedure.
The problem may be due to one of the following:

- The record referenced by the DACHK DD statement is not the Control-M/Analyzer Date Control
  Record.
- The contents of the Date Control Record have been manually modified incorrectly.
The utility stops executing with a condition code of 28.
Corrective Action: Depending on the cause of the problem, do one of the following:
Correct the JCL for the New Day procedure and rerun the procedure.
Correct the Date Control Record and rerun the New Day procedure.

**CTB9CCS OPEN OF CONTROL-M/ANALYZER DATE CONTROL RECORD FAILED. DDNAME "DACHK"**

**Explanation:** The file containing the Control-M/Analyzer Date Control Record could not be opened. This message is issued by the CTBFRM program, which is usually activated as part of the New Day procedure.

The problem may be due to one of the following:

- The record referenced by the DACHK DD statement is not the Control-M/Analyzer Date Control Record.
- The DACHK DD statement is missing.
- An internal error occurred during opening of the file referenced by the DACHK DD statement.

The utility stops executing with a condition code of 32.

**Corrective Action:** Correct the JCL for the New Day procedure and rerun the procedure.

**CTB9CDS INVALID LAST FORMAT DATE IN THE DATE CONTROL-RECORD**

**Explanation:** The last date in the Control-M/Analyzer Date Control Record has an invalid format. The valid format is ddmmyy. This message is issued by the CTBFRM program which is usually activated as part of the New Day procedure.

The problem may be due to one of the following:

- The record referenced by the DACHK DD statement is not the Control-M/Analyzer Date Control Record.
- The contents of the Date Control Record have been manually modified incorrectly.

The utility stops executing with a condition code of 36.

**Corrective Action:** Depending on the cause of the problem, do one of the following:

- Correct the JCL for the New Day procedure and rerun the procedure.
- Correct the format of the Date Control Record and rerun the New Day procedure.

**CTB9CES INVALID ORIGINAL SCHEDULING DATE IN THE DATE CONTROL RECORD**

**Explanation:** The original scheduling date in the Control-M/Analyzer Date Control Record has an invalid format. The valid format is ddmmyy. This message is issued by the CTBFRM program, which is usually activated as part of the New Day procedure.

The problem may be due to one of the following:

- The record referenced by the DACHK DD statement is not the Control-M/Analyzer Date Control Record.
- The contents of the Date Control Record have been manually modified incorrectly.

The utility stops executing with a condition code of 40.
Corrective Action: Depending on the cause of the problem, do one of the following:

- Correct the JCL for the New Day procedure and rerun the procedure.
- Correct the format of the Date Control Record and rerun the New Day procedure.

CTB9CFE FORMAT PROGRAM CTBFRM WAS ALREADY RUN TODAY

Explanation: An attempt was made to run the New Day procedure (which executes the CTBFRM format program) twice in the same day. After the CTBFRM program executes successfully, it should not normally be re-executed the same day.

The CTBFRM program stops executing with a condition code of 44. The Active Balancing file is not reformatted. The New Day procedure continues to execute other programs.

Corrective Action: Check the reason that the New Day procedure is being run twice.

CTB9D0S LAST FORMAT DATE GREATER THAN ORIGINAL SCHEDULING DATE IN THE CONTROL-M/ANALYZER DATE CONTROL RECORD

Explanation: The last format date is greater than the original scheduling date in the Control-M/Analyzer Date Control Record. This message is produced by the New Day procedure. For more details, refer to the INCONTROL for z/OS Administrator Guide.

The utility stops executing with a condition code of 48.

Corrective Action: Correct the Control-M/Analyzer Date Control Record and run the New Day procedure again.

CTB9D1S OPEN OF IOA LOG FILE FAILED

Explanation: Open of the IOA Log File failed. The message is produced by the New Day procedure.

The failure may be due to one of the following:

- The DALOG DD statement is missing.
- The file referenced by the DALOG DD statement is not the IOA Log File.
- The file referenced by the DALOG DD statement is the IOA Log File, but from a different version or of a different IOA environment.

The utility stops executing with a condition code of 52.

Corrective Action: Correct the JCL and run the New Day procedure again.

CTB9D2S ENQ ON THE ACTIVE BALANCING FILE FAILED

Explanation: The CTBFRM program, which is usually activated as part of the New Day procedure, could not get exclusive control of the Control-M/Analyzer Active Balancing file, because a Control-M/Analyzer job or mission was executing with exclusive control at the same time. Exclusive control is required for file formatting.

The utility stops executing with a condition code of 56.

Corrective Action: Rerun the New Day procedure when the Active Balancing file is free for exclusive control.
CTB9D3S  INVALID RC FROM CTBIINFO ROUTINE:  RC= rc, JOBNAME= jobName

**Explanation:** The New Day procedure could not detect the status of the indicated job in the Control-M/Analyzer Active Balancing file. The job is not deleted because it may still be executing.

The job is not deleted. The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

CTB9D4S  OPEN OF CONTROL-M/ANALYZER ACTIVE BALANCING BACKUP FILE FAILED. DDNAME "DABKP"

**Explanation:** Open of Control-M/Analyzer Active Balancing Backup file failed (the DABKP DD statement). This error message is issued by the CTBFRM program, which is usually activated as part of the New Day procedure.

Probable causes:

- The DABKP DD statement is missing.
- The data set referenced by the DABKP DD statement is not the Control-M/Analyzer Active Balancing file.

Program execution stops with a nonzero condition code.

**Corrective Action:** Correct the JCL for the New Day procedure and rerun the procedure.

CTB9D5S  INTERNAL ERROR WHILE PROCESSING ACTIVE BALANCING Backup File. Formatting Failed

**Explanation:** Processing of the Control-M/Analyzer Active Balancing Backup file failed. This message is issued by the CTBFRM program which is usually activated as part of the New Day procedure.

Program execution stops with a nonzero condition code.

**Corrective Action:** Notify your INCONTROL administrator.

CTB9D6S  ERROR OPENING SYSPRINT

**Explanation:** An error occurred while opening the print file referenced by the SYSPRINT DD statement. This message is issued by the CTBFRM program which is usually activated as part of the New Day procedure.

The error may be due to one of the following:

- The SYSPRINT DD statement is missing.
- The data set referenced by the SYSPRINT DD statement cannot be accessed for sequential write.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.
CTB9D7E THE SIZE OR LRECL PARAMETER OF THE ABFBKP FILE DIFFERS FROM THE ABF FILE

**Explanation:** The CTBFRM Control-M/Analyzer utility detected that the Control-M/Analyzer file for the ABF backup (ABFBKP) was either not large enough for all the records, or that it did not have the same record length as the ABF file.

The CTBFRM utility stops executing with a condition code of 64.

**Corrective Action:** According to the source of the problem, either reallocate the Control-M/Analyzer ABFBKP file with the LRECL parameter the same as that of the ABF file, or increase the size of the ABFBKP file. Rerun the job.

CTB9E1I INFORMATION RECORD HAS BEEN DELETED record

**Explanation:** This information message indicates that in correcting the Job Activity Data file, the CTBJAFIG Control-M/Analyzer utility deleted the record Information record from the file because the record was in error. This message is followed by other messages that display additional information about the deleted record.

**Corrective Action:** No action is required.

CTB9E2I PRIMARY REPORT RECORD HAS BEEN DELETED record

**Explanation:** This information message indicates that in correcting the Report Data file, the CTBJAFIG Control-M/Analyzer utility deleted the record Primary Report record from the file because the record was in error. This message is followed by other messages that display additional information about the deleted record.

**Corrective Action:** No action is required.

CTB9E3I SECONDARY REPORT RECORD HAS BEEN DELETED record

**Explanation:** This information message indicates that in correcting the Report Data file, the CTBJAFIG Control-M/Analyzer utility deleted the record Secondary Report record because the record was in error. This message is followed by other messages that display additional information about the deleted record.

**Corrective Action:** No action is required.

CTB9E4I INVOCATION RECORD HAS BEEN CORRECTED record

**Explanation:** This information message indicates that the CTBJAFIG Control-M/Analyzer utility corrected the record Invocation record in the Rule Activity File because the record had been in error. This message is followed by other messages that display additional information about the deleted record.

**Corrective Action:** No action is required.

CTB9E5I REPORT RECORD HAS BEEN DELETED record

**Explanation:** This information message indicates that in correcting the report file, the CTBJAFIG Control-M/Analyzer utility deleted the record report record from the file because the record was in error. This message is followed by other messages that display additional information about the deleted record.
Corrective Action: No action is required.

CTB9E6S ERROR DURING THE CORRECTION PROCESS BY ROUTINE CTBCKP

Explanation: An error occurred while the CTBJAFIG Control-M/Analyzer utility was trying to correct a record in the Job Activity Data file.

This message is followed by the CTB9E8S message, which displays the failed operation, and by the CTB9E9I message, which displays the error code.

The CTBJAFIG utility continues executing with the next record.

Corrective Action: Notify your INCONTROL administrator.

CTB9E7S ERROR DURING THE CORRECTION PROCESS BY ROUTINE CTBREP

Explanation: An error occurred while the CTBJAFIG Control-M/Analyzer utility was trying to correct a record in the Report Data file.

This message is followed by the CTB9E8S message, which displays the failed operation, and by the CTB9E9I message, which displays the error code.

The CTBJAFIG utility continues executing with the next record.

Corrective Action: Notify your INCONTROL administrator.

CTB9E8S OPERATION IS: opn

Explanation: While the CTBJAFIG Control-M/Analyzer utility was correcting a record, the operation indicated in the message failed.

This message follows the CTB9E7S or CTB9E6S message.

Corrective Action: Notify your INCONTROL administrator.

CTB9E9I RETURN CODE IS: rc

Explanation: This information message displays the return code for the failed operation indicated in the CTB9E8S message. This message follows the CTB9E8S message.

Corrective Action: No action is required.

CTB9EAS INVOCATION RECORD IS NOT IN SEQUENCE

Explanation: While reading the Job Activity Data file, the CTBJAFIG Control-M/Analyzer utility encountered an Invocation record which does not belong to any Job record.

The utility continues executing.

Corrective Action: Notify your INCONTROL administrator.
CTB9EBS INFORMATION RECORD IS NOT IN SEQUENCE

**Explanation:** While reading the Job Activity Data file, the CTBJAFI G Control-M/Analyzer utility encountered an Information record which does not belong to any Invocation record.

The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

CTB9ECS SECONDARY REPORT RECORD IS NOT IN SEQUENCE

**Explanation:** While reading the Report Data file, the CTBJAFI G Control-M/Analyzer utility encountered a Secondary Report record which does not belong to any Primary Report record.

The utility continues executing.

**Corrective Action:** Notify your INCONTROL administrator.

CTB9EDI APPLICATION GROUP *grpname*

**Explanation:** This information message indicates the group name from the record deleted by the CTBJAFI G Control-M/Analyzer utility.

**Corrective Action:** No action is required.

CTB9EEI JOBNAME *jobName*

**Explanation:** This information message indicates the job name from the record deleted by the CTBJAFI G Control-M/Analyzer utility.

**Corrective Action:** No action is required.

CTB9EFI DATE *date*

**Explanation:** This information message indicates the date from the record deleted by the CTBJAFI G Control-M/Analyzer utility.

**Corrective Action:** No action is required.

CTB9F0I TIME *time*

**Explanation:** This information message indicates the time from the record deleted by the CTBJAFI G Control-M/Analyzer utility.

**Corrective Action:** No action is required.

CTB9F1I JOBID *jobId*

**Explanation:** This information message indicates the job id from the record deleted by the CTBJAFI G Control-M/Analyzer utility.

**Corrective Action:** No action is required.

**Messages CTBA00 through CTBAxx**

This group includes messages for the Control-M/Analyzer product.
CTBA001 CONTROL-M/ANALYZER UTILITY CTBJAFDL STARTED

Explanation: This information message indicates the normal start of the CTBJAFDL utility.
Corrective Action: No action is required.

CTBA01E PLEASE CHECK THE SYNTAX OF STATEMENT stmt

Explanation: The CTBJAFDL or CTBJAFCP utility failed because of a syntax error in the stmt statement. The utility stops executing with a condition code of 08.
Corrective Action: Correct the indicated statement and rerun the job.

CTBA02S ERROR OPENING SYSPRINT

Explanation: The CTBJAFDL or CTBJAFCP utility failed to open the print file referenced by the SYSPRINT DD statement. The failure may be due to one of the following:
- The SYSPRINT DD statement is missing.
- The data set referenced by the SYSPRINT DD statement cannot be accessed for a sequential write.
The utility stops executing with a condition code of 16.
Corrective Action: Correct the JCL and rerun the job.

CTBA03S ERROR OPENING SYSIN

Explanation: The CTBJAFDL or CTBJAFCP utility failed to open the input file referenced by the SYSIN DD statement. The failure may be due to one of the following:
- The SYSIN DD statement, or the DACMD DD statement, is missing.
- The data set referenced by the SYSIN DD statement cannot be accessed for a sequential read.
The utility stops executing with a condition code of 16.
Corrective Action: Correct the JCL and rerun the job.

CTBA04S ERROR DURING JAF FILE PROCESSING. OPERATION: opn

Explanation: The CTBJAFDL or CTBJAFCP utility failed to perform the opn operation on the Rule Activity file. The accompanying return code is indicated in the CTBA07I message. If processing of the current record fails, processing continues with the next record. In some cases, for example, if the file could not be opened, processing stops.
Corrective Action: Notify your INCONTROL administrator.

CTBA05S ERROR DURING REPORT FILE PROCESSING. OPERATION: opn

Explanation: The CTBJAFDL or CTBJAFCP utility failed to perform the opn operation on the Control-M/Analyzer report file. The accompanying return code is indicated in the CTBA07I message.
If processing of the current record fails, processing continues with the next record. In some cases, for example if the file could not be opened, processing is stopped.

**Corrective Action:** Notify your INCONTROL administrator.

**CTBA06S DDNAME: dd/Name, REQUESTED FUNCTION CANNOT BE PERFORMED SINCE FILE IS BEING ACCESSED BY ANOTHER USER**

**Explanation:** The CTBJ AFDL or CTBJ AFCP Control-M/Analyzer utility could not lock a database file referenced by the DD name in the DD statement when trying to update it.

The CTBJ AFDL or CTBJ AFCP Control-M/Analyzer utility stops execution with a nonzero return code.

**Corrective Action:** Check the reason for a conflict and rerun the Control-M/Analyzer utility after the concurrent applications have finished running.

**CTBA07I RC= rc**

**Explanation:** This information message indicates the return code resulting from execution of the CTBJ AFDL or CTBJ AFCP utility.

**Corrective Action:** No action is required.

**CTBA08E FIRST INPUT STATEMENT FOR CONTROL-M/ANALYZER UTILITY CTBJ AFDL MUST BE A "DAYS" STATEMENT**

**Explanation:** The first input statement for the CTBJ AFDL utility must be, but was not, statement DAYS. The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the input statement and rerun the job.

**CTBA09S ERROR DURING FREEMAIN OPERATION**

**Explanation:** The CTBJ AFDL or CTBJ AFCP utility failed to perform a FREEMAIN operation. The accompanying return code is indicated in the CTBA07I message. The utility stops executing.

**Corrective Action:** Notify your INCONTROL administrator.

**CTBA0AI THE FOLLOWING JOB RECORDS HAVE BEEN DELETED:**

**Explanation:** This information message indicates the successful deletion of jobs by the CTBJ AFDL utility. This message precedes the CTBA11I, CTBA12I, and CTBA13I messages, which display the list of deleted jobs.

**Corrective Action:** No action is required.

**CTBA0BI num JOB RECORDS HAVE BEEN COPIED**

**Explanation:** This information message indicates the number of job entries that have been copied to the target Rule Activity file by the CTBJ AFCP Control-M/Analyzer utility.

**Corrective Action:** No action is required.
CTBA0CI  num PRIMARY REPORT RECORDS HAVE BEEN COPIED

Explanation: This information message indicates the number of primary report entries that have been copied to the target report file by the CTBJAFCP Control-M/Analyzer utility.

Corrective Action: No action is required.

CTBA0DE JOB ACTIVITY FILE IS FULL. PLEASE RUN CONTROL-M/ANALYZER UTILITY CTBJAFDL

Explanation: The CTBJAFCP utility failed to copy of the Rule Activity file because the target file is full. The accompanying return code is indicated in the CTBA07I message.
The utility stops executing.

Corrective Action: Compress the Report file by running the CTBJAFDL Control-M/Analyzer utility.

CTBA0EE REPORT FILE IS FULL. PLEASE RUN CONTROL-M/ANALYZER UTILITY CTBJAFDL

Explanation: The CTBJAFCP utility failed to copy of the Rule Activity file because the target file is full. The accompanying return code is indicated in the CTBA07I message.
The utility stops executing.

Corrective Action: Compress the Report file by running the CTBJAFDL utility.

CTBA0FI num JOB RECORDS HAVE BEEN DELETED

Explanation: This information message indicates the number of job entries that were deleted from the Rule Activity File by the CTBJAFDL Control-M/Analyzer utility.

Corrective Action: No action is required.

CTBA12I | JOBNAME | JOBID | DATE | TIME |

Explanation: This information message consists of a series of titles for the information provided in the CTBA13I message.

Corrective Action: No action is required.

CTBA13I /jobName/jobId/date/time/

Explanation: The CTBA12I and CTBA13I information messages form a chart listing job entries that were deleted from the Rule Activity file by the CTBJAFDL Control-M/Analyzer utility.
The CTBA13I message is repeated once for each job entry that was deleted.

Corrective Action: No action is required.

CTBA16I CONTROL-M/ANALYZER UTILITY CTBJAFCP STARTED

Explanation: This information indicates the normal start of the CTBJAFCP Control-M/Analyzer utility.

Corrective Action: No action is required.
CTBA17S INSUFFICIENT STORAGE TO RUN CONTROL-M/ANALYZER UTILITY CTBJAFDL

**Explanation:** The CTBJAFDL utility requires more memory to compress the Rule Activity file and the report file.

The utility stops executing with a condition code of 12.

**Corrective Action:** Increase the REGION size and rerun the job.

CTBA18S INSUFFICIENT STORAGE TO RUN CONTROL-M/ANALYZER UTILITY CTBJAFCP

**Explanation:** The CTBJAFCP utility requires more memory to copy the Rule Activity file and the report file.

The utility stops executing with a condition code of 12.

**Corrective Action:** Increase the REGION size and rerun the job.

CTBA22S UNABLE TO OPEN FILE. FORMAT FAILED

**Explanation:** The CTBDBF4 Control-M/Analyzer utility failed to open the target file referenced by the DAOUT DD statement.

The failure may be due to one of the following:

- The DAOUT DD statement is missing.
- The data set referenced by the DAOUT DD statement does not exist.

The utility terminates with a condition code of 116.

**Corrective Action:** Correct the JCL and rerun the job.

CTBA23S ERROR OPENING SYSPRINT. UNABLE TO CONTINUE PROCESSING

**Explanation:** The CTBDBF4 Control-M/Analyzer utility failed to open the print file referenced by the SYSPRINT DD statement.

The failure may be due to one of the following:

- The SYSPRINT DD statement is missing.
- The data set referenced by the SYSPRINT DD statement cannot be accessed for a sequential write.

The utility terminates with a condition code of 120.

**Corrective Action:** Correct the JCL and rerun the job.

CTBA24S INSUFFICIENT STORAGE TO RUN FORMAT

**Explanation:** The CTBDBF4 Control-M/Analyzer utility requires more memory to format the target file.

The utility terminates with a condition code of 112.

**Corrective Action:** Increase the REGION size and rerun the job.
CTBA30I A PROBLEM WAS FOUND IN LINE lin

Explanation: This information message indicates that the lin input line was erroneous. An error message detailing the problem follows this message.

Corrective Action: No action is required.

CTBA31E INVALID LINE. item=VALUE EXPECTED

Explanation: The line structure was not in the format item=value. Input lines with parameters for the CTBVXRF cross-reference utility must be formatted item=value.

The CTBVXRF cross-reference utility terminates with an error.

Corrective Action: Correct the utility parameters and rerun the utility.

For more information, see the CTBVXRF cross-reference utility in the INCONTROL for z/OS Utilities Guide.

CTBA32E AN INPUT LINE OF THE FORM LIB=rule-lib IS EXPECTED

Explanation: The input statement to the CTBVXRF cross-reference utility did not include the parameter identified in the message.

The CTBVXRF cross-reference utility terminates with an error.

Corrective Action: Correct the error and rerun the CTBVXRF utility.

For more information, see the CTBVXRF cross-reference utility in the INCONTROL for z/OS Utilities Guide.

CTBA33E AN INPUT LINE OF THE FORM RULE=NAME-MASK IS EXPECTED

Explanation: The input statement to the CTBVXRF cross-reference utility did not include the parameter identified in the message.

The CTBVXRF cross-reference utility terminates with an error.

Corrective Action: Correct the error and rerun the CTBVXRF utility.

For more information, see the CTBVXRF cross-reference utility in the INCONTROL for z/OS Utilities Guide.

CTBA34E AN INPUT LINE OF THE FORM SORT=RULE/VAR IS EXPECTED

Explanation: The input statement to the CTBVXRF cross-reference utility did not include the parameter identified in the message.

The CTBVXRF cross-reference utility terminates with an error.

Corrective Action: Correct the error and rerun the CTBVXRF utility.

For more information, see the CTBVXRF cross-reference utility in the INCONTROL for z/OS Utilities Guide.

CTBA35E AN INPUT LINE OF THE FORM BLOCKS=YES/NO IS EXPECTED

Explanation: The current input line specified an unexpected parameter. The input to cross-reference The CTBVXRF utility consists of parameters specified in a predefined order.

The CTBVXRF cross-reference utility terminates with an error.
**Corrective Action:** Correct the error and rerun the CTBVXRF utility. See the CTBVXRF cross-reference utility in the *INCONTROL for z/OS Utilities Guide* for more information.

CTBA36E INCORRECT SORT OPTION. SPECIFY "RULE" OR "VAR"

**Explanation:** The sort option was incorrect. The Cross-Reference Report may be sorted either by rule name (option RULE) or by variable name (option VAR).

The CTBVXRF cross-reference utility terminates with an error.

**Corrective Action:** Correct the error and rerun the utility.

For more information, see the CTBVXRF cross-reference utility in the *INCONTROL for z/OS Utilities Guide*.

CTBA37E INCORRECT BLOCKS OPTION, SPECIFY "YES" OR "NO"

**Explanation:** The value of the BLOCKS option for the CTBVXRF cross-reference utility was not YES or NO.

The BLOCKS option specifies whether or not to include the block name in the cross-reference report. Its value must be YES or NO.

The CTBVXRF cross-reference utility terminates with an error.

**Corrective Action:** Correct the error and rerun the utility. For more information, see the CTBVXRF cross-reference utility in the *INCONTROL for z/OS Utilities Guide*.

CTBA3AI CONTROL-M/ANALYZER UTILITY CTBDBVCG STARTED

**Explanation:** This information message indicates that the CTBDBVCG Control-M/Analyzer utility, which changes the number of generations, has started running.

**Corrective Action:** No action is required.

CTBA3BE INVALID GROUP CRITERIA SPECIFIED

**Explanation:** The CTBDBVCG Control-M/Analyzer utility detected an error in the GROUP input statement. The CTBDBVCG Control-M/Analyzer utility stops executing with a condition code of 32.

**Corrective Action:** Correct the GROUP input statement and rerun the job. For more information, see the description of the GROUP input statement in the *Control-M/Analyzer User Guide*.

CTBA3CE INVALID VARIABLE CRITERIA SPECIFIED

**Explanation:** The CTBDBVCG Control-M/Analyzer utility detected an error in the VARIABLE input statement. The CTBDBVCG Control-M/Analyzer utility stops executing with a condition code of 32.

**Corrective Action:** Correct the VARIABLE input statement and rerun the job. For more information, see the description of the VARIABLE input statement in the *Control-M/Analyzer User Guide*.

CTBA3DS INTERNAL ERROR READING DATABASE RECORD. ERROR CODE rc

**Explanation:** Processing of the Control-M/Analyzer Model failed.
The utility stops executing with a nonzero condition code.

**Corrective Action:** Provide your INCONTROL administrator with the sysout of the CTBDBVCG utility.

**CTBA3ES INTERNAL ERROR UPDATING DATABASE RECORD, ERROR CODE rc**

**Explanation:** Processing of the Control-M/Analyzer Variables Definition or Variables Generations failed. The utility stops executing with a nonzero condition code.

**Corrective Action:** Provide your INCONTROL administrator with the sysout of the CTBDBVCG utility.

**CTBA3FS INSUFFICIENT SPACE IN THE CONTROL-M/ANALYZER VAR FILE**

**Explanation:** The CTBDBVCG utility could not update the Control-M/Analyzer Variables Generations file because it was full.

The CTBDBVCG utility stops executing with a nonzero condition code.

**Corrective Action:** Enlarge the Control-M/Analyzer Variables Generations file or decrease the value of the NUMGEN input parameter and rerun the job.

**CTBA40S INSUFFICIENT SPACE IN THE CONTROL-M/ANALYZER MOD FILE**

**Explanation:** The CTBDBVCG utility could not update the Control-M/Analyzer Variables Definition file because it was full.

The CTBDBVCG utility stops executing with a nonzero condition code.

**Corrective Action:** Enlarge the Control-M/Analyzer Variables Definition file or decrease the value of the NUMGEN input parameter and rerun the job.

**CTBA41E INVALID NUMGEN PARAMETER SPECIFIED**

**Explanation:** The CTBDBVCG Control-M/Analyzer utility detected an error in the NUMGEN input statement.

The CTBDBVCG Control-M/Analyzer utility stops executing with a condition code of 32.

**Corrective Action:** Correct the NUMGEN input statement and rerun the job. For more information, see the description of the NUMGEN input statement in the *Control-M/Analyzer User Guide*.

**CTBA42S OPEN OF SYSIN FAILED. CHECK DD CARD "DACMD"**

**Explanation:** The CTBDBVCG Control-M/Analyzer utility failed to open the input file referenced by the DACMD DD statement.

Possible causes are:

- The DACMD DD statement is missing.
- The data set referenced by the DACMD DD statement cannot be written to sequentially.

The utility stops executing with a condition code of 16.

**Corrective Action:** Correct the JCL accordingly and rerun the job.
CTBA43S ERROR OPENING CONTROL-M/ANALYZER DATABASE

**Explanation:** The CTBDBVCG Control-M/Analyzer utility failed to open the Control-M/Analyzer database. The utility stops executing with a nonzero condition code.

**Corrective Action:** Verify that the correct Control-M/Analyzer database was allocated to the CTBDBVCG utility and rerun the job.

CTBA44S INSUFFICIENT STORAGE TO RUN CONTROL-M/ANALYZER UTILITY CTBDBVCG

**Explanation:** There is insufficient memory for the CTBDBVCG Control-M/Analyzer utility to update the database.

The CTBDBVCG utility stops executing with a condition code of 12.

**Corrective Action:** Increase the region size for the CTBDBVCG utility, and rerun the job.

CTBA45S OPEN OF SYSPRINT FAILED. CHECK DD CARD "DCBOUT"

**Explanation:** The CTBDBVCG Control-M/Analyzer utility failed to open the print file referenced by the DCBOUT DD statement.

The failure might be due to one of the following reasons:

- The DCBOUT DD statement is missing.
- The data set referenced by the DCBOUT DD statement cannot be written to sequentially.

The CTBDBVCG utility stops executing with a condition code of 8.

**Corrective Action:** Correct the JCL accordingly and rerun the job.

CTBA46I NO INPUT PARAMETERS SPECIFIED. SYSIN FILE IS EMPTY

**Explanation:** This information message indicates that no input statements were specified for the CTBDBVCG Control-M/Analyzer utility.

The CTBDBVCG utility stops executing with a condition code of 4.

**Corrective Action:** Insert GROUP and/or VARIABLE input statements in the JCL and rerun the job.

CTBA47I NO CONTROL-M/ANALYZER VARIABLES SATISFIED THE SPECIFIED CRITERIA

**Explanation:** This information message indicates that the CTBDBVCG Control-M/Analyzer utility found no database records that satisfy the specified input criteria.

The CTBDBVCG utility stops executing with a condition code of 4.

**Corrective Action:** Correct the GROUP and/or VARIABLE input statements in the JCL and rerun the job.

Messages CTBB00 through CTBBxx

This group includes messages for the Control-M/Analyzer product.
CTBB01S ERROR OCCURRED WHILE PROCESSING FILE fileName IN MSUBSTMASK

**Explanation:** The MSUBSTMASK function failed to process the `fileName` file.

Possible causes are:

- The DD statement for the file is missing
- The data set referenced by the DD statement cannot be read sequentially.

The Control-M/Analyzer runtime environment terminates with an error.

**Corrective Action:** Correct the JCL and rerun the job.

CTBB02S USERBLOCK `usrblk` IN ON_COMPARE IS NOT DECLARED

**Explanation:** The `usrblk` userblock is not specified in the current Control-M/Analyzer rule. An ON_COMPARE statement referenced a nonexistent user block.

The Control-M/Analyzer runtime environment ends with an error.

**Corrective Action:** Correct the reference and re-invoke Control-M/Analyzer.

CTBB03S ERROR WHILE PROCESSING USERBLOCK `usrblk` IN ON_COMPARE

**Explanation:** Control-M/Analyzer encountered an error while processing the `usrblk` userblock during execution of an ON_COMPARE statement.

The Control-M/Analyzer runtime environment ends with an error.

**Corrective Action:** Correct the error and restart Control-M/Analyzer.

CTD messages

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

Messages CTD0 through CTD0xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTD0001 Control-V GLOBAL INDEX `utilityName` STARTED

**Explanation:** This information message indicates that the `utilityName` Global Index utility started.

**Corrective Action:** No action is required.

CTD001E PLEASE FILL IN LIBRARY NAME

**Explanation:** The library name is missing. The LIBRARY field must contain data.
Corrective Action: Enter a name for the library.

CTD001I Control-V GLOBAL INDEX utilityName ENDED OK
Explanation: This information message indicates that the utilityName Global Index utility finished successfully.
Corrective Action: No action is required.

CTD001S UNABLE TO OPEN BUNDLE TRACKING FILE.
Explanation: The CTDTBTR (Bundle Tracking System screen) program failed to open the Bundle Tracking file.
The CTDTBTR program ends.
Corrective Action: Check the messages in the sysout of the program, and correct the problem accordingly. Return to the Bundle Tracking System screen (DT screen).

CTD002E PLEASE FILL IN MEMBER NAME
Explanation: Missing member name. The MEMBER field is obligatory (tree name).
Corrective Action: Fill in the member name.

CTD003E MEMBER IS NOT A VALID RECIPIENT TREE
Explanation: The MEMBER entered is not a valid Recipient Tree.
Corrective Action: Fill in a member name which is a valid Recipient Tree.

CTD004E LIBRARY AND MEMBER NAME MUST BE ENTERED
Explanation: This is one of two messages with the same ID, but different text.
LIBRARY and MEMBER specifications are missing. The LIBRARY and MEMBER fields are obligatory.
Corrective Action: Fill in the LIBRARY and MEMBER fields.

CTD004E INVALID DO= FUNCTION SPECIFIED
Explanation: This is one of two messages with the same ID, but different text.
The function specified in a DO statement is not valid.
The current utility stops.
Corrective Action: Correct the function name in the DO statement and rerun the job.

CTD005E MEMBER IS IN USE BY ANOTHER USER
Explanation: This is one of two messages with the same ID, but different text.
Another Control-D user is currently working on the member tree. Two users cannot work on the same member simultaneously.
Corrective Action: Try again later.
CTD005E INVALID PARAMETER: parm

Explanation: This is one of two messages with the same ID, but different text.
The parm input parameter for the CTVUPGDB or CTDDBPRT utility is not valid.
The utility stops.
Corrective Action: Correct the invalid input parameter and rerun the job.

CTD006E REDUNDANT PARAMETER: parm

Explanation: The parm input parameter for the CTVUPGDB or CTDDBPRT utility was already specified.
The same parameter is specified twice.
The utility stops.
Corrective Action: Delete the extra input parameter from the JCL and rerun the job.

CTD006S MEMBER IS EMPTY

Explanation: The designated Recipient Tree member does not contain any data.
Corrective Action: Delete this member from the library, then enter this member again.

CTD007E ERROR IN PARAMETERS: FODATE IS HIGHER THAN TODATE

Explanation: The specified starting order date FODATE is later than the specified ending order date TODATE.
The utility stops.
Corrective Action: Fix the value of either FODATE or TODATE in the JCL and rerun the job.

CTD007S INSUFFICIENT STORAGE TO LOAD RECIPIENT TREE MEMBER

Explanation: Insufficient storage to load the member (the tree).
Corrective Action: Do one of the following:
  ▪ Log on again using a larger SIZE parameter.
  ▪ If you are using many Control-D screens concurrently, exit some of them using the END command.

CTD008E PLEASE FILL IN A VALID OPTION - "Y" OR "N"

Explanation: This is one of two messages with the same ID, but different text.
Invalid option. The valid options are:
  ▪ Y (Yes)
  ▪ N (No)
Corrective Action: Select Y or N.

CTD008E INVALID DATE SPECIFIED: date

Explanation: This is one of two messages with the same ID, but different text.
Either the starting order date FODATE or the ending order date TODATE is invalid. The correct format is DD/MM/YY.

In this message, date is the problematic FODATE or TODATE date.

The utility stops.

**Corrective Action:** Correct the value of the incorrect ODATE parameter and rerun the job.

**CTD009E ONE (AND ONLY ONE) EXIT OPTION MUST BE MARKED AS "Y"**

**Explanation:** Two exit options are marked as Y (Yes). Only one EXIT OPTION field can be marked as Y.

**Corrective Action:** Mark Y or N in one of the EXIT OPTION fields.

**CTD00AE MEMBER IS NOT A VALID APPROVAL TREE**

**Explanation:** The MEMBER entered is not a valid Approval Tree.

**Corrective Action:** Fill in a member name which is a valid Approval Tree.

**CTD00BE INVALID PARAMETERS**

**Explanation:** A parameter in the SYSIN stream for the CTVUPGDB utility is invalid. The error is detected during analysis of input parameters.

The CTVUPGDB utility stops.

**Corrective Action:** Check other messages for the utility to identify and fix the problem, and rerun the CTVUPGDB utility.

**CTD00CE THE PARAMETER parm MUST BE SPECIFIED**

**Explanation:** The parm input parameter for the CTVUPGDB utility is missing. The CTVUPGDB utility requires the parm parameter.

The CTVUPGDB utility stops.

**Corrective Action:** Insert the missing parameter in the JCL and rerun the job.

**CTD00DE ERROR OPENING GLOBAL INDEX DATABASE. RC= rc**

**Explanation:** The current utility or IOA application server could not open the Global Index database. Global Index processing stops.

**Corrective Action:** Do the following:

- If rc is 0 (meaning OK), examine the file names for the DAGIR and DAGIRI DD statements. Correct them, if necessary, and rerun the job.

- If rc is not 0, for possible return code values and their meanings, see:
  - if the Global Index is an IOA Access Method file, the GIX010E message
  - if the Global Index is a DB2 database, the CTDGI0S message
Examine the IOA log for messages clarifying the error.
Correct the problem, and rerun the job.
If the problem persists, contact your INCONTROL administrator.

CTD010S THE REQUESTED ENTRY NAME WAS NOT FOUND

Explanation: The requested recipient name for this level was not found in the tree. The Recipient Tree may contain hundreds, or thousands, of report recipients. To directly display a specific recipient in the tree, fill in the recipient name, or name prefix, next to the appropriate level.

Corrective Action: Enter a new recipient name at this level, or at some other level. If the recipient name is still not found, enter the tree without entering a recipient name, and use the FIND command to find the requested recipient.

CTD011S INSUFFICIENT STORAGE TO BUILD APPROVAL TREE MEMBER

Explanation: There is insufficient storage to build the Approval Tree member.

Corrective Action: Do one of the following:
- Log on again using a larger SIZE parameter.
- If you are using many Control-D screens concurrently, exit some of them using the END command.

CTD012S INTERNAL PROGRAM ERROR. NOTIFY THE IOA ADMINISTRATOR

Explanation: Internal Control-D error while processing Recipient Tree.
Possible causes are:
- The member requested is not a Recipient Tree (although its structure is very similar to one).
- There is an internal Control-D error.

Corrective Action: Use the following procedure to correct this problem:
1. Check the IOA log for other messages to determine the cause of the failure.
2. Fix the Recipient Tree
3. Rerun the process that issued the message
4. If the problem persists, collect all information related to the cause of the message and contact BMC Software Customer Support

CTD013E PLEASE ENTER A VALID OPTION

Explanation: An invalid option has been entered.
Valid options are:
- D - delete
- I - insert
- S - add synonym
- F - see or hide parent

**Corrective Action:** Enter a valid option.

**CTD014E PLEASE ENTER A VALID LEVEL**

**Explanation:** The Recipient Tree level is invalid. The Recipient Tree level must be a two-character code as shown on the third line of the screen.

**Corrective Action:** Enter a valid Recipient Tree level.

**CTD015E PLEASE ENTER A VALID NAME**

**Explanation:** The recipient name is invalid. The recipient name must be unique in the tree. It can be up to 8 characters. Embedded blanks are not allowed.

**Corrective Action:** Enter a valid recipient name.

**CTD016E PLEASE ENTER A VALID SYNONYM**

**Explanation:** The synonym is invalid. Synonyms can be up to 20 characters. Embedded blanks are allowed.

**Corrective Action:** Enter a valid synonym.

**CTD017E PLEASE ENTER A VALID PARENT NAME**

**Explanation:** The parent name is invalid. The parent of the current recipient can be up to 8 characters. Embedded blanks are not allowed.

**Corrective Action:** Enter a valid parent name.

**CTD018E PLEASE ENTER A VALID SELECTION VALUE (Y/N)**

**Explanation:** The level selection value option is invalid. Valid selection values are:

- Y - display recipients of the level
- N - do not display recipients of the level

**Corrective Action:** Enter either Y or N.

**CTD019E AT LEAST ONE OF THE SELECTIONS MUST BE "Y"**

**Explanation:** None of the level selection values are marked as Y. At least one of the level selection values must be Y.

**Corrective Action:** Enter Y for one of the level selections.
CTD020E RECIPIENT NAME NOT ENTERED IN ENTRY SCREEN

Explanation: The NEXT command was entered but no recipient has been specified in the Entry Panel.
Corrective Action: Locate the recipient name using the FIND command.

CTD021E BOTTOM OF DATA REACHED

Explanation: The bottom of the Recipient Definition Tree screen has been reached while performing a NEXT command.
Corrective Action: Use the scrolling conventions to scroll backward and forward.

CTD022I NEXT NAME FOUND

Explanation: This information message indicates that the recipient specified in the entry panel was found after the NEXT command and the recipient can be found at the top of the screen.
Corrective Action: No action is required.

CTD023E CTVGDB FAILED RC= rc

Explanation: The CTVGDB routine invoked by CTVUPGDB ended with errors.
CTVUPGDB issues this message whenever the CTVGDB routine it invokes ends with a return code other than 0.

Possible values for $rc$ from CTVGDB, and their meanings, are:

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>OK</td>
<td>OK</td>
</tr>
<tr>
<td>4</td>
<td>End of file. No values for subindex.</td>
</tr>
<tr>
<td>8</td>
<td>Error during open</td>
</tr>
<tr>
<td>12</td>
<td>Error during close</td>
</tr>
<tr>
<td>16</td>
<td>Error during GETMAIN operation</td>
</tr>
<tr>
<td>20</td>
<td>Error during FREEMAIN operation</td>
</tr>
<tr>
<td>24</td>
<td>Error during dynamic allocation</td>
</tr>
<tr>
<td>28</td>
<td>Error during dynamic deallocation</td>
</tr>
<tr>
<td>32</td>
<td>Error during load</td>
</tr>
<tr>
<td>36</td>
<td>DBO error message</td>
</tr>
<tr>
<td>40</td>
<td>Internal error in path tree</td>
</tr>
</tbody>
</table>
CTVUPGDB ends with a return code of 08.

**Corrective Action:** Check the meaning of the return-code from CTVGDB to identify and fix the problem, and rerun the job. If necessary, contact your INCONTROL administrator.

**CTD023I NEXT NAME FOUND, BUT THIS LEVEL IS NOT BEING DISPLAYED**

**Explanation:** This information message indicates that the recipient name found by the NEXT command cannot be displayed because its level is specified as N in the level selection line.

**Corrective Action:** Enter Y in the level selection line.

**CTD024E PLEASE ENTER THE PARENT LEVEL, OR ERASE THE PARENT NAME**

**Explanation:** This is one of two messages with the same ID, but different text.

The parent name has been entered, but the parent level is missing. The parent level is obligatory with the parent name.

**Corrective Action:** Enter the parent level, or erase the parent name.

**CTD024E parm PARAMETER INVALID. ONLY YES OR NO IS VALID**

**Explanation:** This is one of two messages with the same ID, but different text.

The value of the parm input parameter is invalid. The value of the parm parameter must be YES or NO.

The current utility stops.

**Corrective Action:** Fix parm in the JCL and rerun the utility.

**CTD025E PLEASE ENTER THE PARENT NAME, OR ERASE THE PARENT LEVEL**

**Explanation:** The parent level has been entered, but the parent name is missing. The parent name is obligatory with the parent level.

**Corrective Action:** Enter the parent name, or erase the parent level.

---

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>44</td>
<td>Internal error during OPENSUB operation</td>

</tr>
<tr>
<td>60</td>
<td>Two paths with different index names</td>
</tr>
<tr>
<td>64</td>
<td>Sort file is full</td>
</tr>
</tbody>
</table>
CTD025W MAXIMUM NUMBER OF PROCESSED INDEXES procIndex REACHED. PROCESSING STOPPED

Explanation: The CTVUPGDB utility tried to add another main index to the Global Index database when it had already added the maximum number for this run. The MAXINDX parameter defines the maximum number of indexes that may be added to the Global Index database in each run of the CTVUPGDB utility.

The utility adds MAXINDX main indexes and ends with a return code of 04. Other indexes will be added during the next run of the CTVUPGDB utility.

Increase the value of the MAXINDX parameter and run the CTVUPGDB utility again.

Corrective Action: No action is required.

CTD026E parm PARAMETER INVALID. ONLY YES, NO OR ALL IS VALID

Explanation: The value of the parm input parameter is invalid. The value of the parm parameter must be YES, NO, or ALL.

The current utility stops.

Corrective Action: Correct the parm input parameter in the JCL, and rerun the utility.

CTD026S OPEN OF MISSIONS ORDER LIST FILE FAILED. DDNAME = ddName

Explanation: The New Day procedure issues this message when open of the mission order list file fails (the ddName DD statement).

For more information, see the sections describing report decollating, printing, backup and restore missions in the INCONTROL for z/OS Administrator Guide.

Possible causes are:

- The ddName DD statement is missing.
- The data set (member) described by the ddName DD statement does not exist.

Processing of the mission order list terminates with a return code of 08.

Corrective Action: Call your INCONTROL administrator. After the problem is solved, rerun the job.

CTD027E JOBID PARAMETER INVALID. SHOULD BE Jnnnn or Jnnnnnnn

Explanation: The JOBID input parameter is invalid. The format of the parameter name must be the character J followed by five or seven digits.

The utility stops.

Corrective Action: Correct the JOBID input parameter in the JCL, and rerun the utility.

CTD027S UNABLE TO LOAD MODULE modName

Explanation: Loading of the modName module failed.

Possible causes are:
The IOA Load library is not in the load modules search list.
- There is not enough memory to load the module.
- The `modName` module does not exist in the Load library.
- The IOA Load library has been updated while you were working and the position of the `modName` module has changed.

The function requested is terminated.

**Corrective Action:** Look on the system log for additional messages related to the problem.

Try one of the following:
- If the IOA Load library is not in the search list, add a STEPLIB DD statement to the library.
- If the loading failed because of lack of memory do one of the following:
  - For batch jobs, increase the REGION size.
  - For TSO, try to logon again using a larger SIZE parameter.
  - If you are using many IOA screens concurrently, try to exit a few using the END command. This can release memory which is used by the screens.
- If the Load library has been modified and you are working under TSO, try to log on again. If you are working under ROSCOE, you may have to shut down ROSCOE and bring it up again. If the IOA Load library is in the Linklist, a refresh to the LLA is needed.

**CTD028S** MAXIMUM NUMBER OF MISSION ORDER CARDS HAS BEEN EXCEEDED. DDNAME = `ddName`

**Explanation:** The New Day procedure issues this statement when the `ddName` DD statement contains more than 500 mission order list statements.

For more information, see the sections describing report decollating, printing, backup and restore missions in the *INCONTROL for z/OS Administrator Guide*, and see also the sections describing New Day processing.

Processing of the mission order list terminates with a return code of 08.

**Corrective Action:** Ask the INCONTROL administrator to break the New Day procedure into more steps, with each step processing a maximum of 500 missions in the mission order list. After the problem is solved, rerun the New Day procedure.

**CTD028W** INDEX EXISTS IN GLOBAL INDEX DATABASE, USE FORCE PARAMETER TO ADD IT AGAIN

**Explanation:** The CTVUPGDB utility is trying to add an index that is already in the Global Index database. The CTD029I message, which follows the current message, provides details about the index that caused the error.

The index is not processed.

**Corrective Action:** To replace values in an existing index, run the CTVUPGDB utility with the FORCE input parameter set to YES.
CTD029I USER *userName*, REPORT *reportName*, JOBNAME *jobName*, JOBID *jobId*, ODATE *odate*

**Explanation:** This information message provides detailed information about the situation that caused the CTD028W message.

**Corrective Action:** No action is required.

CTD029S INTERNAL ERROR IN CTDCMI

**Explanation:** Internal error in the CTDCMI module.

Possible error situations include:

- CLISTs that schedule missions manually - for more information, see the *INCONTROL for z/OS Administrator Guide*
- New Day procedure - for more information, see the *INCONTROL for z/OS Administrator Guide*
- Force or Order in the Control-D Mission Definition screen
- when Control-M orders a Job Scheduling Table in which the CATEGORY field was already filled in The Active Missions file is not updated. The New Day procedure ends with the return code 08.

**Corrective Action:** Collect the produced trace and contact BMC Customer Support.

CTD030S MISSION ORDER LIST IS EMPTY. DDNAME = *ddName*

**Explanation:** The *ddName* DD statement does not contain any mission order list statements. This message is issued by the New Day procedure.

For more information, see the *INCONTROL for z/OS Administrator Guide* sections on report decollating, printing, backup, and restore missions, and see also the sections describing New Day processing.

Processing of the mission order list terminates with return code 04.

**Corrective Action:** Add missions to be processed to the mission order list and rerun the job.

CTD031E MEMBER *memName* NOT FOUND

**Explanation:** The *memName* member is not in the library. Look for additional messages containing the library name or the DD statement.

This message is produced in one of the following components of Control-D:

- In the New Day procedure, in one of the following cases:
  - The requested mission name is not in library or DD name. For example, when the following statements are in a file referenced by the DAPRTLST DD statement of the CTDNDAY procedure:
    
    290988 CTD.PROD.PRTMIS MORNING1 *FORCE
    290988 *INPUTMORNING1 *FORCE

    If the MORNING1 member is not in the CTD.PROD.PRTMIS library, the CTM680E message is produced. If the MORNING1 member is not in the data set described by the INPUT DD statement, the CTM680E message is produced. See mission scheduling in the *INCONTROL for z/OS Administrator Guide*. 

• A Generic User Name List was coded, but the member name for this list was not in the data set described by the DAGENUSR DD statement. For more information, see the Control-D and Control-V User Guide.

• A calendar to be read from the data set described by the DACAL DD statement was specified.

  ▪ During manual scheduling of a mission using the following CLIST CTDISRQ:

  ▪ The requested mission name is not in the library. For example, during manual scheduling of a Printing Mission with the following parameters:

    PRINT MISSIONS LIBRARY ===> CTD.PROD.PRTMIS
    MISSION NAME ===> MORNING1

    If the MORNING1 member is not found in library CTD.PROD.PRTMIS, the CTM680E message is produced.

    ▪ A Generic User Name List was coded, but the member name for this list was not in the data set described by DD statement DAGENUSR. For more information, see the Control-D and Control-V User Guide.

    ▪ A calendar was specified to be read from the data set described by the DACAL DD statement.

    ▪ During an attempt to schedule a decollating mission using the CATEGORY Control-M Job Production Parameter, the memName member in the Control-D Report Decollating Mission library was not found. For more information, see the CATEGORY basic scheduling parameter in the Control-M for z/OS User Guide.

The system action depends on the component that issued the message, as follows:

  ▪ New Day procedure - The mission is not placed on the Active Missions file. Processing of the other missions continues.

  ▪ Scheduling a mission manually using CLISTs - The mission is not placed on the Active Missions file.

  ▪ Control-M - The job is placed on the Active Jobs file, but the decollating mission is not placed on the Active Missions file.

**Corrective Action:** The correct response depends on the component that issued the message, as follows:

  ▪ New Day procedure -

    ▪ If the requested mission name is not found in the library or DD name, determine the correct name of the mission, and add this mission to the library, if necessary. Use the appropriate CLIST to schedule the mission manually.

    ▪ If the Generic User Name List member is not found, determine the correct name of the member, and add this member to the library, if necessary. Use the appropriate CLIST to schedule the mission manually.

    ▪ If the calendar member is not found, determine the correct name of the calendar, and add this member to the library if necessary. Use the appropriate CLIST to schedule the mission manually.

    ▪ If the error occurred during scheduling of a mission manually using CLISTs, take the same action as for A.
If the error occurred in Control-M, the member is not in the library. Add a decollating mission with the name of the member displayed in the message to the Decollating Mission library, or erase the CATEGORY screen entry from the Control-M Scheduling Definition. Then schedule this job using the CTDMSRQ CLIST.

CTD031I TO GLOBAL INDEX DATABASE WERE ADDED: reportsQuantity REPORTS, indexQuantity INDEXES, indexValueNum INDEX VALUES

Explanation: This information message describes data that was added to the Global Index database.
Corrective Action: No action is required.

CTD032E ERROR IN CARD: text
Explanation: This message displays the erroneous data card referred to by the message CTD145E.
Corrective Action: No action is required.

CTD033E INVALID ORIGINAL SCHEDULING DATE
Explanation: The original scheduling date in this mission order list statement is in error. The New Day procedure issues this message.

For more information, see the sections on report decollating, printing, backup and restore missions in the INCONTROL for z/OS Administrator Guide, and see also the sections on New Day processing.

This invalid mission order list statement is bypassed. Other valid mission order list statements are processed. The New Day procedure ends with a return code of 04.
Corrective Action: Correct faulty mission statements, and rerun the New Day procedure.

CTD034E ONE OR MORE MISSIONS ENDED WITH ERRORS
Explanation: One or more mission order list statements is invalid. The New Day procedure issues this message, if at least one CTD032E message was previously issued.

For more information, see the sections on report decollating, printing, backup and restore missions in the INCONTROL for z/OS Administrator Guide, and see also the sections on New Day processing.

The New Day procedure ends with a return code of 04.
Corrective Action: Correct faulty mission statements, and check for any other error messages relating to the New Day procedure. After fixing any problems, rerun the New Day procedure.

CTD034S INTERNAL ERROR CREATING TABLE tableName
Explanation: An internal error occurred in the CTVUPGDB utility. CTVUPGDB did not find the SYSDATA entry in the internal table.

The CTVUPGDB utility ends with a return code of 8.
Corrective Action: Contact your INCONTROL administrator.
CTD035E INDEX tableName HAS INCORRECT LENGTH

**Explanation:** The CTVUPGDB utility tried to add a path that was already in the Global Index database with different length parameters. This message occurs during an attempt to change the length of the index value in the definition of the decollation mission for a path that is already in the Global Index database.

CTVUPGDB continues without adding the values in the indicated path to the Global Index database.

**Corrective Action:** Change the length of the index value in the definition of the decollation mission that is causing the incorrect path or delete the old path from the Global Index database.

CTD036I GLOBAL INDEX HOUSEKEEPING UTILITY STARTED

**Explanation:** This information message indicates that the CTVGICL Global Index housekeeping utility started.

**Corrective Action:** No action is required.

CTD037I GLOBAL INDEX HOUSEKEEPING UTILITY ENDED

**Explanation:** This information message indicates that the CTVGICL Global Index housekeeping utility ended.

**Corrective Action:** No action is required.

CTD038I SEARCHING THE ACTIVE AND MIGRATED USER FILES

**Explanation:** This information message indicates that the CTVGICL Global Index housekeeping utility started searching active and migrated user files. Use this message to calculate how long each stage of the utility takes.

**Corrective Action:** No action is required.

CTD039I DELETING VSA ENTRIES

**Explanation:** This information message indicates that the CTVGICL Global Index housekeeping utility started deleting VSA entries from the Global Index database. Use this message to calculate how long each stage of the utility takes.

**Corrective Action:** No action is required.

CTD041S SMFWTM RETURNED RC= 4 - SMF RECORD TOO LONG

**Explanation:** Highlighted, unrollable message.

Control-D attempted to write an SMF record which could not fit completely in an SMF data set.

The user modified Control-D exit CTDX006, but moved an incorrect value to the SMFLEN field (DSECT CTDUSMF). This field contains the length of the SMF record.

The SMF record is not written, but Control-D continues processing. Control-D sets an internal indication that a permanent error is present on SMF recording, and will not continue to attempt SMF recording. From this point on, instead of writing to SMF, the SMF049I message is written to the IOA Log. This log message is a replacement for SMF recording, and can be entered into SMF after the problem is fixed.
Corrective Action: Correct the problem in CTDX006, assemble and link-edit this exit, and bring down Control-D. When Control-D is brought up again, SMF recording will resume.

CTD042I PATH DELETED: pathName

Explanation: This information message indicates that the CTVGICL Global Index utility deleted the specified path from the Global Index database.

Corrective Action: No action is required.

CTD042S SMFWTM RETURNED RC= 8 - SMF RECORD TOO SHORT

Explanation: Highlighted, unrollable message.

Control-D attempted to write an SMF record which is smaller than 18 characters long.
The user modified the Control-D Exit CTDX006, but moved an incorrect value to the SMFLEN field (DSECT CTDUSMF). This field contains the length of the SMF record.
The SMF record is not written, but Control-D continues processing. Control-D sets an internal indication that a permanent error is present on SMF recording, and will not continue to attempt SMF recording. From this point on, instead of writing to SMF, the SMF049I message is written to the Control-D log. This log message is a replacement for SMF recording, and can be entered into SMF after the problem is fixed.

Corrective Action: Correct the problem in CTDX006, assemble and link-edit this exit, and bring down Control-D. When Control-D is brought up again, SMF recording will resume.

CTD043E ERROR IN DELPATH FOR pathName RC rc

Explanation: The DELPATH Global Index function could not delete the specified path. CTVGICL invokes the DELPATH function to delete paths.

DELPATH skips the path that caused the error and continues to delete the next path.

Corrective Action: This error message may be issued because the PATH to be deleted is in use when DELPATH tries to delete it. Check other messages for the job to identify and fix any errors. For possible return code values and their meanings, see the CTD010E message. Rerun the CTVGICL utility.

CTD043S SMFWTM RETURNED RC= 16 - SMF IS NOT ACTIVE

Explanation: Highlighted, unrollable message.

Control-D attempted to write an SMF record, but SMF is not active.
The SMF record is not written, but Control-D continues processing. Control-D sets an internal indication that a permanent error is present on SMF recording, and will not continue to attempt SMF recording. From this point on, instead of writing to SMF, the SMF049I message is written to the IOA Log. This log message is a replacement for SMF recording, and can be entered into SMF after the problem is fixed.

Corrective Action: Initiate SMF recording, then bring down Control-D. When Control-D is brought up again, SMF recording will resume.
CTD044E parmName PARAMETER INVALID. SHOULD BE AFTER PATH PARAMETER

Explanation: The parmName input parameter for the CTVUPGDB Global Index housekeeping utility is in the wrong position. The ALT and BASELEN parameters may be specified only once each and must appear after the PATH parameter because they refer to a specific path.

Corrective Action: Fix the input parameters in the JCL and rerun the job.

CTD044S SMFWTM RETURNED RC= 20 - SMF EXIT IEFU83 SUPPRESSED THE RECORD

Explanation: Highlighted, unrollable message.

Control-D attempted to write an SMF record, but the IEFU83 SMF exit suppressed the record.

The SMF record is not written, but Control-D continues processing. Control-D sets an internal indication that a permanent error is present on SMF recording, and will not continue to attempt SMF recording. From this point on, instead of writing to SMF, the SMF049I message is written to the IOA Log. This log message is a replacement for SMF recording, and can be entered into SMF after the problem is fixed.

Corrective Action: Correct the IEFU83 SMF exit to allow Control-D to write SMF records. When Control-D is brought up again, SMF records will resume.

CTD045S SMFWTM RETURNED RC= 24 - THE SMF FILES ARE FULL

Explanation: Highlighted, unrollable message.

Control-D attempted to write an SMF record, but the SMF files are full.

The SMF record is not written, but Control-D continues processing. Control-D will write the SMF049I message to the IOA Log file. This log message is a replacement for SMF recording, and can be entered into SMF later.

Control-D will keep attempting to write to the SMF file. If the SMF file is still full, the SMF049I message will be written to the log.

Please note that Control-D does not have to be taken down. As soon as room is found on an SMF file, SMF recording will take place automatically.

Corrective Action: The operator should clear SMF files according to the conventions of the site. As soon as this is done, Control-D will automatically continue with SMF recording.

CTD045W NO RECORDS WERE ADDED TO THE GLOBAL INDEX DATABASE

Explanation: The CTVUPGDB Global Index housekeeping utility did not add any records to the Global Index database.

The CTVUPGDB utility continues processing.

Corrective Action: To add records to the Global Index database, correct the input parameters in the JCL for the CTVUPGDB utility and rerun it.
CTD046S BLDL/LOAD FAILED FOR THE MODULE "modName"

Explanation: This is one of two messages with the same ID, but different text.
Loading of the modName module failed.
Possible causes are:
- IOA Load library is not in the load modules search list (STEPLIB + Linklist).
- There is insufficient memory.
- There is some other system-oriented reason, which may be found in the syslog.

Execution might stop.
Corrective Action: Prepare the Control-M monitor full output and contact BMC Customer Support.

CTD046S INTERNAL PROBLEM IN MVS. SMF RECORD NOT WRITTEN

Explanation: This is one of two messages with the same ID, but different text.
Highlighted, unrollable message.
Control-D attempted to write an SMF record, but there is an internal problem in MVS.

This is due to one of the following return codes from MVS:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>26</td>
<td>Record is not currently being recorded.</td>
</tr>
<tr>
<td>40</td>
<td>Buffer storage caused data to be lost.</td>
</tr>
<tr>
<td>44</td>
<td>SVC 83 unable to establish recovery.</td>
</tr>
</tbody>
</table>

For the return code, refer to the SMF047S message.
The SMF record is not written, but Control-D continues processing. Control-D sets an internal indication that a permanent error is present on SMF recording, and will not continue to attempt SMF recording. From this point on, instead of writing to SMF, the SMF049I message is written to the IOA Log. This log message is a replacement for SMF recording, and can be entered into SMF after the problem is fixed.

Corrective Action: Call the system programmer. After the problem is fixed by the system programmer, bring down Control-D. When Control-D is brought up again, SMF recording will resume.

CTD047S RC=rc RECEIVED FROM MACRO SMFWTL

Explanation: Highlighted, unrollable message.
Control-D is unable to write SMF records. Possible causes are:
The SMF046S message was issued. This message specifies the return code issued by SMF.

An unknown return code was issued by SMF. This message specifies that return code.

The SMF record is not written, but Control-D continues processing. Control-D sets an internal indication that a permanent error is present on SMF recording, and will not continue to attempt SMF recording. From this point on, instead of writing to SMF, the SMF049I message is written to the Control-D log. This log message is a replacement for SMF recording, and can be entered into SMF after the problem is fixed.

**Corrective Action:** Call the INCONTROL administrator.

**CTD048S** THE Control-D SMF RECORDING IS TERMINATED - PLEASE TAKE CORRECTIVE ACTION

**Explanation:** Highlighted, unrollable message.

Control-D is unable to write SMF records.

This message is issued whenever a permanent error is present on SMF recording. This message is issued for the SMF041S through SMF050S messages.

The SMF record is not written, but Control-D continues processing.

**Corrective Action:** Refer to the SMF041S through SMF050S messages.

**CTD049I** MISSIONS PROCESSING STARTED

**Explanation:** This information message indicates that processing of missions started.

This message is issued by:

- CLISTs which schedule missions manually - for more information, see the *INCONTROL for z/OS Administrator Guide*.
- New Day procedure - for more information, see the relevant section of the *INCONTROL for z/OS Administrator Guide*.

**Corrective Action:** No action is required.

**CTD050S** INVALID VALUE val IN THE INSTALLATION PARAMETER "SMF"

**Explanation:** Highlighted, unrollable message.

Control-D attempted to write an SMF record, but an invalid value (val) is present on the SMF field in CTDPARM.

The SMF field in CTDPARM can contain the following values:

- Character string, length of three, value NO.
- A 3-digit number from 128 through 255.

The SMF record is not written, but Control-D continues processing. Control-D sets an internal indication that a permanent error is present on SMF recording, and will not continue to attempt SMF recording. From this point on, instead of writing to SMF, the SMF049I message is written to the IOA Log. This log message is a replacement for SMF recording, and can be entered into SMF after the problem is fixed.

**Corrective Action:** Call your INCONTROL administrator.
CTD051S ALL OF THE MISSIONS HAVE ENDED WITH ERRORS

Explanation: All mission order list statements were flagged as being invalid. The New Day procedure issues this message, if CTD032E messages were previously issued for all the mission order list statements or if CTD032E messages were previously issued because scheduling was cancelled by user exit CTDX001.

See sections on report decollating, printing, backup and restore missions in the INCONTROL for z/OS Administrator Guide. See also New Day processing.

The New Day procedure ends with a return code of 08.

Corrective Action: Correct all mistakes in mission statements and rerun the New Day procedure.

CTD052E ERROR IN LIBRARY= libName MEMBER= memName CATEGORY= catName

Explanation: This message indicates the erroneous mission definition. The erroneous data it contains are displayed in the preceding messages.

The erroneous mission is not entered into the Active Mission file.

Corrective Action: Correct the mission definition and re-order it.

CTD053S MODULE modName ABENDED - CODE = abCode

Explanation: An abend occurred in the modName module.

Certain Control-D functions may fail. There will probably be additional messages on the system log or on the IOA log.

Corrective Action: If possible, correct the cause of the abend. Otherwise, call BMC Software Customer Support.

CTD054S OPEN OF USER DATE CONTROL-RECORD FAILED - DDNAME "DACHK"

Explanation: Open of the file containing the User Date Control Record failed (the DACHK DD statement).

This message is issued by the CTDRRQ, CTDPRQ, CTDBRQ, or CTDSRQ program, which is activated by the New Day procedure.

This error may be due to one of the following:

- The DACHK DD statement is missing.
- The data set (member) described by the DACHK DD statement does not exist.

The New Day procedure ends with a return code of 08.

Corrective Action: Correct the JCL for the New Day procedure and rerun it.

CTD055S DATE CONTROL-RECORD IS EMPTY

Explanation: The data set described by the DACHK DD statement is empty. This message is issued by the CTDRRQ, CTDPRQ, CTDBRQ, or CTDSRQ program, which is activated by the New Day procedure.

The New Day procedure ends with a return code of 08.

Corrective Action: Correct the JCL for the New Day procedure and rerun it.
CTD056S PREVIOUS RUN OF \textit{pgm} DID NOT FINISH OK

\textbf{Explanation:} A previous run of the New Day procedure probably abended. This message is issued by the \textit{pgm} program (CTDRRQ, CTDPRQ, CTDBRQ, or CTDSRQ), which is activated by the New Day procedure. Before a \textit{pgm} program starts operating, it compares Date-2 with Date-3 (Date-4 with Date-5, and so on). If they are not equal, a previous run of the \textit{pgm} program of the New Day procedure probably abended. See the Date Control record in the \textit{INCONTROL for z/OS Administrator Guide}.

The New Day procedure ends with a return code of 08.

\textbf{Corrective Action:} Correct the value of the Date Control record and rerun the job. Make sure the same mission is not scheduled twice on the same day.

CTD057S LAST MONTHLY SCHEDULING DATE GREATER THAN THE CURRENT ORIGINAL SCHEDULING DATE

\textbf{Explanation:} Invalid current (or last) original scheduling date. Date-2 (or Date-4/Date-6/Date-8) in the Date Control record is greater than Date-1. Someone probably modified the Date Control record incorrectly (the DACHK DD statement).

For more information, see the Date Control record in the \textit{INCONTROL for z/OS Administrator Guide}.

The New Day procedure ends with a return code of 08.

\textbf{Corrective Action:} Correct the Date Control record (the DACHK DD statement), and rerun the New Day procedure.

CTD058S LAST MONTHLY SCHEDULING DATE WAS MORE THAN 28 DAYS AGO, CHECK IT

\textbf{Explanation:} The current or last original scheduling date is more than 28 days ago. Date-1 in the Date Control record is greater than Date-2, Date-4, Date-6, or Date-8, by 28 days.

Possible causes are:
- The New Day procedure has not been used for more than 28 days. Correct the date in the record to “yesterday.”
- The contents of the Date Control record may have been modified incorrectly.

For details about the Date Control record, see the \textit{INCONTROL for z/OS Administrator Guide}.

The New Day procedure ends with a return code of 08.

\textbf{Corrective Action:} Correct the DACHK DD statement in the Date Control record, and rerun the New Day procedure.

CTD059W LIBRARY \textit{lib} SHOULD BE COMPRESSED

\textbf{Explanation:} The \textit{lib} library, which is specified in the PDS parameter, contains fewer free tracks than the number specified in the MINIMUM parameter.

The PDS and MINIMUM parameters are used for automatically compressing a library. If the MINIMUM condition is satisfied, CTDRRQ, CTDPRQ, CTDBRQ, or CTDSRQ issues this message, and the mission is placed in the Active Missions file. For more details, see the \textit{Control-D and Control-V User Guide}. 

293
The mission is placed on the Active Missions file.

**Corrective Action:** No action is required.

**CTD061S INVALID YEAR IN DATE CONTROL-RECORD**

**Explanation:** Either an invalid year was specified in the Date Control record used by the New Day procedure, or the current year is not defined in the calendar specified in the mission.

This message can be issued in either of the following cases.

- If the New Day procedure is running, Date1 in the Date Control record does not contain a valid year, or the year is not yet (or no longer) supported by the Control-D release currently in use or the DACHK DD statement does not point to the correct file.
- If a mission is running, the current year is not defined in the calendar specified in the mission.

The program terminates with a return code of 08.

**Corrective Action:** If the message is issued when the New Day procedure is running:

- Make sure DD statement DACHK points to the correct file.
- Make sure that Date1 in the Date Control Record contains a valid year.
- Make sure that the specified year is supported by the Control-D release.

If the message is issued when a mission is running, either add the current year to the calendar specified in the mission, or correct the calendar specification in the mission by specifying a different or no calendar.

**CTD062S INVALID ORIGINAL SCHEDULING DATE IN DATE CONTROL-RECORD (POSITIONS 1-6)**

**Explanation:** Invalid original scheduling date in the User Date Control record (positions 1-6). This error message is issued by the CTDRRQ, CTDPRQ, CTDBRQ or CTDSRQ program, which is activated by the New Day procedure.

Valid formats are mmddyy or ddmmyy. The contents of the DACHK DD statement in the Date Control record may have been incorrectly modified.

For more details see the *INCONTROL for z/OS Administrator Guide*.

The CTDRRQ, CTDPRQ, CTDBRQ, or CTDSRQ program ends with a return code of 08.

**Corrective Action:** Correct the DACHK DD statement in the Date Control record, and rerun the New Day procedure.

**CTD063S INVALID CURRENT (OR LAST) ORIGINAL SCHEDULING DATE OF type MISSIONS**

**Explanation:** Invalid original scheduling date in the Date Control record for *type* missions.

In this message, *type* missions are those of the following types:
This message is issued by the appropriate CTDQQ, CTDPRQ, CTDDBQ, or CTDSRQ program, which is activated by the New Day procedure.

Date-2, Date-4, Date-6, or Date-8 in the Date Control record is invalid. The valid format is mmddyy or ddmmyy. The contents of the DACHK DD statement in the Date Control record may have been incorrectly modified.

For more details, see the *INCONTROL for z/OS Administrator Guide*.

The New Day procedure ends with a return code of 08.

**Corrective Action:** Correct the DACHK DD statement in the Date Control record and rerun the New Day procedure.

---

CTD065E SEVERE ERROR IN CALENDAR calName OR YEAR NOT FOUND IN CALENDAR

**Explanation:** Either the year is not defined in the calendar, or the calendar was corrupted.

This message is issued by:

- CLISTs which schedule missions manually
- New Day procedure
- The Online Facility when a FORCE or ORDER is issued from the Mission List screen.

The Active Missions file is not updated with this mission. If a New Day procedure is running, processing of other missions continues.

**Corrective Action:** Check the contents of the mission and the calendar.

---

CTD070E CANNOT MIX "# OF DAYS TO KEEP" WITH "# OF GENERATIONS TO KEEP"

**Explanation:** Both # OF DAYS TO KEEP and # OF GENERATIONS TO KEEP are specified. Only one of these options may be specified. They cannot be combined in one backup mission.

**Corrective Action:** Select only one of the options and blank out the other option.

---

CTD071S BLDL FAILED FOR PROGRAM pgm

**Explanation:** The pgm Control-D internal module is not present on the IOA Load library.

The Control-D monitor is shut down.

**Corrective Action:** Determine who deleted the pgm module and why. Restore this module from a backup tape of the IOA Load library. Then bring up Control-D.
CTD073E PLEASE FILL IN "# OF DAYS TO KEEP" OR "# OF GENERATIONS TO KEEP"

Explanation: There is no value for # OF DAYS TO KEEP or # OF GENERATIONS TO KEEP. A value greater than zero must be specified for one and only one of the fields.

Corrective Action: Specify a value greater than zero for one of the fields.

CTD077E SECONDARY SKELETON NAME MUST BE DIFFERENT THAN MIGRATION MISSION NAME

Explanation: The same name is specified for the secondary skeleton and the migration mission. The name of the secondary skeleton must be different from that of the migration mission.

Corrective Action: Change the secondary skeleton name.

CTD078E MEDIA NAME IS NOT FOUND IN IOASPRM MEMBER

Explanation: A migration target media that is not defined in the IOASPRM member is specified in the IOA Parm library. Each target media specified in the migration mission definition must be defined with media-specific parameters (NAME, TYPE, DSNPREF, UNITNAME, DEVADDR, and so on) in the IOASPRM member.

For information about these parameters, see the Control-V chapter in the INCONTROL for z/OS Installation Guide.

The migration mission is not saved or updated.

Corrective Action: Verify that the target media is spelled correctly in the migration mission definition. Specify a target media which is defined in the IOASPRM member, or define the desired target media in the IOASPRM member, and then use that target media in the migration mission definition.

CTD079E AGE MUST BE MORE THAN PREVIOUS AGE + REFRESH DAYS (IF ANY)

Explanation: A value for the AGE parameter was not larger than the value in the AGE parameter plus the value, if any, in the REFRESH EVERY parameter for the preceding stage.

At least one migration process and one refresh process (if any is specified) must be performed for each stage. Therefore, the age of the report, in days at each migration, must be greater than its age at the previous migration, and greater than its age at a subsequent refresh operation, if one was specified for the previous migration).

The migration mission is not saved or updated.

Corrective Action: Modify the AGE parameter, or the REFRESH EVERY parameter, or both, to comply with the age requirements.

CTD080E MEDIA NAME MUST BE SPECIFIED

Explanation: A migration mission is missing the MEDIA NAME subparameter. The MEDIA NAME subparameter must be specified for primary migration. If a migration stage has secondary migration, the MEDIA NAME subparameter must also be specified for secondary migration.

The migration mission is not saved or updated.
Corrective Action: In the MEDIA NAME subparameter, specify a target media which is defined in the IOASPRM member in the IOA PARM library.

CTD081E AGE IN DAYS MUST BE LESS THAN RETENTION DAYS

Explanation: The AGE subparameter was not smaller than the value in the RETENTION DAYS parameter. When a report reaches the age specified in the RETENTION DAYS parameter, it is deleted. Therefore, a report cannot migrate on that day or any subsequent day.

The migration mission is not saved or updated.

Corrective Action: Modify the AGE subparameter or the RETENTION DAYS parameter, or both, so that the value in the AGE subparameter is less than the value in the RETENTION DAYS parameter.

CTD082E AGE IN DAYS FOR MIGRATION MUST BE SPECIFIED

Explanation: A migration mission is missing an AGE subparameter. The age at which the report will migrate must be specified for each migration stage. The age is specified in days from the date the report was created.

The migration mission is not saved or updated.

Corrective Action: In the AGE subparameter, specify the age of the report in days when migration should occur.

CTD083E FIRST MIGRATION LEVEL MUST BE SPECIFIED

Explanation: A migration mission is missing mandatory parameters for migration stage 01. Parameters must be specified for migration stage 01.

The migration mission is not saved or updated.

Corrective Action: Specify the AGE and PRIMARY MEDIA NAME mandatory parameters for stage 01 migration.

CTD084E MIGRATION LEVELS MUST BE CONSECUTIVE. PLEASE FILL IN PREVIOUS LEVEL

Explanation: There is no block containing the STAGE parameter and its subparameters. Migration stage numbers from 1 through 10 are generated automatically. You must define migration stages in sequence without skipping a stage.

The migration mission is not saved or updated.

Corrective Action: Specify the migration path stages in sequential order.

CTD085E REFRESH DAYS MUST NOT EXCEED RETENTION DAYS MINUS AGE

Explanation: The number of days specified for the refresh interval in the REFRESH EVERY subparameter exceeds the difference between the age at time of migration and the age at which the report is deleted (RETENTION DAYS). The media on which a report is stored cannot be refreshed after the age at which the report should be deleted.

The migration mission is not saved or updated.
Corrective Action: Respecify one or more of the following
- the RETENTION DAYS parameter
- the AGE subparameter
- the REFRESH EVERY subparameter

so that the value in the REFRESH EVERY subparameter does not exceed the difference between the values specified in the AGE subparameter and the RETENTION DAYS parameter.

CTD0A1E PARENT NAME AND PARENT LEVEL MUST BE BOTH FILLED IN OR BOTH BLANKS

Explanation: Either the PARENT NAME or the PARENT LEVEL is defined, but not both fields. PARENT NAME and PARENT LEVEL fields must be specified together if they are specified at all.
The user is prompted to correct the PARENT field.
Corrective Action: Specify the missing value, or blank out both fields.

CTD0A2I FORCED BROWSE DUE TO USER EXIT SPECIFICATION

Explanation: This information message indicates that an attempt was made to edit a Recipient Tree member that may only be browsed.
User exit CTDX021 specifies that the requested Recipient Tree member may only be browsed. In Browse mode, no changes may be made to the tree member. However, all recipients may be selected, and the member may perform a tree validity check using the CHKTREE command.
The Recipient Tree member is accessed in Browse mode.
Corrective Action: No action is required.

CTD0A3E OPTIONS "D" "I" AND "P" ARE INVALID UNDER BROWSE

Explanation: An invalid option was entered while accessing a Recipient Tree member under Browse mode. The only valid option is S (Select). The D (Delete), I (Insert) and P (Parent) options are not valid in Browse mode.
The requested option is not performed.
Corrective Action: No action is required.

CTD0A4E PLEASE FILL IN AUTHORIZE BEFORE FILLING IN $SYSDATA

Explanation: A Y or N was entered in the $SYSDATA field without specifying a user name in the AUTHORIZE field.
The AUTHORIZE field is used to specify who may view the reports of the recipient. Additionally, the $SYSDATA field on the same line is used to indicate whether or not the authorized user may also view $SYSDATA records. The $SYSDATA field must be blank if no user is specified in the AUTHORIZE field.
Corrective Action: Fill in a user name in the AUTHORIZE field, or blank out both fields.
Messages CTD100 through CTD1xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTD100I  CONTROL-D MONITOR STARTED

**Explanation:** This is a general information message which is issued when the Control-D monitor is started.

**Corrective Action:** No action is required.

CTD102E  INVALID PARM GIVEN TO MONITOR. PARM CAN BE " " OR "1" FOR PRIMARY MONITOR AND "2-9" FOR SECONDARY MONITORS

**Explanation:** Highlighted, unrollable message.

The value of the PARM field in the Control-D monitor procedure or the secondary monitor procedure is invalid.

The Control-D monitor or the secondary monitor shuts down.

**Corrective Action:** Check the value defined in the CTDMON# field in CTDPARM. Change the PARM field in the appropriate procedure to correspond to this value and start Control-D.

For example, for the CONTROL2 procedure: `/CONTROLD EXEC PGM=CTMMON,PARM='2'`

CTD103E  INVALID MODIFY PARAMETER. VALID PARAMETERS ARE:

**Explanation:** An invalid parameter was passed to the File Transfer monitor by an operator modify command. A list of valid modify parameters is displayed on the operator console following this message.

The operator modify command is rejected.

**Corrective Action:** Enter an operator modify command with valid parameters.

CTD107I  SHUT DOWN UPON REQUEST FROM OPERATOR

**Explanation:** This information message is a Control-D monitor shut down message when the shut down was requested by the operator.

Control-D monitor shuts down.

**Corrective Action:** No action is required.

CTD113W  CONTROL-D MONITOR SHUTTING DOWN FOR A NEW DAY

**Explanation:** Highlighted, unrollable message.

Normal message of Control-D monitor shutting down for the New Day procedure.

The Control-D monitor shuts down once a day at a specific time for the New Day procedure. For more information on the New Day procedure, see the *Control-D and Control-V User Guide*.

Control-D monitor will shut down and start the New Day procedure (CTDNDAY). When it finishes executing, it will start the Control-D monitor again.

**Corrective Action:** No action is required.
CTD116S OPEN OF ACTIVE MISSIONS FILE FAILED - DDNAME "DAAMF"

**Explanation:** Highlighted, unrollable message.

Open of Control-D Active Missions file failed (DD statement DAAMF). Possible causes are:

- The DAAMF DD statement is missing.
- The data set described by the DAAMF DD statement is not the Control-D Active Missions file.
- The data set described by the DAAMF DD statement is the Control-D Active Missions file, but it is of another Control-D monitor, or of a different Control-D version.

The Control-D monitor will shut down.

**Corrective Action:** Correct the JCL for the Control-D monitor.

CTD117S ACTIVE MISSIONS FILE IS BEING FORMATTED NOW

**Explanation:** Highlighted, unrollable message.

Control-D monitor has been brought up while the Active Missions file is under formatting.

The New Day procedure did not finish formatting the file, either because it was still working, or because it abended. It is impossible to start the Control-D monitor until the New Day procedure finishes executing successfully.

The Control-D monitor shuts down.

**Corrective Action:** Check how the New Day procedure finished executing. All the problems of the New Day procedure must be corrected before restarting the Control-D monitor. Note, however, that if an IPL occurred during the previous run of the New Day procedure, it will correct itself when restarted. Therefore, it can be restarted without correction.

CTD118S FILE ALLOCATED TO DDNAME "DAAMF" IS NOT THE EXPECTED ACTIVE MISSIONS FILE

**Explanation:** Highlighted, unrollable message.

The data set described by the DAAMF DD statement is not the expected Control-D Active Missions file. This could be due to one of the following:

- The file allocated to the DAAMF DD statement is not the Control-D Active Missions file.
- The file allocated to the DAAMF DD statement is the Control-D Active Missions file, but it is of a different version or of a different Control-D monitor.

Control-D monitor will shut down.

**Corrective Action:** Correct JCL for the Control-D monitor.

CTD119S ACTIVE MISSIONS FILE IS DAMAGED - NOTIFY THE IOA ADMINISTRATOR

**Explanation:** Highlighted, unrollable message.

The contents of the Active Missions file have been corrupted.
The Active Missions file is marked as FORMAT during New Day procedure processing, and marked as FREE at successful completion. Currently, the file is not marked as FORMAT, nor as FREE.

Control-D monitor will shut down.

**Corrective Action:** Call your system programmer for assistance. Examine messages issued during the NEWDAY procedure, take appropriate corrective action, and then rerun the NEWDAY procedure. If the problem recurs, take appropriate action on the Active Mission file: To compress or copy the Active Mission file, use the CTDCAMF utility. To reformat the Active Mission file use the CTDFRAMF utility.

**CTD120I** CONTROL-D MONITOR SHUTTING DOWN

**Explanation:** Highlighted, unrollable message.

This information message is a general Control-D message issued when shutting down the Control-D monitor by a P command, or on certain internal Control-D events.

The IOA Log should contain additional messages concerning the reason for shutting down.

Control-D monitor shuts down.

**Corrective Action:** No action is required.

**CTD121S** CONTROL-D MONITOR ENDED WITH ERROR

**Explanation:** Highlighted, unrollable message.

Control-D monitor ended with an error. The IOA Log should contain additional messages concerning the specific error.

Control-D monitor shuts down.

**Corrective Action:** Check the IOA Log or the computer log for the reason. Call the system programmer for assistance if needed. Try to start the Control-D monitor again as soon as possible.

**CTD122W** YOUR CONTROL-D IS ALREADY ACTIVE. QNAME qName

**Explanation:** Highlighted, unrollable message.

**Corrective Action:** No action is required.

**CTD123I** CONTROL-D INTERVAL IS SET TO nn SECONDS

**Explanation:** This information message is produced as a result of setting a Control-D sleeping interval by an operator command.

For more details, see the INCONTROL for z/OS Administrator Guide.

Control-D monitor will "wake up" every nn seconds and check what it has to do.

**Corrective Action:** No action is required.

**CTD124E** INTERVAL MUST BE A TWO DIGIT NUMBER BETWEEN 03-99 SECONDS

**Explanation:** An invalid Control-D sleeping interval was specified in an operator modify command. The Control-D sleeping interval must be a 2-digit number from 03 through 99 seconds. For more details, see the INCONTROL for z/OS Administrator Guide.
Corrective Action: Enter a valid interval.

CTD125I  validModifyParm
Explanation: This message displays a valid parameter that can be used in MODIFY.
Corrective Action: No action is required.

CTD126I  NEW EXIT  exitName  LOADED
Explanation: This information message indicates a successful execution of the EXIT REFRESH operator modify command.
A new copy of a Control-D user exit was loaded successfully.
For more information, see the INCONTROL for z/OS Administrator Guide.
Corrective Action: No action is required.

CTD127I  NEWDEST COMMAND ACCEPTED
Explanation: This information message is the result of acceptance of an operator NEWDEST command passed to the Control-D monitor.
The next time that the Control-D monitor tries to SHOUT a message, it will load a new dynamic destination table.
Corrective Action: No action is required.

CTD128S  RECIPIENT TREE WAS NOT LOADED BECAUSE OF ERROR - CONTROL-D IS TERMINATING
Explanation: The loading of the Control-D Recipient Tree was unsuccessful.
As part of its initialization processing, the Control-D monitor attempts to load the Recipient Tree. However, the loading of the Recipient Tree was not successful.
The Control-D monitor will shut down.
Corrective Action: There are additional messages describing the problem on the IOA Log and the system log.

CTD129I  ERROR WHILE LOADING EXIT  exitName. EXIT NOT LOADED
Explanation: This information message indicates that the Control-D monitor failed to load the exitName user exit.
Common reasons for failure include:
- The IOA Load library is in the Linklist, and someone has updated the library without performing a refresh for the LLA.
- The last assembly or linkage of exitName failed.
- There is insufficient memory to load this exit.
The Control-D monitor will continue to run. However, the exitName user exit will not be activated.
**Corrective Action:** Check the system log for the reason for the failure.

**CTD12AI CONTROL-D MONITOR IS SUSPENDING BY OPERATOR REQUEST**

**Explanation:** Highlighted, unrollable message.

This information message indicates that the Control-D monitor is being suspended while the New Day procedure is running in internal mode. The Control-D monitor is suspended once a day at a specific time for the New Day procedure when it runs in internal mode. For more information on the New Day procedure, see the INCONTROL for z/OS Administrator Guide.

The Control-D monitor suspends all mission processes. When it finishes, message MON12CI is issued.

**Corrective Action:** No action is required.

**CTD12BI CONTROL-D MONITOR IS SUSPENDING BY OPERATOR REQUEST**

**Explanation:** Highlighted, unrollable message.

This information message indicates that the Control-D monitor is being suspending due to an operator request.

The Control-D monitor suspends all mission processes. When it finishes, message MON12CI is issued.

**Corrective Action:** No action is required.

**CTD12CI CONTROL-D MONITOR SUSPENDED**

**Explanation:** Highlighted, unrollable message.

This information message indicates that the Control-D monitor is being suspended while the New Day procedure is running in internal mode.

The Control-D monitor has started the New Day subtask. When it finishes executing, the monitor will resume and start the New Day procedure (CTDNDAY).

**Corrective Action:** No action is required.

**CTD12DI CONTROL-D MONITOR RESUMED**

**Explanation:** Highlighted, unrollable message.

This information message indicates that the Control-D monitor has resumed after being suspended for the New Day procedure or by operator request.

The Control-D monitor resumes all mission processes.

**Corrective Action:** No action is required.

**CTD12EI CONTROL-D NEW DAY TIME STAMP IS** $timeStamp$

**Explanation:** This information message indicates that the New Day process has set the $timeStamp$ time stamp as the time of a new day.

The $timeStamp$ timestamp is a hexadecimal representation of the time-of-day clock value used for synchronization for the CTDDELRP utility and for backup missions. It is displayed for tracking and debugging purposes.
For an explanation of the synchronization process, see message MONA59I.

**Corrective Action:** No action is required.

**CTD12FE UNABLE TO UPDATE THE MISSION STATUS**

**Explanation:** The Control-D monitor is unable to update the status of a decollation mission, which was suspended during a New Day procedure that was executing in internal mode. The monitor begins to process such a mission before the New Day procedure begins, but only finishes after the procedure ends. The reason is that the mission was updated outside of the Control-D monitor.

The Control-D monitor continues to run. However, the mission status is not updated.

**Corrective Action:** Restart the Control-D monitor.

**CTD12GS NEWDAY SUBTASK ENDED WITH ERROR**

**Explanation:** A New Day subtask ended with an error or abended.

The Control-D monitor shuts down with user abend 0006. A dump of the abending task which is needed for problem resolution is also included in the output.

**Corrective Action:** No action is required.

**CTD12HS INVALID NEWDAY MODE**

**Explanation:** The incorrect NDAYMODE parameter was specified in the start command for the Control-D monitor or the CTDNDAY procedure.

Valid values are:

- **INT** - internal mode. The Control-D or Control-V monitors execute simultaneously with the New Day procedure.
- **EXT** - external mode. The Control-D monitor starts the New Day procedure, and then shuts down the Control-D monitor or the CTDNDAY procedure.

The Control-D monitor or the CTDNDAY procedure shuts down.

**Corrective Action:** Restart the Control-D monitor or the CTDNDAY procedure with the correct parameter.

**CTD130I COMMAND cmd ACCEPTED FOR PRINTER prtr**

**Explanation:** This information message indicates acceptance of an operator STARTPRT or STOPPRT command passed to the Control-D monitor.

The requested printer is opened (started) or closed (stopped).

**Corrective Action:** No action is required.

**CTD131I TREE WAS NOT LOADED BECAUSE IT IS IN USE BY ONE OF THE SUBTASKS - TRY AGAIN LATER**

**Explanation:** This information message is a result of an operator LOADTREE command passed to the Control-D monitor.
The Recipient Tree is used by several subtasks of the Control-D monitor. One of the subtasks had exclusive control of the Recipient Tree for a short period of time.

The new Recipient Tree is not loaded. Control-D continues using the old Recipient Tree.

**Corrective Action:** Try to load a new Recipient Tree later.

**CTD132E PRINTER prtr IS NOT DEFINED TO CONTROL-D**

**Explanation:** Result of an operator STARTPRT or STOPPRT command passed to the Control-D monitor.

The PRINTER Control-D Installation Parameter defines the logical printers on which Control-D can print. However, the `prtr` printer name is not defined in the PRINTER Installation Parameter.

The requested STARTPRT or STOPPRT function is not performed.

**Corrective Action:** Enter the correct printer name in the STARTPRT or STOPPRT command.

**CTD133I STARTING THE CONTROL-D PRINTERS CONTROL-MONITOR - prtr**

**Explanation:** This information message is issued during normal initialization processing in the Control-D monitor.

The Control-D monitor activates the Printers Control monitor `prtr` as an independent started task.

The Control-D monitor invokes the `prtr` started task. This name is taken from the PRTSTC Control-D Installation Parameter.

**Corrective Action:** No action is required.

**CTD134I WAITING FOR THE CONTROL-D PRINTERS CONTROL-STC (name) TO START**

**Explanation:** This information message indicates that the Printers Control monitor has been activated by the Control-D monitor.

The Control-D monitor waits for the Printers Control started task to start executing. This message can appear more than once. If, after a number of times, the Control-D monitor cannot find the Printers Control monitor, it assumes that it has failed and the Control-D monitor shuts down.

**Corrective Action:** No action is required.

**CTD135E CONTROL-D PRINTERS CONTROL-MONITOR monName ENDED ABNORMALLY. CONTROL-D SHUTTING DOWN**

**Explanation:** Highlighted, unrollable message.

The Printers Control monitor `monName` was shut down due to errors.

The Control-D monitor will shut down.

**Corrective Action:** Check the IOA Log for additional clarification messages on the reason for the shutdown.
CTD136I STOPPING THE PRINTERS CONTROL-MONITOR

Explanation: This information message indicates that a shutdown process has been issued from the Control-D monitor. Before the Control-D monitor shuts itself down, it will shut down the Printers Control monitor first. Control-D will shut down.

Corrective Action: No action is required.

CTD137I WAITING FOR THE PRINTERS CONTROL-STC (name) TO TERMINATE

Explanation: This information message indicates that a shutdown process has been issued from the Control-D monitor. The Control-D monitor has issued the command to shut down the Printers Control monitor, and is now waiting for a response. This message can appear more than once, but not more than 10 times.

Corrective Action: No action is required.

CTD138E WAITING TOO LONG FOR THE PRINTERS CONTROL-STC (name). STC BEING CANCELLED

Explanation: Highlighted, unrollable message.
A shutdown process issued from the Control-D monitor.
The Control-D monitor has issued the command to the Printers Control monitor to shut itself down, but there was no response from the Printers Control monitor.
The Printers Control monitor is cancelled (operator command C name).

Corrective Action: Check the system log, the IOA Log, and the JCL of the Control-D monitor and the Printers Control monitor.

CTD139I GENERIC JOB DECOLLATION IS ACTIVE ON CLASSES (classList)

Explanation: This information message indicates that the Generic decollation from the classList Generic classes is now active. The Control-D monitor issues this message when starting, after new day processing and after successfully executing the STARTGEN command.

Control-D will start decollating sysouts from the classList Generic classes. For more information, see the description of generic processing in the INCONTROL for z/OS Administrator Guide.

Corrective Action: No action is required.

CTD13AE GENERIC DECOLLATION CANNOT BE ACTIVATED. GENCLAS IS NOT DEFINED IN CTDPARM

Explanation: The operator issued the command F CONTROLD,STARTGEN but no generic classes were defined in CTDPARM.
The command is ignored.
Corrective Action: For details on specifying generic classes in CTDPARM, see the Control-D chapter of the INCONTROL for z/OS Installation Guide and proceed accordingly.

CTD13BI PRINTER prtrId DEST dest TYPE type IS OPEN

Explanation: This information message indicates that the prtrId logical printer has opened following a STARTPRT command issued by the operator.

The variables in this message are:

- prtrId - the identity of the logical printer that has opened
- dest - the value of the Dest Printer Definition parameter
- type - the value of the Type Printer Definition parameter

For more information on these Printer Definition parameters, see the Control-D chapter of the INCONTROL for z/OS Installation Guide.

Corrective Action: No action is required.

CTD13CI STOPPING THE MONITOR monName

Explanation: This information message is issued when the monitor stops as a result of receiving the modify command /F CONTROLD,STOP=monName.

Corrective Action: No action is required.

CTD13DE THE MONITOR monName WAS NOT ORIGINALLY ACTIVE.

Explanation: The modify command /F CONTROLD,STOP=monName was issued, but the monName monitor was not activated when Control-D started.

Control-D cannot start a new monitor that was not activated when Control-D started.

The new monitor is not started.

Corrective Action: Correct the value of monName in the modify command.

CTD13EI MQ DECOLLATION IS ACTIVE

Explanation: This information message indicates a successful execution of the STARTMQ operator modify command.

MQ decollation for MQ Queues is now active.

Corrective Action: Control-D will start decollating messages from MQ Queues.

CTD140I GENERIC JOB DECOLLATION IS BEING DEACTIVATED

Explanation: This information message indicates a successful execution of the STOPGEN operator modify command.

Deactivation of Generic decollation from all Generic classes is in process.

Control-D will not start new decollations from Generic classes. Currently executing (decollating) missions will finish the processing of jobs whose output processing has already started.
Corrective Action: No action is required.

CTD141I STARTING THE SECONDARY CONTROL-D MONITOR monName

Explanation: This information message is a normal start message for initialization processing of the monName Control-D monitor.

The Control-D monitor activates the secondary monitor as an independent started task.
The Control-D monitor invokes the started task name, CONTROL?, where ? indicates the number of the monitor.

Corrective Action: No action is required.

CTD142I WAITING FOR THE SECONDARY CONTROL-D MONITOR monName TO START

Explanation: This information message indicates that although a start command has been issued by the Control-D monitor, the monName Control-D secondary monitor has not yet started.

This is due to one of the following:

- JES queues are busy.
- The secondary monitor procedure does not exist in the procedure library (PROCLIB).
- There is a JCL error in the secondary monitor procedure.

If this situation is not corrected, the Control-D monitor makes up to eight (8) attempts to initialize. After eight (8) unsuccessful attempts, the Control-D monitor shuts down.

Corrective Action:

- If JES queues are busy, no action is required.
- If there is a problem with the secondary monitor procedure, correct it, and start Control-D.

CTD143E SECONDARY CONTROL-D MONITOR monName ENDED ABNORMALLY. Control-D SHUTTING DOWN

Explanation: Highlighted, unrollable message.

The monName secondary Control-D monitor ended with errors. The IOA Log should contain additional messages concerning specific errors.

The Control-D monitor and the monName secondary monitor shut down.

Corrective Action: Check the IOA Log and the system log for the cause of the problem. If necessary, call the system programmer for assistance. Try to start the Control-D monitor again as soon as possible.

CTD144I WAITING FOR CONTROL-D SECONDARY MONITOR monName TO TERMINATE

Explanation: This information message indicates that a shutdown process command was issued from the Control-D monitor.
The Control-D monitor has issued a shutdown command to the secondary monitor `monName`, and is now waiting for the secondary monitor to shut down. This message may appear more than once. The secondary monitor will shut down at the end of the currently executing decollation.

**Corrective Action:** No action is required.

**CTD145E LIBRARY= libName MEMBER= memName CONTAINS INVALID DATA**

**Explanation:** The `memName` member in the `libName` library, which should contain a mission definition, actually contains improper mission identification data. The erroneous data card is displayed in message CTD032E, which follows this message.

The erroneous mission is not entered into the Active Mission file.

**Corrective Action:** Correct the mission definition and re-order it.

**CTD145I UNABLE TO READ THE MEMBER CTDPLEX FROM THE CTD PARM LIBRARY. RC= rc. THE SYSPLEX OPTION IS NOT ACTIVE.**

**Explanation:** The CTDPLEX member was not found in the Control-D PARM library.

In this message, `rc` is the error return code. For more information on these codes, see the description of IOAMEM in the *INCONTROL for z/OS Administrator Guide*.

The use of multiple monitors using SYSPLEX support is not activated.

**Corrective Action:** Ensure that the CTDPLEX member is present in the Control-D PARM library.

**CTD145S type MISSION missionName CONTAINS INVALID DATA**

**Explanation:** There is a mismatch between the mission type identified in the message to be processed, and the mission data contained in `missionName`. For instance, the user attempted to schedule a printing mission, but the mission data contains backup data.

The New Day procedure issues this message. For more information, see the sections on report decollating, printing, backup and restore missions, and on New Day processing, in the *INCONTROL for z/OS Administrator Guide*.

Processing of all mission order list statements stops. The New Day procedure ends with a return code of 08.

Correct any incorrect mission statements and rerun the New Day procedure. Make sure you only run the New Day procedure once.

**Corrective Action:** No action is required.

**CTD146I MQ DECOLLATION IS BEING DEACTIVATED**

**Explanation:** This information message indicates a successful execution of the STOPMQ operator modify command.

Deactivation of MQ decollation from all MQ QUEUES is in process.
**Corrective Action:** Control-D will not start new decollations from MQ QUEUES, although currently existing decollating missions will finish the processing of messages whose output processing has already begun.

**CTD146S INVALID DATA IN THE "PARM" FIELD**

**Explanation:** There is an error in the parameter input to the CTDRRQ, CTDPRQ, CTDBRQ, or CTDSRQ program.

This message is issued by:
- CLISTs that schedule missions manually - The supplied CLIST was incorrectly modified. For more information, see the INCONTROL for z/OS Administrator Guide.
- New Day procedure - The supplied JCL procedures were incorrectly modified. For more information, see New Day processing in the INCONTROL for z/OS Administrator Guide.

Processing of all mission data stops. The New Day procedure ends with return code 08.

**Corrective Action:** Correct the CLIST or job and rerun.

**CTD147E INVALID PARAMETER PASSED TO CTDMIS - NOTIFY THE IOA ADMINISTRATOR**

**Explanation:** Internal error in the CTDMIS module.

This message is issued by:
- CLISTs that schedule missions manually. For more information, see the INCONTROL for z/OS Administrator Guide.
- New Day procedure. For more information, see New Day processing in the INCONTROL for z/OS Administrator Guide.

The Active Missions file is not updated. The module ends with return code 08.

**Corrective Action:** Notify your IOA administrator.

**CTD148E INVALID RETURN CODE FROM CTDMIS - NOTIFY THE IOA ADMINISTRATOR**

**Explanation:** The CTDMIS module has an internal error.

This message is issued by:
- CLISTs that schedule missions manually.
- New Day procedure.

For more information, see the INCONTROL for z/OS Administrator Guide.

The Active Missions file is not updated. The module issues return code 08.

**Corrective Action:** Call your IOA administrator.

**CTD149E ERROR IN MISSION ORDER LIST**

**Explanation:** There is an error in a mission order list entry. The preceding message describes the error.
Processing of the other mission order list statements continues. The New Day procedure ends with a return code of 04.

**Corrective Action:** Check the preceding error message. Correct the error, then rerun the New Day procedure.

**CTD151S OPEN OF RECIPIENT TREE MEMBER FAILED - DDNAME "DATREE"**

**Explanation:** An attempt to open the Recipient Tree definition member failed.

Possible causes are:

- The DATREE DD statement is missing.
- The file allocated to the DATREE DD statement is not the Control-D Recipient Tree.
- The attempt to open the tree member referenced by the DATREE DD statement failed.

This message can be produced in the following situations:

- Initialization of the Control-D monitor and Printers Control monitor: The Control-D monitor will shut down.
- Security checking in the Online User Report List screen: The user will not be able to enter the User Report List screen.
- Using the KeyStroke Language (KSL) scripts: The job will end with errors. KSL reports will not be produced.
- Issuing Control-D operator command LOADTREE to a Control-D component: The new Recipient Tree will not be loaded. Control-D (or another component) will continue using the “old” Recipient Tree.

**Corrective Action:**

- Initialization of the Control-D monitor and Printers Control monitor: Modify the JCL procedure (CONTROLD/CTDPRINT) the DATREE DD statement to point to the correct library and member, and bring up Control-D.
- Security checking in the Online User Report List screen: Modify the CLIST (CTDISPF, CTMISPFD, DMAN, ROSDMAN, ROSTMAND, TMAND) the DATREE DD statement to point to the correct library and member, exit from the Control-D Online Facility, and reenter the Online Facility.
- The KeyStroke Language: Modify the JCL procedure (CTDRKSL/CTMRKSLD) to point to the correct library and member name, and rerun the job.
- The Control-D operator command LOADTREE was issued: Modify the Recipient Tree using the Online Recipient Tree Definition screen, and re-enter the LOADTREE operator command.

**CTD152E PARENT parent OF RECIPIENT recip IS NOT IN THE TREE OR PARENT LEVEL IS INCORRECT - RECIPIENT IGNORED**

**Explanation:** The recipient entry with the name and level specified in the parent name and parent level fields is not found in the Recipient tree.

Control-D has searched the entire tree and failed to find the parent name specified for the new recipient.

This message can be produced in the following situations:
when entering the Online User Report List screen
- the KeyStroke Language
- the Control-D operator command LOADTREE was issued
- the IOAOMON1 operator command LOADTREE was issued
- when IOAOMON1 is initialized
- when saving an edited tree
- when executing the CHECK command to verify the tree
- during the initialization of the Control-D monitor and Printers Control monitor

The loading of the Recipient Tree will continue. However, this particular recipient will not become part of the Recipient Tree.

**Corrective Action:** Correct the parent name in the Recipient Tree using the Online Recipient Tree Definition screen. Depending on the situation, take one of the following actions:

- Initialization of the Control-D monitor and Printers Control monitor: Issue a LOADTREE operator command to load in the new Recipient Tree.
- Entering the Online User Report List screen: Exit from the Control-D Online Facility, and re-enter the Online Facility.
- The KeyStroke Language: Rerun the job.
- The Control-D operator command LOADTREE was issued: Re-enter the LOADTREE operator command.
- The IOAOMON1 operator command LOADTREE was issued: Re-enter the LOADTREE operator command.
- When IOAOMON1 is initialized: Issue a LOADTREE operator command for IOAOMON1.
- When saving an edited tree: Correct the tree and resave.
- When executing a CHECK command: Correct the tree and re-issue the command.

**Explanation:** An invalid Recipient Tree level has been entered.

The Recipient Tree levels are installation defined (the CTDPARM member). The valid levels are displayed at the top of the Control-D Recipient Tree screen. This message can be produced under in one of the following situations:
when entering the Online User Report List screen

the KeyStroke Language

the Control-D operator command LOADTREE was issued

the IOAOMON1 operator command LOADTREE was issued

when IOAOMON1 is initialized

when saving an edited tree

when executing the CHECK command to verify the tree

during the initialization of the Control-D monitor and Printers Control monitor

The loading of the Recipient Tree will continue. However, this particular recipient will not become part of the Recipient Tree.

**Corrective Action:** Enter a valid Recipient Tree level in the Recipient Tree using the Online Recipient Tree Definition screen. Depending on the situation, take one of the following actions:

- Initialization of the Control-D monitor and Printers Control monitor: Issue a LOADTREE operator command to load in the new Recipient Tree.
- Entering the Online User Report List screen: Exit from the Control-D Online Facility, and re-enter the Online Facility.
- The KeyStroke Language: Rerun the job.
- The Control-D operator command LOADTREE was issued: Re-enter the LOADTREE operator command.
- The IOAOMON1 operator command LOADTREE was issued: Re-enter the LOADTREE operator command.
- When IOAOMON1 is initialized: Issue a LOADTREE operator command for IOAOMON1.
- When saving an edited tree: Correct the tree and resave.
- When executing a CHECK command: Correct the tree and re-issue the command.

**CTD154S INSUFFICIENT MEMORY TO LOAD THE RECIPIENT TREE - LOADING ABORTED**

**Explanation:** Insufficient memory to load the Recipient Tree.

The loading of the Recipient Tree is aborted. This message can be produced in the following situations:

- Initialization of the Control-D monitor and Printers Control monitor: The Control-D monitor will shut down.
- Security checking in the Online User Report List screen: The user will not be able to enter the Online Recipient Tree Definition screen.
- The KeyStroke Language: The job will end with errors. KSL reports will not be produced.
- The Control-D operator command LOADTREE was issued: The new Recipient Tree will not be loaded. Control-D will continue using the “old” Recipient Tree.

**Corrective Action:**
Initialization of the Control-D monitor and Printers Control monitor: Increase the REGION parameter of the Control-D monitor and Printers Control monitor - JCL procedures CONTROLD and CTDPRINT.

Security checking in the Online User Report List screen: Log on again using a larger SIZE parameter.

The KeyStroke Language: Increase the REGION parameter of the job, and rerun.

The Control-D operator command LOADTREE was issued: Increase the REGION parameter of the Control-D monitor and Printers Control monitor - JCL procedures CONTROLD and CTDPRINT. Bring down Control-D, and then up again.

CTD155S THE RECIPIENT TREE IS EMPTY. LOADING ABORTED

Explanation: The Recipient Tree is empty. Loading is aborted.

The Recipient Tree must be defined using the Installation Parameters. This message can be produced in the following situations:

Initialization of the Control-D monitor and Printers Control monitor: The Control-D monitor will shut down.

Security checking in the Online User Report List screen: The user will not be able to enter the Online Recipient Tree Definition screen.

The KeyStroke Language: The job will end with errors. KSL reports will not be produced.

The Control-D operator command LOADTREE was issued: The new Recipient Tree will not be loaded. Control-D will continue using the “old” Recipient Tree.

Corrective Action: Delete this Recipient Tree member from the library, then generate a new Recipient Tree using the Online Recipient Tree Definition screen. Depending on the situation, take one of the following actions:

Initialization of the Control-D monitor and Printers Control monitor: Bring up the Control-D monitor.

Security checking in the Online User Report List screen: Exit from the Control-D Online Facility, and re-enter the Online Facility.

The KeyStroke Language: Rerun the job.

The Control-D operator command LOADTREE was issued: Re-enter the LOADTREE operator command.

CTD156E USER "DEMO" IS RESERVED FOR CONTROL-D

Explanation: There is an attempt to add the user DEMO to the Control-D recipient tree. The Control-D environment reserves user name DEMO for demonstration and training purposes. It may not be specified as a user in the production system.

The operation is not performed.

Corrective Action: Specify a different user name to be added.

CTD157E INVALID LEVEL lvl OF PARENT parent IN RECIPIENT recip

Explanation: The Recipient Tree level entered for the parent of this recipient is invalid.

The valid levels are displayed at the top of the Recipient Tree screen. This message can be produced in the following situations:
during the initialization of the Control-D monitor and Printers Control monitor
- when entering the Online User Report List screen
- the KeyStroke Language
- the Control-D operator command LOADTREE was issued
- the IOAOMON1 operator command LOADTREE was issued
- when IOAOMON1 is initialized
- when saving an edited tree
- when executing the CHECK command to verify the tree

The loading of the Recipient Tree will continue. However, this particular recipient will not become part of the Recipient Tree.

**Corrective Action:** Correct the level for the parent using the Online Recipient Tree Definition screen. Depending on the situation, take one of the following actions:

- Initialization of the Control-D monitor and Printers Control monitor: Issue a LOADTREE operator command to load in the new Recipient Tree.
- Entering the Online User Report List screen: Exit from the Control-D Online Facility, and re-enter the Online Facility.
- The KeyStroke Language: Rerun the job.
- The Control-D operator command LOADTREE was issued: Re-enter the LOADTREE operator command.
- The IOAOMON1 operator command LOADTREE was issued: Re-enter the LOADTREE operator command.
- When IOAOMON1 is initialized: Issue a LOADTREE operator command for IOAOMON1.
- When saving an edited tree: Correct the tree and resave.
- When executing a CHECK command: Correct the tree and re-issue the command.

**CTD158E LEVEL lvl OF THE PARENT parent IS LOWER THAN THE LEVEL OF RECIPIENT recip**

**Explanation:** The level of the parent of the recipient is lower than the level of the recipient being defined.

The level of the parent must be higher than the level of the “child.” (Note that the order can be seen in the Recipient Tree Entry screen).

**Corrective Action:** Enter a parent name with a different level or give the recipient a lower level.

**CTD159E ERROR IN FREEMAIN OF PREVIOUS TREE, LOADING OF NEW TREE CONTINUED**

**Explanation:** The freeing of the memory for the previous Recipient Tree failed.
The Control-D operator command LOADTREE was issued in order to load in a new Recipient Tree. After loading memory for the “new” Recipient Tree, Control-D attempts to free the memory assigned to the “old” Recipient Tree.

The loading of the “new” Recipient Tree will be accepted. However, the memory allocated to the “old” tree will not be freed until Control-D is shut down.

**Corrective Action:** No action is required.

**CTD160I** CONTROL-D RECIPIENT TREE LOADED - *num* RECIPIENTS

**Explanation:** This information message indicates that the Recipient Tree was successfully loaded.

**Corrective Action:** No action is required.

**CTD161E** RECIPIENT *recip* ALREADY IN TREE - CURRENT RECIPIENT ENTRY IGNORED

**Explanation:** The recipient entered is already in the Recipient Tree. The current recipient entry is ignored.

A recipient name (not synonym) can only appear once in the Recipient Tree. This message can be produced in the following situations:

- when entering the Online User Report List screen
- the KeyStroke Language
- the Control-D operator command LOADTREE was issued
- the IOAOMON1 operator command LOADTREE was issued
- when IOAOMON1 is initialized
- when saving an edited tree
- when executing the CHECK command to verify the tree
- during the initialization of the Control-D monitor and Printers Control monitor

The loading of the Recipient Tree will continue. However, this particular recipient will not become part of the Recipient Tree (the first one will).

**Corrective Action:** Delete the duplicate recipient using the Online Recipient Tree Definition screen. Depending on the situation, take one of the following actions:
Initialization of the Control-D monitor and Printers Control monitor: Issue a LOADTREE operator command to load in the new Recipient Tree.

Entering the Online User Report List screen: Exit from the Control-D Online Facility, and re-enter the Online Facility.

The KeyStroke Language: Rerun the job.

The Control-D operator command LOADTREE was issued: reenter the LOADTREE operator command.

The IOAOMON1 operator command LOADTREE was issued: Re-enter the LOADTREE operator command.

When IOAOMON1 is initialized: Issue a LOADTREE operator command for IOAOMON1.

When saving an edited tree: Correct the tree and resave.

When executing a CHECK command: Correct the tree and re-issue the command.

CTD163E MAXIMUM NUMBER OF PC USERS IS EXCEEDED. PC INFO FOR USER usr IS IGNORED

Explanation: The number of users authorized for PC file transfer exceeds the maximum number of PC users defined in the PASDPC member in the IOA PARM library.

Maximum number of PC users in PARM library is defined at the time the license is received to use Control-D/WebAccess Server.

All users over maximum will not be able to use file transfer option.

Corrective Action: Set AUTHORIZED TO USE PC to N for some users in screen T, or obtain a new license with a greater number of PC users.

CTD1T01 FILE TRANSFER STARTED

Explanation: This information message indicates that the File Transfer monitor was started.

Corrective Action: No action is required.

CTD1T3E INVALID MODIFY PARAMETER. VALID PARAMETERS ARE:

Explanation: An invalid parameter was passed to the File Transfer monitor by an operator modify command. A list of valid modify parameters is displayed on the operator console following this message.

The modify command is rejected.

Corrective Action: Enter an operator modify command with valid parameters.

CTD1T4S BLDL/ATTACH FAILED FOR TASK taskName

Explanation: Initialization of a File Transfer monitor internal task failed. The reason, system code, is on the computer log. Possible causes are:

- The task is not in the IOA Load library.
- There is insufficient memory for File Transfer monitor.

The File Transfer monitor shuts down.
**Corrective Action:** Refer to your system programmer for assistance. If necessary, increase the monitor REGION size.

**CTD1T5S UNRECOVERABLE ERROR ENCOUNTERED**

**Explanation:** An unrecoverable error occurred during operation of the File Transfer monitor, while trying to access to the Active Transfer file.

The File Transfer monitor shuts down.

**Corrective Action:** Examine relevant CTD9B1S-CTD9B9S messages, and take appropriate corrective action. If the problem is not resolved, send the IOA log and the CTDFTM file transfer monitor print-out to BMC Customer Support.

**Messages CTD200 through CTD2xx**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

**CTD200I** **CTDCBTR STARTED.**

**Explanation:** This information message indicates that the CTDCBTR Control-D utility has started.

**Corrective Action:** No action is required.

**CTD201I** **CTDCBTR ENDED OK.**

**Explanation:** This information message indicates that the CTDCBTR Control-D utility has ended normally.

**Corrective Action:** No action is required.

**CTD202S** **INSUFFICIENT MEMORY FOR CONTROL-D MONITOR.**

**Explanation:** Insufficient memory for the initiation of Control-D monitor.

Control-D monitor will shut down.

**Corrective Action:** Increase the Control-D monitor region size.

**CTD202S** **CTDCBT ENDED WITH ERRORS.**

**Explanation:** The CTDCBTR Control-D utility ended with errors.

The utility stops executing.

**Corrective Action:** Check the job syslog for any error messages, and correct the problem accordingly. Rerun the job.

**CTD203S** **DELETE FAILED FROM BTR FILE**

**Explanation:** The CTDCBTR utility failed to delete a record from the Bundle Tracking (BTR) file.

The CTDCBTR utility terminates.
**Corrective Action:** Check for other messages relating to this problem, and correct accordingly. Rerun the utility.

**CTD204S PROBLEM DETECTED IN UTILITY CTDCBTR PARAMETERS.**

**Explanation:** A problem was detected in the input parameters of the CTDCBTR utility. This message can be triggered by a number of causes, for example, if no parameters were specified at all, or if the DABTRIN DD statement is absent.

The CTDCBTR utility ends.

**Corrective Action:** Check the parameters specified for the utility, and check for a DABTRIN DD statement. Correct the input accordingly and rerun the job.

**CTD205I NUMBER OF DELETED RECORDS: num**

**Explanation:** This information message indicates the number of records deleted by the CTDCBTR utility.

**Corrective Action:** No action is required.

**CTD206I INPUT CARDS: inputStmts.**

**Explanation:** This information message displays the input parameters which were specified in the JES log of the job for the CTDCBTR utility.

**Corrective Action:** No action is required.

**CTD207E REDUNDANT PARAMETER: inputStmt.**

**Explanation:** A superfluous parameter was specified for the CTDCBTR utility.

The CTDCBTR utility ends.

**Corrective Action:** Remove the superfluous input parameter and rerun the utility.

**CTD229S OPEN FAILED FOR DDNAME "DARES".**

**Explanation:** Open of a debugging output file failed (the DARES DD statement).

This is probably because the DARES DD statement is missing in the Control-D procedure. Control-D monitor will shut down with error message.

**Corrective Action:** Correct the JCL for the Control-D monitor procedure and start it again.

**CTD230S OPEN FAILED FOR DDNAME "DARESC" OR "DASINC".**

**Explanation:** Open of IOA Conditions file failed (the DARESC DD statement or the DASINC DD statement).

Possible causes are:
The DARESC DD statement is missing.

The DASINC DD statement is missing.

The data set described by the DARESC DD statement is not the IOA Conditions file.

The data set described by the DASINC DD statement is not the IOA Conditions synchronization file.

The data set described by the DARESC DD statement is the IOA Conditions file, but it is of a different version or of a different Control-D monitor.

Control-D monitor shuts down with error message.

**Corrective Action:** Correct the JCL for the Control-D procedure, and start the procedure again.

CTD241W OUTPUT CONDITION cond_date NOT UPDATED - NO MORE SPACE. NOTIFY THE IOA ADMINISTRATOR.

**Explanation:** Highlighted, unrollable message.

No more space to add output conditions to the conditions file. The date is in mmd format.

The record for that specific day of the month is full. For example, if a condition with date reference of January 3rd cannot be added, an entry in the Conditions file that contains conditions for January 3rd, February 3rd, March 3rd, and so on, is full.

The condition is not added, and a highlighted message is displayed on the operator console. Control-D continues to function, but missions that depend on the condition are not submitted.

**Corrective Action:**

Immediate action:

1. Enter Control-D Online Facility Resource Map (screen 4). By changing the date range limit, look for conditions with the same day (but of a different month) as the condition that could not be added, and delete them manually - providing that they are not needed.

2. Add the failing condition manually in order to maintain production flow.

3. Report the event to your system programmer.

Long term action:

4. You should run the IOACLND Control-M utility more often.

5. You may want to increase the record length of the IOA Conditions file. For more information on how to do this, see the section on expanding IOA files in the *INCONTROL for z/OS Administrator Guide*.

CTD256E ERROR WHILE READING SYSOUT FROM SPOOL OR FROM CDAM FILES

**Explanation:** Internal Control-D error.

The status of this decollating mission is set to ENDED NOTOK.

**Corrective Action:** Look for additional messages on the IOA Log. Call BMC Software Customer Support for assistance.
CTD260E ERROR IN ACTIVE USER REPORTS LIST FILE. USER UPDATE FAILED.

**Explanation:** The update to the Active User Report List file failed. Perhaps the Active User Report List file is full or the Index component is corrupted.

The status of this decollating mission is set to ENDED NOTOK.

**Corrective Action:** Examine relevant CTDU99E and CTD908S messages, take appropriate corrective action, and then rerun the decollating mission. Use the CTDDIG utility to check the integrity of the user file. If the problem persists, contact BMC Customer Support.

CTD261E SEVERE ERROR WHILE LOCATING SYSOUT PARAMETERS FROM JES

**Explanation:** Highlighted, unrollable message.

An internal test of the JES control blocks failed.

Control-D retrieves data set characteristics from the JES2 control blocks. These blocks are release-dependent. To avoid abends, Control-D tests the blocks at the beginning of its process. If the test fails, the CTD261E message is displayed.

This error is often caused by MSGCLASS for started tasks being set to PURGE or DUMMY. Control-D uses the settings of MSGCLASS for started tasks for test SYSOUT.

Snaps are produced and put in the DADUMP DD statement. Control-D continues to process without retrieving characteristics from the JES Control Blocks.

**Corrective Action:** Do the following:

1. Ensure that the MSGCLASS output class for the started task (STC) in the JES2PARM member of the SYS1.PARMLIB library is not set to PURGE or DUMMY.
2. If MSGCLASS is set correctly, collect the relevant snaps from the DADUMP DD statement and contact BMC Software Customer Support.

CTD266E CTDPARM GENOTFND SETTING INVALID FOR CURRENT ENVIRONMENT - GENERIC DECOLLATION PROCESSING STOPPED.

**Explanation:** The setting of the GENOTFND parameter in CTDPARM is not supported by the MVS/JES configuration of the computer.

Some options of the GENOTFND parameter in CTDPARM are valid only in certain MVS/JES configurations. For example, JES3 supports only CLASS and DELETE as values for the GENOTFND parameter.

For a description of the GENOTFND parameter, see the Control-D chapter of the INCONTROL for z/OS Installation Guide.

The unmatched sysout file remains unchanged.

**Corrective Action:** Do the following:

1. Manually remove the problematic sysout from the generic class.
2. Correct the GENOTFND parameter in CTDPARM.
3. Restart the Control-D monitor after compiling CTDPARM.
CTD26AE MISSION ABENDED S nnn U nnnn.

Explanation: Highlighted, unrollable message.

The decollation mission abended with the system code or the user code or both these codes displayed in this message.

The decollation mission finishes NOTOK. Control-D tries to process other missions.

Corrective Action: If Control-D cannot process other missions, stop and restart the Control-D monitor. Save the job log of the Control-D decollation monitors and the output referenced by DD statement IODUMP of the decollation monitor which processed the problematic mission. Call BMC Software Customer Support.

CTD26BE SUBSYSTEM REQUEST FAILED FOR JOB jobName. RC15= rc, SSOBRETN= rtrn_code.

Explanation: A “sysout processing” request caused an unexpected return code to be received from JES. JES was unable to satisfy the request.

The variables in this message are:
- jobName - the name of the relevant job
- rc - the code returned in register 15
- rtrn_code - the contents of the SSOBRETN field of the request block

Corrective Action: Verify that JES is active and functions normally. If JES is functioning normally, save all sysouts of this execution of the Control-D monitor and contact BMC Software Customer Support. Request RESTORE of the problematic report again.

CTD271I GENERIC JOB DECOLLATION IS INACTIVE

Explanation: This information message indicates that Generic Processing is not active. The reason the message is issued depends in which of the following formats the message is issued.

- regular, rollable message - indicates that the corresponding Control-D monitor does not perform the Generic Processing. The Control-D monitor issues the message when it is started and after new day processing.
- highlighted, unrollable message - indicates that a job is waiting to be decollated in one of the Generic classes, but Generic Processing is not active. This message will appear every 10 minutes, until Generic Processing is activated.

Control-D continues processing, but no Generic Processing will be done.

Corrective Action: Use the following guidelines to resolve the problem:
If you have Generic Missions that CTDNDAY processing should order, ensure that the GENLIST member contains the library and table name for your Generic Missions.

If you have a Library and table names in the GENLIST member, ensure that the MEMBERS really exist in the library. Also verify that the library is the correct name.

Check to see if CTDNDAY processing had an error during the ordering of GENLIST. If an error occurred the deactivation of Generic Processing is automatic.

Check to see if someone issued the STOPGEN command.

Issue the following command, to activate Generic Processing:

F CONTROLD,STARTGEN

The application will respond by displaying the following message:

CTD139I GENERIC JOB DECOLLATION IS ACTIVE ON CLASSES (claslist)

To verify your classes, check the GENCLAS= parameter in the CTDPARM member.

Note:
If there are NO Generic Missions being ordered during the CTDNDAY processing, you need to manually activate Generic Processing if you are manually Forcing/Ordering Generic Missions.

For more information on activating and deactivating generic processing, see the INCONTROL for z/OS Administrator Guide.

CTD272I SYSOUT REMOVED FROM QUEUE. GENERIC DECOLLATING MISSION NOT FOUND FOR JOB jobName.

Explanation: This information message indicates that Control-D found a non-held output on one of the classes dedicated for Generic processing. There is a Generic decollating mission for the class, but there is no applicable decollating mission for the sysout.

Whenever a non-held output appears on the spool in one of the classes defined for Generic processing, Control-D looks for a Generic decollating mission (on the Active Missions file) which matches the job name. If a match is not found, the sysout is processed according to the GENOTFND Control-D installation parameter. For more information, see the Control-D chapter in the INCONTROL for z/OS Administrator Guide.

Corrective Action: Check to see if the Generic decollating mission for this job should be on the Active Missions file. If so, order the decollating mission. If not, purge the sysout.

CTD273I SYSOUT CLASS CHANGED FROM CLASS x TO ESCAPE CLASS y.

Explanation: This information message indicates that Control-D found a non-held output on one of the classes dedicated for Generic processing. There is a Generic decollating mission for the class, but there is no applicable decollating mission for the sysout.

Whenever a non-held output appears on the spool in one of the classes defined for Generic processing, Control-D looks for a Generic decollating mission on the Active Missions file that matches the job name. If a match is not found under JES3, Control-D changes the sysout’s class to an Escape Class as specified in the GENOTFND Control-D installation parameter, and the output remains on the spool. For more information, see the INCONTROL for z/OS Administrator Guide.
**Corrective Action:** Check to see if the Generic decollating mission for this job should be Active on the Active Missions file. If so, order the decollating mission. If not, purge the sysout.

**CTD276I** MESSAGE MOVED TO MQ ESCAPE QUEUE *queueName*

**Explanation:** This information message indicates that the message was moved to the *queueName* queue that was defined in the CTDMQPRM parameter of the MQNOTFIND CTD PARM member.

**Corrective Action:** No action is required.

**CTD282I** *text (usr)*.

**Explanation:** Highlighted, unrollable message.
This information message is activated by the SHOUT Facility.
The variables in this message are:
- *text* - the information
- *usr* - the user ID of the job order requesting the SHOUT

**Corrective Action:** No action is required.

**CTD284I** NEW DYNAMIC DESTINATION TABLE LOADED.

**Explanation:** This information message indicates that a new Dynamic Destination Table has been loaded by the Control-D monitor. The message also appears on initialization of the SHOUT Facility under the Control-D monitor.

**Corrective Action:** No action is required.

**CTD285W** DYNAMIC DESTINATION TABLE NOT LOADED.

**Explanation:** Loading of the Dynamic Destination Table by the Control-D monitor failed.
It could be due to one of the following:
- There is insufficient memory for loading the table.
- The IOADEST table does not exist in the IOA PARM library.

If the failure happens during the initialization of the Control-D monitor, then SHOUT notifications will not be controlled by the Dynamic Destination Table. If this happens as a result of an *F CONTROLD,NEWDEST* command (operator command instructing the Control-D monitor to load a new Destination Table), the old destination table will remain in effect.

**Corrective Action:** Check the MVS Log for the reason for the failure (probably a system abend code). Correct the problem and then, in order to load the table, issue the operator command *F CONTROLD,NEWDEST.*

**CTD286E** RULER DEFINITION TOO LONG (NOT SAVED). TRY TO OMIT "INSERTED" LINES

**Explanation:** Ruler definition exceeded the maximum allowed length.
The rule is not saved.
Corrective Action: Decrease size of the ruler by omitting Inserted lines.

CTD295E PLEASE FILL IN STRING, FROM COLUMN AND UNTIL COLUMN
Explanation: One of the obligatory fields was not specified in the ruler definition screen. String and column fields must be filled in.
Corrective Action: Fill in these fields.

CTD296E COLUMN MUST BE A THREE DIGIT NUMBER (000-255)
Explanation: Column specification is incorrect. Column number must contain only digits.
Corrective Action: Enter correct column number.

CTD297E "TO COL" MUST BE GREATER THAN "FROM COL"
Explanation: Column specification is incorrect. FROM column number must be not greater than TO column number.
Corrective Action: Enter correct column numbers.

CTD298E LINE MUST BE A THREE DIGIT NUMBER 001-255 OR L99-L01
Explanation: The specified line is out of range. Line range is 001-255 or L99-L01 (from the bottom of the page).
Corrective Action: Correct the line range specification.

CTD299E "TO LINE" MUST BE GREATER THAN "FROM LINE"
Explanation: The specified FROM LINE is greater than the specified TO LINE. The TO LINE value must be greater than or equal to the FROM LINE value.
Corrective Action: Correct the TO LINE and/or FROM LINE values.

CTD29BW INSUFFICIENT MEMORY TO COMPLETE PROCESSING OF THE PRINT RULER rulerName FOR REPORT recipientName / jobName / reportName
Explanation: This warning message is issued if there is insufficient memory for using PRINT RULER rulerName for report recipientName / jobName / reportName. The report is printed without the ruler formatting.
Corrective Action: Increase region size of the corresponding address space and rerun printing.

CTD2T0I FILE TRANSFER MONITOR SHUTTING DOWN
Explanation: Highlighted, unrollable message.
This information message indicates that the File Transfer monitor is shutting down.
Corrective Action: No action is required.
CTD2T1S FILE TRANSFER MONITOR ENDED WITH ERROR

Explanation: This information message indicates that the File Transfer monitor ended with an error.

Corrective Action: In the printout of the File Transfer monitor, check the messages which preceded this FTM121S message for an indication of the cause of the error, and take appropriate corrective action.

CTD2T2W FILE TRANSFER MONITOR IS ACTIVE. QNAME "qName"

Explanation: Highlighted, unrollable message.

The user attempted to activate the File Transfer monitor when it was already active. More than one File Transfer monitor cannot be active at the same time.

The new File Transfer monitor is not activated.

Corrective Action: No action is required.

CTD2T5I validModifyParm

Explanation: This information message displays a valid modify parameter that can be used in File Transfer monitor operator commands. It is issued together with the FTM103E message.

Corrective Action: No action is required.

CTD2T8S RECIPIENT TREE WAS NOT LOADED BECAUSE OF ERROR - MONITOR IS TERMINATING

Explanation: The attempt to load the Recipient Tree failed. As part of the initialization process, the File Transfer monitor attempts to load the Recipient Tree.

The File Transfer monitor shuts down.

Corrective Action: Check other messages in the IOA log and JES log to determine why the Recipient Tree could not be loaded. Fix the Recipient Tree. Then try again to start the File Transfer monitor.

CTD2T9S NO RECIPIENTS WERE FOUND WITH IP ADDRESS. MONITOR IS TERMINATING

Explanation: The File Transfer monitor was unable to find a recipient with an IP address.

The File Transfer monitor terminates.

Corrective Action: Contact BMC Software Customer Support.

CTD2TAS SUBTASK IS TERMINATED BY TIMEOUT FOR IPA = ipAdd

Explanation: The subtask has timed out and been terminated.

The monitor main task periodically checks the status of all its subtasks. When the CPU of a subtask has not changed since the last check, the subtask is considered to be inactive ("hanging"), and the main task of the monitor interrupts the subtask.

The subtask is terminated.
Corrective Action: In the printout of the File Transfer monitor, and in the log of your PC session manager, check the messages which preceded this FTM121S message for an indication of the reason why the subtask was left inactive, and take appropriate corrective action.

CTD2TBS SUBTASK IS TERMINATED BY CANCEL REQUEST FOR IPA = ipAdd. PORT = portNumber.
Explanation: The File Transfer monitor subtask with the IP address identified in this message has been terminated by an operator modify CANCEL command.
The identified subtask is terminated.
Corrective Action: No action is required.

CTD2TCS THERE ARE NO ACTIVE SUBTASKS
Explanation: This information message indicates that the File Transfer monitor has no active subtasks.
Corrective Action: No action is required.

CTD2TDS FORMAT OF THE MODIFY COMMAND IS NOT CORRECT
Explanation: An invalid operator modify command has been entered.
The command is rejected.
Corrective Action: Correct and reissue the operator modify command.
For more information, see the File Transfer Monitor section in the Control-D chapter in the INCONTROL for z/OS Administrator Guide.

CTD2TES THE SUBTASK NUMBER IS NOT DIGITAL
Explanation: An invalid subtask number has been specified in an operator modify CANCEL command.
The command is rejected.
Corrective Action: Enter a valid subtask number and reissue the command.

CTD2TFS THE SUBTASK NUMBER EXCEEDS THE TOTAL NUMBER OF THE ACTIVE SUBTASKS
Explanation: The subtask number entered in an operator modify CANCEL command is invalid, because it is greater than the total number of active subtasks.
For more information, see the File Transfer Monitor section in the Control-D chapter in the INCONTROL for z/OS Administrator Guide.
The command is rejected.
Corrective Action: Enter a valid subtask number in the operator modify CANCEL command and reissue the command.
CTD2TGS SUBTASK IS ALREADY NOT ACTIVE FOR IPA = ipAdd PORT = portNumber

Explanation: The File Transfer monitor subtask with the ipAdd IP address and portNumber port number is already inactive.
The command is rejected.
Corrective Action: No action is required.

CTD2THS SUBTASK IS TERMINATED BY SUSPEND FOR IPA = ipAdd PORT = portNumber

Explanation: The File Transfer monitor subtask with the ipAdd IP address and portNumber port number has been terminated by an operator modify SUSPEND command.
The subtask is terminated.
Corrective Action: No action is required.

CTD2TIS IPA SPECIFIED IN THE CANCEL COMMAND IS NOT CORRECT.

Explanation: An invalid IP address was specified in an operator modify CANCEL command.
The command is rejected.
Corrective Action: Enter a correct IP address in the CANCEL command and reissue the command.

CTD2TJS THE INTERVAL PARAMETER VALUE IS NOT DIGITAL.

Explanation: An invalid File Transfer monitor sleeping interval has been specified in an operator modify command.
The File Transfer monitor sleeping interval must be a 3-digit number from 1 through 999 seconds.
For more information, see the File Transfer Monitor section in the Control-D chapter in the INCONTROL for z/OS Administrator Guide.
The operator modify command is rejected.
Corrective Action: Enter a valid value for the File Transfer monitor sleeping interval and reissue the command.

CTD2TKI THE MODIFY COMMAND cmdText IS ACCEPTED

Explanation: This information message indicates that the cmdText modify command has been accepted by the File Transfer monitor.
Corrective Action: No action is required.

Messages CTD300 through CTD3xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.
CTD304E  func NOT OK WITH cc Y REASON CODE rsn MQ NAME uuuuuuu

Explanation: An error was detected during interface with IBM WebSphere MQ Series.

The variables in this message are:

- **func** - can be one of the following interface functions:
  - MQCONN
  - MQDISC
  - MQOPEN
  - MQGET
  - MQPUT
  - MQCLOS
  - MQCOMMT

- **cc** - the completion code, which can be one of the following:
  - 0
  - 1,,,
  - 2

- **rsn** - the reason code, which can have many different values. More detailed information about reason codes is included in the IBM WebSphere MQ Series documentation set.

System action is determined by the completion code and reason code combination. More detailed information about these codes is included in the IBM WebSphere MQ Series documentation set.

Corrective Action: User response to a particular completion and reason code combination is determined by that combination. More detailed information about these codes is included in the IBM WebSphere MQ Series documentation set.

CTD305E INSUFFICIENT MEMORY TO DECOLLATE MESSAGE FROM MQ

Explanation: Insufficient memory to decollate the message from the IBM WebSphere MQ queue.

Corrective Action: Increase the Control-D monitor REGION size.

CTD306E IOAUCODE INITIALIZATION FAILED RC rc REASON rsn

Explanation: An error was detected during initialization of the table used in the translation of an XML report or in the checking of Xpath values of the mission definition. The message can be issued from

- the R screen
- the A.Z screen
- the Control-D monitor

Possible causes of this error are:
the ENCODTBL member was not found in the IOA IOAENV library

the ENCODTBL member contains more than 100 entries

some other internal error

The system performs the following actions:

Mission definition edition is terminated. The IOAE2FS (International format) issues on the R.S and A.Z screens.

The translation of the XML report does not proceed. Control-D continues processing.

**Corrective Action:**

Check the ENCODTBL member in the IOA IOAENV library, make any necessary corrections, reactivate the IOA Online facility, and continue the mission definition edition.

or

Check the ENCODTBL member in the IOA IOAENV library, make any necessary corrections, reactivate Control-D, and run this mission again.

If the problem persists contact BMC Software Customer Support.

**CTD307E UNICODE TRANSLATION FAILED RC rc REASON rsn**

**Explanation:** An error was detected during translation of an XML report to EBCDIC or during the checking of Xpath-values of the mission definition for XML reports. The message can be issued from

- the R screen
- the A.Z screen
- the Control-D monitor

The variables in this message are:

- rc - the return code. Valid values of rc are:

<table>
<thead>
<tr>
<th>rc</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>Incomplete translation, due to separator (FF)</td>
</tr>
<tr>
<td>8</td>
<td>The encoding pair that was specified in ENCODTBL is not supported</td>
</tr>
<tr>
<td>12</td>
<td>The input data in the XML report was incorrect</td>
</tr>
<tr>
<td>16</td>
<td>Internal error: incorrect parameters</td>
</tr>
<tr>
<td>20</td>
<td>One of the members that was specified in ENCODTBL was not found in the IOA IOAENV library</td>
</tr>
</tbody>
</table>

- rsn - the code that disclosed the detailed reason for the internal error

The system performs the following actions:
Mission definition edition is terminated. The IOAE2FS (International format) is issued on the R.S and A.Z screens.

The translation of the XML report does not proceed. Control-D continues processing.

**Corrective Action:**

- Check the ENCODTBL member in the IOA IOAENV library, make any necessary corrections, reactivate the IOA Online facility, and continue the mission definition edition.

  or

- Check the ENCODTBL member in the IOA IOAENV library, make any necessary corrections, reactivate Control-D and run this mission again.

If the problem persists contact BMC Software Customer Support.

**CTD30AI MQ DECOLLATION IS STOPPED**

**Explanation:** The MQ interface process has stopped.

This message can appear for two reasons:

- The STOPMQ modify command was issued
- Errors occurred during MQ interface

**Corrective Action:** If errors occurred during MQ interface, review the LOG to determine the cause, make appropriate corrections, and issue the STARTMQ modify command.

**CTD30BE LOADING OF MODULE OF MQ STUB IS FAILED, THE NAME IS mmmmmmmmmm**

**Explanation:** The prefix LOAD library is not installed or the IBM WebSphere MQ Series is not installed for the user, but an MQ decollation mission was defined.

The CTD30AI message will be issued and IBM WebSphere MQ decollation will be stopped.

**Corrective Action:** If the IBM WebSphere MQ Series is not installed, delete the MQ mission. Otherwise correct your installation configuration and then issue the STARTMQ modify command.

**CTD30CE ANY OF MQ QUEUES CAN NOT BE OPENED**

**Explanation:** Control-D tried to retrieve a message from every IBM WebSphere MQ queue, but all attempts failed.

The CTD30AI message will be issued and IBM WebSphere MQ decollation will be stopped.

Review previous messages and issue appropriate responses. After you perform the necessary corrections, issue the STARTMQ modify command.

**Corrective Action:** No action is required.

**CTD30DI MQ QUEUE IS BEING CLOSED BECAUSE PUT/GET IS FAILED, QUEUE NAME dddddddd**

**Explanation:** The access to this IBM WebSphere MQ Series queue is being closed because of failure of MQPUT for the ESCAPE MQ queue, or failure of MQGET for the MQ queue.
Control-D continues processing MQ decollations until this message is issued for all MQ queues.

**Corrective Action:** For additional information see the IBM WebSphere MQ Series documentation set.

**CTD30EE MEMBER CTDMQPRM IS NOT FOUND IN CTD PARM OR VALUE OF MQNOTFIND PARAMETER IS NOT DEFINED**

**Explanation:** The CTDMQPRM member was not found in CTD PARM, or the value of the MQNOTFIND parameter has not been defined.

The CTD30AI message will be issued and IBM WebSphere MQ decollation will be stopped.

Define the CTDMQPRM member or add the name of the MQNOTFIND parameter; then issue the STARTMQ modify command.

**Corrective Action:** No action is required.

**CTD310S OPEN OF RECIPIENT TREE (DD STATEMENT "DATREE") FAILED**

**Explanation:** Open of the Control-D Recipient Tree failed. There is a problem with the DATREE DD statement in the Control-D CLIST.

It is due to one of the following:

- The DD statement DATREE is missing.
- If the DD statement DATREE is allocated to a library, the requested member name is not found.

You will not be able to use the User Report List screen.

**Corrective Action:** Correct the Control-D entry CLIST DMAN (or TMAND or other) to include the DD statement DATREE. Then exit the Control-D Online Facility, and reenter.

**CTD311S SECURITY VIOLATION - YOU ARE TRYING TO BYPASS THE RECIPIENT TREE**

**Explanation:** The Recipient Tree data set name or member name is incorrect. Control-D security exit CTDX004 checks if the data set name and member name of the DATREE DD statement are correct.

You will not be able to use the User Report List screen.

**Corrective Action:** Do one of the following

- Correct the Control-D entry CLIST by changing the data set name or the member name of the Recipient Tree. Then exit from the Control-D Online Facility, and reenter it.
- Correct security exit CTDX004 in the SAMPEXIT library by checking for the correct Recipient Tree data set name or member name. The called routine is TREEVER. Then exit the Control-D Online Facility, and reenter it.

**CTD312S ERROR WHILE LOADING THE RECIPIENT TREE**

**Explanation:** The loading of the Control-D Recipient Tree failed. An appropriate error message is displayed on the operator console and the IOA Log. The error message specifies the exact cause of the problem.

**Note:**
Il error messages relating to the Recipient Tree on the IOA Log start with TRE.
You will not be able to use the User Report List screen.

**Corrective Action:** Correct the Recipient Tree. Then exit from the Control-D Online Facility, and re-enter it.

**CTD313E YOU ARE NOT AUTHORIZED TO RECEIVE REPORTS FOR THIS RECIPIENT**

**Explanation:** The user has specified a value in a filter for the RECIPIENT field, and is not authorized to view report entries for recipients that match this value.

The requested function is not performed.

**Corrective Action:** To obtain authorization to view these report entries, contact your INCONTROL administrator.

**CTD314E YOU ARE NOT AUTHORIZED TO DO THIS ACTION**

**Explanation:** You are not authorized to perform this function on the User Report List file.

The attempt to perform one of the following functions does not have the required authorization:

- add an entry
- update an entry
- delete an entry
- restore a report
- reprint a report

The requested function is not performed.

**Corrective Action:** To get authorization to perform this function, call your INCONTROL administrator.

This message is the result of the action of the Control-D Security Exit CTDX004. For more information, refer to the following routines within this exit:

- RECINS - add an entry
- RECUPD - update an entry
- RECDEL - delete an entry
- RECRST - restore a report
- RECRPRT - reprint a report

**CTD315I SOME REPORTS WERE HIDDEN BY USER SECURITY EXIT**

**Explanation:** This information message indicates that, for security reasons, one or more reports on the User Report List file was not displayed. The RECCONF routine of Control-D security exit CTDX004 determined that the requestor is not authorized to look at some report entries on the User Report List screen.

One or more report entries on the User Report List file is hidden.
Corrective Action: No action is necessary. All entries for which there is authorization will be visible. To see all report entries, call your INCONTROL administrator.

CTD316E YOU CANNOT UPDATE THE COP# ABOVE THE MAXIMUM SPECIFIED ON DECOLLATION

Explanation: The number of copies on the User Report List screen is above the maximum. The maximum number of copies allowed for this report is specified in the Report Decollating Mission Definition screen. The number of copies on the User Report List screen cannot be greater than the maximum number of copies on the Report Decollating Mission Definition screen. The User Report List file is not updated.

Corrective Action: Do one of the following:
- Change the number of copies to a lower value.
- Ask the INCONTROL administrator to increase the maximum number of copies allowed.

CTD317E USER DOES NOT EXIST IN THE RECIPIENT TREE

Explanation: This user to be added or deleted to the User Report List file is not defined in the Control-D Recipient Tree. The User Report List file is not updated.

Corrective Action: Do one of the following:
- Correct the user to be added or updated.
- Request the INCONTROL administrator to add the user to the Recipient Tree.

CTD318S YOU ARE NOT AUTHORIZED TO USE THIS SCREEN

Corrective Action: To get authorization to enter the User Report List screen, contact your INCONTROL administrator.

CTD319E YOU ARE NOT AUTHORIZED TO LOOK AT $SYSDATA RECORDS

Explanation: You are not authorized to look at $SYSDATA records on the User Report List screen. Control-D security exit CTDX004 (routine USERLIST) determined that you cannot look at $SYSDATA records. The requested $SYSDATA entries are not displayed.

Corrective Action: To get authorization to look at $SYSDATA records, contact your INCONTROL administrator.

CTD31AE YOU ARE NOT AUTHORIZED FOR THIS APPROVAL

Explanation: The user has specified a value in a filter for the APPROVAL NAME field, and is not authorized to view report entries for Approval names that match this value.
The requested function is not performed.

**Corrective Action:** To obtain authorization to view these report entries, contact your INCONTROL administrator.

**CTD320S UNABLE TO VIEW THIS REPORT - ALL COMPRESSED DATASETS WERE DELETED**

**Explanation:** There are no compressed data sets for this report entry on the User Report List screen. You attempted to perform the V (View) function on the User Report List screen. The IOATOLV Control-D internal program was unable to find any compressed data sets for this report entry.

The view function is not performed.

**Corrective Action:** Ask the INCONTROL administrator to check why all the compressed data sets for this report were deleted.

**CTD321S UNABLE TO VIEW THIS REPORT - RC FROM IOATOLV=rc**

**Explanation:** The report cannot be viewed due to an error in the IOATOLV internal module or in a routine called by it, which resulted in return code `rc`. The V(View) option was specified on the User Report List screen. The IOATOLV internal module was called to perform the view function.

The following table shows the problem indicated by each return code, the routine in which it occurred, and the suggested action to take.

<table>
<thead>
<tr>
<th>rc</th>
<th>Routine</th>
<th>Explanation</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>04</td>

</tbody>
</table>

The report is not displayed or only partially displayed.

**Corrective Action:** Do one of the following, as indicated in the preceding table:

1. Report the message number and return code to BMC Software Customer Support.
2. This report is too large to view online. Report this to your INCONTROL administrator.
3. Ask your INCONTROL administrator to bring up the Compressed Dataset Access Method (CDAM) so you can view this report.
4. Examine the IOA Log file for messages regarding the event. Use the return code to determine what caused the IOA Archive Server cache mechanism to fail. If the error cannot be resolved, contact BMC Software Customer Support.
5. Ask the operator to start the IOA Archive Server.
6. Ask the operator to activate the required media in the IOA Archive Server.
7. Contact your INCONTROL administrator to find out what happened to the required data set.
8. Contact your OSS operator to find out what happened to the required volume or platter.
9. Ask the operator to activate at least one device of the required media in the IOA Archive Server.
10. Correct the problem that caused the allocation to fail and retry.
11. Contact the operator to determine why the requested volume was not mounted.

CTD322S UNABLE TO VIEW THIS REPORT BECAUSE OF AN INTERNAL ERROR

**Explanation:** The IOATOLV routine encountered a problem, and returned an invalid return code. Control-M/Tape called the IOATOLV routine when the user specified the V (View) option in the User Report List screen.

The report cannot be viewed.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

CTD32BE NUMBER OF PRINT MISSIONS EXCEEDS THE ALLOWED MAXIMUM

**Explanation:** A large number of PRINT missions were specified in the deferred print request for reports created by a Decollation Mission with STORED=Y in the DO PRINT parameter.

The PRINT mission name specified in the DO PRINT parameter, is hidden in both the User Report List Print Window and the Control-D/WebAccess Host PRINT Window. Nevertheless, since the PRINT mission name is stored in the report entry it is included in the total number of PRINT missions stored in the report entry. The maximum number of PRINT missions, whether immediate or deferred, that are stored in one report entry cannot exceed 5.

The print request is not performed.

**Corrective Action:** Perform the deferred print request again with less PRINT missions.

CTD323E VIEW RULER \textit{rulerName} DOES NOT EXIST FOR THIS USER/REPORT/JOB

**Explanation:** The \textit{rulerName} ruler was not located. The name may have been misspelled, or the ruler has not been defined.

No ruler is activated.

**Corrective Action:** Specify a valid ruler name.

CTD324E AT LEAST ONE PRINTING MISSION NAME MUST BE ENTERED

**Explanation:** No Printing Mission was defined. At least one Printing Mission name must be entered in the MISSION NAME field for deferred printing.
An error message is issued, and the cursor is positioned at the MISSION NAME field.

**Corrective Action:** Enter at least one mission name.

**CTD325E DEFERRED PRINTING - RULER NAME MUST BE "DEFAULT"**

**Explanation:** The RULER NAME field does not contain the value DEFAULT. In case of deferred printing, the ruler name must be DEFAULT to use an existing DEFAULT ruler.

An error message is issued and the cursor is positioned at the RULER NAME field.

**Corrective Action:** Correct the ruler name to DEFAULT.

**CTD326E DEFERRED PRINTING - FROM PAGE NUMBER MUST BE EQUAL TO 1**

**Explanation:** The FROM PAGE field contains a value other than 1. In case of deferred printing, the FROM PAGE must be defined as the first page.

An error message is issued and the cursor is positioned at the FROM PAGE field.

**Corrective Action:** Correct the value in the FROM PAGE field to 1.

**CTD327E YOU CAN ONLY SELECT THE ENTIRE PAGE RANGE FOR DEFERRED PRINTING**

**Explanation:** An invalid page range was defined for deferred printing. For deferred printing, the entire page range must be defined.

An error message is issued, and the cursor is positioned at the PAGE RANGE field.

**Corrective Action:** Correct the page range.

**CTD328S UNABLE TO EDIT A RULER - INVALID RC rc FROM CTDTEXT**

**Explanation:** An internal error occurred that caused the CTDTEXT subroutine to return an invalid return code.

The ruler is set to OFF.

**Corrective Action:** Have your INCONTROL administrator call BMC Software Customer Support for assistance.

**CTD329E INVALID parm PARAMETER**

**Explanation:** An invalid value was specified in the User Report List Print window. Control-D Exit 4 found an invalid value in the parm parameter.

The report is not printed.

**Corrective Action:** Correct the parameter.

**CTD330I COMPRESSED DATASET ACCESS METHOD MAINTENANCE UTILITY STARTED**

**Explanation:** This information message indicates the normal start of the CTDAMUT1 utility.
**Corrective Action:** No action is required.

**CTD331I** COMPRESSED DATASET ACCESS METHOD MAINTENANCE UTILITY ENDED OK

**Explanation:** This information message indicates the normal termination of the CTDAMUTI utility.

**Corrective Action:** No action is required.

**CTD332S** COMPRESSED DATASET ACCESS METHOD MAINTENANCE UTILITY ENDED WITH ERRORS

**Explanation:** The CTDAMUTI Compressed Dataset Access Method utility ended with errors.

This is a general message when the CTDAMUTI utility ends with errors. The job sysout should contain prior messages detailing the reasons.

**Corrective Action:** No action is required.

**CTD333E INVALID CDAM MAINTENANCE UTILITY FUNCTION: func**

**Explanation:** An invalid function (func) was given to the CTDAMUTI Control-D utility.

For more information, see the section on the CTDAMUTI CDAM maintenance utility in the *Control-D and Control-V User Guide*.

The CTDAMUTI utility terminates with a return code of 08.

**Corrective Action:** Correct the function, and rerun the CTDAMUTI utility.

**CTD334W NO CDAM FILES FOUND FOR THE SPECIFIED SELECTION CRITERIA**

**Explanation:** No CDAM data sets were found that match the data set identification parameters given to the CTDAMUTI utility.

The CTDAMUTI utility attempts to locate CDAM data sets based on the data set identification parameters given to it. One of the following problems is present:

- An error was made by the user in the data set identification parameter.
- Someone deleted the required CDAM data sets.

For more information, see the section on the CTDAMUTI CDAM maintenance utility in the *Control-D and Control-V User Guide*.

The CTDAMUTI utility will terminate with a return code of 04.

**Corrective Action:** Do one of the following, then rerun the utility:

- Correct the data set identification parameter.
- Restore the requested CDAM data sets.

**CTD335S OPEN OF PARAMETERS FILE FAILED. DDNAME "SYSIN"**

**Explanation:** The open of the SYSIN DD statement failed.
Possible causes are:

- The SYSIN DD statement or the DAMUTIN DD statement is missing.
- The data set described by the SYSIN DD statement or the DAMUTIN DD statement cannot be opened for sequential read.

For more information, see the section on the CDAMUTI CDAM maintenance utility in the *Control-D and Control-V User Guide*.

The CTDAMUTI utility terminates with a return code of 12.

**Corrective Action:** Correct the CTDAMUTI JCL and rerun the utility.

CTD339S OPEN OF OUTPUT (SPOOL PRINT) FILE FAILED

**Explanation:** Internal error in the CTDAMUTI utility.

The dynamic allocation of a sysout print file by the CTDAMUTI utility failed.

The CTDAMUTI utility terminates with a return code of 12.

**Corrective Action:** Have your system programmer call your IOA representative for assistance.

CTD33AS NO SELECTION PARAMETERS ARE SPECIFIED

**Explanation:** No CDAM selection parameters were specified in the input of the CTDAMUTI utility.

At least one CDAM selection parameter must be specified in the input of the CTDAMUTI utility.

The CTDAMUTI utility ends with an error.

**Corrective Action:** Rerun the CTDAMUTI utility specifying CDAM selection parameters.

CTD364I WAITING FOR ACTIVE PRINTING MISSION(S) IN ORDER TO SHUT DOWN

**Explanation:** Highlighted, unrollable message.

This information message indicates that the Control-D monitor was shut down, but is waiting for print tasks to finish in order to complete the shut down.

The Control-D internal Printing Missions Manager task received a request from the Control-D monitor to shut down. However, one or more of the print tasks under the control of the Printing Missions Manager is still printing. As soon as all the print tasks are completed, the Printing Missions Manager task will shut itself down.

**Corrective Action:** No action is required.

CTD390S OPEN OF DDNAME *ddName* FAILED.

**Explanation:** Open of the *ddName* DD name failed. Possible causes are:

- The *ddName* DD statement is missing.
- The data set described by the *ddName* DD statement does not exist.

Execution stops.

**Corrective Action:** Correct the JCL of the job and rerun.
CTD394S INVALID PARAMETER - parm

Explanation: An invalid parameter was specified to the report or utility.

If this message was issued during execution of the CTMBLT utility, it is followed by message BLT895I and/or BLT896I, which identify the problematic job, keyword, and value. This message may also be issued by the CTMBUPD utility.

The report or utility stops executing with a condition code of 08 or 12.

Corrective Action: For the syntax of the parameter for the report or utility, see either the INCONTROL for z/OS Administrator Guide or the INCONTROL for z/OS Utilities Guide, as appropriate.

Messages CTD400 through CTD4xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTD400S INVALID RETURN CODE FROM SORT = rc. CHECK THE SORT MANUAL.

Explanation: A sort program that has been activated internally by a report ended with an unexpected return code (rc).

The report stops executing with a condition code of 08 or 12.

Corrective Action: To clarify the reason, refer to the documentation for the sort program and to the sort messages of the job.

CTD403E PRINT MISSION HAS NOT STARTED DURING APPROPRIATE TIME FRAME

Explanation: Highlighted, unrollable message.

The Control-D monitor issued a MODIFY command for a Printing monitor to start processing a Printing Mission. The Printing monitor did not answer during the time frame defined by optional wish WD2344 (whose default is five minutes).

The problem can occur because the Printing monitor has a low priority and the computer is heavily loaded. Therefore, the Printing monitor does not get control during the time allowed for a response.

The Control-D monitor terminates the mission NOT-OK.

Corrective Action: Assign a higher priority, or change the performance group of the Printing monitor to provide better response time from this address space (or do both). In case of a batch printing mission, make sure that enough initiators are available for handling batch printing jobs. If this is impossible or undesirable, define a higher value for the time frame defined by optional wish WD2344 in the IOADFLTS member of the DOC library or specify an appropriate time-out in the Printing Mission Definition screen (screen M.S).

CTD40AE ALTERNATE INDEX ACTXREP DOES NOT MATCH THE MAIN CLUSTER ACTUSER. REBUILD IT

Explanation: Highlighted, unrollable message.
Corrective Action: No action is required.

CTD422S OPEN OF USER DATE Control-RECORD FAILED - DDNAME "DACHK"

Explanation: Open of the file containing the User Date Control Record failed (the DACHK DD statement). Issued by the CTMCHK, CTDCHK, or CTBCHK program, which is usually activated by the New Day procedure.

Possible causes are:

- The DACHK DD statement is missing.
- The data set (member) described by the DACHK DD statement does not exist.

The CTMCHK, CTDCHK, or CTBCHK program ends with errors.

Corrective Action: Correct the JCL for the job or CLIST.

CTD424S INVALID ORIGINAL SCHEDULING DATES IN USER DATE Control-RECORD (POSITIONS 1-6)

Explanation: Invalid original scheduling date in User Date Control Record (positions 1 through 6). This date should be earlier than the current installation working date. The valid format is ddmmyy or mmdyy.

Valid formats are:

- ddmmyy
- mmdyy

Possible causes are:

- The previous run of the CTDCHK or CTMCHK program did not finish OK.
- Someone has incorrectly modified the contents of the User Date Control Record (the DACHK DD statement).

For more information, see the INCONTROL for z/OS Administrator Guide.

The New Day procedure ends with errors.

Corrective Action: Correct your Date Control Record (DD statement DACHK).

CTD425S INVALID POST DATE IN USER DATES CONTROL RECORD (POSITIONS 67-72 -72)

Explanation: The contents of the Date Control Record for this Daily are invalid.

Valid formats are:

- ddmmyy
- mmdyy

This message usually indicates that the User Date Control Record was incorrectly modified. The date should be earlier than or equal to the original scheduling date (defined in positions 1 through 6).

The New Day procedure ends with errors.
Corrective Action: Correct the Date Control Record (the DACHK DD statement).

CTD426W CONTROL-D (dailytype) DID NOT RUN FOR nnn DAYS

Explanation: Highlighted, unrollable message.

The difference between the current working date and the original scheduling date (positions 1 through 6 in the Date Control Record) is more than one day. The New Day procedure has not run for nnn days. A New Day procedure is expected to run once a day.

Common causes are:

- The computer has not been working for at least one day.
- The Control-M or Control-D monitor has not been working for over 24 hours.
- The contents of the Date Control Record were incorrectly modified for this Daily.
- In the case of the New Day procedure, the computer may have been IPLed with the wrong date.
- In the case of a User Daily, the Daily has not run for a few days.

The value of dailytype can be GENERAL for the New Day procedure or the job name of a regular User Daily job.

For User Daily jobs, processing continues. Missions are selected according to the RETRO parameter.

For the New Day procedure, this message appears highlighted on the operator console, together with the CTM427W or CTD427W and CTM428W or CTD428W messages. If the operator answers YES, processing continues, taking the RETRO parameter of each job into consideration. If the operator answers NO, the New Day procedure stops executing with an error message.

Corrective Action: If the computer was IPLed with the wrong date, answer NO, correct the problem, and then activate the New Day procedure manually. Control-M or Control-D will not work until the problem is resolved.

CTD427W IS IT TRUE? (ANSWER "YES" OR "NO")

Explanation: Highlighted, unrollable message.

The last run of the New Day procedure was more than 24 hours ago. This message appears together with the CHK426W, CTM426W, or CTD426W and CHK428W, CTM428W, or CTD428W messages. For more details, see the CHK426W message.

The General New Day procedure waits for the operator response.

Corrective Action: If the computer was IPLed with the wrong date, answer NO, correct the problem, and then activate the New Day procedure manually. Control-M or Control-D will not work until the problem is resolved.

CTD428W YOUR ANSWER IS:

Explanation: Highlighted, unrollable message.

The last run of the New Day procedure was more than 24 hours ago. This message appears together with the CHK426W, CTM426W, or CTD426W and CHK427W, CTM427W, or CTD427W messages. For details, see the CHK426W message.

The New Day procedure waits for the operator response.
**Corrective Action:** If the computer was IPLed with the wrong date, answer NO, correct the problem, and then activate the New Day procedure manually. Control-M or Control-D will not work until the problem is resolved.

**CTD429S** {CTMCHK | CTDCHK | CTBCHK} ENDED WITH ERRORS

**Explanation:** The CTMCHK, CTDCHK, or CTBCHK program ended with errors. It is activated as part of the New Day procedure. IOA Log should contain an earlier message about the error.

The New Day procedure finishes executing with a condition code of 08.

**Corrective Action:** Check the IOA Log for error messages. If necessary, manually correct the Date Control Record (date-3 and date-5) to allow the next run of the User Daily job. For details, see the *INCONTROL for z/OS Administrator Guide*.

**CTD430E** POSSIBLE ABEND OF PREVIOUS DAILY RUN!

**Explanation:** A previous run of the same New Day procedure probably abended.

The New Day procedure terminates with errors.

**Corrective Action:** Correct the Date Control Record and rerun the New Day procedure. As a result of the last abend, dates 2, 3 and dates 4, 5, in the Date Control Record are not identical - they should be. If you correct them to the values of date 3 or date 6, a rerun of the New Day procedure schedules all the jobs in the New Day procedure for the days after dates 2-5 until the date designated in date 1 (the current original scheduling date). Do not schedule the same job twice.

For more information, see the *Control-M for z/OS User Guide* or the *Control-D and Control-V User Guide*.

**CTD431I** {CTMCHK | CTDCHK | CTBCHK} STARTED

**Explanation:** This information message indicates that the CTMCHK, CTDCHK, or CTBCHK program, which is activated by the New Day procedure, started executing.

**Corrective Action:** No action is required.

**CTD432I** {CTMCHK | CTDCHK | CTBCHK} ENDED

**Explanation:** This information message indicates that the CTMCHK, CTDCHK, or CTBCHK program, which is activated by the New Day procedure, ended normally.

**Corrective Action:** No action is required.

**CTD433S** DIFFERENCE BETWEEN CURRENT AND LAST RUN OF THIS DAILY IS NEGATIVE BY num DAYS

**Explanation:** The current working date in the computer is before the last original scheduling date of this New Day procedure.

This message is issued by the New Day procedure as a result of incorrect dates in the Date Control Record. For more details, see the *Control-M for z/OS User Guide* or the *Control-D and Control-V User Guide*.

The New Day procedure stops executing with an error message.
Corrective Action: Correct the contents of the Date Control Record, and rerun the Daily. If this problem occurs under the New Day procedure, call your system programmer. The problem should be resolved immediately as the Control-M or Control-D monitor will not be able to operate. Check whether the computer has been IPLed with the correct date.

CTD434W THIS DAILY HAS ALREADY BEEN RUN TODAY

Explanation: The same New Day procedure has already been run today. The current working date in the computer is equal to the last original scheduling date - positions 1 through 6 in the Date Control Record (the DACHK DD statement).

For details, see the Control-M for z/OS User Guide or the Control-D and Control-V User Guide.

Processing terminates with a return code of 8.

Corrective Action: Check the result of the run carefully for possible errors. If the Control-M or Control-D monitor is up and running, there is no need to run the New Day procedure - it was probably started by accident. In any case, have your INCONTROL administrator look at the problem. It is possible that the computer was IPLed with the wrong date.

CTD435S OPERATOR RESPONDED "NO"

Explanation: The operator answered NO to the CHK428W, CTM428W, or CTD428W message.

The New Day procedure stops executing.

Corrective Action: Correct the problem (usually date related), and rerun the New Day procedure.

CTD436S USER DATE CONTROL-RECORD IS EMPTY

Explanation: The data set described by the DACHK DD statement is empty (the New Day procedure).

The New Day procedure terminates with errors.

Corrective Action: Correct the JCL for the job and rerun it.

CTD439I ONLY \( num \) FREE ENTRIES ARE LEFT ON THE COMMUNICATION FILE - PLEASE INCREASE ITS SIZE

Explanation: This information message indicates that the Control-D Communication file is almost full.

In this message, \( num \) is the number of free entries left in this file.

The printing of the reports will continue.

Corrective Action: At the earliest possible time, bring down Control-D, then follow these steps:

1. Increase the COMSIZE Installation Parameter. For more information, see the section on setting Control-D installation parameters in the Control-D chapter of the INCONTROL for z/OS Installation Guide.

2. Run the CTDFRCOM utility in order to create a new communication file.

3. Bring up Control-D.
CTD43AE NO FREE RECORDS IN COM FILE. PRINT MISSION TERMINATES ABNORMALLY

**Explanation:** The current print mission cannot obtain a free record in the communications file.

Each print mission requires one record in the COM file for communicating between the Control-D monitor and the print task. A free record is obtained before the print task is started released when it ends.

The print mission ends NOTOK.

**Corrective Action:** Increase the size of the COM file by increasing the value of the COMSIZE parameter in CTDPARM. You can do this using ICE, as follows:

1. In the IOA Installation Menu, select Customization.
2. Select the environment to customize.
3. In the Customization screen, set Product ID to CTD and select Product Customization.
4. Select Major Step 6, Customize Control-D Dataset Parameters.
5. Select Minor Step 2, Control-D Dataset Parameters.
6. Increase the size of the COMSIZE parameter.
7. Return to the Minor Steps Selection screen, and select Minor Step 3, Save Parameters into Product Libraries.
8. Select Minor Step 5, Format the Communication File.

You can now rerun the print mission.

CTD452I FORMATTING OF *activeFile* FILE STARTED

**Explanation:** This information message indicates that the Control-M Active Jobs file (AJF) or the Control-D Active Missions file (AMF) is currently being formatted.

**Corrective Action:** No action is required.

CTD453S OPEN OF DATES CONTROL-RECORD FAILED. DDNAME "DACHK"

**Explanation:** Open of Control-M or Control-D Date Control record failed in the DACHK DD statement). This error message is issued by the CTMFRM (Control-M), or CTDFRM (Control-D) program as part of the New Day procedure. Possible causes are:

- The DACHK DD statement is missing.
- The data set (member) described by the DACHK DD statement is not the Control-M or Control-D Date Control Record.

**Corrective Action:** Correct the JCL for the New Day procedure.

CTD454E FORMAT (*format_pgm*) ALREADY RUN TODAY

**Explanation:** An attempt was made to run the New Day procedure twice in the same day. The New Day procedure issues *format_pgm*. This program should not run more than once a day.

Possible values of *format_pgm* are:
CTMFRM - formats the Active Jobs file (AJF) in Control-M
CTDFRM - formats the Active Missions file (AMF) in Control-D

The AJF or AMF is not formatted, but the New Day procedure continues to execute other programs in the program list.

**Corrective Action:** Check why the New Day procedure is being run twice, and whether jobs or missions were accidentally ordered twice because the General Date Control Record was erroneously modified.

**CTD455S LAST FORMAT DATE GREATER THAN ORIGINAL SCHEDULING DATE IN CONTROL-D DATES CONTROL-RECORD**

**Explanation:** The last format date is later than the original scheduling date in the Control-M Date Control record or the Control-D Date Control record. The New Day procedure issues this message. For more details, see the appropriate user guide.

New Day processing stops.

**Corrective Action:** Correct the Control-M or Control-D Date Control record, and run the New Day procedure again.

**CTD456S OPEN OF activeFile FILE FAILED. DDNAME "ddName"**

**Explanation:** Open of the Control-M Active Jobs file (AJF) or the Control-D Active Missions file (AMF) defined in the `ddName` DD statement failed. The New Day procedure calls the program that issues this message.

In Control-M, `ddName` is DACKPT and `activeFile` is the Active Jobs file (AJF).
In Control-D `ddName` is DAAMF and `activeFile` is the Active Missions file (AMF).

Possible causes are:
- The `ddName` DD statement is missing.
- The data set described by the `ddName` DD statement is not the AJF or the AMF.
- The data set described by the `ddName` DD statement is the AJF or the AMF, but of another Control-M or Control-D monitor, or of a different version of Control-M or Control-D.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL for the New Day procedure, and rerun it.

**CTD457S OPEN OF BACKUP FILE FAILED. DDNAME "DABKUP"**

**Explanation:** Open of backup file for the Active Jobs file (AJF) or Active Missions file (AMF) defined in the DABKUP DD statement failed. This error message is issued by the CTMFRM (Control-M) or CTDFRM (Control-D) program, which is usually activated as part of the New Day procedure.

Possible causes are:
The DABKUP DD statement is missing.

The data set described by the DABKUP DD statement is not the Active Jobs Backup file or Active Missions Backup file.

The data set described by the DABKUP DD statement is the Control-M Active Jobs Backup file or the Control-D Active Missions Backup file, but of another Control-M or Control-D monitor, or of a different version of Control-M or Control-D.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL for the New Day procedure, and rerun it.

**CTD458S** ERROR IN *activeFile* - RECORD 0. SHOULD BE FORMAT OR FREE

**Explanation:** Record 0 of the *activeFile* file contains incorrect data. This error message is issued by the CTMFRM (Control-M) or CTDFRM (Control-D) program, which is usually activated as part of the New Day procedure.

In Control-M *activeFile* is the Active Jobs file (AJF).

In Control-D *activeFile* is the Active Missions file (AMF).

Possible causes of this message are:

- The *activeFile* file is corrupt.
- The data set described by the DACKPT DD statement (Control-M) or the DAAMF DD statement (Control-D) is not the *activeFile* file, but is very similar to one.

Program execution stops with a condition code of 08.

**Corrective Action:** Check the validity of the data set described by the DACKPT or DDAMF DD statement. If necessary, correct the JCL, and rerun the New Day procedure.

If the *activeFile* is corrupt, use a standard copy utility, like IEBGENER, to copy *activeFile*, and send it to BMC Software Customer Support. If necessary, run the FORMCKP utility to reformat the Active Jobs file or the CTDFRAMF utility to reformat the Active Missions file. However, these utilities also erase all the jobs or missions in the respective files.

**CTD459I** *activeFile* IS RESTORED FROM BACKUP

**Explanation:** This information message indicates the beginning of a rerun of the New Day procedure after an earlier abend during the format of *activeFile*.

In Control-M, *activeFile* is the Active Jobs file (AJF).

In Control-D *activeFile* is the Active Missions file (AMF).

*activeFile* is restored from the appropriate backup file and processing continues normally.

**Corrective Action:** No user action is required.

**CTD45CE** func OPERATION FOR "COM" FILE FAILED. RC=rc

**Explanation:** An internal error occurred in the CTDCIO internal module while the Active Mission file was being formatted.

The Active Mission file is not formatted.
Corrective Action: Note the values of \textit{func} and \textit{rc} and contact BMC Software Customer Support.

CTD460S DATE CONTROL-RECORD IS EMPTY

Explanation: The DACHK DD statement describes an empty data set or member.

For more information, see the sections that describe NEW DAY processing in the Control-M and Control-D chapters of the \textit{INCONTROL for z/OS Administrator Guide}.

Program execution stops with a condition code of 08.

Corrective Action: Correct the Control-M or Control-D Date Control Record and run the New Day procedure again.

CTD461S ERROR WHILE FORMATTING IOA CONDITIONS FILE

Explanation: I/O error while formatting the IOA Conditions file.

Possible causes are:

- The data set described by DD statement DARESF is not the IOA Conditions file.
- An I/O error occurred while reading the IOA Conditions file.

Program execution stops with a condition code of 08.

Corrective Action: Correct and run the New Day procedure again. In case of an I/O error, you may need to recreate the IOA Conditions file. This erases all the conditions from the file.

CTD462S INVALID LAST FORMAT DATE IN DATE CONTROL RECORD

Explanation: Invalid format of last format date in the Date Control Record. This message is issued by the CTMFRM or CTDFRM program, which is activated as part of the New Day procedure. The valid format is \texttt{ddmmyy} or \texttt{mmddyy}.

Possible causes are:

- Someone has modified the contents of the Date Control Record incorrectly.
- The record described by the DACHK DD statement is not the Control-M Date Control Record or the Control-D Date Control Record.

For more information, see NEW DAY processing in the Control-M and Control-D chapters of the \textit{INCONTROL for z/OS Administrator Guide}.

Program execution stops with a condition code of 08.

Corrective Action: Do one or both of the following, as necessary:

- Correct the JCL for the Daily Subsystem, and rerun it.
- Correct the format date in the Date Control Record, and rerun the New Day procedure.

CTD463S INVALID ORIGINAL SCHEDULING DATE IN DATE CONTROL RECORD

Explanation: Invalid original scheduling date in the Date Control Record. The valid format is \texttt{ddmmyy} or \texttt{mmddyy}.
Possible causes are:

- The record described by the DACK DD statement is not the Control-M General Date Control Record or the Control-D General Date Control Record.
- Someone modified the contents of the General Date Control Record incorrectly.

This message is issued by the CTMFRM (Control-M) or CTDFRM (Control-D) program. These programs are activated as part of the New Day procedure.

For more information, see the sections that describe NEW DAY processing in the Control-M and Control-D chapters of the INCONTROL for z/OS Administrator Guide.

Program execution stops with a condition code of 08.

**Corrective Action:** Do one or both of the following, as necessary:

- Correct the JCL for the New Day procedure and rerun it.
- Correct the original scheduling date in the General Date Control Record and rerun the New Day procedure.

CTD464S FILE ALLOCATED TO DDNAME "ddName" IS NOT YOUR activeFile

**Explanation:** The data set described by the `ddName` DD statement is not the file specified by `activeFile`.

In Control-M, `ddName` is DACKPT and `activeFile` is the Active Jobs file (AJF).
In Control-D `ddName` is DAAMF and `activeFile` is the Active Missions file (AMF).

Possible causes are:

- The data set described by the `ddName` DD statement is not the AJF or the AMF.
- The data set described by the `ddName` DD statement is the AJF or the AMF, but of another Control-M or Control-D monitor, or of a different version of Control-M or Control-D.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the problem in the data set name indicated by the `ddName` DD statement, and run the New Day procedure again.

CTD465S FILE ALLOCATED TO DDNAME "DABKUP" IS NOT A BACKUP OF activeFile

**Explanation:** The data set described by the DABKUP DD statement is not a backup of `activeFile`.

In Control-M, `activeFile` is the Active Jobs file (AJF).
In Control-D `activeFile` is the Active Missions file (AMF).

Possible causes are:
The data set described by the DAKBUP DD statement is not the AJF or the AMF.
The data set described by the DAKBUP DD statement is the AJF or the AMF, but of another Control-M or Control-D monitor, or of a different version of Control-M or Control-D.

Program execution stops with a condition code of 08.
**Corrective Action:** Correct the Control-M Date Control Record and rerun the affected procedure.

CTD466S NEED MORE MEMORY TO FORMAT activeFile
**Explanation:** There is not enough memory to format the activeFile file.

The New Day procedure issues this message.
In Control-M, activeFile is the Active Jobs file (AJF) or the History file (HST).
In Control-D activeFile is the Active Missions file (AMF).

Program execution stops with a condition code of 08. Control-M and Control-D monitors will not start after this error.
**Corrective Action:** To enable monitors to start, set REGION=0M and rerun the affected procedure. If the REGION is already set to 0M, then ensure that the MVS exit IEFUSI allows sufficient virtual storage memory to be allocated above the 16M line. For example, since each record of the above files requires 1024 bytes of storage, a file containing 200,000 records requires 200M of storage above the line.

CTD468I FORMATTING OF activeFile ENDED
**Explanation:** This information message indicates that the New Day procedure finished formatting the activeFile file.

This message is issued by the CTMFRM (Control-M) or CTDFRM (Control-D) program, which is activated as part of the New Day procedure.
In Control-M, activeFile is the Active Jobs file (AJF).
In Control-D activeFile is the Active Missions file (AMF).

**Corrective Action:** No action is required.

CTD470S ERROR WHILE FORMATTING THE activeFile, FILE WAS NOT FORMATTED
**Explanation:** An error occurred during formatting of the activeFile file.

The New Day procedure issues this message.
In Control-M, activeFile is the Active Jobs file (AJF).
In Control-D activeFile is the Active Missions file (AMF).

Program execution stops with a condition code of 08.
**Corrective Action:** Look for a previous message that describes the type of error. Correct it and rerun the New Day procedure.
CTD485I  ATTEMPTING TO OBTAIN SYNCHRONIZATION TIMESTAMP

Explanation: This information message indicates that a backup mission (or the CTDDELRP utility) is trying to synchronize with the Control-D monitor.

For an explanation of the synchronization process, see the MONA59I message.

Corrective Action: No action is required.

CTD486I  SYNCHRONIZATION TIMESTAMP OBTAINED:  timeStamp

Explanation: This information message indicates that a backup mission or the CTDDELRP utility is trying to synchronize with the Control-D monitor.

The displayed timestamp is a hexadecimal representation of the time-of-day clock value used for synchronization. It is displayed for tracking and debugging purposes.

For an explanation of the synchronization process, see the MONA59I message.

Corrective Action: No action is required.

CTD487E  SYNCHRONIZATION FAILURE. RC:  rc

Explanation: The decollation task could not provide a timestamp during synchronization for the backup job, the CTDDELRP utility, or the CTVJAR utility.

Valid values for  rc, and their explanations, are:

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>16</td>
<td>Error access the Active User file</td>
</tr>
<tr>
<td>20</td>
<td>Internal error</td>
</tr>
</tbody>
</table>

The backup job, the CTDDELRP utility, or the CTVJAR utility fails.

Corrective Action: Do the following:

- If the return code is 16, see the preceding CTDU99E message.
- If the return code is 20, notify BMC Software Customer Support.

When the error occurs, perform the following steps:

1. Enter the log screen.
2. Use the SHOW command.
3. Change the value of the ALL MESSAGE TYPES field to Y.
4. Print the log.
CTD487S MIGRATION FILE WAS FORMATTED WITH INCORRECT COMPRESSION TABLE

**Explanation:** A migration file was opened for multistage migration but the migration file was formatted with an old compression table. A multistage migration mission stores log data about the last three migration stages in the SYSDATA record. If a migration file formatted with an old compression table is used, this data is lost.

The migration mission ends NOTOK.

**Corrective Action:** Reformat the migration file by unloading it by means of job CTDUFDUL and reloading it by means of job CTDUFRST from the Control-D JCL library.

CTD488I PROCESS IS WAITING FOR SYNCHRONIZATION

**Explanation:** This information message indicates that the backup job, the CTDDELRP utility, or the CTVJAR utility waits for the decollation task to provide a timestamp.

**Corrective Action:** No action is required.

CTD488W MIGRATION OF "CDAM name" FROM OSS TO OSS REJECTED

**Explanation:** While building a migration mission, the Control-D monitor found a request to migrate the CDAM name file from one OSS media to another OSS media, but this type of migration is not allowed. This CDAM file is deleted from the list of CDAM files to be migrated.

**Corrective Action:** Change the migration path of the problematic migration mission.

CTD494E OPEN OF BACKUP UTILITY MESSAGES FILE FAILED

**Explanation:** The open of the SYSIN DD statement failed. This message is produced by the ANALYZE step of the backup/migration job.

Possible causes are:

- The SYSIN DD statement has been deleted or its JCL has been modified incorrectly.
- The data set referenced by SYSIN DD statement cannot be opened for sequential read.

The requested backup or migration is not performed. The status of the Backup or Migration Mission is changed to ENDED NOTOK.

**Corrective Action:** Do the following:

1. Check the ANALYZE step of the backup or migration job in the library referenced by the DADSKL DD statement.
2. Modify the JCL as required. For the correct format for SYSIN JCL, see the BKPDFDSS sample skeleton job in the Control-D or Control-V SKL library.
3. Rerun the Backup or Migration Mission.

CTD496E OPEN OF ACTIVE MISSIONS FILE FAILED. DDNAME "DAAMF"

**Explanation:** Open of the Active Missions file failed. This file is referenced by the DAAMF DD statement.
This message is produced by the ANALYZE step of the backup or migration job. This step executes the CTDBKCC program, which analyzes the output of the backup or migration process.

Possible causes are:

- The DAAMF DD statement is missing.
- The data set referenced by the DAAMF DD statement is not the Active Missions file.
- The data set referenced by DAAMF DD statement is the Active Missions file for another Control-D or Control-V monitor or a different version of Control-D or Control-V.

Backup or migration of the requested data sets is not performed. The status of the backup or migration mission remains BACKUP or MIGRATE IN PROCESS. This status will change to ENDED OK after the backup or migration job is corrected and rerun.

**Corrective Action:**

1. Check the ANALYZE step of the backup or migration job in the library referenced by the DADJOB DD statement.
2. Modify or add the DAAMF DD statement.
3. Rerun the job.
4. To prevent a recurrence of this problem, make the same modification to the backup or migration skeleton JCL in the library referenced by the DADSKL DD statement.

CTD497E UNABLE TO UPDATE STATUS OF MISSION *misName* 
ODEATE=*misoDate* TIMESTAMP=*misTime* (RC=rc)

**Explanation:** where *rc* is the return code of the Active Mission file service.

Backup or migration job cannot update, in the Active Mission file, the status of the mission indicated in the message.

The mission remains in status IN PROCESS.

**Corrective Action:** Use the appropriate utility (BKPRESET or MIGRESET) to reset the mission status. If the problem recurs, prepare the IOA LOG and contact BMC Customer Support.

**Messages CTD600 through CTD6xx**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTD646E PRINT PLAN FILE DOES NOT EXIST

**Explanation:** Attempt to enter the P (Print Control Option) failed. The Print Plan file was not yet created. Control-D allocates and builds the Print Plan file when it processes a Printing Mission. During this process, the Printing Mission status is BUILDING PRINT PLAN, and it is not possible to enter the Print Control Option until after the Print Plan file is created.

Request is rejected.

**Corrective Action:** Wait until the Printing Mission finishes building the Print Plan file, and then retry to enter the Print Control Option.
CTD647E PRINT CONTROL-IS VALID FOR PRINT MISSIONS ONLY  
Explanation: The P (Print Control) option was specified for a mission that is not a Printing Mission. The P (Print Control) option may only be activated for Printing Missions.  
Corrective Action: Specify an option which is valid for the required mission.

CTD649E CANNOT RERUN MISSION missionName ODATE date - TASK SUSPENDED  
Explanation: A restart was attempted on a mission which was in SUSPENDED status. A SUSPENDED mission cannot be restarted.  
The rerun order is rejected.  
Corrective Action: Wait until the mission has finished and issue another rerun request.

CTD650S OPEN OF ACTIVE MISSIONS FILE FAILED. DDNAME "DAAMF"  
Explanation: Open of Control-D Active Missions file failed (the DAAMF DD statement).  
This is due to one of the following:  
- The DAAMF DD statement is missing.  
- The data set described by the DAAMF DD statement is not the Control-D Active Missions file.  
- The data set described by the DAAMF DD statement is the Control-D Active Missions file of another I OA I Installation, or of a different version of Control-D.  
Corrective Action: Check the contents of the system log for additional messages which may clarify the picture, or logon again.

CTD651S READ ERROR ON CONTROL-D ACTIVE MISSIONS FILE. NOTIFY THE I OA ADMINISTRATOR  
Explanation: I/O error while reading Control-D Active Missions file.  
Possible causes are:  
- The file allocated to the DAAMF DD statement is not the Control-D Active Missions file.  
- The file allocated to the DAAMF DD statement is the Control-D Active Missions file, but it is of a different version.  
- Real I/O error.  
Corrective Action: Check the contents of the system log for additional messages which may clarify the picture, or log on again.

CTD652S INTERNAL ERROR - INVALID REQUEST TO CTDUMS request  
Explanation: Internal error. Invalid request to the CTDUMS Control-D internal program.  
The function requested is not performed.  
Corrective Action: Have your system programmer call BMC Software Customer Support.
CTD653E CANNOT action MISSION missionName ODATE odate - NOT HELD

Explanation: Result of DELETE or CHANGE commands. The missionName mission of the original scheduling date odate is not in HELD state and therefore cannot be deleted or changed.
Delete or change request ignored.

Corrective Action: Hold the mission using the H option. Wait until the REQUESTED HELD status is changed to HELD, and then you can perform the change or delete.

CTD654E CANNOT action MISSION missionName ODATE odate - ALREADY DELETED

Explanation: The missionName mission of the original scheduling date (odate) has already been deleted.
The user request is ignored.

Corrective Action: No action can be performed

CTD655E ACTIVE MISSIONS FILE IS IN USE, TRY AGAIN LATER

Explanation: Another user is currently updating the file. The file is temporarily in use by another user or by the Control-D monitor.
The requested action is not performed.

Corrective Action: Try again later.

CTD656E action OF MISSION missionName ODATE odate IGNORED - STATUS HAS CHANGED

Explanation: Result of HOLD (H), RERUN (R), FREE (F) or CHANGE (C) request for the missionName mission of the odate original scheduling date, the status of which has already been changed. While you were looking at the screen, another user or Control-D monitor changed the status of the mission, or the contents of the production parameters.
The requested action is ignored.

Corrective Action: Check the mission status and act accordingly.

CTD657E CANNOT action MISSION missionName ODATE odate - MAX CHANGES OVER, TRY AGAIN LATER

Explanation: Cannot carry out more actions on the missionName mission of the odate original scheduling date. The maximum number of requests for action has been exceeded. Control-D monitor must accept the requests before another action can be performed.
The user request is ignored.

Corrective Action: If the Control-D monitor is up, try again. If it is down, it should be brought up again.
CTD658S CANNOT action MISSION missionName ODATE odate - UNEXPECTED CODE FROM CTDUMS

Explanation: Unexpected code from the CTDUMS Control-D internal utility.
The user request is ignored.
Corrective Action: Have your system programmer call BMC Software Customer Support.

CTD659I action OF MISSION missionName ODATE odate PERFORMED

Explanation: This information message displays the result of a DELETE (D), RERUN (R), CHANGE (C), FREE (F), HOLD (H), or BYPASS (B) command.
The missionName mission has been:
- DELETED
- REQUESTED RERUN
- REQUESTED CHANGE (save in Zoom screen)
- REQUESTED FREE
- REQUESTED HELD
- BYPASSED (the input conditions and/or the time limit for the mission)
Corrective Action: No action is required.

CTD660E INVALID VALUE, USE "Y" OR "N"

Explanation: Invalid value specified in the field. The cursor points to the field that contains the invalid value.
Corrective Action: Select Y for yes, or N for no.

CTD661E AT LEAST ONE TASKTYPE MUST BE "Y"

Explanation: At least one tasktype must be Y.
Corrective Action: Mark at least one of the task types as Y.

CTD662E AT LEAST ONE MESSAGE TYPE MUST BE "Y"

Explanation: At least one message type must be Y. All of the Y/N options were marked N.
Corrective Action: Mark at least one of the message types Y.

CTD663E AT LEAST ONE OF THE FIRST TWO TYPES OF MISSION STATUS MUST BE "Y"

Explanation: At least one of the first two types of mission status must be Y. Both are marked N.
Corrective Action: Mark at least one of the first two types of mission status as Y.
CTD664S INTERNAL ERROR BEFORE CALLING CTDUMS

**Explanation:** Internal error.
The function requested is not performed.

**Corrective Action:** Have your system programmer call BMC Software Customer Support.

CTD665E CANNOT RERUN MISSION *missionName* `ODATE odate` - TASK NOT ENDED

**Explanation:** The *missionName* mission of the `odate` original scheduling date did not finish executing, therefore it cannot be rerun.
The rerun request is ignored.

**Corrective Action:** Try again later.

CTD666S INTERNAL ERROR - UNEXPECTED RETURN CODE FROM CTDTDWY

**Explanation:** Internal error. Invalid return code from the CTDTDWY Control-D internal program (Why screen).

**Corrective Action:** Have your system programmer call BMC Software Customer Support.

CTD667E "WHY" OPTION CAN BE USED ONLY ON TASK IN "WAIT SCHEDULE/PROCESS" STATE

**Explanation:** The WHY option (?) is used to determine the reason a task is waiting to be scheduled. It cannot be used unless the task is in the WAIT SCHEDULE or WAIT PROCESS state.
The user request is ignored.

**Corrective Action:** No action is required.

CTD668S INTERNAL ERROR - UNEXPECTED RETURN CODE FROM CTDTAPR *rc*

**Explanation:** Internal error. Invalid return code from the CTDTAPR Control-D internal program (Printing Mission Zoom screen).

**Corrective Action:** Have your system programmer call BMC Software Customer Support.

CTD669E ERROR ON ACTIVE MISSIONS FILE. CANNOT BUILD ZOOM SCREEN

**Explanation:** Result of the ZOOM (Z) command. Error in the contents of the Active Missions file.
Possible causes are:
• The Active Missions file has been corrupted, perhaps by incorrect usage of one of the Control-D user exits.
• An internal Control-D error occurred.

**Corrective Action:** Call your system programmer for assistance. A dump of the file will be needed to solve the problem.

**CTD66AE "BYPASS" OPTION CAN BE USED ONLY ON MISSION IN "WAIT SCHEDULE/PROCESS"**

**Explanation:** The “BYPASS” option is used for ignoring the conditions that prevent a mission from starting. The “BYPASS” option cannot be used unless a mission is in a WAIT SCHEDULE or WAIT PROCESS state.

**Corrective Action:** Cancel the "BYPASS" option.

**CTD670S INTERNAL ERROR. CANNOT BUILD ZOOM SCREEN**

**Explanation:** Internal Control-D error while building the Zoom screen.

**Corrective Action:** Have your system programmer call BMC Software Customer Support for assistance.

**CTD671E CANNOT action MISSION missionName ODATE odate - IN REQUESTED CHANGE MODE**

**Explanation:** A user tried to FREE or DELETE a task which is still in the REQUESTED CHANGE mode. The request is ignored.

**Corrective Action:** Wait until the REQUESTED CHANGE status disappears and then try again.

**CTD672E CANNOT SAVE MISSION. INSUFFICIENT SPACE IN MISSION RECORD - USE LESS DATA**

**Explanation:** Additional data were added to the mission on the Zoom screen, and the message appears as a result of the SAVE command. When a mission order is placed on the Active Missions file, space is reserved for possible future addition of data by the user. This message appears whenever this space is exhausted.

New mission data are not saved.

**Corrective Action:** Try to delete some data in the Zoom screen. If you are trying to add ON statements, try to delete other ON statements. For OUT conditions, delete unnecessary OUT statements, and so on. Deletion of all SHOUT WHEN messages, usually releases enough space. If all these actions fail, delete the mission order, and re-issue it manually with the new data using the CLIST CTDMISRQ.

If the problem persists, consult BMC Software Customer Support.
CTD673E CANNOT \textit{action} MISSION \textit{missionName} ODATE \textit{odate} - MISSION IN PROCESS

\textbf{Explanation:} Result of DELETE (D) request for the \textit{missionName} mission of the \textit{odate} original scheduling date, which is in process. You can only delete a mission that awaits scheduling, or that has finished executing (ended).

The request is ignored.

\textbf{Corrective Action:} Free the mission, let Control-D analyze it and bring it to the ENDED status.

CTD675E OPTION NOT SUPPORTED YET FOR THIS TYPE OF MISSION

\textbf{Explanation:} The Zoom option for this type of mission is not yet supported.

The requested Zoom action is not performed.

\textbf{Corrective Action:} No action is required.

CTD680E THERE ARE NO RESTORE REQUESTS FOR MISSION \textit{misName} (TIMESTAMP=\textit{misTime})

\textbf{Explanation:} This error message indicates that no reports were assigned to the Restore Mission (\textit{misName}).

The following variables are used in this message:

- \textit{misName} - the name of the Restore Mission
- \textit{misTime} - the time stamp of the Restore Mission

The Restore Mission terminates with a status of NOTOK.

\textbf{Corrective Action:} No action is required.

CTD682E RC=\textit{rc} FROM CTMMEM. MISSION \textit{misName} TIMESTAMP=\textit{misTime} TERMINATED

\textbf{Explanation:} This error message indicates an error occurred during the processing of a Control-D SKL or JOB library that prevented the Restore Mission (\textit{misName}) from continuing.

The following variables are used in this message:

- \textit{rc} - the return code passed back from the program that was processing the library
- \textit{misName} - the name of the Restore Mission
- \textit{misTime} - the time stamp of the Restore Mission

The Restore Mission terminates with a status of NOTOK.

\textbf{Corrective Action:} Look in the IOA log for other messages to determine the cause of the failure. Call your INCONTROL Administrator.

CTD686E DSN \textit{dsn} NOT IN CATALOG

\textbf{Explanation:} The requested DSN \textit{dsn} is not in the catalog. Possible causes are:
- Control-M AutoEdit facility - failure to read a symbols member (%%GLOBAL statement, or
  %%LIBSYM %%MEMSYM statement).
- JOA Online facility - schedule, calendar or rule definition.
- New Day procedure - failure to read a calendar from the data set described by the DACAL DD
  statement.

The system action depends on the cause, as follows:
- AutoEdit facility - job submission stops.
- JOA Online facility - reading or updating of the table, calendar or rule is not performed.
- New Day procedure ends with errors.

**Corrective Action:** The appropriate response depends on the cause, as follows:
- AutoEdit facility - correct the JCL for the job and rerun it.
- Online facility - correct the library name and retry.
- New Day procedure - correct the New Day procedure and retry.

**CTD688I** RESTORE TASK STARTED.

**Explanation:** This information message indicates that the Control-D internal restore task has begun. This
is the normal message that the application should issue when a restore task starts.

**Corrective Action:** No action is required.

**CTD689E** [taskType memName] jobName jobId orderId MAXIMUM
NUMBER OF MEMBERS/LINES IN MEMBER EXCEEDED

**Explanation:** There is insufficient memory to read a large member from the library.

The system action and appropriate user response depend on the circumstances at the time the message
is issued, as follows:
- If this message was issued during the New Day procedure, the cause is failure to read a calendar
  from the data set described by the DCAL DD statement. In this case, job submission fails. Increase
  the REGION size or LOGON size, and try again.
- If this message was issued while you were using the Control-M AutoEdit facility, the cause is failure to
  read one of the following symbols members:
  - a %%GLOBAL statement
  - a %%LIBSYM %%MEMSYM statement

In this case, job submission fails. Increase the REGION size or LOGON size, and try again.
- If this message was issued while you were using the Control-M Online facility, the cause is failure to access a schedule or calendar definition. Increase the REGION size or LOGON size, and try again.

- If this message was issued while you were using the CTMTBUPD or CTMXRF Control-M utilities, the cause is failure to access a schedule definition. In this case, utility execution fails. Increase either the SLINMAX or the SCHDMAX utility control statements, as appropriate. For more information, see the INCONTROL for z/OS Utilities Guide.

**Corrective Action:** No action is required.

**CTD691E INVALID PARAMETERS FOR RESTORE ANALYZE PROGRAM**

**Explanation:** An invalid parameter was passed to the restore job. This message is produced by the last step of the restore job, which executes the CTDRCSC program. CTDRCSC analyzes the output of the restore process. The parameters passed to this program are wrong. For further details, see the INCONTROL for z/OS Administrator Guide.

The restore of the requested data sets will not be performed. The status of the Restore Mission will remain RESTORE IN PROCESS.

**Corrective Action:** Do the following:

1. Check the last step of the restore job which can be found on the library allocated to the DADJOB DD statement. This step executes the CTDRCSC program, and has two parameters, timestamp and mission name. For the correct format of these two parameters, see the RSTDFDSS sample skeleton job in the Control-D SKL library, modify the JCL, and rerun the job. The status of the Restore Mission will then change to ENDED OK.

2. In order to prevent this problem from occurring again, modify the last step of the restore job which can be found on the library allocated to the DADSKL DD statement.

**CTD693E CATEGORY=cat NOT FOUND IN MEMBER=memName LIBRARY=libName**

**Explanation:** A mission in cat category that was specified in the mission order list has not been found in the memName member of libName library.

The indicated mission is not entered into the Active Mission file.

**Corrective Action:** Correct the mission order list and re-order the indicated mission.

**CTD694E MISSION misName TIMESTAMP=misTime FAILED TO OPEN RESTORE UTILITY MESSAGES FILE**

**Explanation:** The restore job executing the specified restore mission was unable to open the messages file of the invoked restore utility.

The variables in this message are:

- **misName** - the name of the restore mission
- **misTime** - the time stamp of the restore mission

The restore mission ends NOTOK.

**Corrective Action:** Check the additional messages issued from the restore job.
CTD696E MISSION misName TIMESTAMP=misTime FAILED TO OPEN ACTIVE MISSION FILE

**Explanation:** The restore job executing the specified restore mission was unable to open the Active Mission file.

The variables in this message are:
- `misName` - the name of the restore mission
- `misTime` - the time stamp of the restore mission

The restore job only prints the restore utility log.

**Corrective Action:** Call your INCONTROL Administrator.

CTD696I ALL MISSIONS PROCESSED SUCCESSFULLY

**Explanation:** This information message is issued when terminating the selection and placing missions on the Active Missions file. This message appears even if no missions were placed on the Active Missions file.

This message is issued by:
- CLISTs that schedule missions manually
- New Day procedure

For more information, see the relevant section of the *INCONTROL for z/OS Administrator Guide*.

**Corrective Action:** No action is required.

CTD697S SEVERE ERROR IN PROCESSING MISSIONS - PROCESSING TERMINATED

**Explanation:** The processing of the missions ended with errors. There is at least one earlier message concerning the errors.

The New Day procedure or CLIST ends with a return code of 08.

**Corrective Action:** Check the previous error messages and correct accordingly. If necessary, correct the Date Control record manually to allow the next run of the New Day procedure. For more details, see the *INCONTROL for z/OS Administrator Guide*.

CTD698S UNABLE TO PROCESS ANY MISSION

**Explanation:** The CTDRRQ, CTDPRQ, CTDBRQ, or CTDSRQ module was unable to open the IOA Log file or DD name SYSPRINT. There is a prior message concerning the error.

The New Day procedure or CLIST ends with a return code of 12.

**Corrective Action:** Check the previous error message. Correct the error, then rerun the New Day procedure or CLIST.
CTD69AI NO MISSIONS WERE SCHEDULED DURING ORDERING REQUEST

Explanation: This information message indicates that the user ordered missions. However, the missions were not scheduled because the scheduling dates defined in the missions do not match the current working date.

Corrective Action: No action is required.

CTD69BE UNABLE TO ORDER OLD MIGRATION MISSION DEFINITION. UPDATE THE MISSION AND REORDER

Explanation: A migration mission with a definition that does not support multistage migration paths was ordered. The STAGE parameter must be specified for at least stage 01. Migration mission definitions that do not contain the STAGE parameter do not satisfy this requirement.

The migration mission is not ordered.

Corrective Action: Redefine the migration mission with the STAGE parameter and reorder the migration mission.

Messages CTD700 through CTD7xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTD701E PLEASE FILL IN REPORT/JOB NAME OR OMIT CATEGORY

Explanation: A category name is specified, but the report or job name is missing. A report or job must be specified as well as a category name.

Corrective Action: Either fill in a report or job name or omit the category to get a list of reports or jobs in the library.

CTD702E CTLG N CAN NOT BE SPECIFIED FOR THIS MEDIA TYPE

Explanation: The CTLG subparameter is specified as N (do not catalog the migrated files) for a medium type that is not CART. This option can be used only for a cartridge type specified as CART in the IOASPRM member.

Corrective Action: Specify Y or blank in the CTLG subparameter.

CTD710E JOBID CAN BE JOBnum TSUnum STCnum* OR BLANK

Explanation: There is an invalid value in a decollation mission JOBID field.

The JOBID field in a Decollation mission can take one of the following values only:
Job ID can be JOBnum, TSU num, STC num, or blank.

Corrective Action: Specify a JobID in one of the above formats, or leave the field empty.

CTD712E Valid values for IN QUEUE are "Y", "N", "E", or blank.

Explanation: There is an invalid value in the WHEN IN QUEUE Decollation Mission field. Valid values for WHEN IN QUEUE field in a decollation mission are Y, N, E or BLANK only.

Corrective Action: Specify either Y, N, or E in the WHEN IN QUEUE field, or leave it empty.

CTD713E Job ID can be JOBnum, TSU num, STC num, or blank.

Explanation: There is an invalid value in a decollation mission Job ID field. The Job ID field in Decollation mission can take one of the following values only:

- JOB num
- TSU num
- STC num
- (Blank)

Corrective Action: Specify a JobID in one of the above formats, or leave the field empty.

CTD714E Until line should be blank when FROM line is *.

Explanation: There is an invalid value in the WHEN TO LINE field in a decollation mission. If an asterisk is specified in the second WHEN FROM LINE field, the WHEN TO LINE field must be blank.

Corrective Action: Clear the WHEN TO LINE field with a blank, or change the value of the WHEN FROM LINE field.
CTD715E MASK IN JOBNAME IS ALLOWED ONLY FOR GENERIC DECOLLATIONS

Explanation: A mask character in the JOBNAME parameter for a decollation mission is not generic. In a non-generic decollation mission, the JOBNAME parameter must be unique and cannot contain mask characters.

Corrective Action: Either make the decollation generic, or specify a unique value in the JOBNAME parameter.

CTD716E FOR RECORD LEVEL INDEX, MASK MUST HAVE LINE RANGE AND INDEX LINE +/-

Explanation: The DO INDEX statement is invalid. A record level index was specified without a line range for the mandatory mask, or without an index line location defined as a +/- offset from the location of the line containing the mandatory mask.

If a DO INDEX statement contains the REC parameter set to Y or C, it must also contain both of the following:

- a mask for the record-level index with a line range for that mask
- a line offset for the index value which begins with a + or - sign.

The decollation mission is not saved or updated.

Corrective Action: Specify a page-level index (set REC to N), or specify a mask with a mask line range and an index value location which is defined as a + or - offset from the mask line.

CTD719E FOR JOBNAME_DDNAME INDEX MIGRATION MISSION MUST BE "JOBARC"

Explanation: A migration mission name other than JOBARC was specified in a JOB ARCHIVE decollation mission definition. Decollation definitions for the JOB ARCHIVE utility must include both the special index JOBNAME_DDNAME and the migration mission name JOBARC.

The cursor stays in the field until the correct migration mission name is specified.

Corrective Action: Change the migration mission name to JOBARC.

CTD71AE MASK mparm CONFLICTS WITH INDEX iparm +/-

Explanation: There is a conflict between the values specified for the following parameters, because one of these values is invalid:

- the LINE or COL parameter in a MASK statement
- the LINE or COL parameter in a DO INDEX or SUBINDEX statement where the value started with a + or - sign

For more information on these parameters, see the Control-D and Control-V User Guide.

The variables in this message are:
### mparm - the value of the LINE or COL parameter of the MASK statement

The system waits for the parameter values to be corrected.

**Corrective Action:** Correct the parameter values.

#### CTD725I TOP OF CATEGORIES LIST

**Explanation:** This information message indicates that a user attempted to jump to the previous category (using PF10) but the current category is the first category in the member.

**Corrective Action:** No action is required.

#### CTD726I BOTTOM OF CATEGORIES LIST

**Explanation:** This information message indicates that a user attempted to jump to the previous category (using PF11) but the current category is the last category in the member.

**Corrective Action:** No action is required.

#### CTD751E PLEASE FILL IN MISSION NAME OR OMIT CATEGORY

**Explanation:** Category name specified, but mission name missing. A mission name must be defined.

**Corrective Action:** Either fill in mission name or omit category name to get a list of missions in the library.

#### CTD769E VALID MISSION TYPE IS PRT/BKP/RST

**Explanation:** An invalid mission type was entered.

Valid mission types:

- **PRT** - Printing Mission
- **BKP** - Backup Mission
- **RST** - Restore Mission

**Corrective Action:** Correct the mission type field.

#### CTD770E MISSION TYPE MUST BE SPECIFIED WHEN ENTERING A NEW MISSION

**Explanation:** Missing the mission type field on the Mission Definition screen. The mission type (PRT, BKP or RST) must be entered when defining a new mission.

**Corrective Action:** Enter the appropriate mission type.

#### CTD770S OPEN OF CONTROL-D COMMUNICATION FILE FAILED

**Explanation:** The CTDFRCOM utility, which is used to allocate and format the Control-D Communication file, could not open the file.

Possible causes are:
The DACOM DD statement is missing.
There is insufficient memory for the job.
The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

**CTD771I** FORMATTING OF CONTROL-D COMMUNICATION FILE STARTED

**Explanation:** This information message indicates that the Control-D Communication file is currently being formatted.

**Corrective Action:** No action is required.

**CTD772I** FORMATTING OF CONTROL-D COMMUNICATION FILE ENDED

**Explanation:** This information message indicates that the formatting of Control-D Communication file by the CTDFRCOM utility ended.

**Corrective Action:** No action is required.

**CTD773S** FORMATTING OF CONTROL-D COMMUNICATION FILE - WRITE I/O ERROR

**Explanation:** An I/O error occurred during formatting of the Control-D Communication file. This may occur when there is incompatibility between the definition of the Communication file in the Installation Parameters (COMSIZE in CTDPARM) and the JCL SPACE or DCB parameters.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct either the JCL or the Installation Parameters.

**CTD774S** CONTROL-D COMMUNICATION FILE WAS NOT BUILT

**Explanation:** Due to a problem described by other messages, the Control-D communication file was not built. The CTDFRCOM utility stops executing with a condition code of 08.

**Corrective Action:** Examine the contents of the system log for additional messages that may clarify the cause of the error. If the CTD913S message is issued, follow the explanation contained in the CTD913S message. If this does not solve the problem, record all related information, including the contents of the CTD913S message, and contact BMC Software Customer Support.

**CTD775I** monName CONTROL-D PRINTERS CONTROL-MONITOR STARTED

**Explanation:** This information message indicates that the monName Control-D Printers Control monitor started.

**Corrective Action:** No action is required.

**CTD776E** monName CONTROL-D PRINTERS CONTROL-MONITOR ALREADY ACTIVE

**Explanation:** Highlighted, unrollable message.
Someone tried to start the monName Control-D Printers Control monitor, which is already active. The Control-D Printers Control monitor is automatically activated from the Control-D monitor. It should not be activated manually.

The monName Control-D Printers Control monitor will shut down.

Corrective Action: No action is required.

CTD777S monName CONTROL-D PRINTERS CONTROL-MONITOR ENDED WITH ERRORS

Explanation: Highlighted, unrollable message.

The monName Control-D Printers Control monitor ended with errors. The IOA Log should contain additional messages concerning each specific error.

The monName Control-D Printers Control monitor and the Control-D monitor will shut down.

Corrective Action: Check the IOA Log and the system log for the reason. Call the system programmer for assistance if needed. Try to start the Control-D monitor again as soon as possible.

CTD778I monName ALL MODIFY/STOP COMMANDS MUST BE ISSUED BY CONTROL-D MAIN MONITOR ONLY

Explanation: This information message indicates that the user tried to issue a MODIFY or STOP command to either the Control-D Printers Control monitor or to a Control-D secondary monitor. A MODIFY or STOP command to the Control-D Printers Control monitor or a Control-D secondary monitor can only be issued by the Control-D primary monitor.

The MODIFY or STOP command is ignored.

Corrective Action: No action is required.

CTD779I monName CONTROL-D PRINTERS CONTROL-MONITOR ENDED

Explanation: Highlighted, unrollable message.

This information message is the general message which is issued when the Control-D Printers Control monitor ends.

Corrective Action: In this message, monName is the name of the Printers Control monitor that has ended.

CTD781E FIELD MUST BE NUMERIC AND IN RANGE OF 1-255

Explanation: An invalid value has been specified in the INTERVAL parameter. The INTERVAL parameter must be numeric, and must contain three digits in the range from 000 through 254.

Corrective Action: Correct the INTERVAL parameter.
CTD782E INVALID PRINTER NAME. YOU CAN USE ONLY NAMES DEFINED TO CONTROL-D

**Explanation:** An invalid printer name has been specified in the PRINTER parameter of the Printing Mission Definition screen. The printer name specified must be defined in the Control-D Installation Parameters.

**Corrective Action:** Correct the PRINTER parameter.

CTD783E PLEASE FILL IN THE PRINTER NAME

**Explanation:** Missing the PRINTER parameter in the Printing Mission Definition screen. The PRINTER parameter is obligatory if the DEST parameter is specified.

**Corrective Action:** Specify the printer name to be used for printing the bundle.

CTD784E FORM NAME MUST BE SPECIFIED FOR REQUEST

**Explanation:** Missing the FORM parameter in the Printing Mission Definition screen. The FORM parameter is required if the REQUEST parameter is specified.

**Corrective Action:** Specify the form number or name to be used in printing the bundle.

CTD785E PLEASE FILL IN THE REQUEST

**Explanation:** Missing the REQUEST parameter in the Printing Mission Definition screen. The REQUEST parameter is obligatory if the FORM parameter has been specified.

**Corrective Action:** Specify the REQUEST to be used in printing the bundle.

CTD788E PLEASE FILL IN THE PRINTING MISSION NAME

**Explanation:** The MISSION NAME parameter on the Printing Mission Definition screen has not been specified. The MISSION NAME parameter is obligatory.

**Corrective Action:** Specify the Printing Mission name.

CTD789E INVALID FORMAT OF SORT PARAMETERS

**Explanation:** The format of the SORT SEQ parameter of the Printing Mission Definition screen is invalid. Sort sequence numbers (1-9) must be separated by commas. For details, see the SORT parameter in the Control-D and Control-V User Guide.

**Corrective Action:** Correct the SORT SEQ parameter.

CTD790E INVALID SORT SEQUENCE NUMBER

**Explanation:** The sort sequence number in the SORT parameter of the Printing Mission Definition screen is invalid. Valid sort sequence numbers are from 1 through 9. For details, see the SORT parameter in the Control-D and Control-V User Guide.

**Corrective Action:** Correct the SORT SEQ parameter.
CTD791E DUPLICATE SORT SEQUENCE NUMBER

**Explanation:** The same sort sequence number was entered twice in the SORT parameter of the Printing Mission Definition screen. Each sort sequence number must be used only once.

**Corrective Action:** Correct the SORT SEQ parameter.

CTD795E SKELETON MEMBER NAME MUST BE FILLED IN WHEN BATCH=Y

**Explanation:** A value of Y was entered in the BATCH parameter, but the name of the skeleton member was not specified. When defining a batch print mission, you must specify the skeleton member name.

**Corrective Action:** Specify the skeleton member name or change the batch parameter to N.

CTD796E SKELETON MEMBER NAME MUST BE BLANK WHEN BATCH=N

**Explanation:** The skeleton member name was specified, but the BATCH parameter was specified as N. The skeleton member name is valid only when the BATCH parameter is Y.

**Corrective Action:** Erase the skeleton member name or change the BATCH parameter to Y.

CTD797E FREE FIELD CAN BE "CLOSE" OR "END" ONLY

**Explanation:** An invalid value was specified in the FREE field.

Valid values for the FREE field are:

- CLOSE
- END

**Corrective Action:** Specify either CLOSE or END in the FREE field.

CTD798E FREE FIELD CANNOT BE "END" WHEN BATCH=N

**Explanation:** END was specified in the FREE field, but the BATCH parameter was N. END is valid in the FREE parameter for batch print missions only. That is, BATCH must be set to Y.

**Corrective Action:** Change the value of the FREE parameter to CLOSE, or change the value of the BATCH parameter to N.

CTD79AE "MONITOR" FIELD SHOULD BE BLANK OR NUMERIC (1 - 9)

**Explanation:** An invalid value was specified in the MONITOR parameter of the Printing Mission Definition.

The MONITOR Printing Mission Definition parameter specifies which Control-D Printing monitor address space processes the Printing Mission. The MONITOR parameter can be blank to allow Control-D or Control-V to automatically select the next available Printing monitor, or it can be a number from 1 through 9 to specify the Printing monitor that should process the Printing Mission.

The Printing Mission Definition is not created or saved until a valid value is entered for the MONITOR parameter.

**Corrective Action:** Enter a number from 1 to 9 in the field for the MONITOR parameter or leave the field blank, then save the Printing Mission Definition.
CTD79CI FORMATTING OF CONTROL-D PAGE COUNTER FILE ENDED

Explanation: This information message indicates that the Page Counter file was formatted successfully by the CTDFRPGC utility.

The CTDFRPGC utility terminates with a return code of 0.

Corrective Action: No action is required.

CTD79DS CONTROL-D PAGE COUNTER FILE WAS NOT BUILT

Explanation: The Page Counter file was not formatted by the CTDFRPGC utility because an error was encountered.

The CTDFRPGC utility terminates with a return code of 8.

Corrective Action: For an explanation of the problem, see the previously issued message (CTM910S or CTM913S). Correct the problem and rerun the utility.

CTD79ES OPEN OF CONTROL-D PAGE COUNTER FILE FAILED

Explanation: The CTDFRPGC utility could not open the Page Counter file for formatting.

The Page Counter file is not formatted. The CTDFRPGC utility terminates with a return code of 8.

Corrective Action: Check the system log output of the job that executed the CTDFRPGC utility for messages associated with the open error. Correct the problem and rerun the utility.

CTD79FS FORMATTING OF CONTROL-D PAGE COUNTER FILE - WRITE I/O ERROR

Explanation: The CTDFRPGC utility could not write a record to the Page Counter file during format processing.

The Page Counter file is not formatted. The CTDFRPGC utility terminates with a return code of 8.

Corrective Action: Check the system log output of the job that executed the CTDFRPGC utility for messages associated with the open error. Correct the problem and rerun the utility.

CTD7A0S PAGE COUNTER FILE FULL. PAGE COUNTING TERMINATES

Explanation: An attempt was made to add a record to the Page Counter file during decollation processing, but no space remains.

Processing of the Page Counter file terminates. The decollation process continues.

Corrective Action: Ignore this message if Page Counter file processing is not needed because the ON PAGE parameter is not specified in any Printing Mission Definition. If Page Counter file processing is needed, stop the Control-D Decollation monitor, delete the Page Counter file (CTD PGC), and use job CTDFRPGC to format a new CTD PGC file with a larger PGCSIZE value. Then restart the Control-D Decollation monitor.
CTD7A1I DDCARD "DAPGC" MISSING. PAGE COUNTING TERMINATES

**Explanation:** This information message indicates that the DAPGC DD statement was not defined in the Control-D Decollation monitor JCL. The Control-D Decollation monitor could not initialize Page Counter file processing because the Page Counter file is not referenced by the DAPGC DD statement.

The Control-D Decollation and Printing monitors continue normal execution but Page Counter file processing is disabled.

**Corrective Action:** Ignore this message if Page Counter file processing is not needed because the ON PAGE parameter is not specified in any Printing Mission Definition. If Page Counter file processing is needed, stop the Control-D Decollation monitor, add the DAPGC DD statement to the monitor JCL, then restart the Control-D Decollation monitor.

CTD7A2S INTERNAL ERROR IN FUNCTION func. PAGE COUNTING TERMINATES

**Explanation:** The Control-D Decollation monitor encountered an internal error during Page Counter file processing. The following are possible causes of the problem:

- Page Counter file corruption
- Insufficient space allocated for the Page Counter file (usually due to a large number of PRINT missions)

The Control-D Decollation and Printing monitors continue normal execution but Page Counter file processing is disabled.

**Corrective Action:** Ignore this message if Page Counter file processing is not needed because the ON PAGE parameter is not specified in any Printing Mission Definition. If Page Counter file processing is needed, stop the Control-D Decollation monitor, delete the Page Counter file (CTD PGC), and use job CTDFRPGC to format a new CTD PGC file with a larger PGCSIZE value. Then restart the Control-D Decollation monitor. If this does not restore Page Counting, prepare the relevant IOA Log file and the system log message output, and contact BMC Customer Support.

Messages CTD800 through CTD8xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTD800E PLEASE FILL IN JOBNAME

**Explanation:** Missing job name. The JOBNAME field is obligatory.

**Corrective Action:** Fill in the name of the job. This decollating mission will process the reports (outputs) of the specified job name.

CTD801E PLEASE FILL IN OWNER ID

**Explanation:** Missing owner ID. The owner ID field is obligatory.

**Corrective Action:** Fill in the owner ID. This parameter identifies the user who requests Control-D services. This parameter is mainly used by the Control-D security mechanism.
CTD802E INVALID FORMAT OF DAYS PARAMETER

Explanation: Invalid format specified in the DAYS parameter. The DAYS parameter should contain 1-31, ALL, +1, +3, and so on. For more details, see the DAYS parameter in the Control-D and Control-V User Guide.

Corrective Action: Correct the contents of the field.

CTD803E "ALL" PARAMETER MIXED WITH SPECIFIC - CORRECT

Explanation: The ALL parameter was specified together with specific days in the DAYS parameter or the WDAYs parameter. You cannot specify WDAYs or DAYS with the ALL option.

Corrective Action: Omit either the ALL option or the SPECIFIC DAYS option.

CTD804E INVALID FORMAT OF WDAYs PARAMETER

Explanation: Invalid format of WDAYs parameter. WDAYs parameter should contain 0-6, ALL, +1, and so on. For more details, see the WDAYs parameter in the Control-D and Control-V User Guide.

Corrective Action: Correct the WDAYs field.

CTD805E MAXWAIT SHOULD BE 00-31 OR 99

Explanation: The MAXWAIT parameter value is invalid. MAXWAIT should be in the range from 00 through 31 (days in which to execute the mission) or 99 (forever).

Corrective Action: Correct the MAXWAIT field.

CTD806E EXPECTED CONTINUATION NOT RECEIVED (AFTER ",")

Explanation: The DAYS or WDAYs parameter ended with a comma. Additional data is expected after the comma.

Corrective Action: Correct the parameter.

CTD807E DAYS OPTION AND WDAYs OPTION CANNOT BE MIXED

Explanation: The DAYS parameter and the WDAYs parameter were specified together. The WDAYs parameter cannot appear with the DAYS parameter.

Corrective Action: Select either WDAYs or DAYS.

CTD808E DATES PARAMETER CONFLICTS WITH DAYS, WDAYs OR MONTHS OPTION

Explanation: The DATES parameter was mixed with DAYS, WDAYs or MONTHS parameters. The DATES parameter must appear alone.

Corrective Action: Erase any data in the DAYS, WDAYs and MONTHS parameters.

CTD809E CANNOT MIX DATES OPTIONS WITH CONFCAL OPTION

Explanation: The DATES and CONFCAL parameters were both specified. These parameters cannot be specified together.
Corrective Action: Omit either the DATES or CONFCAL specification.

CTD810E CANNOT MIX MINIMUM/PDS WITH OPTIONS DAYS, WDAYS, MONTHS, DATES OR CONFCAL

Explanation: The MINIMUM and PDS parameters were specified with DAYS, WDAYS, MONTHS, DATES or CONFCAL parameters. The MINIMUM and PDS parameters must appear without any date-related parameters.

Corrective Action: Specify either the MINIMUM and PDS parameters or the date-related parameters, but not both.

CTD811E MINIMUM AND PDS MUST BE FILLED IN TOGETHER

Explanation: The MINIMUM parameter was specified, but the PDS field is empty, or vice versa. MINIMUM and PDS parameters must be filled in together.

Corrective Action: Fill in both the MINIMUM and PDS fields.

CTD812E INVALID CONDITION DATE REFERENCE

Explanation: Invalid condition date reference specified. Date reference should be ODAT, PREV, ****, or mmdd (ddmm). For more details, see these parameters in the Control-D and Control-V User Guide.

Corrective Action: Correct the date reference.

CTD813E MISSING/INVALID CONDITION OPTION. TRY "+- ADD OR "- "- DELETE

Explanation: Invalid or missing condition option. Condition option should be + for ADD, or - for DELETE. For more details, see these parameters in the Control-D and Control-V User Guide.

Corrective Action: Insert + or - in the condition option field.

CTD814E INVALID ACTION

Explanation: Invalid action specified in DO statement. For valid actions, see the Control-D and Control-V User Guide.

Corrective Action: Correct the DO action field.

CTD815E INVALID URGENCY. USE "R"- REGULAR, "U"- URGENT OR "V"- VERY URGENT

Explanation: Invalid SHOUT urgency specified. SHOUT urgency should be R for regular, U for urgent, or V for very urgent. For more details, see these parameters in the Control-D and Control-V User Guide.

Corrective Action: Fill in R, U, or V in the SHOUT urgency field.

CTD816E INVALID "WHEN" ATTRIBUTE

Explanation: Invalid WHEN attribute of SHOUT statement.

WHEN should be one of the following:
• OK
• NOTOK
For more details, see the Control-D and Control-V User Guide.

**Corrective Action:** Correct the WHEN field.

**CTD817E INVALID SHOUT DESTINATION CODE**

**Explanation:** Invalid SHOUT destination code.
SHOUT destination code should be one of the following:
• OPER
• OPER2
• USERID-usrid
• TSO-logonid
For more details, see the Control-D and Control-V User Guide.

**Corrective Action:** Correct the SHOUT destination field.

**CTD818E PLEASE FILL IN THE "IN" PREREQUISITE CONDITION NAME**

**Explanation:** Missing IN prerequisite condition name. The condition date reference was specified without a corresponding condition name.

**Corrective Action:** Fill in the IN prerequisite condition name field.

**CTD819E PLEASE FILL IN THE PREREQUISITE CONDITION NAME**

**Explanation:** Missing prerequisite condition name in DO COND statement. At least one condition is expected in DO COND statement.

**Corrective Action:** Fill in the prerequisite condition name.

**CTD820E USE OF PREV/NEXT DATE REFERENCE CONFLICTS WITH PDS/MINIMUM OPTIONS**

**Explanation:** A PREV (or NEXT) date reference was specified for a job scheduled by the PDS parameter. There is no next date or previous date when the job is scheduled according to the status of the library.

**Corrective Action:** Use another valid date reference.

**CTD821E ONLY CODE OPTION "-" ALLOWED FOR DATE REFERENCE $$$$/******

**Explanation:** Code option + was specified for a generic date reference. You cannot add a prerequisite condition to all possible dates of the year.

**Corrective Action:** Enter "-" in the code option or use a different date reference.
CTD822E REDUNDANT TEXT IN SHOUT PARAMETER

**Explanation:** The SHOUT WHEN parameter contains data which is not relevant to the SHOUT option specified, or the SHOUT WHEN is empty.

**Corrective Action:** Erase the redundant text.

CTD823E PLEASE FILL IN THE SHOUT LINE BEFORE THIS MESSAGE LINE

**Explanation:** A message is filled in, but the SHOUT line before it is empty.

**Corrective Action:** Fill in the SHOUT WHEN field. If necessary, fill in the TO destination field as well.

CTD824E PLEASE FILL IN THE MESSAGE

**Explanation:** There is no message in the SHOUT statement.

**Corrective Action:** Fill in the message.

CTD827E INVALID DATA, ONLY "A","P","N" AND BLANK ARE ACCEPTABLE

**Explanation:** Invalid data specified for the SEARCH parameter.

The SEARCH parameter has the following options:

- A - Search the Active User Report List.
- P - Search the Permanent User Report List.
- N - Do not search the Report Lists.
- " " (Blank) - The default value, which is taken from optional Wish WD0933, is used.

For more information, see the *Control-D and Control-V User Guide*.

**Corrective Action:** Correct the SEARCH field.

CTD829E REDUNDANT TEXT, OR FILL IN THE PREVIOUS "ON" LINE

**Explanation:** A WHEN page identification criterion or a DO USER statement was entered without an ON statement. On the following Report Decollating screen, If there is data on the WHEN (line 2) or DO line (line 3), there must be data on the ON line (line 1).

```
DEFCOPIES01LVLUSER05DESTMAXCOPIES

1. ON (CLASS, DSN, SYSDATA, SYSLOG, SYSJCL, SYSMSG) PRT DEST MAX COPIES
   05 PRINTING PARAMETERS

2. WHEN LINE 001- 005 COL 010- 070 PRINT Y ...... STRING = MONTHLY A/R

3. DO PRINT BY MORNING
```

---
Corrective Action: Fill in the ON line (line 1), or erase the data from the WHEN (line 2) or DO line (line 3).

CTD830E INVALID "ON" VALUE

Explanation: Invalid ON statement. ON should be one of the following:

- CLASS
- DSN
- SYSOUT
- SYSDATA
- SYSLOG
- SYSJCL
- SYSMSG

Corrective Action: Correct the ON parameter.

CTD832E PLEASE FILL IN THE CLASS

Explanation: ON CLASS has been specified without the letter of the class. Corrective Action: Fill in the letter of the class.

CTD833E PLEASE FILL IN THE DSN

Explanation: ON DSN has been specified without the Compressed Dataset Access Method selection criteria. The selection criteria specified must be a valid Compressed Dataset Access Method (CDAM) retrieval parameter, such as PREFIX, PGMSTEP, and so on.

For a list of valid CDAM parameters, see the Control-D and Control-V User Guide.

Corrective Action: Fill in the selection criteria.

CTD834E FROM LINE GREATER THAN UNTIL LINE

Explanation: The FROM line is greater than the UNTIL line in the page identification criteria.

Corrective Action: Change either the FROM line or the UNTIL line.

CTD835E FROM COL GREATER THAN UNTIL COL

Explanation: The FROM column is greater than the UNTIL column in the page identification criteria.

Corrective Action: Change either the FROM column or the UNTIL column.

CTD836E INVALID VALUE. TRY "O"- OR "A"- AND OR BLANK

Explanation: Invalid AND/OR option specified. The valid options are A for and relation O for or relation, blank for no additional WHEN line.

Corrective Action: Fill in A, O, or blank.
CTD837E EXPECTING ADDITIONAL "WHEN" DATA. AND/OR FIELD IS MARKED IN PREVIOUS "WHEN" LINE

**Explanation:** An additional WHEN line has been displayed due to an A or O in the AND/OR parameter, but the line is empty.

**Corrective Action:** Fill in the additional WHEN line or delete the A or O in the previous WHEN line.

CTD838E PLEASE FILL IN A SEARCH STRING

**Explanation:** WHEN LINE/COLUMN references have been entered, but the search string is missing. If line and column references are used, the search string is obligatory.

**Corrective Action:** Fill in the search string.

CTD839E INVALID VALUE. TRY "E", "A", "S" OR BLANK

**Explanation:** The user entered an invalid value. E, A, S, or blank are the only values valid in this field.

**Corrective Action:** Enter the correct value.

CTD83AE INVALID VALUE. TRY "Y", "N", "S" OR BLANK

**Explanation:** The user entered an invalid value. Y, N, S, or blank are the only values valid in this field.

**Corrective Action:** Enter the correct value.

CTD841E PLEASE FILL IN AT LEAST ONE PRINTING MISSION NAME

**Explanation:** DO PRINT has been selected, but the Printing Mission name is missing. The Printing Mission name is obligatory when DO PRINT is used.

**Corrective Action:** Enter the Printing Mission name.

CTD842E PLEASE FILL IN AT LEAST ONE BACKUP MISSION NAME

**Explanation:** DO BACKUP has been selected, but the Backup Mission name is missing. The Backup Mission name is obligatory when DO BACKUP is used.

**Corrective Action:** Enter the Backup Mission name.

CTD843E PLEASE FILL IN THE REPORT NAME

**Explanation:** DO NAME has been selected, but the report name is missing. The report name is obligatory when DO NAME is used.

**Corrective Action:** Enter the report name, or *. For more details, see the *Control-D and Control-V User Guide*.

CTD847E REDUNDANT TEXT IN "WHEN" LINE. ERASE OR FILL IN LINE/COL RANGE

**Explanation:** There is data in the WHEN page identification criteria line AND/OR field, but no data in the LINE or COL range. In the following Report Decollating screen, if there is data in the PRINT, REF NEXT PAGE, CONT ID, AND/OR, or STRING fields, then LINE and COL must also be filled in.
INCONTROL for z/OS Messages Manual

WHEN LINE 001-005 COL 010-070 PRINT Y ......AND/OR A STRING = MONTHLY A/R

Corrective Action: Fill in the LINE or COL range, or erase the PRINT, REF NEXT PAGE, and so on, data fields.

CTD848E PLEASE FILL IN THE AND/OR FIELD IN THE PREVIOUS "WHEN" LINE

Explanation: Two consecutive WHEN lines are specified without AND/OR relations between them.
Corrective Action: Erase the second WHEN line or do as the message says.

CTD849E EITHER "LEVEL" OR "USER" CAN BE MARKED AS "\*\*" BUT NOT BOTH

Explanation: An asterisk (*) has been inserted in both the LEVEL field and the USER field of a DO USER statement.
Corrective Action: Choose one field, and clear the other.

CTD84AE THE VALUE CONFLICTS WITH MULTI-S

Explanation: The value S for the MUTLI parameter and the value Y for the STORE parameter are invalid.
Corrective Action: Leave the value of the MULTI parameter blank and set the value of the STORE parameter to N.

CTD84BE INVALID VALUE. TRY "S" OR BLANK

Explanation: The value specified for the field where the cursor is positioned is invalid.
Corrective Action: Set the value of the field to S or leave it blank.

CTD850E "USER" MUST BE MARKED AS "\*\*"

Explanation: There is data in the DO USER LINE or COL field, but the USER data field is not set to *. If either the DO USER LINE or COL field is specified, then the USER data field must be set to *. For more information, see DO USER in the Control-D and Control-V User Guide.
Corrective Action: Enter * in the USER data field, or clear the LINE and COL fields.

CTD851E "USER" MUST BE FILLED IN

Explanation: DO USER is specified, but the USER field is blank. When DO USER is specified, the USER field must be filled in.
Corrective Action: Fill in the USER field.

CTD852E FROM/UNTIL COL ARE OBLIGATORY WHEN USING "\*\*" USER/LEVEL REFERENCE

Explanation: An asterisk (*) was entered in the USER field in the DO USER parameter, but the FROM and UNTIL COL fields are unspecified. FROM and UNTIL COL fields must be specified when * is used for the USER field.
Corrective Action: Fill in the FROM and UNTIL column references.

CTD853E FROM/UNTIL COL ARE OBLIGATORY WHEN USING "*" NAME REFERENCE

Explanation: An asterisk (*) has been entered in the DO NAME field, but the FROM and UNTIL COL fields are unspecified. FROM and UNTIL COL fields must be specified when * is used for DO NAME.

Corrective Action: Fill in the FROM and UNTIL column references.

CTD854E "NAME" MUST BE MARKED AS "*"

Explanation: There is data in the DO NAME LINE and COL fields, but the NAME data field is not set to *.
If the DO NAME LINE and COL fields are entered, then the NAME data field must be set to *.
For more information, see DO NAME in the Control-D and Control-V User Guide.

Corrective Action: Enter * in the NAME data field, or erase the LINE and COL fields.

CTD855E WHEN USING CLASS "*", NO OTHER CLASS CAN BE SPECIFIED

Explanation: Invalid class mixture specified. When specifying class *, no other class can be specified.
For more information, see the Control-D and Control-V User Guide.

Corrective Action: Correct the CLASS field.

CTD856E THIS CLASS IS INVALID FOR GENERIC JOB NAMES

Explanation: Y was entered in the GENERIC field, but the data entered in the ON CLASS field contradicts the installation parameters. If Y was entered in the GENERIC field, then the ON CLASS option must contain one of the Generic classes specified during Control-D installation.

Corrective Action: Check the GENCLAS parameter of the CTDPARM and enter the correct one in the ON CLASS field.

CTD857E INVALID CLASS. THIS CLASS IS DEDICATED FOR GENERIC JOBNAMES ONLY

Explanation: N was entered in the GENERIC field, but the data entered in the ON CLASS field contradicts the Installation Parameters. If N was entered in the GENERIC field, then the ON CLASS option must not contain one of the Generic classes specified during Control-D installation.

Corrective Action: Check the GENCLAS parameter of the CTDPARM and enter the correct one in the ON CLASS field.

CTD858E ONLY "ON CLASS" IS VALID FOR GENERIC DECOLLATING MISSIONS

Explanation: Y was entered in the GENERIC field, but the ON statement does not contain the CLASS option.
A Generic decollating mission can contain ON statements only with the CLASS option.

Corrective Action: Correct the ON statement. For more information, see the Report Decollating Parameters chapter in the Control-D and Control-V User Guide.
CTD859E IN Q "N" IS INVALID FOR GENERIC DECOLLATING MISSIONS

**Explanation:** N was entered in the WHEN IN QUEUE field despite the fact that Y was entered in the GENERIC field. The parameter specified in the WHEN IN QUEUE field for Generic decollating missions must be either Y or blank.

**Corrective Action:** Enter Y or blank in the WHEN IN QUEUE field. For more information, see the Report Decollating Parameters chapter in the Control-D and Control-V User Guide.

CTD860E PREVIOUS "ON" STATEMENT HAS ONLY EMPTY "DO" AND "WHEN" LINES

**Explanation:** The user started to enter data in the fields of the new ON statement without entering data in the DO and/or WHEN fields of the previous ON statement. The ON statement must contain at least one non-empty WHEN or DO field.

**Corrective Action:** Enter data in the WHEN or DO fields of the previous ON statement, or erase data from the fields of the current ON statement.

CTD861E INVALID FORMAT OF statement, OR POS+LTH NOT IN RANGE

**Explanation:** %%JOBNAME, %%EXTWTR, or %%USERID is specified in a DO USER statement, but without a valid range. Valid format of this statement is shown below, where POS (startpos) and LTH (len) must both be numeric and not greater than 9:

```
DO USER %%variable(startpos,len)
```

The specified range may be invalid for one of the following reasons:

- No range is present.
- Range was not enclosed in parentheses.
- Range contains non-numeric values.
- Range is logically wrong.

**Corrective Action:** Correct the DO USER statement. For more information, see the DO USER parameter in the Control-D and Control-V User Guide.

CTD863E MONITOR CAN BE " " OR "1" FOR PRIMARY MONITOR OR "2-9" FOR SECONDARY MONITORS

**Explanation:** Invalid monitor number specified. The MONITOR field should be blank or 1 for the primary monitor, or 2-9 for secondary monitors.

**Corrective Action:** Correct the MONITOR field.

CTD864E INVALID MONITOR SPECIFIED FOR GENERIC MISSION

**Explanation:** Invalid monitor specified for generic mission. Generic missions can only be processed by the monitor specified in the GENMON Installation Parameter (in CTDPARM).

**Corrective Action:** Change the MONITOR field of the decollating mission to the value specified in the GENMON parameter.
CTD865E INVALID MONITOR SPECIFIED. MONITOR NOT DEFINED IN CTDPARM

**Explanation:** Invalid monitor specified. The number of Control-D monitors is defined in the CTDMON# Installation Parameter (in CTDPARM).

**Corrective Action:** Change the MONITOR field of the decollating mission to a value not higher than that specified in the CTDMON# parameter.

CTD866E INVALID LINE OPTION

**Explanation:** An invalid option was typed.

Valid options are:
- H - header option
- F - footer option
- D - delete option
- I - insert after line option
- B - header before line option
- C - column editing option
- Blank - no option

**Corrective Action:** Specify a valid option.

CTD867E HEADER/FOOTER CANNOT CONTAIN A REGULAR SCROLLABLE (BLANK) LINE

**Explanation:** Either the H option was specified after a scrollable line, or the F option was specified before a scrollable line. Header and footer sections must be entirely unscrollable. Header lines may not be preceded by scrollable unmarked lines, and the footer lines may not be followed by scrollable unmarked lines.

**Corrective Action:** Correct the header or footer specifications.

CTD868E AT LEAST ONE LINE MUST BE DEFINED AS A SCROLLABLE (BLANK) LINE

**Explanation:** No line in the page was left unmarked. At least one line must be scrollable and unmarked.

**Corrective Action:** Unmark at least one line in the page.

CTD869E INVALID CHARACTER IN "CUT" SPECIFICATION LINE

**Explanation:** An invalid range ID was specified in the Cut line. Range ID must be a digit or any letter except the letter E.

**Corrective Action:** Correct the Cut line.
CTD870E EXPECTING AN "E" CHARACTER TO TERMINATE THIS RANGE

Explanation: A specified range was not terminated with the letter E.
Corrective Action: Correct the Cut line.

CTD871E A RANGE WITH THIS LETTER IDENTIFIER IS ALREADY DEFINED

Explanation: The same letter was already used as a range ID. The same letter may not be used to specify more than one range ID. Range ID must be unique.
Corrective Action: Correct the Cut line.

CTD872E THIS "E" DOES NOT TERMINATE ANY OPEN RANGE

Explanation: A letter E that does not terminate any range was specified. The letter E may only terminate a range; it may not be used to specify a range ID.
Corrective Action: Correct the Cut line.

CTD873E NOT ENOUGH MEMORY TO SAVE COLUMNS EDITING. LAST CHANGES ARE IGNORED

Explanation: Insufficient memory to save the column editing specifications in memory.
All the latest changes are ignored.
Corrective Action: Exit from all the other screens (screen A, screen 5, and so on) and try again to specify the column editing. If it happens again, notify your INCONTROL administrator.

CTD874E USE "F" TO FREEZE COLUMN, OR BLANK FOR REGULAR COLUMN

Explanation: An invalid value was specified in the FREEZE LINE field. The FREEZE LINE describes the columns to be frozen or not frozen.
Valid FREEZE LINE options are:
- F - to freeze a column
- ' ' (Blank) - for a regular column
Corrective Action: Put a valid FREEZE LINE option in the FREEZE LINE field.

CTD877E INVALID OPTION USE BLANK OR "TEST"

Explanation: An invalid value was specified for the WRITER OPTION parameter in the Print Mission Definition screen. The only valid WRITER OPTION values are blank and TEST.
The cursor stays in the field until a valid WRITER OPTION value is specified.
Corrective Action: Specify a valid WRITER OPTION value
CTD881I  COPYING PERMANENT USER FILE TO ACTIVE USER FILE
STARTED

Explanation: This information message indicates that the CTDCP2A utility is copying the list of reports from the Permanent User Report List file to the Active User Report List file.

Corrective Action: No action is required.

CTD882I  COPYING PERMANENT USER FILE TO ACTIVE USER FILE ENDED
OK

Explanation: This information message indicates that the CTDCP2A utility has finished copying the list of reports from the Permanent User Report List file to the Active User Report List file. This is a normal end message for the CTDCP2A utility.

Corrective Action: No action is required.

CTD884S  COPYING PERMANENT USER FILE TO ACTIVE USER FILE ENDED
WITH ERRORS

Explanation: An error occurred during the execution of the CTDCP2A utility.

Corrective Action: A previous message should describe the error.

CTD885E  INVALID DATE SUPPLIED IN THE PARM FIELD

Explanation: The content of the date parameter passed to the CTDCP2A utility is invalid. The valid format is ddmmyy or mmddyy.

Corrective Action: Correct the date, and rerun the CTDCP2A utility.

Messages CTD900 through CTD9xx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTD900E  PLEASE FILL IN CATEGORY NAME

Explanation: The CATEGORY field is obligatory but missing from this screen.

Corrective Action: Fill in the CATEGORY field.

CTD901E  INVALID TASK TYPE

Explanation: An invalid task type was specified. For valid task types, see the Control-D and Control-V User Guide.

Corrective Action: Correct the TASKTYPE field.

CTD902E  INVALID OPTION (TRY "Y", "N" OR BLANK)

Explanation: An invalid option was specified. Valid options are Y for yes, and N or blank for no. The cursor points to the invalid value.
**Corrective Action:** Select Y, N or blank.

**CTD903E FIELD SHOULD BE NUMERIC OR BLANK**

**Explanation:** The field contains data that are neither numeric characters nor blanks. If numeric values are used, then no trailing or preceding blanks are allowed. The cursor points to the invalid field value.

**Corrective Action:** Correct field contents.

**CTD904E INVALID TIME**

**Explanation:** An invalid time was specified. The format of the TIME parameter should be hhmm. For more details, see the Control-D and Control-V User Guide.

**Corrective Action:** Correct the TIME field. Insert FROM or UNTIL.

**CTD905E INVALID LEVEL**

**Explanation:** The specified level is not defined in the installation as a valid tree level. Level must be a two letter code that is defined in the Control-D Installation Parameters (CTDPARM).

**Corrective Action:** For a list of valid level codes see option T on the Main Menu.

**CTD906I REFRESH OF PERMANENT USER FILE FROM THE ACTIVE USER FILE STARTED**

**Explanation:** This information message indicates that the CTDCA2P utility is copying the list of reports from the Active User Report List file to the Permanent User Report List file. Normal start message of the CTDCA2P utility.

**Corrective Action:** No action is required.

**CTD907I REFRESH OF PERMANENT USER FILE FROM THE ACTIVE USER FILE ENDED OK**

**Explanation:** This information message is the normal end message for the CTDCA2P utility. It indicates that the CTDCA2P utility successfully finished copying the list of reports from the Active User Report List file to the Permanent User Report List file.

**Corrective Action:** No action is required.

**CTD908S fileType USER FILE ERROR RC=rc PGM pgm_csect ID xx/yyyy FUNCTION func**

**Explanation:** An error occurred while accessing a User Report List file.

The variables in this message are:

- **fileType** - the type of User Reports List file component. Valid values for the data component are:
  - ACT
  - PRM
  - HST
• MG \( n \), where \( n \) is the migrated partition number

Valid values for the index component are composed of the index component letter, followed the data component values.

- \( rc \) - the return code from the user file interface routine.
- \( pgm\_csect \) - the program CSECT, which received the error.
- \( xx/yyy \) - an identifier for localizing the erroneous call.
- \( function \) - the operation that caused the error.

Return codes may range from 004 through 399. The return codes from 300 through 399 relate to index components. Their explanations are the same as the corresponding return codes in the range from 100 through 199, which relate to data components.

Valid values of \( rc \) are:

<table>
<thead>
<tr>

<td>The structure of the index tree is corrupted. The indicated key value, or a higher value, was not found in the block.</td>
</tr>
<tr>
<td>220</td>
<td>Invalid function.</td>
</tr>
<tr>
<td>224</td>
<td>Invalid timestamp</td>
</tr>
<tr>
<td>284</td>
<td>Invalid chain of index elements - rebuild index and rerun process.</td>
</tr>
</tbody>
</table>

The system action depends on which component was accessing the user file. Usually, the current routine terminates. Additional messages clarifying the source of the error are written to the IOA Log file before this message.

**Corrective Action:** Do the following:

1. For return codes 200 and higher,
   - rebuild the index component
   - rerun the process
2. For all other return codes,
   - search the IOA Log file and the relevant job log for messages clarifying the source of the error
   - correct the error
   - rerun the job.
3. If the error persists, contact BMC Software Customer Support.
CTD909S REFRESH OF PERMANENT USER FILE FROM THE ACTIVE USER FILE ENDED WITH ERRORS

Explanation: An error occurred during the execution of the CTDCA2P utility.
Corrective Action: An earlier message describes the error.

CTD90AE FIELD SHOULD BE BLANK FOR GENERIC=Q

Explanation: A value has been typed in either the JOBID or the DSN field in the Report Decollating Mission screen (Screen R.S) or the Active Mission Zoom screen (Screen A.Z). If GENERIC is set to Q, these fields must be left blank.

For more information, see the Control-D and Control-V User Guide.
Corrective Action: Correct the contents of the fields.

CTD90BE "ON on_stmt" IS NOT VALID FOR GENERIC=x

Explanation: The value that has been set in an ON statement is invalid for the current setting of the GENERIC parameter.
- If GENERIC is set to Q, the only valid value for ON is MQ.
- If GENERIC is set to Y or N or is left blank, all values are valid for ON except MQ.

For more information, see the Control-D and Control-V User Guide.
Corrective Action: Correct the contents of the fields.

CTD90CE INVALID OPTION (TRY "U", "L" OR BLANK)

Explanation: An invalid option has been specified in the CS field in the Report Decollating Mission screen (Screen R.S) or the Active Mission Zoom screen (Screen A.Z). The cursor points to the invalid value.
The valid options are:
- U - upper case
- L or ' ' (Blank) - lower case

For more information, see the Control-D and Control-V User Guide.
Corrective Action: Correct the contents of the field, by typing U or L, or by leaving the field blank.

CTD90DE VARIABLE NAME TOO { LONG | SHORT }. LENGTH SHOULD BE 8 CHARACTERS

Explanation: A name has been specified for a variable that is either too long or too short. The variable name must consist of exactly 8 characters.

For more information, see the Control-D and Control-V User Guide.
Corrective Action: Correct the length of the variable name to 8 characters.

CTD90EE VALUE IS MORE THAN /lim

Explanation: The value specified exceeds the maximum permitted.
In this message, \( \text{lim} \) is the maximum permitted value.

Possible causes are:

- An invalid value was specified for the LINE or COL parameter in one of the following statements:
  - WHEN
  - DO USER
  - DO NAME
  - DO INDEX
  - MASK
  - SUBINDX

Valid values for the LINE parameter are any 5-digit number from 00001 through 39999.
Valid values for the COL parameter are any 5-digit number from 00001 through 32767.

For more information on these parameters, see the Control-D and Control-V User Guide.

- An invalid index value was specified in the COL parameter in a DO INDEX or SUBINDEX statement when the value in the COL field began with a + or - sign. Valid values in this case are any 5-digit number from 00001 through 00050.

The system waits for the values to be corrected.

**Corrective Action:** Correct the value in the LINE or COL field.

**CTD90FE LENGTH OF VALUE IS MORE THAN 200**

**Explanation:** On setting values for the DO SET parameter, when setting a value for the list of node tag names (\( Xpath \)), too many characters were used.

Valid values for \( Xpath \) are from 4 through 200 characters (case sensitive) in length. For more information, see the DO SET parameter in the Control-D and Control-V User Guide.

**Corrective Action:** Correct the value of \( Xpath \).

**CTD90GE INVALID NAME OF VARIABLE**

**Explanation:** An invalid variable name has been specified in the DO SET %% field in the decollation mission definition.

Valid names for variables are from 1 through 8 alphanumeric characters, but cannot be the same as any system variable. For more information, see DO SET in the Control-D and Control-V User Guide.

**Corrective Action:** Insert a valid variable name.

**CTD910E INVALID CONTROL-D ACCESS METHOD PARAMETER - \( parm \)**

**Explanation:** This is one of two messages with the same ID, but different text.

The \( parm \) Compressed Dataset Access Method (CDAM) parameter is invalid. For a list of valid CDAM parameters, see the Control-D and Control-V User Guide.

In the following example of an invalid parameter, BLOCKS should have been specified instead of BLOCS:
The CDAM data set is not created.

**Corrective Action:** Correct the invalid CDAM parameter, and rerun the job.

**CTD910E INVALID CONTROL- R ACCESS METHOD PARAMETER - parm**

**Explanation:** This is one of two messages with the same ID, but different text.

The access method parameter is invalid. An internal error occurred during Control-M/Restart SYSDATA archiving.

Control-M terminates processing.

**Corrective Action:** Contact BMC Software Customer Support.

**CTD911E INVALID VALUE OF CONTROL-D ACCESS METHOD PARAMETER parmValue**

**Explanation:** This is one of two messages with the same ID, but different text.

The value of the Compressed Dataset Access Method (CDAM) parameter is not valid. For a list of valid parameter values, see the Control-D and Control-V User Guide.

In the following example of an invalid parameter value, KKK must be a numeric value:

```
//PRINT DD SUBSYS=(CDAM,'BLOCKS=KKK')
```

The CDAM data set is not created.

**Corrective Action:** Correct the invalid CDAM parameter value, and rerun the job.

**CTD911E INVALID VALUE OF CONTROL-R ACCESS METHOD PARAMETER parmValue**

**Explanation:** This is one of two messages with the same ID, but different text.

The Control-M/Restart access method parameter value is not valid. An internal error occurred during Control-M/Restart SYSDATA archiving.

Control-M stops processing.

**Corrective Action:** Contact BMC Software Customer Support for assistance.

**CTD912S ERROR IN CONTROL-x INSTALLATION PARAMETERS - INVALID DAYTIME**

**Explanation:** The format of the DAYTIME Control-\text{-}x Installation parameter is invalid. DAYTIME is the start time of the work day in your installation. Valid formats are +hhmm or -hhmm.

For more details, see the section that describes installation parameters in the chapter for the appropriate products in the \textit{INCONTROL for z/OS Installation Guide}.

The requested function terminates.

**Corrective Action:** Call your system programmer to correct the DAYTIME parameter in the CT \text{-}x:PARM member.
CTD913S OPEN OF DDNAME "SYSPRINT" FAILED

**Explanation:** The opening of a print file failed.

Possible causes are:

- The DD statement SYSPRINT is missing.
- The data set described by the DD statement SYSPRINT cannot be accessed for sequential write.

The program stops executing.

**Corrective Action:** Correct the JCL and submit again.

CTD914E COMPRESSED DATASET ACCESS METHOD SUBSYSTEM name DOES NOT EXIST

**Explanation:** The Compressed Dataset Access Method (CDAM) was not defined as a subsystem. For information on how to define CDAM as a subsystem, see the Control-D operational parameters and CDAM installation instructions in the Control-D chapter of the *INCONTROL for z/OS Installation Guide*.

The CDAM data set is not created.

**Corrective Action:** Do the following:

1. Define CDAM as a subsystem.
2. Initialize CDAM, using the IOASINIT started task procedure.
3. Rerun the job.

CTD914S ERROR OPENING SYSPRINT

**Explanation:** This is one of two messages with the same ID, but different text.

An error occurred while opening the SYSPRINT DD statement. The DD statement is probably missing.

The IOADIG utility terminates with a return code of 8.

**Corrective Action:** Notify your INCONTROL administrator.

CTD914S ERROR IN CONTROL-D INSTALLATION PARAMETERS - INVALID DATETYP

**Explanation:** This is one of two messages with the same ID, but different text.

Highlighted, unrollable message.

The DATETYP IOA Installation Parameter is invalid. DATETYP is the type of date format used in the installation. Valid formats are:

- A - *mmddyy*
- W - *ddmmyy*
- J - *yymmdd*

For more details, see the section that describes how to set IOA installation parameters in the IOA chapter of the *INCONTROL for z/OS Installation Guide*. 

399
The requested function stops.

**Corrective Action:** Call your system programmer to correct the DATETYP parameter in the IOAPARM member.

**CTD915E COMPRESSED DATASET ACCESS METHOD SUBSYSTEM name IS NOT ACTIVE**

**Explanation:** The Compressed Dataset Access Method (CDAM) subsystem is not active. To initialize the CDAM, see the section on installation of the CDAM in the Control-D chapter of the *INCONTROL for z/OS Installation Guide.*

The CDAM data set is not created.

**Corrective Action:** Do the following:

1. If necessary, modify SYS1.PARMLIB as specified in the guide so that Control-D is initialized properly after IPL.
2. Run the IOASINIT started task to initialize CDAM immediately.
3. Rerun the job.

**CTD915S NO PARAMETERS PASSED**

**Explanation:** No parameters were passed to the IOADIG utility.

The utility terminates with a return code of 24.

**Corrective Action:** Notify your INCONTROL administrator.

**CTD916W PROGRAM pgm WAITING FOR resourceName**

**Explanation:** One of the IOA monitor internal programs detected an IOA resource in use by a TSO user or batch job. This message normally appears a few times a day.

The variables in this message are:

- **pgm** - the name of the internal program that is waiting for the resource that is in use
- **rname** - the name of the resource that is in use

**Valid values are:**

<table>
<thead>
<tr>
<th>rname</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>CNDF</td>
<td>The IOA Conditions file</td>
</tr>
<tr>
<td>RESF</td>
<td>The Control-M Resources file</td>
</tr>
<tr>
<td>LOG</td>
<td>The IOA Log file</td>
</tr>
<tr>
<td>Control-M</td>
<td>The Control-M New Day procedure</td>
</tr>
<tr>
<td>JES_SSRQ</td>
<td>A JES subsystem request</td>
</tr>
</tbody>
</table>
The message is displayed on the operator console.

**Corrective Action:** The user response depends on the circumstances, as follows:

- If the message appears many times every few seconds, the file may be hung. This situation must be resolved by determining which program is holding the specified `rname`. Look for the IOA QNAME that is specified in the IOA Installation Parameter and take appropriate corrective action.

- If the program name `pgm` is CTMFrm and the `rname` is CONTROLM, some possible reasons are:
  - there are several Control-M monitors running with the same QNAME
  - there is a user daily job running that has a date control record in which columns 60 through 65 are not blank, meaning that it is acting as the Control-M New Day procedure and therefore Control-M has been enqueued
  - the Control-M New Day procedure was started externally (manually) rather than being started by the monitor, and as a result waits for the monitor to be suspended

Take appropriate corrective action.

If the program name `pgm` is CTMJES and the `resourceName` is JES_SSRQ, then Control-M (in its postprocessing phase) has called the JES2 interface using IEFSSREQ (a JES2 subsystem request) and is waiting for some function to be executed by JES2, but the execution of that function is being delayed in JES2. If the message persists in this situation, prepare the Control-M monitor full output and contact BMC Customer Support.

**CTD918S INSUFFICIENT MEMORY TO RUN CONTROL-x**

**Explanation:** *Highlighted, unrollable message.*

More memory is required for the INCONTROL monitor.

The specified monitor will shut down.

**Corrective Action:** Increase the REGION size of the specified monitor.

**CTD919E ERROR IN CDAM PROCESSING - LOADING OF MODULE loadModName FAILED**

**Explanation:** CDAM failed to load the `loadModName` module, which is required for processing a CDAM data set.

CDAM data set fails to open.

**Corrective Action:** Check that the load modules with a VERID suffix that appear in IOAPARM are in a LINKLIST load library. If this is not the cause of the problem, supply BMC Software Customer Support with the IOA log file and this message.
CTD920E CDAM OPEN PROCESS FAILED

**Explanation:** CDAM failed to open a CDAM data set. This message is preceded by messages which provide the reason for the failure.

One of the following actions occurs:

- If this message is issued during the decollation process, the decollating mission terminates NOT OK and message REP256E is issued.
- If this message is issued when an open report request is issued, the CDAM does not exist.

**Corrective Action:** Using the information from the preceding messages, correct the cause of the problem, and rerun a problematic application job, or Control-D monitor according to the one that was involved in the failure.

CTD921E DDNAME = ddName - OUTPUT LIMIT WAS REACHED

**Explanation:** The maximum number of records allowed in a CDAM data set was reached. The maximum number of records that can be written by an application program to a CDAM data set can be specified by either the OUTLIM parameter in the CDAM subsystem parameters of a program, or by applying optional Wish WD0699.

The application program abends with the code S722.

**Corrective Action:** Check the application program for an error that causes so many records to be written to one CDAM data set. If this is not the problem, increase the maximum number of records that can be written to a CDAM data set.

To do this only for a specific application program, specify the OUTLIM parameter in the CDAM subsystem parameters of the program. To perform this for all application programs, apply optional Wish WD0699.

CTD922E DDNAME=ddName, DYNAMIC ALLOCATION ERROR, RC =rc, REASON CODE=rsn

**Explanation:** An error occurred during the attempted dynamic allocation of a CDAM data set, and the allocation failed.

The variables in this message are:

- *ddName* - the name of the CDAM data set
- *rc* - the return code
- *rsn* - the reason code

For more information on the return code and reason code, see the IBM manual *MVS Programming: Authorized Assembler Services Guide*.

The CDAM data set is not created.

**Corrective Action:** Do the following:

1. Try to correct the error, using the information provided by the return code and reason code.
2. If you cannot solve the problem, note the values of *ddName*, *rc*, and *rsn*, and contact BMC Software Customer Support.
**CTD922S DYNAMIC ALLOCATION ERROR, RC=rc, REASON CODE=rsn**

**Explanation:** In Control-D during an attempt to allocate a CDAM data set, or in Control-M/Restart during an attempt to allocate an archived SYSDATA data set, an error occurred.

In Control-D, an error caused dynamic allocation of the CDAM data set to fail. If rc is 04A8, this message indicates that the IOA subsystem does not support CDAM.

In Control-M/Restart, Possible causes are:
- When the Control-M monitor tried to archive the SYSDATA of the job (while processing it).
- When the Control-M monitor tried to read an archived SYSDATA output of a job, while trying to analyze job execution results.
- When the CONTROLR step tried to scan the archived SYSDATA output of the previous run or runs of the job.

In Control-D, the CDAM data set is not created.

In Control-M/Restart, after either of the first two causes, Control-M shuts down with an error message. After the third cause, the CONTROLR step stops with a non-zero condition code or with an abend code, depending on the ABENDTYP Control-M/Restart Installation Parameter in CTRPARM. The job terminates after the CONTROLR step.

**Corrective Action:** In Control-D, if rc is 04A8, run the IOASINIT procedure with OPTIONS set to D.

In all other cases, for more information, see the IBM manual *MVS Programming: Authorized Assembler Services Guide*. If you cannot solve the problem, contact BMC Software Customer Support and provide the DD name, RC, and reason code.

**CTD924E ENCRYPTION/DECRYPTION PROCESS FAILED FOR dsn RC= rc RSN= rsn**

**Explanation:** Either the CDAM encryption process or the CDAM decryption process failed for the dsn CDAM data set being processed.

**Corrective Action:** Supply BMC Software Customer Support with the full output of the job or monitor STC.

**CTD925E ERROR READING DATASET: dsn**

**Explanation:** The data set being processed is not a CDAM data set. CDAM recognizes a CDAM data set by its control information block that appears at its beginning. In this case, either the control information block is missing, or it is not in the correct format.

During decollation, the decollating mission finishes NOT OK and the REP256E message is issued. During printing, the problematic report is marked NOT PRINTED, and the corresponding printing mission finishes NOT OK.

**Corrective Action:** Supply BMC Software Customer Support with the problematic data set.
CTD926E LOCATE FAILED FOR DATASET: dsn

**Explanation:** In Control-D, a CDAM data set was not found in the catalog. In Control-D, this message usually indicates that the physical data set was deleted from the disk, but there are still references to it in the Active User Report List.

In Control-M/Restart, the CONTROLR step could not find the specified archived SYSDATA output of the previous run or runs of the job.

In Control-D, the CDAM data set cannot be accessed.

In Control-M/Restart, the CONTROLR step terminates with a nonzero condition code or with an abend code (depending on the ABENDTYP Control-M/Restart Installation Parameter in CTRPARM). The job terminates after the CONTROLR step.

**Corrective Action:** In Control-D, try to find the cause of the inconsistency and fix it. In Control-M/Restart, try to determine why the archived MSGCLASS output of the previous runs was deleted.

CTD929W DDNAME=ddName, MIXING TYPES OF CONTROL-CHARS (ASA+MACHINE). USE ALLOCOPT=ONEDSN TO DECOLLATE

**Explanation:** A report with both ASA and Machine Control characters was produced by an application job. This kind of report can be processed by Control-D correctly only if it is written directly to a CDAM file.

**Corrective Action:** To print the report correctly, specify ALLOCOPT=ONEDSN in the PRINT/CDAM PARMS of the corresponding decollating mission.

CTD92CS INVALID PARAMETER, VALID PARAMETERS ARE ACT=R/W, TYPE=F/V

**Explanation:** An invalid parameter was passed to the IOADIG utility.

Valid values for the ACT parameter are:

- R - Perform a read-only check. Do not correct detected errors.
- W - If an error is detected, correct it.

Valid values for the TYPE parameter are:

- F - Fixed length records in data file.
- V - Variable length records in data file.

The utility terminates with a return code of 24.

**Corrective Action:** Rerun the IOADIG utility after setting its parameters to valid values.

CTD930I DELETE OF UNNEEDED REPORTS STARTED

**Explanation:** This information message is the normal start message of the CTDDELRP utility. CTDDELRP is used to clean unnecessary entries from the Active User Report List file, and to erase the compressed sysout data sets that belong to them from the disk.

**Corrective Action:** No action is required.
CTD931I DELETE OF UNNEEDED REPORTS ENDED OK

Explanation: This information message is the normal end message of the CTDDELRP utility. CTDDELRP is used to clean unnecessary entries from the Active User Report List file, and to erase the compressed sysout data sets that belong to them from the disk.

Corrective Action: No action is required.

CTD932I REPORT ENTRY ADDED

Explanation: This information message is the normal message of the “I” (insert) option on the User Report List screen when a new user report entry has been added.

Corrective Action: No action is required.

CTD933E PLEASE ENTER VALID DATA FOR THIS FIELD

Explanation: Displayed after the “I” (insert) option on the User Report List screen was requested.

Corrective Action: Enter the appropriate data for this field.

CTD933S DELETE OF UNNEEDED REPORTS ENDED WITH ERRORS

Explanation: The CTDDELRP utility ended with errors. Earlier messages describe the problem. The CTDDELRP utility ends with a return code of 08.

Corrective Action: Check the earlier messages, correct the problem, and rerun the job.

CTD934E COP# MUST BE 3 DIGITS (001-255)

Explanation: This is one of two messages with the same ID, but different text.

An invalid value was entered in the User Report List PRINT window COP# screen field.

This field is numeric, and all its three digits must be entered. The value of this field must be from 001 through 255. The maximum number of copies allowed for this report is specified in the Report Decollating Mission Definition screen. The number of copies cannot be greater than the maximum number of copies on the Report Decollating Mission Definition screen.

Corrective Action: Correct the number of copies.

CTD934E INSUFFICIENT STORAGE. ATTEMPT TO RERUN

Explanation: This is one of two messages with the same ID, but different text.

There is insufficient storage to run the CTDDELRP utility.

Corrective Action: Increase the REGION size of the utility and rerun.

CTD935E CANNOT VIEW/CHANGE ADDITIONAL USERS ON AN INSERTED LINE

Explanation: The A (ADDITIONAL INFO) option was entered with the cursor on an inserted line. The ADDITIONAL INFO option must be entered from a non-inserted line.
**Corrective Action:** Move the cursor up to the last non-inserted line in the User Report List entry, and reissue the A option.

**CTD936E** THIS ENTRY CANNOT BE VIEWED

**Explanation:** There was an attempt to view an entry that was not associated with a CDAM file.

**Corrective Action:** No action is required.

**CTD937E** INVALID PARAMETER: - parm

**Explanation:** Invalid parameter for the CTDDELRP Control-D utility. This error message is issued by the CTDDELRP Control-D utility, which cleans unnecessary entries from the Active User Report List file. For more details, see the section on the CTDDELRP utility in the INCONTROL for z/OS Utilities Guide.

The CTDDELRP Control-D utility terminates with a condition code of 08. The Active User Report List file is not cleaned.

**Corrective Action:** Correct the parameter syntax in the CTDDELRP utility.

**CTD938E** ONLY "Y" "N" OR " " ARE ALLOWED IN THIS FIELD

**Explanation:** This is one of two messages with the same ID, but different text.

The user entered an invalid value. Y, N, or blank are the only values valid in this field.

**Corrective Action:** Correct the value entered.

**CTD938E** MISSING PARAMETER AFTER: - parm

**Explanation:** This is one of two messages with the same ID, but different text.

The subparameter after parm is missing. This error message is issued by the CTDDELRP Control-D utility, which cleans unnecessary entries from the Active User Report List file. For details, see the CTDDELRP utility in the INCONTROL for z/OS Utilities Guide.

The CTDDELRP Control-D utility terminates with condition code of 08. The Active User Report List file is not cleaned.

**Corrective Action:** Correct the parameter syntax in the CTDDELRP utility.

**CTD939E** OPTION/COMMAND INVALID FOR THIS TYPE OF USER/REPORT ENTRY

**Explanation:** This is one of two messages with the same ID, but different text.

An invalid option or command was entered in the User Report List screen. The list of allowed options or commands in the User Report List is shown at the bottom of the screen. Only one of these options or commands can be entered on this screen.

**Note:**

If $SYSDATA records are listed, not all displayed options are available.

**Corrective Action:** Enter a valid option or command.
CTD939E REDUNDANT PARAMETER: - parm

Explanation: This is one of two messages with the same ID, but different text.
There is a redundant parameter for the CTDDELRP Control-D utility. The CTDDELRP Control-D utility, which deletes unnecessary entries from the Active User Report List file, issues this message. For details, see the CTDDELRP utility in INCONTROL for z/OS Utilities Guide.

The CTDDELRP Control-D utility terminates with a condition code of 08. The Active User Report List file is not cleaned.

Corrective Action: Correct the parameter syntax in the CTDDELRP utility.

CTD93AE ONLY 'I' 'E' 'A' OR 'S' ARE ALLOWED FOR PRINT MISSION TYPE

Explanation: The user entered an invalid value. Only I, E, A, or S are valid values for this field.

Corrective Action: Enter the correct value.

CTD93DS THERE ARE REPORTS REQUESTED FOR MIGRATION. CONTROL-V SHOULD BE INSTALLED

Explanation: The CTDDELRP utility discovered that although in the Active User Reports file there are reports requested for migration, no Control-V environment is installed. CTDDELRP is terminated.

Corrective Action: Install a Control-V environment.

CTD940E OPTION INVALID FOR A "WAIT " DECOLLATION REPORT

Explanation: An invalid option was entered in the User Report List screen for an entry which is in WAIT DECOLLATION status. There are some options which are not valid for an entry that is in WAIT DECOLLATION status. For example, an entry in WAIT DECOLLATION status cannot be viewed or printed.

Corrective Action: Enter a valid option.

CTD941I REPORT DELETED: jobName /usr /name

Explanation: This information message indicates that the requested deletion was completed. It is the normal message of the D (delete) option of the User Report List screen.

Corrective Action: No action is required.

CTD942E "E" AND "P" OPTIONS ARE VALID ONLY ON ENTRIES WITH REPORTS

Explanation: An invalid option was entered in the User Report List screen. The EDIT (E) and PRINT (P) options can be specified only for entries that have already been decollated.

Corrective Action: Enter a valid option.

CTD943E ONLY "W" OR " " ARE ALLOWED IN THIS FIELD

Explanation: An invalid value was entered in the User Report List W field. This field must have a value of W, or be blank. If W is specified in this field, then the DEST or WTR field is the name of an external writer on which the report should be printed.
For more information, see the section on User Reports and Reports List in the Control-D and Control-V User Guide.

Corrective Action: Correct the W field.

CTD944E RULER TYPE CAN BE "VIEW" OR "PRINT"

Explanation: Invalid ruler type was defined in the Exit Option Window. Ruler type must be VIEW or PRINT.

Corrective Action: Specify a valid ruler type.

CTD944S IMMEDIATE PRINT FAILED, INVALID DESTINATION

Explanation: An invalid destination was entered on the User Report List PRINT window. This field must be blank, or contain a valid remote printer JES destination.

The report is not printed.

Corrective Action: Correct the DEST (destination) field.

CTD945E IMMEDIATE PRINT CANCELLED, NUMBER OF ALLOWED PAGES EXCEEDED

Explanation: Control-D security exit (CTDX004) determined that the number of pages to be printed exceeds the maximum allowable for immediate printing.

This security check prevents printing of large numbers of pages to remote printers. In the case of the main printer, it forces the use of Printing Mission, because of performance considerations. The function RECI PRT in Control-D exit CTDX004 can be modified by the installation to restrict the number of pages that can be printed immediately.

The report is not printed.

Corrective Action: Modify the FROM PAGE/TO PAGE numbers to print a smaller section of the report.

CTD946E SPECIFIED RULER DOES NOT EXIST

Explanation: An attempt was made to copy a nonexistent ruler. There is no ruler with corresponding ruler name, job name, report name, and user name.

Copy is performed.

Corrective Action: Specify valid ruler parameters.

CTD946S SYSOUT ALLOCATION FAILED, RC=rc, ERROR=error

Explanation: Internal error. Control-D was unable to dynamically allocate a sysout file in order to print a report immediately.

The report is not printed.

Corrective Action: See the IBM manual MVS Programming: Authorized Assembler Services Guide.

CTD947E INTERNAL ERROR WHILE READING A RULER

Explanation: An error occurred during ruler file format conversion.
INCONTROL for z/OS Messages Manual

Requested operation is not performed

**Corrective Action:** See your Control-D administrator for assistance.

**CTD947I REPORT PRINTED OK - FROM fileName FILE: jobName / userName / reportName**

**Explanation:** This information message indicates that the immediate printing of the report was successful.

The specified report is printed.

**Corrective Action:** No action is required.

**CTD948E PLEASE FILL IN RULER NAME**

**Explanation:** A ruler name was not specified in the Exit Option Window of ruler definition screen. A ruler name must be specified.

**Corrective Action:** Specify a ruler name.

**CTD949E THE SAMPLE PAGE IS TOO SMALL TO SHOW THIS RULER. RULER CLEARED**

**Explanation:** The current ruler cannot be applied to the current page because the ruler definition contains references to lines that are not on the page.

The current page is shown without the ruler formatting.

**Corrective Action:** No action is required.

**CTD94AE ERROR WHILE READING CDAM**

**Explanation:** An I/O error was encountered during processing of an Immediate Print request. If the report is a migrated report, a more detailed message can be produced by viewing the report.

One of the following errors was encountered by the CTDTUSR program during processing of an Immediate Print request:

- A CDAM file or extent associated with the report being printed does not exist or is not cataloged.
- A CDAM file was restored to a DASD device with a different track size than the DASD device on which the CDAM file was created.

The report is not printed.

**Corrective Action:** Be sure all CDAM files exist on appropriate DASD devices. Retry the Immediate Print request. Try viewing the report to see if an error is also encountered during view.

**CTD94BE INTERNAL ERROR IN CTDDPR. RC=rc**

**Explanation:** An internal error occurred while processing an Immediate Print request.
In this message, \texttt{rc} is the return code. Valid values are:

<table>
<thead>
<tr>
<th>\textbf{rc}</th>
<th>\textbf{Explanation}</th>
</tr>
</thead>
<tbody>
<tr>
<td>28</td>
<td>An internal error occurred while processing an Immediate Print request. This return code is issued when printing to an EMAIL type of CTDS destination, if no e-mail addresses can be resolved from the CTDS destination RECIPIENT attribute.</td>
</tr>
</tbody>
</table>
| 48          | The problem occurred during printing a binary report. It can be caused by one of the following:  
  \begin{itemize}  
  \item Resources required for printing AFP or XEROX normalized report are unavailable.  
  \item Printed report has incorrect internal structure.  
  \end{itemize} |
| 52          | The error occurred during the GETINX function of the CTVDPC program. |
| 56          | The error occurred during the WRTINX function of the CTVDPC program. |
| 60          | The error occurred during the GETINX function of the CTVDPC program when data sets are uncataloged. |
| 64          | An allocation error of the index file occurred during the GETINX function of the CTVDPC program. |

The report is not printed.

**Corrective Action:** Check the IOA Log file and job log for additional messages associated with the error. Correct the problem and re-execute the program. If the error persists, contact BMC Software Customer Support.

**CTD94CE MISSING OUTPUT STATEMENT \texttt{stmtName}**

**Explanation:** An output statement is missing in the IOA Online environment. The report could not be printed because the output statement specified for the report is missing from the IOA Online environment.

The report is not printed.

**Corrective Action:** Add the output statement to the IOA Online environment. Then, log on again and/or restart the IOA Online monitor.

**CTD94DE ERROR IN READING PAGEDEF/FORMDEF MEMBER**

**Explanation:** An error was encountered while trying to read a PAGEDEF or FORMDEF value. Either the PAGEDEF or the FORMDEF specified does not exist in the libraries defined for Control-D or Control-V.

The report is not printed.

**Corrective Action:** Add the missing PAGEDEF and/or FORMDEF member to the relevant library.

**CTD94EE ABEND IN IMMEDIATE PRINT \texttt{sysabend usrabend}**

**Explanation:** The Immediate Print request abended.
The variables in this message are:

- `sysabend` - System abend code
- `usrabend` - User abend code

The print request terminates.

**Corrective Action:** Check the system log for other error messages associated with this problem and proceed accordingly.

For abend code S000 U0186: Restart the online session prior to retrying the print request.

**CTD94GE REQUESTED TCP/IP STACK UNAVAILABLE**

**Explanation:** ISTACK parameter was specified in IOAPARM member and the system has TCP/IP dual stack mode, but the specified stack is not running.

The message is preceded by a full screen message that contains the stack name.

**Corrective Action:** Either bring up the started task named 'stack', or remove the ISTACK parameter from IOAPARM and restart the online session.

**CTD950E THIS FIELD MUST BE NUMERIC AND GREATER THAN ZERO**

**Explanation:** An invalid value was entered in this User Report List field. This field must be numeric and greater than zero. Leading zeroes must be supplied.

**Corrective Action:** Correct the field.

**CTD951E INVALID OPTION (TRY "Y" OR "N")**

**Explanation:** The user entered an invalid value. Y or N are the only values valid in this field.

**Corrective Action:** Correct the value entered.

**CTD952E ENTRY DELETED - DSN dsn NOT FOUND**

**Explanation:** Compressed data set `dsn` was not found after deleting a report entry from the User Report List file. The report (SYSDATA) entry was deleted from the User Report List file. However, the attempt to delete all the associated compressed data sets for this report entry was not successful.

**Corrective Action:** Notify the INCONTROL administrator. Additional messages may be found on the system log.

**CTD953E FROM DATE GREATER THAN TO DATE**

**Explanation:** The FROM date entered on the User Reports Entry Panel is greater than the TO date. You can specify that only record entries within a date range are to be displayed for the Active and History User Report List file using the DATEFROM and TO screen fields.

**Corrective Action:** Correct the DATEFROM or TO date fields.

**CTD954I REPORT SET FOR RESTORE: jobName / userName / reportName**

**Explanation:** This information message indicates that a backed up (migrated) report has been assigned to the restore mission for restoration.
Corrective Action: No action is required.

CTD955E FUNCTION NOT SUPPORTED ON THIS SCREEN

Explanation: An invalid function was entered on the User Report List screen. Not all functions are supported on all User Report List screens. For example, the View (V) function can be used on the Active User Report List file, but not on the Permanent and History files.

Corrective Action: Enter a different function.

CTD956E CANNOT MIX RESTORE/WAIT-RESTORE/WAIT- BACKUP RETRIEVAL OPTIONS

Explanation: More than one of the Definition options (Permanent, Active, or History) on the User Report List Entry Panel was specified with Y.

Corrective Action: Leave the Y next to one of the three Definition options, but specify the other two as N.

CTD958E COP# MUST BE 3 DIGITS (000-255) OR "DFT" (FOR DEFAULT)

Explanation: An invalid value was entered in the User Report List COP# screen field.

Valid values are:

- a 3-digit number from 000 through 255
- The maximum number of copies allowed for this report is specified in the Report Decollating Mission Definition screen. The number of copies on the User Report List screen cannot be greater than the maximum number of copies on the Report Decollating Mission Definition screen.

- DFT - the default number of copies

The number of copies is taken from the PRT COPIES field of the Report Decollating Mission Definition screen. Note that the COP# field will be changed from DFT to the default numeric value after decollation.

Corrective Action: Correct the number of copies.

CTD959S ENTRY DELETED, BUT ALLOC ERROR err OCCURRED ON COMPRESSED DSN

Explanation: An allocation error occurred on a compressed data set after deleting a report entry from the User Report List file. The report (SYSDATA) entry was deleted from the User Report List file. However, the attempt to delete all the associated compressed data sets for this file was not successful.

Corrective Action: Notify the INCONTROL administrator. Additional messages will appear on the system log.

CTD95AE HEX INOPERABLE FOR FULL PAGE MODE RULERS

Explanation: The attempt to view the report in hexadecimal format using a full page mode ruler failed. The HEX command is not supported when viewing reports using a full page mode ruler.

The attempt fails.

Corrective Action: View the report without a full page mode ruler.
**CTD95BI**  
jobname/recipient/report ID=recordId SET TO RESTORE WITH MISSION misName

**Explanation:** This information message indicates that backed up (migrated) report is assigned to the **misName** mission for restoration.

The variables in this message are:
- **jobname** - the name of the job that created the report
- **recipient** - the user for whom the report was created
- **report** - the name of the report
- **recordId** - the internal database identifier of the report
- **misName** - the name of the mission

**Corrective Action:** No action is required.

**CTD95CE** THIS FIELD IS NOT RELEVANT FOR RECIPIENT $SYSDATA

**Explanation:** The field cannot be used as a selection criterion for recipient $SYSDATA defined on the User Reports Entry Panel. The cursor points to the invalid field.

**Corrective Action:** Check that recipient $SYSDATA was entered improperly or clear the field.

**CTD960E** INSUFFICIENT STORAGE TO BUILD REPORTS LIST - USE ANOTHER SELECTION CRITERIA

**Explanation:** There is insufficient memory to build the User Report List. There is insufficient memory to build a list using the selection criteria on the User Reports Entry Panel.

**Corrective Action:** Do one of the following:
- Change the selection criteria so that the User Report List to be built is shorter. For instance, select only a specified job name instead of selecting all jobs.
- If you are using many IOA screens concurrently, exit some of them using the END command.
- Increase region size, or reduce the maximum number of sessions allowed simultaneously under an online monitor, or take both these steps.

**CTD961E** INSUFFICIENT STORAGE TO BUILD REPORTS LIST - USE ANOTHER SELECTION CRITERIA

**Explanation:** There is insufficient memory to build the User Report List. The user entered selection criteria on the User Reports Entry Panel. However, there is insufficient memory to build a list using these selection criteria.

**Corrective Action:** Do one of the following:
- Change the selection criteria so that the User Report List to be built is shorter. For instance, select only a specified job name instead of selecting all jobs.
- If you are using many IOA screens concurrently, exit some of them using the END command.
- Increase region size and/or reduce the maximum number of sessions allowed simultaneously under an online monitor.

**CTD962E INTERNAL PROGRAM ERROR - CTDCLS - INVALID PARM**

**Explanation:** Internal error in the CTDCLS module.
The user will be unable to see any entries on the User Report List file.

**Corrective Action:** Call BMC Software Customer Support.

**CTD963E FOR "U" OPTION YOU MUST CHANGE AN EDITABLE FIELD OF THE ENTRY**

**Explanation:** The U (update) option was selected, but no change was made to an editable field. After U (update) is selected, Control-D expects a change to be made to editable fields such as DEST, COP#, or ADDITIONAL USERS.

**Corrective Action:** Update the appropriate field or fields.

**CTD964I REPORT MODIFIED: jobName/user /name**

**Explanation:** This information message indicates that an entry in the User Report List screen was updated.

**Corrective Action:** No action is required.

**CTD965E ONLY ONE "I" OPTION CAN BE ACTIVE AT A TIME**

**Explanation:** Multiple insert ("I" functions) were entered on the User Report List screen. Only one record can be inserted at one time into the Report List file.

**Corrective Action:** Make sure that only one insert function is present on the screen.

**CTD967E ENTER A VALID VTAM DESTINATION, OR CHANGE "W" TO BLANK**

**Explanation:** There is a W in the User Report List W field, indicating that a VTAM destination must be entered in the DEST or WTR field. If the W option is specified in the User Report List W field, then the name of an external writer on which the report should be printed must be specified in the DEST or WTR field.

For more information, see the section on User Reports or Reports List in the *Control-D and Control-V User Guide*.

**Corrective Action:** Enter a VTAM destination in the DEST or WTR field, or blank out the W field.
CTD968E SEVERE ERROR WHILE READING A RULER

**Explanation:** When reading the ruler from the Control-D database, a read error occurred. When reading the ruler from the Control-D database, a VSAM read I/O error occurred.

The ruler is set to OFF. In addition, the CTD908S message is issued.

**Corrective Action:** For additional information about the VSAM I/O error, see the CTD908S message.

CTD969E CANNOT PERFORM AN INSERT ON AN INSERTED LINE

**Explanation:** User tried to insert perform an additional insert on an inserted line. Insert on an already inserted line is not supported.

**Corrective Action:** Insert the additional line in a different line.

CTD970I PLEASE FILL IN THE REPORT ENTRY DATA

**Explanation:** This information message indicates that mandatory report data was not entered.

**Corrective Action:** Fill in the report entry data.

CTD971I REPORT IS BEING RESTORED

**Explanation:** This information message indicates that a report is being restored by a process called from Control-D user exit CTDX004. This process is used for restoring reports created by CA-DISPATCH, CA-View and INFOPACK and converted to Control-D.

**Corrective Action:** No action is required.

CTD971S OPEN OF CONTROL-D ACTIVE MISSIONS FILE FAILED

**Explanation:** The CTDFRAMS Control-D utility, which is used to allocate and format the Active Missions file, failed to open the file for formatting.

Possible causes are:
- The DAAMF DD statement is missing.
- There is insufficient memory for the job.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

CTD972E ERROR DURING PROCESSING RESTORE REQUEST

**Explanation:** An error occurred when a restore job was submitted by a process called from the CTDX004 Control-D user exit. This process is used for restoring reports created by CA-DISPATCH, CA-View and INFOPACK and converted to Control-D.

The report is not restored.

**Corrective Action:** Determine why the job could not be submitted. Correct the problem and rerun the restore request.
CTD972I BUILDING OF CONTROL-D ACTIVE MISSIONS FILE STARTED

Explanation: This information message indicates that the CTDFRAMS utility, which allocates and formats the Active Missions file, has started.
Corrective Action: No action is required.

CTD973I BUILDING OF CONTROL-D ACTIVE MISSIONS FILE ENDED

Explanation: This information message indicates that the CTDFRAMS utility, which allocates and formats the Active Missions file, has ended normally.
Corrective Action: No action is required.

CTD974S CONTROL-D ACTIVE MISSIONS FILE WAS NOT BUILT.

Explanation: The CTDFRAMS utility failed.
Corrective Action: Look for additional clarification messages on the IOA Log.

CTD975E PLEASE SPECIFY A VALID RULER NAME, OR "ON"/"OFF"

Explanation: Ruler name is not specified, and ruler command ON is specified.
Corrective Action: Enter a ruler name, or set the ruler to OFF.

CTD975S CONTROL-D ACTIVE MISSIONS FILE WRITE ERROR

Explanation: I/O error while formatting Control-D Active Missions file.
This error may occur when there is incompatibility between the definition of the Active Missions file in the Installation Parameters (CTDPARM) and the JCL SPACE or DCB parameters.
The utility stops executing with a condition code of 08.
Corrective Action: Correct either the JCL or the Installation Parameters.

CTD976E INTERNAL ERROR WHILE READING A RULER

Explanation: An internal error occurred during reading of a ruler.
No ruler is in effect.
Corrective Action: Ask your INCONTROL administrator to call BMC Software Customer Support for assistance.

CTD977I REPORT SET FOR DEFERRED PRINT: jobName / userName / reportName

Explanation: This information message indicates that the deferred print has been successfully requested and that the report will be printed by the specified Printing Mission.
Corrective Action: No action is required.
CTD978E "FROM PAGE" NUMBER CANNOT BE GREATER THAN "TO PAGE" NUMBER

**Explanation:** An invalid FROM PAGE definition was entered. The FROM PAGE number that was specified is greater than the TO PAGE number.

**Corrective Action:** Correct the FROM PAGE/TO PAGE values.

CTD979E RESTORE IN PROCESS, OR CANNOT RESTORE THIS TYPE OF ENTRY

**Explanation:** This entry on the History User Report List file cannot be restored.

The attempt to restore a SYSDATA entry or reissue a restore request that is already in REQUESTED RESTORE state fails.

**Corrective Action:** Restore another entry on the file.

CTD97AI PLEASE CONFIRM: ‘R’-RETRY/’S’-SCRATCH TAPE/’C’-CANCEL

**Explanation:** During a migration job, the operator rejected a system request to mount a specific tape. For example, the operator typed CANCEL on receiving an IEF238D message, or NO on receiving an IEF455D message.

The migration job waits for a reply to this message.

**Corrective Action:** Type one of the following replies, which have the meaning shown in parentheses:

- R (Try again to mount the same tape.)
- S (Try to mount a scratch tape instead of the specific tape.)
- C (Cancel the migration job.)

CTD97BI INVALID REPLY TO CTD97AI.

**Explanation:** The system issued the CTD97AI message, but the reply typed by the operator was invalid. The CTD97AI message is reissued.

**Corrective Action:** Type a valid reply to the CTD97AI message.

Valid replies, which have the meaning shown in parentheses, are:

- R (Try again to mount the same tape.)
- S (Try to mount a scratch tape instead of the specific tape.)
- C (Cancel the migration job.)

CTD980S **monName** LOAD OF CONTROL-D SPECIAL ROUTINES FAILED

**Explanation:** Highlighted, unrollable message.

Initialization of the Printers Control monitor **monName** failed because of missing modules.

The Control-D Printers Control monitor and the Control-D monitor will shut down.
Corrective Action: Determine who deleted the missing load modules and why. Restore these modules from a backup tape of the IOA Load library, and bring up the Control-D monitor.

CTD981S proc RECIPIENT TREE WAS NOT LOADED BECAUSE OF ERROR - CONTROL-D PRINTERS Control-MONITOR IS TERMINATING

Explanation: Highlighted, unrollable message.
The Recipient Tree was not loaded because of an error.
The Control-D Printers Control monitor and the Control-D monitor will shut down.
Corrective Action: Look at the IOA Log and the computer log for additional error messages. These additional messages pinpoint the specific problem encountered while loading the Recipient Tree.

CTD982I monName CONTROL-D PRINTERS MONITOR IS WAITING FOR ONE OR MORE PRINT SUBTASKS TO TERMINATE

Explanation: This information message indicates that a shutdown process command was issued from the Control-D monitor, but the Control-D Printers Control monitor is still printing.
The Printing Mission that is still printing can be found in the Active Missions Status screen.
If the Printers Control monitor is still printing when a shutdown request is issued, it continues to print.
The Control-D monitor does not shut down until printing is finished.
Corrective Action: If you allow the Printing Mission to finish printing, no action is required.
To shut down the Control-D monitor immediately, change the status of the active Printing Mission in the Active Missions Status screen (AMS) to HOLD. Free it after the Control-D monitor has restarted.

CTD983E monName CONTROL-D PRINTERS MONITOR IS TERMINATING EVEN THOUGH ONE OR MORE PRINT SUBTASKS HAS NOT TERMINATED.

Explanation: Highlighted, unrollable message.
The Control-D monitor is shutting down the monName Control-D Printers Control monitor.
The Control-D monitor issued a command to shut down the monName Printers Control monitor. The Printers Control monitor was not shut down because one or more print subtasks were awaiting completion. Under certain circumstances, the Control-D monitor forces shutdown of the Printers Control monitor after a default site-specific length of time.
The monName Control-D Printers Control monitor shuts down.
Corrective Action: No action is required.

CTD98AI PRINT MISSION POSTPONED. MAX NUMBER OF SUBTASKS IS REACHED IN THE CURRENT MONITOR

Explanation: This information message indicates that the current print mission cannot be processed because the print monitor is already processing the maximum number of missions as defined in optional Wish WD2618.
The print mission is delayed until one of the missions being processed terminates.
**Corrective Action:** If this message appears frequently, it is recommended to increase the maximum number of print missions the print monitor can process concurrently.

**CTD98BI** PRINT MISSION CONTINUES PROCESSING

**Explanation:** This information message indicates that the print monitor resumed processing a mission that was postponed (see the CTD98AI message)

**Corrective Action:** No action is required.

**CTD990I** PRINTING MISSION missionName STARTED PRINTING

**Explanation:** This information message indicates that the Control-D Printers Control monitor started printing for the missionName.

**Corrective Action:** No action is required.

**CTD991I** PRINTING MISSION missionName FINISHED PRINTING

**Explanation:** This information message indicates that the Control-D Printers Control monitor completed the missionName printing mission successfully.

**Corrective Action:** No action is required.

**CTD993E** ERROR IN CTDCIO FUNCTION func RC rc - PRINTING STOPPED

**Explanation:** An internal error occurred in the CTDCIO internal module. The error occurred within the Control-D Printers Control monitor.

The printing for this mission will stop. The status of this Printing Mission is changed to NOTOK.

**Corrective Action:** Contact BMC Software Customer Support. Please provide the values of FUNCTION and RC.

**CTD994E** ERROR IN CTDRSV FUNCTION func RC rc - PRINTING STOPPED

**Explanation:** Internal error.

An internal error occurred in the CTDRSV internal module. The error occurred within the Control-D Printers Control monitor.

The printing for this mission will stop. The status of this Printing Mission is changed to NOTOK.

**Corrective Action:** Contact BMC Software Customer Support. Please provide the values of FUNCTION and RC.

**CTD995E** ERROR IN CTDALC RC rc S99RC s99rc FUNCTION func - PRINTING STOPPED

**Explanation:** Internal error. The allocation of the PLAN file failed.

An internal error occurred in the CTDALC internal module. The error occurred within the Control-D Printers Control monitor.

The printing for this mission will stop. The status of this Printing Mission is changed to NOTOK.
Corrective Action: Contact BMC Software Customer Support. Please provide the values of \texttt{rc}, \texttt{s99rc}, and \texttt{func}.

CTD997E ERROR IN UPDATE OF PRINTED USERS, STATUS OF USER REPORTS MAY BE INVALID

Explanation: Internal error.

After printing a bundle, Control-D updates the status of all printed user reports in the Active User Report List file from \texttt{WAIT PRINT} to \texttt{PRINTED}. This message is produced if an error occurs in this update process.

The status of this Printing Mission is changed to \texttt{NOTOK}. All the reports are printed, but the entries in the Active Report List file have not been updated. This could result in duplicate printing.

Corrective Action: Look for VSAM related messages on the system log or on the syslog of the Control-D monitor. Contact BMC Software Customer Support.

CTD998E ALLOC FAILED FOR \texttt{fileName} - FILE WAS NOT FOUND

Explanation: Internal error.

The Control-D Printers Control monitor was unable to dynamically allocate the \texttt{fileName} file.

The status of this Printing Mission is changed to \texttt{NOTOK}.

Corrective Action: Contact BMC Software Customer Support. Please provide the value of \texttt{file}.

CTD9A3I BUILDING OF CONTROL-D ACTIVE TRANSFER FILE STARTED

Explanation: This information message indicates that the CTDBAT program, which is used for formatting the Active Transfer file, has started.

Corrective Action: No action is required.

CTD9A4I BUILDING OF CONTROL-D ACTIVE TRANSFER FILE ENDED

Explanation: This information message indicates that the CTDBAT program, which is used for formatting the Active Transfer file, has ended normally.

Corrective Action: No action is required.

CTD9A5S CONTROL-D ACTIVE TRANSFER FILE WAS NOT BUILT

Explanation: An error occurred during formatting of the Active Transfer file (the CTDBAT program). Formatting is terminated.

Corrective Action: Check the system log for a previous message regarding the error. Correct the problem, and reformat the file.

CTD9A6S OPEN OF CONTROL-D ACTIVE TRANSFER FILE FAILED

Explanation: The probable cause is a missing DAATF DD statement.

Formatting is terminated.
**Corrective Action:** Check and correct DD statement DAATF.

**CTD9A7S CONTROL-D ACTIVE TRANSFER FILE WRITE ERROR**

**Explanation:** Format routine received I/O error accessing ATF file. An I/O error was encountered by the CTDBAT program when accessing the Active Transfer file.

Possible causes are:
- A hardware failure may have occurred.
- Active Transfer file specification contains invalid parameters.

Formatting is terminated.

**Corrective Action:** Do one of the following:
- After the hardware problem has been resolved, reformat the file.
- Check and correct the DCB parameters specified in the DAATF DD statement; reformat the file.

**CTD9A9S NUMBER OF RECORDS IN ACTIVE TRANSFER FILE IS LESS THAN 3**

**Explanation:** The CTDBAT program determines the number of records for the Active Transfer file from the ATFBLK Installation Parameter in CTDPARM. This value cannot be less than three.

Formatting is terminated.

**Corrective Action:** Correct CTDPARM; reformat the Active Transfer file.

**CTD9B1S RELEASE OF ATF FILE NOT SUPPORTED BY THIS RELEASE OF CONTROL-D**

**Explanation:** The release defined in the Active Transfer file is not the same as the release defined in the Control-D Load library.

Control-D checks that the release number defined in the Active Transfer file is the same release number that is defined in the Control-D Load library. An error occurs when trying to allocate an Active Transfer file that belongs to a different Control-D release, for example, a test or production release.

The requested function is not performed.

**Corrective Action:** Backup the Active Transfer file and reformat it. You can do this using ICE, as follows:
1. In the IOA Installation Menu, select Customization.
2. Select the environment to customize.
3. In the Customization screen, set Product ID to CTD and select Product Customization.
4. Select Major Step 6, Customize Control-D Dataset Parameters.
5. Select Minor Step 6, Format the A.T.F File.

**CTD9B2S OPEN OF CONTROL-D ATF FILE FAILED**

**Explanation:** An attempt by Control-D to open the Active Transfer file failed. The DAATF DD statement for the Active Transfer file is missing in the logon or Print monitor procedure.
Requested function is not performed.

**Corrective Action:** Check the DAATF DD statement in the Control-D and logon procedures.

CTD9B3S CONTROL-D ATF FILE IS FULL

**Explanation:** An overflow was detected in the Active Transfer file. The Active Transfer file is full and requires enlargement or compression.

Requested function is not performed.

**Corrective Action:** Compress or enlarge the Active Transfer file using the CTDCATF utility. For more information, see the *INCONTROL for z/OS Utilities Guide*.

CTD9B7S FILE ALLOCATED TO DDNAME "DAATF" IS NOT YOUR CONTROL-D ATF

**Explanation:** The QNAME defined in the Active Transfer file is not the same as the QNAME defined in CTDPARM. Either a file from another Control-D installation was accessed, or there was an error in the current installation.

Requested function is not performed.

**Corrective Action:** Check CTDPARM. If the QNAME was changed after installation procedures were performed, specify the original QNAME and rerun CTDPARM. If two different Control-D installations are running concurrently, then make sure that the files do not mix between the two different monitors.

CTD9B8S FILE ALLOCATED TO DDNAME "DAATF" IS NOT A CONTROL-D ATF

**Explanation:** The Active Transfer file does not have a valid identification. The Active Transfer file must contain the characters ATF in the first block (offset 18).

Requested function is not performed.

**Corrective Action:** Backup the Active Transfer file and reformat it. You can do this using ICE, as follows:

1. In the IOA Installation Menu, select Customization.
2. Select the environment to customize.
3. In the Customization screen, set Product ID to CTD and select Product Customization.
4. Select Major Step 6, Customize Control-D Dataset Parameters.
5. Select Minor Step 6, Format the A.T.F File.

CTD9B9S CONTROL-D ATF FILE IS FORMATTING/CTDBAT PROBABLY ABENDED

**Explanation:** A compression or formatting of the Active Transfer file was started, but did not end successfully. The Active Transfer file contains an indicator that the format or compression processing was incomplete.

Requested function is not performed.

**Corrective Action:** Backup the Active Transfer file and reformat it. You can do this using ICE, as follows:
1. In the IOA Installation Menu, select Customization.
2. Select the environment to customize.
3. In the Customization screen, set Product ID to CTD and select Product Customization.
4. Select Major Step 6, Customize Control-D Dataset Parameters.
5. Select Minor Step 6, Format the A.T.F File.

CTD9C0I CTDUPBKP UTILITY STARTED

**Explanation:** This information message indicates that the CTDUPBKP utility has started.

**Corrective Action:** No action is required.

CTD9C1I CTDUPBKP UTILITY COMPLETED SUCCESSFULLY

**Explanation:** This information message indicates that the CTDUPBKP utility has completed without errors.

**Corrective Action:** No action is required.

CTD9C2S CTDUPBKP UTILITY ENDED WITH ERRORS

**Explanation:** This information message indicates that the CTDUPBKP utility has ended with errors.

**Corrective Action:** Check all the messages issued by the CTDUPBKP utility and proceed accordingly.

CTD9C3I FILE=ACT WAS SPECIFIED. ACTIVE USER FILE WILL BE PROCESSED

**Explanation:** This information message indicates that FILE was set to ACT in the input parameters of the CTDUPBKP utility, and as a result the Active User file is processed.

**Corrective Action:** No action is required.

CTD9C4I FILE=HST WAS SPECIFIED. HISTORY USER FILE WILL BE PROCESSED

**Explanation:** This information message indicates that FILE was set to HST in the input parameters of the CTDUPBKP utility and, as a result, the History User file is processed.

**Corrective Action:** No action is required.

CTD9C5I FILE=MIG WAS SPECIFIED. MIGRATION USER FILE WILL BE PROCESSED

**Explanation:** This information message indicates that FILE was set to MIG in the input parameters of the CTDUPBKP utility and, as a result, the Migration User file is processed.

**Corrective Action:** No action is required.

CTD9C6E NO FILE PARAMETER WAS SPECIFIED

**Explanation:** The FILE parameter was not specified in the input parameters of the CTDUPBKP utility.
The FILE parameter is mandatory.
The CTDUPBKP utility terminates

**Corrective Action:** Specify the FILE parameter and rerun the utility.

CTD9C7E NO $SYSDATA RECORDS FOUND IN THE {ACTIVE | HISTORY | MIGRATION} USER FILE

**Explanation:** The CTDUPBKP utility did not find any $SYSDATA records in the specified user file to update.
The CTDUPBKP utility terminates.
**Corrective Action:** Check the input FILE parameter of the utility for the correct user file and rerun the utility.

CTD9C8E SELECT CARD WAS NOT SPECIFIED

**Explanation:** A SELECT statement was omitted from the CTDUPBKP utility input parameters.
The CTDUPBKP utility terminates.

**Corrective Action:** Add a SELECT statement to the CTDUPBKP utility input statements and rerun the utility. For more information, see the *INCONTROL for z/OS Utilities Guide*.

CTD9C9I *input_parm* WAS SPECIFIED

**Explanation:** This information message displays the input parameter that the user specified for the CTDUPBKP utility.

**Corrective Action:** No action is required.

CTD9CAI NO VOLSER WAS FOUND FOR THE {ACTIVE | PERMANENT | HISTORY} USER FILE

**Explanation:** This information message indicates that a detailed report ordered by the user was not produced because the $SYSDATA record of the identified user file was not found.

**Corrective Action:** No action is required.

CTD9CCE ERROR IN CONTROL-STATEMENT

**Explanation:** An error was found in the input control statement specified by the user for the CTDUPBKP utility.
The input control statement is displayed in message UBK9CBI which precedes this message.
The CTDUPBKP utility terminates.

**Corrective Action:** Correct the input control statement and rerun the utility.

For a description of the input parameters of the CTDUPBKP utility, see the description of the utility in the *INCONTROL for z/OS Utilities Guide*. 

424
CTD9CDW THERE IS NO CONTROL-RECORD FOR BKPMIS backupMissionName

**Explanation:** The CTDUPBK utility could not find the Backup Control record for the backup mission of the current $SYSDATA record.

When FILE is set to HST in the input parameters of the CTDUPBK utility, the utility attempts to read the backup control record for the backup mission of the current $SYSDATA record. In this case, the backup control record could not be found in the History file.

The CTDUPBK utility continues with processes that do not require the backup control record.

**Corrective Action:** To create a backup control record, in the input parameters of the CTDUPBK utility specify the backup mission name in the BKPMIS parameter, and the number of backup generations to retain in the GENER parameter. Rerun the CTDUPBK utility.

For further details, see the CTDUPBK utility in the *INCONTROL for z/OS Utilities Guide*.

CTD9CEE RETPD CANNOT BE CHANGED

**Explanation:** The RETPD parameter was specified as an input parameter for the CTDUPBK utility, but the generation number found in the Backup Control record was not 0.

When activating the CTDUPBK utility, the user specified the RETPD parameter without setting GENER to NONE. The backup mission in question was previously run using the NUMBER OF DAYS TO KEEP method. Once a mission has been run using NUMBER OF DAYS TO KEEP method, it cannot be run using the RETPD method.

The CTDUPBK utility continues with other processes.

**Corrective Action:** Either change the method in the parameters to NUMBER OF DAYS TO KEEP then rerun the utility, or define a new backup mission defined with the RETPD parameter.

CTD9CFE INVALID RETURN CODE FROM SORT. RC=rc

**Explanation:** The SORT utility called by the CTDUPBK utility ended with errors.

For information on the return code (rc), see the section on return codes in the SORT utility documentation in the *INCONTROL for z/OS Utilities Guide*.

The CTDUPBK utility terminates.

**Corrective Action:** Correct the cause accordingly and rerun the CTDUPBK utility.

CTD9F01 CONTROL-RECORD FOR BKPMIS backupMissionName HAS BEEN CREATED

**Explanation:** This information message indicates that a backup control record was recreated for the backupMissionName backup mission.

A backup control record is recreated when the FILE parameter is set to HST for the backup mission, and when the original backup control record is missing.

**Corrective Action:** No action is required.
INCONTROL for z/OS Messages Manual

Messages CTDA00 through CTDAxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDA00E YOU ARE UNAUTHORIZED TO SAVE THIS RULER

**Explanation:** You are not authorized to save the current ruler. Control-D security exit CTDX004, routine RULSAVE, determined that you cannot save rulers.

The ruler is not saved.

**Corrective Action:** If you think you should be able to save rulers, contact your INCONTROL administrator.

CTDA01E CTDX004: ERROR IN CTMMEM RC=rc READING SKELETON

**Explanation:** The RESTORE skeleton that is used for restoring reports converted to Control-D from other products (CA-View, CA Dispatch, and so on) cannot be read from the SKL library.

The restore request ends NOT OK.

**Corrective Action:** Proceed according to the CTMMEM return code displayed in the message. CTMMEM return codes are described in the DOCIMEM member in the IOA DOC library. After correcting the action, request RESTORE of the problematic report.

CTDA02E MISSING SMF DATA SELECTION CRITERIA

**Explanation:** The DASYSIN file for the CTDSMFRP utility contains a blank statement. The DASYSIN file should contain selection criteria statements for the SMF report.

The CTDSMFRP utility terminates with a return code of 08.

**Corrective Action:** Provide correct selection criteria statements.

CTDA03E NO SMF RECORDS MET THE SELECTION CRITERIA

**Explanation:** This is one of two messages with the same ID, but different text.

There are no Control-D SMF records to match the selection criteria for the SMF report (the CTDSMFRP utility), or no selection criteria were specified when running the CTDSMFRP utility, or SMF was not set to YES in CTDPARM.

The CTDSMFRP utility terminates with a return code of 04.

**Corrective Action:** No action is required.

CTDA03E CTDX004: ERROR IN GETMAIN FOR SKELETON

**Explanation:** This is one of two messages with the same ID, but different text.

There is insufficient memory to read the RESTORE skeleton that is used for restoring reports converted to Control-D from other products (for example, CA-View, CA Dispatch).

The current restore request ends NOT OK.

**Corrective Action:** Increase the REGION size of the online environment.
CTDA04E  CTDX004: UNABLE TO DYNAMICALLY ALLOCATE INTRDR  rc

**Explanation:** Dynamic allocation of the internal reader (INTRDR) by a Control-D command failed during an attempt to submit a restore job for reports converted to Control-D from other products (such as, CA-View, CA Dispatch).

In this message, `rc` is the return code of the failed dynamic allocation.

The restore job is not submitted. The current restore request ends NOT OK.

**Corrective Action:** Refer to the IBM manual that deals with information returned from an SVC 99. Take appropriate action based on the return code displayed in the message.

CTDA05E  CTDX004: ERROR IN GETMAIN FOR SYSDATA RECORD

**Explanation:** There is insufficient memory for the SYSDATA record that is needed to restore reports converted to Control-D from other products (for example, CA-View, CA Dispatch).

The current restore request ends NOT OK.

**Corrective Action:** Increase the REGION size of the Online environment.

CTDA11S  OPEN OF SCRATCH LIST FAILED. DDNAME "DASCRLST"

**Explanation:** Open of scratch list file issued by the CTDDERLP utility in the DASCRLST DD statement failed.

Possible causes are:

- The DASCRLST DD statement is missing.
- The data set described by the DASCRLST DD statement cannot be opened for sequential processing.

The CTDDERLP utility ends with errors.

**Corrective Action:** Check the JCL for the job; correct and rerun the utility.

CTDA12I  DELETE OF UNNEEDED DATASETS STARTED

**Explanation:** This information message indicates that the CTDDCD program of the CTDDERLP utility, which deletes unneeded CDAM data sets, has started.

**Corrective Action:** No action is required.

CTDA13I  SCRATCH LIST IS EMPTY

**Explanation:** This information message indicates that the CDAM scratch list is empty. This message is issued by the CTDDCD program of the CTDDERLP utility, which is used to delete unneeded compressed sysout data sets.

**Corrective Action:** No action is required.

CTDA141  DELETE OF UNNEEDED DATASETS ENDED OK

**Explanation:** Normal termination message of the CTDDCD program (of the CTDDERLP utility) which is used to delete unneeded compressed sysout data sets.

**Corrective Action:** No action is required.
CTDA15E DELETE OF UNNEEDED DATASETS ENDED WITH ERRORS

Explanation: The CTDDCD program (used in the CTDDELRP utility and in the New Day procedure), which is used to delete unneeded data sets, ended with errors. The CTDDCD program continues processing and completes with a condition code of 04.

Corrective Action: Refer to previous messages and the CTDA18E message.

CTDA16I DATASET dsn DELETED

Explanation: This information message is issued by the CTDDCD program of the CTDDELRP utility to indicate that the dsn compressed sysout data set was deleted successfully.

Corrective Action: No action is required.

CTDA17E DATASET dsn COULD NOT BE DELETED DUE TO:

Explanation: Warning message from the CTDDCD program (of the CTDDELRP utility) indicating that the dsn compressed sysout data set could not be deleted. The reason for the failure is described in the CTDA18E message.

Corrective Action: No action is required.

CTDA18E rsn FUNC=func, RC=rc, STATUS=statusCode

Explanation: This warning from the CTDDCD program indicates that a data set could not be deleted and displays the reason for the message, the related system function, the return code, and the status code. The header for this message is provided by the CTDA17E message.

Possible values for rsn are:
- DATASET IS IN USE
- DATASET NOT IN CATALOG
- DATASET NOT ON VOLUME
- RACF PREVENTED THE SCRATCH
- GENERAL SCRATCH ERROR
- GENERAL UNCATALOG ERROR

The CTDDELRP utility or the New Day procedure continues processing and completes with a condition code of 04.

Corrective Action: Perform the action described below as appropriate for the reason in the message.
DATASET IS IN USE - If the data set was in use by an online user, ignore the warning. The data set remains on the scratch list and is deleted during the next run of the CTDDELRP utility.

DATASET NOT IN CATALOG or DATASET NOT ON VOLUME - Someone may have removed the specified CDAM data set manually (for example, ISPF 3.2). Investigate the cause and ensure that the files are deleted with standard Control-D procedures. Edit the scratch list file and remove the relevant DSNs. This is necessary because the scratch list accumulates the DSNs that could not be deleted and they will cause the same error the next time it runs.

RACF PREVENTED THE SCRATCH - The job was not authorized to delete the file. Correct the security authorization. The DSN remains on the scratch list and is deleted the next time the CTDDELRP utility runs.

GENERAL SCRATCH ERROR or GENERAL UNCATALOG ERROR - These rare errors indicate a structural problem in the system catalog or VTOC. Contact your systems programmer for assistance.

If you cannot solve the problem, refer to the IBM manual "System Programming Library: Data Management" for an explanation of reason and status codes. See the LOCATE, SCRATCH, or UNCATALOG section, depending upon the function displayed in the message:

- LOCATE - retrieving catalog information by data set name
- SCRATCH - deleting a data set
- UNCATALOG - uncataloging a data set

CTDA19S OPEN OF SCRATCH REJECTS FAILED. DDNAME "DASCRREJ"

Explanation: CTDDCD issues this message to report that open of scratch rejects file failed (the DASCRREJ DD statement).

Possible causes are:
- The DASCRREJ DD statement is missing.
- The data set described by the DASCRREJ DD statement does not exist.

The CTDDELRP utility or the New Day procedure ends with errors.

Corrective Action: Correct the JCL, and rerun the job.

CTDA21S OPEN OF INPUT FILE FAILED. DDNAME "DAIN"

Explanation: There may be a missing DAIN DD statement in the JCL job. The CTDCTRL program terminates.

Corrective Action: Add a DAIN DD statement to the job.

CTDA22S OPEN OF OUTPUT FILE FAILED. DDNAME "DAOUT"

Explanation: There may be a missing DAOUT DD statement in the JCL job. The CTDCTRL program terminates.

Corrective Action: Add a DAOUT DD statement to the job.
**CTDA23I** FILE CONVERSION STARTED

**Explanation:** This information message indicates that the CTDCRL program started processing.

**Corrective Action:** No action is required.

**CTDA24I** INPUT RECORDS - *num*

**Explanation:** This information message indicates that the CTDCRL program ended and read *num* records.

**Corrective Action:** No action is required.

**CTDA25I** OUTPUT RECORDS - *num*

**Explanation:** This information message indicates that the CTDCRL program ended and wrote *num* records.

**Corrective Action:** No action is required.

**CTDA26I** FILE CONVERSION ENDED

**Explanation:** This information message indicates that the CTDCRL program finished processing.

**Corrective Action:** No action is required.

**CTDA30E** OPEN OF SORT FILE FAILED. DDNAME *ddName*

**Explanation:** The SORT utility invoked by the CTDDELRP utility failed to open the *ddName* DD statement.

The CTDDELRP utility stops.

**Corrective Action:** Ensure all DD statements are valid. Restart the CTDDELRP utility.

**CTDA31E** INVALID RETURN CODE FROM SORT, RC=*rc*

**Explanation:** Internal sort program ended with errors. This message is from the CTDDELRP utility, which cleans unnecessary entries from the Active User Report List file. The utility uses the site sort program internally.

The utility terminates with a condition code of 08.

**Corrective Action:** Refer to the sort messages for the job and to the user guide for the sort facility used at your site.

**CTDA34E** OPEN OF SCRATCH LIST FAILED. DDNAME "DASCRLST"

**Explanation:** The CTDDELRP Control-D utility, which cleans unnecessary entries from the Active User Report List file, failed to open the scratch list file using the DASCRLST DD statement. Possible causes are:

- The DASCRLST DD statement is missing.
- The data set described by the DASCRLST DD statement cannot be opened for a sequential write.

The utility terminates with a condition code of 08.
Corrective Action: Correct the JCL and rerun the job.

CTDA35I WAITING FOR ANOTHER CTDDELRP OR RESTORE JOB TO TERMINATE
Explanation: This information message indicates that the CTDDELRP utility is waiting for another CTDDELRP job or a restore job to terminate. CTDDELRP is cleans unnecessary entries from the Active User Report List file. To maintain data integrity, CTDDELRP cannot run concurrently with another CTDDELRP or a restore job.

When the contending job terminates, CTDDELRP resumes processing.
Corrective Action: No action is required.

CTDA36E OPEN OF "DAWORK" DD CARD FAILED
Explanation: Open of the Active Transition file failed. This file is referenced by the DAWORK DD statement. The DAWORK DD statement is probably missing. This error message is issued by the CTDDSO program, which is the first step of the CTDDELRP utility.

CTDDSO terminates with a condition code of 08.
Corrective Action: Check for previous messages indicating the reason for the open failure. Correct the problem, and rerun the CTDDELRP utility.

CTDA37I JOB jobName JOBID jobId IS WAITING FOR MIGRATION BY missionName
Explanation: This information message is produced by the CTDDELRP utility. It indicates the jobName job is ready for migration by the missionName Migration Mission.
The sysout compressed data sets for the jobName job will not be deleted until the Migration Mission runs successfully.
Corrective Action: No action is required.

CTDA38I SYSDATA RECORD IS MISSING FOR INDEX index. JOB jobName JOBID jobId WILL BE DELETED
Explanation: This information message indicates that the CTDDELRP utility, which cleans unnecessary entries from the Active User Report List file, cannot find a SYSDATA record that corresponds to an index record in the Active User Report List file.
The SYSDATA record was probably manually deleted from the Active User Reports List file.
The index record and index file are deleted to maintain database integrity. Processing continues.
Corrective Action: No action is required.

CTDA39E NO INPUT PARAMETERS WERE SUPPLIED
Explanation: The CTDDELRP utility, which is used to clean unnecessary entries from the Active User Report List file, did not receive input parameters from a DADELIN DD statement. The CTDDELRP utility should be supplied with input parameters indicating actions for the utility to perform.
The CTDDSO program terminates with a condition code of 08.

**Corrective Action:** Verify that input parameters are specified by means of the DADELIN DD statement, and rerun the job.

**CTDA3AE OPEN OF "DAXREP" FAILED**

**Explanation:** The CTDDELRP utility, which cleans unnecessary records from the Active User Report List file, failed to open the Print Control Record Scratch file referenced by the DAXREP DD statement. The DAXREP DD statement is probably missing. This error message is issued by the CTDDSO program, which is the first step of the CTDDELRP utility.

The CTDDSO program terminates with a condition code of 08.

**Corrective Action:** Correct the error, and rerun the CTDDELRP utility.

**CTDA3BE I/O ERROR WRITING TO XREP DELETE FILE. DDNAME "DAXREP"**

**Explanation:** An I/O error occurred while writing the file referenced by the DAXREP DD statement. This message is issued by the CTDDSO program, which is the first step of the CTDDELRP utility.

The CTDDELRP utility terminates.

**Corrective Action:** Run the CTDBLXRP utility to rebuild the Print Control Record. Rerun the CTDDELRP utility.

**CTDA3CE INSUFFICIENT SPACE ALLOCATED TO XREP DELETE FILE. DDNAME "DAXREP"**

**Explanation:** The file referenced by the DAXREP DD statement has insufficient space allocated. This message is issued by the CTDDSO program, which is the first step of the CTDDELRP utility.

The CTDDELRP utility continues processing.

**Corrective Action:** To prevent this problem in the future, allocate more space to the file referenced by the DAXREP DD statement. Run the CTDBLXRP utility to rebuild the Print Control Record.

**CTDA3DE "FE" PRINT SUPPORT ERROR. RETURN CODE rc**

**Explanation:** An error was encountered while trying to delete a Print Control Record. This message is issued by the CTDDSO program, which is the first step of the CTDDELRP utility.

Possible values of *rc* are:

- 016 - invalid function
- 024 - open error
- 028 - error in sort

The CTDDELRP utility continues processing.

**Corrective Action:** Run the CTDBLXRP utility to rebuild the Print Control Record.
CTDA3EI *** PARM=TEST SPECIFIED - SIMULATION MODE ***

Explanation: This information message indicates that the CTDDELRP utility is running in SIMULATION mode. In SIMULATION mode, the CTDDELRP utility produces a report that indicates which entries would have been deleted and which data sets would have been erased if the utility were running in PRODUCTION mode.

Corrective Action: Examine the output of the CTDDELRP utility to determine if the proper entries would have been deleted from the Active User Report List file and the proper CDAM data sets would have been erased. Make any changes required to prevent the deletion of needed Active User Report List entries or CDAM data sets.

Rerun the utility in PRODUCTION mode to delete unneeded entries in the Active User Report List file and to erase CDAM data sets that no longer have references in that file.

CTDA40E WHEN USING CLASS *, ONE OF THE FOLLOWING THREE FIELDS MUST BE ENTERED

Explanation: If an asterisk (*) was entered in the CLASS field, a value must be inserted in the EXTWTR field, the DEST field, or the FORM field.

Corrective Action: Insert a value in the EXTWTR, DEST, or FORM field.

CTDA41E MIXED GENERIC AND NON-GENERIC CLASSES IS NOT ALLOWED

Explanation: Mixed generic and non-generic classes were specified. When setting GENERIC to Y, only the classes specified in the GENCLAS Installation Parameter are allowed. When setting GENERIC to N, only classes not specified by the GENCLAS Installation Parameter are allowed.

Corrective Action: Correct the CLASS field.

CTDA42E INVALID OPTION (USE "Y", "N", "W", "E" OR BLANK)

Explanation: User entered an invalid value in the CONTID field in the Decollating Mission Definition screen.

Corrective Action: Enter a valid option in the CONTID field.

CTDA43E USER IS NOT FOUND IN THE RECIPIENT TREE

Explanation: A recipient that was defined in a DO USER parameter of the decollating mission does not appear in the Control-D Recipient Tree. This message appears while exiting the Decollating Mission Definition screen, or after using the CHKUSR command.

The Decollating Mission Definition screen is not exited; an error message containing the invalid user name is displayed.

Corrective Action: Correct the invalid user name in the decollating mission definition, or add a new user to the Control-D Recipient Tree.

CTDA44E PLEASE ENTER TEXT OF THE REMARK

Explanation: A value was set for the DO REMARK parameter in the Decollating Mission Definition screen, but no text was entered for the remark.
Corrective Action: Enter text in the DO REMARK parameter field.

CTDA45E ENTER "U", "C", "A", "B", OR BLANK

Explanation: There is an invalid value in the T field on a DO USER line in the Decollating Mission Definition screen.

Valid values are:

- U (Unconditional) - The user receives the report page regardless of whether or not the user's children receive the page.
- C (Conditional) - The user only receives the report page if the user's children do not receive the page. Default.
- A (Accept all users) - The user receives the report page even if the user's name is not in the Recipient Tree.
- B - The user does not need to search for the recipient in the Recipient Tree. This option can be used to improve the performance of the decollation when the site has a large Recipient Tree.
- " " (Blank) - The default (Conditional) is assumed.

Corrective Action: Enter a valid option in the T field.

CTDA46E THIS FEATURE IS NOT SUPPORTED IN YOUR SYSTEM

Explanation: User entered the SYSOUT option in the ON statement line on the Decollating Mission Definition screen, in a JES3 site. DO SYSOUT is supported in JES2 sites only. Your site must be a JES3 site.

Corrective Action: Specify any valid option other than SYSOUT in the ON statement, for example, ON CLASS, ON DSN, and so on.

CTDA47E PLEASE FILL IN RULE NAME

Explanation: DO CTBRULE has been specified without a rule name. If a DO CTBRULE statement is specified, a rule name must be included in the statement.

Corrective Action: Specify the rule name, or delete the DO CTBRULE statement.

CTDA48E FIRST CHARACTER CANNOT BE NUMERIC

Explanation: The first character specified in the rule name in the DO CTBRULE statement is, but should not be, numeric. The rule name must be a member name, and member names cannot begin with a numeric character.

Corrective Action: Correct the specified rule name so that the first character is not numeric.

CTDA49E "COPIES" VALUE EXCEEDS "MAX COPIES" VALUE

Explanation: The value of the MAX COPIES field must be, but is not, greater than or equal to the value of the COPIES field.

Corrective Action: Change the value of either COPIES or MAX COPIES so that MAX COPIES is greater than or equal to COPIES.
CTDA50E SYNONYM=synonym IS NOT ALLOWED WITH USER=*FORCE

**Explanation:** Option A (All) is specified for the SYNONYM parameter for use with the DO USER=*FORCE action. When SYNONYM is set to A, report pages are sent to all users in the Recipient Tree that have the specified synonym. This parameter cannot be specified when the statement DO USER=*FORCE is chosen, because USER=*FORCE causes the Recipient Tree to be searched until the first user with the specified synonym is found.

**Corrective Action:** Change the parameter to F (first), or clear it.

CTDA51E ENTER "F", "A" OR BLANK

**Explanation:** The user specified an invalid SYNONYM parameter.

The valid options for the SYNONYM parameter:

- F (First) or blank - The Recipient Tree is searched until the first user with the specified synonym is found. The report pages are sent to that user only.
- A (All) - The report pages are sent to all users with the specified synonym in the Recipient Tree.

**Corrective Action:** Change the parameter to F, A or blank.

CTDA53E "FE" PRINT SUPPORT ERROR. RETURN CODE /rc

**Explanation:** An executing Restore Mission failed to create or update an internal Printing Mission record in the Active User Report file.

When a record with status WAITING FOR PRINT is restored, the Control-D Decollation monitor writes an internal Printing Mission record to indicate that there are reports waiting to be printed by the Printing Mission specified in the DO PRINT parameter. These records are produced with the following key:

/rc is the return code from the CTDXRPRoutine.

The Restore Mission restores the reports but terminates with NOTOK status. The restored reports will not be selected by any Printing Mission whose name is specified in the DO PRINT Decollation Mission parameter.

**Corrective Action:** These reports can be manually scheduled for Deferred Printing by using the P line command to display the Print Window under Option U and then specifying the Printing Mission name. If the problem persists, report the return code to BMC Software Customer Support.

CTDA54I RSTRESET PROCESSING STARTED

**Explanation:** This information message denotes the normal start of the RSTRESET Control-D utility.

The RSTRESET utility changes the status of all active restore missions to ENDED NOT OK, and changes the status of all reports selected for restoring to BACKED UP.

**Corrective Action:** No action is required.

CTDA55I RSTRESET PROCESSING ENDED

**Explanation:** This information message indicates that the RSTRESET Control-D utility ended normally.

**Corrective Action:** No action is required.
CTDA58S OPEN OF ACTIVE MISSIONS FILE FAILED.

**Explanation:** The CTDRESET utility has failed to open the Active Mission file.
The utility does not reset reports restore processing.

**Corrective Action:** Call your INCONTROL Administrator.

CTDA60E RESTORE MISSION NOT IN LIBRARY `lib`

**Explanation:** The specified Restore Mission name is not defined in the Restore Mission Definition library.
When you request a Restore, a validity check is done for the Restore Mission name. A search is made for the $$PARMS member in the library allocated to the DACMD `xx DD` statement, where `xx` is the application ID. The member contains a RSTLIB parameter, which specifies the name of the Restore Mission Definition library. If the Restore Mission name is not found in this library, this message is issued.

**Corrective Action:** Specify a Restore Mission name which exists in the Restore Mission Definition library. If you are not familiar with the names used in your data center, consult your INCONTROL administrator.

CTDA61E MISSING "RSTLIB=" PARAMETER IN $$PARMS MEMBER (DD DACMD`xx`)`

**Explanation:** Internal error in the Restore Mission validation process.
When you request a Restore, a validity check is done for the Restore Mission name. A search is made for the $$PARMS member in the library allocated to the DACMD `xx DD` *statement*, where `xx` is the application ID. The member contains a RSTLIB parameter, which specifies the name of the Restore Mission Definition library. The parameter was missing from the member.

**Corrective Action:** Consult your INCONTROL administrator who will specify the RSTLIB parameter in the $$PARMS member.

CTDA62S ERROR WHILE PREPARING FORMATS

**Explanation:** Syntax errors were detected in the Display Types definition member. The Display Type definition member was loaded and analyzed and syntax errors were detected. Specific errors were previously displayed with the erroneous source lines.
The User Reports Entry Panel is not displayed.

**Corrective Action:** Correct the Display Types definition errors in the $$FRM member of the PARM library, and try to reenter the User Reports Entry Panel.

CTDA63S INTERNAL ERROR IN CTMTJOB RC=`rc`

**Explanation:** An internal error occurred while attempting to display the error messages that resulted from the syntax check of the Display Type definitions.
The error messages are not displayed.

**Corrective Action:** Ask your INCONTROL administrator to notify BMC Software Customer Support.
CTDA64E DISPLAY TYPE type FOR report-list-type [sysdata] NOT FOUND

Explanation: There was an attempt to display an invalid User Report List display combination. Available Report List display combinations are predefined in the $$FRM member of the PARM library. The exact combination must exist in the member.

For each combination, the following three characteristics are defined:
- ID - Display Type letter (for example, D (Default), U (User), and so on).
- TYPE - Permanent, Active or History Report List.
- CLASS - Usual, Sysdata or Ruler.

The User Report List screen is not displayed.

Corrective Action: Specify a valid (existing) display combination.

CTDA65E INTERNAL ERROR WHILE SETTING HEADER RC=rc

Explanation: An internal error occurred while attempting to place the Display Type’s header in the screen.

The User Report List screen is not displayed.

Corrective Action: Have your INCONTROL administrator notify BMC Software Customer Support.

CTDA66E USER FIELD MUST EXIST IN FORMAT

Explanation: An INSERT operation was attempted on a User Report List whose current Display Type does not contain the USER field. To insert a new user record in a User Report List, the USER field must be specified.

The new record is not inserted.

Corrective Action: Insert a record when using a Display Type that contains the USER field, or add this field to the definition of the current Display Type.

CTDA67E USER FIELD MUST BE EDITABLE IN FORMAT

Explanation: An INSERT operation was attempted on a User Report List whose current Display Type contains a protected USER field. To insert a new user record in a User Report List, the USER field must be specified.

The new record is not inserted.

Corrective Action: Either insert the record when using a Display Type that contains an unprotected USER field, or define the USER field in the current Display Type as unprotected.

CTDA68E JOBNAME FIELD MUST EXIST IN FORMAT

Explanation: An INSERT operation was attempted on a User Report List whose current Display Type does not contain the JOBNAME field. To insert a new user record in a User Report List, the JOB field must be specified.

The new record is not inserted.
Corrective Action: Either insert a record when using a Display Type that contains the JOB field, or add this field to the definition of the current Display Type.

CTDA69E JOBNAME FIELD MUST BE EDITABLE IN FORMAT

Explanation: An INSERT operation was attempted on a User Report List whose current Display Type contains a protected JOBNAME field. To insert a new user record in a User Report List, the JOB field must be specified.

The new record is not inserted.

Corrective Action: Either insert the record when using a Display Type that contains an unprotected JOB field, or define the JOB field in the current Display Type as unprotected.

CTDA70E "OPT" FIELD MUST EXIST IN FORMAT

Explanation: An attempt was made to specify an option (for example, Insert, Update, and so on) however, the OPTION field is not present in the current Display Type. The OPTION field must be defined in a Display Type in order to specify a required operation or option on a record of the User Report List.

No operations are performed on the User Report List.

Corrective Action: Add the OPTION field to the Display Type.

CTDA71E INTERNAL ERROR - FORMAT DOES NOT EXIST

Explanation: An internal error occurred while attempting to process the User Report List.

The User Report List screen is not processed.

Corrective Action: Have your INCONTROL administrator notify BMC Software Customer Support.

CTDA72E USER OR JOBNAME CANNOT BE UPDATED

Explanation: The user attempted to update or modify the contents of the USER field, the JOB field, or both. The USER and the JOB fields may not be modified when updating a record.

The record is not updated.

Corrective Action: Try updating the record again without modifying the USER or JOB fields.

CTDA73E INTERNAL ERROR - DATA FIELD TOO SHORT

Explanation: The user modified or updated the contents of a field, but the field length defined in the Display Type definition is shorter than the size of the field in the Control-D database.

A field can be updated in the Control-D database only if its length in the screen is not less then its database length. While this is normally the case, an error might have been made if the Display Type field was defined especially for the site.

The record is not updated.

Corrective Action: Modify the length of the field in the DISPLAY TYPE definition to the recommended length. A list of field lengths can be found in the $$FIELD member in the PARM library.
CTDA74E INTERNAL ERROR UNIDENTIFIED RC - RC=rc

Explanation: An internal error occurred while attempting to insert or update a user record. The record is not inserted or updated.

Corrective Action: Have your INCONTROL administrator notify BMC Software Customer Support.

CTDA75E INTERNAL ERROR - IN WEDTQRY - RC=rc

Explanation: An internal error occurred while attempting to insert a user record. The record is not inserted.

Corrective Action: Have your INCONTROL administrator notify BMC Software Customer Support.

CTDA76E AN EDIT FIELD ENDS AFTER SCREEN BOUNDS

Explanation: The contents of a field that do not fit on the physical screen were modified or updated. Display formats with a logical length of 132 columns may be used on a physical screen of 80 columns, but some of the fields are not displayed at all, and some are truncated. An editable field that is truncated may not have its contents modified or updated.

The record is not updated. The cursor is positioned on the problematic field.

Corrective Action: Modify the Display Type definition to allow the entire field to be displayed, or use a physical screen which displays the entire field.

CTDA77E YOU ARE NOT AUTHORIZED TO USE THIS FORMAT

Explanation: This Display Type is not authorized for the current user. The INCONTROL administrator can authorize (or deny) the use of certain Display Types for certain users.

The User Report List screen is not displayed.

Corrective Action: Request a Display Type for which you are authorized, or see your INCONTROL administrator for authorization and access to specified Display Type.

CTDA78E YOU MUST FILL IN THE DISPLAY TYPE FIELD

Explanation: Entry to the User Report List attempted without specifying a Display Type in the User Reports Entry Panel. To view the User Report List, specify a valid Display Type in the DISPLAY TYPE field.

The User Report List is not displayed.

Corrective Action: Specify a valid Display Type.

CTDA79E INVALID NUMBER OF DAYS

Explanation: A date in the FROM DATE or TO DATE field of the User Reports Entry Panel is invalid. The specified date must be a valid date in the format used in your installation. For more information, see the Control-D and Control-V User Guide.

The User Report List is not displayed.

Corrective Action: Correct the date specification and retry.
CTDA80E NUMBER OF DAYS SHOULD BE 365 OR LOWER

Explanation: The relative date in the FROM DATE or TO DATE field of the User Reports Entry Panel is invalid.
For information about valid combinations for this field, see the Control-D and Control-V User Guide.
The User Report List is not displayed.
Corrective Action: Correct the date specification and retry.

CTDA81E COND. CODE COMPARISON SHOULD BE ">C" AND 4 DIGITS, EXAMPLE: >C0004

Explanation: The value in the REMARK or CC field of the User Reports Entry Panel is invalid.
For information about valid combinations for this field, see the Control-D and Control-V User Guide.
The User Report List is not displayed.
Corrective Action: Correct the REMARK or CC specification and retry.

CTDA82E YOU MUST GIVE A ONE LETTER DISPLAY TYPE NAME

Explanation: The Display Type code specified in the DISPLAY command in the User Report List is invalid. The DISPLAY command requires a one letter Display Type parameter. This parameter must indicate an existing Display Type.
The current Display Type is not changed.
Corrective Action: Specify a valid Display Type with the DISPLAY command.

CTDA83E DISPLAY TYPE NAME SHOULD BE ONE LETTER ONLY

Explanation: More than one letter is specified for the Display Type code in the DISPLAY command in the User Report List. The DISPLAY command requires a 1-letter Display Type parameter. This parameter must indicate an existing Display Type.
The current Display Type is not changed.
Corrective Action: Specify a valid, 1-letter Display Type with the DISPLAY command.

CTDA84E DISPLAY TYPE SHOULD HAVE AT LEAST ONE LINE IN SHORT FORMAT

Explanation: The Display Type specified contains only Long format lines. A Display Type cannot have all its lines defined as Long format lines. At least one line must be defined for Short format. Long format lines are used only when Additional Information is requested for a record. Short format lines are always displayed.
For information on customizing IOA display format members, see the INCONTROL for z/OS Administrator Guide.
The User Report List is not displayed.
Corrective Action: Modify the Display Type definition to contain at least one Short format line.
CTDA85E CANNOT CHANGE DISPLAY TYPE WHILE INSERTING

Explanation: There is an attempt to change the Display Type using the DISPLAY command, while a new record is being inserted using the Insert line option. The insert operation must be complete before a Display Type is changed.

The DISPLAY command is not performed.

Corrective Action: Complete the insert operation, and then retry the DISPLAY command.

CTDA86E FIELD SHOULD BE NUMERIC

Explanation: There was an attempt to modify or update the contents of a numeric field with a non-numeric value. The updated field must have a numeric value.

The record is not updated.

Corrective Action: Specify a numeric value in the field before updating the record.

CTDA87E REPORT EMPTY. CHECK INCLUDE/EXCLUDE RULER DEFINITIONS

Explanation: The report for which view is requested contains no report lines. An empty report usually indicates that a ruler was applied to a report, which contained a combination of Include and Exclude criteria that left no lines in the report.

The VIEW option is not performed.

Corrective Action: Check the ruler or rulers for the report. Request that the report be displayed without problematic rulers or without rulers entirely.

CTDA88E ENTRY SHOULD BE IN "WAIT-RESTORE" STATE

Explanation: You cannot un-restore a record that is not scheduled to be restored. Only records in the WAIT-RESTORE state can be un-restored.

The un-restore operation is not performed.

Corrective Action: No action is required.

CTDA89W WARNING: CTDTUSR SHOULD RUN ABOVE THE 16MB LINE - CONTACT SYS-PROG

Explanation: The CTDTUSR User Report List program resides below the 16MB line. The CTDTUSR User Report List program is designed to run above the 16MB line to achieve better resource utilization, especially when running under the Online monitor. For some reason, the program is not taking advantage of this ability.

The system continues as usual.

Corrective Action: Have your INCONTROL administrator notify BMC Software Customer Support.

CTDA8AI REPORT UNRESTORED: jobname/recipient report ID=recordId

Explanation: This information message indicates that the restore request to the backed up (migrated) report is canceled.

The variables in this message are:
INCONTROL for z/OS Messages Manual

- **jobname** - the name of the job that created the report
- **recipient** - the user for whom the report was created
- **report** - the name of the report
- **recordId** - the internal database identifier of the report

**Corrective Action:** No action is required.

CTDA8BE OPERATION NOT AUTHORIZED WHEN IN DEMO MODE

**Explanation:** An unauthorized operation was attempted on a DEMO record. DEMO records are reserved for demonstration and training purposes, and are normally accessed by specifying DEMO in the User Reports Entry Panel. Some operations are not permitted on DEMO records. To protect the integrity of the DEMO records, Update and Delete operations are not permitted on these records.

The unauthorized operation is not performed.

**Corrective Action:** No action is required.

CTDA8CE ENTRY IN "WAIT-RESTORE" CANNOT BE DELETED

**Explanation:** There was an attempt to delete a report entry from the History User Report List file that has a status of WAIT RESTORE. Report entries in WAIT RESTORE state cannot be deleted.

The delete operation is not performed.

**Corrective Action:** User should first use the No Restore option to change the status of the report entry to BACKEDUP, and then perform the delete again.

CTDA8DE UNABLE TO OBTAIN NOTES - RC FROM CTDNPS=rc

**Explanation:** The Control-D Notepad Facility received a nonzero return code from the CTDNPS routine; notes cannot be obtained. The message usually accompanies another error message that defines a specific error according to the return code (rc).

**Corrective Action:** Contact your system programmer for assistance.

CTDA8EE UNABLE TO SHOW NOTES - RC FROM CTDTNTP=rc

**Explanation:** The Control-D Notepad Facility received a nonzero return code from routine CTDTNTP; notes cannot be displayed. The message represents an internal error in the Control-D Notepad Facility. The return code (rc) indicates the error.

**Corrective Action:** Contact BMC Software Customer Support for assistance.

CTDA8FE YOU ARE NOT AUTHORIZED TO WORK WITH TAG NOTES

**Explanation:** The CTDX004 Control-D security exit determined that you are not authorized to read or write tag notes in the displayed report.

**Corrective Action:** If you think you should be able to read or write tag notes, contact your INCONTROL administrator.
CTDA91E INVALID MISSION TYPE. ONLY BKP OR RST ALLOWED

**Explanation:** An invalid mission type was specified.

**Corrective Action:** Correct the mission type and continue.

CTDA92I MEMBER *memName* SAVED

**Explanation:** This information message indicates that the *memName* member has been saved successfully. All missions are stored on members.

**Corrective Action:** No action is required.

CTDA95E VALUE OF CNDREC# PARAMETER IN IOAPARM IS NOT EQUAL TO ACTUAL FILE SIZE

**Explanation:** The CNDREC# parameter in IOAPARM has been changed but the IOA Conditions file has not been rebuilt.

A difference was detected between the length of the IOA Conditions file and the length specified in the IOAPARM member of the PARM library.

This is usually due to using the IOAPARM member (read from the IOA Load library) for the wrong monitor.

The monitor shuts down.

**Corrective Action:** To correct this situation, do one of the following:

- Rebuild the IOA Conditions file, so that its length is as specified in IOAPARM.
- Modify the CNDREC# parameter in IOAPARM so that its length is the length of the existing IOA Conditions file.

After correcting the problem, restart the monitor.

CTDA96W LOAD OF SECURITY MODULE CTDSE01 FAILED. SECURITY CHECKING WILL BE BYPASSED

**Explanation:** The CTDSE01 module was not found and was not linked into the CTDCMI module. To perform security checking during ordering of missions, Control-D calls the CTDSE01 security exit. If your security checking is performed by CTDX001, link a dummy security exit into CTDCMI to prevent this message from being issued.

The mission is ordered.

**Corrective Action:** Check whether or not the security exit should exist.

CTDAA0I DELETE OF UNNEEDED INP RECORDS STARTED

**Explanation:** This information message indicates that the CTDNDAY process started deleting unneeded INP records from the Control-D Active User File.

**Corrective Action:** No action is required.
CTDAA1I DELETE OF UNNEEDED INP RECORDS ENDED OK

**Explanation:** This information message indicates that the CTDNDAY process completed deleting unneeded INP records from the Control-D Active User File.

**Corrective Action:** No action is required.

CTDAA2E DELETE OF UNNEEDED INP RECORDS WITH ERRORS

**Explanation:** This error message indicates that the CTDNDAY process failed to delete the unneeded INP records from the Control-D Active User File. The CTDNDAY process finished executing with a conditional code of 08.

**Corrective Action:** Examine the SYSPRINT and IOA Log File for error messages to clarify the cause of the problem. If possible, fix the problem and rerun CTDNDAY.

CTDAA3I n INP RECORDS WERE DELETED

**Explanation:** This information message indicates the number of INP records deleted from the Active User File during the CTDNDAY run.

**Corrective Action:** No action is required.

CTDAD1E ERROR IN MEMBER AUDTPARM LINE= line_number, BLOCK= block_name, PARAMETER= parameter_name

**Explanation:** This error message is issued during Control-D audit service initialization if an error is detected in the AUDTPARM audit configuration member.

The variables in this message are:

- **line_number** - number of the line in the AUDTPARM member where the error is detected
- **block_name** - name of the block where the error is detected
- **parameter_name** - name of the invalid parameter

The audit service initialization stops, but the component continues to work without Control-D auditing.

**Corrective Action:** Examine the following message that explains the reason for the error. For Control-D auditing to work properly, correct the invalid line in the AUDTPARM member and restart the task.

CTDAD2E INVALID BLOCK NAME

**Explanation:** An invalid block name is detected in the AUDTPARM audit configuration member.

The audit service initialization stops, but the component continues to work without Control-D auditing.

**Corrective Action:** Examine the preceding CTDAD1E message where the invalid block coordinates are specified. For Control-D auditing to work properly, correct the error in the AUDTPARM member and restart the task.

CTDAD3E INVALID PARAMETER NAME

**Explanation:** An invalid parameter name is detected in the AUDTPARM audit configuration member.

The audit service initialization stops, but the component continues to work without Control-D auditing.
Corrective Action: Examine the preceding CTDAD1E message where the invalid parameter coordinates are specified. For Control-D auditing to work properly, correct the error in the AUDTPARM member and restart the task.

CTDAD4E INVALID PARAMETER VALUE value
Explanation: An invalid parameter value is detected in the AUDTPARM audit configuration member. The audit service initialization stops, but the component continues to work without Control-D auditing.
Corrective Action: Examine the preceding CTDAD1E message where the invalid parameter coordinates are specified. For Control-D auditing to work properly, correct the error in the AUDTPARM member and restart the task.

CTDAD5E PARAMETER VALUE LENGTH EXCEEDED
Explanation: A parameter value length in the AUDTPARM audit configuration member exceeds the maximum allowable length for this parameter. The audit service initialization stops, but the component continues to work without Control-D auditing.
Corrective Action: Examine the preceding CTDAD1E message where the invalid parameter coordinates are specified. For Control-D auditing to work properly, correct the error in the AUDTPARM member and restart the task.

CTDAD6E A MANDATORY PARAMETER IS MISSING
Explanation: A mandatory parameter is missing from a block of the AUDTPARM audit configuration member. The audit service initialization stops, but the component continues to work without Control-D auditing.
Corrective Action: Examine the preceding CTDAD1E message where the invalid block coordinates are specified. For Control-D auditing to work properly, correct the error in the AUDTPARM member and restart the task.

CTDAD7E SPECIFIED LEVEL level IS NOT DEFINED IN ANY EVENT BLOCK
Explanation: An EVENT block is not defined in the AUDTPARM audit configuration member for the level specified by the LEVELA parameter of the LEVEL block. The audit service initialization stops, but the component continues to work without Control-D auditing.
Corrective Action: Examine the preceding CTDAD1E message where the invalid block coordinates are specified. For Control-D auditing to work properly, correct the error in the AUDTPARM member and restart the task.

CTDAP01 CTDAPRV UTILITY STARTED
Explanation: This information message indicates that the CTDAPRV utility has started.
Corrective Action: No action is required.
CTDAP1I CTDAPRV UTILITY COMPLETED SUCCESSFULLY

Explanation: This information message indicates that the CTDAPRV utility has completed successfully without errors.

Corrective Action: No action is required.

CTDAP2E CTDAPRV UTILITY ENDED WITH ERRORS

Explanation: This error message indicates that the CTDAPRV utility discovered problems during processing and the utility has stopped running.

Corrective Action: Examine the job log for error messages describing the problem. Make any necessary corrections and rerun the utility.

CTDAP4E INVALID PARAMETER: parm

Explanation: The parm input parameter specified in the JCL for the CTDAPRV utility is not valid and the utility has stopped running.

Corrective Action: Correct the invalid input parameter (parm) in the JCL and rerun the job.

CTDAP6E REDUNDANT PARAMETER: parm

Explanation: The parm input parameter for the CTDAPRV utility has already been specified. The parameter which can be specified only once is specified twice in the current statement. The utility has stopped running.

Corrective Action: Remove the extra input parameter from the input parameters stream in JCL and rerun the job.

CTDAP7E parm PARAMETER LENGTH EXCEEDED

Explanation: The parm input parameter for the CTDAPRV utility exceeds the maximum allowable length. The utility has stopped running.

Corrective Action: Correct the invalid input parameter (parm) in the JCL and rerun the job.

CTDAP8E EMPTY stat STATEMENT

Explanation: The statement stat is specified for the CTDAPRV utility without any parameters. The utility has stopped running.

Corrective Action: Add the required parameters to the statement in the JCL and rerun the job.

CTDAP9E INPUT PARAMETERS ERROR

Explanation: This error message indicates that the CTDRETC utility discovered errors in the input parameters. Additional information about the errors is available in the job log.

Corrective Action: Examine the job log for error messages describing the problem. Make any necessary corrections in the input parameters and rerun the utility.
CTDAPAE CTDAPRV UTILITY TERMINATES DUE TO AN ERROR IN THE SORT

Explanation: The CTDAPRV utility issues this error message when the invoked SORT utility ends with errors. The utility has stopped running.

Corrective Action: Examine the messages issued by the SORT utility to SYSOUT to identify the problem. Make appropriate changes to the JCL and rerun the job.

CTDAPBE EMAIL FOR APPROVAL=approval name IS NOT FOUND IN THE APPROVAL TREE

Explanation: The SHOUT command without parameter EMAIL is specified for the CTDAPRV utility, and the EMAIL destination is not specified for the corresponding Approval entry in the Approval Tree. The utility does not send the SHOUT message and continues to work.

Corrective Action: Specify the EMAIL destination in the Approval Tree or in the input parameter and rerun the job.

CTDAPCI nnnnn REPORTS WERE SELECTED

Explanation: This information message indicates that the CTDAPRV utility selected nnnnn reports for processing.

Corrective Action: No response required.

CTDAU01 CTDAUTR UTILITY STARTED

Explanation: This information message indicates that the CTDAUTR utility has begun.

Corrective Action: No action is required.

CTDAU11 CTDAUTR UTILITY COMPLETED SUCCESSFULLY

Explanation: This information message indicates that the CTDAUTR utility has finished without errors.

Corrective Action: No action is required.

CTDAU2E CTDAUTR UTILITY ENDED WITH ERRORS

Explanation: This error message indicates that the CTDAUTR utility has finished with errors. The problem is described by previous error messages issued to the job log.

The utility stops.

Corrective Action: Examine the job log for error messages describing the reason for the problem. Fix the problem and rerun the utility.

CTDAU3E PARAMETER LENGTH EXCEEDED: parm

Explanation: The value of the parm input parameter specified for the CTDAUTR utility is longer than the maximum allowed.

The utility stops.
**Corrective Action:** Correct the invalid input parameter and rerun the job.

**CTDAU4E INVALID PARAMETER: parm**

**Explanation:** The parm input parameter specified for the CTDAUTR utility is not valid. The utility stops.

**Corrective Action:** Correct the invalid input parameter and rerun the job.

**CTDAU5E THE PARAMETER parm MUST BE SPECIFIED**

**Explanation:** The required parm input parameter for the CTDAUTR utility is missing. The utility stops.

**Corrective Action:** Insert the missing parameter to the JCL and rerun the job.

**CTDAU6E REDUNDANT PARAMETER: parm**

**Explanation:** The parm input parameter for the CTDAUTR utility has been specified more than once. The utility stops.

**Corrective Action:** Delete the extra input parameter from the JCL and rerun the job.

**CTDAU8E SORT FAILED WITH RETURN CODE rc**

**Explanation:** The SORT utility invoked by the CTDAUTR utility ended with errors. The CTDAUTR utility issues this message whenever the SORT utility ends with a return code (rc) other than 0.

Refer to the documentation for your SORT utility for an explanation of the return code (rc) value. The utility stops.

**Corrective Action:** To correct this problem, use the following procedure:

1. Examine the return code (rc) and the messages issued to SYSOUT by the SORT utility to identify the problem
2. Make appropriate changes to the JCL
3. Rerun the job

**CTDAU9E THE FILE PARAMETER IS NOT ALLOWED FOR ACTION=RECIPIENTS**

**Explanation:** This error message is issued if the FILE parameter is specified for the CTDAUTR utility when the required action is to receive list of authorized recipients (ACTION=RECIPIENTS). The FILE parameter can be specified only in case the required action is to receive the list of available reports (ACTION=REPORTS). The utility stops.

**Corrective Action:** Correct the input parameters and rerun the job.
CTDAUAI ALL RECIPIENTS ARE AUTHORIZED FOR THE USER user-id

Explanation: This information message is issued when the CTDAUTR utility has been submitted to receive a list of authorized recipients and all recipients are authorized for the specified User ID (user-id). This situation can occur in the following cases:

- The user and security exits are missing for the environment specified by the ENV parameter.
- The user and security exits called with the function USERLIST for the specified User ID return RC=0.
- The specified User ID is authorized for the Recipient '*' in the Control-D Recipient tree.

The utility ends with a return code of zero without issuing the requested report.

Corrective Action: No action is required.

CTDAUBI ALL REPORTS ARE AUTHORIZED FOR THE USER user-id

Explanation: This information message is issued when the CTDAUTR utility has been submitted to receive a list of available reports and all available reports are authorized for the specified User ID (user-id). This situation can occur when the user and security exits are missing from the environment specified in the ENV parameter.

The utility ends with a return code of zero and a list of all Control-D reports available from the User files specified in the FILE parameter is issued.

Corrective Action: No action is required.

CTDAUCI NO RECIPIENTS ARE AUTHORIZED FOR THE USER user-id

Explanation: This information message is issued when the CTDAUTR utility has been submitted to receive a list of authorized recipients and no recipients are authorized for the specified User ID (user-id) according to the Control-D Recipient tree and security definitions.

The utility ends with a return code of zero without issuing the requested report.

Corrective Action: No action is required.

CTDAUDI NO REPORTS ARE AUTHORIZED FOR THE USER user-id

Explanation: This information message is issued when the CTDAUTR utility has been submitted to receive a list of available reports and no reports are authorized for the specified User ID (user-id) according to the Control-D Recipient tree and security definitions.

The utility ends with a return code of zero without issuing the requested report.

Corrective Action: No action is required.

Messages CTDB00 through CTDBxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDB06E OUTGRP INFORMATION IS UNAVAILABLE

Explanation: Highlighted, unrollable message.
The OUTGRP parameter is specified in CTDPARM, but the function cannot be performed.

An attempt to get the GROUPID parameter failed due to one of the following:

- The OUTGROUP OUTPUT statement was not specified in the CTDPRINT procedure.
- The corresponding control blocks cannot be found in the current release of MVS.

A special snap is sent to the DD name DADUMP.

**Corrective Action:** Check that the OUTGROUP OUTPUT statement is specified in the CTDPRINT procedure. If the error persists, contact your INCONTROL administrator and supply the snaps.

**CTDB07E OUTGRP COULD NOT BE SET**

**Explanation:** *Highlighted, unrollable message.*

The GROUPID parameter could not be set for the current chunk according to the OUTGROUP parameter in CTDPARM.

**Corrective Action:** Notify your INCONTROL administrator.

**CTDB08E ERROR ACCESSING BARCODE TRACKING FILE RC=rc**

**Explanation:** A print mission failed to access the Barcode Tracking (BTR) file.

The current print mission terminates NOT OK.

**Corrective Action:** Correct the source of the problem using the IOAF70I or IOAF71I message to be found in the JES log. Rerun the mission.

**CTDB0DE OUTPUT CARD DYNAMIC ALLOCATION FAILED, RC=rc, REASON=rsn, KEY=key_code**

**Explanation:** The dynamic allocation (pursuant to optional wish WD3133) of an output statement during a printing mission failed.

The variables in this message are:

- **rc** - the return code
- **rsn** - the reason code
- **key_code** - the key code

These codes are the standard system return, reason, and key codes that are returned when dynamic allocation of an output statement occurs. For more information on these codes, see the description of the OUTADD macro in the IBM manual *MVS Programming: Authorized Assembler Services Reference.*

The printing mission does not use the dynamic allocation of an output statement for the current report.

**Corrective Action:** Examine the values of the return, reason, and key codes, and take appropriate corrective action.

**CTDB10E "FE" PRINT SUPPORT ERROR. RETURN CODE rc**

**Explanation:** An executing Printing Mission failed to delete an internal Printing Mission record in the Active User Report file.
If the DO PRINT parameter is specified in a Decollation Mission Definition, the Control-D Decollation monitor writes an internal Printing Mission record to indicate that there are reports waiting to be printed by the Printing Mission specified in the DO PRINT parameter.

These records have the following key:
\[ X'\text{FE}',C'\text{PRINTMS}',Printing-Mission-Name \]

In this message, \textit{rc} is the return code from the CTDXRP routine.

Control-D encountered an error when attempting to delete the record for the current Printing Mission during Printing Mission termination processing.

The Printing Mission continues.

\textbf{Corrective Action:} If the problem persists, report the return code to BMC Software Customer Support.

\textbf{CTDB21I CTVACDB UTILITY STARTED IN }\textit{mode} \textbf{MODE}

\textbf{Explanation:} This information message indicates the normal start of the CTVACDB utility in the mode specified.

In this message, \textit{mode} is the mode in use. Valid values are:

- TEST--simulation mode
- PROD--production mode

\textbf{Corrective Action:} No action is required.

\textbf{CTDB22I PARM=TEST SPECIFIED - SIMULATION MODE}

\textbf{Explanation:} This information message indicates that the CTVGDBB or CTVGI CL utility ran in simulation mode. In this mode, messages are generated that indicate what actions would normally be performed. These actions are not performed, nor are any files changed.

\textbf{Corrective Action:} Check the SYSOUT of the CTVGDBB or CTVGI CL utility before running it in production mode.

\textbf{CTDB23I CTVACDB UTILITY ENDED OK}

\textbf{Explanation:} This information message indicates the normal termination of the CTVACDB utility.

\textbf{Corrective Action:} No action is required.

\textbf{CTDB24S CTVACDB UTILITY ENDED WITH ERRORS}

\textbf{Explanation:} (severe general message) The CTVACDB utility ended with errors.

\textbf{Corrective Action:} See the IOA LOG and the job sysout.

\textbf{CTDB25E OPEN OF SORT FILE FAILED. DDNAME "dd_Name"}

\textbf{Explanation:} The SORT utility invoked by the CTVACDB utility failed to open the \texttt{dd_Name DD} statement.

The CTVACDB utility stops.

\textbf{Corrective Action:} Ensure that all DD statements are valid and then restart the CTVACDB utility.
CTDB26E INVALID PARAMETER: parmValue

Explanation: An invalid parameter parmValue was encountered in the input data stream of the CTVACDB utility.

The utility terminates with a condition code of 08.

Corrective Action: Correct the parameter syntax and resubmit the job. For more information, see the section on the CTVACDB utility in the INCONTROL for z/OS Utilities Guide.

CTDB27E MISSING PARAMETER AFTER: parmValue

Explanation: A subparameter of a parameter to the CTVACDB utility is missing. A subparameter is expected after the parmValue parameter.

The utility terminates with a condition code of 08.

Corrective Action: Correct the parameter syntax and resubmit the job. For more information, see the section on the CTVACDB utility in the INCONTROL for z/OS Utilities Guide.

CTDB28E OPEN OF PARAMETERS FILE FAILED. DDNAME "SYSIN"

Explanation: The open of the SYSIN DD statement failed. Possible causes are:

- The SYSIN DD statement is missing.
- The data set described by the SYSIN DD statement cannot be opened for sequential read.

The CTVACDB utility terminates with a return code of 08.

Corrective Action: Correct the JCL for the CTVACDB and rerun the utility. For more information, see the section on the CTVACDB utility in the INCONTROL for z/OS Utilities Guide.

CTDB29E LOCATE ERROR FOR DSN dsn

Explanation: The CTVACDB utility encountered a CDAM file name that does not exist in the catalog. The dsn data set might have been deleted or uncataloged.

The dsn data set is ignored.

Corrective Action: Check the output of the CTVACDB utility, and then try to resolve the problem.

CTDB2AE ACD FOR DATASET dsn IS NOT CORRECT

Explanation: The CTVACDB utility found incorrect ACD data for the migrated data set dsn on the volume.

If the CTVACDB utility works in PROD mode, incorrect ACB will be updated.

Corrective Action: If the CTVACDB utility works in PROD mode, looks for corresponding CTDB2CE message. If the CTVACDB utility works in TEST mode, resubmit the CTVACDB utility in PROD mode to fix the problematic ACD.

CTDB2BE INVALID RETURN CODE FROM SORT, RC=rc

Explanation: A sort program activated internally by the CTVACDB utility ended with an unexpected return code of rc.
The CTVACDB utility terminates with a condition code of 08.

**Corrective Action:** For details about the reason for the failure, see the documentation for the sort program and the job's sort messages.

**CTDB2CE ACD WILL BE UPDATED FOR DATASET dsn**

**Explanation:** The CTVACDB utility will update incorrect ACD data for the migrated data set dsn. This message appears after corresponding CTDB2AE message.

**Corrective Action:** No action is required.

**CTDB2DE NO CDAM/INDEX DATASET WERE MIGRATED ON volume VOLUME**

**Explanation:** The specified volume does not contain a migrated CDAM/INDEX.

The CTVACDB utility terminates with a condition code of 08.

**Corrective Action:** Correct input parameter VOL and resubmit the CTVACDB utility.

**CTDB2FI ACD WILL BE CLEANED FOR DATASET dsn**

**Explanation:** This information message is issued for each relevant data set when FUNCTION=CLEAN is specified for the CTVACDB utility. It indicates that the ACD data will be cleaned for the migrated data set dsn.

**Corrective Action:** No action is required.

**CTDB45I CONTROL-D ACTIVE MISSIONS FILE IS COPIED TO BACKUP FILE**

**Explanation:** This information message is the normal start message of the CTDCAMF utility for the COPY option.

**Corrective Action:** No action is required.

**CTDB46I COMPRESSING OF CONTROL-D ACTIVE MISSIONS FILE STARTED**

**Explanation:** This information message is the normal start message of the CTDCAMF utility for the COMPRESS option.

**Corrective Action:** No action is required.

**CTDB47I COMPRESSING OF CONTROL-D ACTIVE MISSIONS FILE ENDED**

**Explanation:** This information message is the normal termination message of the CTDCAMF utility for the COMPRESS option.

**Corrective Action:** No action is required.

**CTDB48S ERROR WHILE COMPRESSING ACTIVE MISSIONS FILE, FILE WAS NOT COMPRESSING**

**Explanation:** The CTDCAMF Control-D utility failed.
This could be due to one of the following:

- The DAAMF DD statement is missing.
- The data set described by the DAAMF DD statement is not the Control-D Active Missions file.
- The data set described by the DAAMF DD statement is the Control-D Active Missions file, but for another Control-D monitor or from a different Control-D version.
- The DABKUP DD statement is missing.
- The SYSPRINT DD statement is missing. See the CTM913S message.

Corrective Action: Correct the JCL and rerun the job.

CTDB55E ERROR WHILE OPENING DD "DASCRLST". OLD PRINT PLAN FILES WILL NOT BE DELETED

Explanation: An error occurred while trying to write a print plan file name to the scratch list. The message is issued by the AMF formatting program. This program could not open the file referenced by DD DASCRLST. This could be because the entire corresponding DD statement is missing.

Corrective Action: Verify that the DD DASCRLST statement exists in the JCL and that it references an existing file.

CTDB60I MISSION missionName NOT ORDERED. MISSION ALREADY IN ACTIVE MISSIONS FILE

Explanation: This information message indicates that the specified mission already exists on the Active Missions file. Therefore there is no need to order it again. This situation is common during the product test period.

Corrective Action: No action is required.

CTDB70S OPEN FAILED fileName

Explanation: The Online Print Control Program was unable to open the Print Plan file of the selected Printing Mission, probably because the file name has not yet been created.

The Print Plan file is a sequential file that contains the information required by the Control-D Printers Control monitor to print a specific Printing Mission, such as report names, user names, and job names of the reports that are scheduled to be printed by this Printing Mission. This file is built during the initial Printing Mission processing.

Corrective Action: Retry to enter the Print Control option. If the problem recurs, enter the Log option for this Printing Mission to view the error messages.

CTDB71S ALLOCATION FAILED fileName

Explanation: The Online Print Control Program was unable to dynamically allocate the Print Plan file of the selected Printing Mission, probably because the filename has not yet been created. It is also possible that the Print Plan file was manually deleted.
The Print Plan file is a sequential file that contains the information required for the Control-D Printers Control monitor to print a specific Printing Mission, such as report names, user names, and job names of the reports that are scheduled to be printed by this Printing Mission. This file is built during the initial Printing Mission processing.

Corrective Action: Notify your INCONTROL administrator.

CTDB72S OPEN OF COMMUNICATION FILE FAILED (DDNAME DACOM)

Explanation: The Online Print Control Program was unable to open the Communication file, which is used for communication with the Printers Control monitor. The file must be available for the Online Print Control program.

Corrective Action: Notify your INCONTROL administrator.

CTDB73E INVALID VALUE, TRY "N" or "Y"

Explanation: User specified an invalid value in a Yes/No field. Valid values are Y (for Yes) or N (for no).

Corrective Action: Specify Y or N.

CTDB74E SKIP TO REPORT COMMAND IS INVALID AFTER STOP COMMAND LOCATION

Explanation: SKIP TO REPORT option was specified after a STOP AT REPORT option. A SKIP TO REPORT option may not be specified after a STOP AT REPORT option.

Corrective Action: Reposition the SKIP TO REPORT and STOP AT REPORT options. For example, reposition the existing SKIP TO REPORT option to the start of the Report List and re-enter the SKIP TO REPORT option.

CTDB75E INVALID VALUE. TRY "C" or "R"

Explanation: The specified value is invalid.

Valid values are:
- C - The Printing Mission should skip to the specified report at the end of the current chunk.
- R - The Printing Mission should skip to the specified report at the end of the current report.

Corrective Action: Specify C or R.

CTDB76E STOP COMMAND IS INVALID BEFORE SKIP TO REPORT COMMAND LOCATION

Explanation: STOP AT REPORT option was specified before a SKIP TO REPORT option. A STOP AT REPORT option may not be specified before a SKIP TO REPORT option.

Corrective Action: Reposition the STOP AT REPORT and SKIP TO REPORT options. For example, reposition the existing SKIP TO REPORT option to the start of the Report List and re-enter the STOP AT REPORT option.
INCONTROL for z/OS Messages Manual

CTDB77E SKIP FROM PC REPORT TO NON-PC REPORT IS FORBIDDEN

**Explanation:** SKIP TO REPORT option was positioned on a non-PC report when the Printing Mission was processing PC reports. The SKIP TO REPORT option cannot be specified on a non-PC report when the printing mission is processing PC reports.

**Corrective Action:** Enter the SKIP TO REPORT option after the printing mission completes printing, and rerun the mission.

CTDB78I OPTION opt PROCESSED FOR PRINT MISSION missionName CATEGORY cat. USER userName JOB jobName /jobId REPORT reportName

**Explanation:** This information message is written to the IOA Log file when a user specifies a Print Control option (> , <, D, or U) on the Print Plan screen.

**Corrective Action:** No action is required.

CTDB79E ONLY ONE IMMEDIATE COMMAND (P, T, H, R) IS ALLOWED

**Explanation:** An Immediate Printing Control command was issued before a previous command had been passed to the Control-D Functional Subsystem (FSS) monitor. Immediate Printing Control commands can be issued under the Print Plan screen for printing missions that use the Control-D/Writer facility. These commands are SKIP, STOP, TEST, HALT, RESUME and PRINT.

The Immediate Printing Control command is ignored.

**Corrective Action:** Wait a little while and then reissue the Immediate Printing Control command.

CTDB7AE COMMAND IS NOT SUPPORTED YET

**Explanation:** A B (BACK) command was entered in the Print Plan screen (screen A.P) for a printing mission that uses the Control-D/Writer facility. This command is not supported yet.

The B (BACK) command is ignored.

**Corrective Action:** Use the SKIP command instead of the BACK command.

CTDB7BE FIELD MUST BE NUMERIC AND GREATER THAN ZERO

**Explanation:** An invalid number of pages was specified in a Printing Control command in the Print Plan screen (screen A.P) for a printing mission that uses the Control-D/Writer facility.

The Print Plan screen cannot be saved.

**Corrective Action:** Specify a valid number of pages - numeric and greater than zero.

CTDB7DE COMMAND FAILED. POST RETURN CODE prc

**Explanation:** An error occurred in passing a Printing Control command to the Control-D Functional Subsystem (FSS) monitor. The Print Plan uses the POST command in a cross-memory environment to pass commands under Print Plan screen for printing missions that use the Control-D/Writer facility.

The Printing Control command is ignored.

**Corrective Action:** Repeat the command. Save the return code issued in the message, the job log of the FSS monitor, and the IOA Log of the printing mission. Contact BMC Software Customer Support.
CTDB7EE IMMEDIATE COMMANDS ARE NOT AVAILABLE WHEN PRINT MISSION IS NOT ACTIVE

**Explanation:** An immediate Printing Control command under the Print Plan screen was issued for a non-active printing mission. Immediate Printing Control commands, SKIP, STOP, TEST, HALT, RESUME and PRINT, are only available for active running printing missions. They are issued under the Print Plan screen for printing missions that use the Control-D/Writer facility.

The command is ignored.

**Corrective Action:** Issue the immediate Printing Control command only after the printing mission enters the printing stage.

CTDB7FE TEST COMMAND IS AVAILABLE ONLY IN HALTED STATUS

**Explanation:** Printing Control command TEST was issued for a printing mission that did not have HALTED status.

Printing Control command TEST can be issued in the Print Plan screen for a printing mission that uses the Control-D/Writer facility. However, this command can only be issued for a printing mission whose status is HALTED.

The TEST Printing Control command is ignored.

**Corrective Action:** Halt the printing mission by means of the HALT command and then issue the TEST command.

Messages CTDC00 through CTDCxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDC01I UPDATING OF ACTIVE USER REPORTS FILE STARTED

**Explanation:** This information message indicates that the CTDDSM program started. The CTDDSM program is the second step of the CTDDELRP utility. It updates and deletes records from the Active User Report file according to information in the work file built by the first step of the CTDDELRP utility.

**Corrective Action:** No action is required.

CTDC02I UPDATING OF ACTIVE USER REPORTS FILE ENDED OK

**Explanation:** This information message indicates that the CTDDSM program ended without errors. The CTDDSM program is the second step of the CTDDELRP utility. It updates and deletes records from the Active User Report file, according to information in the work file built by the first step of the CTDDELRP utility.

**Corrective Action:** No action is required.
CTDC03S UPDATING OF ACTIVE USER REPORTS FILE ENDED WITH ERRORS

Explanation: An unrecoverable processing error was encountered by the CTDDSM program. The CTDDSM program, which is the second step of the CTDDELRP utility, updates and deletes records from the Active User Report file, according to information in the work file built by the first step of the CTDDELRP utility.

The CTDDSM program terminates with a condition code of 8.

Corrective Action: Check previously issued IOA Log file and system log messages to determine the cause of the error. Correct the problem and rerun the job.

CTDC05E OPEN OF INPUT FILE FAILED. DDNAME "DADSOIN"

Explanation: The CTDDSM program failed to open the work file referenced by the DADSOIN DD statement. The CTDDSM program is the second step of the CTDDELRP utility. It updates and deletes records from the Active User Report file, according to information in the work file built by the first step of the CTDDELRP utility.

The CTDDSM program terminates with a condition code of 08.

Corrective Action: Check previously issued IOA Log file and system log messages to determine the cause of the error. Correct the problem and rerun the job.

CTDC28E ERROR CREATING CCF FILE FOR PRINTING, RC=rc

Explanation: An internal error occurred during an attempt to create a CCF report for immediate printing required in Page On Demand mode, while the print job created by the Control-D Application Server was creating a temporary CCF data set by means of the DVS DV_Subset function.

The print job terminates with an error.

Corrective Action: Check the DVS error messages issued together with the CTDC28E message. For information about these messages, see the DVS programmer's guide. If you cannot resolve the problem, save the return code and the DVS error messages and contact BMC Software Customer Support.

CTDC40I DATA BASE CONVERSION STARTED

Explanation: This information message indicates that the IOA Access Method (IAM) conversion program started. The IAM conversion program moves records from Active, Permanent, History, or Migrated VSAM files to the new IAM and converts these records to the new format.

Corrective Action: No action is required.

CTDC41I DATA BASE CONVERSION ENDED. RC=rc

Explanation: This information message indicates that the IOA Access Method (IAM) conversion program has ended.

Corrective Action: If the conversion program ends with a non-zero return code, check the system log file for additional messages that describe the error. Correct the problem before rerunning the program.
CTDC43S DCBOUT OPEN ERROR

Explanation: The IOA Access Method (IAM) conversion program could not open the SYSOUT file or the data set referenced by the SYSPRINT DD statement, which is used by the program to write message output during execution.

The IAM conversion program terminates.

Corrective Action: Check the system log file for additional messages that describe the error. Correct the problem before rerunning the program.

CTDC45S RC=rc DURING func OPERATION

Explanation: An internal error occurred during IOA Access Method (IAM) file access while the func function was executing.

The IAM conversion program terminates.

Corrective Action: Check the IOA Log file and the system log file for additional messages that describe the error. Correct the problem before rerunning the program. If the error persists, contact BMC Software Customer Support.

CTDC46S VSAM OPEN ERROR

Explanation: The IOA Access Method (IAM) conversion program encountered an error while opening the VSAM input file which contains the records to be converted.

The IAM conversion program terminates.

Corrective Action: Check the system log file for additional messages that describe the error. Correct the problem before rerunning the program.

CTDC48S PARAMETER ERROR. THE PARAMETER SHOULD BE A/P/H/M

Explanation: The Database conversion program encountered an error while reading the input parameter. The parameter that specifies the user file to be converted is invalid. Valid values are A, P, H or M to specify the Active, Permanent, History, or Migrated User file as input.

The Database conversion program terminates.

Corrective Action: Specify a valid input parameter before rerunning the program.

CTDC49S NUMBER OF CONVERSION ERRORS EXCEEDS THE MAXIMUM ALLOWED

Explanation: The number of errors which occurred during a Database conversion is more than the permitted maximum. This maximum number of errors permitted is specified in the Database conversion program.

The Database conversion program terminates.

Corrective Action: Check the system log file for additional messages that describe the error. Correct the problem before rerunning the Database conversion program.
CTDC51I THE PRIMARY RECORD IS NOT FOUND FOR THE CONTINUATION RECORD

**Explanation:** This information message indicates that the Database conversion program encountered a continuation record that has no corresponding primary record. The Database conversion program checks all continuation records in the Database. If no primary record exists for a continuation record, the continuation record is not converted to the new Database.

The Database conversion program continues.

**Corrective Action:** No action is required.

CTDC52I CONVERTED:

**Explanation:** This information message is issued when the Database conversion program terminates. This message is the header for data displayed by the CTDC53I message, which indicates the number of records converted.

**Corrective Action:** No action is required.

CTDC53I recordType RECORDS: num

**Explanation:** This information message is issued when the Database conversion program terminates. A separate message indicates the number of records converted for each type of record converted. This message follows the CTDC52I message.

The Database conversion program terminates.

**Corrective Action:** No action is required.

CTDC54I USER NAME IN RECORD IS ZERO. RECORD IS IGNORED

**Explanation:** This information message indicates that the utility that converts Control-D or Control-V VSAM files to the IOA Access Method Database could not convert a user record found in the VSAM file. The user record has a key (user name) of binary zeros, which is invalid.

The record is passed over, and is not transferred to the IOA Access Method Database. Processing continues.

**Corrective Action:** No action is required.

CTDC56S ERROR IN CTV RECORD CONVERSION

**Explanation:** During index record conversion, the CTVCVI program, which converts the index records, ended with a return code greater than 4.

The database conversion program terminates.

**Corrective Action:** Correct the problem according to the messages which are issued with this message, and rerun the conversion job.

Messages CTDD00 through CTDDxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.
CTDD69E QUOTES WITHIN QUOTED STRING MUST BE PAIRED

**Explanation:** Quotation marks in the STRING field were not paired. When quotes are specified in the STRING field, they must be paired.

**Corrective Action:** Correct the quotation marks in the STRING field.

CTDD6AE EMPTY STRING IN QUOTES NOT PERMITTED

**Explanation:** An empty string between two quotation marks (" " ) was specified in the Include, Exclude, or Color Lines screens. An empty string is not a valid criterion for Include or Exclude lines.

**Corrective Action:** Correct the string specification.

CTDD70E COLOR SHOULD BE BLANK OR: B,G,P,R,T,W,Y

**Explanation:** An invalid value was specified in the COLOR field.

Valid COLOR options are:

- Blank - no color
- B - blue
- G - green
- P - pink
- R - red
- T - turquoise
- W - white
- Y - yellow

**Corrective Action:** Specify a valid COLOR option in the COLOR field.

CTDD71E HILITE SHOULD BE BLANK OR B,R,U

**Explanation:** An invalid value was specified in the HILITE field.

Valid HILITE options are:

- B - blink
- R - reverse video
- U - underscore

**Corrective Action:** Specify a valid HILITE option in the HILITE field.

CTDD72E PLEASE SPECIFY ONLY ONE ON INSTRUCTION

**Explanation:** An object for coloring or highlighting is not defined, or two or more objects are specified. Only one object - a string, line or column/line range - may be specified for coloring or highlighting.

**Corrective Action:** Select only one type of object to be colored or highlighted.
CTDD90S OPEN OF ACTIVE TRANSFER FILE FAILED. DDNAME "DAATF"

Explanation: The Active Transfer file cannot be opened. The DAATF DD statement is missing.
Requested function is not performed.
Corrective Action: Check that the DAATF DD statement is defined in the logon or Online monitor procedure.

CTDD91S ERROR ON CONTROL-D ACTIVE TRANSFER FILE

Explanation: An error was detected while attempting to access the Active Transfer file. This is probably caused by an I/O error.
Requested function is not performed.
Corrective Action: Fix the I/O error and retry the action.

CTDD92E CANNOT func PACKET pktName - NOT HELD

Explanation: An attempt was made to FREE or DELETE a packet while the packet was not in the HELD status. A packet must be in the HELD state before it may be freed or deleted.
Requested function is not performed.
Corrective Action: Place the packet in the HELD state using the H option, and retry the required action.

CTDD93E CANNOT func PACKET pktName - ALREADY DELETED

Explanation: An action was attempted on a deleted packet.
The requested action is not performed.
Corrective Action: If a function is required for a deleted packet, then order a new packet.

CTDD94I func OF PACKET pktName PERFORMED

Explanation: This information message indicates that the requested action was processed successfully.
Corrective Action: No action is required.

CTDD95E CANNOT ZOOM PACKET userName - INTERNAL ERROR rc

Explanation: An internal error occurred in the zoom operation in the PC Packet Status screen (F Screen).
The zoomed record remains unchanged.
Corrective Action: Supply BMC Software Customer Support with the return code identified in the message.

CTDD96E CANNOT HOLD PACKET pktName - ALREADY HELD

Explanation: A HOLD request was issued for a packet that was already held. A packet that is already held cannot be held again until after it is freed.
Requested function is not performed.
Corrective Action: Correct the action required and retry.
CTDD97E COPIES FIELD MUST CONTAIN A NUMBER FROM 1 TO 255

Explanation: An invalid number was entered in the COPIES field on the Confirm Print Window of the file Transfer Control screen. Valid values are from 1 through 255.

Corrective Action: Enter a valid value in the COPIES field.

CTDD98I PRINT COMPLETED OK

Explanation: This information message indicates that the Immediate Printing for the PC user ENDED OK.

Corrective Action: No action is required.

CTDD99E INVALID DESTINATION

Explanation: An invalid destination was entered in the Confirm Print Window of the file Transfer Control screen. Only destinations that are defined in JES parameters for the site are valid.

Corrective Action: Correct the entry in the DEST field on the window.

CTDD9AE SYSOUT ALLOCATION ERROR, CODE=rc rsn

Explanation: The Immediate Printing request ENDED NOTOK due to an error in allocating the SYSOUT file. The SYSOUT parameters for one of the reports to be printed may be invalid.

Printing stops. Reports processed before the error were already sent to JES.

Corrective Action: Check the characteristics of the reports contained in this packet. If necessary, check MVS documentation for an explanation of the return code for Dynamic Allocation and the reason code.

CTDD9BE FILE ALLOCATION ERROR, CODE=rc rsn

Explanation: The Immediate Printing request ENDED NOTOK due to an error in allocating the input files. The CDAM file and/or the index file may have been manually deleted. The variables in this message are:

- rc - the error return code
- rsn - the error reason code

Printing is not performed.

Corrective Action: No action is required.

CTDD9CE PRINT INTERNAL ERROR

Explanation: Immediate Printing failed due to internal error.

Printing stops. Part of the files may be printed.

Corrective Action: Notify your INCONTROL administrator.

CTDD9DE ENTER "Y" OR "N"

Explanation: The CONFIRM field of the Confirm Print Window of the file Transfer Control screen contains an invalid value. Valid values are Y (Yes) and N (No).

Corrective Action: Enter Y to perform printing or N to exit the window without printing.
CTDD9EE YOU ARE NOT AUTHORIZED TO PERFORM \textit{func}

\textbf{Explanation:} The Security Exit denied the request to perform a function in the file Transfer Control screen.

The requested function is not performed.

\textbf{Corrective Action:} Notify the INCONTROL administrator.

CTDD9FE CANNOT \textit{func} PACKET \textit{packet-name} - PACKET CHANGED WHILE ZOOMING

\textbf{Explanation:} The Zoom screen from which the change is requested is no longer up-to-date because \textit{packet packet-name} was changed by another user after the Zoom screen was displayed. To prevent possible overlaying of the changes made by another user, or because the requested changes may no longer be valid, the requested changes are not performed.

The requested changes are not saved.

\textbf{Corrective Action:} Refresh the Zoom screen and repeat the changes if desired.

CTDD9GE PIX FILE ALLOCATION ERROR, CODE=rc rsn

\textbf{Explanation:} An error occurred while trying to allocate a Pix file.

The variables in this message are:

- \textit{rc} - the return code from dynamic allocation
- \textit{rsn} - the reason code from dynamic allocation.

\textbf{Corrective Action:} See the IBM manual \textit{MVS Programming: Authorized Assembler Services Guide}. If you still cannot resolve the problem, have your INCONTROL administrator provide BMC Software Customer Support with the return code and reason code.

CTDD9HE INTERNAL INDEX ERROR

\textbf{Explanation:} Processing of the Index file failed due to an internal error.

Failure may be due to one of the following:

- insufficient storage
- Pix file Open failure

The Index screen is not displayed.

\textbf{Corrective Action:} Notify your INCONTROL administrator.

Messages CTDE00 through CTDExx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.
CTDE01W $$TRNRES CTD PARM

**Explanation:** During initialization of the IOA Application Server, the loading or parsing of the $$TRNRES member in the Control-D PARM library failed.
The $$TRNRES member is used for extracting print resources.
Initialization of the Application Server continues.

**Corrective Action:** If you need to use this feature, ensure that the $$TRNRES member is provided or corrected.

CTDE02E IOAUPDS FAILED-RC=rc F=func M=memName D=dsn

**Explanation:** An error occurred during the processing of the `memName` member in the `dsn` resource library.
The variables in this message are:
- `rc` - the internal error code
- `func` - the code of the operation that failed
- `memName` - the member that was being processed when the error occurred
- `dsn` - the name of the resource library that contains `memName`
The transforming decollation mission fails.

**Corrective Action:** Call your INCONTROL administrator.

CTDE03E LIBSET libsetname NOT FOUND IN TRNTAB

**Explanation:** The report that is being decollated requires the `libsetname` resource libraries set, but that resource library set is not present in the $$TRNRES member in the Control-D PARM library.
The decollation mission fails.

**Corrective Action:** Ensure that the name of the `libsetname` resource library set is included in the $$TRNRES member, and redecollate the report.

CTDE04E NO TRNTAB AVAILABLE - CHECK IF $$TRNRES EXISTS

**Explanation:** The $$TRNRES member is missing from the Control-D PARM library.
The transforming decollation mission fails.

**Corrective Action:** Call your INCONTROL administrator.

CTDE05E REPORTTYPE= PARAM IS MISSING - ADD REPORT CLIQUE FAILED

**Explanation:** An internal error occurred during a decollation that transforms the format of the decollated report.
The decollation mission ends NOT OK.

**Corrective Action:** Call your INCONTROL administrator.
CTDE06E INTERNAL ERROR - REPORT CLIQUE MUST BE ADDED IN ONE SECTION

Explanation: An internal error occurred during a decollation that transforms the format of the decollated report.

The decollation mission ends NOT OK.

Corrective Action: Call your INCONTROL administrator.

CTDE07E RESOURCE NOT FOUND: res_req res_name res_typ rep_format res_spec res_sum lib_set_name

Explanation: During a decollation that transforms the format of the decollated report, a required resource was not found in the specified resource library set.

The variables in this message are:

- res_req - the code of the resource request
- res_name - the name of the requested resource
- res_typ - the code of the type of the requested resource
- rep_format - the code of the format of the decollated report
- res_spec - the specification of the requested resource
  - S - a specific resource
  - D - a default resource
- res_sum - the checksum of the requested resource (only where a specific resource was requested)
- lib_set_name - the name of the resource library set that is currently being used

An attempt is made to perform the decollation mission without the res_name resource, or to substitute a similar resource that is available. If this attempt fails, the decollation mission ends NOT OK.

Corrective Action: Ensure that all necessary resources are available in the specified resource library set before launching the decollation mission.

CTDE08E INCORRECT SIZE OF RESOURCE'S res MEMBER memName IN LIBRARY dsn

Explanation: During a decollation that transforms the format of the decollated report, the size of the required resource member did not correspond with the size recorded in the Control-D database.

The variables in this message are:

- res - the name of the problematic resource
- memName - the name of the resource member
- dsn - the data set name of the library that contains memName

The probable cause is corruption of the memName resource member.
The decollation mission ends NOT OK.

**Corrective Action:** Restore the `memName` resource member from a backup copy.

**CTDE09E RESOURCE LIBRARY `dsn` CONTAINS A MEMBER WITH AN INCORRECT NAME `memName`**

**Explanation:** During a transforming decollation mission, a resource library has been found to contain a member with a name that is in an invalid format.

The name of a member in a resource library must be in the format `lccccccc`, where `l` is a letter and `c` is a digit.

The probable cause is that a data set has been incorrectly named in the `$TRNRES` member.

The variables in this message are:
- `dsn` - the name of the resource library containing the problematic member
- `memName` - the name of the problematic member

The decollation mission fails.

**Corrective Action:** Correct the name of the problematic data set in the `$TRNRES` member and rerun the decollation mission.

**CTDE0AE RESOURCE LIBRARY `dsn` IS INACCESSIBLE OR HAS AN INCORRECT FORMAT**

**Explanation:** The `dsn` data set that was specified as a resource library in the `$TRNRES` member in the Control-D PARM library is either inaccessible or in an inappropriate format.

This error message may be issued during any of the following:
- a decollation mission: the mission ends NOT OK
- a DO screen operation: the operation fails
- the processing of a Control-D/WebAccess request: the request fails

**Corrective Action:** Do the following:

1. Ask your INCONTROL administrator to recreate the `dsn` data set in the correct format and ensure its accessibility
2. Retry the mission, operation or request.

**CTDE0BI RESOURCE LIBRARY `dsn` IS SUBMITTED FOR HSM RECALL. PLEASE RETRY YOUR REQUEST AFTER A FEW MINUTES**

**Explanation:** The required resource library, `dsn`, has been migrated by HSM.

This message may be issued during a DO screen operation or the processing of a Control-D/WebAccess request.

A request is issued to HSM RECALL to recall `dsn` and make it available.

**Corrective Action:** Wait for a few minutes, and then retry the operation or reissue the request.
CTDE0CE ERROR WHILE PROCESSING RESOURCE LIBRARY. F=req L=dsn M=memName. IOAMEM RC+RSN=rsn

**Explanation:** A complicated error occurred during one of the following:
- a decollation mission: the mission ends NOT OK
- a DO screen operation: the operation fails
- the processing of a Control-D/WebAccess request: the request fails

The variables in this message are:
- *req* - the code of the request
- *dsn* - the data set name of the relevant resource library
- *memName* - the name of the resource member that is being processed
- *rsn* - the combined return and reason code received from IOAMEM

**Corrective Action:** Contact your INCONTROL administrator.

CTDE0DE ALLOCATION ERROR FOR THE RESOURCE LIBRARY *dsn*. RSN=rsn

**Explanation:** A required resource library could not be accessed.

The variables in this message are:
- *dsn* - the data set name of the required resource library
- *rsn* - the dynamic allocation failure reason code

This error message may be issued during any of the following:
- a decollation mission: the mission ends NOT OK
- a DO screen operation: the operation fails
- the processing of a Control-D/WebAccess request: the request fails

**Corrective Action:** Contact your INCONTROL administrator.

CTDE0EE HSM RECALL ERROR FOR THE RESOURCE LIBRARY *dsn*. RC=rc

**Explanation:** A request to recall a required resource library was submitted to HSM RECALL to ensure its accessibility, but the request failed.

The variables in this message are:
- **dsn** - the name of the required resource library that was the subject of the failed HSM request
- **rc** - the return code received from HSM
- If this message was issued during a decollation mission, the mission ends NOT OK.
- If this message was issued during a screen DO operation, the operation fails.
- If this message was issued during the processing of a Control-D/WebAccess user request, the request fails.

**Corrective Action:** Contact your INCONTROL administrator.

**CTDE10E INVALID VALUE, USE "Y" OR "N"**

**Explanation:** Invalid value specified in the field. The cursor points to the field that contains the invalid value.

**Corrective Action:** Select Y for Yes, or N for No.

**CTDE11E PARAMETER MEMBER $$TRNRES IS TOO LARGE**

**Explanation:** The size of the $$TRNRES member exceeds the allowed maximum.

The Control-D monitor fails and the decollation mission ends NOTOK.

**Corrective Action:** Decrease the size of the $$TRNRES member.

**CTDE12E RESOURCE LIBRARY HAS AN INCORRECT FORMAT**

**Explanation:** The Control-D resource library has an inappropriate RECFM or LRECL value.

Control-D uses the CTD RESLIB library to store resources used for Control-D Transformer. The name of the CTD RESLIB library is saved in the User file, which causes a limitation during upgrade (you need to use a constant data set name in all releases). To prevent incorrect use of different CTD RESLIB library names, Control-D installs RESLIB with an incorrect RECFM parameter.

The system performs one of the following actions:

- The decollation mission ends NOTOK.
- The online environment fails with one of more of the following messages: IOAE42E, MAN85ES.

**Corrective Action:** If the message was issued after upgrade to a new release, in order to use CTD RESLIB from the previous release, do the following:

1. Delete the CTD RESLIB allocated in the new environment.
2. In the IOADSNL member of the IOA PARM library, add a reference to the relevant CTD RESLIB data set.

If you did not previously work with transformers, create a new CTD RESLIB file for resource management, as follows:

3. Delete the CTD RESLIB allocated during installation.
4. Use job CTDFRESL to allocate a new file.
CTDE13E RESOURCE LIBRARY ACCESS ERROR

**Explanation:** An internal error occurred while accessing the Control-D resource library. It may be supplemented with system messages explaining the cause of the problem in more detail. The Control-D monitor fails and the decollation mission ends NOTOK.

**Corrective Action:** Contact your INCONTROL administrator.

CTDE14E PROCESSING MEMBER $$TRNRES FAILS

**Explanation:** A general error occurred while processing the Control-D resource library. It is supplemented with other IOA messages explaining the cause of the problem in more detail. The Control-D monitor fails and the decollation mission ends NOTOK.

**Corrective Action:** Contact your INCONTROL administrator.

Messages CTDF00 through CTDFxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDF01I CDAM CLEAN-UP UTILITY STARTED

**Explanation:** This information message indicates the normal start of the CTDCCU Control-D utility. This utility identifies CDAM files that can be deleted from disk because they are no longer referenced by the Active User Report List file.

**Corrective Action:** No action is required.

CTDF01S INSUFFICIENT STORAGE FOR TRANSFER SUBTASK

**Explanation:** A request for additional storage to attach a new transfer subtask failed. The request is ignored, and the transfer subtask is not stored. Other processing continues.

**Corrective Action:** Increase the value of the REGION parameter to increase the region size.

CTDF02I CDAM CLEAN-UP UTILITY ENDED OK

**Explanation:** This information message is the normal end message of the CTDCCU Control-D utility CTDCCU. This utility identifies CDAM files that can be deleted from disk because they are no longer referenced by the Active User Report List file.

**Corrective Action:** No action is required.

CTDF02S ERROR IN DYNALLOC FUNCTION: *func RC =rc rsn*

**Explanation:** An error occurred under FTO Application Server during the attempted dynamic allocation of an output SYSOUT or CDAM data set, and the allocation failed.

The variables in this message are:
func - the failed function
rc - the return code
rsn - the reason code

For more information on the return code and reason code, refer to IBM manuals about interpreting dynamic allocation error return and reason codes.

The SYSOUT or CDAM data set is not created.

Corrective Action: Do the following:
1. Try to correct the error, using the information provided by the return code and reason code.
2. If you cannot solve the problem, note the values of func, rc, and rsn, and contact BMC Software Customer Support.

CTDF03S CDAM CLEAN-UP UTILITY ENDED WITH ERRORS

Explanation: The CTDCCU Control-D utility ended with errors. The sysout of the job should contain other messages detailing the reasons.

The utility stops executing with a return code which depends on the severity of the error.

Corrective Action: Check the previous error message or messages, correct the problem and rerun the job.

CTDF05E OPEN OF INPUT FILE FAILED. DDNAME "DACCUI N"

Explanation: Open of the file containing input parameters failed (the DACCUI N DD statement). This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file.

It may be due to one of the following:
• The DACCUI N DD statement is missing.
• The data set pointed to by the DACCUI N DD statement cannot be opened for sequential read.

The utility stops executing with a condition code of 08.

Corrective Action: Correct the JCL and rerun the job.

CTDF05S text

Explanation: An error occurred during transmission of a file to the PC. The message text (text) describes the reason for the problem.

The file is not transmitted.

Corrective Action: Correct the problem, and restart the File Transfer monitor.

CTDF06I FILES ARE TRANSMITTED OK FOR USER userId IPA=ipAdd:port FILE=fileName.CDM

Explanation: This information message indicates that the specified files were successfully transmitted to the PC.
The variables in this message are:

- `userId` - the identity of the user to whom the report belongs
- `ipAdd` - the IP address
- `port` - the port number
- `fileName` - the name of the file being transferred

**Corrective Action:** No action is required.

**CTDF0AI** FILE TRANSFER STARTED. FOR USER `userId:PA=ipAdd :port` FILE=`fileName.CDM`

**Explanation:** This information message is displayed when the File Transfer monitor starts to transfer a package to the identified IP address.

The variables in this message are:

- `userId` - the identity of the user to whom the report belongs
- `ipAdd` - the IP address
- `port` - the port number
- `fileName` - the name of the file being transferred

**Corrective Action:** No action is required.

**CTDF0BI** WAITING FOR CTDDELRP OR RESTORE JOB TO TERMINATE

**Explanation:** This information message indicates that the CTDCCU utility is waiting for a CTDDELRP job or a restore job to terminate before the utility can resume executing.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file.

**Note:**
To ensure data integrity, do not run the CTDCCU utility concurrently with a CTDDELRP job or a restore job.

When the contending job terminates, the CTDCCU utility resumes processing.

**Corrective Action:** No action is required.

**CTDF0CI** UNRECOVERABLE ERROR ENCOUNTERED.

**Explanation:** During the operation of the File Transfer monitor, an unrecoverable error occurred when access was attempted to the Active Transfer file.

The File Transfer monitor shuts down.

**Corrective Action:** Contact your INCONTROL administrator.
CTDF0DS SECURITY VIOLATION IN THE FILE TRANSFER MONITOR.

**Explanation:** A serious error occurred while the File Transfer monitor was working. The transfer of the package was rejected by a security exit, or by User Exit 23.

Every transfer request is sent to both the security exit and the user exit, if they exist. Either exit can reject a transfer request.

The package is not transferred.

**Corrective Action:** If you consider that you ought to have authority to transfer the package, contact your INCONTROL administrator.

CTDF0EW ATF IS REFRESHED. SUBTASK IPA=IP address IS CLOSED.

**Explanation:** This warning message is issued when the transfer process fails because the status of the corresponding record in the ATF can not be updated. It can occur if a package, whose time has come for transfer, can not find the corresponding record in the ATF because it was reformatted and refreshed during the NEWDAY process.

CTDFTM continues to work and the subtask with the specified IP address is closed.

**Corrective Action:** If the package remains at the status NOT TRANSMITTED, reorder the package.

CTDF10E OPEN OF SORT FILE FAILED. DDNAME ddName

**Explanation:** The site sort utility, which was invoked by the CTDCCU Control-D utility, failed to open the data set pointed to by the ddName DD statement. This error message is issued by the CTDCCU Control-D utility, which identifies CDAM files that are no longer referenced by the Active User Report List file.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

CTDF11E INVALID RETURN CODE FROM SORT. RC=rc

**Explanation:** The sort utility of the site, which was invoked by the CTDCCU Control-D utility, has ended with errors.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file.

The utility stops executing with a condition code of 08.

**Corrective Action:** Refer to the sort messages of the job and to the user guide for the sort facility used at your site. Call your system programmer for assistance if necessary.

CTDF12E INVALID RETURN CODE FROM IDCAMS

**Explanation:** The site IDCAMS program, which was invoked by the CTDCCU Control-D utility, has ended with errors. The error is usually caused by corrupted data in the system catalog.

This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file.

The utility stops executing with a condition code of 08.
Corrective Action: Use TSO command LIST C LVL (prefix) HISTORY to produce more detailed messages about the problem and correct accordingly.

CTDF13E OPEN OF WORK FILE FAILED. DDNAME "DAWORK"

Explanation: The CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file, failed to open the Work List file (the DAWORK DD statement).

Possible causes are:
- The DAWORK DD statement is missing.
- The data set pointed to by the DAWORK DD statement cannot be opened for sequential write.

The utility stops executing with a condition code of 08.

Corrective Action: Correct the JCL and rerun the job.

CTDF14E INVOCATION OF PROGRAM pgm FAILED. PROGRAM COULD NOT BE ACCESSED

Explanation: Invocation of the pgm program ended with errors. This error message is issued by the CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file.

The utility stops executing with a condition code of 08.

Corrective Action: Look for previous error messages which describe the type of error. Call your system programmer for assistance if necessary.

CTDF20E OPEN OF SCRATCH FILE FAILED. DDNAME "DASCRLST"

Explanation: The CTDCCU Control-D utility, which is used to identify CDAM files that are no longer referenced by the Active User Report List file, was unable to open the Scratch List file (the DASCRLST DD statement).

Possible causes are:
- The DASCRLST DD statement is missing.
- The data set pointed to by the DASCRLST DD statement cannot be opened for sequential write.

The utility stops executing with a condition code of 08.

Corrective Action: Correct the JCL and rerun the job.

CTDF20I COPYING APAPARM LIBRARY TO LIBRARY WITH RECFM VARIABLE STARTED

Explanation: This information message indicates that the CTDCNVAP utility started copying the APAPARM library to a library with variable RECFM.

Corrective Action: No action is required.
CTDF21I COPYING APAPARM LIBRARY TO LIBRARY WITH RECFM VARIABLE ENDED OK

Explanation: This information message indicates that the CTDCNVAP utility successfully finished copying the APAPARM library to a library with variable RECFM.

Corrective Action: No action is required.

CTDF22S COPYING APAPARM LIBRARY TO LIBRARY WITH RECFM VARIABLE ENDED WITH ERRORS

Explanation: When attempting to copy the APAPARM library to a library with variable RECFM, the CTDCNVAP utility ended with errors.

Corrective Action: Notify your INCONTROL administrator.

CTDF24S UNABLE TO READ DIRECTORY. INSUFFICIENT STORAGE

Explanation: The CTDCNVAP utility could not copy the APAPARM library to a library with variable RECFM because of insufficient storage.

Corrective Action: Notify your INCONTROL administrator.

CTDF26S UNABLE TO READ A MEMBER FROM THE APAPARM LIBRARY

Explanation: Due to an internal error while attempting a read operation, the CTDCNVAP utility could not copy a member from the APAPARM library to a library with variable RECFM.

Corrective Action: Notify your INCONTROL administrator.

CTDF27S UNABLE TO PUT A MEMBER TO THE NEW APAPARM LIBRARY

Explanation: Due to an internal error while attempting a write operation, the CTDCNVAP utility could not copy a member from the APAPARM library to a library with variable RECFM.

Corrective Action: Notify your INCONTROL administrator.

CTDF28S INPUT APAPARM LIBRARY IS EMPTY

Explanation: The CTDCNVAP utility could not copy a member from the APAPARM library to a library with variable RECFM because the input library is empty.

Corrective Action: Notify your INCONTROL administrator.

CTDF30E INTERNAL CONSOLE ERROR. FUNCTION func. RETURN CODES rc, rc. REASON CODE rsn. USING THE INTERNAL CONSOLE TERMINATES

Explanation: An error occurred when using the extended MCS console.

Control-D terminates the extended MCS console and starts using a standard method for preventing the mixing of chunks during deferred printing.

Corrective Action: Keep a system log of the problem, and a job log of the Control-D printer monitor. It is recommended to stop, then restart, the Control-D monitor to prevent a possible mixing chunks problem.
CTDF31I THE INTERNAL OPERATOR CONSOLE IS ACTIVATED

**Explanation:** This information message is generated when Control-D activates an extended MCS console to prevent the mixing of chunks during deferred printing.

When APPLY is set to YES for optional wish WD2624, Control-D uses an extended MCS console to prevent the mixing of chunks during deferred printing.

**Corrective Action:** No action is required.

CTDF32E NO RESPONSE OF INTERNAL CONSOLE. USING THE CONSOLE TERMINATES

**Explanation:** There is no response from the extended MCS console used by Control-D to prevent the mixing of chunks during deferred printing.

Control-D stops using the extended MCS console and starts using a standard method for preventing the mixing of chunks during deferred printing.

**Corrective Action:** Keep a system log of the problem, and a job log of the Control-D printer monitor. It is recommended to stop, then restart, Control-D monitor to prevent a possible mixing chunks problem.

CTDF40I ACIF PRINTING INTERFACE STARTED

**Explanation:** This information message indicates that the Control-D ACIF Interface Facility has started for a report being processed by the Printing Mission that issued the message.

A report destined for PC file transfer that was decollated with the ACIF CDAM parameter set to YES will be converted by ACIF into AFP Category 5 data stream format.

The Printing Mission begins initialization of the ACIF Interface Facility.

**Corrective Action:** No action is required.

CTDF41I ACIF PRINTING INTERFACE COMPLETED SUCCESSFULLY

**Explanation:** This information message indicates that the Control-D ACIF Interface Facility has successfully converted a report being processed by the Printing Mission that issued the message.

A report destined for PC file transfer that was decollated with the ACIF CDAM parameter set to YES was converted by ACIF into AFP Category 5 data stream format.

The Printing Mission terminates processing of the ACIF Interface Facility and completes processing of the report.

**Corrective Action:** No action is required.

CTDF42E ACIF PRINTING INTERFACE ENDED IN ERROR

**Explanation:** The Control-D ACIF Interface Facility encountered an error condition while attempting to convert a report being processed by the Printing Mission that issued the message.

This message is followed by the ACIF43E and ACIF44E messages that describe the cause of the error.

The Printing Mission terminates processing of the ACIF Interface Facility and ends in error.

**Corrective Action:** Examine the ACIF43E and ACIF44E messages to determine why the Control-D ACIF Interface Facility ended in error and correct the problem accordingly.
CTDF43E CODE=err_cod, R15=reg_15, R0=reg_0, R1=reg_1

Explanation: The Control-D ACIF Interface Facility encountered an error condition while attempting to convert a report being processed by the Printing Mission that issued the message. This message displays the Control-D internal error code and the contents of registers 15, 0 and 1 at the time of error.

The variables in this message are:

- **err_cod** - the Control-D internal error code
- **reg_15** - the contents of register 15
- **reg_0** - the contents of register 0
- **reg_1** - the contents of register 1

The Control-D ACIF Interface Facility issues this message in combination with the ACIF44E message to describe the error and to assist in diagnosing its cause.

The Control-D ACIF Interface Facility terminates processing of the report. The Printing Mission ends in error.

Corrective Action: Examine the ACIF44E message for a description of the problem encountered.

CTDF44E descr

Explanation: The Control-D ACIF Interface Facility encountered an error condition while attempting to convert a report being processed by the Printing Mission that issued the message. This message displays a text description of the error encountered.

The Control-D ACIF Interface Facility issues this message in combination with the ACIF43E message to describe the error and to assist in diagnosing its cause.

The Control-D ACIF Interface Facility terminates processing of the report. The Printing Mission ends in error.

Corrective Action: Use the information displayed in this message and in the ACIF43E message to determine the cause of the error and correct the problem. If the problem persists, contact your INCONTROL administrator.

CTDF45I MAXIMUM CONCURRENT ACIF PRINTING MISSIONS ALREADY EXECUTING

Explanation: This information message indicates that the Control-D ACIF Interface Facility is temporarily unavailable because, within a Print monitor address space, the maximum number of Printing Missions that can concurrently use the facility has been reached.

The Control-D ACIF Interface Facility limits the total number of ACIF subtasks that can execute at the same time. This limit is defined by means of customization setting WD2375. The wait interval is defined by means of customization setting WD2377.

When the time specified in the wait interval has elapsed, the Printing Mission again tries to access the Control-D ACIF Interface Facility.

Corrective Action: No action is required.
CTDF46I WAITING FOR AN EXECUTING ACIF PRINTING MISSION TO COMPLETE

**Explanation:** This information message indicates that the Printing Mission detected that the maximum number of ACIF subtasks permitted to execute simultaneously has been reached.

The Control-D ACIF Interface Facility limits the total number of ACIF subtasks that can execute at the same time. This limit is defined by means of customization setting WD2375. The wait interval is defined by means of customization setting WD2377.

When the time specified in the wait interval has elapsed, the Printing Mission again tries to access the Control-D ACIF Interface Facility.

**Corrective Action:** No action is required.

CTDF47E MAXIMUM RETRIES LIMIT TO START AN ACIF PRINTING MISSION REACHED

**Explanation:** The Printing Mission failed to access the Control-D ACIF Interface Facility after making the maximum number of attempts allowed.

The Control-D ACIF Interface Facility was being used by the maximum number of ACIF subtasks allowed to execute concurrently. The Printing Mission tried to access the Control-D ACIF Interface Facility without success more than the maximum retry value specified by means of customization setting WD2378.

The Printing Mission ends in error.

**Corrective Action:** Increase the maximum retry value specified by means of customization setting WD2378 and/or increase the wait interval value specified by means of customization setting WD2377. Reorder the Printing Mission. If the problem persists, contact your INCONTROL administrator.

CTDF48W ACIFPARM MEMBER memName NOT FOUND - SEARCHING FOR MEMBER $$$$DFLT

**Explanation:** No matching member was found in the Control-D ACIFPARM library for the report being processed by the Control-D ACIF Interface Facility.

Control-D failed to find an ACIFPARM library member whose name matches either the report's job, Printing Mission or Recipient name. The member name search convention used is determined by the setting of optional wish WD2376. The default is J for job name.

Control-D will attempt to obtain default ACIF execution parameters from the $$$$DFLT ACIFPARM member.

**Corrective Action:** Check the setting for optional wish WD2376. Add a member to the ACIFPARM library with the appropriate name or verify that the default ACIF execution parameters in the $$$$DFLT ACIFPARM member are appropriate for the report.

CTDF49W ACIF ISSUED WARNING MESSAGES - PROCESSING CONTINUES

**Explanation:** The Control-D ACIF Interface Facility has detected that ACIF completed processing with a noncritical return code of 4.
The Control-D ACIF Interface Facility has successfully completed converting the report to AFP Category 5 data stream format. However, a warning condition was detected by ACIF that may affect the data stream's contents.

**Corrective Action:** Inspect the ACIF message output to determine the cause of the warning and whether or not its effect on the report data stream can be ignored.

**CTDF63W ACTIVE MISSIONS FILE IS NEARLY FULL**

*Explanation: Highlighted, unrollable message.*

The Active Missions file is over 90% full. When the Active Missions file is 90% full, Control-D alerts the user. If the Active Missions file is 100% full, new missions cannot be ordered.

**Corrective Action:** Notify the INCONTROL administrator. The Active Missions file size should be increased.

**CTDF64I PLEASE NOTIFY THE IOA ADMINISTRATOR**

*Explanation: Highlighted, unrollable message.*

Usually issued after a severe Control-D error which needs to be handled by an experienced Control-D person.

**Corrective Action:** Call your IOA administrator immediately.

**CTDF90S OPEN OF DDCARD ddName FAILED**

*Explanation: Open for the ddName DD statement pointing to the password member failed.*

Possible causes are:

- The ddName DD statement is missing.
- The file allocated to the ddName DD statement is not a sequential file nor a member in a PDS.

Authorization to access the product is denied.

**Corrective Action:** Correct the JCL statement for the procedure or the allocations for the CLIST.

**CTDF91S PASSWORD MEMBER TOO LARGE (DD ddName)**

*Explanation: The password member (or sequential data set) has too many lines.*

In this message, ddName is the identity of the DD statement that points to the password member. Authorization to access the product is denied.

**Corrective Action:** Remove unnecessary lines from the member.

**CTDF92S SYNTAX ERROR IN PASSWORD MEMBER (DD ddName)**

*Explanation: A syntax error was found in the password member. When this message is issued by the monitor, it is generally followed by message CTDF9DS, which describes the erroneous line in the member.*

In this message, ddName is the identity of the DD statement that points to the password member. Authorization to access the product is denied.
Corrective Action: Correct the text in the password member.

CTDF93S VALUE ERROR IN PASSWORD MEMBER (DD ddName)

Explanation: A field in the password member contains invalid data. When this message is issued by the monitor, it is generally followed by message CTDF9DS, which describes the erroneous line in the member.

In this message, ddName is the identity of the DD statement that points to the password member.

Authorization to access the product is denied.

Corrective Action: Correct the text in the password member.

CTDF94S PASSWORD INVALID, PLEASE RECHECK PASSWORD MEMBER (DD ddName)

Explanation: Data in the password member was not consistent with the specified password.

In this message, ddName is the identity of the DD statement that points to the password member.

Authorization to access the product is denied.

Corrective Action: Check the contents of the password member against the text received from BMC Software Customer Support. If it checks, contact the representative.

CTDF95S PASSWORD FOR Control-x IS ABOUT TO EXPIRE IN n DAYS

Explanation: Highlighted, unrollable message.

The password expiration period is about to end. An expiration date is specified in the password member for the product.

Corrective Action: Contact BMC Software Customer Support for a new password.

CTDF96S PASSWORD FOR Control-x HAS EXPIRED

Explanation: Highlighted, unrollable message.

The password expiration period has ended.

An expiration date is specified in the password member for the product.

Authorization to access the product is denied.

Corrective Action: Contact BMC Software Customer Support for a new password.

CTDF97S INTERNAL ERROR OCCURRED ON DD ddName. PLEASE NOTIFY THE IOA ADMINISTRATOR

Explanation: An internal error has occurred while analyzing the password member pointed to by the ddName DD statement.

Authorization to access the product is denied.

Corrective Action: Notify the IOA administrator.
CTDF98S OBLIGATORY FIELD MISSING FROM PASSWORD MEMBER (DD ddName)

**Explanation:** An obligatory field is missing from a password member.

The `ddName` DD statement points to the password member. The fields PROD, START, CPUID, PASS and TYPE should appear at least once in a password member. For Control-D/WebAccess Server, the CTD_PC_USERS field is also obligatory.

Authorization to access the product is denied.

**Corrective Action:** Check the contents of the password member against the text received from your INCONTROL administrator.

CTDF9AS PASSWORD FOR Control-x NOT DEFINED IN MEMBER (DD ddName)

**Explanation:** The member pointed to by the `ddName` DD statement does not contain the password for the appropriate product.

In this message, `ddName` is the identity of the DD statement that points to the password member.

Authorization to access the product is denied.

**Corrective Action:** Check that the specified password member is the correct member for this product.

CTDF9BS AUTHORIZATION PERIOD HAS NOT STARTED YET (DD ddName)

**Explanation:** The start date of the password has not yet arrived.

The `ddName` DD statement points to the password member. The START field contains the starting date of the password.

Authorization to access the product is denied.

**Corrective Action:** Check that the specified password member is the correct member for this period.

CTDF9CS CPUID/MODEL NOT FOUND IN AUTHORIZED CPU LIST (DD ddName)

**Explanation:** The current CPU is not defined in the CPU list.

The `ddName` DD statement points to the password member. Each entry in the CPU list in the password member contains the CPUID of the CPU and its model.

Authorization to access the product is denied.

**Corrective Action:** Check that the specified password member is the correct member for this CPU.

CTDF9DS CARD = text

**Explanation:** This message supplies additional information for a previous error message.

This message may appear after the CTDF92S or CTDF93S message which indicates an error has occurred in one of the lines of the password member. The CTDF9DS message displays the erroneous line.

**Corrective Action:** See the CTDF92S or CTDF93S messages.
CTDF9ES PASSWORD DDCARD ddName POINTS TO A NON EXISTING MEMBER (ABEND S013-18)

**Explanation:** The *ddName* DD statement is allocated to a nonexisting member in a PDS file.
In this message, *ddName* is the identity of the DD statement that points to the password member.
Authorization to access the product is denied.

**Corrective Action:** Correct the name of the member in the DD statement or create a member with the specified name.

CTDF9FS PASSWORD FOR Control-x EXPIRED, TEMPORARY AUTHORIZATION GRANTED

**Explanation:** The password for Control- x has expired. Nonetheless, Control- x can be run on the current date.
Despite password expiration, Control- x can be run on the 28th, 29th, 30th, 31st, 1st, 2nd, and 3rd days of each month for special purposes.
Control- x processing continues.

**Corrective Action:** Contact BMC Software Customer Support to obtain password renewal.

Messages CTDG00 through CTDGxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDG01E INDEX CREATION ERROR. RC = rc, INTERNAL RC = \( int_{\text{rc}} \), REASON = \( rsn \)

**Explanation:** Control-V was unable to create an index file.
Even though the index file is not created, the decollated report is produced.
Possible values for *rc* are shown in the following table:

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>16</td>
<td>Insufficient memory.</td>
</tr>
<tr>
<td>20</td>
<td>Insufficient space on the volumes to create the index file.</td>
</tr>
<tr>
<td>28</td>
<td>Size of the index file calculated internally is not big enough for all entries.</td>
</tr>
<tr>
<td>40</td>
<td>Dynamic allocation error.</td>
</tr>
<tr>
<td>44</td>
<td>Dynamic deallocation error.</td>
</tr>
<tr>
<td>48</td>
<td>Sort error.</td>
</tr>
</tbody>
</table>
INCONTROL for z/OS Messages Manual

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>Other</td>
<td>Internal error.</td>
</tr>
</tbody>
</table>

This message is followed by the REPG06E message.

The index is not created.

**Corrective Action:** Take appropriate actions to correct the problem associated with the specified return code:

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>16</td>
<td>Increase the REGION size of the Control-D or Control-V Decollation monitor.</td>
</tr>
<tr>
<td>20</td>
<td>Clear space on the volumes defined for index files in Control-V Installation Parameters or add another volume to the Control-V Installation Parameters.</td>
</tr>
<tr>
<td>28</td>
<td>First check that definition of every subindex is correctly defined in the decollation mission. If this is not the source of the problem, contact BMC Software Customer Support with the decollation mission definition and sample pages of the report.</td>
</tr>
<tr>
<td>40</td>
<td>For a description of the return code received, see the IBM manual <em>MVS Programming: Authorized Assembler Services Guide</em>. If you cannot resolve the problem, record the return code, internal return code and reason code. Contact BMC Software Customer Support.</td>
</tr>
<tr>
<td>44</td>
<td>Take the same action outlined for return code 40 above.</td>
</tr>
<tr>
<td>48</td>
<td>Check the sort messages in the Control-D or Control-V Decollation monitor sysout. If you cannot resolve the problem, record the sort messages and contact BMC Software Customer Support.</td>
</tr>
<tr>
<td>other</td>
<td>Record the return code, internal return code and reason code and contact BMC Software Customer Support.</td>
</tr>
</tbody>
</table>

**CTDG01S ACTION SUSPENDED. PREVIOUS ACTION PENDING**

**Explanation:** Option H (Hold), F (Free), D (Delete), R (Rerun) or C (Change) was requested for a Report decollating mission. The status of the mission, as displayed on the Status screen, has not been updated completely by all the Control-D monitors.

This message is relevant only for Report decollating missions that can be processed by any active Control-D monitor (that is, the MONITOR field of the Report decollating mission definition was left blank).

The request is ignored.

**Corrective Action:** Try again later.
CTDG10E PLACE CURSOR ON REPORT LINES

**Explanation:** The user pressed **PF06** in order to specify a new tag note. However, the cursor is not on a report line. When specifying a new tag note, the cursor must point to the report line for which a note will be written.

**Corrective Action:** Place cursor in the desired position within a report line.

CTDG11E SPECIFY END POSITION FOR NOTE STRING, OR PF5 TO CANCEL

**Explanation:** **PF6** was pressed to define a new tag note. The Control-D Notepad Facility is waiting for further actions. To define a new tag note, specify start and end positions in the string for which a note will be written. Specify start and end positions separately, by setting the cursor in the desired position, and pressing **PF6**.

**Corrective Action:** Put cursor at the end of the specified string, or press **PF5** to cancel the current tag note specification.

CTDG12E MULTIPLE LINES ARE NOT ALLOWED FOR NOTE

**Explanation:** Start and end positions for the tag note string are specified on different report lines. In the current release of the Control-D Notepad Facility, start and end positions for the tag note string must be specified in the same report line.

**Corrective Action:** Specify start and end positions for the tag note string in the same report line.

CTDG13E INTERNAL ERROR WHEN SPECIFYING A NEW NOTE

**Explanation:** An internal program error was detected by the Control-D Notepad Facility when specifying a new tag note.

**Corrective Action:** Call BMC Software Customer Support.

CTDG14E RULER CHANGED. TO GET INVISIBLE NOTES PRESS PF6

**Explanation:** The ruler was changed, and there were tag notes defined for the old ruler. After applying the new ruler, tag note strings are moved to other positions.

Specify tag notes after a ruler is defined, verified and applied to a report, because tag notes are related to the applied ruler.

If the strings being moved by a new ruler are related to tag notes, they will not be marked as note strings.

**Corrective Action:** In order to have these strings marked as note strings in their former positions, press **PF6**. After that the notes will be available.

CTDG15E PLEASE ENTER THE REQUIRED DATA

**Explanation:** You must specify the Restore Mission name in the displayed Restore Window when you request restoration of a report.

**Corrective Action:** Specify the Restore Mission name.
CTDG16E CANNOT GIVE TO THE SAME USER

**Explanation:** The user name specified in the GIVETO Option prompt window is the user name to which the report belongs. The GIVETO Option allows a copy of a report to be given to another user but not to the owner of the report.

**Corrective Action:** Specify another user name in the GIVETO Option prompt window or cancel the GIVETO request by specifying N (for NO) in the CONFIRM field of the GIVETO window.

CTDG17I REPORT GIVEN TO user2: jobName / user1 / reportName

**Explanation:** This information message indicates the normal completion of the GIVETO Option (option G) of the User Report List screen.

**Corrective Action:** No action is required.

CTDG18I REPORT VIEWED FROM fileType FILE, RC=rc: jobName / JOBID / userName / reportName

**Explanation:** This information message indicates that a VIEW request was performed. The text of the message specifies the report name, job name, jobID, user name, file type, and return code.

**Corrective Action:** No action is required.

CTDG21E LOAD FAILURE OF XCOMJOB MODULE

**Explanation:** The FT Control monitor could not load the XCOMJOB module.

The FT Control monitor shuts down.

**Corrective Action:** Make sure XCOMJOB exists on the STEPLIB DD statement of the CTD2AS4 member in the PROCLIB library.

CTDG22E DYNALLOC FAILURE. DSN=dsn

**Explanation:** The data set identified by dsn could not be dynamically allocated.

The FT Control monitor shuts down.

**Corrective Action:** If the DSN name is the AS4LOG file, ensure that the AS4LOG file exists with that data set name. Otherwise, notify BMC Software Customer Support.

CTDG24E BAD RETURN CODE FROM XCOM, RC=rc

**Explanation:** XCOM is currently not available.

The FT Control monitor continues its regular cycles, issuing requests to the XCOM server.

**Corrective Action:** Check XCOM availability. Refer to the Application Program Interface chapter in the XCOM manual. If XCOM stops and restarts between FT Control monitor cycles, the transfer process will continue.

CTDG25E FAILURE LOADING CTDAS4US

**Explanation:** The Control-D AS/400 Users Table (CTDAS4US) was not loaded.
The FT Control monitor shuts down.

**Corrective Action:** Make sure that the library pointed to by the AS4NMDD DD name includes the CTDAS4US member.

**CTDG29I** INVALID MODIFY *num* (where *num* is COMMAND or TIME INTERVAL)

**Explanation:** This message indicates that an invalid MODIFY command was issued. The FT Control monitor continues without modification.

**Corrective Action:** Reissue the MODIFY command with the correct syntax.

**CTDG2BI** MONITOR STOPPED

**Explanation:** This information message indicates that the FT Control monitor stopped due to operator request. The FCMD2AS4,STOP or P CTD2AS4 command was executed.

The FT Control monitor shuts down.

**Corrective Action:** Use the S CTD2AS4 command to restart the file Transfer monitor when the report packet transfer process should resume.

**CTDG2EE** IOA LOG NOT AVAILABLE

**Explanation:** Attempt to open the IOA Log file failed.

The FT Control monitor shuts down.

**Corrective Action:** Notify your local INCONTROL administrator.

**CTDG30I** THE REPORT IS BEING RECALLED. PLEASE TRY LATER

**Explanation:** This information message indicates that some or all of the CDAM files of the report to be viewed or printed migrated, and are not immediately available. At installations using DF/HSM, a request for online viewing or printing of a report causes sending direct HSM recall request for the HSM migrated files. Optional wish WD1623 defines whether the running program should wait for request completion or continue running and try to access the report later.

HSM recall request is sent to recall these migrated CDAM files for later access. Then, according to optional wish WD1623, either wait for the request completion or continue running.

**Corrective Action:** Wait until the recall request has successfully completed. Then, according to optional wish WD1623, either regain access to the report or try again to view the report.

**CTDG31E** YOU ARE NOT AUTHORIZED TO SPECIFY THIS PARAMETER

**Explanation:** Online Viewing Security Exit 4 denied your request to display a report list by setting a non-zero return code when called with function code SELFUNC. Function code SELFUNC normally grants or denies access to display a report list depending on the selection criteria specified on the Option U Selection screen.

**Corrective Action:** Modify the selection criteria on the Option U Selection screen or contact your IOA or security administrator to determine why the request was denied.
CTDG32E NO INDEX EXISTS FOR THIS REPORT

**Explanation:** Option X to list a report indexes in the Index Window was specified in the Active Report List screen but the selected report has no index.

**Corrective Action:** Define one or more indexes with DO INDEX statements in the Report Decollation Mission if this report should be indexed.

CTDG3AE DYNAMIC ALLOCATION OF INDEX FILE FAILED, REASON CODE=rc

**Explanation:** Control-D or V failed to dynamically allocate an index file.

The index file is not allocated.

**Corrective Action:** For a description of the return code received, see the IBM manual *MVS Programming: Authorized Assembler Services Guide*. If you cannot resolve the problem, record the reason code and contact BMC Software Customer Support.

CTDG4GE CTVX001 COULD NOT ACCESS INDEXES

**Explanation:** The CTVX001 exit, could not retrieve an index value from a non-Control-V index file.

The system stops.

**Corrective Action:** Contact BMC Software Customer Support.

CTDG61E ERROR IN FUNCTION NAME WHILE CALL CTDAMFM

**Explanation:** The function requested during a call to the CTDAMFM module was invalid.

The request fails.

**Corrective Action:** Specify a valid function for the CTDAMFM module.

CTDG62E NOT ENOUGH MEMORY FOR GETMAIN IN CTDAMFM

**Explanation:** There was not enough memory in the CTDAMFM module to perform GETMAIN.

The request fails.

**Corrective Action:** Specify the region size as 0.

CTDG63E ERROR WHILE LOADING CTDAMFM LOAD MODULE

**Explanation:** An error occurred during an attempt to load the CTDAMFM module. Either the CTDAMFM module is not in the appropriate library, or there was not enough space to load it.

Formatting of the Active Mission file (AMF) stops.

**Corrective Action:** Ensure that the CTDAMFM module exists in the appropriate library, and that there is enough space to load it.
CTDG66S INVALID VALUE IN PARAMETER DBFILE. VALID VALUES ARE: ACT, PRM, HST, MIG, MG1-MG9

**Explanation:** The DBFILE parameter in the CTDDIB utility is not set to ACT, PRM, HST, MIG or MG n. The CTDDIB utility creates an index file from an existing data file. The user tried to run the CTDDIB utility without a valid DBFILE parameter.

The CTDDIB utility terminates.

**Corrective Action:** Rerun the CTDDIB utility after setting the DBFILE parameter to ACT, PRM, HST, MIG, or MG n depending on the type of file for which the index is being created, as follows:

- **ACT** - Active User file
- **PRM** - Permanent User file
- **HST** - History User file
- **MIG** - Migrated User file
- **MG n** - Migrated User file partition, where n is the partition number

CTDG8NE INVALID EXPDATE PARAMETER

**Explanation:** An invalid date is specified in the EXPDATE parameter or this parameter is specified in the PROD mode, although it must only be specified in the TEST mode.

The CTVCLMIG utility ends with a return code of 12.

**Corrective Action:** Correct the EXPDATE parameter and rerun the utility.

CTDGA0I DELETE OF UNNEEDED INDEX FILES STARTED

**Explanation:** This information message identified that the CTVDELI utility began execution. This utility scans the Migrated User Report List file and erases index files and index records that are no longer needed.

**Corrective Action:** No action is required.

CTDGA1I DELETE OF UNNEEDED INDEX FILES ENDED OK

**Explanation:** This information message indicates that the CTVDELI utility finished executing without errors. This utility scans the Migrated User Report List file and erases index files and index records which are no longer needed.

**Corrective Action:** No action is required.

CTDGA2S DELETE OF UNNEEDED INDEX FILES ENDED WITH ERRORS

**Explanation:** The CTVDELI utility ended with errors. This utility scans the Migrated User Report List file and erases index files and index records that are no longer needed. The problem is described in one or more preceding messages.

The CTVDELI utility terminates with a return code of 08.

**Corrective Action:** Check preceding error messages, correct the problem, and rerun the job.
CTDGA4E INVALID PARAMETER: - parm

Explanation: The parm parameter is not valid for the CTVDELI utility. This message is issued by the CTVDELI Control-V utility, which scans the Migrated User Report List file, and erases index files that are no longer needed.

The CTVDELI utility terminates with a condition code of 08.

Corrective Action: Correct the parameter syntax and resubmit the job. For more information, see the CTVDELI utility in the INCONTROL for z/OS Utilities Guide.

CTDGA5E MISSING PARAMETER AFTER: - parm

Explanation: A subparameter of the parm parameter is missing. This message is issued by the CTVDELI Control-V utility, which scans the Migrated User Report List file, and erases index files that are no longer needed.

The CTVDELI utility terminates with a condition code of 08.

Corrective Action: Correct the parameter syntax, and resubmit the job. For more information, see the CTVDELI utility in the INCONTROL for z/OS Utilities Guide.

CTDGA6E REDUNDANT PARAMETER: - parm

Explanation: The parm parameter is specified more than once in the CTVDELI utility. This message is issued by the CTVDELI Control-V utility, which scans the Migrated User Report List file, and erases index files that are no longer needed.

The CTVDELI utility terminates with a condition code of 08.

Corrective Action: Remove the redundant parameter, and resubmit the job. For more information, see the CTVDELI utility in the INCONTROL for z/OS Utilities Guide.

CTDGA7E OPEN OF MIGRATED USER REPORTS LIST FILE FAILED. DDNAME "DAVMIG"

Explanation: Open of the Control-V Migrated User Report List file failed. This file is referenced by the DAMIG DD statement. This message is issued by the CTVDELI utility, which scans the Migrated User Report List file and erases index files that are no longer needed.

Possible causes are:

- The DAMIG DD statement is missing.
- The data set referenced by the DAMIG DD statement is not a Control-V Migrated User Report List file.
- The Migrated User Report List file referenced by the DAMIG DD statement belongs to another monitor, or was produced by a different version of Control-V.

The CTVDELI utility terminates with a condition code of 08.

Corrective Action: Correct the JCL for the CTVDELI utility, and rerun the job. For more information, see the CTVDELI utility in the INCONTROL for z/OS Utilities Guide.

CTDGA8E OPEN OF PARAMETERS FILE FAILED. DDNAME DADELIN

Explanation: Open of the Parameters file for the CTVDELI utility failed. Possible causes are:
▪ The DADELIN DD statement is missing.
▪ The data set referenced by the DADELIN DD statement cannot be opened for sequential read.

The CTVDELI utility terminates with a condition code of 12.

**Corrective Action:** Correct the JCL, and rerun the job. For more information, see the CTVDELI utility in the *INCONTROL for z/OS Utilities Guide*.

**CTDGA9E** OPEN OF SORT FILE FAILED. DDNAME *ddName*

**Explanation:** The SORT utility invoked by the CTVDELI utility failed to open the data set referenced by the *ddName* DD statement.

The CTVDELI utility stops.

**Corrective Action:** Ensure all DD statements are valid, and rerun the CTVDELI utility. For more information, see the CTVDELI utility in the *INCONTROL for z/OS Utilities Guide*.

**CTDGAAE** INVALID RETURN CODE FROM SORT, RC=rc

**Explanation:** The internal sort program ended with errors. This message is issued by the CTVDELI utility, which scans the Migrated User Report List file and erases index files that are no longer needed. The utility uses the site sort program.

The CTVDELI terminates with a condition code of 08.

**Corrective Action:** Check the explanations of the sort messages for the job in the manual for your sort facility.

**CTDGABI** WAITING FOR A CTDDELRP, RESTORE OR ANOTHER CTVDELI JOB TO TERMINATE

**Explanation:** This information message indicates that the CTVDELI utility is waiting for a CTDDELRP job, a restore job, or another CTVDELI job to terminate.

The CTVDELI utility scans the Migrated User Report List file, and erases index files that are no longer needed. To ensure data integrity, CTVDELI cannot run concurrently with the CTDDELRP utility, a restore job, or another CTVDELI job.

When the contending job terminates, the CTVDELI utility resumes processing.

**Corrective Action:** No action is required.

**CTDGACE** NO INPUT PARAMETERS WERE SUPPLIED

**Explanation:** The CTVDELI utility did not receive input parameters by way of the SYSIN DD statement. The CTVDELI utility scans the Migrated User Report List file, and erases index files that are no longer needed. The utility requires input parameters indicating which actions it should perform.

The CTVDELI utility terminates with a condition code of 08.

**Corrective Action:** Verify that input parameters are specified by way of the SYSIN DD statement. Rerun the CTVDELI utility.
**CTDGADI *** PARM=TEST SPECIFIED - SIMULATION MODE ***

**Explanation:** This information message indicates that the CTVDELI utility is running in SIMULATION mode. In SIMULATION mode, the CTVDELI utility produces a report that indicates which indexes would have been deleted if the utility were running in PRODUCTION mode.

**Corrective Action:** Examine CTVDELI output to determine if the proper indexes would have been deleted from disk. Make any changes required to prevent the incorrect deletion of indexes that are needed for any reason. Rerun the utility in PRODUCTION mode to actually delete unneeded indexes from disk.

**CTDGAEE LOCATE ERROR FOR INDEX dsn**

**Explanation:** The CTVDELI utility encountered index dsn, which could not be located, possibly because the data set is not cataloged. The CTVDELI utility scans the Migrated User Report List file and erases unneeded index files.

The index with the data set name dsn is not deleted.

**Corrective Action:** Determine why the data set could not be located. Correct the problem. Rerun the CTVDELI utility if necessary.

**CTDGAFE ERROR DELETING INDEX dsn - FILE SKIPPED**

**Explanation:** The CTVDELI utility encountered the dsn index, which could not be deleted. This message is issued by the CTVDELI utility, which scans the Migrated User Report List file, and erases index files that are no longer needed.

Possible causes include the following:

- The data set was not found on the device indicated in the catalog.
- The device on which the data set exists is not online.

The dsn index is not deleted.

**Corrective Action:** Determine why the data set could not be deleted. Correct the problem. Rerun the job if necessary.

**CTDGAGE ERROR UNCATALOGING INDEX dsn - FILE SKIPPED**

**Explanation:** The CTVDELI utility encountered the dsn index, which could not be uncataloged. This message is issued by the CTVDELI utility, which scans the Migrated User Report List file, and erases index files that are no longer needed.

The index is not uncataloged.

**Corrective Action:** Determine why the data set could not be uncataloged. Correct the problem. Rerun the job if necessary.

**CTDGB6I NO VALUES EXIST FOR THIS INDEX**

**Explanation:** This information message indicates that no values of the specified index appear in the user’s report.

**Corrective Action:** No action is required.
**CTDGB7E INVALID MEDIA SPECIFIED FOR REPORT**

**Explanation:** A migrated report could not be accessed because the media to which it was migrated was not found. The $SYSDATA entry that corresponds to this migrated report specifies a migrated media which does not appear in the IOASPRM.

The migrated report is not accessed.

**Corrective Action:** Have your INCONTROL administrator correct the IOASPRM to reference the migrated media that appears in the $SYSDATA entry.

**CTDGB8E NO $SYSDATA ENTRIES EXIST FOR THIS USER ENTRY**

**Explanation:** The user attempted to handle (view, print, and so on) a report by means of a user entry but no corresponding $SYSDATA entry was found. The $SYSDATA record was probably deleted manually.

The user cannot view, print, and so on, the report.

**Corrective Action:** No action is required.

**CTDGB9E INVALID VALUE. USE "Y", "N" OR "B"**

**Explanation:** The user entered an invalid value. The only values that are valid for this field are Y, N, or B.

**Corrective Action:** Correct the value entered.

**CTDGBAE INVALID VALUE - FIELD NUMBER MUST BE 1 TO 12**

**Explanation:** The value in the field is not valid. The value in this field must be from 1 through 12.

The SORT command is not performed.

**Corrective Action:** Correct the value specified for this field, and try again.

**CTDGBBE INVALID VALUE - SORT ORDER MUST BE "A" OR "D"**

**Explanation:** The value that specifies the sort order is not valid. The value that specifies the sort order must be A (ascending) or D (descending).

The SORT command is not performed.

**Corrective Action:** Enter A or D to specify the sort order, and try again.

**CTDGBCE TOO MANY PARAMETERS - UP TO 5 FIELDS CAN BE USED IN SORT**

**Explanation:** More than five fields specify the sort. The SORT command supports a maximum of five sort fields.

The SORT command is not performed.

**Corrective Action:** Redefine the sort using a maximum of five fields, and try again.
CTDGBDE INVALID PARAMETER - SHOULD BE FIELD # (1-12) AND "A" OR "D"

**Explanation:** The sort field number is invalid, or the sort order, or both. Each field number must be a value from 1 through 12, and the sort order must be either A (ascending) or D (descending).

The SORT command is not performed.

**Corrective Action:** Correct the values, and try again.

CTDGBEE FILL FIELD NUMBER

**Explanation:** The sort field number is missing. At least one sort field, and no more than five, must be specified.

The SORT command is not performed.

**Corrective Action:** Enter at least one value to specify the sort field, and no more than five, and try again.

CTDGBFS INTERNAL PROGRAM ERROR IN SORT

**Explanation:** An internal error occurred in the sort program. At least one sort field, and no more than five, must be specified.

The SORT command is not performed.

**Corrective Action:** Ask your INCONTROL administrator to report this error to BMC Software Customer Support.

CTDGBGE CANNOT EDIT RULER - NO CORRESPONDING REPORT FOUND

**Explanation:** Attempt to edit a ruler failed, because no report entry exists that corresponds to the ruler.

**Corrective Action:** Either create a report entry that corresponds to the selected ruler, or create a ruler for the report entry you would like to edit by specifying ‘E’ next to the report entry.

CTDGBHE PRINT RULER *rulerName* DOES NOT EXIST FOR THIS USER/REPORT/JOB

**Explanation:** The *rulerName* print ruler was not located. A print ruler with the specified name was not defined or the ruler name was misspelled.

The report is not printed.

**Corrective Action:** Verify that the desired ruler exists and is spelled correctly. If necessary, define the ruler, use another ruler that is already defined, or print the report without a ruler.

CTDGBIE COMMAND SPAGE NOT SUPPORTED WHEN VIEWING WITH INDEX

**Explanation:** The SPAGE command was specified during viewing of a report with an index. Command SPAGE is not supported for viewing a report with an index.

The command is not performed.
**Corrective Action:** To print a report section pointed to by an index value, use either of the following:
- the PRINT option from the List of Index Values panel
- the PRINT command from the Quick Access panel.

**CTDGBJ1** COMMAND "VALUE" NOT APPLICABLE WHEN VIEWING WITHOUT AN INDEX

**Explanation:** This information message indicates that the command VALUE was entered to display the currently selected index value, but no index value had been used to view the report. If an index value is not used to view a report, the whole report is viewed and this command is not applicable.

The command is not performed.

**Corrective Action:** No action is required.

**CTDGBKE** "TO PAGE" IS GREATER THAN NUMBER OF PAGES IN REPORT (reportName)

**Explanation:** The value of the TO PAGE parameter specified in the Print window is greater than the number of pages in the reportName report. The maximum value for the TO PAGE parameter is the number of pages in the report.

The reportName report is not printed.

**Corrective Action:** Specify a valid TO PAGE value in the Print window, and try again.

**CTDGBLE CANNOT ACCESS NOTES - INTERNAL ERROR IN LINE NUMBERS**

**Explanation:** Tag notes for the report being viewed cannot be accessed because of an internal error. Each tag note is associated with a string in the report. The line numbers for the page are not correct. Therefore, the tag note strings cannot be located.

The tag notes and associated strings are not displayed.

**Corrective Action:** Record the report for which the error occurred and the actions taken while viewing the report. Contact BMC Software Customer Support.

**CTDGBME CANNOT ACCESS NOTES - INTERNAL ERROR IN PAGE NUMBER TRANSLATION**

**Explanation:** The tag notes of the report cannot be accessed because of an internal error. Each tag note is associated with a string in the report. The page number in which the string appears was not calculated correctly because of an internal error. Therefore, the tag note strings cannot be located.

The tag notes and associated strings are not displayed.

**Corrective Action:** Record the report for which the error occurred and the actions taken while viewing the report. Contact BMC Software Customer Support.
CTDGBKNE NOTE CREATION FAILED - SPECIFY A STRING FROM THE ORIGINAL REPORT

**Explanation:** A tag note cannot be created for the specified string. Each tag note is associated with a string in the original report, before it was edited by a Control-D ruler.

A tag note cannot be associated with any of the following types of strings:

- A string on an inserted line.
- A string that comes from a paste line (in the ruler definition), in a line that has column edit instructions.
- A string that does not start and end in the same ‘Cut’ group, in a line that has column edit instructions.

The Notepad window is not displayed for note creation.

**Corrective Action:** Choose a different string to associate with the tag note.

CTDGBOE $SYSDATA RECORDS NOT SUPPORTED UNDER J CL ARCHIVING

**Explanation:** The value $SYSDATA was specified in the USER parameter in display type J of the Control-D or Control-V USER REPORTS ENTRY PANEL. It is not possible to display $SYSDATA records when using display type J (the JOB ARCHIVE display).

The User Report list is not displayed.

**Corrective Action:** Specify a valid user name or leave the USER parameter empty. To display $SYSDATA records, change the display type.

CTDGBPE UNABLE TO VIEW THIS REPORT - SOME COMPRESSED DATASET EXTENTS ARE MISSING

**Explanation:** Attempted to view a report stored in a CDAM file failed because at least one CDAM file extent is missing. It was probably deleted from the disk manually or by another process.

The report is not displayed.

**Corrective Action:** Attempt to find and restore any missing file extents.

CTDGBQE "WRAP" MODE AVAILABLE ONLY WITH "SHOWCC" MODE "ON"

**Explanation:** WRAP was requested when SHOWCC was turned OFF. SHOWCC must be ON, when WRAP is requested.

WRAP is not activated.

**Corrective Action:** Set SHOWCC ON, and request WRAP again.

CTDGBRE RULERS NOT AVAILABLE WITH "WRAP" MODE

**Explanation:** WRAP was specified for a report when a ruler was turned ON. WRAP is not available when a ruler is turned ON.

WRAP is not activated.

**Corrective Action:** Turn OFF the ruler to use WRAP.
CTDGBSE INTERNAL ERROR DURING NOTE CREATION

**Explanation:** An internal error caused the application to try to create an empty note, or a note longer than 80 characters. A note cannot be empty or longer than 80 characters. The note is not created.

**Corrective Action:** Ask your INCONTROL administrator to contact BMC Software Customer Support for assistance.

CTDGBTE ERROR ACCESSING `fileName`, RC=`rc`

**Explanation:** An error occurred while information was being read from the `fileName` CDAM file. The return code (`rc`) indicates why the error occurred.

Valid values for `rc`, and their explanations, are:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>No data found</td>
</tr>
<tr>
<td>8</td>
<td>No space for data vector</td>
</tr>
<tr>
<td>12</td>
<td>Error during access of the active user file</td>
</tr>
<tr>
<td>20</td>
<td>Invalid function</td>
</tr>
<tr>
<td>24</td>
<td>Internal error in converting vsa</td>
</tr>
<tr>
<td>28</td>
<td>Insufficient memory to load the note pad</td>
</tr>
<tr>
<td>32</td>
<td>ENQ (enqueue) or dequeue error</td>
</tr>
<tr>
<td>36</td>
<td>USER not authorized to add, delete or update note</td>
</tr>
<tr>
<td>40</td>
<td>Record to replace or delete not found</td>
</tr>
<tr>
<td>080204</td>
<td>CDAM processing error. For more details, see CTD922E or CTD926E messages in the job log.</td>
</tr>
</tbody>
</table>

The report is not displayed.

**Corrective Action:** Ask your INCONTROL administrator for help.

CTDGBUI ADD USER `recipient` ADDED TO `username` / `jobName` / `reportName` IN `{ACT | PRM}` FILE

**Explanation:** This information message is issued if a recipient was added to the ADDITIONAL USER field.

ACT is the Active User Reports file.

PRM is the Permanent User Reports file.
Corrective Action: No action is required.

CTDGBVI ADD USER recipient DELETED FROM userName / jobName / reportName IN {ACT | PRM} FILE

Explanation: This information message is issued if a recipient was deleted from the ADDITIONAL USER field.

- ACT is the Active User Reports file.
- PRM is the Permanent User Reports file.

Corrective Action: No action is required.

CTDGBWI ADD USER recipient1 REPLACED BY recipient2 IN userName / jobName / reportName IN {ACT | PRM} FILE

Explanation: This information message indicates that the ADDITIONAL USER field was modified.

- ACT is the Active User Reports file.
- PRM is the Permanent User Reports file.

Corrective Action: No action is required.

CTDGBXE ERROR ACCESSING CDAM FILE RC=rc

Explanation: An error occurred during a read of a CDAM file. The return code (rc) indicates why the error occurred.

Valid values for rc, and their explanations, are:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>End of data sets</td>
</tr>
<tr>
<td>8</td>
<td>Point error</td>
</tr>
<tr>
<td>12</td>
<td>Get error</td>
</tr>
<tr>
<td>16</td>
<td>Unrecognized request</td>
</tr>
<tr>
<td>20</td>
<td>Allocation error</td>
</tr>
<tr>
<td>24</td>
<td>Open error</td>
</tr>
<tr>
<td>28</td>
<td>Subsystem not operational</td>
</tr>
<tr>
<td>32</td>
<td>Wrong data read from the file</td>
</tr>
<tr>
<td>36</td>
<td>Unrecognized cache routine name</td>
</tr>
</tbody>
</table>

497
<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>56</td>
<td>Invalid media specified for report</td>
</tr>
</tbody>
</table>

The file is not accessed.

**Corrective Action:** Ask your INCONTROL administrator for assistance.

**CTDGBYE CDAM SUBSYSTEM IS NOT ACTIVE**

**Explanation:** A CDAM request was not performed because the CDAM subsystem was not active. The request is not performed.

**Corrective Action:** Run the IOASINIT procedure to start the CDAM subsystem.

**CTDGBZE ERROR IN noterecord - RC = rc**

**Explanation:** An error occurred during access of a Note record noterecord in the Active User file. A return code (rc) of 32 indicates an error during access of the Active User file. The note is not accessed.

**Corrective Action:** Run the CTDGIR utility to check the integrity of the Active User file.

**CTGDG0I CONTROL-V JCL ARCHIVING STARTED**

**Explanation:** This information message indicates that the CTVJAR Job Archiving utility has started.

**Corrective Action:** No action is required.

**CTGDG1I CONTROL-V JOB ARCHIVING ENDED O.K.**

**Explanation:** This information message indicates that the CTVJAR Job Archiving utility ended successfully.

**Corrective Action:** No action is required.

**CTGDG2I CONTROL-V JOB ARCHIVING FAILED**

**Explanation:** This information message indicates that the CTVJAR Job Archiving utility failed. Other messages generated in response to the failure describe the cause for the failure. Job archiving ends.

**Corrective Action:** Examine all messages issued by the Job and correct the failure. If necessary, correct the input and rerun the CTVJAR Job Archiving utility.

**CTGDG3I *** PARM=TEST SPECIFIED - SIMULATION MODE *****

**Explanation:** This information message indicates that the CTVJAR Job Archiving utility was run in TEST mode. CTVJAR was activated using the TEST parameter in the PARM field of the executive statement. When CTVJAR is active in TEST mode, no updates are performed to the Active User file. Only a report is created.

**Note:**
If the user sets the SYNC parameter to YES in CTVJAR, active generic decollation will close the recently created CDAM file. The active generic decollation will wait for new decollations until the CTVJAR Job Archiving utility is terminated.

No updates are performed to the Active User file. A report is created.

**Corrective Action:** Do the following:

1. Check the results of the TEST mode run.
2. If results are acceptable, rerun the CTVJAR utility with PARM set to PROD.

**CTDGD4E INVALID RETURN CODE FROM SORT, RC=rc**

**Explanation:** The CTVJAR Job Archiving utility received an invalid return code from the SORT utility. CTVJAR called the SORT utility to sort the entry being consolidated, but the sort failed.

In this message, \( rc \) is the invalid return code.

The system terminates the CTVJAR utility.

**Corrective Action:** Examine the messages generated by the SORT utility for a description of the problem. Correct the problem and rerun the CTVJAR utility.

**CTDGD5E OPEN OF SORT FILE FAILED. DDNAME "SORTIN"**

**Explanation:** The CTVJAR Job Archiving utility was unable to open the file referenced by the SORTIN DD statement. Either the SORTIN DD statement is missing from the JCL of CTVJAR, or the definition of the SORTIN DD statement is invalid.

The CTVJAR utility terminates.

**Corrective Action:** Correct the DD statement and rerun the CTVJAR utility.

**CTDGDC6E CTDRPUF FAILED. RC: rc**

**Explanation:** Control-V called the CTDRPUF routine to create a report entry in the Active User file of the newly archived report. However, CTDRPUF was unable to create the new report.

In this message, \( rc \) is the CTVJAR return code.

CTVJAR processing continues with the next report.

**Corrective Action:** Check the IOA log for all messages generated for this failure. If the cause for the failure remains unclear, contact BMC Software Customer Support.

**CTDGDEE INVALID PARAMETERS RECEIVED FROM USER. RC =rc**

**Explanation:** There are invalid parameters in the SYSIN file. This is a summary message. Preceding messages clarify the error. The CTVJAR Job Archiving utility issues the return code \( rc \).

The system terminates job archiving.

**Corrective Action:** Check all messages generated for this error. Correct the input parameters, and rerun the CTVJAR Job Archiving utility.
CTDGDFE THE PARAMETER parm MUST BE SPECIFIED FOR JOBARC UTILITY

**Explanation:** The user attempted to execute the CTVJAR Job Archiving utility without specifying the parm parameter. The parm parameter is mandatory for CTVJAR.

The CTVJAR Job Archiving utility terminates.

**Corrective Action:** Add the parm parameter and rerun the CTVJAR utility.

CTDGE0E INVALID PARAMETER: - parm

**Explanation:** An invalid parameter was specified in the parameter statement for the CTVJAR Job Archiving utility.

In this message, parm is the invalid parameter that was specified.

The CTVJAR Job Archiving utility terminates.

**Corrective Action:** Correct the values in the PARM statement, and rerun the CTVJAR Job Archiving utility.

CTDGE1E REDUNDANT PARAMETER: - parm

**Explanation:** The parm parameter was specified more than once in the input for the CTVJAR Job Archiving utility. The parm parameter can be specified only once in the input for this utility.

In this message, parm is the redundant parameter specified by the user.

The CTVJAR Job Archiving utility terminates.

**Corrective Action:** Ensure that the parm parameter is specified only once, and rerun the CTVJAR Job Archiving utility.

CTDGE2E ERROR IN PARAMETERS: FODATE IS HIGHER THAN TODATE

**Explanation:** A later date value was specified in FODATE than in TODATE in the input for the CTVJAR Job Archiving utility. The FODATE and TODATE parameters indicate a date range for reports to be consolidated by CTVJAR. A date range is valid only if FODATE is earlier than, or the same as, TODATE.

The CTVJAR Job Archiving utility terminates.

**Corrective Action:** Ensure that the date value specified for FODATE is not later than the date value for TODATE. Rerun CTVJAR.

CTDGE3E INVALID DATE SPECIFIED:= ddName

**Explanation:** An invalid date value was specified in the ddName DD statement in the input for the CTVJAR Job Archiving utility.

The CTVJAR Job Archiving utility terminates.

**Corrective Action:** Check and correct the date value and rerun the CTVJAR utility.
INCONTROL for z/OS Messages Manual

CTDGE4E NO USER RECORDS FOUND FOR -fileName

**Explanation:** Control-V found a SYSDATA record for the fileName CDAM file. However, the fileName CDAM file contained no user records that corresponded to the SYSDATA record. In the input for the CTVJAR Job Archiving utility, the user specified a CDAM file that contained no user records in the input for the CTVJAR utility.

In this message, fileName is the name of the problematic CDAM file.

The CTVJAR utility ignores the SYSDATA record, and continues processing normally.

**Corrective Action:** Check why the user records are missing. If the user records were deleted using the U screen, restore user records from a backup.

CTDGE6E CTVXVAL FAILED FOR - indexFile - SEE OTHER ERROR MESSAGES

**Explanation:** The CTVXVAL internal routine was unable to process the indexFile index file.

The system skips the index file, and continues processing.

**Corrective Action:** To determine the cause, check the other messages generated by the failure of CTVXVAL.

CTDGE8E CTDTRE FAILED RC: 08

**Explanation:** An internal routine failed with a return code of 08. The CTVJAR Job Archiving utility uses the CTDTRE routine to determine the validity of each user name supplied by the user for the consolidated report.

The CTVJAR utility terminates.

**Corrective Action:** Determine the cause by checking preceding error messages generated by the failure. Verify that the user tree is properly defined and rerun the CTVJAR utility.

CTDGE9E USER NAME userName IS NOT FOUND IN TREE. JOB ARCHIVING WILL NOT BE PERFORMED

**Explanation:** The userName user name could not be found by the CDTRE utility. The CTVJAR Job Archiving utility uses the CTDTRE utility program to determine the validity of the user name supplied by the user for the consolidated report. The userName user name was specified by the USER parameter of the CTVJAR utility, but could not be found in the Control-D recipient tree.

CTVJAR terminates.

**Corrective Action:** Correct the user parameter and rerun CTVJAR.

CTDGEEE THERE ARE TOO MANY MATCHING CDAM DATASETS KEPT OPEN BY CONTROL-D MONITORS. UTILITY TERMINATES.

**Explanation:** The CTVJAR Job Archiving utility terminated execution without creating consolidated reports. This occurred under option SYNC=NO, because too many CDAM datasets matching selection criteria are opened by the Control-D decollation monitor.

**Corrective Action:** Execute the utility with parameter SYNC=YES.
CTDGF01 PAGES num1 TO num2 ARE SELECTED FOR INCLUSION

**Explanation:** This information message indicates that the SPAGE command with the INCLUDE parameter was issued during online viewing of a report. The range of pages identified in the message is printed after exit from online viewing.

**Corrective Action:** No action is required.

CTDGF11 PAGES num1 TO num2 ARE SELECTED FOR EXCLUSION

**Explanation:** This information message indicates that the SPAGE command with the EXCLUDE parameter was issued during online viewing of a report. The range of pages identified in the message is not printed after exit from online viewing.

**Corrective Action:** No action is required.

CTDGF21 ALL PAGES HAVE BEEN UNSELECTED

**Explanation:** This information message indicates that the SPAGE RESET command was issued during online viewing of a report. No pages are printed after exit from online viewing.

**Corrective Action:** No action is required.

CTDGF3E text

**Explanation:** The specified error occurred while a report was being viewed online, during processing of the SPAGE command.

Possible values of text are:
• INTERNAL ERROR - SPGB PARAMETER ADDRESS IS ZERO
• UNABLE TO OBTAIN STORAGE FOR INITIAL SPAGE BLOCK
• UNABLE TO OBTAIN PROGRAM WORK AREA STORAGE
• INTERNAL ERROR - REPORT RECORD PARAMETER ADDRESS IS ZERO
• SECURITY EXIT DENIED ACCESS TO THE SPAGE COMMAND
• UNABLE TO RELEASE EXCESS STORAGE OF EXISTING SPAGE BLOCK
• UNABLE TO OBTAIN STORAGE FOR EXTENDED SIZE SPAGE BLOCK
• UNABLE TO RELEASE STORAGE OF COPIED SPAGE BLOCK
• INTERNAL ERROR - FUNCTION ID PARAMETER ADDRESS IS ZERO
• INTERNAL ERROR - FUNCTION ID CODE IS INVALID
• INTERNAL ERROR - WORD COUNT PARAMETER ADDRESS IS ZERO
• INTERNAL ERROR - CURRENT PAGE PARAMETER ADDRESS IS ZERO
• PARAMETER NOT RECOGNIZED - CORRECT THE COMMAND AND TRY AGAIN
• INTERNAL ERROR - WORD LIST PARAMETER ADDRESS IS ZERO
• INVALID PARAMETER LENGTH - CORRECT THE COMMAND AND TRY AGAIN
• INVALID PAGE NUMBER - SPECIFY A NUMBER FROM 1 TO 99999999
• START PAGE NUMBER MUST BE SPECIFIED BEFORE END PAGE NUMBER
• START PAGE NUMBER MUST NOT BE GREATER THAN END PAGE NUMBER
• INTERNAL ERROR - SECURITY EXIT CALL ROUTINE ADDRESS IS ZERO
• INTERNAL ERROR - SECURITY EXIT FUNCTION ID ADDRESS IS ZERO
• START PAGE NUMBER GREATER THAN NUMBER OF PAGES IN THE REPORT

The SPAGE command is not processed.

Corrective Action: If possible, fix the problem and try again.

Where space is a problem, try increasing the REGION size.

If these measures fail, do the following:

1. Record the following information:
   • the text of the message
   • the IOA products that are installed at the site
   • all the messages from the IOA log that refer to the report in question
   • where possible, the order of the user actions during viewing of the report

2. Contact BMC Software Customer Support.
CTDGF4E USER $SYSDATA DOES NOT EXIST IN PERMANENT USER FILE

**Explanation:** An attempt has been made to view a $SYSDATA record in the Permanent file, but it does not exist in that file.

**Corrective Action:** No action is required.

CTDGI0S GID INTERFACE ERROR RC=rc PGM pgm_csect ID=xxx FUNCTION func

**Explanation:** An error occurred while accessing the Global Index Database above DB2.

The variables in this message are:
- `rc` - the return code from the CTDGI D interface routine
- `pgm_csect` - the program CSECT, which received the error
- `xxx` - an identifier for localization of erroneous calls
- `func` - the operation that caused the error

Valid values for `rc`, and their explanations, are:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>12</td>
<td>Invalid function</td>
</tr>
<tr>
<td>20</td>
<td>Not enough storage</td>
</tr>
<tr>
<td>48</td>
<td>SETPATH was not issued before value accessing</td>
</tr>
<tr>
<td>56</td>
<td>Error opening the CTDGI DB2 member</td>
</tr>
<tr>
<td>60</td>
<td>Invalid parameter found in the CTDGI DB2 member</td>
</tr>
<tr>
<td>64</td>
<td>Obligatory parameter missing from the CTDGI DB2 member</td>
</tr>
<tr>
<td>68</td>
<td>Duplicate parameter found in the CTDGI DB2 member</td>
</tr>
<tr>
<td>72</td>
<td>More than 10 fields found in a PATH description in the CTDGI DB2 member.</td>

<tr>
<td>84</td>
<td>SQL error</td>
</tr>
<tr>
<td>85</td>
<td>SQL error if time-out occurs</td>
</tr>
<tr>
<td>88</td>
<td>Error in loading the DB2 interface module</td>
</tr>
</tbody>
</table>
The system action depends on the identity of the component that was accessing the Global Index database. Usually, the current routine terminates. Additional messages clarifying the source of the error are written to the IOA Log file before this message.

**Corrective Action:** Search the IOA Log file and the relevant job log for messages clarifying the source of the error. Correct the error and restart IOA application server. If the error persists, contact BMC Software Customer Support.

**CTDG11E INVALID FUNCTION**

**Explanation:** The Global Index facility was invoked with an invalid function. The request is not performed.

**Corrective Action:** Request a valid function for the Global Index facility.

**CTDG16E INDEX NAME PATH IS NOT SET**

**Explanation:** A request for an index value was performed before a SETPATH request. SETPATH must be performed before the index value is requested. The SETPATH request fails.

**Corrective Action:** Put the SETPATH request before the request for an index value, and try again.

**CTDGI1AE OPEN OF THE CTDGIDB2 MEMBER FAILED**

**Explanation:** An error occurred while opening the CTDGIDB2 member. The Global Index request is not performed.

**Corrective Action:** Search the relevant job log for messages clarifying the source of the error. Determine whether the CTDGIDB2 member exists in the library pointed to by the DADPARM DD statement. After resolving the problem, either restart the IOA application server or rerun the job, depending on which component was accessing the Global Index database.

**CTDGI1BE INVALID STATEMENT IN CTDGIDB2: statement**

**Explanation:** An invalid statement statement was detected in the CTDGIDB2 member. The Global Index request is not performed.

**Corrective Action:** Correct the CTDGIDB2 member and either restart the IOA application server or rerun the job, depending on which component is accessing the Global Index database.

**CTDGICE OBLIGATORY PARAMETER (DSN, PLAN, PATH OR TABLE) IS MISSING IN CTDGIDB2**

**Explanation:** An obligatory parameter is missing in the CTDGIDB2 member. The obligatory parameters are:
CTDGIDE DUPLICATE STATEMENT IN CTDGIDB2: duplic_stmt

Explanation: A duplicate statement duplic_stmt was detected in the CTDGIDB2 member, although this statement can be specified only once.

Corrective Action: Correct the CTDGIDB2 member and either restart the IOA application server or rerun the job, depending on which component is accessing the Global Index database.

CTDGI EE NUMBER OF FIELDS IN THE PATH num MORE THEN 10

Explanation: Too many fields are specified for path number num. A maximum of 10 fields can be specified.

Corrective Action: Correct the CTDGIDB2 member and either restart the IOA application server or rerun the job, depending on which component is accessing the Global Index database.

CTDGI FE DB2 OPEN ERROR RC=rc RS=rsn

Explanation: An error occurred while opening the DB2 subsystem.

The variables in this message are:

- rc - the return code from the DB2 CAF interface
- rsn - the reason code returned from the DB2 CAF interface

Corrective Action: For the explanation of the return and reason codes, refer to your DB2 documentation. If necessary contact your DB2 administrator.

CTDGI GE {PATH | TABLE} NOT FOUND IN CTDGIDB2:

indexPath|tableName

Explanation: Either the requested index path or the DB2 table was not found in the CTDGIDB2 member.

The variables in this message are:
INCONTROL for z/OS Messages Manual

- `indexPath` - the requested index path
- `tableName` - the name of the requested DB2 table

The Global Index request is not performed.

**Corrective Action:** Do the following:
1. Check the `indexPath` index path name and the `tableName` DB2 table name.
2. Check CTDGIDB2 member and the job input statements, and correct them as necessary.
3. Rerun the job.

**CTDGIHE SQL ERROR**

**Explanation:** DB2 issued a SQL error code.

This message (CTDGIHE) is followed by the DB2 messages, which provide the error code and a detailed explanation of the error.

The Global Index request is not performed.

**Corrective Action:** Do the following:
1. To establish the source of the error, examine the DB2 messages that followed this CTDGIHE message. For clarification of the DB2 messages, refer to your DB2 documentation.
2. Correct the error.
3. Restart the IOA application server or rerun the job, depending on which component is accessing the Global Index database.
4. If necessary contact your DB2 administrator.

**CTDGIJE GETVAL WAS NOT ISSUED BEFORE GETVSA**

**Explanation:** A GETVSA request was issued, but a GETVAL request had not been issued before it.

The possible cause is an internal error in the application that calls the CTDGID interface routine.

The Global Index request is not performed.

**Corrective Action:** Contact your INCONTROL administrator.

**CTDGIJE SQL ERROR**

**Explanation:** An SQL error occurred during inserting line to DB2 table when decollation mission loads data to Global Index database. Control-D decollates the report without loading data to Global Index database. The decollation mission is set to status \textit{ENDED\- NOT "OK" after it is completed.}

**Corrective Action:** Do the following actions:
- Examine the DB2 messages associated with this error to determine the reason for the error and correct the problem.
- Use the CTDGBILD job to load index values from reports decollated by this mission to the Global Index database.
Messages CTDH00 through CTDHxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDH01I CREATION OF PRINT CONTROL-RECORDS STARTED

Explanation: This information message indicates that the CTDBLXRP utility has begun processing. The CTDBLXRP utility rebuilds Print Control Records in the Active User Report List file. Corrective Action: No action is required.

CTDH02I CREATION OF PRINT CONTROL-RECORDS ENDED OK

Explanation: This information message indicates that the CTDBLXRP utility has successfully completed execution. The CTDBLXRP utility rebuilds Print Control Records in the Active User Report List file. The CTDBLXRP utility terminates with a condition code of 0. Corrective Action: No action is required.

CTDH03S CREATION OF PRINT CONTROL-RECORDS ENDED WITH ERRORS

Explanation: The CTDBLXRP utility, which rebuilds Print Control Records in the Active User Report List file, encountered a critical error during execution. The utility terminates with a condition code of 8 or higher. Corrective Action: Check the IOA Log file and system log for previous messages associated with the error. Correct the problem and re-execute the utility.

CTDH07E "FE" PRINT SUPPORT ERROR. RETURN CODE rc FUNCTION func

Explanation: The CTDBLXRP utility, which rebuilds Print Control Records in the Active User Report List file, encountered an error while performing the func function.

The error associated with each return code (rc) is identified below.

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>008</td>
<td>Memory shortage.</td>
</tr>
<tr>
<td>012</td>
<td>Memory shortage.</td>
</tr>
<tr>
<td>016</td>
<td>Invalid function.</td>
</tr>
<tr>
<td>020</td>
<td>Database I/O error.</td>
</tr>
<tr>
<td>024</td>
<td>Open error.</td>
</tr>
</tbody>
</table>

Processing terminates.
Corrective Action: Check the IOA Log file and system log for additional messages associated with the error. Determine the cause of the error, correct the problem, and re-execute the utility. If the problem persists, contact BMC Software Customer Support.

Messages CTDI00 through CTDIxx
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDI01E ERROR CONNECTING SESSION MANAGER
Explanation: An error was encountered while attempting to connect to the session manager. Printing to the CTDS destination failed because the session manager interface could not establish a connection. The printing job fails.
Corrective Action: Fix the problem and reprint the report.

CTDI02E INSUFFICIENT STORAGE. INCREASE THE REGION SIZE
Explanation: There is insufficient storage available for program processing. The job is not run.
Corrective Action: Increase the value of the REGION parameter and rerun the job.

CTDI03E text
Explanation: This message includes a message text (text) returned from the communication program. This message is issued together with other error messages and clarifies the cause of the problem.
Corrective Action: No action is required.

CTDI04E INTERNAL ERROR SENDING REPORTS TO SESSION MANAGER
Explanation: The session manager interface program was invoked with an invalid argument. The error occurred in the application using the session manager interface. The report is not sent to the session manager.
Corrective Action: Fix the application program.

CTDI05E ERROR IN DEFAULT PARAMETERS CTDSPARM RC=rc
Explanation: An error was encountered while attempting to access the CTDSPARM member in the IOA PARM library. The program cannot read the CTDSPARM member. The attempt to read the CTDSPARM member fails.
Corrective Action: Check if the CTDSPARM member exists in the IOA PARM library, and if the IOA PARM library is allocated.
CTDI06E ERROR IN LOADING TRANSLATION TABLE RC=rc

Explanation: An error was encountered while loading a translation table, for example, from EBCDIC to ASCII.

The printing job fails.

Corrective Action: Correct the problem and rerun the printing job.

CTDI07E ERROR CLOSING CONNECTION WITH SESSION MANAGER

Explanation: An error was encountered during session termination. The session manager interface was not able to terminate the session manager connection.

The printing job fails.

Corrective Action: Fix the connection problem and rerun the printing job.

CTDI08E CTDDS HOST AND/OR PORT ARE NOT SPECIFIED IN CTDSPARM

Explanation: The interface program cannot connect with the session manager, because a default HOST and/or PORT is not defined in the CTDSPARM member.

The connection fails.

Corrective Action: Specify defaults for HOST and PORT.

CTDI09E DYNALLOC ERROR OF THE PAG FILE. RC=rc rsn

Explanation: An error occurred during dynamic allocation of a PAG file in the printing process.

The dynamic allocation request fails.

Corrective Action: Analyze the return and reason code, fix the problem accordingly, and perform the print request again.

CTDI0AE THE SYSDATA RECORD IS NOT FOUND

Explanation: An attempt has been made to print a report to a Control-D/Delivery Server destination by means of a user entry, but no corresponding $SYSDATA entry was found.

The probable cause is that the relevant $SYSDATA record was deleted manually.

The report is not printed to the destination.

Corrective Action: No action is required.

CTDI0BE CLOSING INVERTED COMMA IS OMITTED IN THE CTDSPARM

Explanation: The format of a parameter value in the CTDSPARM member is invalid. The value began with a single quotation mark (') or double quotation marks ("), but did not end with the same type of quotation marks.

The invalid parameter value is ignored. The report is not printed.

Corrective Action: Examine the CTDSPARM member and insert a valid value where necessary.
CTDI0CI REPORT NAME = reportName

**Explanation:** This information message provides the report name for the accompanying message.

**Corrective Action:** Examine the accompanying message and its user response, and take the appropriate corrective action.

CTDI0EE CTDS EXTERNAL DESTINATION dest IS NOT FOUND

**Explanation:** This message is issued when a print mission tries to send a subscription for printing a report or for notification to the Control-D/Delivery Server but the External Destination dest specified in the subscription record does not exist in the External Destinations List.

The report or notification is not sent to the Control-D Delivery Server.

**Corrective Action:**
1. Define the External Destination dest in the External Destinations List (for more details see Control-D and Control-V User Guide) or change the External Destination in the subscription record to one that exists in the External Destination List using CTVUINV utility.
2. Rerun the problematic print mission.
3. If you changed the External Destination to an existing one, change it also in the CTDSPARM member so that this destination is used by the next subscriptions.

CTDI0FW BODY TEXT READ ERROR, MEMBER=memname RC=rc

**Explanation:** The e-mail body text cannot be read from the memname member specified in the BODYTEXT parameter of CTDS DESTINATION ATTRIBUTES. The return code rc can have the following values:
- 04 - the memname member does not contain a section corresponding to the printed report name.
- 08 - the memname member is not found in the IOA BANNERS library

The attached to e-mail report is distributed without an e-mail body text. Print mission or Immediate print ends OK.

**Corrective Action:** Check the BODYTEXT parameter in CTDS DESTINATION ATTRIBUTES and the content of the specified member. Fix the problem and print the report again.

CTDI0GW RECIPIENTS LIST READ ERROR, MEMBER=memname RC=rc

**Explanation:** The e-mail recipients list cannot be read from the memname member specified in the RECIPIENT parameter of CTDS DESTINATION ATTRIBUTES. The return code rc can have the following values:
- 04 - the memname member does not contain a section corresponding to the printed report name.
- 08 - the memname member is not found in the IOA BANNERS library

The report is not distributed to the e-mail addresses specified in the member.

If additional e-mail addresses are specified in the RECIPIENT parameter or in the CTD tree recipient entry, the report is distributed to these e-mail addresses and the Print mission or Immediate print ends with the status OK.

If additional e-mail addresses are not specified, the report is not distributed. The CTDI0HE message follows this message and the Print mission or Immediate print ends with the status NOT OK.
**Corrective Action:** Check the RECIPIENT parameter in CTDS DESTINATION ATTRIBUTES. Fix the problem and print the report again.

CTDI0HE EMPTY RECIPIENTS LIST FOR THE DESTINATION *destname*

**Explanation:** No e-mail addresses are resolved to report distribution when report is printed to CTDS destination of email type.

The report is not distributed and the Print mission or Immediate print ends NOT OK.

**Corrective Action:** Check the IOA Log for additional messages associated with this printing. Check the RECIPIENT parameter specified in the CTDS *destname* Destination Attribute. Fix the problem and print the report again.

**Messages CTDJ 00 through CTDJ xx**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDJ01I ACTIVATION OF ALTERNATIVE INDEXES STARTED

**Explanation:** This information message indicates that the CTDUFANX utility has activated an alternative index component of a user file.

**Corrective Action:** No action is required.

CTDJ02I ACTIVATION OF ALTERNATIVE INDEXES ENDED COMPLETELY

**Explanation:** This information message indicates that the alternative index component was successfully activated, deactivated, or printed. This message is issued by the CTDUFANX utility.

**Corrective Action:** No action is required.

CTDJ03S ACTIVATION OF ALTERNATIVE INDEXES ENDED WITH ERROR

**Explanation:** An error was encountered during alternative index component activation. This message is issued by the CTDUFANX utility. Other error messages indicate the cause of the error.

The alternative index file is not usable.

**Corrective Action:** Correct the problem, and rerun the CTDUFANX utility to activate the alternative index component.

CTDJ04I ALTERNATIVE INDEXES DEFINITIONS LIST

**Explanation:** This information message indicates the list of alternative index definition statements from the member specified in parameter M of the CTDUFANX utility.

**Corrective Action:** No action is required.

CTDJ05I ALTERNATIVE INDEX *letter* DELETED

**Explanation:** This information message indicates alternative index deactivation. This message is issued by the CTDUFANX utility.
In this message, letter is the letter that identifies the alternative index component.

Corrective Action: No action is required.

CTDJ 06I ALTERNATIVE INDEX letter ADDED

Explanation: This information message indicates alternative index activation. This message is issued by the CTDUFANX utility.

In this message, letter is the letter that identifies the alternative index component.

Corrective Action: No action is required.

CTDJ 07I ACTIVE ALTERNATIVE INDEXES LIST

Explanation: This information message indicates the list of active alternative indexes for the user file specified in the FILE parameter of the CTDUFANX utility.

Corrective Action: No action is required.

CTDJ 08S ILLEGAL DEFINITION: field

Explanation: An error was detected in a field in the definition statement of the definition member specified in parameter M of the CTDUFANX utility.

In this message, field is the illegal field. If field = REC LENGTH, the total length of the index record exceeds the maximum value.

The CTDUFANX utility terminates with a condition code of 24.

Corrective Action: Rerun the CTDUFANX utility after setting the correct definition. For more information, refer to the section that describes the CTDUFANX utility in the INCONTROL for z/OS Utilities Guide.

CTDJ 09S FORBIDDEN INPUT PARAMETER: parm

Explanation: A forbidden parameter was detected for the CTDUFANX utility.

In this message, parm is the forbidden parameter.

The CTDUFANX utility terminates with a condition code of 20.

Corrective Action: Rerun the CTDUFANX utility after setting the correct parameter. For more information, refer to the section that describes the CTDUFANX utility in the INCONTROL for z/OS Utilities Guide.

CTDJ 0AS OPEN ERROR FOR DDNAME ddName.

Explanation: The file that the CTDUFANX utility requested cannot be opened. Possible causes are:

- The DD statement that references the data file is missing.
- The file referenced by the DD statement is not an IOA Access Method data file.
- An internal error occurred while attempting to open the file referenced by the DD statement.

The CTDUFANX utility terminates with a condition code of 8.
Corrective Action: Correct the JCL and rerun the job. If the error persists, notify your INCONTROL administrator.

CTDJ0BI INPUT PARAMETERS: parmList.
Explanation: This information message indicates the input parameters list for CTDUFANX utility.
Corrective Action: No action is required.

CTDJ0CI ALTERNATIVE INDEX letter IS NOT AVAILABLE FOR READ
Explanation: This information message indicates that an alternative index is active but not available for read. As a result, the alternative index cannot be used during a report list request. This message is issued by the CTDUFANX utility.
In this message, letter is the letter that identifies the alternative index.
Corrective Action: If the corresponding User Report List data component contains some reports, rebuild alternative indexes using the CTDDIB utility.

CTDJ0DI ALTERNATIVE INDEX letter IS FORMATTED
Explanation: This information message indicates that an alternative index is active, but contains no index values. This message is issued by the CTDUFANX utility.
In this message, letter is the letter that identifies the alternative index.
Corrective Action: If the corresponding User Report List data component contains some reports, rebuild alternative indexes using the CTDDIB utility.

CTDJ0EI ALTERNATIVE INDEX letter IS NOT FORMATTED
Explanation: This information message indicates that an alternative index component contains some records. This message is issued by the CTDUFANX utility.
In this message, letter is the letter that identifies the alternative index.
Corrective Action: No action is required.

CTDJ0HI ALTERNATIVE INDEX letter IS NOT ACCESSIBLE
Explanation: This information message indicates that an inaccessible alternative index component has been detected by the CTDUFANX utility. This is caused by an internal error.
In this message, letter is the letter that identifies the alternative index.
The CTDUFANX utility terminates with a condition code of 20.
Corrective Action: Check and repair the User Report List database using the CTDDIG utility. If the error persists, notify your INCONTROL administrator.

Messages CTDM00 through CTDMxx
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.
CTDM03S Control-V UNMIGRATE ENDED WITH ERRORS

**Explanation:** The CTVUNMIG Control-V utility ended with errors.
CTVUNMIG terminates.

**Corrective Action:** Check the job log or the IOA log for the other messages generated by this error. Correct the problem, and rerun the CTVUNMIG utility.

CTDM04E LOADING OF Control-\{D | V\} INSTALLATION PARAMETERS FAILED

**Explanation:** Load of the CTDPARM or CTVPARM module failed.
The loading of Control-D or Control-V Installation Parameters failed. Possible causes are:

- The IOA Load library is not in the load modules search list.
- There is insufficient memory to load the IOA Installation Parameters.
- A specified load module does not exist in the Load library.

The CTVUNMIG utility continues without sending messages to the IOA log.

**Corrective Action:** Do the following:
1. To produce messages to the IOA log, try one of the following:
2. If the IOA Load library is not in the search list, add a STEPLIB DD statement to the library.
3. If the loading failed because of lack of memory, increase the region size.
4. Rerun the CTVUNMIG utility.

CTDM06E INVALID PARAMETER: \textit{parm}

**Explanation:** The user specified an invalid parameter for the CTVUNMIG utility.
The utility stops executing with an error.

**Corrective Action:** Correct the \textit{parm} parameter and rerun the utility.

CTDM07E MISSING PARAMETERS

**Explanation:** The user omitted mandatory parameters from the input to the CTVUNMIG utility.
The CTVUNMIG utility stops executing with an error.

**Corrective Action:** Specify the required parameters and rerun the utility.

CTDM08S UNABLE TO LOAD MODULE \textit{modnam}

**Explanation:** Control-V was unable to load the \textit{modnam} module.
Possible causes are:
**The IOA Load library is not in the load modules search list.**

**Insufficient storage was available to load the module.**

**The \texttt{modnam} module does not exist in the IOA Load library.**

In this message, \texttt{modnam} is the name of the module that could not be loaded.

The system action is determined by the module (\texttt{modnam}):

- If \texttt{modnam} is the \texttt{IOASPRM} module, the CTVUNMIG utility continues without IOA parameters.
- If \texttt{modnam} is the \texttt{LSMCALL} module, the utility stops executing with an error.

**Corrective Action:** No action is required.

- If the IOA Load library is not in the search list, add a \texttt{STEPLIB} DD statement to the library.
- If the loading failed due to lack of memory, increase the \texttt{REGION} size.

Rerun CTVUNMIG.

CTDM10S OPEN OF DDNAME=\texttt{ddName} DSNAME=\texttt{dsn} FAILED

**Explanation:** The user specified a DD name that could not be opened.

The utility stops executing with a condition code of 16.

**Corrective Action:** Check the system log for messages generated in response to this failure. If you are unable to solve the problem, report the contents of the messages to BMC Software Customer Support.

CTDM12I FILE DSNAME=\texttt{dsn} UNMIGRATION ENDED

**Explanation:** This information message indicates that the specified file was successfully unmigrated. \texttt{dsn} is the last extent of a CDAM file that was unmigrated. The unmigrated file can be found on DASD.

**Corrective Action:** No action is required.

CTDM13E MIGRATED FILE EOD REACHED

**Explanation:** This information message indicates that the size of the migrated file did not correspond to the information in the header of that file.

The job stops executing with a condition code of 08.

**Corrective Action:** Contact BMC Software Customer Support and send the complete log of the job.

CTDM20I CONTROL-D FOREIGN REPORT RESTORE ENDED O.K.

**Explanation:** This information message indicates that a foreign report was successfully restored as a Control-D report.

**Corrective Action:** No action is required.

CTDM21E CONTROL-D FOREIGN REPORT RESTORE FAILED

**Explanation:** The CTDFOR utility failed to restore the foreign report file. The CTDFOR utility terminates. The foreign report is not restored.
Corrective Action: Examine other messages to determine the cause of the failure. Fix the problem, and rerun the CTDFOR utility.

CTDM29E REDUNDANT PARAMETER:- parm
Explanation: The same parameter was specified twice for the CTDFOR utility.
The CTDFOR utility terminates.
Corrective Action: Remove the redundant parameter, and rerun the CTDFOR utility.

CTDM2FS UNKNOWN PRODUCT NAME PROVIDED IN PRODUCT= PARAMETER: parm
Explanation: A product name specified in the PRODUCT parameter is unknown to the CTDFOR utility. It is not the name of a product supported by the utility.
The CTDFOR utility terminates.
Corrective Action: Set the PRODUCT parameter to the name of a supported product.

CTDM30E CONVERSION ROUTINE FAILED. RC = rc
Explanation: The conversion routine called by the CTDFOR utility failed to convert the report file to a CDAM file.
The CTDFOR utility terminates.
Corrective Action: Examine other messages to determine the cause for the conversion routine failure. Correct the problem and rerun the CTDFOR utility.

CTDMP0I CTDUFMDV STARTED
Explanation: This information message indicates that the CTDUFMDV utility has started.
Corrective Action: No action is required.

CTDMP1E Migrated USER FILE IS NOT ALLOWED FOR UPDATING
Explanation: Another application (such as the CTDDELRP or CTVCLMIG utilities or a MIGRATION mission) is updating a migrated User Report List file. The CTDUFMDV utility cannot be submitted with the PART parameter at the same time.
The CTDUFMDV utility ends with an error.
Corrective Action: Resubmit the CTDUFMDV utility with the PART parameter again. If the Migrated User File (MUF) became unavailable as a result of the CTDUFMDV utility failure, submit the CTDUFMDV utility with the RESET parameter, to restore full accessibility to the old MUF.

CTDMP2E OPEN OF FILE ddName FAILED
Explanation: The data set referenced by the ddName DD statement could not be opened.
The CTDUFMDV utility ends with an error.
Corrective Action: Check other messages generated by the CTDUFMDV job to determine the cause for the failure. Correct the problem and rerun the utility.
CTDMP3E ORDER OF INPUT PARAMETERS IS INCORRECT

Explanation: The sequence of dates defined in the SYSIN stream for the CTDUFMDV utility, which was submitted with the EXEC statement parameter PART, is not in ascending order.

The CTDUFMDV utility ends with an error.

Corrective Action: Correct the input parameters and rerun the utility.

CTDMP4E FIELD PARM param IS INCORRECT

Explanation: The value of the CTDUFMDV EXEC statement parameter param is not valid.

The CTDUFMDV utility ends with an error.

Corrective Action: Correct the invalid parameter and rerun the utility.

CTDMP5I INPUT PARAMETERS:

Explanation: This information message is issued to the JES log of the job for the CTDUFMDV utility as a header before the following CTDMP6I message or messages.

Corrective Action: No action is required.

CTDMP6I InputStatement

Explanation: This information message displays the input parameters that were specified in the SYSIN stream and issued to JES log of the job for the CTDUFMDV utility.

Corrective Action: No action is required.

CTDMP7E INPUT PARAMETER IS INCORRECT

Explanation: The value of parameter that was displayed in the last CTDMP6I message is not valid.

The CTDUFMDV utility ends with an error.

Corrective Action: Correct the invalid input parameter and rerun the utility.

CTDMP8E INSUFFICIENT MEMORY

Explanation: There is not enough memory available to run the CTDUFMDV utility.

The utility ends with an error.

Corrective Action: Do one of the following:
If the CTDUFMDV utility was submitted with the PART parameter, increase the REGION size and resubmit the utility.

If the CTDUFMDV utility was submitted with the ACT, HST, or MIG parameters, do one or both of the following:

- Decrease the value of the maximum number of VSA records processed by one cycle using the SYSIN stream.
- Increase the REGION size and resubmit the utility.

**CTDMP9E INVALID RETURN CODE FROM SORT, RC=rc**

**Explanation:** A sort program that was activated internally by the CTDUFMDV utility ended with an unexpected return code of rc.

The CTDUFMDV utility ends with an error.

**Corrective Action:** For details about the reason for the failure, refer to the documentation for the sort program and to the job's sort messages.

**CTDMPAE NO $SYSDATA RECORDS FOUND IN THE fileType USER FILE**

**Explanation:** The fileType User Reports List file does not contain any SYSDATA record.

In this message, fileType is the type of User Reports List file. Valid values are:

- ACT
- HST
- MIG

The CTDUFMDV utility ends with an error.

**Corrective Action:** No action is required.

**CTDMPEI CTDUFMDV ENDED OK. fileType USER FILE IS UPDATED.**

**Explanation:** This information message indicates that the CTDUFMDV utility has successfully updated a User Report List file.

In this message, fileType is the type of User Reports List file. Valid values are:

- ACT
- HST
- MIG

**Corrective Action:** No action is required.

**CTDMPFI CTDUFMDV ENDED OK. MIG PARTITIONS ARE CREATED OR UPDATED.**

**Explanation:** This information message indicates that the CTDUFMDV utility has successfully separated an old Migrated User Report List file to different partitions or updated a new Migration User Report List in secondary execution.
Corrective Action: No action is required.

CTDMPGW DUPLICATE RECORD IN NEW FILE. KEY=VSARecordKey
Explanation: A duplicate record was found in the data file. The duplicate record might be the result of an updating target Migrated User Report List after a previous CTDUFMDV execution.
The CTDUFMDV utility continues processing. The duplicate record that was updated first is removed. The record that was updated later contains more current data, and remains in the data file.
Corrective Action: No action is required.

CTDMPHE MIGRATED USER FILE CANNOT BE SEPARATED REPEATEDLY
Explanation: The CTDUFMDV is submitted for Migrated User Report List which was already separated (CTDUFMDV was submitted with parameter PART for the same MUF).
The CTDUFMDV utility ends with an error.
Corrective Action: If you need to separate the original MUF again, first submit CTDUFMDV with the RESET parameter.

CTDMPII NUMBER OF PROCESSED RECORDS: XXXXXXXXXXX
Explanation: This information message displays the number of processed VSA records from Migrated User Report List.
Corrective Action: No action is required.

CTDMPJE SYSIN IS EMPTY
Explanation: This message indicates that no input statements were specified in the SYSIN stream for the CTDUFMDV utility submitted with MODE=PART or (COPYOLD,DATE) or (COPYNEW,DATE).
The CTDUFMDV utility ends with an error.
Corrective Action: Add the required input statements under DD card SYSIN and rerun the utility.

CTDMR0I CTDUFMPR UTILITY STARTED/RESTARTED WITH function FUNCTION IN mode MODE
Explanation: This information message indicates that the CTDUFMPR utility started or restarted with the function specified in the input parameters (COPY or DELETE) in the specified mode (PROD or TEST).
The first time the utility is submitted for a specified function, the term STARTED is displayed in the message.
If the utility did not end with RC=0 in the previous run and now is starting again with the same function, the term RESTARTED is displayed in the message.
An example where the utility does not end with RC=0 is where the utility does not process all the required records in the previous run because the time limit, specified by the TIMELIM parameter, was exceeded.
Corrective Action: No action is required.
CTDMR1E MIGRATED USER FILE IS NOT DIVIDED TO PARTITIONS

Explanation: This error message is issued when the CTDUFMPR utility did not find the MI PART record in the file pointed to by the DAMIG DD statement.
The utility stops with RC=8.
Corrective Action: Check whether the DAMIG DD statement points to the correct Migrated User File. Do not submit the CTDUFMPR utility if the Migrated User file is not divided into partitions.

CTDMR3E INVALID EXEC PARAMETER: parm

Explanation: The parm input parameter specified in the CTDUFMPR utility JCL EXEC statement is not valid.
The utility stops with RC=12.
Corrective Action: Correct the invalid input parameter (parm) in the JCL and resubmit the job.

CTDMR4E UTILITY WITH FUNCTION COPY IS COMPLETED. SUBMIT IT WITH FUNCTION DELETE.

Explanation: This error message is issued when the user submits the CTDUFMPR utility with the COPY function after the COPY stage has already ended with return code 0, but the DELETE stage has not yet been submitted yet.
The utility stops with return code 8.
Corrective Action: Submit the CTDUFMPR utility with the DELETE function to complete the repartition process.

CTDMR5I INPUT SYSIN PARAMETERS:

Explanation: This information message is issued as a header before printing the parameters specified in the SYSIN DD stream. The statements specified in the SYSIN DD stream are printed after this message.
Corrective Action: No action is required.

CTDMR6E INVALID INPUT PARAMETER: parm

Explanation: The parm input parameter, specified in the SYSIN DD stream for CTDUFMPR, is not valid.
The utility stops with RC=12.
Corrective Action: Correct the invalid input parameter (parm) in the JCL and resubmit the job.

CTDMR7E INVALID NUMBER OF INPUT PARTITION DATES

Explanation: The number of new partition last dates specified in the SYSIN DD stream for the CTDUFMPR utility is not equal to the number of existing partitions in the Migrated User file.
The utility stops with RC=12.
Corrective Action: Correct the invalid input parameters specified in the SYSIN DD stream and resubmit the job.
CTDMR8I THERE ARE *n* PARTITIONS IN THE MIGRATED USER FILE

**Explanation:** This information message indicates how many partitions exist in the Migrated User File.

**Corrective Action:** No action is required.

CTDMR9I --- COPY RECORDS TO APPROPRIATE PARTITIONS

**Explanation:** This information message indicates that the CTDUFMPR utility has started the stage of copying records to other Migrated User File partitions. Records located in partitions that do not match the date ranges of the new partitions will be copied to appropriate partitions.

**Corrective Action:** No action is required.

CTDMRAI *nnnnnnnn* RECORDS ARE READ FROM PARTITION *x*

**Explanation:** This information message indicates how many records have been read from partition *x* of the Migrated User File. Such a message is issued only for partitions which are candidates for moving records from them because their date ranges have been changed by the input parameters.

**Corrective Action:** No action is required.

CTDMRB1 *nnnnnnnn* RECORDS ARE COPIED FROM PARTITION *x* TO PARTITION *y*

**Explanation:** This information message indicates how many records have been copied from partition *x* to partition *y* by the CTDUFMPR utility.

**Corrective Action:** No action is required.

CTDMRC1 --- COPY NEW RECORDS ADDED OR UPDATED DURING UTILITY RUNNING

**Explanation:** This information message indicates that the stage of copying the records, which were added or updated while the CTDUFMPR utility was running, has started. The Migrated User File records added or updated in partitions that do not match the date ranges of the new partitions will be copied to appropriate partitions.

**Corrective Action:** No action is required.

CTDMRDE COPY FUNCTION NOT COMPLETED, MUST COMPLETE COPY BEFORE SUBMITTING WITH DELETE FUNCTION

**Explanation:** This error message is issued when the user submits the CTDUFMPR utility with the DELETE function, before the COPY function is submitted and completed.

The utility stops with RC=8.

**Corrective Action:** Ensure that the CTDUFMPR utility with the COPY function has been submitted and completed, before re-submitting the CTDUFMPR utility with the DELETE function.

No action is required.
CTDMREI  nnnnnnnn RECORDS ARE DELETED FROM PARTITION x

Explanation: This information message indicates how many records have been deleted from partition x by the CTDUFMPR utility.

Corrective Action: No action is required.

CTDMRFW UTILITY STOPPED BECAUSE THE TIME LIMIT hhmm WAS EXCEEDED

Explanation: This warning message indicates that the CTDUFMPR utility ended because the time limit, specified in the input parameter, was exceeded. Not all the records, which were specified to be copied or deleted, were processed.

The utility stops with RC=4.

Corrective Action: Re-submit the utility with the same FUNCTION parameter as before.

CTDMRGI PARTITION x LAST DATE: OLD – date1, NEW – date2

Explanation: This information message indicates the existing (OLD) last report date1 for partition x and the new last report date2 that will take its place for partition x after repartition process is completed. The dates are displayed in YYYYMMDD format. The CTDUFMPR utility issues this message for each existing partition of the Migrated User File.

Corrective Action: No action is required.

CTDMRHI CTDUFMPR UTILITY ENDED OK, RC=rc

Explanation: This information message indicates that the CTDUFMPR utility ended without errors. The return code, rc, can be 00 or 04. RC=00 indicates that all the required records of the Migrated User File have been processed and the submitted utility function is completed. RC=04 indicates that the utility stopped because the time limit was exceeded.

Corrective Action: If RC=00, no action is required. If RC=04, re-submit the utility with the same FUNCTION parameter as before.

CTDMRII CTDUFMPR UTILITY ENDED WITH ERRORS, RC=rc

Explanation: This information message indicates that the CTDUFMPR utility ended with errors. Additional error messages, describing the errors, precede this message.

Corrective Action: Perform the actions described in the additional error messages.

CTDMRJI --- DELETING RECORDS COPIED TO OTHER PARTITIONS

Explanation: This information message indicates that the CTDUFMPR utility started the step of deleting the records that were copied to the other Migrated User File partitions.

Corrective Action: No action is required.
CTDMRKE MIGRATED USER FILE IS HELD BY CREATE PARTITIONS OR REPARTITION PROCESS

**Explanation:** This error message is issued by a Control-D application (such as migration mission, CTDDELRP, or CTVCLMIG), which cannot work in parallel with the CTDUFMDV or CTDUFMP utilities when they are updating the Migrated User file partitions. For more information about synchronization of Control-D components with the CTDUFMDV and CTDUFMP utilities, see the INCONTROL for z/OS Administrator Guide.

The Control-D application stops after issuing this message.

**Corrective Action:** Re-submit the stopped Control-D application after CTDUFMDV, with function PART, or CTDUFMPR, with function COPY, is completed.

CTDMRLE CTDUFMPR WITH FUNCTION=DELETE IS NOT STARTED SINCE A RESTORE MISSION IS IN PROCESS

**Explanation:** The CTDUFMPR utility issues this error message, when it is started with the DELETE function while a restore operation from a migrated mission is in process. The DELETE function can only be started after the restore operation has been completed. For more information about synchronization of Control-D components with the CTDUFMPR utilities, see the INCONTROL for z/OS Administrator Guide.

The utility stops with RC=8.

**Corrective Action:** Re-submit the CTDUFMPR utility with the DELETE function after all restore missions are completed.

CTDMRMW PERFORM ACTIONS DESCRIBED IN ADMINISTRATOR GUIDE BEFORE STARTING CTDUFMPR WITH FUNCTION DELETE

**Explanation:** This warning message is issued at the completion of a run of CTDUFMPR utility with the COPY function. It is intended to remind the user that some additional actions must be performed before starting the CTDUFMPR utility with the DELETE function.

The utility ends with RC=0 after issuing this message.

**Corrective Action:** Perform the actions described in the INCONTROL for z/OS Administrator Guide and then submit the CTDUFMPR utility with the DELETE function.

CTDMS01 CTDUPMIS UTILITY STARTED

**Explanation:** This information message indicates that the CTDUPMIS utility started.

**Corrective Action:** No action is required.

CTDMS11 CTDUPMIS UTILITY COMPLETED SUCCESSFULLY

**Explanation:** This information message indicates that the CTDUPMIS utility completed successfully.

**Corrective Action:** No action is required.

CTDMS2E CTDUPMIS UTILITY ENDED WITH ERRORS

**Explanation:** This error message indicates that the CTDUPMIS utility discovered problems during processing. Additional information on the problems is available in the job log.
The utility stops.

**Corrective Action:** Examine the job log for error messages describing the problems. Make any necessary corrections and rerun the utility.

**CTDMS3E UPDATE PARAMETER parm IS NOT AVAILABLE SINCE SIMILAR SELECTION PARAMETER IS NOT SPECIFIED**

**Explanation:** The parameter `parm` is specified in the CHANGE TO statement to be updated, but the similar parameter for selecting values to be updated is not specified.

The utility stops.

**Corrective Action:** Correct the input parameters in the JCL and rerun the job.

**CTDMS4E INVALID PARAMETER: parm**

**Explanation:** The `parm` input parameter specified in the JCL for the CTDUPMIS utility is not valid.

The utility stops.

**Corrective Action:** Correct the invalid `parm` input parameter in the JCL and rerun the job.

**CTDMS5E THE PARAMETER parm MUST BE SPECIFIED**

**Explanation:** The `parm` input parameter for the CTDUPMIS utility is required, but it is missing.

The utility stops.

**Corrective Action:** Add the missing parameter to the JCL and rerun the job.

**CTDMS6E REDUNDANT PARAMETER: parm**

**Explanation:** The `parm` input parameter for the CTDUPMIS utility has already been specified.

The utility stops.

**Corrective Action:** Remove the extra input parameter from the input parameter stream in the JCL and rerun the job.

**CTDMS7E NO SELECT STATEMENTS ARE SPECIFIED IN THE INPUT PARAMETER STREAM**

**Explanation:** At least one SELECT statement must be specified in the input parameters stream, but none are specified.

The utility stops.

**Corrective Action:** Correct the input parameters in the JCL and rerun the job.

**CTDMS8E PARAMETER parm LENGTH EXCEEDED**

**Explanation:** The `parm` input parameter for the CTDUPMIS utility exceeds the maximum allowable length.

The utility stops.
Corrective Action: Correct the invalid parm input parameter in the JCL and rerun the job.

CTDMS9E EMPTY SELECT/CHANGE PARAMETER GROUP

Explanation: There are no parameters specified in either the SELECT or the CHANGE TO statement. At least one parameter must be specified. The utility stops.

Corrective Action: Correct the input parameters in the JCL and rerun the job.

CTDMSAI NUMBER OF SELECTED MEMBERS nm, CATEGORIES nc

Explanation: This information message indicates the number of decollation mission definition members and categories selected during the CTDUPMIS utility run.

Corrective Action: No action is required.

CTDMSBI NUMBER OF UPDATED MEMBERS nm, CATEGORIES nc

Explanation: This information message indicates the number of decollation mission definition members and categories updated during the CTDUPMIS utility run.

Corrective Action: No action is required.

CTDMSCI parm IS CHANGED FROM old_value TO new_value

Explanation: This information message indicates that the value of the parm decollation mission parameter is changed from old_value to new_value.

Corrective Action: No action is required.

CTDMSDI parm old_value IS DELETED

Explanation: This information message indicates that the old_value of the parm decollation mission parameter is deleted.

Corrective Action: No action is required.

CTDMSDI parm new_value IS ADDED

Explanation: This information message indicates that the new_value of the parm decollation mission parameter is added.

Corrective Action: No action is required.

CTDMSGW parm new_value ALREADY EXISTS

Explanation: This warning message issued by the CTDUPMIS utility when the CHANGE TO statement includes instructions to add a new decollation parameter value to the decollation mission definition, but that parameter value already exists in the selected decollation block. The new value is not added and the decollation mission definition is not updated.

Corrective Action: Examine the input parameters. Change the parameters and rerun the utility if necessary.
CTDMSHW CLASS x IS NOT DELETED. AT LEAST ONE CLASS SHOULD REMAIN.

Explanation: This warning message issued by the CTDUPMIS utility when the CHANGE TO statement includes instructions to delete class x from the ON-CLASS or ON-TRNCLASS decollation mission definition, but x is the only class in this statement. It cannot be deleted because this statement must contain at least one class value.

The x class value is not deleted and the decollation mission definition is not updated.

Corrective Action: Examine the input parameters. Change the parameters and rerun the utility if necessary.

CTDMSII MEMBER member CATEGORY category

Explanation: This information message is issued before these messages: CTDMSGW, CTDMSHW, CTDMSOE, and CTDMSPE. It indicates which decollation member and category the following message is related to.

Corrective Action: No action is required.

CTDMSKE STORE=CAT CAN BE SPECIFIED ONLY IF OUTLIB DIFFERS FROM REPLIB

Explanation: The STORE=CAT input parameter is specified for the CTDUPMIS utility, but the OUTLIB parameter is not specified. The STORE=CAT parameter can only be specified when the OUTPUT parameter is specified.

The utility stops.

Corrective Action: Correct the input parameters in the JCL and rerun the job.

CTDMSLE MEMBER NAME CAN BE UPDATED ONLY IF OUTLIB DIFFERS FROM REPLIB

Explanation: The MEMBER parameter is specified in the CHANGE TO statement for the CTDUPMIS utility, but the OUTLIB parameter is not specified or the OUTLIB library is the same as the REPLIB library. The member name can only be changed when the OUTPUT parameter specifies a library different from the input REPLIB library.

The utility stops.

Corrective Action: Correct the input parameters in the JCL and rerun the job.

CTDMSME CTDUPMIS UTILITY TERMINATES DUE TO AN ERROR IN THE SORT

Explanation: The CTDUPMIS utility issues this message when the invoked SORT utility ended with errors.

The utility stops.

Corrective Action: To identify the problem, examine the messages issued by the SORT utility to SYSOUT. Make the appropriate changes in the JCL and rerun the job.
CTDMSNI MEMBER NAME IS CHANGED FROM old_member TO new_member

Explanation: This information message indicates that the decollation member is stored in the library specified in the OUTLIB parameter with the name: new_member.

Corrective Action: No action is required.

CTDMSOE CLASS x IS INVALID FOR GENERIC DECOLLATION MISSION

Explanation: The CTDUPMIS utility attempts to change the class value to x or add class x to a generic decollation mission definition, but the class x is not specified in the list of generic classes in the CTDPARM parameters member.

The decollation mission definition is not updated.

Corrective Action: Examine the input parameters. Change the parameters and rerun the utility if necessary.

CTDMSPE CLASS x IS DEDICATED FOR GENERIC DECOLLATION MISSIONS ONLY

Explanation: The CTDUPMIS utility attempts to change the class value to x or add class x to a non-generic decollation mission definition, but the class x is specified in the list of generic classes in the CTDPARM parameters member.

The decollation mission definition is not updated.

Corrective Action: Examine the input parameters. Change the parameters and rerun the utility if necessary.

CTDMSRW NO DECOLLATION MISSIONS ARE SELECTED

Explanation: There are no decollation mission definitions found in the REPLIB library satisfying the selection parameters specified for the CTDUPMIS utility.

The decollation mission definition is not updated.

Corrective Action: Examine the input parameters. Change the parameters and rerun the utility if necessary.

CTDMSSE PARAMETER parm IS NOT AVAILABLE IN ‘CHANGE TO’ STATEMENT

Explanation: The parm parameter is specified in the CHANGE TO statement to be updated, but this parameter is only available as a selection parameter in the SELECT statement.

The utility stops.

Corrective Action: Correct the input parameters in the JCL and rerun the job.
INCONTROL for z/OS Messages Manual

Messages CTDO00 through CTDOxx
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDO01E OBJECT RECORD recordKey HAS NOT BEEN FOUND IN THE REPOSITORY ON THE req REQUEST.

Explanation: In the course of the req request (issued either from Control-D program or from DO screen), the recordKey record was not found in the Control-D database and req was not successfully completed. Either recordKey does not exist or there is a consistency violation in the Control-D database.

Corrective Action: Search IOALOG for a message about recordKey deletion or for a message indicating an access error regarding recordKey.

Messages CTDP00 through CTDPxx
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDP01E INVALID DIRECTION PARAMETER SPECIFIED - VALUE SHOULD BE "T", "B", "D", OR "U"

Explanation: An internal error caused an invalid parameter to be sent to the host when the Get-Report-List API was issued.

No report entries are returned by the host.

Corrective Action: Check the IOA Log file and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

CTDP02E USER=$SYSDATA IS NOT SUPPORTED

Explanation: $SYSDATA was specified in the USER parameter of the Control-D/WebAccess Server Report List filter. The $SYSDATA user is not supported by Control-D/WebAccess Server in Page On Demand mode.

No reports are retrieved.

Corrective Action: Change the USER parameter in the Report List filter to a valid user name.

CTDP03E ODATE, DECOLLATION DATE, AND RUN DATE MUST ALL BE THE SAME

Explanation: The ODATE, DECOLLATION DATE, and RUN DATE Report List filter fields contain different values. When retrieving reports according to all three date types, the same value must be entered for all three dates in the Report List filter.

No reports are retrieved.

Corrective Action: Correct the date values in the Report List filter or specify only one date type.
CTDP04E DECOLLATION TIME AND RUN TIME MUST BE THE SAME

**Explanation:** The DECOLLATION TIME and RUN TIME fields of the Report List filter must have the same value. When using both time types to retrieve reports, the same value must be specified for each time field in the Report List filter.

No reports are retrieved.

**Corrective Action:** Correct the time values in the Report List filter or specify only one time type.

CTDP05E MISMATCH BETWEEN DATES AND TIMES SPECIFIED

**Explanation:** The DATE and TIME Report List filter fields are not the same type. When using DATE and TIME to retrieve reports, the DATE and TIME Report List filter fields must be the same type. For example, if retrieving according to Decollation date, only the DECOLLATION TIME field or no time field is valid.

No reports are retrieved.

**Corrective Action:** Specify a valid combination of DATE and TIME fields in the Report List filter.

CTDP06E INVALID VALUE - SPECIFY \( \text{val1}, \text{val2}, \text{OR} \ \text{val3} \)

**Explanation:** Due to an internal error, an invalid value was specified in one of the Report List filter fields. The invalid value was sent to the host in the Get-Report-List API.

No report entries are returned by the host.

**Corrective Action:** Check the IOA Log file and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

CTDP07E RECIPIENTS LIST IS OVERFILLED. PLEASE INCREASE ITS SIZE

**Explanation:** The number of recipients that were encountered during the report list requests processing exceeded the estimate given in optional wish WDN004.

The request terminates with an error message.

**Corrective Action:** Correct the value in the DATA parameter in optional wish WDN004, then stop and restart the IOAGATE monitor.

CTDP08E INVALID SORT FIELD OR DIRECTION SPECIFICATION

**Explanation:** There is an invalid value in at least one sort key field or direction specified either in optional Wish WD3368 or in the Control-D/Web Access Report List request.

The Control-D/Web Access Report List request is rejected.

**Corrective Action:** Examine the values entered in sort key fields and directions, either in optional Wish WD3368 or the Report List request, and correct any invalid values.

CTDP09E ALLOWED SIZE OF SORTED REPORT LIST IS EXCEEDED

**Explanation:** The number of reports selected on the Control-D/Web Access Report List request exceeds the limit specified in optional Wish WD3368.

The Control-D/Web Access Report List request is rejected.
**Corrective Action:** Do one of the following:
- Increase the limit specified in optional Wish WD3368.
- Narrow the scope of the Report List request.

CTDP0AE INTERNAL ERROR RC=rc IN pgmname

**Explanation:** An internal error occurred during the processing of a Control-D/Web Access Report List request.

In this message, rc is the internal error return code and pgmname is the program name, where the error occurred.

The Control-D/Web Access Report List request is rejected.

**Corrective Action:** Call your INCONTROL administrator.

CTDP10E INTERNAL ERROR - INVALID REQUEST SUB-TYPE RECEIVED

**Explanation:** An internal error occurred when the user attempted to view a report in Control-D/WebAccess Server Page On Demand mode.

The report is not made available for viewing.

**Corrective Action:** Check the IOA Log file and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

CTDP11E INTERNAL ERROR - STORAGE NOT AVAILABLE FOR element

**Explanation:** The host server has insufficient memory to perform the view report request.

The report is not made available for viewing.

**Corrective Action:** Increase the REGION size of the server task on the host and restart the server.

CTDP12E INTERNAL ERROR - ILLEGAL USER FILE TYPE SPECIFIED IN OPEN REQUEST - fileType

**Explanation:** An internal error occurred when the user attempted to view a report in Control-D/WebAccess Server Page On Demand mode.

The report is not available for viewing.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

CTDP13E Page page longer than maximum output message length

**Explanation:** Page page, which is requested to be viewed by an end user in Control-D/WebAccess, is longer than the LOGATE buffer size. This value is specified in the MAXMSGSZ parameter that is found in the corresponding application server definition in the ECAAPPL member of the IOAENV library.

The report is not made available for viewing.
Corrective Action: If the MAXMSGSZ parameter is set to the maximum allowed value (32723), review the text report page size and change the LINECT parameter so that the page size fits into the MAXMSGSZ specification.

Old reports with a big page size should be redecollated. Because page separators inside of CDAM cannot be changed, these reports should be issued to SPOOL using the CTDAMUT1 utility with the RECOVER function and redecollated from SPOOL.

The optional wish WD3595 allows the viewing of incomplete pages instead of receiving the CTDP13E message.

CTDP14E You are not allowed to access report reportName / jobName / username

Explanation: The CTDX004 Control-D user exit or the CTDSE04 security module on the host does not allow the current user to view this report entry. For more information, see the VIEWCONF function within the exit.

The report is not available for viewing.

Corrective Action: To authorize a user to view this report, notify your INCONTROL administrator.

CTDP16E INTERNAL ERROR IN CTDTFLL, RC= rc

Explanation: An internal error occurred in one of the following cases:

- during an attempt to view a report in Control-D/WebAccess Server Page On Demand mode
- during an attempt to print a Control-V index report by a PRINT mission from the Control-D PRINT monitor

The error occurred in the CTDTFLL program in the host server during processing of a view report request. The report is not made available for viewing. The following are possible CTDTFLL rc (return code) values:

- 4—one or more continuation User records not found.
- 8—user file access error.
- 12—cannot read SYSDATA record.
- 16—GETMAIN failed because of insufficient memory.
- 20—too many GETMAIN calls.
- 32—FREEMAIN request error.

Corrective Action: Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

CTDP17E INTERNAL ERROR IN IOABOX, FUNCTION - function, RC=rc, FEEDBACK=feedbackCode

Explanation: An internal error occurred during an attempt to view a report in Control-D/WebAccess Server Page On Demand mode in the IOABOX program in the host server. The report is not available for viewing. The following are possible IOABOX rc (return code) values:
- 8--block point error
- 12--block get error
- 20--CDAM file allocation error
- 28--CDAM subsystem not operational
- 32--encoding error
- 36--unrecognized cache routine name
- 56--invalid media specified for report

When $rc=8$ or $rc=12$, there is a feedbackCode from the CDAM system.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Customer Support.

**CTDP18E** INTERNAL ERROR - ILLEGAL REPORT HANDLE SUPPLIED IN REQUEST

**Explanation:** An internal error occurred during an attempt to view a report in Control-D/WebAccess Server Page On Demand mode.

The report is not available for viewing.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

**CTDP19E** INTERNAL ERROR - UNABLE TO FREE STORAGE OF $element$, $RC=rc$

**Explanation:** An internal error occurred when the user attempted to exit from viewing a report in Control-D/WebAccess Server Page On Demand mode.

The host server cannot close the viewed report. Other problems may occur due to this error.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem, the return code in this message, and any additional error messages to BMC Software Customer Support.

**CTDP1AE** INTERNAL ERROR - ILLEGAL PAGE NUMBER REQUESTED

**Explanation:** An internal error occurred when the user attempted to view a report in Control-D/WebAccess Server Page On Demand mode.

The report is not made available for viewing.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

**CTDP1BE** INTERNAL ERROR IN CTVINXR, FUNCTION = $func$, $RC=rc$

**Explanation:** An internal error occurred in the CTVINXR program during an attempt to view a report in Control-D/WebAccess Server Page On Demand mode. The Report List filter included index name or index value (or both) selection criteria to retrieve only report sections corresponding to the index criteria.
The report is not made available for viewing.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

CTDP1CE REPORT ENTRY DOES NOT EXIST

**Explanation:** The report entry requested for viewing does not exist in the host database. It was probably deleted from the host database after the report list was retrieved and before the report view request was issued.

The report is not made available for viewing.

**Corrective Action:** Use the Refresh option to produce an updated report list that does not contain deleted report entries.

CTDP1DE INDEX ENTRY DOES NOT EXIST

**Explanation:** An attempted to view a report based on an index value specified in the Hit List filter failed, because the specified value does not exist in the current index for the report.

The report is not viewed.

**Corrective Action:** In the Filter window, select reports without the Index Value parameter, and then use the Viewing With Indexes option to select the required index value in order to view the report.

CTDP1EE NON-UNIQUE INDEX OR VALUE

**Explanation:** An attempt to view a report based on an index value specified in the Hit List filter failed, because the specified index name and index value prefix are not unique for the report. More than one index satisfies the specified index mask, or more than one value satisfies the specified value prefix entered in the Hit List filter.

The report is not viewed.

**Corrective Action:** In the Filter window, select reports without the Index Value parameter, and then use the Viewing With Indexes option to select the required index value in order to view the report.

CTDP1FI REPORT reportName / jobName / JOBID / userName / VIEWED FROM ACTIVE | MIGRATED FILE

**Explanation:** This information message is generated when the specified report is viewed by means of Page On Demand from the active or migrated file. The text of the message specifies the report name, job name, JobID, user name, and file type.

**Corrective Action:** No action is required.

CTDP1GI INDEX NAME: index_name

**Explanation:** This information message provides the index name for the accompanying message.

**Corrective Action:** Examine the accompanying message and its user response, and take the appropriate corrective action.
CTDP1HI INDEX VALUE: index_value

Explanation: This information message provides the index value for the accompanying message.
Corrective Action: Examine the accompanying message and its user response, and take the appropriate corrective action.

CTDP20E You are not authorized to use this option

Explanation: There is no authorization to perform this action under Page On Demand. This message is generated by the CTDX04 Control-D user exit or the CTDSE24 security module.
The requested function is not performed.
Corrective Action: If the user should be authorized to perform this function, call your INCONTROL administrator.

CTDP21I Report reportName / jobName / username will be retrieved in batch

Explanation: Some or all of the CDAM files of the report to be viewed or printed have migrated, and are not immediately available. At sites using DF/HSM with Control-D option WD2889 applied, a request for online viewing or immediate printing of a report causes the CTDTUSR program to check if the CDAM files of the report were migrated.
A batch job is submitted to recall these migrated CDAM files for later access.
Corrective Action: Wait until this batch job completed successfully. Then, try again to view the report.

CTDP22E INTERNAL ERROR - ILLEGAL INDEX HANDLE SUPPLIED IN REQUEST

Explanation: An internal error occurred during an attempt to access an index in Control-D/WebAccess Server in Page On Demand mode. An invalid index token was received from the client.
The index is not accessed.
Corrective Action: Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

CTDP23E ERROR - SECTION NUMBER REQUESTED IS NOT IN SEQUENCE

Explanation: An internal error occurred in the Page On Demand facility.
The requested report is not displayed.
Corrective Action: Notify your INCONTROL administrator, and do the following:
1. Activate debug levels 10, 11, 17, 18 and 19 in the Control-D Application Server.
2. Duplicate the operation that caused the error to occur.
3. Print the output from the DADUMP and DATRACE debug data sets.
4. Send the printed output to BMC Software Customer Support.
CTDP24E ERROR ACCESSING CDAM FILE, CTDPRSC FUNCTION=func, RC=rc

Explanation: An internal error occurred while attempting to access a CDAM file. The CDAM file being accessed was created by a printing mission using the STORE parameter set to YES. The report is not displayed.

Corrective Action: Notify your INCONTROL administrator and do the following:
1. Activate debug levels 10, 11, 17, 18 and 19 in the Control-D Application Server.
2. Duplicate the operation that caused the error to occur.
3. Print the output from the DADUMP and DATRACE debug data sets.
4. Send the printed output along with the message text and return code to BMC Software Customer Support.
5. Look for additional error messages in the IOALOG and the job log.

CTDP25E DYNAMIC ALLOCATION OF fileName FILE FAILED, RC=rc, REASON CODE=rsn

Explanation: An internal error occurred during dynamic allocation of temporary file, while Control-D was retrieving a PDF or CCIF report using the Page On Demand interface. The report is not displayed.

Corrective Action: Notify your INCONTROL administrator. Look for additional error messages in the job log generated in response to the problem. If the problem cannot be resolved, send a copy of the CTDParm member and the error messages in the job log to BMC Software Customer Support.

CTDP26E You are not authorized to cancel restore request for report reportName / jobName / username

Explanation: The user is not authorized to cancel restore request for the selected report. The un-restore request is rejected by the security exit. The un-restore operation is not performed.

Corrective Action: To get access to this action, notify your INCONTROL administrator.

The variables in this message are:
- reportName - the name of the report
- jobName - the name of the job that created the report
- username - the user for whom the report was created

CTDP27E DYNAMIC DEALLOCATION OF fileName FILE FAILED, RC=rc, REASON CODE=rsn

Explanation: An internal error occurred during dynamic deallocation of temporary file, while Control-D was retrieving a PDF or CCIF report by means of the Page On Demand interface. The report is not displayed.
Corrective Action: Notify your INCONTROL administrator. Look for additional error messages in the job log generated in response to the problem. If the problem cannot be resolved, send a copy of the CTDPARM member and the error messages in the job log to BMC Software Customer Support.

CTDP28E ERROR CREATING fileName FILE FOR VIEWING, RC=rc
Explanation: Control-D detected an internal error when the indexed section of a PDF or CCIF report was requested for viewing.
The report is not displayed.
Corrective Action: Notify your INCONTROL administrator and do the following:
1. Activate debug levels, 11, 17, 18 and 19 in the Control-D Application Server.
2. Duplicate the operation that caused the error to occur.
3. Look for additional error messages in the IOALOG, job log and SYSOUT data sets.
4. View the complete PDF or CCIF without Control-V indexes, to bypass the cause of the problem.
If you cannot solve the problem, record this error message, all other associated error messages, the results of viewing the PDF or CCIF without indexes, and the output of the DADUMP and DATRACE debug data sets. Contact BMC Software Customer Support.

CTDP29E ERROR OPENING fileName FILE, RC=rc
Explanation: Control-D detected an internal error while preparing an indexed section of a subset PDF or CCIF file for viewing. Control-D generated the return code, which is reserved for internal use.
The report is not displayed.
Corrective Action: Notify your INCONTROL administrator and do the following:
1. Activate debug levels, 11, 17, 18 and 19 in the Control-D Application Server.
2. Duplicate the operation that caused the error.
3. Look for additional error messages in the IOALOG, job log, and SYSOUT data sets.
4. View the complete PDF or CCIF without Control-V indexes to bypass the cause of the problem.
If you cannot solve the problem, record all associated error messages, the results of viewing the PDF or CCIF without indexes, and the output of the DADUMP and DATRACE debug data sets. Contact BMC Software Customer Support.

CTDP2AE INTERNAL ERROR - REPORT TYPE REQUESTED IS NOT CORRECT
Explanation: An internal error occurred in the Page On Demand facility.
The requested report is not displayed.
Corrective Action: Notify your INCONTROL administrator and do the following:
1. Activate debug levels 10, 11, 17, 18 and 19 in the Control-D Application Server.
2. Duplicate the operation that caused the error to occur.
3. Print the output of the DADUMP and DATRACE debug data sets.
4. Send the printed output to BMC Software Customer Support.
CTDP2BE AN IMAGE CAN BE VIEWED ONLY VIA AN INDEX VALUE

Explanation: The user tried to view an image report without specifying an index value. In order to view an image report, an index value must be specified.
The report is not displayed.
Corrective Action: Specify an index and an index value for the report.

CTDP2CE You are not authorized to restore report reportName / jobName / username

Explanation: The user is not authorized to restore the selected report.
The restore request is rejected by the security exit. The report is not restored.
Corrective Action: To get access to this action, notify your INCONTROL administrator.

CTDP2DI Report reportName / jobName / username will be restored from long-term archive

Explanation: This information message indicates that the requested report is being restored from a long-term archive. The restoration process is underway. It may take some time.
The report will be restored.
Corrective Action: No action is required.

CTDP2EI Report reportName / jobName / username is already waiting for restore

Explanation: The report requested for restore is already waiting for restore based on a previous request. The previous restore request for the same report, perhaps from another user, is being processed. The current request is unnecessary.
The report will be restored.
Corrective Action: No action is required.

CTDP2FE INTERNAL ERROR. RC=rc REASON CODE=rsn

Explanation: The IOATAE program encountered an internal error during report translation from ASCII to EBCDIC.
The request could not be performed.
Corrective Action: Have your INCONTROL administrator notify BMC Software Customer Support.

CTDP2GE Error during processing restore request for report reportName / jobName / username

Explanation: This error message indicates that an error occurred during report restore processing. Details of the error can be found in other messages that accompany this message.
The restore request is not performed.
Corrective Action: Check the log for additional messages concerning the restore failure.

CTDP2HE ERROR FROM CTDPRPS RC= rc

Explanation: An internal error occurred in the CTDPRPS program during a check on the requested report.
Possible error causes are:
rc Explanation
4 End of report is exceeded
8 Storage request failed
12 Invalid function accessing the CTDPRPSP program
16 Supplied buffer is too small to create line
20 Invalid report was processed
28 Error retrieving a resource for a normalized report
The request is not performed.
Corrective Action: Check the IOA Log file for additional messages associated with the error and try to correct the problem. If the error persists, collect all related information and contact BMC Software Customer Support.

CTDP2IE PROGRAM pgm FAILED. RC=rc

Explanation: An internal error occurred in the pgm program during report transformation.
The request is not performed
Corrective Action: Have your INCONTROL administrator notify BMC Software Customer Support.

CTDP2JE ERROR OPENING fileName FILE

Explanation: An error occurred while opening a temporary file for the report transformation process.
In this message, fileName is the name of the file that could not be opened.
The request is not performed.
Corrective Action: Notify your INCONTROL administrator or responsible system programmer.

CTDP2KE PUT TO fileName FILE FAILED, RC=rc

Explanation: An internal I/O error occurred while attempting to write to file fileName during the transformation process of a report.
The request is not performed.
Corrective Action: Have your INCONTROL administrator notify BMC Software Customer Support.

CTDP2LE ERROR IN ATTACH OF pgm, RC=rc

Explanation: An internal error was encountered while attempting to attach the pgm transformation program.
In this message, \texttt{rc} is a macro ATTACH return code. The request is not performed.

**Corrective Action:** Have your INCONTROL administrator notify BMC Software Customer Support.

**CTDP2ME Program pgm not found in load library, Rc=rc**

**Explanation:** The \texttt{pgm} transformation program was not found in the load library. \texttt{rc} is a macro BLDL return code, and is described in IBM documentation.

The request is not performed.

**Corrective Action:** Analyze the return code and correct the problem accordingly. If the problem persists or you cannot correct it, have your INCONTROL administrator notify BMC Software Customer Support.

**CTDP2NE Report reportName/jobName/username is too big, you are not allowed to view it**

**Explanation:** An attempt has been made to view a report which exceeds the limit defined in optional wish WD3353.

**Corrective Action:** If you think that you should be authorized to perform this action, contact your INCONTROL administrator.

**CTDP2OE DJ DEPARAM support is not available**

**Explanation:** APPLY was set in optional Wish WD3408 to YES, but the level of CTDDJE was less than that required for this setting to operate.

The requested function is not performed.

**Corrective Action:** Enter ICE and recompile the appropriate version of CTDDJE, which is in the SAMPEXIT library.

**CTDP2PI jobname/recipient/report ID=recordId SET TO RESTORE WITH MISSION misName**

**Explanation:** This information message indicates that the backed up (migrated) report is assigned to the \texttt{misName} mission for restoration.

The variables in this message are:

- \texttt{jobname} - the name of the job that created the report
- \texttt{recipient} - the user for whom the report was created
- \texttt{report} - the name of the report
- \texttt{recordId} - the internal database identifier of the report

**Corrective Action:** No action is required.
CTDP2RE Report *reportName / jobName / username* should be in "WAIT-RESTORE" state

**Explanation:** You cannot un-restore a record that is not scheduled to be restored. Only records in the WAIT-RESTORE state can be un-restored.

The un-restore operation is not performed.

The variables in this message are:
- *reportName* - the name of the report
- *jobName* - the name of the job that created the report
- *username* - the user for whom the report was created

**Corrective Action:** No action is required.

CTDP2SI Restore request canceled for report: *jobName / username / reportName* ID=recordId

**Explanation:** This information message indicates that the restore request to the backed up (migrated) report is canceled.

The variables in this message are:
- *reportName* - the name of the report
- *jobName* - the name of the job that created the report
- *username* - the user for whom the report was created
- *recordId* - the internal database identifier of the report

**Corrective Action:** No action is required.

CTDP2TI Restore request canceled for report: *reportName / jobName / username*

**Explanation:** This information message indicates that the restore request to the backed up (migrated) report is canceled.

The variables in this message are:
- *reportName* - the name of the report
- *jobName* - the name of the job that created the report
- *username* - the user for whom the report was created

**Corrective Action:** No action is required.

CTDP2UE Error during processing cancel restore request for report *reportName / jobName / username*

**Explanation:** An error occurred during cancellation of report-restore processing. The unrestore operation is not performed.
Corrective Action: For details of this error, check the log for related messages.

CTDP30E INTERNAL ERROR - ILLEGAL NOTES HANDLE SUPPLIED IN REQUEST
Explanation: An internal error occurred during an attempt to access notes in Control-D/WebAccess Server in Page On Demand mode. An invalid note token was received from the client.
The notes are not accessed.
Corrective Action: Check the IOA Log and the system log for additional error messages. Report the problem and additional error messages to BMC Software Customer Support.

CTDP31E INTERNAL ERROR - CONTINUATION REQUEST WITHOUT AN INITIAL REQUEST FOR INDEX OF NOTES
Explanation: An internal error occurred during an attempt to access notes in Control-D/WebAccess Server in Page On Demand mode. Only the continuation of a request was received. The initial request may have been lost due to a transmission error.
The notes are not accessed.
Corrective Action: Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

CTDP32W NOTES ARE NOT SUPPORTED FOR THIS REPORT IN PAGE ON DEMAND MODE
Explanation: Notes are accessible in Page On Demand mode only for reports decollated under IOA Release 5.0.4 and above. The notes of reports decollated by a previous version of Control-D are not accessible in Page On Demand mode.
The requested action is not performed.
Corrective Action: Create or access the note by means of the Control-D Notepad facility.

CTDP33E INTERNAL ERROR IN CTDNPS - FUNCTION "func " RC=rc
Explanation: The Control-D Application Server received a non-zero return code from the CTDNPS routine.
Notes cannot be accessed.
Corrective Action: Report this error message and any other relevant messages to BMC Software Customer Support.

CTDP34E INTERNAL ERROR - CANNOT TRANSLATE PAGE NUMBER OF NOTE
Explanation: An internal error occurred during an attempt to access a tag note for a report being viewed. A tag note cannot be accessed because the page number of the associated string is unknown.
The note is not accessed.
Corrective Action: Report this problem and any relevant error messages from the IOA Log and the Control-D Application Server to BMC Software Customer Support.

CTDP35E NOTE DATA IS TOO LONG - LIMITED TO 560 PER VERSION

Explanation: The note being created contains too many characters. Each note version is limited to 560 characters.

The note version is not created.

Corrective Action: Make the note shorter.

CTDP36E INTERNAL ERROR - REPORT NOTE DOES NOT EXIST - CANNOT ADD NEW VERSION

Explanation: An internal error occurred when trying to create a tag note for a report being viewed. A tag note cannot be created because of an internal error.

The note is not created.

Corrective Action: Report this problem and any relevant error messages from the IOA Log and the Control-D Application Server to BMC Software Customer Support.

CTDP37E CANNOT ADD VERSION - MAXIMUM NUMBER OF VERSIONS REACHED

Explanation: The user tried to add a new version of a note, but the maximum number of note versions already exists.

The new version is not added.

Corrective Action: Modify an existing note version or delete and replace the last version of the note.

CTDP38E INTERNAL ERROR - CANNOT CREATE REPORT NOTE - ALREADY EXISTS

Explanation: The attempt to create a General note for a report failed due to an internal error.

The note is not created.

Corrective Action: Report this problem and any relevant error messages from the IOA Log and the Control-D Application Server to BMC Software Customer Support.

CTDP39E ERROR IN INPUT MESSAGE LENGTH - MESSAGE IS TOO SHORT - REQUEST TYPE = type

Explanation: An internal communication error occurred between Control-D/WebAccess Server and the Control-D Application Server.

The message is ignored.

Corrective Action: Report this problem and any relevant error messages from the IOA Log and the Control-D Application Server to BMC Software Customer Support.
CTDP3AE I NTERNAL ERROR - CANNOT DELETE REPORT NOTE - DOES NOT EXIST

**Explanation:** The user attempted to delete a note attached to a report, but the note does not exist.

The note is not deleted.

**Corrective Action:** Report the entry for which you received this message and any relevant messages in the IOA Log and Control-D Application Server to BMC Software Customer Support.

CTDP3BE I NTERNAL ERROR FREEING STORAGE - RC=rc

**Explanation:** An internal error occurred when the user attempted to exit from the Note window in Control-D/WebAccess Server in Page On Demand mode.

The server on the host cannot free the associated note structure of the notes accessed. Other problems may occur because of this error.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and additional error messages to BMC Software Customer Support.

CTDP3CE REPORT ENTRY DELETED - CANNOT ACCESS NOTES

**Explanation:** The report entry corresponding to the notes being processed does not exist. It was probably deleted by another user or by the CTDDLCP utility.

The note is not saved or updated.

**Corrective Action:** Refresh the User Report list to get a current list of existing report entries.

CTDP3DE I NTERNAL ERROR - INVALID REQUEST SUB-TYPE - MUST BE BETWEEN 1 AND n

**Explanation:** An internal error occurred during an attempt to access a note of a report in Control-D/WebAccess Server in Page On Demand mode. An invalid request type was received from the client.

The note is not accessed.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

CTDP3EE I NTERNAL ERROR - INVALID NOTE TOKEN SUPPLIED IN REQUEST

**Explanation:** An internal error occurred during an attempt to access a note of a report in Control-D/WebAccess Server in Page On Demand mode. An invalid note handle was received from the client.

The note cannot be accessed.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.
CTDP3FE ACTION NOT DONE - NOTE IS CURRENTLY IN USE - TRY AGAIN LATER

**Explanation:** There was an attempt to delete an existing note or create a new version of a note that is currently accessed by another user. A note that is currently in use by one user can only be browsed by other users.

The requested action is not performed.

**Corrective Action:** No action is required.

CTDP3GE INTERNAL ERROR - PAGE NOT FOUND IN PAGE TABLE - CANNOT CREATE NOTE

**Explanation:** An internal error occurred when trying to create a tag note for a report being viewed. A tag note cannot be created because the page number of the associated string is unknown.

The note is not created.

**Corrective Action:** Exit from Page On Demand mode and try to create the note again. If you do not succeed, report this problem and any relevant messages from the IOA Log and the Control-D Application Server to BMC Software Customer Support.

CTDP3HS INSUFFICIENT STORAGE - INCREASE REGION SIZE

**Explanation:** There is insufficient memory in the host server to perform the notes access request.

The notes are not accessed.

**Corrective Action:** Increase the REGION size of the server task on the host, and restart the server.

CTDP3IE CANNOT CREATE NOTE - THIS NOTE ALREADY EXISTS

**Explanation:** You cannot create a tag note for a string that is already associated with a tag note.

The note is not created.

**Corrective Action:** Tag the note to a different string or create a new version of the existing note.

CTDP3JE YOU ARE NOT AUTHORIZED TO USE THIS OPTION

**Explanation:** You are not authorized to view, create or delete a note under Page On Demand. This message is generated by the CTDX024 Control-D user exit or the CTDSE24 security module for the ‘shownote,’ ‘delnote,’ or ‘addnote’ function.

The requested function is not performed.

**Corrective Action:** If the user should be authorized to perform this function, contact your INCONTROL administrator.

CTDP3KE YOU ARE NOT AUTHORIZED TO ACCESS NOTES

**Explanation:** You are not authorized to access notes under Page On Demand. This message is generated by the CTDX024 Control-D user exit or the CTDSE24 security module for the ‘viewnote’ function.
The notes are not retrieved.

**Corrective Action:** If the user should be authorized to perform this function, contact your INCONTROL administrator.

**CTDP3LE** YOU ARE NOT AUTHORIZED TO CREATE/EDIT/DELETE NOTES

**Explanation:** You are not authorized to write or delete notes under Page On Demand. This message is generated by the CTDX024 Control-D user exit or the CTDSE24 security module for the ‘editnote’ function. The note is not created or deleted.

**Corrective Action:** If the user should be authorized to perform this function, contact your INCONTROL administrator.

**CTDP40E** UNABLE TO ACCESS INDEXES - RC = rc

**Explanation:** An internal error occurred when accessing the Index facility of Control-D/WebAccess Server Page On Demand or Control-D PRINT monitor.

The requested action is not performed.

**Corrective Action:** Report this problem and any relevant error messages from the IOA Log and the Control-D Application Server to BMC Software Customer Support.

**CTDP41E** NOT ENOUGH SPACE FOR INDEXES - SOME INDEXES ARE MISSING

**Explanation:** There are too many index paths for this report. Some index paths cannot be accessed by means of Page On Demand.

Only the displayed index paths are accessible by means of Page On Demand.

**Corrective Action:** You can access the rest of the index paths by means of the Control-D Index facility.

**CTDP42E** INTERNAL ERROR - INVALID REQUEST SUB-TYPE - MUST BE BETWEEN 1 AND n

**Explanation:** An internal error occurred when the user attempted to access an Index facility of Control-D/WebAccess Server Page On Demand.

The function is not performed.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

**CTDP43E** INTERNAL ERROR FREEING STORAGE - RC = rc

**Explanation:** An internal error occurred when the user attempted to exit from the Index facility of Control-D/WebAccess Server Page On Demand.

The server on the host cannot close the index used. Other problems may occur because of this error.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.
CTDP44S INSUFFICIENT STORAGE - INCREASE REGION SIZE

Explanation: Insufficient memory in the host server to perform the index request. The indexes cannot be accessed.
Corrective Action: Increase the REGION size of the server task on the host, and restart the server.

CTDP45E REPORT ENTRY DELETED - CANNOT ACCESS INDEXES

Explanation: The report entry corresponding to the index being processed does not exist. The report entry was probably deleted by another user or by the CTDDELRP utility. The report is not displayed.
Corrective Action: Refresh the User Report list to get a current list of existing report entries.

CTDP46S ERROR IN INPUT MESSAGE LENGTH - MESSAGE IS TOO SHORT

Explanation: An internal communication error occurred between Control-D/WebAccess Server and the Control-D Application Server. The requested action is not performed.
Corrective Action: Report this problem and any relevant error messages from the IOA Log and the Control-D Application Server to BMC Software Customer Support.

CTDP47S ERROR IN INPUT MESSAGE - INDEX PATH IS INCORRECT

Explanation: Internal error in communication between Control-D/WebAccess Server and the Control-D Application Server. The report section is not retrieved.
Corrective Action: Report this problem and any relevant error messages from the IOA Log and the Control-D Application Server to BMC Software Customer Support.

CTDP48S INTERNAL ERROR - LOAD OF MODULE modName FAILED

Explanation: The Control-D Application Server failed to load the modName module. The requested function is not performed. Other problems may follow.
Corrective Action: Consult your INCONTROL administrator. If necessary, report this problem to BMC Software Customer Support.

CTDP49S INTERNAL ERROR - MISMATCH BETWEEN INDEX RECORD AND USER RECORD

Explanation: Internal error in the Control-D Application Server or Control-D PRINT monitor. The requested action is not performed.
Corrective Action: Report this problem, the report entry for which it occurred, and any relevant error messages from the IOA Log and the Control-D Application Server to BMC Software Customer Support.
CTDP4AS INTERNAL ERROR IN INPUT PARAMETERS

Explanation: An internal error occurred when accessing the Index facility of Control-D/WebAccess Server Page On Demand.
The requested action is not performed.

Corrective Action: Record this problem and any relevant error messages from the IOA Log and the Control-D Application Server to BMC Software Customer Support.

CTDP4BS INTERNAL ERROR - CANNOT LOCATE THE PREVIOUS VALUE FROM WHICH TO START

Explanation: An internal error occurred when accessing the Index facility of Control-D/WebAccess Server Page On Demand.
The requested action is not performed.

Corrective Action: Record this problem and any relevant error messages from the IOA Log and the Control-D Application Server to BMC Software Customer Support.

CTDP4CE CANNOT VIEW REPORT SECTION - INDEX PATH VALUES ARE NOT UNIQUE

Explanation: The index values in the selected path are not unique. The report cannot be viewed.
The report section is not viewed.

Corrective Action: Choose index values from the List of Index Values, and then attempt to View the report.

CTDP50I REPORT PRINTED FROM fileName FILE: jobName / userName / reportName

Explanation: This information message indicates that the immediate printing of the report was successful.
The specified report is printed.

Corrective Action: No action is required.

CTDP51E CTDDPR/CTDCNV/CTDUF MODULE NOT LOADED, RC=rc

Explanation: The CTDDPR, CTDCNV, or CTDUF module cannot be loaded.
In this message, \( rc \) is a macro LOAD return code, and is described in IBM documentation.
The request is not performed.

Corrective Action: Analyze the return code and fix the problem.

CTDP52E ERROR IN CTDDPR: INVALID DESTINATION

Explanation: An invalid destination was detected in the CTDDPR program for the report that was requested for printing. The sysout can not be allocated with this destination.
INCONTROL for z/OS Messages Manual

The print request is not performed.

Corrective Action: Correct the destination, and perform the print request again.

CTDP53E SYSOUT ALLOCATION FAILED, RC=rc, ERROR=rsn

Explanation: An error was encountered when the CTDDPR program tried to allocate a sysout.

In this message, \texttt{rc} and \texttt{rsn} are dynamic allocation return and reason codes, respectively. They are described in IBM documentation.

The request is not performed.

Corrective Action: Analyze the reason code, fix the problem, and issue the request again.

CTDP54E INCORRECT CONTINUATION RECORD

Explanation: An incorrect continuation record was encountered when opening a requested report. This indicates that the Control-D database contains corrupted records, because of an internal error. The request is not performed.

Corrective Action: Check the IOA Log file and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

CTDP55E ERROR IN CTDDPR: USER FILE ACCESS ERROR

Explanation: An internal error was encountered during access of a User Active Report file.

The request fails.

Corrective Action: Have your INCONTROL administrator notify BMC Software Customer Support.

CTDP56E ERROR IN CTDDPR: CDAM ERROR

Explanation: An I/O error was encountered during processing of an Immediate Print request from Control-D/Web Access. If the report is a migrated report, a more detailed message can be produced by viewing the report.

One of the following errors was encountered by the CTDTUSR program during processing of an Immediate Print request:

- A CDAM file or extent associated with the report being printed does not exist or is not cataloged.
- A CDAM file was restored to a DASD device with a different track size than the DASD device on which the CDAM file was created.

The request fails.

Corrective Action: Use the following suggestions to resolve the issue:

- Be sure all CDAM files exist on the appropriate DASD devices.
- Retry the Immediate Print request.
- View the report to see if an error is also encountered during viewing.

CTDP57E ERROR IN CTDDPR: INSUFFICIENT STORAGE

Explanation: There was insufficient storage to handle an immediate printing request
The print request fails.

**Corrective Action:** Increase the REGION parameter value for the Application Server.

**CTDP58E** **INTERNAL ERROR - IN CTDDPR - RC=rc**

**Explanation:** An internal error occurred during processing of the immediate print request from Control-D/Web Access.

The following table lists and explains the possible values for the return code (rc):

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>28</td>
<td>An internal error occurred while processing an Immediate Print request.</td>
</tr>
<tr>
<td>52</td>
<td>The error occurred during the GETINX function of the CTVDPC program.</td>
</tr>
<tr>
<td>56</td>
<td>The error occurred during the WRTINX function of the CTVDPC program.</td>
</tr>
<tr>
<td>60</td>
<td>The error occurred during the GETINX function of the CTVDPC program when data sets are uncataloged.</td>
</tr>
<tr>
<td>64</td>
<td>An allocation error of the index file occurred during the GETINX function of the CTVDPC program.</td>
</tr>
</tbody>
</table>

The print request is not performed.

**Corrective Action:** Use the following procedure to correct the error.

1. Check the IOA Log file and job log for additional messages associated with the error.
2. Correct the problem based on information found in the messages.
3. Re-submit the print request.
4. If the error persists, contact BMC Software Customer Support.

**CTDP59E** **MISSING OUTPUT STATEMENT stmt**

**Explanation:** The stmt required OUTPUT statement is missing from the Application Server procedure.

The request fails.

**Corrective Action:** Add the missing OUTPUT statement to the Application Server procedure.

**CTDP5AE** **ERROR IN READING PAGEDEF/FORMDEF MEMBER**

**Explanation:** The report requires a PAGEDEF/FORMDEF definition, but the corresponding member containing the definition was not found in the PAGEDEF/FORMDEF library.

The request is not performed.

**Corrective Action:** Notify your INCONTROL administrator.
**CTDP5BE ABEND IN IMMEDIATE PRINT \( \{ \text{scode} | \text{ucode} \} \)**

**Explanation:** An abend occurred during an immediate printing.

The variables in this message are:
- \( \text{scode} \) - a system ABEND code
- \( \text{ucode} \) - an user ABEND code

The report is not printed.

**Corrective Action:** Notify your responsible system programmer.

**CTDP5CE INTERNAL ERROR - INVALID HANDLE TYPE IN INPUT**

**Explanation:** An internal error occurred during processing of an Immediate Print request from Control-D/WebAccess. An invalid type of handle was received. The request is not performed.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

**CTDP5DE INTERNAL ERROR - ILLEGAL INDEX HANDLE SUPPLIED IN REQUEST**

**Explanation:** An internal error occurred during an attempt to access an index in Control-D/WebAccess. An invalid index token was received from the client. The index was not accessed.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. Report the problem and any additional error messages to BMC Software Customer Support.

**CTDP5EI REPORT REQUESTED FOR PRINT FROM fileName FILE: jobName / userName / reportName**

**Explanation:** This information message indicates that following a request by a Control-D/WebAccess user, the identified report was successfully submitted in a host for deferred printing.

The variables in this message are:
- \( \text{reportName} \) - the name of the report that is to be printed
- \( \text{jobName} \) - the name of the job that created the report
- \( \text{userName} \) - the name of the recipient to whom the report belongs
- \( \text{fileName} \) - the name of the file from which the \( \text{reportName} \) report is to be printed

The \( \text{reportName} \) report will be printed at the host machine with the corresponding Print Mission.

**Corrective Action:** No action is required.

**CTDP5FE ERROR IN DEFERRED PRINT REQUEST RC=rc**

**Explanation:** An error was encountered during the deferred printing of a report.
Valid values for \textit{rc}, and their explanations, are:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
<td>Insufficient memory</td>
</tr>
<tr>
<td>12</td>
<td>Invalid request</td>
</tr>
<tr>
<td>16</td>
<td>Error during the opening of a Control-D database file</td>
</tr>
<tr>
<td>36</td>
<td>USER record not found in the Control-D database</td>
</tr>
<tr>
<td>48</td>
<td>Invalid sub-request type.</td>
</tr>
</tbody>
</table>

The report is not printed.

\textbf{Corrective Action:} If the return code is 8, increase the amount of memory that is allowed for Control-D monitors. Otherwise, have your INCONTROL administrator notify BMC Software Customer Support.

\textbf{CTDP5GE AT LEAST ONE PRINT MISSION NAME SHOULD BE ENTERED}

\textbf{Explanation:} A print mission name was not specified in the deferred print request. A print mission name is mandatory.

The print request is not performed.

\textbf{Corrective Action:} Specify a print mission name, and enter the request again.

\textbf{CTDP5HE REQUESTED NUMBER OF PRINT COPIES EXCEEDS THE MAXIMUM ALLOWED}

\textbf{Explanation:} The requested number of report copies for printing exceeds the allowable maximum. The allowable maximum is defined in the MAXCOPIES field in the report decollating mission definition.

The print request is not performed.

\textbf{Corrective Action:} Correct the number of copies, and perform the print request again.

\textbf{CTDP5IW Action} \textit{action} denied for object keyed by \textit{objkey}

\textbf{Explanation:} A Control-D/WebAccess user issued a request for the identified action to the Control-D/WebAccess ruler (Logical View) with a specific key in the Control-D Repository, but the 024 Control-D User Exit or Security Exit denied the request.

The variables in this message are:

- \textit{action} - the action requested by the user
- \textit{objkey} - the key of the Control-D/WebAccess ruler in the Control-D Repository

The request is rejected.

\textbf{Corrective Action:} Call your INCONTROL administrator.
CTDP5J1 RULER *action: rulerName KEYYED BY <rulerKey> FOR REPORT <reportName>*

**Explanation:** A Control-D/WebAccess user requested an action on a Control-D/WebAccess ruler (Logical View) with a specific key in the Control-D Repository, and the request was fulfilled.

The variables in this message are:

- **rulerName** - the name of the Control-D/WebAccess ruler
- **rulerKey** - the key of the Control-D/WebAccess ruler in the Control-D Repository
- **reportName** - the name of the report
- **action** - the requested action

**Corrective Action:** No action is required.

CTDP62E CTDPCIN: CTDPRSC FUNCTION = func, RC = rc.

**Explanation:** An internal error occurred in the CTDPRSC internal module.

The error occurred during either of the following:

- preparation of a CCIF file for viewing
- creation of a Control-V index during printing mission processing

The report is not displayed or the index is not created.

**Corrective Action:** Notify your INCONTROL administrator and do the following:

1. Look for additional error messages in the IOA Log file, job log and SYSOUT data sets.
2. If the error occurred in Page-On-Demand, activate debug levels 10, 11, 17, 18 and 19 in the Control-D Application Server.
3. Duplicate the operation that caused the error to occur.
4. Send the DADUMP and DATRACE output debug data sets to BMC Software Customer Support.

CTDPD1E INVALID USER FILE - SPECIFY A, M, OR H

**Explanation:** The CTD/WA user’s request to copy, move, or delete the report was rejected. This is an internal error message that normally does not appear.

**Corrective Action:** Call your INCONTROL administrator.

CTDPD2W THE *req REQUEST FROM USER *userId IS REJECTED FOR REPORT <reportName>

**Explanation:** The CTD/WA user’s request to copy, move, or delete the report was rejected by the installation Exit program.

**Corrective Action:** Call your INCONTROL administrator.
CTDPD3I REPORT WITH KEY <reportID> IS act FROM USER user1 TO USER user2

**Explanation:** This information message indicates that the reportID report has been successfully copied or moved from user user1 to user user2, in accordance with the CTD/WA user's request.

In this message, reportID is the identity of the report.

The information about the report name is provided in message CTDI0CI, which follows this message.

**Corrective Action:** No action is required.

CTDPD4I REPORT WITH KEY <reportID> IS DELETED

**Explanation:** This informational message indicates that the reportID report has been successfully deleted from the repository, in accordance with the CTD/WA user's request.

In this message, reportID is the identity of the report.

The information about the report name is provided in message CTDI0CI, which follows this message.

**Corrective Action:** No action is required.

CTDPT1E RECIPIENT LIST IS EMPTY.

**Explanation:** The Recipient Tree, or the requested subtree, is empty.

**Corrective Action:** Correct the request and retry.

CTDPT2E INSUFFICIENT MEMORY TO PERFORM THE RECIPIENT TREE REQUEST.

**Explanation:** A shortage of storage occurred while processing the Recipient Tree.

The user's request that led to the processing of the Recipient Tree is rejected.

**Corrective Action:** Wait for a time, then retry the request. If the problem persists, call your INCONTROL administrator.

CTDPT3E INTERNAL ERROR IN RECIPIENT TREE REQUEST.

**Explanation:** An internal error occurred while processing a user's request.

The request is rejected.

**Corrective Action:** Call your INCONTROL administrator.

CTDPU1E RECORD TO BE UPDATED NOT FOUND

**Explanation:** The record to be updated in the Control-D database was not found. The record was deleted, perhaps by another user, before it could be updated.

The record is not updated.

**Corrective Action:** Refresh the received data.
CTDPU2E RECORD IS CHANGED, UPDATE FAILED

**Explanation:** A record in the Control-D database was changed after the user has received it, that is, after it was read and before it was updated.

The request fails.

**Corrective Action:** Refresh received data, and issue the update request again.

CTDPU3E ERROR OPENING THE IOA AM FILE

**Explanation:** An internal error occurred during the opening of the IOA AM file.

The IOA AM file is not opened.

**Corrective Action:** Have your INCONTROL administrator notify BMC Software Customer Support.

CTDPU5W Request rejected because of report status change.

**Explanation:** A record in the Control-D database was changed after the user has received it, that is, after it was read and before it was updated.

The request fails.

**Corrective Action:** Refresh received data, and issue the update request again.

Messages CTDQ00 through CTDQxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDQ01E SYNTAX ERROR $err_num$ IN LINE $lineNum$ OF MEMBER $$$CLIQUE$

**Explanation:** When entering parameters in the Control-D Objects Entry Panel (Screen DO), the parsing of the $$$CLIQUE Report Cliques description member failed.

**Corrective Action:** Fix the $$$CLIQUE member in the IOA MSG library.

CTDQ02E INVALID CLIQUE FORMAT

**Explanation:** While attempting to create a new Report Clique definition in the Control-D Report Cliques Entry Panel (Screen DO.1), the command NEW was typed with an invalid format.

The SELECT FORMAT window is displayed.

**Corrective Action:** No action is required.

CTDQ03E SYNTAX ERROR IN REPORT CLIQUE TEXT; KEYWORD=$keywd$

**Explanation:** The requested entry contains invalid data in the $keywd$ keyword.

**Corrective Action:** Correct the non-valid value using DO screen.
CTDQ04E MISSING VALUE FOR MANDATORY KEYWORD

Explanation: No value was inserted in a mandatory keyword.
Corrective Action: Insert a value for the keyword.

CTDQ05E VALUE LENGTH IS NOT IN RIGHT BOUNDS

Explanation: The value that has been inserted in a keyword is either too long or too short.
Corrective Action: Correct the keyword value.

CTDQ06E INVALID NUMBER

Explanation: The value that has been inserted in a keyword that requires a numeric value is not a valid number.
Corrective Action: Correct the keyword value.

CTDQ07E NUMBER IS NOT IN RIGHT BOUNDS

Explanation: The value that has been inserted in a keyword that requires a numeric value is either too small or too large.
Corrective Action: Correct the keyword value.

CTDQ08E COMBO VALUE DOES NOT MATCH ANY OPTION

Explanation: The value that has been inserted in a keyword does not correspond to one of the options on the screen.
Corrective Action: Correct the keyword value.

CTDQ09E REPORT CLIQUE cliqName ALREADY EXISTS

Explanation: An attempt has been made to save a new Report Clique definition using a name that has already been used for an existing Report Clique definition.
Corrective Action: Save the new Report Clique definition under a different name.

CTDQ0AE OBJECT NOT FOUND

Explanation: A file entry has been selected for editing, deleting, or browsing, but the file entry does not exist. Perhaps the object was deleted by another user or CTD/WA working simultaneously.
Corrective Action: Check the parallel processing in LOG using the Log screen, which you access through the IOA Primary Option menu. Use the CTDDIG utility to check the integrity of the Permanent User file (for object types 1-4) or the Active User file (for object type 5).

CTDQ0CE THIS COMMAND IS ALLOWED IN EDIT MODE ONLY

Explanation: The command "SAVE" was entered, but the user entered the Report Clique screen (Screen DO.Z) in Browse mode.
The SAVE command is rejected.
Corrective Action: No action is required.

CTDQ0DE TO BROWSE RESOURCES OF TYPE 'CLIQUE' USE OPTION 4 ON OBJECTS ENTRY PANEL

Explanation: Having opened the Control-D Resources Entry Panel (Screen DO.3) by entering "3" in the COMMAND field of the Control-D Objects Entry Panel (Screen DO), the user entered "CLQ" in the RESOURCE TYPE field.

The Control-D Resources Entry Panel (Screen DO.3) is designed to list resources of all types other than Clique Resources.

The selection of the CLQ option is rejected.

Corrective Action: Exit the Control-D Resources Entry Panel (Screen DO.3) and open the Control-D Clique Resources Entry Panel (Screen DO.4).

CTDQ0EW THE UNKNOWN KEYWORD(S) WILL BE DELETED FROM THE CLIQUE DURING SAVE

Explanation: A Control-D Report Clique contains keywords that are not defined in the Report Clique description member, because the member has been changed since the Report Clique was last saved. The user has edited and then tried to save the Report Clique. This message warns that the undefined keywords will be deleted when the Report Clique is saved.

Corrective Action: No action is required.

CTDQ0GE THE OPTION IS NOT ALLOWED ON THIS LINE

Explanation: In one of the following Control-D screens
- the Resources List screen (Screen DO.R)
- the Reports Cliques List screen (Screen DO.C)
- the Resource Sets List screen (Screen DO.T)

The user typed D (delete) beside a line, but the line had already been deleted.

Corrective Action: No action is required.

CTDQ0HW ONLY THE FIRST 200000 BYTES OF THE HUGE RESOURCE CAN BE BROWSED

Explanation: An attempt has been made to browse a very large resource from the Control-D Resources List screen (Screen DO.R), but no more than 200,000 bytes of data can be browsed from this screen.

Only the first 200,000 bytes of data are displayed.

Corrective Action: No action is required.

Messages CTDR00 through CTDRxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.
CTDR01E INVALID PARAMETER, VALID PARAMETER: MODE=TEST OR MODE=PROD

**Explanation:** A MODE parameter error was detected in the CTDRS utility.
The CTDRS utility terminates with a condition code of 8.

**Corrective Action:** Correct the JCL and rerun the job. The MODE parameter in the CTDRS utility must be set to one of the following values:
- **TEST** - The utility runs in simulation mode and performs an analysis. It issues error messages that indicate when there are orphan RESSET records and RESOURCES.
- **PROD** - The utility runs in production mode and deletes orphan RESSET, RESOURCE records from the permanent user file, and members from the Control-D RESLIB library.

CTDR02I UTILITY CTDRS STARTED IN mode MODE

**Explanation:** This information message indicates that the CTDRS -- Delete orphan resource records utility started in TEST or PROD mode.

**Corrective Action:** No action is required.

CTDR03E ORPHAN RESOURCE SET jobName/counter IS DETECTED

**Explanation:** The CTDRS utility detected an orphan RESSET record. The variables in this message are:
- **jobName** - The name of the job to which the orphan RESSET record belongs.
- **counter** - The counter part of the orphan RESSET record key.
If the CTDRS utility is running in PROD mode, the orphaned RESSET record will be removed.

**Corrective Action:** No action is required.

CTDR04E RESOURCE SET IS MISSING FOR SYSDATA jobName/counter FILE {ACT | HST | MIG}

**Explanation:** This message indicates that the CTDRS utility cannot find the RESSET record that was referred by the SYSDATA record jobName/counter. The variables in this message are:
- **jobName** - The name of the job to which the SYSDATA record belongs.
- **counter** - The counter part of the SYSDATA record key.
The CTDRS utility continues processing.

**Corrective Action:** An end-user might experience problems when viewing a corresponding report. Investigate why the RESSET record was removed and try to restore the missing RESSET record to its original state.

CTDR05I SYSDATA RECORDS WITH RESOURCE SET IN THE {ACT | HST | MIG} FILE num

**Explanation:** This information message indicates the number of found SYSDATA records which contain references to RESSET records in the specified user file.
Corrective Action: No action is required.

CTDR06I ORPHAN RESOURCE SET jobName/counter IS DELETED
Explanation: This information message is issued by the CTDRSD utility and indicates that the utility has deleted the orphaned RESSET record. The variables in this message are:
- jobName - The name of the job to which the orphan RESSET record belongs.
- counter - The counter part of the orphan RESSET record key.
Corrective Action: No action is required.

CTDR07I UTILITY CTDRSD ENDED.
Explanation: This information message indicates that the CTDRSD -- Delete orphan resource records utility ended.
Corrective Action: No action is required.

CTDR08I NO ERRORS DETECTED.
Explanation: This information message indicates that the CTDRSD utility ended with no errors detected.
Corrective Action: No action is required.

CTDR09I ORPHAN RESOURCE SET RECORDS num
Explanation: This information message displays the number of found orphan RESSET records.
Corrective Action: No action is required.

CTDR0AE ERROR WHILE LOADING CTDAOBJ IS ENCOUNTERED
Explanation: An error occurred during an attempt to load the CTDAOBJ module. Possible causes are:
- The IOA Load library is not in the load modules search list.
- There is not enough memory to load the module.
- The CTDAOBJ module does not exist in the Load library.
- The IOA Load library is in the Linklist, and someone has updated the library without performing a refresh for the LLA.
- There is some other system-oriented reason which may be found in the syslog.
The CTDRSD utility ends with a condition code of 16.
Corrective Action: Try the following options to resolve the error:
Look on the system log for additional messages related to the problem. Then try one of the following:

- If the IOA Load library is not in the search list, add a STEPLIB DD statement to the library.
- If the loading failed because of lack of memory, increase the region size.
- If the Load library has been modified and the IOA Load library is in the Linklist, refresh LLA.
- Rerun the CTDRSD utility.

**CTDR0BE OPEN FAILED FOR OBJECT FILE RC = rc**

**Explanation:** The CTDRSD utility failed to open the OBJECT database. In this message, `rc` is the return code generated by the error.

The CTDRSD utility ends with a condition code of 16.

**Corrective Action:** Check the IOALOG and the system log for messages which indicate the reason that the open failed. If you are unable to solve the problem, report the contents of the messages to BMC Software Customer Support.

**CTDR0CI RESOURSE SET RECORDS IN THE PERMANENT USER FILE num**

**Explanation:** This information message displays the number of RESSET records found in the User file.

**Corrective Action:** No action is required.

**CTDR0DE GET RESOURCE SET LIST ERROR**

**Explanation:** An error occurred while accessing a RESSET record list. This message accompanies additional messages, which provide detailed information.

The CTDRSD utility ends with a condition code of 16.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. If you are unable to solve the problem, report the contents of the messages and any additional error messages to BMC Software Customer Support.

**CTDR0EE SORT FAILED WITH RC = rc**

**Explanation:** The site SORT utility, which was invoked by the CTDRSD, has ended with errors. In this message, `rc` is the return code generated by the SORT utility.

The CTDRSD utility ends with a condition code of 16.

**Corrective Action:** Refer to the SORT messages of the job and to the user guide for the SORT facility used at your site. If necessary, call your system programmer for assistance.

**CTDR0FE OPEN OF SORT FILE FAILED. DDNAME ddname**

**Explanation:** An OPEN failure for the `ddname` DD statement was detected for the CTDRSD utility. The main program of the CTDRSD utility could not open the `ddname` DD statement. The specified DD statement is missing from the JCL for the CTDRSD utility.

The CTDRSD utility ends with a condition code of 16.

**Corrective Action:** Add the missing DD statement and rerun the CTDRSD utility.
CTDR0GE GET RESOURCE LIST ERROR

**Explanation:** An error occurred while accessing a RESOURCE list. This message accompanies additional messages, which provide detailed information.

The CTDRSU utility ends with a condition code of 16.

**Corrective Action:** Check the IOA Log and the system log for additional error messages. If you are unable to solve the problem, report the contents of the messages and any additional error messages to BMC Software Customer Support.

CTDR0HI RESOURCES IN THE PERMANENT USER FILE num

**Explanation:** This information message displays the number of RESOURCE records found in the permanent user file.

**Corrective Action:** No action is required.

CTDR0IE RESOURCE res_name/res_typ/rep_format/res_sum IS MISSING FOR RESOURCE SET jobName/counter

**Explanation:** This message indicates that the CTDRSU utility cannot find the RESOURCE record or the member of the Control-D RESLIB library that has been referred by the RESSET record jobName/counter. The variables in this message are:

- res_name - The name of the requested resource.
- res_typ - The code of the type of the requested resource.
- rep_format - The code of the format of the decollated report.
- res_sum - The checksum of the requested resource.
- jobName - The name of the job to which the orphan RESSET record belongs.
- counter - The counter part of the orphan RESSET record key.

The CTDRSU utility continues processing.

**Corrective Action:** An end-user might have problems with viewing the corresponding report. Investigate why the RESOURCE was removed and try to restore the missing resource to its original state.

CTDR0JE ORPHAN RESOURCE res_name/res_typ/rep_format/res_sum IS DETECTED

**Explanation:** The CTDRSU utility detected an orphan RESOURCE. The variables in this message are:

- res_name - The name of the requested resource.
- res_typ - The code of the type of requested resource.
- rep_format - The code of the format of the decollated report.
- res_sum - The checksum of the requested resource.

If the CTDRSU utility is running in PROD mode, the orphaned RESSET record will be removed.

**Corrective Action:** No action is required.
CTDR0KE ORPHAN CLIQUE RESOURCE Rep_Clique_name/res_sum IS DETECTED

**Explanation:** The CTDRSD utility detected an orphan CLIQUE RESOURCE. The variables in this message are:

- *Rep_Clique_name* - The Report Clique Definition name.
- *res_sum* - The checksum of the requested Report Clique resource.

If the CTDRSD utility is running in PROD mode, the orphaned CLIQUE RESOURCE will be removed.

**Corrective Action:** No action is required.

CTDR0LI ORPHAN RESOURCE res_name/res_typ/rep_format/res_sum IS DELETED

**Explanation:** This information message is issued by the CTDRSD utility and indicates that the utility has deleted the orphaned RESOURCE. The variables in this message are:

- *res_name* - The name of the requested resource.
- *res_typ* - The code of the type of the requested resource.
- *rep_format* - The code of the format of the decollated report.
- *res_sum* - The checksum of the requested resource.

**Corrective Action:** No action is required.

CTDR0MI ORPHAN CLIQUE RESOURCE Rep_Clique_name/res_sum IS DELETED

**Explanation:** This information message is issued by the CTDRSD utility and indicates that the utility has deleted the orphaned CLIQUE RESOURCE. The variables in this message are:

- *Rep_Clique_name* - The Report Clique Definition name.
- *res_sum* - The checksum of the requested Report Clique resource.

**Corrective Action:** No action is required.

CTDR0NI ORPHAN RESOURCES num

**Explanation:** This information message displays the number of found orphan RESOURCE records from the permanent user file and/or members of the Control-D RESLIB library.

**Corrective Action:** No action is required.

CTDR0OE CLIQUE RESOURCE Rep_Clique_name/res_sum IS MISSING FOR RESOURCE SET jobName/counter

**Explanation:** This message indicates that the CTDRSD utility cannot find the CLIQUE RESOURCE referred by the RESSET record *jobName/counter*. The variables in this message are:
- **res_sum** - The checksum of the requested Report Clique resource.
- **jobName** - The name of the job to which the RESSET record belongs.
- **counter** - The counter part of the RESSET record key

The CTDRSD utility continues processing.

**Corrective Action:** An end-user might experience problems when attempting to view the corresponding report. Investigate why the CLIQUE RESOURCE was removed and try to restore the missing CLIQUE RESOURCE to its original state.

**CTDROPE ORPHAN RESOURCE res_name/res_typ/rep_format/res_sum IS NOT DELETED**

**Explanation:** Either the orphaned RESOURCE record from the permanent user file or a member of the Control-D RESLIB library was not deleted by the CTDRSD utility. This message follows other messages that explain the nature of the error. The variables in this message are:
- **res_name** - The name of the requested resource.
- **res_typ** - The code of the type of the requested resource.
- **rep_format** - The code of the format of the decollated report.
- **res_sum** - The checksum of the requested resource.

The CTDRSD utility continues processing.

**Corrective Action:** Review the messages that precede this message for reasons for the deletion failure.

**CTDROQE ORPHAN CLIQUE RESOURCE Rep_Clique_name/res_sum IS NOT DELETED**

**Explanation:** The orphaned CLIQUE RESOURCE was not deleted by the CTDRSD utility. This message follows other messages that explain the nature of the error. The variables in this message are:
- **res_sum** - The checksum of the requested Report Clique resource.

The CTDRSD utility continues processing.

**Corrective Action:** Review the messages that precede this message for reasons for the deletion failure.

**CTDRORE RESOURCE SET jobName/counter IS NOT DELETED**

**Explanation:** The orphaned RESSET record was not deleted by the CTDRSD utility. This message follows other messages that explain the nature of the error. The variables in this message are:
- **jobName** - The name of the job to which the orphan RESSET record belongs.
- **counter** - The counter part of the orphan RESSET record key.

The CTDRSD utility continues processing.
Corrective Action: Review the messages that precede this message for reasons for the deletion failure.

CTDR0SI  DELETED RESOURCE SET RECORDS num
Explanation: This information message displays the number of deleted RESSET records.
Corrective Action: No action is required.

CTDR0TI  DELETED RESOURCES num
Explanation: This information message displays the number of deleted RESOURCE records from the permanent user file and/or members of the Control-D RESLIB library.
Corrective Action: No action is required.

CTDRS0I  CTDUFPRRT STARTED
Explanation: This information message indicates that CTDRSTMS, the massive restore request utility, has started.
Corrective Action: No action is required.

CTDRS1E INVALID PARAMETER: parm
Explanation: The parm input parameter specified for the CTDRSTMS utility is not valid.
The utility stops.
Corrective Action: Correct the invalid input parameter and rerun the job.

CTDRS2E REDUNDANT PARAMETER: parm
Explanation: The parm input parameter for the CTDRSTMS utility has already been specified.
The utility stops.
Corrective Action: Delete the extra input parameter from the JCL and rerun the job.

CTDRS3E THE PARAMETER parm MUST BE SPECIFIED
Explanation: The required parm input parameter for the CTDRSTMS utility is missing.
The utility stops.
Corrective Action: Insert the missing parameter into the JCL and rerun the job.

CTDRS6I NUMBER OF SELECTED RECORDS: number
Explanation: This information message issue displays the total number of records selected by the CTDRSTMS utility.
Corrective Action: No action is required.

CTDRSEI  CTDUFRST ENDED WITH ERRORS
Explanation: This information message indicates that the CTDRSTMS utility finished with errors.
Corrective Action: Examine other messages relating to the CTDRSTMS utility to identify and fix the problem, and then rerun the utility.

CTDRSF1 CTDRSTMS ENDED OK
Explanation: This information message indicates that the CTDRSTMS utility finished successfully.
Corrective Action: No action is required.

CTDRSGI KEY='reportKey', ODATE=date
Explanation: This information message identifies a report that was selected by the CTDRSTMS utility.
The variables in the message are:
- reportKey - VSA key of the selected report.
- date - decollation mission order date of the report. The date format is one of the following, depending on the site standard defined in the IOAPARM installation member.
  - dd/mm/yy
  - mm/dd/yy
  - yy/mm/dd
Corrective Action: No action is required.

CTDRSHI LIST OF SELECTED REPORTS:
Explanation: This information message is the title for the list of selected reports (CTDRSGI messages) that are issued by the CTDRSTMS utility.
Corrective Action: No action is required.

Messages CTDS00 through CTDSxx
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDS20E ACCESS DENIED FOR USER userName: rsn
Explanation: The IOASE16 security module or the IOAZ016 user exit rejected the request to log on to the Control-D Application Server. The message displays the reason provided by the security package for rejecting the user.
For an explanation of the reason code (rsn), see your security software documentation.
The variables in this message are:
- userName - the name of the user
- rsn - the reason for denying access
The login request is rejected.
Corrective Action: Check that the user name and password are spelled correctly and retry. If necessary, contact your security administrator.

CTDS21W fileName user file unlocked. Lock was done by progName rc=rc.

Explanation: A post processing request routine revealed that one of the user files was held and not released during request processing. The routine releases the file.

The variables in this message are:
- fileName - the name of the user file. Valid values are:
  - ACT
  - MIG
  - HST
- progName - the name of the program that held and did not release the file
- rc - the return code of the release command. A return code of 04 means that the file was successfully released. A return code greater than 04 means that there was an error in the release command.

Corrective Action: No action is required.

Messages CTDT00 through CTDTxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDT01I TRANSFER START GROUP groupId REPORT repId

Explanation: This information message indicates that the transfer of the repId report in the groupId group from the Control-D Session Agent started.

Corrective Action: No action is required.

CTDT02I TRANSFER ENDED OK GROUP groupId, BYTES numBytes (trfr_rate BYTES/SEC), REPORT repId

Explanation: This information message indicates that the transfer of the repId report in the groupId group from the Control-D Session Agent ended successfully.

The variables in this message are:
- groupId - the identity of the group that contains repId
- repId - the identity of the report that was transferred
- numBytes - the number of bytes transferred
- trfr_rate - the transfer rate, in bytes per second

Corrective Action: No action is required.
CTDT04E FUNCTION func WAS SUPRESSED BY CTDSE27/CTDX027 EXIT GROUP groupId REPORT repId

Explanation: A File Transfer option function has been suppressed, either by Control-D Security Exit 27, or by Control-D User Exit 27.

The variables in this message are:
- func - the File Transfer option function that was suppressed
- groupId - the identity of the group that contains repId
- repId - the identity of the report that was to be transferred

The repId report is not transferred.

Corrective Action: If you use Control-D Security Exit 27 to perform some special function instead of or in addition to the standard function, no intervention is required.
Otherwise, correct Control-D Security Exit 27 or Control-D User Exit 27.

CTDT05E UNEXPECTED RETURN CODE rc FOR FUNCTION func FROM CTDSE27/CTDX027 EXIT GROUP groupId REPORT repId

Explanation: An unexpected return code was returned by either Control-D User Exit 27 or Control-D Security Exit 27.

The variables in this message are:
- rc - the return code
- func - the function that was being performed when rc was returned
- groupId - the identity of the group that contains repId
- repId - the identity of the report on which func was being performed

The transfer of repId from the Control-D Session Agent is terminated.

Corrective Action: Correct Control-D Security Exit 27 or Control-D User Exit 27.

CTDT06E ERROR IN FTOPARM errorText

Explanation: An error was found in the text of a member in the Control-D FTOPARM library.
The transfer of the current message from the Control-D Session Agent is terminated.

Corrective Action: Correct the problematic text in the Control-D FTOPARM library.

CTDT07E TRANSFER HAS BEEN TERMINATED GROUP groupId, BYTES numBytes (trfr_rate BYTES/SEC), REPORT repId

Explanation: The transfer of a report has been terminated.
The variables in this message are:
The transfer of repId is terminated.

**Corrective Action:** Examine accompanying messages that explain the reason for the termination of this transfer.

CTDT08E TRANSFER ENDED NOT OK GROUP groupId, BYTES numBytes (trfr_rate BYTES/SEC), REPORT repId

**Explanation:** The transfer of a report ended unsuccessfully (NOT OK).

The variables in this message are:

- **groupId** - the identity of the group that contains repId
- **numBytes** - the number of bytes transferred
- **trfr_rate** - the transfer rate, in bytes per second
- **repId** - the identity of the report that was being transferred

**Corrective Action:** Examine accompanying messages that explain the reason for the transfer ending NOT OK.

CTDTR0I CTDUPTR UTILITY STARTED

**Explanation:** This information message indicates that CTDUPTR, the utility that updates the Control-D recipient tree, has begun.

**Corrective Action:** No action is required.

CTDTR1I CTDUPTR UTILITY COMPLETED SUCCESSFULLY

**Explanation:** This information message indicates that the CTDUPTR utility finished without errors.

**Corrective Action:** No action is required.

CTDTR2E CTDUPTR UTILITY ENDED WITH ERRORS

**Explanation:** This information message indicates that the CTDUPTR utility discovered problems during processing. Additional information on the problems discovered is available in the job log.

The utility stops.

**Corrective Action:** Examine the job log for error messages describing the problem. Make any necessary corrections and rerun the utility.
CTDTR3I CONTROL-D RECIPIENT TREE MEMBER \textit{memname} SAVED

\textbf{Explanation:} This information message indicates that the Control-D recipient tree member (\textit{memname}) has been updated by the CTDUPTR utility and saved in the library.

\textbf{Corrective Action:} No action is required.

CTDTR4E INVALID PARAMETER: \textit{parm}

\textbf{Explanation:} The \textit{parm} input parameter specified in the JCL for the CTDUPTR utility is not valid. The utility stops.

\textbf{Corrective Action:} Correct the invalid input parameter (\textit{parm}) in the JCL and rerun the utility.

CTDTR5E THE PARAMETER \textit{parm} MUST BE SPECIFIED

\textbf{Explanation:} The \textit{parm} input parameter for the CTDUPTR utility is missing. The CTDUPTR utility requires the \textit{parm} parameter.

The utility stops.

\textbf{Corrective Action:} Add the missing parameter to the JCL and rerun the utility.

CTDTR6E REDUNDANT PARAMETER: \textit{parm}

\textbf{Explanation:} The \textit{parm} input parameter for the CTDUPTR utility has already been specified. The same parameter is specified twice.

The utility stops.

\textbf{Corrective Action:} Remove the extra input parameter from the JCL and rerun the utility.

CTDTR7E NO OPERATIONS SPECIFIED IN THE INPUT PARAMETERS

\textbf{Explanation:} No operations have been found in the input parameters for the CTDUPTR utility. The input parameters should contain at least one of the following operations:

- SELECT
- DELETE
- INSERT
- COPY

The utility stops.

\textbf{Corrective Action:} Correct the input parameters and rerun the job.

CTDTR8E RECIPIENT LEVEL \textit{lv} IS NOT DEFINED IN CTDParm

\textbf{Explanation:} The recipient level \textit{lv} specified in the input parameter for the CTDUPTR utility is not found in the available levels list in CTDParm.

The utility stops.

\textbf{Corrective Action:} Use the following procedure:
1. Examine the input parameters in the JCL.
2. Do one of the following actions:
   3. Correct the value for the recipient level
   4. Add the new level to CTDParm
   5. Rerun the utility.

**CTDTR9I  CTDUPTR UTILITY IS RUNNING IN SIMULATION MODE**

**Explanation:** This information message indicates that the CTDUPTR utility is running in simulation mode because the MODE=TEST parameter has been specified.

The utility issues the updating report but does not save the updated Recipient tree member in the library.

**Corrective Action:** If all update actions in the issued report are correct, set the MODE parameter to PROD (MODE=PROD) and run the utility to update the Recipient Tree.

**CTDTRAW  RECIPIENT  *recipient name* IS NOT DELETED BECAUSE IT HAS CHILD ELEMENTS**

**Explanation:** This warning message is issued when a DELETE operation is specified, without the WITHCHILD parameter, for a recipient that has child elements.

The utility skips the DELETE operation and continues processing.

**Corrective Action:** Use the following procedure:

1. Verify the specified recipient and all its child elements should be deleted.
2. If the recipient should be deleted, add the WITHCHILD parameter to the DELETE operation.
3. Rerun the utility.

**CTDTRBI  NUMBER OF RECIPIENTS IN THE TREE IS  *nnnnnnn*.

**Explanation:** This information message indicates that the Control-D Recipient tree contains *nnnnnn* recipient entries after updating by the CTDUPTR utility.

**Corrective Action:** No action is required.

**CTDTRCI  THE RECIPIENT TREE MEMBER  *memname* IS NOT SAVED**

**Explanation:** This information message indicates that the CTDUPTR utility did not save the updated Recipient tree member *memname* in the library.

The utility issues the updating report but the updated Recipient tree member is not saved in the library.

**Corrective Action:** This message is issued in the following cases:
The utility ran in TEST mode. For more information, see the explanation of message CTDTR9I.

The utility discovered problems during processing. Examine the job log for error messages describing the problem, correct the problem and rerun the utility.

CTDTRDE RECIPIENT=recipient name, STATEMENT=statement

**Explanation**: This message follows the error message CTD003E and gives information on the Recipient tree member statement causing the error.

The utility stops.

**Corrective Action**: Use the following procedure to correct this problem:

1. Verify that the Recipient tree member name (*recipient name*) specified is correct.
2. If the member name is incorrect, set the MEMBER parameter to the correct value.
3. If the member name is correct, check the specified statement in this member and make the appropriate changes to fix the problem.
4. Rerun the utility.

CTDTREW RECIPIENT recipient name IS NOT FOUND TO BE COPIED

**Explanation**: This warning message is issued when the recipient entry, specified as the source for a COPY operation, is not found in the recipient tree.

The utility skips the COPY operation and continues processing.

**Corrective Action**: Correct the *recipient name* specified as the source to be copied and rerun the utility.

CTDTRFW NO RECIPIENTS SATISFY TO operation PARAMETERS

**Explanation**: This warning message indicates that no recipient entries satisfied the selection parameters specified for the SELECT or DELETE operation.

The operation is skipped and the utility continues processing.

**Corrective Action**: Adjust the selection parameters and rerun the utility.

CTDTRGW CTDUPTR UTILITY COMPLETED WITH WARNINGS

**Explanation**: This warning message indicates that the CTDUPTR utility finished processing and wrote warning messages to the job log.

The utility ends with the return code 4. If PROD mode has been specified, the updated Recipient tree member is saved in the library.

**Corrective Action**: Make the appropriate changes to the JCL based on the information contained in the warning messages in the job log and rerun the utility.

CTDTRHW RECIPIENT=recipient name, PARAMETER=parameter

**Explanation**: This message indicates the parameter line that caused the warning message (either CTDTRIW or CTDTRJW) that follows this line.
The problematic parameter line is skipped and the utility continues processing.  

**Corrective Action:** For information on how to correct the parameter line, see the User actions for the CTDTRIW or CTDTRJW message.

**CTDTRIW ENTRY SPECIFIED FOR DELETION IS NOT FOUND**

**Explanation:** This warning message indicates that a description line, address line, synonym or authorized TSO user specified to be deleted from a recipient entry is not found. The preceding CTDTRHW message indicates the parameter line that caused the warning.

The parameter line, indicated by the CTDTRHW message, is skipped and the utility continues processing.  

**Corrective Action:** Correct the parameter line indicated by the CTDTRHW message and rerun the utility.

**CTDTRJW DUPLICATE ENTRY IS NOT ADDED**

**Explanation:** This warning message indicates that a description line, address line, synonym or authorized TSO user specified to be added to a recipient entry already exists. The preceding CTDTRHW message indicates the parameter line that caused the warning.

The parameter line, indicated by the CTDTRHW message, is skipped and the utility continues processing.  

**Corrective Action:** Correct the parameter line indicated by the CTDTRHW message and rerun the utility.

**CTDTRLI nnnnnnn NEW RECIPIENTS WERE ADDED**

**Explanation:** This information message indicates the number of recipients (nnnnnnn) added to the Control-D recipient tree during the CTDUPTR utility run.

**Corrective Action:** No action is required.

**CTDTRMI nnnnnnn RECIPIENTS WERE DELETED**

**Explanation:** This information message indicates the number of recipients (nnnnnnn) deleted from the Control-D recipient tree during the CTDUPTR utility run.

**Corrective Action:** No action is required.

**CTDTRNI nnnnnnn RECIPIENTS WERE UPDATED**

**Explanation:** This information message indicates the number of recipients (nnnnnnn) updated in the Control-D recipient tree during the CTDUPTR utility run.

**Corrective Action:** No action is required.

**CTDTROI nnnnnnn RECIPIENTS WERE COPIED**

**Explanation:** This information message indicates the number of recipients (nnnnnnn) copied to another recipient in the Control-D recipient tree during the CTDUPTR utility run.

**Corrective Action:** No action is required.

**CTDTRPE PARAMETER LENGTH EXCEEDED: parm**

**Explanation:** The parm input parameter exceeds the maximum allowable length.
The utility stops.

**Corrective Action:** No action is required.

**Messages CTDU00 through CTDUxx**

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

**CTDU10E fileType USER FILE ERROR error**

**Explanation:** An error occurred while accessing a User Reports List file. This message is written to the IOA Log file by the user file interface routine.

The variables in this message are:

- **fileType** - the type of User Reports List file component. Valid values for the data component are:
  - ACT
  - PRM
  - HST
  - MG
  - MG \( n \), where \( n \) is the migrated partition number

Valid values for the index component are composed of the index component letter, followed the data component values.

- **error** - the error description

Control returns to the calling routine which usually issues the CTD908S message.

**Corrective Action:** Do one of the following, depending on the value of **error**:

- If the value of **error** is INCORRECT FORMAT OF DATA / INDEX FILE, use the IOADBF utility to reformat the problematic file.
- If the value of **error** is RECORD NOT FOUND IN THE DATA FILE or INDEX RECORD DOES NOT MATCH DATA RECORD, use the CTDDIB utility to rebuild the index file.
- If the value of **error** is FILE IS NOT CONVERTED ACCORDING TO WD1164, use the CTDDIB utility to rebuild the index file.
- If the value of **error** is DATA FILE OVERFLOW or INDEX FILE OVERFLOW, enlarge the problematic file by running the IOADBF utility with the EXTEND function.

**Note:**

You can prevent this problem in the future by defining a secondary space allocation and automatic extension in the corresponding Space Calculation Step. You can find this using ICE:

1. In the IOA Installation Menu, select Customization.
2. Select the environment to customize.
3. In the Customization screen, set Product ID to CTD and select Product Customization.
4. Select Major Step 5, Customize Control-D User Files.
   - If the value of error is ALTERNATIVE INDEX DEFINITION MISMATCHES LRECL, check and correct
     the alternative index definition in the DEF xxxi or DEFALTI members or both, and rerun the
     CTDUFDBF, CTDUFANX, and CTDDIB utilities to recreate the alternative index component.

**CTDU11I** *opn* OPERATION FOR *fileName* FILE FROM *pgm* PROGRAM IN
*modeType* MODE

**Explanation:** This information message indicates that accesses to user files were traced as requested by
optional wish WD2370.

**Corrective Action:** No action is required.

**CTDU99E** *fileType* FILE RC=rc FUNC *func* PGM *pgmCsect* ID=xx /yyy LAST
KEY=lastKey

**Explanation:** An error occurred while accessing a User Report List file.

This message accompanies the CTD908S message, and provides additional information.

The variables in this message are:

- *fileType* - the type of User Report List file component. Valid values for the data component are:
  - ACT
  - PRM
  - HST
  - MIG
  - MG n, where n is the migrated partition number

Valid values for the index component are composed of the index component letter, followed by the data
component values.

- rc - return code
- func - the operation that caused the error
- pgmCsect - the program CSECT that received the error
- xx/yyy - an identifier for localizing the erroneous call
- lastKey - the key in the data or index file

Return codes may range from 004 through 399. The return codes from 300 through 399 relate to index
components. Their explanations are the same as the corresponding return codes in the range from 100
through 199, which relate to data components.
The following table lists and explains the possible values for the return code (`rc`):

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
</table>
| 004 | - Read operation: EOF.  
- Add index operation: Duplicate Key.  
- Update operation: Record was changed. 0i |
<p>| 008 | Duplicate key.                                                             |
| 012 | Incorrect record for update.                                               |
| 016 | The record was not found (probably deleted), or an invalid record was read, or the function is not correct. |
| 020 | Insufficient memory to open an IOA Access Method file.                     |
| 024 | Not enough space in data file.                                             |
| 028 | Not enough space in index file.                                            |
| 032 | The current call terminates because the previous open failed.             |
| 036 | Incorrect record length.                                                   |
| 040 | Internal error.                                                            |
| 044 | Internal error.                                                            |
| 052 | Invalid key fields.                                                        |
| 056 | Key is too long.                                                           |
| 058 | For future use.                                                            |
| 060 | Index record does not match data record.                                   |
| 064 | Wish WD1164 setting does not match file contents.                          |
| 068 | Incorrect parameter for Interface routine.                                 |
| 072 | Incorrect file type.                                                       |
| 106 | Record not found.                                                          |
| 108 | Record not found. Invalid extent number.                                   |</p>

</tbody>
</table>

The system action depends on which component was accessing the user file. Usually, the current routine terminates. Additional messages clarifying the source of the error are written to the IOA Log file before this message.

**Corrective Action:** Do the following:

1. For return codes 200 and higher,
   - rebuild the index component
   - rerun the process
2. For all other return codes,
   - search the IOA Log file and the relevant job log for messages clarifying the source of the error
   - correct the error
   - rerun the job
3. If the error persists, contact BMC Software Customer Support.

---

**CTDUF01 CTDUFPR T STARTED**

**Explanation:** This information message indicates that CTDUFPR T, the user records printing utility, started.

**Corrective Action:** No action is required.

---

**CTDUF1E INVALID PARAMETER: parm**

**Explanation:** The `parm` input parameter specified for the CTDUFPR T utility is not valid. The utility stops.

**Corrective Action:** Correct the invalid input parameter and rerun the job.

---

**CTDUF2E REDUNDANT PARAMETER: parm**

**Explanation:** The `parm` input parameter for the CTDUFPR T utility has already been specified. The same parameter is specified twice. The utility stops.

**Corrective Action:** Delete the extra JCL input parameter and rerun the job.

---

**CTDUF3E THE PARAMETER parm MUST BE SPECIFIED**

**Explanation:** The `parm` input parameter for the CTDUFPR T utility is missing. The CTVUFPR T utility requires the `parm` parameter.

The CTDUFPR T utility stops.

**Corrective Action:** Insert the missing JCL parameter and rerun the job.
CTDUF4E THE PARAMETER parm CANNOT BE SPECIFIED FOR RECORD TYPE x

Explanation: The parm input parameter for the CTDUFPRTR utility cannot be specified for record type x which is specified in the RECORD parameter.

The CTDUFPRTR utility stops.

Corrective Action: Delete the problematic JCL input parameter and rerun the job.

CTDUF5I INPUT PARAMETER: parm

Explanation: This information message identifies that the parm input parameter for the CTDUFPRTR utility is specified.

Corrective Action: No action is required.

CTDUF6I NUMBER OF SELECTED RECORDS: num

Explanation: This information message issues total number of records selected by the CTDUFPRTR utility.

Corrective Action: No action is required.

CTDUF9I recordType RECORDS: num

Explanation: This information message follows the CTDUF6I message if the RECORD parameter is not specified for the CTDUFPRTR utility.

Each such message issues the number of selected records of the specified record type.

Corrective Action: No action is required.

CTDUFERI CTDUFPRTR ENDED WITH ERRORS

Explanation: This information message indicates that the CTDUFPRTR utility finished with errors.

Corrective Action: Examine other messages relating to the CTDUFPRTR utility to identify and fix the problem, then rerun the utility.

CTDUFFRI CTDUFPRTR ENDED OK

Explanation: This information message indicates that the CTDUFPRTR utility finished successfully.

Corrective Action: No action is required.

CTDUGFI CONTROL-V UTILITY CTVSCTT STARTED

Explanation: This information message indicates that the CTVSCTT utility was started.

Corrective Action: No action is required.

CTDUFHFI CONTROL-V UTILITY CTVSCTT STOPPED BECAUSE OF ERRORS

Explanation: This information message indicates that the CTVSCTT utility stopped working because of severe errors detected during the utility run.
The CTVSCTT utility ends with a return code of 08.

**Corrective Action:** Examine the accompanying messages for the cause of the problem and take action accordingly.

**CTDUFI1 CONTROL-V UTILITY CTVSCTT ENDED**

**Explanation:** This information message indicates that the CTVSCTT utility ended and the output file was created that contains information about the data sets that were migrated to tape.

**Corrective Action:** No action is required.

**CTDUFKE MEDIA NAME *media* NOT FOUND IN IOASPRM**

**Explanation:** The CTVSCTT utility read a SYSDATA or Index record from the Migrated User file with a media name that does not exist in the IOASPRM parameters member.

The problematic record is skipped and the CTVSCTT utility continues processing.

**Corrective Action:** Check the media name issued in the message. If there were reports that were migrated to this media, add this media to the IOASPRM member and rerun the utility.

**CTDUFLE THE PARAMETER 'FIELD' CAN BE SPECIFIED AFTER PRINTFORM=REPORT ONLY**

**Explanation:** This error message is issued when the FIELD parameter was encountered, in the input stream for the CTDUFPRRT utility, before the PRINTFORM=REPORT parameter was specified.

The utility stops.

**Corrective Action:** Correct the input parameters and rerun the job.

**CTDUFME FIELD= fieldName CANNOT BE SPECIFIED FOR RECORD TYPE type**

**Explanation:** This error message is issued when the CTDUFPRRT utility has been submitted and the following conditions are true:

- PRINTFORM parameter is set to REPORT (PRINTFORM=REPORT)
- FIELD parameter set to a field name that is not permitted for the record type (type) specified

The utility stops.

**Corrective Action:** Use the following procedure to correct this issue:

1. Check the list of field names allowed for the printed records type. For more information, see the INCONTROL for z/OS Utilities Guide.
2. Correct the input parameters
3. Rerun the job
Messages CTDV00 through CTDVxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDV00I  CTVUPI NV UTILITY STARTED

**Explanation:** This information message indicates that the CTVUPI NV utility started.

**Corrective Action:** No action is required.

CTDV01I  CTVUPI NV UTILITY COMPLETED SUCCESSFULLY

**Explanation:** This information message indicates that the CTVUPI NV utility completed successfully.

**Corrective Action:** No action is required.

CTDV02E  CTVUPI NV UTILITY ENDED WITH ERRORS

**Explanation:** This error message indicates that the CTVUPI NV utility processing was interrupted because of problems. Additional information about the problems is available in the job log.

The utility stops.

**Corrective Action:** Examine the job log for error messages describing the problem. Make any necessary corrections and rerun the utility.

CTDV03I  CTVUPI NV UTILITY IS RUNNING IN SIMULATION MODE

**Explanation:** This information message indicates that the CTVUPI NV utility is running in the simulation (TEST) mode. No data will be changed in the Permanent User File. Only an output report will be issued.

**Corrective Action:** No action is required.

CTDV04E  INVALID PARAMETER: **parm**

**Explanation:** The **parm** input parameter specified in the JCL for the CTVUPI NV utility is not valid.

The utility stops.

**Corrective Action:** Correct the invalid **parm** input parameter in the JCL and rerun the job.

CTDV05E  INVALID PARAMETER IN CTDSPARM: **parm**

**Explanation:** The **parm** input parameter in the CTDSPARM member that specifies a default destination value for printing subscribed reports is not valid.

The utility stops.

**Corrective Action:** Correct the invalid **parm** input parameter in the CTDSPARM member and rerun the job.

CTDV06E  REDUNDANT PARAMETER: **parm**

**Explanation:** The **parm** input parameter of the CTVUPI NV utility has already been specified. The parameter can validly be specified only once in the current statement.
The utility stops.

**Corrective Action:** Remove the extra input parameter from the input parameter stream in JCL and rerun the job.

**CTDV07E parm PARAMETER LENGTH EXCEEDED**

**Explanation:** The `parm` input parameter of the CTVUPINV utility exceeds the maximum allowable length.

The utility stops.

**Corrective Action:** Correct the invalid `parm` input parameter in the JCL and rerun the job.

**CTDV08E EMPTY stat STATEMENT**

**Explanation:** The action `stat` statement is specified of the CTVUPINV utility without any parameters.

The utility stops.

**Corrective Action:** Add required parameters to the statement in the JCL and rerun the job.

**CTDV09E OBLIGATORY PARAMETER parm FOR RECORD TYPE=x IS MISSING**

**Explanation:** The `parm` parameter, which is obligatory for the record type `x`, is missing after the record is inserted or updated by the CTVUPINV utility. The utility does not process the input statement causing this error, but continues to process other input statements.

**Corrective Action:** Check the input parameters causing this error, specify valid parameters in JCL, and run the new job, if necessary.

**CTDV0AE PARAMETER parm IS NOT AVAILABLE FOR RECORD TYPE=x**

**Explanation:** The record type `x`, created by the CTVUPINV utility according to the specified input parameters, is missing the `parm` parameter, which is obligatory for this record type. The utility does not process the input statement causing this error, but continues to process other input statements.

**Corrective Action:** Check the input parameters causing this error, specify valid parameters in JCL, and run the new job, if necessary.

**CTDV0BE EMPTY INDEX NAME OF INDEX LEVEL x**

**Explanation:** The CTVUPINV utility issues this error message in the following cases:

- The name of the Index level `x` is not specified in the created subscription record, but the name of the next Index level is specified.
- The name of the Index level `x` is not specified in the created subscription record, but the Index value of the corresponding Index level is specified.

The utility does not process the input statement causing this error, but continues to process other input statements.

**Corrective Action:** Check the input parameters causing this error, specify valid parameters in JCL, and run the new job, if necessary.
CTDV0CE EMPTY INDEX VALUE OF INDEX LEVEL x

Explanation: The CTVUPINV utility issues this error message in the following cases:

- The value of the Index level x is not specified in the created subscription record, but the value of the next Index level is specified.
- The value of the Index level x is not specified in the created subscription record, but the Index name of the corresponding Index level is specified.

The utility does not process the input statement causing this error, but continues to process other input statements.

Corrective Action: Check the input parameters causing this error, specify valid parameters in JCL, and run the new job, if necessary.

CTDV0DE REPORT NAME SHOULD NOT HAVE MASK CHARACTERS FOR RECORD TYPE=G/R

Explanation: The CTVUPINV utility issues this error message when the created subscription record of type G or R has mask characters in the first 12 bytes of the report name. It is not valid because the first 12 characters of the report name are included with the record ID.

The utility does not process the input statement causing this error, but continues to process other input statements.

Corrective Action: Check the input parameters causing this error, specify valid parameters in JCL, and run the new job, if necessary.

CTDV0EE LAST LEVEL INDEX VALUE SHOULD NOT HAVE MASK CHARACTERS FOR RECORD TYPE=I/S

Explanation: The CTVUPINV utility issues this error message when the created subscription record of type I or S has mask characters in the first 12 bytes of the last level index value. It is not valid because the first 12 characters of the last level index value are included with the record ID.

The utility does not process the input statement causing this error, but continues to process other input statements.

Corrective Action: Check the input parameters causing this error, specify valid parameters in JCL, and run the new job, if necessary.

CTDV0GE THE SECOND DESTINATION SHOULD NOT BE SPECIFIED WHEN THE FIRST IS EMPTY

Explanation: The CTVUPINV utility issues this error message when the created subscription record has the second specification for the printing destination, while the first specification is empty.

The utility does not process the input statement causing this error, but continues to process other input statements.

Corrective Action: Check the input parameters and the CTDSPARM default destination parameters causing this error, specify valid parameters in JCL, and run the new job, if necessary.
CTDV0HE DUPLICATE RECORD, OLD RECORD ID: record_id

Explanation: The CTVUPINV utility issues this error message when the created subscription record has the same record key of an existing subscription record. For more information about the record key, see the description of the utility in the INCONTROL for z/OS Utilities Guide.

The utility does not process the input statement causing this error, but continues to process other input statements.

Corrective Action: Check the input parameters causing this error, specify valid parameters in JCL, and run the new job, if necessary.

CTDV0II OPERATION: operation, RECORD ID: record_id

Explanation: The information message precedes the error messages CTDV09E, CTDV0AE, CTDV0BE, CTDV0CE, CTDV0DE, CTDV0EE, CTDV0FE, CTDV0GE, and CTDV0HE. It is issued when the error described in the following message is recognized in the subscription record updated by the CHANGE TO or REPLICATE operations. It indicates the performed operation and the created subscription record. You can see the contents of the updated INV record in the output report file referred to in the DAREPORT DD statement.

Corrective Action: No action is required.

CTDV0JE CTVUPINV UTILITY TERMINATES DUE TO AN ERROR IN THE SORT

Explanation: The CTVUPINV utility issues this error message when the invoked SORT utility ended with errors.

The utility stops.

Corrective Action: Examine the messages issued by the SORT utility to SYSOUT to identify the problem. Make appropriate changes to the JCL and rerun the job.

CTDV0KI nnnnnnn NEW SUBSCRIPTION RECORDS WERE ADDED

Explanation: This information message indicates the number of subscription records added to the Permanent User File during the CTVUPINV utility run.

Corrective Action: No action is required.

CTDV0LI nnnnnnn SUBSCRIPTION RECORDS WERE READ FROM THE PERMANENT FILE

Explanation: This information message indicates the number of subscription records read from the Permanent User File during the CTVUPINV utility run.

Corrective Action: No action is required.

CTDV0MI nnnnnnn SUBSCRIPTION RECORDS WERE SELECTED

Explanation: This information message indicates the number of subscription records selected from the Permanent User File during the CTVUPINV utility run.

Corrective Action: No action is required.
CTDV0NI  ***nnnnnn** Subscription Records were Deleted

**Explanation:** This information message indicates the number of subscription records deleted from the Permanent User File during the CTVUPINV utility run.

**Corrective Action:** No action is required.

CTDV001I  ***nnnnnn** Subscription Records were Updated

**Explanation:** This information message indicates the number of subscription records updated in the Permanent User File during the CTVUPINV utility run.

**Corrective Action:** No action is required.

CTDV0PW  **No Records were Processed by the Utility**

**Explanation:** This warning message indicates that no records were found that satisfy the selection parameters specified in the input statements. In this situation the CTVUPINV utility ends with return code 4.

**Corrective Action:** No action is required.

CTDV0QI  ***nnnnnn** Subscription Records were Replicated

**Explanation:** This information message indicates the number of subscription records replicated in the Permanent User File during the CTVUPINV utility run.

**Corrective Action:** No action is required.

CTDV0RE  **Subscribe=**X** is Not Available for Record Type=**Y

**Explanation:** The record type **X**, created by the CTVUPINV utility according to the specified input parameters, has the SUBSCRIBE type **Y**, which is not available this record type. The utility does not process the input statement causing this error, but continues to process other input statements.

**Corrective Action:** Check the input parameters causing this error, specify valid parameters in JCL and run the new job if necessary.

CTDV0SE  **Invalid Destination for Subscribe=**X

**Explanation:** This error message can be issued by either the CTVUPINV utility or when an end-user tries to subscribe to a report using Control-D/WebAccess.

The message is issued by the CTVUPINV utility in the following cases:

- for a record with SUBSCRIBE=I/E the first destination was not CTDS. Where SUBSCRIBE=I/E, only CTDS is valid.
- for a record with the first printing destination is CTDS, but the second destination is empty
- the DEST1 and DEST2 input parameters are not specified and the NOTIFICATION and/or E-MAIL parameters in the CTDSPARM member are incorrect or omitted.

The message is issued by the Application Server if the NOTIFICATION and/or E-MAIL parameters in the CTDSPARM member are incorrect or omitted.
Corrective Action: If the error message is issued under CTVUPINV, check the input parameters and the CTDSPARM default destination parameters. Specify valid parameters and run the new job if necessary. If the error message is issued by Application Server, define correct values in the CTDSPARM member and run the new job if necessary.

CTDV0TE YOU ARE NOT AUTHORIZED TO SUBSCRIBE FOR REPORT jobName/username/reportName
Explanation: Either the CTDX024 Control-D user exit or the CTDSE24 security module on the host does not allow the current user to subscribe for report entry.
Corrective Action: Ask your INCONTROL administrator for authorization to subscribe for the report.

CTDVOUE SUBSCRIPTION TO THIS E-MAIL ADDRESS ALREADY EXISTS FOR REPORT jobName/username/reportName
Explanation: The end-user tried to subscribe a report to an e-mail address, where the subscription to the address already exists.
Corrective Action: Subscribe the report with the correct e-mail address.

CTDVOVE SUBSCRIPTION CANNOT BE PERFORMED. DEFAULT SUBSCRIPTION PARAMETERS ARE NOT SET.
Explanation: The end-user wants to receive notification or report by e-mail, but the default destination is not set in the CTDSPARM member. Subscription is not performed.
Corrective Action: Notify your INCONTROL administrator.

CTDWOWI SUBSCRIPTION PERFORMED FOR REPORT jobName/username/reportName
Explanation: This information message indicates that the subscription for the report was successful.
Corrective Action: No action is required.

Messages CTDW00 through CTDWxx
This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDWL0I APPLICATION SERVER CONNECTED TO WLM SUCCESSFULLY
Explanation: This information message indicates that the Application server successfully connected to the WLM (Work Load Manager).
Corrective Action: No action is required.
CTDWL1I  APPLICATION SERVER DISCONNECTED FROM WLM SUCCESSFULLY

**Explanation:** This information message indicates that the Application server successfully disconnected from the WLM (Work Load Manager).

**Corrective Action:** No action is required.

CTDWL2E MEMBER CTDASWLM IN CTD PARM LIBRARY HAS INVALID STRUCTURE

**Explanation:** The structure of the CTDASWLM member in the CTD PARM library is invalid. Message CTDWL3I or CTDWL5I follows message CTDWL2E, displaying a text description of the error encountered. The Control-D Application server continues normal processing, but does not involve the WLM to manage the response time.

**Corrective Action:** Fix the problem, and reload the CTDASWLM member.

CTDWL3E  *inputControlStatement*

**Explanation:** This message follows message CTDWL2E, and displays the control statement of the error encountered.

**Corrective Action:** No action is required.

CTDWL4E  CONNECTION TO WLM SERVICE *service* FAILED, RC=*rc*, REASON CODE= *rsn*

**Explanation:** Connection to the WLM service for the current request failed with return code of *rc* and a reason code of *rsn*.

The variables in this message are:

- **service** - one of the following WLM services:
  - IWMCONN- IWMDISC- IWMCLSFY- IWMRPT
- **rc** - WLM return code
- **rsn** - WLM reason code

The Control-D Application server continues normal processing, but does not involve the WLM to manage the response time for the current request.

**Corrective Action:** Do the following:
For an explanation of the return and reason codes, refer to IBM documentation about WLM for a description of the received return and reason codes.

Fix the problem, and reload the CTDASWLM member.

CTDWL5E GENERIC SUBSYSTEM TYPE OR SUBSYSTEM NAME IS NOT DEFINED

**Explanation:** The CTDASWLM member in the CTD PARM library does not contain the correct Generic Subsystem Type (parameter SYSNAME) or Subsystem Name (parameter SUBSYSNAME) as defined in WLM for the Application server. This message follows message CTDWL2E.

The Control-D Application server continues normal processing, but does not involve the WLM to manage the response time.

**Corrective Action:** Fix the problem, and reload the CTDASWLM member.

Messages CTDX00 through CTDXxx

This group includes messages for the Control-D, Control-D/Image, and Control-D/Page on Demand products.

CTDX00I CTDUFEXP UTILITY STARTED

**Explanation:** This information message indicates that the CTDUFEXP utility started.

**Corrective Action:** No action is required.

CTDX01E CTDX005 IS CALLED FOR AN INVALID FUNCTION function REQUEST REJECTED.

**Explanation:** Sample Exit Program CTDX005 was called for the function unintended function. The request is ignored.

**Corrective Action:** Notify your INCONTROL administrator.

CTDX02E CONTROL CHARACTER TRANSLATION ERROR

**Explanation:** An error occurred when sample Exit Program CTDX005 attempted to transfer ASA control characters to machine control characters, or vice versa.

Translation of the current record is terminated.

**Corrective Action:** Notify your INCONTROL administrator.

CTDX03E ABEND abCode OCCURRED IN CONTROL-D EXIT 005

**Explanation:** Abend abCode occurred during the execution of sample Exit Program CTDX005.

The current request is terminated. The Exit program returns with a return code of 12.

**Corrective Action:** Notify your INCONTROL administrator.
CTDX04E ABEND abCode OCCURRED IN CONTROL-D EXIT 003

Explanation: Abend abCode occurred during the execution of sample Exit Program CTDX003.
The current request is terminated. The Exit program returns with a return code of 12.
Corrective Action: Notify your INCONTROL administrator.

CTDX05E PRINT FILE ddName CANNOT BE OPENED. REPORTS WILL BE SENT TO A SPOOL.

Explanation: Sample Exit Program CTDX005 was unable to open the ddName print file.
The print mission’s output is rerouted to a spool instead of a dataset.
Corrective Action: Notify your INCONTROL administrator.

CTDX06E FAILED TO ALLOCATE EXISTING PRINT FILE dsName RC= rc RSN= rsn

Explanation: Sample Exit Program CTDX005 failed to use the existing dsName dataset for its print file.
The variables in this message are:
- dsName - the dataset to be used for the print file
- rc - the return code from the failed dynamic allocation request
- rsn - the reason code from the failed dynamic allocation request
The Exit program tries to create a new dataset for its print file.
Corrective Action: Notify your INCONTROL administrator.

CTDX07E PRINT FILE ALLOCATION ERROR: DSNAME= dsName RC= rc RSN= rsn

Explanation: Sample Exit Program CTDX005 failed to allocate the new dsName dataset for its print file.
The variables in this message are:
- dsName - the dataset to be used for the print file
- rc - the return code from the failed dynamic allocation request
- rsn - the reason code from the failed dynamic allocation request
The print mission’s output is rerouted to a spool instead of a dataset, as described in message UXDX05E.
Corrective Action: Notify your INCONTROL administrator.

CTDX08I PRINT FILE ddName dsName ASSIGNED TO MISSION misName

Explanation: This information message indicates that the dsName dataset was allocated for the print mission’s misName print file with ddName.
Corrective Action: Notify your INCONTROL administrator.
CTDX09W FAILED TO UNALLOCATE PRINT FILE ddName RC=rc RSN=rsn

**Explanation:** Sample Exit Program CTDX005 failed to unallocate the ddName print file.

The variables in this message are:

- **ddName** - the DD name to be used for the print file
- **rc** - the return code from the failed dynamic allocation request
- **rsn** - the reason code from the failed dynamic allocation request

The program continues with a new print file.

**Corrective Action:** Notify your INCONTROL administrator.

CTDX0AE CTDUFEXP UTILITY TERMINATES DUE TO AN ERROR IN THE SORT

**Explanation:** The CTDUFEXP utility issues this error message when the invoked SORT utility ended with errors. The utility stops.

**Corrective Action:** Examine the messages issued by the SORT utility to SYSOUT to identify the problem. Make appropriate changes to the JCL and rerun the job.

CTDX0BE EXPORT RULERS IS NOT AVAILABLE FOR file FILE

**Explanation:** The CTDUFEXP utility issues this error message when the object RULERS is specified for a file type, which is not an ACT file type. Export RULERS can be performed only from Active User file. The utility stops.

**Corrective Action:** Correct the input parameters according to the utility parameters description in the **INCONTROL for z/OS Utilities Guide**. Rerun the utility.

CTDX0CW LOCATE ERROR FOR dsn, RC = rc

**Explanation:** This warning message notifies that the CTDUFEXP utility cannot locate the dsn dataset name in the MVS catalog. The utility continues to work, but the VOLSER of the volume where the problematic dataset resides is not included to the output report.

**Corrective Action:** Analyze the rc return code of the LOCATE macro. It is described in the IBM document: z/OS DFSMSdfp Advanced Services. Determine why the data set could not be located. Correct the problem, if possible, and rerun the CTDUFEXP utility, if necessary.

CTDX0DE PARAMETER parm IS NOT AVAILABLE FOR THE REPORTS/RULERS SELECTION

**Explanation:** The CTDUFEXP utility issues this error message when the specified parm selection parameter is not available for the REPORTS or RULERS objects. The utility stops.

**Corrective Action:** Correct the input parameters according to the utility parameters description in the **INCONTROL for z/OS Utilities Guide**. Rerun the utility.
CTDX0EW LIST= outrep NOT AVAILABLE FOR file FILE

**Explanation:** The CTDUFEXP utility issues this warning message when the output report specified in the LIST parameter is not available for the processed User file type. The utility continues to work, but the specified output report is not issued.

**Corrective Action:** No action is required.

CTDX0FW LIST= outrep NOT AVAILABLE FOR action ACTION

**Explanation:** The CTDUFEXP utility issues this warning message when the output report specified in the LIST parameter is not available for the action performed by the utility. The utility continues to work, but the specified output report is not issued.

**Corrective Action:** No action is required.

CTDX0GI number RECORDS READ FROM file FILE

**Explanation:** This information message indicates total number of records that the CTDUFEXP utility has read from the file User file.

**Corrective Action:** No action is required.

CTDX0HI number record-type RECORDS SELECTED FOR action

**Explanation:** This information message indicates the number of records of the record-type type that the CTDUFEXP utility has selected for the EXPORT or CLEANUP action.

**Corrective Action:** No action is required.

CTDX0II number REPORTS SELECTED FOR action

**Explanation:** This information message indicates the number of Control-D reports that the CTDUFEXP utility has selected for the EXPORT or CLEANUP action.

**Corrective Action:** No action is required.

CTDX0JW THERE ARE NO REPORTS/RULERS SELECTED FOR action

**Explanation:** This warning message indicates that the CTDUFEXP utility has selected neither reports nor rulers for the EXPORT or CLEANUP action.

**Corrective Action:** Examine the input selection parameters. Change them and rerun the utility if necessary.

CTDX0KE dsn ALREADY EXISTS. DELETE THE OLD DATASET OR CHANGE THE PACKAGE NAME

**Explanation:** The CTDUFEXP utility issues this error message when it detects an output dataset in the MVS catalog with the same package name and file type as specified by the input parameters. The utility stops.

**Corrective Action:** Delete the old dataset outside of Control-D or change the package name in the input parameter if you want to keep the old dataset name. Rerun the utility.
CTDX0LI  number DATASETS SELECTED FOR EXPORT

Explanation: This information message indicates the number of datasets that the CTDUFEXP utility has selected for export.

Corrective Action: No action is required.

CTDX0MI  number VOLUMES SELECTED FOR EXPORT

Explanation: This information message indicates the number of volumes that the CTDUFEXP utility has selected for export.

Corrective Action: No action is required.

CTDX0NW report-key -REPORT IS NOT DELETED BECAUSE IT HAS NOT BEEN UNLOADED FOR EXPORT.

Explanation: The CTDUFEXP utility performing the CLEANUP action issues this warning message if the specified report is selected for delete but it has not been previously unloaded by the utility in the EXPORT action. The utility continues to work, but the specified report is not deleted.

Corrective Action: Examine the input parameters for the utility. If it is necessary, run the utility with the EXPORT action and only then with the CLEANUP action.

CTDX0PE CLEANUP RULERS ACTION IS NOT AVAILABLE FOR THE UTILITY.

Explanation: The CTDUFEXP utility issues this error message when the CLEANUP RULERS action has been specified in the input parameters. This action is not available for the utility. Only reports can be cleaned-up. The utility stops.

Corrective Action: Correct the input parameters according the utility parameters description in the INCONTROL for z/OS Utilities Guide. If necessary, rerun the utility.

CTDX0QE INPUT PARAMETERS ERROR

Explanation: This error message indicates that the CTDUFEXP utility discovered errors in the input parameters. Additional information about the errors is available in the job log. The utility stops.

Corrective Action: Examine job log for error messages describing the problem. Make any necessary corrections in the input parameters and rerun the utility.

CTDX0RE EMPTY group-name PARAMETERS GROUP

Explanation: The CTDUFEXP utility issues this error message when the group-name (INCLUDE or EXCLUDE) statement is not followed with selection parameters. The utility stops.

Corrective Action: Correct the input parameters according to the utility parameters description in the INCONTROL for z/OS Utilities Guide. Rerun the utility.

CTDX0SE MEDIA NAME mediaName NOT FOUND IN IOASPRM

Explanation: This message is issued by the CTDUFEXP utility when printing the ‘List of exported datasets’ report, if a media name is not found in the IOASPRM member.

The variable in this message, mediaName, contains the media name of the migrated report.
The corresponding entry in the ‘List of exported datasets’ report has an empty SIZE value. The utility continues to work.

**Corrective Action:** Add the media name, `mediaName`, as specified in the message, to the IOASPRM member and rerun the CTDUFEXP utility.

**CTDX0TE CENTERA INIT ERROR:** RC= `rc`, REASON CODE= `rsn`

**Explanation:** Connection to EMC Centera cannot be established. This message is followed by message MIG5E9I, which issues the Centera pool value used for connection.

The variables in this message are:

- `rc` - return code from the EMC Centera API.
- `rsn` - reason code from the EMC Centera API.

The ‘List of exported datasets’ report issued by the CTDUFEXP utility has empty SIZE column for all entries related to the CENTERA media.

The utility continues to work.

**Corrective Action:** Refer to EMC Centera documentation for a description of the received reason code. Check the pool value printed in the accompanying MIG5E9I message. If the IP addresses are not correct, update them in parameters POOL1-POOL4 in the IOASPRM member. Then rerun the CTDUFEXP utility.

**CTDX0UI CLIP_ID= `clipId`

**Explanation:** This information message follows message CTDX0VE. The clip ID related to the message CTDX0VE is issued, where `clipId` is the CENTERA clip ID.

**Corrective Action:** No action is required.

**CTDX0VE CENTERA READ ERROR RC= `rc`, REASON CODE= `rsc`, BLN= `blk`, L= `len`

**Explanation:** The CTDUFEXP utility issues this message when an error is detected while reading a block from the EMC Centera clip. This message is followed by message CTDX0UI, which issues the problematic Centera clip name.

The variables in this message are:

- `rc` - return code from the EMC Centera API
- `rsn` - reason code from the EMC Centera API
- `blk` - error block number
- `len` - returned block length

**Corrective Action:** Refer to the EMC Centera documentation for a description of the received reason code. Rerun the CTDUFEXP utility, if necessary.

**CTDX10I CTDRETC UTILITY STARTED**

**Explanation:** This information message indicates that the CTDRETC utility started.

**Corrective Action:** No action is required.
CTDX11I  CTDRETC UTILITY COMPLETED SUCCESSFULLY

**Explanation:** This information message indicates that the CTDRETC utility completed successfully.

**Corrective Action:** No action is required.

CTDX12E  CTDRETC UTILITY ENDED WITH ERRORS

**Explanation:** This error message indicates that the CTDRETC utility discovered problems during processing. Additional information about the problems is available in the job log. The utility stops.

**Corrective Action:** Examine the job log for error messages describing the problem. Make any necessary corrections and rerun the utility.

CTDX13E  THE ACTION STATEMENT PRESERVE/FREE/CHANGE/DLEREP/PRINT IS MISSING

**Explanation:** This error message indicates that the statement that defines the action of the CTDRETC utility is missing in the input parameters. The utility stops.

**Corrective Action:** Specify the one of following actions: PRESERVE, FREE, CHANGE, DLEREP, or PRINT as the first statement in the SYSIN DD input parameters stream in JCL. Rerun the utility.

CTDX14E  INVALID PARAMETER: parm

**Explanation:** The `parm` input parameter specified in the JCL for the CTDRETC utility is not valid. The utility stops.

**Corrective Action:** Correct the invalid input parameter (`parm`) in the JCL and rerun the job.

CTDX15E  THE PARAMETER parm MUST BE SPECIFIED

**Explanation:** The mandatory `parm` input parameter for the CTDRETC utility is missing. The utility stops.

**Corrective Action:** Add the missing parameter to the JCL and rerun the job.

CTDX16E  REDUNDANT PARAMETER: parm

**Explanation:** The `parm` input parameter for the CTDRETC utility has already been specified. The utility stops.

**Corrective Action:** Remove the extra input parameter from the input parameter stream in JCL and rerun the job.

CTDX17E  SELECTION PARAMETER parm IS NOT AVAILABLE FOR action ACTION

**Explanation:** The `parm` input selection parameter is not available for the `action` action specified as the first statement in the input stream for the CTDRETC utility. The utility stops.

**Corrective Action:** Remove the `parm` selection parameter from the input parameter stream in JCL and rerun the job.
CTDX18E PARAMETER parm LENGTH EXCEEDED

**Explanation:** The length of the parm input parameter exceeds the maximum available for this parameter length. The utility stops.

**Corrective Action:** Correct the invalid parm input parameter in the JCL and rerun the job.

CTDX19E SELECTION PARAMETER parm IS NOT AVAILABLE FOR file FILE

**Explanation:** The input parm selection parameter is not available for the file file type specified in the DBFILE input parameter for the CTDRETC utility. The utility stops.

**Corrective Action:** Remove the parm selection parameter from the input parameters stream in JCL and rerun the job.

CTDX1AE CTDRETC UTILITY TERMINATES DUE TO AN ERROR IN THE SORT

**Explanation:** The CTDRETC utility issues this error message when the invoked SORT utility ended with errors. The utility stops.

**Corrective Action:** Examine the messages issued by the SORT utility to SYSOUT to identify the problem. Make appropriate changes to the JCL and rerun the job.

CTDX1CW LOCATE ERROR FOR dsn, RC = rc

**Explanation:** This warning message notifies that the CTDRETC utility cannot locate the dsn dataset name in the MVS catalog. The utility continues to work, but the VOLSER of the volume where the problematic dataset resides is not included to the output report.

**Corrective Action:** Analyze the rc return code of the LOCATE macro. It is described in the IBM document: z/OS DFSMSdfp Advanced Services. Determine why the data set could not be located. Correct the problem, if possible, and rerun the CTDRETC utility, if necessary.

CTDX1FW LIST= outrep NOT AVAILABLE FOR action ACTION

**Explanation:** The CTDRETC utility issues this warning message when the output report specified in the LIST parameter is not available for the action performed by the utility. The utility continues to work, but the specified output report is not issued.

**Corrective Action:** No action is required.

CTDX1GI number RECORDS READ FROM file FILE

**Explanation:** This information message indicates total number of records that the CTDRETC utility has read from the file User file.

**Corrective Action:** No action is required.

CTDX1HI number record-type RECORDS SELECTED FOR action

**Explanation:** This information message indicates the number of records of the record-type type that the CTDRETC utility has selected for the performed action.
Corrective Action: No action is required.

CTDX1II  number REPORTS SELECTED FOR action
Explanation: This information message indicates the number of Control-D reports that the CTDRETC utility has selected for the performed action.
Corrective Action: No action is required.

CTDX1J W THERE ARE NO REPORTS SELECTED FOR action
Explanation: This warning message indicates that the CTDRETC utility has selected no reports for the performed action.
Corrective Action: Examine the input selection parameters. If necessary, change them and rerun the utility.

CTDX1LI  number DATASETS SELECTED FOR action
Explanation: This information message indicates the number of datasets that the CTDRETC utility has selected for the performed action.
Corrective Action: No action is required.

CTDX1MI  number VOLUMES SELECTED FOR EXPORT
Explanation: This information message indicates the number of volumes that the CTDRETC utility has selected for the performed action.
Corrective Action: No action is required.

CTDX1PE SELECTION PARAMETER parm IS NOT AVAILABLE IN EXCLUDE STATEMENT
Explanation: The parm input selection parameter is not available in the EXCLUDE statement of the input stream for the CTDRETC utility. This parameter is only available in the INCLUDE statement. The utility stops.
Corrective Action: Remove the parm selection parameter, which is unavailable, from the JCL input parameter stream and rerun the job.

CTDX1QE INPUT PARAMETERS ERROR
Explanation: This error message indicates that the CTDRETC utility discovered errors in the input parameters. Additional information about the errors is available in the job log. The utility stops.
Corrective Action: Examine the job log for error messages describing the problem. Make any necessary corrections in the input parameters and rerun the utility.

CTDX1RE EMPTY group-name PARAMETERS GROUP
Explanation: The CTDRETC utility issues this error message when the group-name (INCLUDE or EXCLUDE) statement is not followed with selection parameters. The utility stops.
**Corrective Action:** Correct the input parameters according to the utility parameters description in the *INCONTROL for z/OS Utilities Guide*. Rerun the utility.

**CTDX21I CTDUFEXP UTILITY COMPLETED SUCCESSFULLY**

**Explanation:** This information message indicates that the CTDUFEXP utility completed successfully.

**Corrective Action:** No action is required.

**CTDX22E CTDUFEXP UTILITY ENDED WITH ERRORS**

**Explanation:** This error message indicates that the CTDUFEXP utility discovered problems during processing. Additional information on the problems is available in the job log. The utility stops.

**Corrective Action:** Examine job log for error messages describing the problem. Make any necessary corrections and rerun the utility.

**CTDX23E THE ACTION STATEMENT EXPORT OR CLEANUP IS MISSING**

**Explanation:** This error message indicates that the statement that defines the action of the CTDUFEXP utility is missing in the input parameters. The utility stops.

**Corrective Action:** Specify the requested action (EXPORT or CLEANUP) as first statement in the SYSIN DD input parameters stream in JCL. Rerun the utility.

**CTDX24E INVALID PARAMETER: parm**

**Explanation:** The parm input parameter specified in the JCL for the CTDUFEXP utility is not valid. The utility stops.

**Corrective Action:** Correct the invalid *parm* input parameter in the JCL and rerun the job.

**CTDX25E THE PARAMETER parm MUST BE SPECIFIED**

**Explanation:** The mandatory *parm* input parameter for the CTDUFEXP utility is missing. The utility stops.

**Corrective Action:** Add the missing parameter to the JCL and rerun the job.

**CTDX26E REDUNDANT PARAMETER: parm**

**Explanation:** The *parm* input parameter for the CTDUFEXP utility has already been specified. The utility stops.

**Corrective Action:** Remove the extra input parameter from the input parameters stream in JCL and rerun the job.

**CTDX27E NEITHER REPORTS NOR RULERS ARE SPECIFIED BY INPUT PARAMETERS**

**Explanation:** The statement defining the objects to be processed by the CTDUFEXP utility (REPORTS or/and RULERS) is missing in the input parameters. The input parameters stream must contain at least one of these statements. The utility stops.
Corrective Action: Add the REPORTS or RULERS statement to the input parameters stream in JCL and rerun the job.

CTDX28E PARAMETER parm LENGTH EXCEEDED
Explanation: The length of the parm input parameter exceeds the maximum available length for this parameter. The utility stops.
Corrective Action: Correct the invalid parm input parameter in the JCL and rerun the job.

CTDX29E SELECTION PARAMETER parm IS NOT AVAILABLE FOR file FILE
Explanation: The input parm selection parameter is not available for the file file type specified by the DBFILE input parameter for the CTDUFEXP utility. The utility stops.
Corrective Action: Remove the selection parameter from the input parameter stream in JCL and rerun the job.

CTDX30I CTDREPUS UTILITY STARTED
Explanation: This information message indicates that the CTDREPUS utility started.
Corrective Action: No action is required.

CTDX31I CTDREPUS UTILITY COMPLETED SUCCESSFULLY
Explanation: This information message indicates that the CTDREPUS utility completed successfully.
Corrective Action: No action is required.

CTDX32E CTDREPUS UTILITY ENDED WITH ERRORS
Explanation: This error message indicates that the CTDREPUS utility discovered problems during processing. Additional information on the problems discovered is available in the job log. The utility stops.
Corrective Action: Examine the job log for error messages describing the problem. Make any necessary corrections and rerun the utility.

CTDX34E INVALID PARAMETER: parm
Explanation: The parm parameter specified in the JCL for the CTDREPUS utility is not valid. The utility stops.
Corrective Action: Correct the invalid parm input parameter in the JCL and rerun the job.

CTDX36E INVALID PARAMETER: parm
Explanation: The parm parameter for the CTDREPUS utility has already been specified. The parameter must only be specified once. The utility stops.
Corrective Action: Remove the extra input parameter from the input parameters stream in the JCL and rerun the job.
CTDX38E PARAMETER parm LENGTH EXCEEDED

**Explanation:** The length of the `parm` input parameter exceeds the maximum allowable length for this parameter. The utility stops.

**Corrective Action:** Correct the invalid `parm` input parameter in the JCL and rerun the job.

CTDX3AE CTDREPUS UTILITY TERMINATES DUE TO AN ERROR IN THE SORT

**Explanation:** The CTDREPUS utility issues this error message when the invoked SORT utility ended with errors. The utility stops.

**Corrective Action:** Examine the messages issued by the SORT utility to SYSOUT to identify the problem. Make appropriate changes to the JCL and rerun the job.

CTDX3CW LOCATE ERROR FOR dsn, RC = rc

**Explanation:** This warning message notifies that the CTDREPUS utility cannot locate the dataset name `dsn` in the MVS catalog. The utility continues to work, but the VOLSER of the volume where the problematic dataset resides is not included to the output report.

**Corrective Action:** Analyze `rc` return code of the LOCATE macro. It is described in the IBM document: z/OS DFSMSdfp Advanced Services. Determine why the dataset could not be located. If possible, correct the problem and rerun the CTDREPUS utility if necessary.

CTDX3HI number REPORT ENTRIES SELECTED FOR PROCESSING

**Explanation:** This information message indicates the number of report entries that the CTDREPUS utility has selected for processing.

**Corrective Action:** No action is required.

CTDX3II number REPORTS HAVE BEEN PROCESSED

**Explanation:** This information message indicates the number of Control-D reports that have been processed.

**Corrective Action:** No action is required.

CTDX3JW NO REPORT ENTRIES HAVE BEEN SELECTED

**Explanation:** This warning message indicates that the CTDREPUS utility has not selected any reports that satisfy the specified criteria.

**Corrective Action:** Examine the input criteria. If necessary, change them and rerun the utility.

CTDX3QE INPUT PARAMETERS ERROR

**Explanation:** This error message indicates that the CTDREPUS utility discovered errors in the input parameters. Additional information about the errors is available in the job log. The utility stops.

**Corrective Action:** Examine the job log for error messages describing the problem. Make any necessary corrections and rerun the utility.
CTDX40I CTDNREOR UTILITY STARTED

**Explanation:** This information message indicates that the CTDNREOR utility started.

**Corrective Action:** No action is required.

CTDX41I CTDNREOR UTILITY COMPLETED SUCCESSFULLY

**Explanation:** This information message indicates that the CTDNREOR utility completed successfully.

**Corrective Action:** No action is required.

CTDX42E CTDNREOR UTILITY ENDED WITH ERRORS

**Explanation:** This error message indicates that the CTDNREOR utility discovered problems during processing. Additional information on the problems discovered is available in the job log.

**Corrective Action:** Examine the job log for error messages describing the problem. If necessary, make any necessary corrections and rerun the utility.

CTDX44E INVALID PARAMETER: parm

**Explanation:** The `parm` input parameter specified in the JCL for the CTDNREOR utility is not valid. The utility stops.

**Corrective Action:** Correct the invalid `parm` input parameter in the JCL and rerun the job.

CTDX45E THE PARAMETER parm MUST BE SPECIFIED

**Explanation:** The mandatory `parm` input parameter for the CTDNREOR utility is missing. The utility stops.

**Corrective Action:** Add the missing parameter to the JCL and rerun the job.

CTDX46E REDUNDANT PARAMETER: parm

**Explanation:** The `parm` input parameter for the CTDNREOR utility has already been specified. The utility stops.

**Corrective Action:** Remove the extra input parameter from the input parameter stream in the JCL and rerun the job.

CTDX48E PARAMETER parm LENGTH EXCEEDED

**Explanation:** The length of the `parm` input parameter exceeds the maximum allowable length for this parameter. The utility stops.

**Corrective Action:** Correct the invalid `parm` input parameter in the JCL and rerun the job.

CTDX4AE CTDNREOR UTILITY TERMINATES DUE TO AN ERROR IN THE SORT

**Explanation:** The CTDNREOR utility issues this error message when the invoked SORT utility ended with errors. The utility stops.
**Corrective Action:** Examine the messages issued by the SORT utility to SYSOUT to identify the problem. Make appropriate changes to the JCL and rerun the job.

**CTDX4BI number REPORTS HAVE BEEN PROCESSED**

**Explanation:** This information message indicates the number of Control-D report entries containing Notepad records with the old format that have been processed by the CTDNREOR utility.

**Corrective Action:** No action is required.

**CTDX4CI number OLD NOTEPAD RECORDS HAVE BEEN PROCESSED**

**Explanation:** This information message indicates the number of Notepad records with the old format that have been processed by the CTDNREOR utility.

**Corrective Action:** No action is required.

**CTDX4DI number NEW NOTEPAD RECORDS HAVE BEEN CREATED**

**Explanation:** This information message indicates the number of Notepad records with the new format that have been created by the CTDNREOR utility.

**Corrective Action:** No action is required.

**CTDX4JW NO REPORTS WITH OLD NOTEPAD RECORDS HAVE BEEN FOUND**

**Explanation:** This warning message indicates that the CTDNREOR utility has found no reports containing Notepad records with the old format requiring reorganization.

**Corrective Action:** Examine the input selection parameters. If necessary, change them and rerun the utility.

**CTDX4LE CONTROL-D IS ACTIVE IN COMPATIBILITY MODE, UTILITY RUNNING IS NOT ALLOWED**

**Explanation:** This error message indicates that the CTDNREOR utility has been submitted when Control-D is running in compatibility mode with a version less than 8.0.00. The utility is not allowed to run in this mode, since the Notes created by the utility are not accessible if the customer falls back to the old version.

The utility stops with return code 8.

**Corrective Action:** Submit the utility after Control-D is running in full (incompatibility) mode.
CTI - CTM

This group includes messages for the Control-O, Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart on Demand products.

CTI messages

This group includes messages for Control-O products.

Messages CTI600 through CTI6xx

This group includes messages for the Control-O product.

CTI650E STORAGE OBTAIN FAILED WITH RETURN CODE \textit{rc}

\textbf{Explanation:} An attempt to acquire storage for an internal table failed with return code \textit{rc}. The CTOCTI utility requested working storage for an internal table.

The CTOCTI utility terminates.

\textbf{Corrective Action:} Increase the region size specified in the JOB or EXEC JCL statement and rerun the job.

CTI651E OPEN FAILED FOR DDNAME OBJFILE

\textbf{Explanation:} The CTOCTI utility attempted to open the data set referenced by the DD statement \textit{OBJFILE} but failed.

Possible causes are:

- the \textit{OBJFILE} DD statement is misspelled.
- the data set (member) referenced by the \textit{OBJFILE} DD statement does not exist.

The CTOCTI utility terminates.

\textbf{Corrective Action:} Verify that the data set exists and is spelled correctly. Rerun the job.

CTI652S INTERNAL OBJECT TABLE MUST BE ENLARGED

\textbf{Explanation:} The amount of storage allocated for an internal table is insufficient. The system has more started tasks than the CTOCTI utility anticipated. The storage allocated for one of the internal tables is insufficient.

The CTOCTI utility terminates.

\textbf{Corrective Action:} Contact your INCONTROL administrator.
CTI653E ALESERV ADD FAILED FOR addr-spc WITH RETURN CODE rc

**Explanation:** The ALESERV function was invoked to analyze address space addr-spc, but failed with return code rc.

Control-O continues its analysis with the next address space.

**Corrective Action:** No action is required.

CTI654I ADDRESS SPACE addr-spc IS SWAPPED OUT AND WILL BE SKIPPED

**Explanation:** This information message indicates that Control-O failed to get information from the address space addr-spc. The ALESERV function was invoked to analyze the address space but failed because the specified address space is swapped out.

Control-O continues its analysis with the next address space.

**Corrective Action:** No action is required.

CTI655E ALESERV DELETE FAILED FOR addr-spc WITH RETURN CODE rc

**Explanation:** Control-O acquired information from the address space addr-spc but the attempt to disconnect from the address space failed.

After analyzing the address space, the ALESERV function DELETE tried to disconnect from the address space but failed with return code rc.

Control-O continues its analysis with the next address space.

**Corrective Action:** No action is required.

CTI656I STARTED TASK taskName WILL BE ADDED TO THE DATABASE

**Explanation:** This information message indicates that started task taskName was not specified in the Object file but was active in the system.

The started task is added to the COSMOS database.

**Corrective Action:** No action is required.

CTI657I OBJECT_NAME/DESC CLASS_NAME/DESCR ADDRSPAC STATUS _J

**Explanation:** This information message is the header for data displayed by the CTO659I message. It is generated when invoking the CTOCTI utility.

The J field at the end of this message is usually blank. When J is displayed, it means JOINed, and indicates that the address space is part of a composite address space. For example, CICS monitors use three address spaces: AOR, TOR and FOR.

**Corrective Action:** No action is required.
CTI658I  text

**Explanation:** This information message is an internal message issued by the CTOCTI utility. When running the CTOCTI utility to define started tasks for the Control-O/COSMOS database, a Control-O rule traps these internal messages and creates the required definitions for Control-O/COSMOS.

**Corrective Action:** No action is required.

CTI659I  objectName className addrSpace status j

**Explanation:** This information message displays the object name (16 characters), class name (16 characters), address space name (8 characters), status (ACTIVE, INACTIVE, EXCLUDED) and j (1 character)

The J field at the end of this message is usually blank. When J is displayed, it means JOINed and indicates that the address space is part of a composite address space. For example, CICS monitors are use three address spaces: AOR, TOR, and FOR.

**Corrective Action:** No action is required.

CTM messages

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

Messages CTM0 through CTM0xx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTM001I  CTMSLC STARTED

**Explanation:** This information message indicates that the CTMSLC utility, which enables you to remove old job scheduling definitions from the schedule library, has started.

**Corrective Action:** No action is required.

CTM005S  OPEN OF DDNAME ddName FAILED

**Explanation:** The automatic zap application program failed to open the specified DD name. Possible causes are:

- The *ddName* DD statement is missing.
- The data set described by the *ddName* DD statement does not exist.

The program stops execution with a condition code of 08.

**Corrective Action:** The JCL was probably modified incorrectly. Restore the original JCL job stream, as follows:

1. Using the documentation provided as part of the IOA Monthly Maintenance Upgrade system, transfer the JCL job stream from the diskette to the mainframe.
2. Modify the JCL as specified in the documentation.
3. Submit the job.

Note: You may run the JCL job stream as often as necessary. If a zap is already applied, it is bypassed.

**CTM008S SORT FAILED RC = rc**

**Explanation:** Internal sort failed in the CTMRFLW or CTMRAFL utility. The CTMRFLW or CTMRAFL utility activates the regular sort program of the installation.

In this message, `rc` is a return code specific to the sort program.

The program stops executing with a condition code of 08.

**Corrective Action:** Check the sort program literature for the meaning of the sort return code (`rc`), and correct the JCL for the job accordingly.

**CTM00AI NO JOBS WERE DELETED BY LIBRARY CLEANUP PROCESS**

**Explanation:** The CTMSLC utility completed successfully without deleting any job scheduling definitions from the scheduling library.

The utility terminates with a return code of 4.

**Corrective Action:** No action is necessary.

**CTM011E ONLINE MONITOR NOT ACTIVE, IOA SESSION NOT ESTABLISHED RC= rc**

**Explanation:** An error was detected while attempting to start an IOA session. The IOA Online interface uses the services of an online monitor that supplies all IOA online services. If no IOA Online monitor is active, the session cannot be established.

**Corrective Action:** The user response depends on the value of the return code (`rc`). The following table displays possible values for `rc`, together with their explanations and the appropriate user action.

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
<th>User Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>A valid subsystem name (the SSNAME parameter) was not specified in the IOAXPRM member.</td>
<td>Either correct the value specified for the SSNAME parameter in the IOAXPRM member, or define an entry in the IEASSN00 member of the SYS1.PARMLIB library that corresponds to the SSNAME parameter.</td>
</tr>
<tr>
<td>2</td>
<td>No IOA Online monitor was started since the last IPL.</td>
<td>Activate an IOA Online monitor.</td>
</tr>
<tr>
<td>3</td>
<td>No IOA Online monitor was started since the last IPL.</td>
<td>Activate an IOA Online monitor.</td>
</tr>
</tbody>
</table>
**CTM012E MAXIMUM IOA SESSIONS EXCEEDED, PLEASE TRY AGAIN LATER**

**Explanation:** The number of active online sessions permitted reached the maximum. The MAXSESS parameter in IOAXPRM defines the maximum number of sessions that can be active at a certain moment. The CICS interface determined that this maximum was reached for all the active Online monitors.

The session is not established.

**Corrective Action:** Do one of the following:
- Wait until other users terminate their sessions.
- Open one more Online monitor and enter the transaction name again.
- Increase the value of the MAXSESS parameter in IOAXPRM, and increase the region size of the Online monitor correspondingly.

**CTM013I IOA SESSION ENDED RC=rc**

**Explanation:** This information message indicates that the IOA Online monitor ended the session normally due to a user request, or abnormally due to a problem in the IOA Online monitor. The session is terminated.

**Corrective Action:** The user response depends on the value of the return code (`rc`). The following table displays possible values for `rc`, together with their explanations and the appropriate user action.

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
<th>User Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>The session was terminated in response to a user request.</td>
<td>No action is required.</td>
</tr>
<tr>
<td>1</td>
<td>The IOA Online monitor serving the current transaction was terminated.</td>
<td>Reactivate the IOA Online monitor if required.</td>
</tr>
</tbody>
</table>
CTM014E IOA SESSION INITIALIZATION FAILED RC= rc

Explanation: Initialization of an IOA online session failed. The reason for session termination is indicated by the return code included in the message.

Possible return code values, with their explanations, are displayed in the following table.

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>
<td>Internal process communication failed.</td>
</tr>
<tr>
<td>02</td>
<td>An internal error occurred.</td>
</tr>
<tr>
<td>04</td>
<td>Load of the CTMSUSIE module failed.</td>
</tr>
<tr>
<td>05</td>
<td>An IPL occurred since initialization.</td>
</tr>
</tbody>
</table>

The connection between the TP monitor and IOAOMON is terminated.

Corrective Action: If the problem persists, or the return code is 02, contact BMC Customer Support.

CTM015E INTERNAL ERROR, IOA SESSION TERMINATED, RC= abCode

Explanation: The IOA CICS interface transaction abended due to either an internal error or storage violations caused by other transactions.

In this message, abCode is the CICS abend code.

The session is terminated.

Corrective Action: Use standard CICS problem determination techniques to determine the cause of the abend. If no storage violations produced by other transactions are found, contact BMC Customer Support.
CTM016E ONLINE MONITOR NOT ACTIVE, IOA SESSION TERMINATED.
RC= rc

Explanation: The user sent a command to the IOA online monitor when the monitor was not active. The connection between the TP monitor and IOAOMON is terminated.

Corrective Action: The user response depends on the value of the return code (rc). The following table displays possible values for rc, together with their explanations and the appropriate user action.

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
<th>User Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>
<td>The IOA Online Monitor terminated during user action.</td>
<td>Restart the IOA Online Monitor, and log on again.</td>
</tr>
<tr>
<td>02</td>
<td>The IOA Online Monitor bounced: was terminated and restarted.</td>
<td>Log on again, if required.</td>
</tr>
<tr>
<td>03</td>
<td>The IOA Online Monitor terminated</td>
<td>Restart the IOA Online Monitor, and log on again.</td>
</tr>
<tr>
<td>04</td>
<td>The IOA Online Monitor terminated</td>
<td>Restart the IOA Online Monitor, and log on again.</td>
</tr>
<tr>
<td>05</td>
<td>The IOA Online Monitor terminated</td>
<td>Restart the IOA Online Monitor, and log on again.</td>
</tr>
</tbody>
</table>

CTM017E LOAD OF IOAX037 FAILED. IOA SESSION TERMINATED

Explanation: Loading of IOA User Exit 37 failed.

Possible causes are:

- The IOA Load library is not in the load modules search list.
- There is insufficient memory to load the exit.
- The IOAX037 module does not exist in the Load library.
- The IOA Load library has been updated while you were working and the position of the IOAX037 module has changed.

The function requested is terminated.

Corrective Action: Check the system log for additional messages that clarify the situation. Try one of the following:
- If the IOA Load library is not in the search list, add a STEPLIB DD statement to the library.
- If the loading failed because of lack of memory: for batch jobs, increase the REGION size; for TSO, try to logon again using a larger SIZE parameter. If you are using many IOA screens concurrently, try to exit a few using the END command. This can release memory which is used by the screens.
- Add the IOAX037 module to the Load library.
- If the Load library has been modified and you are working under TSO, try to log on again. If you are working under ROSCOE, you may have to shut down ROSCOE and bring it up again.

**CTM018E INSTALLATION ERROR. DFSLI000 IS NOT LINKED TO IOAIMS. IOA SESSION TERMINATED.**

**Explanation:** The IMS routine is not linked to the IOAIMS program of the IOA-IMS online interface. IOA session terminates.

**Corrective Action:** For more information, see the description of the Link IMS routine in the IOA chapter of the INCONTROL for z/OS Installation Guide.

**CTM01AE PROBLEM WITH USER userId IN ASID asId, ALESERV R.C. IS rc**

**Explanation:** The Online monitor failed to invoke the ALESERV MVS service, and returned a return code of `rc`. The specified user in the `asId` address space may not be responding.

**Corrective Action:** Use the DUMP command to cancel the Online monitor, and send the dump to BMC Customer Support for investigation.

**CTM01BE PROBLEM WITH USER userId IN ASID asId, ECB IS NOT MODIFIABLE**

**Explanation:** The Online monitor failed to post the ECB in the CICS address space for the specified user in the `asId` address space, because the ECB resides in a non-modifiable area.

**Corrective Action:** Use the DUMP command to cancel the Online monitor, and send the dump to BMC Customer Support for investigation.

**CTM01CE PROBLEM WITH USER userId IN ASID asId, A.S. SWAPPED OUT MORE THAN 1 MIN**

**Explanation:** The Online monitor failed to post the ECB in the CICS address space for the specified user in the `asId` address space, because the CICS address space was swapped out for more than 1 minute.

**Corrective Action:** Check why the CICS address space was swapped out. BMC highly recommends defining the CICS address space as non-swappable.

**CTM01DE PROBLEM WITH USER userId IN ASID asId, ASCB DO NOT MATCH**

**Explanation:** The Online monitor failed to post the ECB in the CICS address space for the specified user in the `asId` address space, because the CICS address space was brought down.

**Corrective Action:** No action is necessary.
CTM025I CTMSLC ENDED

**Explanation:** This information message indicates that the CTMSLC utility ended normally. The CTMSLC utility enables you to remove old job scheduling definitions from the schedule library.

**Corrective Action:** No action is required.

CTM027S UNABLE TO LOAD MODULE *modName*

**Explanation:** Loading of the *modName* module failed.

Possible causes are:

- The IOA Load library is not in the load modules search list.
- There is not enough memory to load the module.
- The *modName* module does not exist in the Load library.
- The IOA Load library has been updated while you were working and the position of the *modName* module has changed.

The function requested is terminated.

**Corrective Action:** Look on the system log for additional messages related to the problem.

Try one of the following:

- If the IOA Load library is not in the search list, add a STEPLIB DD statement to the library.
- If the loading failed because of lack of memory do one of the following:
  - For batch jobs, increase the REGION size.
  - For TSO, try to logon again using a larger SIZE parameter.
  - If you are using many IOA screens concurrently, try to exit a few using the END command. This can release memory which is used by the screens.
- If the Load library has been modified and you are working under TSO, try to log on again. If you are working under ROSCOE, you may have to shut down ROSCOE and bring it up again. If the IOA Load library is in the Linklist, a refresh to the LLA is needed.

CTM030I TAPE PULL UTILITY IS SUBMITTING JOBS WITH TYPRUN=SCAN

**Explanation:** Highlighted, unrollable message.

The Tape Pull List is currently submitting jobs with TYPRUN set to SCAN. To perform JCL checking, the Tape Pull utility submits jobs through the internal reader with the TYPRUN parameter set to SCAN. It then reads the sysout of the jobs that are submitted, and deletes the sysout from the spool.

**Corrective Action:** No action is required.

CTM038I TAPE PULL LIST UTILITY STARTED

**Explanation:** The Tape Pull List utility has started.

**Corrective Action:** No action is required.
CTM039I TAPE PULL LIST UTILITY ENDED

**Explanation:** The Tape Pull List utility has ended.

**Corrective Action:** No action is required.

CTM041I NEW ACTIVE JOBS FILE SUCCESSFULLY CREATED

**Explanation:** This information message indicates that the CTMCAJF utility has successfully copied the Active Jobs file.

**Corrective Action:** No action is required.

CTM041S SMFWTM RETURNED RC= 4 - SMF RECORD TOO LONG

**Explanation:** Highlighted, unrollable message.
Control-D attempted to write an SMF record, but the record could not fit completely in an SMF data set.
The CTDX006 Control-D Exit has been modified, but an incorrect value was moved to the SMFLEN field (DSECT CTDUSMF). This field contains the length of the SMF record.
The SMF record is not written, but Control-D continues processing. Control-D sets an internal indication that a permanent error is present on SMF recording, and will not continue to attempt SMF recording. From this point on, instead of writing to SMF, the SMF049I message is written to the IOA Log. This log message is a replacement for SMF recording, and can be entered into SMF after the problem is fixed.

**Corrective Action:** Correct the problem in CTDX006, assemble and link-edit this exit, and bring down Control-D. When Control-D is brought up again, SMF recording will resume.

CTM042S SMFWTM RETURNED RC= 8 - SMF RECORD TOO SHORT

**Explanation:** Highlighted, unrollable message.
Control-D attempted to write an SMF record which is less than 18 characters long.
The CTDX006 Control-D Exit has been modified, but an incorrect value has been moved to the SMFLEN field (DSECT CTDUSMF). This field contains the length of the SMF record.
The SMF record is not written, but Control-D continues processing. Control-D sets an internal indication that a permanent error is present on SMF recording, and will not continue to attempt SMF recording. From this point on, instead of writing to SMF, the SMF049I message is written to the Control-D log. This log message is a replacement for SMF recording, and can be entered into SMF after the problem is fixed.

**Corrective Action:** Correct the problem in CTDX006, assemble and link-edit this exit, and bring down Control-D. When Control-D is brought up again, SMF recording will resume.

CTM043S REQUIRED OPERATION CANNOT BE PERFORMED BECAUSE THE Control-M MONITOR IS ACTIVE

**Explanation:** An attempt has been made to run the CTMCAJF utility while the Control-M monitor is active. Maintenance of the Control-M Active Jobs file can be performed only when the Control-M monitor is not active.
The CTMCAJF utility determines whether a Control-M monitor is active by using the enqueue management mechanism to enquire whether the QNAME of the monitor is in use. If the QNAME is not in use, the monitor is down.
The utility terminates with a condition code of 08.

**Corrective Action:** Shut down the Control-M monitor. If you are using the COPY function, read the instructions for the utility in the *Control-M for z/OS User Guide.*

**CTM044S SMFWTM RETURNED RC= 20 - SMF EXIT IEFU83 SUPPRESSED THE RECORD**

**Explanation:** Highlighted, unrollable message.

Control-D attempted to write an SMF record, but the IEFU83 SMF exit suppressed the record.

The SMF record is not written, but Control-D continues processing. Control-D sets an internal indication that a permanent error is present on SMF recording, and will not continue to attempt SMF recording. From this point on, instead of writing to SMF, the SMF049I message is written to the IOA Log. This log message is a replacement for SMF recording, and can be entered into SMF after the problem is fixed.

**Corrective Action:** Correct the IEFU83 SMF exit to allow Control-D to write SMF records. When Control-D is brought up again, SMF records will resume.

**CTM045S SMFWTM RETURNED RC= 24 - THE SMF FILES ARE FULL**

**Explanation:** Highlighted, unrollable message.

Control-D attempted to write an SMF record, but the SMF files are full.

The SMF record is not written, but Control-D continues processing. Control-D will write the SMF049I message to the IOA Log file. This log message is a replacement for SMF recording, and can be entered into SMF later.

Control-D will keep attempting to write to the SMF file. If the SMF file is still full, the SMF049I message will be written to the log.

Please note that Control-D does not have to be taken down. As soon as room is found on an SMF file, SMF recording will take place automatically.

**Corrective Action:** The operator should clear SMF files according to the conventions of the site. As soon as this is done, Control-D will automatically continue with SMF recording.

**CTM046S BLDL/LOAD FAILED FOR THE MODULE " modName "**

**Explanation:** This is one of two messages with the same ID, but different text.

Loading of the modName module failed.

Possible causes are:

- The IOA Load library is not in the load modules search list (STEPLIB + Linklist).
- There is insufficient memory.
- There is some other system-oriented reason which may be found in the syslog.

Execution might stop.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support.
CTM046S INTERNAL PROBLEM IN MVS. SMF RECORD NOT WRITTEN

**Explanation:** This is one of two messages with the same ID, but different text.

Highlighted, unrollable message.

Control-D attempted to write an SMF record, but there is an internal problem in MVS.

This is due to one of the following return codes from MVS:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>26</td>
<td>Record is not currently being recorded.</td>
</tr>
<tr>
<td>40</td>
<td>Buffer storage caused data to be lost.</td>
</tr>
<tr>
<td>44</td>
<td>SVC 83 unable to establish recovery.</td>
</tr>
</tbody>
</table>

For information about the return code, see message SMF047S.

The SMF record is not written, but Control-D continues processing. Control-D sets an internal indication that a permanent error is present on SMF recording, and will not continue to attempt SMF recording.

From this point on, instead of writing to SMF, the SMF049I message is written to the IOA Log. This log message is a replacement for SMF recording, and can be entered into SMF after the problem is fixed.

**Corrective Action:** Call the system programmer. After the problem is fixed by the system programmer, bring down Control-D. When Control-D is brought up again, SMF recording will resume.

CTM047S RC= rc RECEIVED FROM MACRO SMFWTM

**Explanation:** Highlighted, unrollable message.

Control-D is unable to write SMF records.

Possible causes are:

- The SMF046S message was issued. This message specifies the RC returned by SMF.
- An unknown return code was issued by SMF. This message specifies the RC returned by SMF.

The SMF record is not written, but Control-D continues processing. Control-D sets an internal indication that a permanent error is present on SMF recording, and will not continue to attempt SMF recording.

From this point on, instead of writing to SMF, the SMF049I message is written to the Control-D log. This log message is a replacement for SMF recording, and can be entered into SMF after the problem is fixed.

**Corrective Action:** Call your INCONTROL administrator.

CTM049I NEW HISTORY JOBS FILE SUCCESSFULLY CREATED

**Explanation:** This information message indicates that the CTMHCOPI utility successfully created a new History Jobs file from the old one.

**Corrective Action:** No action is required.
CTM050I NEW TIME ZONE DEFINITIONS SUCCESSFULY LOADED

Explanation: This information message indicates that when the Control-M monitor was started, newly specified Time Zone definitions were successfully loaded.

Corrective Action: No action is required.

CTM053S OPEN OF MANUAL CONDS SYNC FILE FAILED. DDNAME "DANSINC"

Explanation: An attempt to open the Manual Conditions Synchronization file failed (the DANSINC DD statement).

Possible causes are:

- The DANSINC DD statement is missing.
- The file allocated to the DANSINC DD statement is not the IOA Manual Conditions Synchronization file.
- The file allocated to the DANSINC DD statement is the IOA Manual Conditions Synchronization file, but it is a different version or for a different IOA installation.

Corrective Action: Correct the JCL for the job or the allocations for the CLIST.

CTM054I LOADING OF IOA MANUAL CONDITIONS FILE STARTED

Explanation: This information message indicates that loading of the IOA Manual Conditions file has started.

The IOALDNRS utility will start collecting the Manual Conditions from the job orders on the Active Jobs file. These are all the prerequisite conditions which are suspected of requiring manual confirmation.

Corrective Action: No action is required.

CTM055I LOADING OF IOA MANUAL CONDITIONS FILE ENDED

Explanation: This information message indicates that the IOA Manual Conditions file has finished loading.

The Manual Conditions file currently contains all the missing conditions for the job orders on the Active Jobs file.

Corrective Action: No action is required.

CTM056S IOA MANUAL CONDITIONS FILE WAS NOT LOADED

Explanation: The IOA Manual Conditions file was not loaded (the IOALDNRS utility). The utility output should contain a prior message that describes the cause of the problem, or whether the AJF (if Control-M is in use) and the AMF (if Control-D is in use) files are empty.

Corrective Action: Correct the problem and rerun the utility.
CTM057S OPEN OF CONTROL-M ACTIVE JOBS FILE FAILED - DDNAME "DACKPT"

**Explanation:** Open of Control-M Active Jobs file failed (the DACKPT DD statement).

The error message is issued by the IOALDNRS utility, which is used to load or create the Manual Conditions List and is due to one of the following:

- The DACKPT DD statement is missing.
- The data set described by the DACKPT DD statement is not the Control-M Active Jobs file.
- The data set described by the DACKPT DD statement is the Control-M Active Jobs file, but of another Control-M monitor, or of a different version of Control-M.

The IOALDNRS utility will terminate with a condition code of 08. The IOA Manual Conditions file is not loaded.

**Corrective Action:** Correct the JCL for the job.

CTM058E FILE ALLOCATED TO DDNAME "DACKPT" IS NOT CONTROL-M ACTIVE JOBS FILE

**Explanation:** The file allocated to the DACKPT DD statement is not the Control-M Active Jobs file.

This error message is issued by the IOALDNRS utility, which is used to load or create the Manual Conditions List.

Possible causes include:

- The file allocated to the DACKPT DD statement is not the Control-M Active Jobs file.
- The file allocated to the DACKPT DD statement is the Control-M Active Jobs file, but it is of a different version or of a different Control-M monitor.

The IOALDNRS utility will terminate with a condition code of 08. The IOA Manual Conditions file will not be loaded.

**Corrective Action:** Correct the JCL for the job.

CTM059E ACTIVE JOBS FILE IS BEING FORMATTED. PLEASE TRY AGAIN LATER

**Explanation:** The Active Jobs file is currently being formatted, which indicates that the New Day procedure is running.

This error message is issued by the IOALDNRS utility (used to load or create the Manual Conditions List), which terminates with a condition code of 08. The IOA Manual Conditions file is not be loaded.

**Corrective Action:** Try again later.

If the Control-D and Control-M New Day procedures start at the same time, you need to ensure that both procedures finish before running the IOALDNRS utility or the CTDLDNRS step. Use one of the following options:
- Set Control-D New Day time (DAYTIMED) long enough after Control-M New Day time (DAYTIME) to ensure that Control-M New Day is ended.
- Remove the CTDLDNRS step from the CTDNDAY procedure. Run the IOALDNRS utility after both Control-M and Control-D New Day procedures have finished.

**CTM060W ACTIVE JOBS FILE IS EMPTY**

**Explanation:** The IOA Manual Conditions file is not built. The Active Jobs file is empty.

This error message is issued by the IOALDNRS utility, which loads or creates the Manual Conditions List. No manual conditions are found because there are no job orders.

The IOA Manual Conditions file will not be loaded.

**Corrective Action:** No action is required.

**CTM061E FILE ALLOCATED TO DDNAME "DASINC" IS NOT THE IOA SYNCHRONIZATION FILE**

**Explanation:** The data set described by the DASINC DD statement is not the IOA Conditions Synchronization file.

This error message is issued by the IOALDNRS utility, which loads or creates the Manual Conditions List. Possible causes are:

- The file allocated to the DASINC DD statement is not the IOA Conditions Synchronization file.
- The file allocated to the DASINC DD statement is the IOA Conditions Synchronization file, but it is of a different version or of a different IOA monitor.

The IOALDNRS utility terminates with a condition code of 08. The IOA Manual Conditions file is not loaded.

**Corrective Action:** Correct the JCL for the job.

**CTM062E FILE ALLOCATED TO DDNAME "DANSINC" IS NOT THE IOA MANUAL CONDS SYNC FILE**

**Explanation:** The data set described by the DANSINC DD statement is not the IOA Manual Conditions Synchronization file.

This error message is issued by the IOALDNRS utility, which loads or creates the Manual Conditions List. Possible causes are:

- The file allocated to the DANSINC DD statement is not the IOA Manual Conditions Synchronization file.
- The file allocated to the DANSINC DD statement is the IOA Manual Conditions Synchronization file, but it is of a different version or of a different IOA monitor.

The IOALDNRS utility terminates with a condition code of 08. The IOA Manual Conditions file is not loaded.

**Corrective Action:** Correct the JCL for the job.
CTM064E INVALID PARAMETER:- parm

Explanation: Invalid parameter for the IOALDNRS utility.

This error message is issued by the IOALDNRS utility, which is used to load or create the Manual Conditions List. For more details, please see the IOALNDRS utility in the INCONTROL for z/OS Utilities Guide.

The IOALDNRS utility terminates with a condition code of 08. The IOA Manual Conditions file is not loaded.

Corrective Action: Correct the parameter syntax (the IOALDNRS utility).

CTM065E MISSING PARAMETER AFTER:- parm

Explanation: Missing subparameter after the parm parameter.

This error message is issued by the IOALDNRS utility, which is used to load or create the Manual Conditions List. For more details, please see the IOALDNRS utility in the INCONTROL for z/OS Utilities Guide.

The IOALDNRS utility terminates with a condition code of 08. The IOA Manual Conditions file is not loaded.

Corrective Action: Correct the parameter syntax (the IOALDNRS utility).

CTM066E REDUNDANT PARAMETER: - parm

Explanation: Redundant parameter for the IOALDNRS utility.

This error message is issued by the IOALDNRS utility, which loads or creates the Manual Conditions List. For more details, please see the IOALDNRS utility in the INCONTROL for z/OS Utilities Guide.

The IOALDNRS utility will terminate with a condition code of 08. The IOA Manual Conditions file is not loaded.

Corrective Action: Correct the parameter syntax (the IOALDNRS utility).

CTM069E OPEN OF ACTIVE MISSIONS FILE FAILED - DDNAME "DAAMF"

Explanation: Open of Control-D Active Missions file failed (the DAAMF DD statement).

This error message is issued by the IOALDNRS utility, which is used to load or create the Manual Conditions List, and is due to one of the following:

- The DAAMF DD statement is missing.
- The data set described by the DAAMF DD statement is not the Control-D Active Missions file.
- The data set described by the DAAMF DD statement is the Control-D Active Missions file, but of another Control-D monitor, or of a different version of Control-D.

The IOALDNRS utility terminates with a condition code of 08. The IOA Manual Conditions file is not loaded.

Corrective Action: Correct the JCL for the job.
CTM070E FILE ALLOCATED TO DDNAME "DAAMF" IS NOT THE EXPECTED ACTIVE MISSIONS FILE

**Explanation:** The file allocated to the DAAMF DD statement is not the Control-D Active Missions file.

This error message is issued by the IOALDNRS utility, which is used to load or create the Manual Conditions List, and may be due to one of the following:

- The file allocated to the DAAMF DD statement is not the Control-D Active Missions file.
- The file allocated to the DAAMF DD statement is the Control-D Active Missions file, but of another Control-D monitor, or of a different version of Control-D.

The IOALDNRS utility terminates with a condition code of 08. The IOA Manual Conditions file is not loaded.

**Corrective Action:** Correct the JCL for the job.

CTM071E ACTIVE MISSIONS FILE IS FORMATTING NOW

**Explanation:** The Control-M Active Missions file is currently formatting, meaning, the Control-D New Day procedure is running.

This error message is issued by the IOALDNRS utility, which is used to load or create the Manual Conditions List.

The IOALDNRS utility terminates with a condition code of 08. The IOA Manual Conditions file will not be loaded.

**Corrective Action:** Try again later.

CTM072E ACTIVE MISSIONS FILE IS DAMAGED - NOTIFY THE IOA ADMINISTRATOR

**Explanation:** The Active Missions file is probably damaged.

The program stops executing with a condition code of 08.

**Corrective Action:** Check whether the file allocated to the DAAMF DD statement is the Control-D Active Missions file. If it is, it has been damaged; in that event, consult your INCONTROL administrator or BMC Customer Support.

CTM075S OPEN OF DDNAME "DASIMOUT" FAILED. SIMULATION STOPPED

**Explanation:** Open of simulation printout file failed (the DASI MOUT DD statement - the CTMSIM utility).

This is due to one of the following:

- The DASIMOUT DD statement is missing.
- The data set described by the DASIMOUT DD statement cannot be opened for sequential write.

The simulation stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL for the job.
CTM076I  SIMULATION STARTED

Explanation: This information message indicates that simulation started (the CTMSIM Control-M utility). This message is issued by the CTMSIM Control-M utility, which activates the Simulation and Forecasting Facility.

Corrective Action: No action is required.

CTM077S  OPEN OF DDNAME "DASIMPRM" FAILED. SIMULATION STOPPED

Explanation: Open of simulation parameters file failed (the DASIMPRM DD statement - the CTMSIM utility)

This could be due to one of the following:
- The DASIMPRM DD statement is missing.
- The data set described by the DASIMPRM DD statement cannot be opened for sequential read.

The simulation stops executing with a condition code of 08.

Corrective Action: Correct the JCL for the job.

CTM078I  SIMULATION ENDED

Explanation: This information message indicates that simulation has ended (the CTMSIM Control-M utility).

Corrective Action: No action is required.

CTM085S  LOADING OF SIMULATION CONTROL TABLE FAILED. SIMULATION STOPPED

Explanation: Loading of simulation control table failed. The CTMSMT module is not in the IOA SIML library, or there is insufficient memory.

Simulation stops.

Corrective Action: Check the IOA SIML library or increase the REGION size.

CTM090E  INSUFFICIENT MEMORY. UNABLE TO CONVERT TABLE

Explanation: There is not enough memory available for the CTMBGRP utility.

The utility ends with a return code of 20 without converting any jobs.

Corrective Action: Increase the REGION size and resubmit the utility.

CTM091E  TABLE tableName IS IN USE. TRY AGAIN LATER.

Explanation: The tableName table is being used by another user or by the Control-M monitor.

The table is not converted. The utility continues processing with the next table, and ends with a return code of 8.

Corrective Action: Try to convert the table later.
CTM092E TABLE `tableName` IS NOT A VALID SCHEDULING TABLE

**Explanation:** The `tableName` table specified by the user is not a valid scheduling table. As a result, the table cannot be converted into a group format.

The table is not converted. The utility continues with the next table, and ends with a return code of 8.

**Corrective Action:** No action is required.

CTM093E CTMMEM FAILED. TABLE= `tableName`, FUNCTION= `func`, RC= `rc`

**Explanation:** The CTMGRB utility issued function `func` for table `tableName`. The function failed. The CTMMEM service routine ended with a return code of `rc`.

The table is not converted. The utility continues with the next table, and ends with a return code of 8.

**Corrective Action:** Check the function and return code of CTMMEM and correct the problem. For details about CTMMEM functions and return codes, see DOCIMEM in the IOA DOC library.

CTM094S CTMGRB INITIALIZATION FAILED: `shortDesc`

**Explanation:** The initialization phase of the CTMGRB utility failed. A short description (`shortDesc`) at the end of the message specifies the cause of the failure. For example:

- LOAD FAILED FOR MODULE `modName`
- OPEN `fileName` FAILED
- DD `ddName` MISSING

The utility terminates with a return code of 16, and no jobs are converted.

**Corrective Action:** Check the short description specified in the message, and proceed accordingly.

CTM095I CTMGRB ENDED. MAX RC: `rc`

**Explanation:** This information message indicates that the CTMGRB utility has finished running

- displays the highest return code (`rc`) from the utility conversions

**Corrective Action:** No action is required.

CTM096I CTMGRB `msg` - TABLE `tableName` FROM `dsn`, GROUP `grpname`

**Explanation:** This information message is issued at the beginning and end of each table conversion. The variables in this message are:

- `msg` - information about the table conversionValid values are:
  - CONVERT STARTED - The conversion has begun.
  - ENDED “OK” - The conversion ended and was successful,
  - ENDED “NOT OK” - The conversion ended and was unsuccessful.
**TableName** - the name of the table

**Groupname** - the group name that was added to the new table by the conversion process

**Corrective Action:** If the value of `msg` was ENDED "NOT OK", check for a previous error message specifying the cause of the error and proceed accordingly.

---

**CTM097I JOB jobName CONVERTED USING RBC rbcName**

**Explanation:** This information message is issued for each job converted.

As part of the conversion process, basic scheduling criteria for each job are replaced by a schedule RBC. The message indicates the job name and the new schedule RBC that was added to it.

**Corrective Action:** No action is required.

---

**CTM098W TABLE TableName CONTAINS ONLY COMPRESS JOBS. NOT CONVERTED TO GROUP FORMAT**

**Explanation:** The `TableName` table that was selected for conversion contains only COMPRESS jobs. COMPRESS jobs are job scheduling definitions utilizing MINIMUM and PDS. If an entire table contains only COMPRESS jobs, the entire table is not converted and this message is issued.

The utility continues with the next table and ends with a return code of 4.

**Corrective Action:** No action is required.

---

**CTM099E TABLE TableName IS ALREADY A GROUP TABLE**

**Explanation:** The `TableName` table, which was selected for conversion, is already in group format. The table is not converted. The utility continues with the next table and ends with a return code of 8.

**Corrective Action:** No action is required.

---

**CTM09AE INVALID SYSIN CARD ENCOUNTERED: text**

**Explanation:** For one table, an invalid keyword was specified, or a valid keyword was omitted from the file referenced to by the SYSIN DD statement.

The variable `text` specifies the SYSIN statement and the error. Examples are:

- **MISSING KEYWORD** `keyword`
- **MISSING CARD** `ddstmt`

The utility continues with the next table and ends with a return code of 8.

**Corrective Action:** Proceed according to the variable text specified in the message.

---

**CTM09BW TABLE XXXXXXXX, JOB YYYYYYYY CONTAINS AN RBC - NOT CONVERTED TO SMART TABLE FORMAT**

**Explanation:** During the execution of the CTMBTBL utility, an attempt was made to convert a regular scheduling table to a SMART table format. However, the utility encountered a job in the table which contains a CTM-Level RBC. The utility does not support such tables and the table is not converted.
The utility bypasses the affected table and continues processing other table conversion request. The utility ends with a return code of 4.

**Corrective Action:** No action is required.

**Messages CTM100 through CTM1xx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**CTM100I CONTROL-M MONITOR STARTED**

**Explanation:** This information message is a general message issued when the Control-M monitor is started.

**Corrective Action:** No action is required.

**CTM101I NEWCONLIST COMMAND ACCEPTED. SUB SYSTEM(S) WILL BE NOTIFIED**

**Explanation:** This information message appears after the operator issued a NEWCONLIST modify command to Control-M.

The Control-M monitor will notify all the console subsystems on all the computers of the required change.

**Corrective Action:** No action is required.

**CTM101S LCT EXCEEDED MAXIMUM NUMBER OF ENTRIES (10000)**

**Explanation:** An attempt was made to add an entry to the Local Command Table (LCT), an internal program table, but it already contains the maximum number of allowable entries.

Control-M Extended MCS tracking is stopped.

**Corrective Action:** Check the SPY289E message, which always accompanies this message, and proceed accordingly.

**CTM102E CONTROL-M MONITOR NOT APF-AUTHORIZED**

**Explanation:** The Control-M monitor is not APF-authorized. The CTMRUN module is not in an APF-authorized library, or does not have the AC attribute set to 1.

The Control-M monitor terminates with a return code of 8.

**Corrective Action:** Add the library name in which CTMRUN resides to the IEAAPF00 member in SYS1.PARMLIB.

**CTM102S JNF EXCEEDED MAXIMUM NUMBER OF ENTRIES (10000)**

**Explanation:** An attempt was made to add an entry to the Job Not Found Table (JNF), an internal program table, but it already contains the maximum number of allowable entries.

Control-M Extended MCS tracking is stopped.

**Corrective Action:** Check the SPY289E message, which always accompanies this message, and proceed accordingly.
CTM103E INVALID MODIFY PARAMETER. VALID PARAMETERS ARE:

**Explanation:** An erroneous parameter was passed to the Control-M monitor by an operator modify command (F). A list of valid modify parameters is displayed on the console after this message. The modify command is rejected.

**Corrective Action:** Enter a correct modify parameter.

CTM104S BDL/ATTACH CTMMRUN FAILED FOR TASK *taskName*

**Explanation:** Initialization of the *taskName* Control-M monitor internal task failed.

Possible causes are:
- The task was not found in the IOA Load library.
- There is insufficient memory for the Control-M monitor.

The exact reason (system code) can be found on the computer log.

Control-M monitor shuts down.

**Corrective Action:** Call your system programmer for assistance. If necessary, increase the Control-M monitor REGION size.

CTM105S UNRECOVERABLE ERROR ENCOUNTERED

**Explanation:** An unrecoverable error occurred in the operation of the Control-M monitor. The IOA Log contains a previous message concerning the error.

The Control-M monitor may:
- abend on U0006
- terminate with a non-zero return code
- hang. See the IOA Administrators Guide, Chapter 3, section 'Shutting Down the Control-M Monitor' to perform a manual shutdown.

**Corrective Action:** Call your system programmer for assistance. If the problem is not resolved, prepare the Control-M monitor full output and contact BMC Customer Support.

CTM106S SUBTASK *subtaskName* HAS ABENDED

**Explanation:** The *subtaskName* Control-M monitor internal subtask has abended.

Control-M monitor shuts down with the 0006 user abend. A dump of the abending task will be included in the output.

**Corrective Action:** Call your system programmer for assistance. If the problem is not resolved, prepare the Control-M monitor full output and contact BMC Customer Support.

CTM107I SHUT DOWN UPON REQUEST FROM OPERATOR

**Explanation:** This information message is issued when the Control-M monitor is shut down upon request from the operator.

Control-M monitor shuts down.
Corrective Action: No action is required.

CTM108S INITIALIZATION ROUTINE FAILED. RC= \textit{rc}

\textbf{Explanation:} \textit{Highlighted, unrollable message.}

Error encountered when initializing the Control-M monitor.

The exact cause of the error is indicated by the return code (\textit{rc}).

The Control-M monitor shuts down.

Corrective Action: If the return code (rc) is 4, verify that the JES subsystem name as defined in IEFSSN\textit{xx} is either JES2 or JES3, and that the JESTYPS parameter in the IOAPARM member is either JES2 or JES3.

If the return code is 8, certain load modules are missing from the IOA LOAD library. Restore the original LOAD library.

If the return code is 24, the IOADEST table (the dynamic destination table for group Shout messages) is missing from the IOA PARM library.

CTM109I THE NUMBER OF INTERVALS TO WAIT FOR THE CONTROL-M DAILY IS SET TO \textit{number/} intervals

\textbf{Explanation:} This information message indicates that after a Control-M monitor issues message CTM113I, it is waiting for the displayed number of Control-M sleeping intervals for the New Day procedure to start executing. If the New Day procedure does not start executing, message CTML03W is issued, followed by message CTML06W.

Corrective Action: No action is required.

CTM111I JOURNAL COMMAND ACCEPTED: \textit{cmd}

\textbf{Explanation:} This information message indicates that a JOURNAL\textasciitilde{}ENABLE or JOURNAL\textasciitilde{}DISABLE modify command was accepted. The command is echoed (as \textit{cmd}) in the message.

Corrective Action: No action is required.

CTM112E SMFID \textit{smfid} IS NOT DEFINED IN CONTROL-M INSTALLATION PARAMETERS

\textbf{Explanation:} The Control-O or CMEM subsystem initialization routine is running under a CPU that was not defined in the IOACPRM member.

Possible causes are:

\begin{itemize}
  \item The CPU in which Control-O or CMEM runs is not defined in the IOACPRM member.
  \item The computer in which Control-O or CMEM runs is a multi-CPU computer, and the SID parameter in the SMFPRM \textit{xx} member in SYS1.PARMLIB does not define all the CPUs correctly.
\end{itemize}

Control-O or CMEM monitor shuts down.

Corrective Action: Do the following:
1. Check that the SMF ID of the computer in which Control-O or CMEM is being initialized is defined in the list of SMF IDs in the IOACPRM member.
2. If the IOACPRM definition appears correct, check the SMF ID defined in SYS1.PARMLIB.
3. In a multi-CPU computer, issue from the console the MVS command $D M=CPU to receive a listing of all CPU serial numbers, and compare them with the PARMLIB definition.

CTM112I  fileName SUPPORT NOT ACTIVATED
Explanation: This information message indicates that History/Journal support is not set to Y in the CTMPARM member.
This message is generated in response to a HISTALOC/JOURNAL=ENABLE or HISTALOC/JOURNAL=DISABLE modify command. This command could not be processed because History/Journaling is not enabled.
Corrective Action: Set HIST/JRN to Y in the CTMPARM member.

CTM113I CONTROL-M MONITOR monName NEW DAY PROCESSING STARTED
Explanation: Highlighted, unrollable message.
This information message indicates that the monName Control-M monitor has begun performing a number of housekeeping tasks prior to submitting the New Day procedure.
Control-M suspends processing at the time specified in CTMPARM to allow the New Day procedure to run.
The Control-M monitor remains suspended until the New Day procedure is successfully completed. At the successful completion of the New Day procedure, the monitor resumes normal execution.
Corrective Action: No action is required.

CTM113W CONTROL-M MONITOR SHUTTING DOWN FOR A NEW DAY
Explanation: Highlighted, unrollable message.
See RUN113W.
Corrective Action: No action is required.

CTM114E JOB HANDLED AT TIME OF ABEND: ID= id MEMBER= memName USER-ID= userId
Explanation: A subtask abended.
As a result of the subtask abend, the RUN106S message is issued. This message follows RUN106S with additional information. The ID (id), member name (memName), and user ID (userId) displayed in the message are from the Master Index file (MIT) that was handled by the subtask when it abended.
Corrective Action: No action is required.

CTM116S OPEN OF ACTIVE JOBS FILE FAILED - DDNAME "DACKPT"
Explanation: Highlighted, unrollable message.
Open of Control-M Active Jobs file failed (the DACKPT DD statement). Possible causes are:

- The DACKPT DD statement missing.
- The data set described by the DACKPT DD statement is not the Control-M Active Jobs file.
- The data set described by the DACKPT DD statement is the Control-M Active Jobs file, but of another Control-M monitor, or of a different version of Control-M.

Control-M monitor shuts down.

**Corrective Action:** Correct the JCL for the Control-M monitor.

**CTM117S ACTIVE JOBS FILE IS BEING FORMATTED NOW**

**Explanation:** Highlighted, unrollable message.

Control-M monitor was started while the Active Jobs file was being formatted. The New Day procedure did not finish formatting the file, either because it is still working, or because it abended. It is impossible to start the Control-M monitor until the New Day procedure finishes executing successfully.

The Control-M monitor shuts down.

**Corrective Action:** Check how the New Day procedure finished executing. All the problems of the New Day procedure must be corrected before restarting the Control-M monitor. Note, however, that if an IPL occurred during the previous run of the New Day procedure, it will correct itself when restarted. Therefore, it can be restarted without correction. If the New Day procedure is abended, it may be necessary to set all dates in the date control record (the DATREC member in the CTM PARM library) to one day prior to the current day and rerun the New Day procedure. If the procedure ends successfully, the user will be able to restart the Control-M monitor.

**CTM118S FILE ALLOCATED TO DDNAME "DACKPT" IS NOT THE EXPECTED ACTIVE JOBS FILE**

**Explanation:** Highlighted, unrollable message.

The data set described by the DACKPT DD statement is not the expected Control-M Active Jobs file. This could be due to one of the following:

- The file allocated to the DACKPT DD statement is not the Control-M Active Jobs file.
- The file allocated to the DACKPT DD statement is the Control-M Active Jobs file, but it is of a different version or of a different Control-M monitor.

Control-M monitor will shut down.

**Corrective Action:** Correct JCL for the Control-M monitor.

**CTM119S ACTIVE JOBS FILE IS DAMAGED - NOTIFY THE IOA ADMINISTRATOR**

**Explanation:** Highlighted, unrollable message.

The contents of the Active Jobs file have been corrupted.
The Active Jobs file is marked as FORMAT during New Day processing, and marked as FREE at successful completion. Currently, the file is not marked as FORMAT, nor as FREE. Control-M monitor will shut down.

**Corrective Action:** Call your system programmer for assistance. If the problem is not resolved, call your IOA Administrator.

**CTM120I** CONTROL-M MONITOR SHUTTING DOWN

**Explanation:** Highlighted, unrollable message.

This information message is issued by Control-M or Control-D when shutting down the Control-M monitor in response to a P command, or on certain internal Control-M events.

The IOA Log contains additional messages concerning the reason for shutting down.

Control-M monitor shuts down.

**Corrective Action:** No action is required.

**CTM121S** CONTROL-M MONITOR ENDED WITH ERROR

**Explanation:** Highlighted, unrollable message.

Control-M monitor ended with an error.

The IOA Log should contain additional messages concerning the specific error.

Control-M monitor will shut down.

**Corrective Action:** Check the IOA Log (or the computer log) for the reason. Call the system programmer for assistance if needed. Try to start the Control-M monitor again as soon as possible.

**CTM122W** YOUR CONTROL-M IS ALREADY ACTIVE. QNAME qName

**Explanation:** Highlighted, unrollable message.

An attempt has been made to start a Control-M monitor which is already active. Two Control-M monitors with the same qname cannot run at the same time.

The newly started Control-M monitor will shut down.

**Corrective Action:** No action is required.

**CTM123I** CONTROL-M INTERVAL IS SET TO nn SECONDS

**Explanation:** This information message is issued when an operator command is used to set a Control-M sleeping interval. For more details, see the INCONTROL for z/OS Administrator Guide.

Control-M monitor wakes up every \( nn \) seconds, and checks what to do.

**Corrective Action:** No action is required.

**CTM124E** VALID PARAMETERS FOR KEYWORD keywrd ARE: parms

**Explanation:** A MODIFY command containing invalid syntax was entered for the Control-M monitor.

In this message, \( parms \) is a list of the valid parameters.
Corrective Action: Enter one of the **parms** parameters.

**CTM125I validParm**

**Explanation:** This message indicates that an erroneous parameter was passed to the Control-M monitor by an operator modify command (F). The message follows the CTM103E message with a valid modify parameter.

**Corrective Action:** Enter a correct modify parameter.

**CTM126I NEW EXIT CTMX004 LOADED**

**Explanation:** This information message indicates successful execution of the CTMX004 operator modify command. A new Control-M resource acquisition user exit was loaded.

**Corrective Action:** No action is required.

**CTM127I NEWDEST COMMAND ACCEPTED: NEWDEST= tableName**

**Explanation:** A NEWDEST operator command has been passed successfully to the Control-M monitor. The Control-M monitor replaces the current destination table with the **tableName** destination table.

**Corrective Action:** No action is required.

**CTM128S OPEN OF DUAL ACTIVE JOBS FILE FAILED-DDNAME "DAALTCKP"**

**Explanation:** Highlighted, unrollable message.

Open of the Control-M Alternate (dual) Active Jobs file failed (the DAALTCKP DD statement).

This is due to one of the following:

- The DAALTCKP DD statement is missing.
- The data set described by the DAALTCKP DD statement is not a Control-M Active Jobs file.

This message will be produced only if Control-M is working in dual file mode, which is selected by setting the DUALDB parameter in the IOAPARM member in the IOA PARM library to Y.

The Control-M monitor will shut down with an error message.

**Corrective Action:** Correct the JCL for the Control-M procedure, and start it again. If you do not wish to run in dual file mode, correct the Control-M Installation Parameters (IOAPARM).

**CTM129W EXIT exitName WAS NOT LOADED**

**Explanation:** Control-M failed to load the **exitName** user exit. Common reasons for failure are:

- The IOA Load library is in the Linklist, and someone has updated the library without performing a refresh for the LLA.
- The last assembly or linkage of the exit failed.
- There is insufficient memory to load the new exit.

Control-M will bypass the exit and continue to run.

**Corrective Action:** Check the computer Log for the cause of the failure.
CTM12AE CONTROL-M EXTENDED MCS INITIALIZATION FAILED. RC= rc, MCSOPER RC= mcssoper_rc REASON= rsn

Explanation: Initialization of the extended MCS console component of Control-M failed.

The second return code (mcssoper_rc) and the reason code (rsn) are displayed only if the value of rc, the first reason code, is 16 or 20.

Possible values for rc, the first return code, are shown in the following table.

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
<td>Authorization failed</td>
</tr>
<tr>
<td>12</td>
<td>Version of operating system not supported</td>
</tr>
<tr>
<td>16</td>
<td>See the Note below this table.</td>
</tr>
<tr>
<td>20</td>
<td>See the Note below this table.</td>
</tr>
<tr>
<td>24</td>
<td>There is insufficient memory</td>
</tr>
<tr>
<td>32</td>
<td>ENQ for the console already held.</td>
</tr>
</tbody>
</table>

Note:
If the value of rc is 16 or 20, the second return code (mcssoper_rc) and the reason code (rsn) from the MCSOPER facility are also displayed.

All services relying on an extended MCS console function are inoperable.

Corrective Action: Correct the problem according to the return code displayed in the message.

For the meanings of the MCSOPER return and reason codes displayed if the return code is 16 or 20, see the description of the MCSOPER macro in the IBM Application Development Reference - Services for Authorized Assembler Language Programs.

Once the cause of the problem has been corrected, bring the Control-M monitor down and up again.

CTM130E SYNTAX ERROR. "QUIESQRES" COMMAND IGNORED

Explanation: The Control-M monitor attempted to evaluate the QUIESQRES command identified in the preceding CTML18I message, but found invalid command syntax.

For a detailed description of the command syntax, see the section on activating and deactivating quiesced quantitative resources in the Control-M chapter of the INCONTROL for z/OS Administrator Guide.

The Control-M monitor ignores the command.

Corrective Action: Enter another QUIESQRES command using valid syntax.

CTM131I NO QUIESCE TIME ASSIGNED TO RESOURCE resourceName

Explanation: The following command was given:
F CONTROLM,QUIESQRES=resourceName,DISP|OFF

with the DISPLAY or OFF parameter. However, no QUIESCE time was assigned to the resourceName resource.

**Corrective Action:** No action is required.

**CTM132I** NO QUIESCE TIME ASSIGNED TO ANY RESOURCE

**Explanation:** The following command was given:

F CONTROLM,QUIESQRES=resourceName,DISP|OFF

with the DISPLAY or OFF parameter. However, no resource had a QUIESCE time assigned.

**Corrective Action:** No action is required.

**CTM133I** yyyy-mm-dd hh:mm QUIESCE TIME ASSIGNED TO RESOURCE resourceName

**Explanation:** This information message displays the action of the Control-M monitor in response to the following command:

F CONTROLM,QUIESQRES=resourceName,DISP|NOW|OFF|hh:mm

The date and time assigned in response to this command depend on the setting of the DISPLAY | NOW | OFF parameter, as follows:

- **DISPLAY** - the time that is currently assigned
- **NOW** - the time assigned is the time current at the time the command is processed
- **hh:mm** - the time assigned is the time specified in the command

**Corrective Action:** No action is required.

**CTM145E** taskType memName jobName /jobId OID=orderId ERROR IN IOAMEM FUNCTION func : RETURN CODE rc

**Explanation:** Highlighted, unrollable message.

Internal error in Control-M monitor.

In this message, rc consists of eight digits that include a 4-digit reason code and a 4-digit return code. For more information on these codes, see the description of IOAMEM in the INCONTROL for z/OS Administrator Guide.

Job submission stops. In some cases, the Control-M monitor will shut down.

**Corrective Action:** Do the following:
• Ask your INCONTROL administrator for assistance.
• If the Control-M monitor shuts down repeatedly, use the H option of the Control-M Active Environment screen (Screen 3) to hold the order that is causing the problem.
• If the return code indicates that an abend has occurred, check the Control-M system log for system messages associated with the abend.

CTM14AE JOB memName OID=orderId NOT SUBMITTED, MIGRATED DSN lib WTO for SUB14AE.

Explanation: Highlighted, unrollable message.
The job was not submitted because the library that contains its member migrated.
The job is not submitted and is assigned a NOTOK status with the NOLIB reason.
Corrective Action: Restore the library to disk and submit the job again.

CTM15CI memName... THE MEMBER HAS BEEN COPIED INTO OVERLIB lib

Explanation: The memName member has been copied from the MEMLIB library into the OVERLIB library, because the COPMEM20 installation parameter was set to Y.
Corrective Action: No action is required.

CTM15CW memName... THE MEMBER HAS NOT BEEN COPIED INTO OVERLIB. REASON: rc-rsn. LIBRARY: lib

Explanation: Although the COPMEM20 Control-M installation parameter was set to Y, Control-M failed to copy the memName member into the OVERLIB library.
The variables in this message are:
• memName - the name of the member that was not copied
• rc - the return code from the IOAMEM program
• rsn - the reason code from the IOAMEM program
• lib - the name of the OVERLIB library
For explanation of the values of rc and rsn, see the description of the IOAMEM Assembler Macro in the INCONTROL for z/OS Administrator Guide.
Corrective Action: Take corrective action on the basis of the values of rc and rsn.

CTM15DI memName... THE MEMBER HAS BEEN DELETED FROM OVERLIB lib

Explanation: The memName member has been deleted from the lib OVERLIB library, because either the DELOVRER or the DELOVRUN Control-M installation parameter was set to Y.
Corrective Action: No action is required.
CTM15DW memName... THE MEMBER HAS NOT BEEN DELETED FROM OVERLIB. REASON: rc-rsn. LIBRARY: lib

**Explanation:** Although either the DELOVRER or the DELOVRUN Control-M installation parameter was set to Y, Control-M failed to delete the memName member from the OVERLIB library.

The variables in this message are:
- **memName** - the name of the member that was not deleted
- **rc** - the return code from the IOAMEM program
- **rsn** - the reason code from the IOAMEM program
- **lib** - the name of the OVERLIB library

For explanation of the values of rc and rsn, see the description of the IOAMEM Assembler Macro in the *INCONTROL for z/OS Administrator Guide.*

**Corrective Action:** Take corrective action on the basis of the values of rc and rsn.

CTM161E taskType memName jobName | jobld OID=orderid SEVERE INTERNAL ERROR WHILE PROCESSING AUTOEDIT INSTRUCTIONS, RC=rc. SUBMISSION CANCELLED

**Explanation:** Severe Control-M internal error during submission of member.

The error occurred in the AutoEdit language interpreter.

Depending on the severity of the error, Control-M monitor will shut down, or at least job submission will be cancelled.

**Corrective Action:** Have your system programmer prepare the Control-M monitor full output and contact BMC Customer Support. You will probably be able to submit the member if you change (or omit) your AutoEdit control statements in the member, but keep a copy of the original member for problem resolution. If you hold the job order, Control-M monitor will not shut down.

CTM166E SUBMITTER FAILURE. CTMLIB ABENDED abCode ON FUNCTION func

**Explanation:** Highlighted, unrollable message.

An abend has occurred while trying to read a member.

The abend code (abCode) and function (func) can suggest the cause of the problem.

Control-M monitor does not abend. Processing of other jobs continues, but the job submission is terminated.

**Corrective Action:** Resolve the problem according to the abend code and rerun the job.

CTM168S CONTROL-M SHUTTING DOWN - COMMUNICATION TO "JES" NOT AVAILABLE

**Explanation:** Highlighted, unrollable message.
The Control-M monitor cannot communicate with JES, and therefore shuts down.

This can be due to the following:

- JES is not working or is in the process of shutting down.
- A subsystem of JES stopped working. JES will probably shut down soon with error, or may get stuck.
- There is some problem with JES operation.
- An error occurred in the Control-M interface to JES.

The Control-M monitor shuts down as a precaution. If something is wrong with JES, the results of job submission or the initiation of a started task may be unpredictable.

**Corrective Action:** If the problem is JES-related, after the JES problem is solved, start the Control-M monitor again.

If you cannot find the cause of the problem, have your system programmer prepare the Control-M monitor full output and contact BMC Customer Support. The sysout of the DD statement DADUMP2 of the Control-M monitor procedure should contain a dump of problem-related areas which can help BMC Customer Support.

In any case, try to start Control-M monitor again, for production to continue.

**CTM169E SEVERE INTERNAL ERROR WHILE STARTING A STARTED TASK**

**Explanation:** A severe Control-M monitor error occurred while starting a started task.

The problem is probably in the Control-M monitor communication with JES. The return code $rc$ can be interpreted by BMC Customer Support.

The Control-M monitor may:

- abend on U0006
- terminate with a non-zero return code
- hang. See the IOA Administrators Guide, Chapter 3, section ‘Shutting Down the Control-M Monitor’ to perform a manual shutdown.

**Corrective Action:** Re-start the Control-M monitor.

- If the problem occurs again, hold the started task which causes the problem (it is in WAIT START state on the Active Environment screen).
- If the problem continues to appear for every started task, hold all the started tasks that should be started by Control-M. This will allow the jobs to run while someone tries to resolve the problem.
- Keep the dumps and contact your INCONTROL administrator.

**CTM170E SEVERE INTERNAL ERROR WHILE RELEASING AN ON SPOOL JOB**

**Explanation:** When the On Spool Facility tried to get the status of the job before releasing it, it received an unknown return code $rc$ from the subsystem request.

The job is not released.
Corrective Action: Have your INCONTROL administrator prepare the Control-M monitor full output and contact BMC Customer Support.

CTM180I ENABLED FOR THE AUTOMATIC RESTART MANAGEMENT FUNCTION. ELEMENT elemName

Explanation: This information message is issued by the Control-M monitor when the Automatic Restart Management function is enabled at monitor initialization time.

The Control-M monitor was requested to enable the Automatic Restart Management function under the elemName element name. When this succeeds, this information message is issued.

Corrective Action: No action is required.

CTM181I AUTOMATIC RESTART IN PROGRESS AFTER UNEXPECTED FAILURE

Explanation: If Automatic Restart Management support is enabled and the Control-M monitor fails unexpectedly, this information message is issued when the Control-M monitor is restarted automatically by MVS.

If the Control-M monitor fails unexpectedly when Automatic Restart Management support is enabled, this information message is issued when the Control-M monitor is automatically restarted by MVS.

Corrective Action: No action is required.

CTM182W AUTOMATIC RESTART MANAGEMENT REQUEST FOR ELEMENT elemName FAILED R15=nn REASON=rsn shortDesc

Explanation: This warning message is issued if the Control-M monitor fails to enable the Automatic Restart Management function under the elemName element.

The return and reason codes are documented in the Return and Reason Codes part of the “IXCARM Macro Instruction” section in the IBM manual MVS Programming: Sysplex Services References. The short description is only displayed for common errors.

The Control-M monitor continues without Automatic Restart Management support.

Corrective Action: Investigate why the enable request was refused and rectify the situation.

CTM183E JOB WAS PUT ON HOLD BY THE AUTOMATIC RECOVERY FEATURE

Explanation: Highlighted, unrollable message.

A job was put into Held status after a subtask abended.

As a result of the abending of the subtask, the CTM114E message is issued. If the MAXJBHLD parameter in the CTMPARM member is set to a value greater than zero, this message is issued following the CTM114E message.

The MAXJBHLD parameter sets the maximum number of jobs that can be put into Held status.

Corrective Action: No action is required.
CTM184E MAXIMUM NUMBER REACHED FOR AUTOMATIC RECOVERY FEATURE - DISABLED

**Explanation:** A job was previously put into Held status after a subtask abended. As a result of the abending of the subtask, the CTM114E and CTM183E messages are issued. This message is issued following the CTM183E message if both the following conditions are satisfied:

- The MAXJBHLD parameter in the CTMPARM member is set to a value greater than zero.
- The number of jobs already put into Held status is equal to the value set in the MAXJBHLD parameter.

The MAXJBHLD parameter sets the maximum number of jobs that can be put into Held status.

**Corrective Action:** No action is required.

CTM188W subtaskName IS PROCESSING JOB jobName ORDID orderId FOR MORE THAN number MINUTES

**Explanation:** The subtaskName subtask has been processing the job for an unreasonable amount of time. The task is most likely hung or in a loop.

Possible causes are:

- If CPU utilization by the Control-M monitor is not unusually high, most probably the subtask is waiting for completion of a system action (for example, recall of migrated data set), or it may point to a problem in MVS or JES.
- If CPU utilization by the Control-M monitor is unusually high, it may indicate a loop (in the base code or in a user exit).

The Control-M monitor continues processing as usual. The subtask continues processing of the indicated job.

**Corrective Action:** Review the system log for additional messages related to the problem.

If the reason for the problem is unclear, take the system (SVC) dump of the Control-M monitor's address space using the DUMP console command. Specify parameter SDATA=(CSA,GRSQ,SUM,RGN,TRT).

If the problem is outside Control-M, holding the job being processed and restarting the Control-M monitor may have only temporary effect.

CTM1A3S OID=orderId SEVERE INTERNAL ERROR READING AJF. RC=rc

**Explanation:** Severe error on Control-M Active Jobs file.

Possible causes are:

- An I/O error
- the file allocated to DD statement DACKPT is not the Control-M Active Jobs file
- the Active Jobs file was corrupted.

The 2TF Control-M program ends with errors.

**Corrective Action:** Have your INCONTROL administrator prepare the Control-M monitor full output and contact BMC Customer Support. Check if the file has been updated from multiple computers without global ENQ control, or updated by an unauthorized program.
CTM1A6S OPEN OF STATISTICS FILE FAILED. RC=rc ERROR=errCode

**Explanation:** Open of Control-M Job Statistics file failed.
Possible causes are:
- a missing DASTAT DD statement
- a VSAM open error

**Corrective Action:** Look for VSAM messages or other system messages, and correct the JCL for the Control-M monitor procedure.

CTM1ADW VM COMMAND OUTPUT TRUNCATED

**Explanation:** The response of the IOA VM command interface exceeded the 4096 bytes that the buffer can hold. The remainder of the response is truncated.

**Corrective Action:** Change the command so it can be held in the available buffer of 4096 bytes.

Messages CTM200 through CTM2xx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTM20AE ERROR IN CTMPPE RC=rc, INFORM YOUR IOA ADMINISTRATOR

**Explanation:** An internal error was detected in MAINVIEW Batch Optimizer (MVBO) support. Control-M ends with an error and shuts down.

**Corrective Action:** Perform the following steps:
1. Activate debug level 75.
2. Restart the Control-M monitor.
3. Recreate the error.
4. Send full output of the Control-M monitor to your INCONTROL Administrator.

CTM20BE OID=orderId, MAXIMUM PIPES IN COLLECTION EXCEEDED (255), PIPES IGNORED

**Explanation:** Too many pipes were specified for the collection or the job added too many pipe definitions to the collection.
This message is issued by Control-M. This message may occur if:
- The job definition includes more than 255 pipe definitions.
- The collection contains the maximum number of pipes and the job tries to add additional pipe definitions.

The pipe definitions in the job (and in other jobs belonging to the same collection) will be ignored.

**Corrective Action:** Ensure that no more than 255 pipes are defined in the collection.
CTM221I IOA SUBSYSTEM subsys INITIALIZATION OF CONTROL-\(x\) FUNCTIONS STARTED

**Explanation:** This information message indicates that initialization of the INCONTROL application functions of the IOA subsystem started.

If \(x\) is M, this message is a result of one of the following:

- a START (S) command to the IOASINIT procedure with OPTIONS set to M
- Control-M (CMEM) subsystem function initialization as a result of Control-O shutdown process

If \(x\) is D, this message is issued as a result of a START command to the IOASINIT procedure with OPTIONS set to D.

If \(x\) is O, this message is issued as a result of a START command to Control-O.

The variables in this message are:

- **subsys** - Subsystem name.
- **x** - One of the following:
  - M - Control-M (CMEM) subsystem functions
  - D - CDAM subsystem functions
  - O - Control-O subsystem functions

**Corrective Action:** No action is required.

CTM224S SUBSYSTEM NAME subsys DOES NOT EXIST IN THE MVS TABLES

**Explanation:** If OPTION was set to D for IOASINIT, the subsystem name does not exist, and possible causes of this message are:

- There is a mismatch between the name specified in the AMNAME parameter (in the Control-D Installation Parameters) and the name specified in the IEFSSNxx member on SYS1.PARMLIB.
- The IEFSSNxx member on SYS1.PARMLIB was not modified to include the subsystem name.

If OPTION was set to M for IOASINIT, or Control-O is started, the subsystem name does not exist and dynamic allocation of the MVS subsystem tables is not allowed. In this case, possible causes of this message are:

- There is a mismatch between the name specified in the SSNAME parameter (in the IOA Installation Parameters) and the name specified in the IEFSSN xx member on SYS1.PARMLIB, and dynamic allocation for the subsystem tables in not allowed (SSALLOC was set to N).
- The IEFSSN xx member on SYS1.PARMLIB was not modified to include the subsystem name and dynamic allocation for the MVS subsystem tables is not allowed (SSALLOC was set to N).

Initialization of the subsystem fails.

**Corrective Action:** Define the subsystem name in the MVS table.
If OPTION was set to D for IOASINIT, see the sections on Control-D operational parameters for details about the AMNAME parameter, about defining the subsystem name in the MVS tables, and about installing the Compressed Dataset Access Method (CDAM), in the Control-D chapter of the INCONTROL for z/OS Installation Guide.

If OPTION was set to M for IOASINIT or Control-O is started, see the section on IOA operational parameters in the IOA chapter of the INCONTROL for z/OS Installation Guide for details about the SSNAME and SSALLOC parameters.

For details about defining the subsystem name in the MVS tables, see the section on installing the Control-M Event Manager Subsystem (CMEM) in the Control-M chapter of the INCONTROL for z/OS Installation Guide.

CTM225S IOA SUBSYSTEM subsys INITIALIZATION OF CONTROL-x FUNCTIONS FAILED

Explanation: Highlighted, unrollable message.
Initialization of the Control- x subsystem functions failed.
The variables in this message are:
- **subsys** - Subsystem name.
- **x** - One of the following:
  - M - Control-M (CMEM) subsystem functions
  - D - CDAM subsystem functions
  - O - Control-O subsystem functions

If x is D, the following components of Control-D do not function:
- Report Decollation - You cannot decollate reports.
- Batch CDAM - You cannot create or read compressed CDAM data sets.
- Online Viewing - You cannot view reports.
- Printing - You cannot print reports.

If x is M, the CMEM subsystem functions are inactive.
If x is O, Control-O is not active.

Corrective Action: Check the system log for a earlier message concerning the error, and correct the error accordingly. If no error message preceded this one, the error is internal. Contact BMC Customer Support.

If x is D, the CTDAMUTI Control-D utility can be used for emergency situations. This utility decompresses the sysout to its original non-compressed form, even when the CDAM subsystem is inactive. For more information, see the CTDAMUTI utility in the INCONTROL for z/OS Utilities Guide.
CTM226E CMEM IS NOT SUPPORTED - ALL CMEM RELATED PARAMETERS WERE NOT DEFINED IN CTMPARM

Explanation: No values were entered for the ONSPTAB, CTM2SBS and CPUS CMEM-related parameters in the CTMPARM member. This message is issued by the CMEM subsystem initialization routine.

Initialization of the Control-M functions of the IOA subsystem fails.

Corrective Action: Refer to the section in the Control-M chapter of the INCONTROL for z/OS Installation Guide that describes the installation consideration when installing CMEM when Control-M is already installed.

CTM227I IOA SUBSYSTEM subsys INITIALIZATION OF CONTROL-\(x\) FUNCTIONS COMPLETED

Explanation: This information message indicates that initialization of the Control- \(x\) subsystem functions was successful. It is the normal termination message during initialization of the Control- \(x\) subsystem functions.

The variables in this message are:
- \(subsys\) - the subsystem name
- \(x\) - one of the following:
  - \(M\) - Control-M (CMEM) subsystem functions
  - \(D\) - CDAM subsystem functions
  - \(O\) - Control-O subsystem functions

Corrective Action: No action is required.

CTM228I IOA SUBSYSTEM subsys DEACTIVATION OF CONTROL-\(x\) FUNCTIONS STARTED

Explanation: This information message indicates that Control- \(x\) subsystem functions are being shut down. It is the normal message issued during shutdown of Control- \(x\) subsystem functions.

If \(x\) is \(M\), this message is issued as a result of either a START (S) command to the IOASTERM procedure with OPTIONS set to M, or starting Control-O monitor, in which case, the Control-O monitor takes over the CMEM functions and therefore stops the CMEM subsystem functions.

If \(x\) is \(D\), this message is issued as a result of a START command to the IOASTERM procedure with OPTIONS set to D.

If \(x\) is \(O\), this message is issued as a result of a Control-O shutdown.

The variables in this message are:
- \(subsys\) - the subsystem name
- \(x\) - One of the following:
  - \(M\) - Control-M (CMEM) subsystem functions
  - \(D\) - CDAM subsystem functions
CTM229I SUBSYSTEM `subsys` WAS USED BY ANOTHER IOA ENVIRONMENT (IOA QNAME)

**Explanation:** The `subsys` subsystem was used in the past for another IOA environment. Currently, there are no active components of this subsystem.

Control-O issues message CTM22AA.

**Corrective Action:** Respond to message CTM22AA.

CTM229S OPEN FAILED FOR DDNAME "DARES"

**Explanation:** Open of a debugging output file failed (the DARES DD statement).
This is probably because the DARES DD statement is missing in the Control-M procedure.
The Control-M monitor will shut down with error message.

**Corrective Action:** Correct the JCL for the Control-M monitor procedure and start it again.

CTM22AA ENTER "YES" TO RE-USE THE SUBSYSTEM OR "NO" TO STOP THE INITIALIZATION

**Explanation:** The situation described in message CTM229I prevents subsystem initialization. The response to this message determines the next action.
The task is suspended until a response to this message is received.

**Corrective Action:** Do one of the following:
- YES - re-use the subsystem by the new environment.
- NO - do not re-use the subsystem by the new environment; terminate subsystem initialization.

CTM22CI SUBSYSTEM INITIALIZATION TERMINATED DUE TO OPERATOR REQUEST

**Explanation:** This information message indicates that the user requested not to re-use the subsystem by the new environment, in response to message CTM22AA.
The subsystem initialization request is terminated.

**Corrective Action:** No action is required.

CTM22DI `monitorType` SWT CONTROL BLOCK IS REALLOCATED DUE TO VERSION CHANGE FROM `oldVersion` TO `newVersion`

**Explanation:** During initialization, Control-O or CMEM could not reuse the SWT control block, because it was allocated by version `oldVersion`. A new control block is allocated.

**Corrective Action:** No action is required.
CTM230S OPEN FAILED FOR DDNAME "DARESF"

**Explanation:** Open of Control-M Resources file failed (the DARESF DD statement).

Possible causes are:

- The DARESF DD statement is missing.
- The data set described by the DARESF DD statement is not the Control-M Resources file.
- The data set described by the DARESF DD statement is the Control-M Resources file of a different version or a different Control-M monitor.

The Control-M monitor shuts down.

**Corrective Action:** Correct the JCL for the Control-M procedure, and start it again.

CTM231I I OA SUBSYSTEM subsys DEACTIVATION OF CONTROL- x FUNCTIONS COMPLETED

**Explanation:** This information message indicates that shutdown of the Control- x subsystem functions was completed. It is the normal message issued during shutdown of the Control- x subsystem functions.

The variables in this message are:

- `subsys` - the subsystem name
- `x` - one of the following:
  - M - Control-M (CMEM) subsystem
  - D - CDAM subsystem
  - O - Control-O subsystem

If `x` is D, the CDAM access method is inactive. The following components of Control-D do not function:

- Report Decollation - You cannot decollate reports.
- Batch CDAM - You cannot create or read compressed CDAM datasets.
- Online Viewing - You cannot view reports.
- Printing - You cannot print any reports.

If `x` is M, the CMEM subsystem functions are inactive unless Control-O is active and took over the CMEM subsystem functions.

If `x` is O, Control-O is not active. If Control-O was stopped with the P CONTROLO command, then CMEM subsystem functions are active.

**Corrective Action:** No action is required.

CTM232S I OA SUBSYSTEM subsys DEACTIVATION OF CONTROL- x FUNCTIONS FAILED

**Explanation:** Highlighted, unrollable message.

Shutdown of the Control- x subsystem functions failed.
The variables in this message are:

- `subsys` - the subsystem name
- `x` - one of the following:
  - M - Control-M (CMEM) subsystem
  - D - CDAM subsystem
  - O - Control-O subsystem

If the Control-`x` subsystem functions were active, they are not shut down.

**Corrective Action:** Check the system log for a previous message concerning the error, and correct the error accordingly.

If no error message preceded this one, the problem is an internal error. Contact BMC Customer Support.

**CTM233E INVALID PARAMETER. ONLY "D" IS VALID**

**Explanation:** The subsystem initialization routine was given a null or invalid parameter. The subsystem initialization routine requires the parameter D.

**Corrective Action:** If the subsystem is initialized manually, specify the correct OPTION parameter in the START command. If the subsystem is initialized through the COMMND `xx` member in SYS1.PARMLIB, correct the OPTION parameter specified in the START command in the member.

**CTM236E SUBSYSTEM NAME IS NOT SPECIFIED IN IOAPARM**

**Explanation:** This is one of two messages with the same ID, but different text.

The subsystem initialization routine found a blank subsystem name definition in the IOAPARM member.

**Corrective Action:** Correct the SSNAME parameter in the IOAPARM member to specify a valid subsystem name, and check that the other subsystem-related parameters were defined correctly.

If Control-D subsystem functions are requested, check the AMNAME parameter in CTDPARM and correct if necessary.

**CTM236E ERROR WHILE ATTEMPTING TO OPEN THE STEPLIB DATASET**

**Explanation:** This is one of two messages with the same ID, but different text.

Control-O could not open file STEPLIB.

Control-O encountered an error opening the STEPLIB file while attempting to activate the alternate subsystem.

Control-O continues without activating the alternate subsystem.

**Corrective Action:** Verify that a STEPLIB library or concatenation of libraries exists. Reactivate Control-O.

**CTM237E ERROR WHILE ATTEMPTING TO LOCATE (BLDL) ONE OF THE SUBSYSTEM FUNCTION Routines**

**Explanation:** Control-O could not find at least one of the alternate subsystem function routines.
While attempting to activate the alternate subsystem, Control-O could not find at least one of the alternate subsystem function routines in the STEPLIB library or concatenation of libraries. Control-O continues without activating the alternate subsystem.

**Corrective Action:** Verify that these modules exist in the STEPLIB library or concatenation of libraries, and reactivate Control-O.

**CTM238E ERROR WHILE ATTEMPTING TO LOAD ONE OF THE SUBSYSTEM FUNCTION ROUTINES**

**Explanation:** Control-O could not load at least one of the alternate subsystem function routines. While attempting to activate the alternate subsystem, Control-O could not find at least one of the alternate subsystem function routines in the STEPLIB library or concatenation of libraries. Control-O continues without activating the alternate subsystem.

**Corrective Action:** Verify that these modules exist in the STEPLIB library or concatenation of libraries, and reactivate Control-O.

**CTM239E DYNAMIC SSI FAILED TO PERFORM REQUEST FOR subsys IOA SUBSYSTEM**

**Explanation:** *This is one of two messages with the same ID, but different text.*
The Dynamic Subsystem Interface Service (SSI) was not able to define the specified subsystem. The Dynamic SSI Service IEFSSI,REQUEST=ADD was used to define SSCT but failed to do so. More detailed information follows in the message: IEFSSI.m: RETURN CODE =s# , REASON CODE= #
The specified subsystem is not activated. The monitor shuts down.

**Corrective Action:** Call your system programmer.

**CTM239E ERROR WHILE ATTEMPTING TO ACQUIRE STORAGE FOR SUBSYSTEM FUNCTION ROUTINES OR THE SSVT**

**Explanation:** *This is one of two messages with the same ID, but different text.*
Control-O could not acquire enough CSA (Common Storage Area) storage to load alternate subsystem function routines or to build the SSVT for the alternate subsystem.

**Corrective Action:** If storage defined for CSA is not large enough, increase the CSA size and perform an IPL.

**CTM240I NEWCONLIST COMMAND RECEIVED. THE CMEM TABLE WAS RELOADED SUCCESSFULLY**

**Explanation:** This information message indicates that the Control-M or Control-O subsystem functions received the NEWCONLIST request from the Control-M monitor, and accordingly reloaded (refreshed) the CMEM table.
The Control-M or Control-O subsystem functions reloaded the CMEM table.
Corrective Action: No action is required.

CTM241W taskType memName jobName /jobId OUTPUT CONDITION condNameDate NOT UPDATED - NO MORE SPACE. NOTIFY THE IOA ADMINISTRATOR

Explanation: Highlighted, unrollable message.

No more space to add output conditions to the conditions file. The date is in mmdd format.

The record for the specified day of the month is full. For example, if a condition with date reference of January 3 cannot be added, then an entry in the conditions file that contains conditions for the third day of every month is full.

The condition is not added, and a highlighted message is displayed on the operator console. Control-M continues to function, but the jobs that depend on the condition are not submitted.

Corrective Action: Immediate actions:
1. Enter Control-M Online Facility Resource Map (Screen 4). By changing the date range limit, find conditions with the same day (but a different month) as the condition that could not be added, and manually delete those that are not needed.
2. Add the failing condition manually, to maintain production flow.
3. Report the event to your system programmer.

Long term actions:
- Run the IOACLND Control-M utility more often.
- Increase the record length of the IOA Conditions file. For more information on how to do this, see the description of expanding IOA files in the INCONTROL for z/OS Administrator Guide.

CTM244S OPEN OF DD NAME "DAALTRES" AND/OR "DAALTSNC" FAILED. DUAL RESOURCE FILE IS NOT AVAILABLE

Explanation: Open of IOA alternate (dual) Conditions file (the DAALTCND DD statement) failed.
Possible causes are:
- The DAALTCND DD statement is missing.
- The data set described by the DAALTCND DD statement is not an IOA Conditions file.

This message will be produced only if Control-M is working in dual file mode (indicated in IOAPARM).

The Control-M monitor will shut down with an error message.

Corrective Action: Correct the JCL for the Control-M procedure, and start it again. If you do not wish to run in dual file mode, correct the Control-M Installation Parameters (IOAPARM).

CTM245E IOA SUBSYSTEM subsys FUNCTIONS FOR CONTROL-x ARE ALREADY ACTIVE. RUN IOASTERM BEFORE REACTIVATING THEM

Explanation: The Control- x subsystem functions cannot be activated (initialized) because they have already been activated. If x is O, Control-M and Control-O are activated concurrently.
The variables in this message are:

- **subsys** - the subsystem name
- **x** - One of the following:
  - M - Control-M (CMEM) subsystem
  - D - CDAM subsystem
  - O - Control-O subsystem

The request is ignored.

**Corrective Action:** No action is required.

- If `x` is O, stop the active Control-O with a `P CONTROLO` or `F CONTROLO,STOP` command. For more information, see the description of shutting down Control-O in the *INCONTROL for z/OS Administrator Guide*.
- If `x` is D, run the IOASTERM procedure with OPTIONS set to D to deactivate the Control-D subsystem functions.
- If `x` is M, stop the active CMEM facility with a `P CTMCMEM` command. For more information, see the description of shutting down the CMEM facility in the *INCONTROL for z/OS Administrator Guide*.

**CTM246W CMEM FACILITY SUSPENDED - COMM FILE IS FULL. CHECK IF CONTROL-M IS ACTIVE**

**Explanation:** The subsystem communication file is full, and therefore the CMEM subsystem functions overwrite the oldest messages. The file that is used by subsystem functions to communicate with the Control-M monitor is full. Old information will be lost.

Possible causes are:

- The Control-M monitor is down, and the communication file has filled up.
- A small communication file was allocated, and the subsystem adds information to it more quickly than the Control-M monitor can process.
- The communication file was put on a disk that is often inaccessible by the monitor, because of hardware reserves and so on.

**Corrective Action:** Check if the monitor is active; if it is not, bring it up. If the monitor is active, then check:

- the accessibility of the disk on which the file resides
- the size of the file
- the performance of the monitor

**CTM247E SUBSYSTEM-TO-MONITOR COMM FILE IS NOT FORMATTED, OR IS INVALID**

**Explanation:** The subsystem-to-monitor communication file has an invalid format or contains invalid data.

The Control-M (CMEM) subsystem functions shut down.
Corrective Action: Check the Control-M Installation Parameters (CTMPARM) definitions, and check whether the relevant file was formatted by the FORMSUB2 utility. To build the FORMSUB2 job, use the TAILOR JOB option, available from ICE by selecting MAINTAIN YOUR ENVIRONMENT => ICE REFRESH => OPTION 3. After the problem is solved, use the IOASINIT JCL procedure to reactivate the Control-M subsystem functions.

CTM248W IOA SUBSYSTEM subsys FUNCTIONS FOR CONTROL- x WERE ALREADY DEACTIVATED

Explanation: The Control- x subsystem functions cannot be deactivated because they are already inactive.

The variables in this message are:
- subsys - Subsystem name.
- x - One of the following:
  - M - Control-M (CMEM) subsystem functions
  - D - CDAM subsystem functions
  - O - Control-O subsystem functions

The request is ignored.

Corrective Action: No action is required.

CTM250I CONTROL-M IS TERMINATING. TERMINATION SHOULD BE COMPLETED IN LESS THAN TWO MINUTES

Explanation: Highlighted, unrollable message.

This information message indicates that the Control-M monitor is about to shut down because of an internal problem. Due to a unique situation, the termination process may take longer than usual.

Control-M monitor shuts down after approximately one minute.

Corrective Action: Do not cancel the Control-M monitor. If it does not shut down after 5 minutes, cancel it with DUMP, prepare the Control-M monitor full output, and notify BMC Customer Support. Find out why the Control-M monitor shut down and start it again as soon as possible.

CTM252S SEVERE INTERNAL ERROR

Explanation: Severe Control-M monitor internal error while processing the above mentioned job order.

Control-M monitor will abend with the user code 0006. The internal task CTMSPY will abend with the user code 0040.

Corrective Action: Control-M Log should contain additional messages describing the type of error.

CTM255S CONTROL-M SHUTTING DOWN - SEVERE ERROR WHILE PROCESSING JOB SYSOUT

Explanation: Highlighted, unrollable message.

Control-M monitor had a severe error while reading the output of the job and is shutting down.
Control-M monitor will shut down.

**Corrective Action:** Check the contents of the IOA Log for prior messages that will clarify the picture. If you cannot correct the reason, and whenever you start the Control-M monitor, the monitor shuts down again for the same reason, then enter Screen 3 of the Online Facility and hold the job order. Prepare the Control-M monitor full output and contact BMC Customer Support.

**CTM256S CONTROL-M SHUTTING DOWN - COMMUNICATION TO "JES" NOT AVAILABLE**

**Explanation:** Highlighted, unrollable message.

The Control-M monitor detected some problem in communication to JES, and shuts down as a precaution. The Control-M monitor is usually one of the first components of the computer environment to detect problems in JES operation. Usually this is because JES was brought down, or is about to get stuck because of an internal JES problem.

The Control-M monitor will shut down.

**Corrective Action:** Correct the JES problem and restart the Control-M monitor.

**CTM258S INSUFFICIENT MEMORY FOR CONTROL-M MONITOR**

**Explanation:** Highlighted, unrollable message.

There is insufficient memory for Control-M monitor to trace a started task.

The started task has just been initiated by the Control-M monitor, and the Control-M monitor requires a small work area in order to try to locate the job ID assigned by JES to the started task. Unfortunately, there is insufficient memory for the required work area.

The Control-M monitor will try again after a few seconds (it is possible that memory will be released by other components of the Control-M monitor). Meanwhile, the started task will remain with a STARTED status and the job ID is “blank.” Under severe circumstances of this event, the Control-M monitor may shut down.

**Corrective Action:** Increase the Control-M monitor region size and start it again. You are working on the limits.

**CTM260S OPEN OF DDNAME ddName FAILED**

**Explanation:** Control-M monitor failed to open a work data set defined by the DD name *ddName*.

This data set must be defined as a temporary or fixed work area for Control-M monitor. The *ddName* DD statement is probably missing.

Control-M monitor will shut down with errors.

**Corrective Action:** Correct the JCL for the Control-M monitor, and start again.

**CTM261S taskTypememNamejobName/ jobld OID=orderId ALLOCATION OF {SYSOUT FILE | ARCHIVE FILE} dsn FAILED: R15 = rc ERR=erc INFO=irc**

**Explanation:** Dynamic allocation to the specified data set failed.
Control-M dynamically allocates the job sysout data sets, and or the archive data set. The allocation failed for the specified reasons. For an explanation of the return codes displayed as part of this message, see the IBM manual MVS Programming: Authorized Assembler Services Guide.

The return codes in this message are:

- \texttt{rc} - the contents of R15 in hexadecimal notation
- \texttt{erc} - the error reason code in hexadecimal notation
- \texttt{irc} - the information reason code in hexadecimal notation

The requested function is stopped. If analysis of job results was in process, the job terminates NOTOK with the REASON UNKNOWN (*UKNW).

**Corrective Action:** Check the relevant IBM publication for the reason.

- For sysout data sets, check if the sysout was purged while the Control-M monitor was trying to read it.
- For archive files, the Control-M monitor allocates archive files with DISP=(NEW,CATLG). Therefore, the same data set name should not be used in different sysout archive instructions, even for the same job.

If your system programmer is unable to resolve the problem, prepare the Control-M monitor full output and contact BMC Customer Support.

**CTM262W num UNSUCCESSFUL ATTEMPTS TO READ JOB DATA BY SUBSYSTEM REQUEST. RETRY CONTINUES**

**Explanation:** This message is issued every \texttt{num} unsuccessful attempts to read job data by subsystem request.

Whenever the Control-M monitor does not succeed in reading job sysout, this message appears on the operator console. For example, when a job is not run due to a JCL error, then the third sysout data set is missing and this message is issued.

Control-M continues to retry reading the job data for a predefined number of times. If the error persists, this job is not read, and the CTMD50S message is issued.

**Corrective Action:** For the appropriate action, see the section on the Control-M Monitor and JES in the Control-M for z/OS Administrator Guide.

**CTM263S OPEN OF SMB FILE DSNAME dsn FAILED. RC=rc**

**Explanation:** Open of the sysout data set of the job by Control-M monitor failed. Control-M cannot read and analyze the sysout of the job.

Possible causes are:

- Someone purged the output of the job while Control-M monitor was trying to read it.
- An internal Control-M monitor error occurred.
- Some general problem with JES caused JES to terminate.

The job finishes with the status FAILED - REASON UNKNOWN.
Corrective Action: If the job was not purged, and JES did not have any problems, prepare the Control-M monitor full output and contact BMC Customer Support.

CTM264S POINT TO DSNAME dsn FILE FAILED. FDBK code

Explanation: Control-M reads the output of the job as a VSAM file. For some reason it failed in a VSAM operation. Control-M cannot read and analyze the sysout of the job.

Possible causes are:
- Someone purged the output of the job while Control-M monitor was trying to read it.
- An internal Control-M monitor error occurred.
- Some general problems with JES caused JES to terminate.

The job finishes with the status FAILED - REASON UNKNOWN.

Corrective Action: If the job was not purged, and JES did not have any problems, prepare the Control-M monitor full output and contact BMC Customer Support.

CTM265S GET TO DSNAME dsn FILE FAILED. FDBK code

Explanation: Control-M reads the output of the job as a VSAM file. For some reason it failed in a VSAM operation. Control-M cannot read and analyze the sysout of the job.

Possible causes are:
- The output of the job was purged while Control-M monitor was trying to read it.
- An internal Control-M monitor error occurred.
- Some general problem with JES caused JES to terminate.

The job finishes with the status FAILED - REASON UNKNOWN.

Corrective Action: If the job was not purged, and JES did not have any problems, prepare the Control-M monitor full output and contact BMC Customer Support.

CTM266S taskType memName jobName /jobId READING JOB DATA BY SUBSYSTEM REQUEST FAILED

Explanation: Control-M monitor could not read all the data sets of the job, and analyze the data.

Possible causes are:
- An internal Control-M monitor error occurred.
- Some general problem with JES caused JES to terminate.
- Someone has purged the output of the job while the Control-M monitor was trying to read it.

The job finishes with status FAILED - REASON UNKNOWN.

Corrective Action: Look for prior messages in the IOA Log. If the job was not purged, and JES did not have any problems, prepare the Control-M monitor full output and contact BMC Customer Support.

CTM267S ARCHIVE FUNCTION ABENDED ON abCode

Common abend codes are:

- SB37, SE37 - no more space for the sysout in the file
- S913 - security violation

**Corrective Action:** No action is required.

- For an Sx37 type of abend, consult your INCONTROL administrator for the possibility of changing the default Control-M archive file allocation size in the Control-M installation parameters (CTMPARM).
- For an S913 abend, check with your security administrator.
- For other abends, check IBM publications for the reason.

**CTM268S INVALID INSTALLATION PARAMETERS FOR SYSOUT ARCHIVING**

**Explanation:** Highlighted, unrollable message.

Invalid values were set for the Control-M Installation Parameters (CTMPARM) that control the sysout archiving function.

The archiving function is terminated. Control-M does not perform any sysout archiving, and valuable data may be lost.

**Corrective Action:** Consult your INCONTROL administrator immediately.

For valid values for the sysout archiving parameters, see the section on Control-M operational parameters in the Control-M chapter of the *INCONTROL for z/OS Installation Guide*.

To load new parameters, shut down the Control-M monitor and start it again.

**CTM26AS ABEND code WHILE READING SYSOUTS. JOBORDER joborder HELD**

**Explanation:** Control-M could not read the output of a job from the spool.

Control-M may be unable to read the output of a job because the OUT180 data set in which the data is placed overflows. The reason for this abend is either that the job output is unusually large, or that a spool corruption occurred that caused Control-M to read a very large amount of information, not related to the specific job, into its OUT180 data set.

The Control-M monitor changes the job status to HELD PROBLEMS READING SYSOUT.

**Corrective Action:** If the OUT180 data set is too small for the job output, increase the space value in the OUT180 DD, restart Control-M monitor, and free the job order in the Active Jobs file (AJF).

**CTM271E OPEN OF DDNAME "OUT180" FAILED**

**Explanation:** Highlighted, unrollable message.

Open of Control-M work data set described by the OUT180 DD statement failed.

This may be due to the following:

- The OUT180 DD statement is missing.
- The OUT180 DD statement cannot be opened for sequential processing.

The Control-M monitor shuts down with an error message.
**Corrective Action:** Correct the JCL for the Control-M monitor and start it again.

**CTM 28J** 
OID=orderId ERROR ANALYZING PARM MEMBER "UNITDEF" AT LINE lineNum

**Explanation:** An error was detected in the specified line of UNITDEF.
There is probably a syntax error.
The Automatic Tape Adjustment facility is turned OFF for the job, and processing continues.
**Corrective Action:** To implement automatic tape adjustment, correct the error in the specified line and restart Control-M.

**CTM280I** 
MAILDEST TABLE WAS {LOADED | RELOADED}

**Explanation:** This information message indicates that the MAILDEST table was LOADED during Control-M initialization, or was RELOADED as a result of a NEWMAILDEST command.
The MAILDEST table must be loaded before shout messages can be sent to their specified addresses.
If there are jobs in the Active Jobs File (AJF) when a NEWMAILDEST command is issued, the MAILDEST table is reloaded, this message is issued and shout messages are sent.
If the AJF is empty, when a NEWMAILDEST command is issued, the MAILDEST table is not reloaded. As soon as a job is put into the AJF, MAILDEST is reloaded, this message is issued and shout messages are sent.
**Corrective Action:** No action is required.

**CTM281W** 
MAILDEST TABLE WAS NOT FOUND IN ANY LIBRARY REFERENCED BY DD STATEMENT DAParm. UNABLE TO SEND SHOUT

**Explanation:** The MAILDEST member is not in the IOA PARM library.
The IOAMAIL module reads the MAILDEST member to prepare a full address for each name on the mail list.
This message is produced when a job scheduling definition or rule issues a SHOUT or DO MAIL action to a destination specifying an e-mail address that cannot be resolved due to the absence of a MAILDEST member in the IOA PARM library.
The MAILDEST member is not loaded and SHOUT messages are not sent.
**Corrective Action:** Build a new MAILDEST member in the IOA PARM library and try again.

**CTM282I** text (usr)

**Explanation:** Highlighted, unrollable message.
This information message is activated by the SHOUT facility. The usr user ID is for the job order requesting the SHOUT.
**Corrective Action:** No action is required.
INCONTROL for z/OS Messages Manual

CTM284I DEST TABLE LOAD SUCCESSFUL: NEWDEST=tableName

**Explanation:** This information message indicates that as a result of an operator NEWDEST command, the Control-M monitor successfully loaded the destination table identified in the message.

**Corrective Action:** No action is required.

CTM285E NEWDEST PARAMETER MISSING OR INVALID

**Explanation:** The destination table passed to the Control-M monitor by means of an operator NEWDEST command is invalid or missing.

The specified destination table is not loaded.

**Corrective Action:** Enter the NEWDEST command specifying a destination table which has been previously defined in a library concatenated to the STEPLIB DD statement of the Control-M procedure.

CTM285W DYNAMIC DESTINATION TABLE NOT LOADED

**Explanation:** Loading of the Dynamic Destination Table by the Control-M monitor failed.

It could be due to one of the following:

- There is insufficient memory for loading the table.
- The IOADEST table does not exist in the IOA PARM library.

If the failure happens during the initialization of the Control-M monitor, then SHOUT notifications will not be controlled by the Dynamic Destination Table. If this happens as a result of an `F CONTROLM,NEWDEST` command (operator command instructing the Control-M monitor to load a new Destination Table), the old destination table will remain in effect.

**Corrective Action:** Check the MVS Log for the reason for the failure (probably a system abend code). Correct the problem and then, in order to load the table, issue the operator command `F CONTROLM,NEWDEST`.

CTM286E OPEN DAM2G FILE BY CTWWMG FAILED

**Explanation:** The CTWWMG program is unable to open the DAM2G communication file.

To send SHOUT messages to Control-M/Enterprise Manager, Control-M uses the CTWWMG program to first write those messages and their records to DAM2G.

**Corrective Action:** Ask your INCONTROL administrator to correct the problem.

CTM287E INVALID OPERATION CODE FROM CTWWMG

**Explanation:** The CTWWMG program cannot write SHOUT message records to the DAM2G communication file because an invalid operation code was used to write the record.

To send SHOUT messages to Control-M/Enterprise Manager, Control-M uses the CTWWMG program to first write those messages and their records to DAM2G.

**Corrective Action:** Ask your INCONTROL administrator to correct the problem.
CTM288E ERROR IN PREPARING SHOUT TO MAIL, RC = rc

Explanation: The rc error occurred during preparation to send Shout messages.

Valid values for rc are:

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>
<td>GETMAIN failure in IOAMAIL.</td>
</tr>
<tr>
<td>02</td>
<td>Error occurred while loading modules in IOAMAIL.</td>
</tr>
<tr>
<td>03</td>
<td>Error occurred in the PRPGRP routine during preparation of group addresses.</td>
</tr>
<tr>
<td>04</td>
<td>Error occurred while reading or writing to the buffers.</td>
</tr>
<tr>
<td>05</td>
<td>Error in DOMAIL routine.</td>
</tr>
<tr>
<td>06</td>
<td>Error in MAILDEST structure.</td>
</tr>
<tr>
<td>07</td>
<td>Error in FREEMAIN.</td>
</tr>
<tr>
<td>08</td>
<td>Error in input parms.</td>
</tr>
<tr>
<td>11</td>
<td>GETMAIN failure in CTMMAL.</td>
</tr>
<tr>
<td>12</td>
<td>Error occurred while loading modules in CTMMAL.</td>
</tr>
<tr>
<td>13</td>
<td>FREEMAIN error in CTMMAL.</td>
</tr>
</tbody>
</table>

Corrective Action: Do one of the following:
- If rc is 03, 04 or 05, correct errors in the MAILDEST table.
- For all other rc values, contact your INCONTROL administrator or system programmer for help.

CTM289E CONTROL-M EXTENDED MCS TRACKING STOPPED. RC=rc

Explanation: Highlighted, unrollable message.

A system error occurred when Control-M monitor attempted an extended MCS console operation. Control-M stops using the extended MCS console.

Corrective Action: Check for a preceding system or IOA message related to this message, and proceed accordingly.
**CTM28HW OID=orderId AUTO TAPE DRIVE RESOURCE ADJUSTMENT IS BYPASSED DUE TO PREVIOUS MESSAGE**

**Explanation:** Resource adjustment for the Automatic Tape Adjustment facility was bypassed for current job end processing.

An error occurred during resource adjustment for the Automatic Tape Adjustment facility. The reason is described in the preceding message.

Job end processing continues without tape drive adjustment.

**Corrective Action:** Check the reason described in the preceding message.

**CTM28KW OID=orderId DAUNITDF DD CARD MISSING**

**Explanation:** There is no valid DD statement that points to UNITDEF.

Either the statement is missing or it contains a syntax error.

The Automatic Tape Adjustment facility is turned OFF for the current job, and processing continues.

**Corrective Action:** To implement automatic tape adjustment, correct the DD statement that points to UNITDEF and restart Control-M.

**CTM28LS OID=orderId GETMAIN FAILED IN CTMATD AUTO TAPE PROCESSING**

**Explanation:** There is not enough memory to perform Automatic Tape adjustment.

The region may be too small.

The Automatic Tape Adjustment facility is turned OFF for the current job, and processing continues.

**Corrective Action:** To implement automatic tape adjustment, increase the size of the region and restart Control-M. If there still is not enough memory, contact your local systems analyst.

**CTM28ME OID=orderId TAPE UNIT unitId IS NOT DEFINED IN "UNITDEF" MEMBER**

**Explanation:** During Automatic Tape Adjustment facility processing, a Tape Unit address was specified in the job log. However, this unit address was not defined in the UNITDEF member.

Resource adjustment for the Automatic Tape Adjustment facility of Control-M was unable to assign Tape Unit address unitId to a defined tape drive type.

The unknown tape drive is ignored for the job and processing continues.

**Corrective Action:** Check the UNITDEF member of the Control-M PARM library. Verify that the unit address is properly defined.

**CTM28TE CNDJNL FILE SIZE DOES NOT MATCH CND FILE SIZE -- JOURNALING DISABLED**

**Explanation:** The size of the IOA Conditions base image file differs from the size of the production Conditions file.
The IOA Conditions base image file CNDJNL is created after New Day processing and is used by the CTMRSTR restore utility. The size of this file must be identical to that of the production Conditions file.
The Control-M monitor deallocates the file and waits for instructions as described in message CTML12W.

Corrective Action: Reply C, I, or E to message CTML12W.

CTM28UE RESJNL FILE SIZE DOES NOT MATCH RES FILE SIZE -- JOURNALING DISABLED
The Control-M Resource file RESJNL is created after New Day processing and is used by the CTMRSTR restore utility. The size of this file must be identical to that of the production Resource file.
The Control-M monitor deallocates the file and waits for instructions as described in message CTML12W.
Corrective Action: Reply C, I, or E to message CTML12W.

CTM28VE FILE fileName DEALLOCATED. RESIZE FILE AND USE JOURNAL=ENABLE COMMAND TO REALLOCATE
Explanation: This message accompanies message CTM921E, CTM287E, or CTM288E and indicates that the problematic base image file has been deallocated.
Corrective Action: Define a file of correct size matching the corresponding production file and use the ENABLE command to allocate the new file to the Control-M monitor.

CTM290S MEMBER memName NOT FOUND
Explanation: The designated HELP member does not exist in the partitioned data set allocated to the CTMHELP DD statement. The CTMHELP DD statement should be allocated to the IOA MSG library.
Corrective Action: The designated member was on the original library. Restore it.

CTM291S INTERNAL ERROR - INVALID RETURN CODE rc IN HELP FACILITY
Explanation: Internal error in the IOA Online Help Facility.
Corrective Action: Contact BMC Customer Support.

CTM292E HELP MEMBER memName IS EMPTY
Explanation: The designated HELP member does not contain any data.
Corrective Action: Check whether the IOAHELP DD statement is allocated to the IOA MSG library. The original supplied member was not empty.

CTM293S INSUFFICIENT STORAGE FOR HELP MEMBER memName
Explanation: Not enough storage to enter the Online Help Facility for the memName member.
Corrective Action: Try to exit a few unnecessary screens using the END command. If it does not help, increase the region size of your logon procedure.

CTM294I UTILITY CTMBLT STARTED
Explanation: This information message indicates that the CTMBLT utility, which is used to create Control-M scheduling tables, has started.
Corrective Action: No action is required.

CTM295I BUILDING JOB CALENDARS STARTED
Explanation: This information message indicates that the CTMRCAL utility started to create the calendars. Calendars will be built for each job in the table, according to its date scheduling criteria.
Corrective Action: No action is required.

CTM296I BUILDING JOB CALENDARS ENDED OK
Explanation: This information message indicates that the CTMRCAL utility finished creating the calendars.
Corrective Action: No action is required.

CTM297E INVALID RETYPE PARAMETER VALUE - ‘S’ SUBPARAMETER REQUIRED
Explanation: The CTMRCAL utility ran with an invalid value for the RETYPE parameter. Valid values for the RETYPE parameter in the CTMRCAL utility are 0S, 1S, or 2S.
The utility terminates with a return code of 16.
Corrective Action: Correct the value of the RETYPE parameter, and rerun the CTMRCAL utility.

CTM298W THE IOAXREF DATABASE DOES NOT CONTAIN THE ITEM
Explanation: Information was requested from the IOAXREF database by pressing PF01/PF13, but no information is available, because the data collection process did not collect any information about this item.
Corrective Action: No action is required.

Messages CTM300 through CTM3xx
This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTM312I CALENDAR calName HAS BEEN BUILT AND SAVED
Explanation: This information message indicates that the IOABLCAL utility has successfully built the calendar.
Corrective Action: No action is required.
CTM313S BUILDING A CALENDAR ENDED WITH ERRORS
Explanation: An error during the execution of the IOABLCAL utility.
Corrective Action: A previous message should describe the error.

CTM314I ADDING SMF ID smfid WAS SUCCESSFUL
Explanation: This information message indicates that a new SMF ID was added successfully to subsystem file M2S on the CMEM monitor by the FORMSUB3 job.
Corrective Action: To make the definition active, stop and restart the Control-M monitor and the Control-O or CMEM monitor on the system with the SMF ID.

CTM315I {BUILDING | UPDATING} OF SUBSYSTEM COMMUNICATION DATASETS STARTED
Explanation: This information message indicates that the FORMSUB1 and FORMSUB2 utilities, which allocate and format Console Subsystem communications files, have started.
Corrective Action: No action is required.

CTM316I {BUILDING | UPDATING} OF SUBSYSTEM COMMUNICATION DATASETS ENDED
Explanation: This information message indicates that the FORMSUB1 and FORMSUB2 utilities, which allocate and format Console Subsystem communications files, have ended normally.
Corrective Action: No action is required.

CTM317S {BUILDING | UPDATING} OF SUBSYSTEM COMMUNICATION DATASETS FAILED
Explanation: The FORMSUB1 or the FORMSUB2 utility failed.
Corrective Action: Look for a previous error message which describes the cause of the error.

CTM318S OPEN OF DDNAME ddName FAILED
Explanation: Open of the ddName DD statement failed. Possible causes are:
- The ddName DD statement is missing.
- The ddName DD statement does not define a valid communication file.
Corrective Action: Correct the JCL of the formatting job.

CTM319S I/O ERROR OCCURRED WHILE BUILDING THE SUBSYSTEM COMMUNICATION DATASETS
Explanation: An I/O error occurred while the FORMSUB1 or FORMSUB2 utility was formatting a subsystem communication file.
Possible causes are:
The utility loaded old and incorrect IOACPRM installation parameters.

The file size defined in the IOACPRM member is different from the size that was defined in the JCL.

The JCL references an invalid data set.

**Corrective Action:** Check the JCL of the formatting job, and the location and content of the IOACPRM module.

**CTM325S SMFID smfid IS NOT DEFINED IN IOA INSTALLATION PARAMETERS**

**Explanation:** The FORMSUB1 or FORMSUB2 utility is running under a CPU that was not defined in the IOACPRM parameters member.

Possible causes are:

- The CPU in which the utility was run was not defined in IOACPRM.
- The utility loaded an incorrect copy of the IOACPRM member.
- The computer in which the utility was run is a multi-CPU computer, and the SID parameter in the SMFPRM_XX member in SYS1.PARMLIB does not define all of the CPUs correctly.

**Corrective Action:** Do the following:

1. Check what CPUs were defined in IOACPRM.
2. Check where the IOACPRM member was placed.
3. If the IOACPRM definition seems to be correct, check the SMF ID that was defined in SYS1.PARMLIB.
4. In a multi-CPU computer, issue the MVS command `D M=CPU` from the console to get a listing of all CPU serial numbers, and compare them with the PARMLIB definitions.

**CTM326E MISSING/INVALID SUBSYSTEM PARAMETERS IN IOACPRM**

**Explanation:** The FORMSUB1 or FORMSUB2 utility encountered one or more subsystem-related parameters in the IOACPRM member that were defined incorrectly or were not defined at all.

**Corrective Action:** Check the following parameter definitions in the IOACPRM member, and correct them if needed:

- SUBSYS
- CTM2SBS
- CPUS.

**CTM334E READING DATEMEM (CALENDAR) calName FAILED**

**Explanation:** Reading of the specified calendar failed.

The job order or mission is not scheduled.

**Corrective Action:** Look for prior messages in the IOA Log that explain why the calendar could not be read.
If the error occurred during the New Day procedure or a User daily, correct date-3 (or date-5), positions 25-30 (or positions 50-55) in the Date Control Record (DD statement DACHK), to the values of date-2 (or date-4).

For a rerun of the same Daily, correct all the dates to the value of the day before. Beware of ordering the same job or mission twice during a rerun on the same day. We suggest that you delete the ordered jobs or missions from the Active Jobs file and then rerun the Daily again.

If the previous abend happened after many jobs or missions had been ordered, BMC recommends a manual request (the CLIST CTMJOB for jobs; the CLIST CTDMISRQ for missions).

**CTM337I text**

**Explanation:** This information message indicates that at KeyStroke Language Report termination, the variable %MSG contained the `text`

It is usually a message which is intentionally issued as part of the report definition.

**Corrective Action:** No action is required.

**CTM341S AUTOMATION LOG FILE LEVEL INCONSISTENT WITH LEVEL OF CONTROL-O**

**Explanation:** The Automation Log file is not compatible with this release of Control-O. While opening an Automation Log file, the CTODVL program checks the file validity and usability. A mismatch was found between the release number of the Automation Log file and the release number of the program accessing it.

The action fails. The Automation Log file is not accessed.

**Corrective Action:** Do either or both of the following:

- Check if the libraries specified in the STEPLIB and LINKLIST concatenation contain modules from different releases.
- Check the Automation Log file data set name. If you are using an older release of the program or an old file, correct the error.

**CTM342S ERROR OPENING AUTOMATION LOG FILE**

**Explanation:** The CTODVL program was unable to open the Automation Log file.

The action fails. The Automation Log file is not accessed.

**Corrective Action:** Do any or all of the following

- Check the definitions in the CTOPARM member.
- Check the JCL for errors.
- Check the data set name for the Automation Log file.

**CTM343S AUTOMATION LOG DYNAMIC ALLOCATION ERROR rc /rsn /dsn**

**Explanation:** The CTODVL program was unable to dynamically allocate the Automation Log file.

The action fails. The Automation Log file is not accessed.
Corrective Action: Do any or all of the following:

- See documentation on dynamic allocation in the *IBM Authorized Guide to Assembler Services* for explanations of the return code ($rc$) and the reason code ($rsn$), and proceed accordingly.
- Check the CTOPARM member.
- Ensure that an Automation Log file exists for this CPU.

CTM344S AUTOMATION WRITE ERROR

Explanation: An I/O error occurred. The CTODVL program did not succeed in performing an I/O operation on the Automation Log file.

The action fails. The Automation Log file is not accessed.

Corrective Action: If you cannot determine the reason for this I/O error (for example, a disk failure), contact BMC Customer Support.

CTM345S ERROR EXECUTING RDJ FCB

Explanation: The CTODVL program received a non-zero return code from the RDJ FCB system service. The CTODVL program failed to read the JFCB of the dynamically allocated Automation Log file.

The action fails. The Automation Log file is not accessed.

Corrective Action: Contact BMC Customer Support.

CTM346S ABEND abCode INTERCEPTED WHILE PROCESSING THE AUTOMATION LOG

Explanation: The CTODVL program intercepted an abend while processing the Automation Log.

The action fails. The Automation Log file is not accessed.

Corrective Action: Contact BMC Customer Support.

CTM347S THE ALLOCATED AUTOMATION LOG FILE BELONGS TO ANOTHER CONTROL-O INSTALLATION

Explanation: The specified Automation Log file refers to another Control-O. While opening an Automation Log file, the CTODVL program checks the validity and usability of the file being opened. A mismatch was found between the current value specified for the CTOQNAME parameter in the CTOPARM member and the value of that parameter when the Automation Log file was formatted.

The action fails. The Automation Log file is not accessed.

Corrective Action: Do either or both of the following:

- Ensure that you are not using load libraries that belong to another installation of Control-O.
- Check if the CTOPARM member has changed.

CTM348S FILE NOT AN AUTOMATION LOG FILE

Explanation: The specified file is not a Control-O Automation Log file. While opening an Automation Log file, CTODVL checks the validity and usability of the file. The specified file was not an Automation Log file.
The action fails. The Automation Log file is not accessed.

**Corrective Action:** Check if the formatting of the Automation Log file ended successfully. If it failed, redefine (reformat) the Automation Log.

**CTM349S AUTOMATION LOG FILE IS BEING FORMATTED IT CANNOT BE ACCESSED**

**Explanation:** The specified Automation Log file is currently being formatted. While opening the Automation Log file, the CTODVL program checks the validity and usability of the file. The specified file has a status incompatible with the requirements of the program.

The action fails. The Automation Log is not accessed.

**Corrective Action:** Check if the formatting of the Automation Log file ended successfully. If it failed, redefine (reformat) the Automation Log.

**CTM390S OPEN OF DDNAME ddName FAILED.**

**Explanation:** Open of the `ddName` DD name failed. Possible causes are:

- The `ddName` DD statement is missing.
- The data set described by the `ddName` DD statement does not exist.

Execution stops.

**Corrective Action:** Correct the JCL of the job and rerun.

**CTM391S INVALID COMBINATION OF PARAMETERS ENCOUNTERED**

**Explanation:** An invalid combination of parameters was specified for the CTMBLT Control-M utility.

**Corrective Action:** Correct the parameters and rerun the job. For information about valid parameter combinations, see the *INCONTROL for z/OS Utilities Guide*.

**CTM391I NIGHT SCHEDULE REPORT STARTED**

**Explanation:** This is one of two messages with the same ID, but different text.

This information message is the regular start message of the Night Schedule Report.

**Corrective Action:** No action is required.

**CTM391I OVERNIGHT EXECUTION REPORT STARTED**

**Explanation:** This is one of two messages with the same ID, but different text.

This information message indicates that processing of the Overnight Execution Report has begun.

**Corrective Action:** No action is required.

**CTM392S OPEN OF DDNAME ddName FAILED**

**Explanation:** The opening of the data set referenced by the `ddName` DD statement failed.

Possible causes are:
- the DD statement referring to the data set referenced by the *ddName* DD statement is missing.
- The data set referenced by the *ddName* DD statement does not exist.

**Corrective Action:** Correct the JCL and rerun.

**CTM393I** NIGHT SCHEDULE REPORT ENDED

**Explanation:** This is one of two messages with the same ID, but different text.
This information message is the regular termination message of the Night Schedule Report.

**Corrective Action:** No action is required.

**CTM393I** OVERNIGHT EXECUTION REPORT ENDED

**Explanation:** This is one of two messages with the same ID, but different text.
This information message indicates that processing of the Overnight Execution Report has ended.

**Corrective Action:** No action is required.

**CTM393S** RULE-BASED CALENDAR *rbc_calendar_name* NOT FOUND

**Explanation:** A job or table schedule definition contains a reference to an RBC that does not exist in the RBC library.

**Corrective Action:** Either define the RBC or reference the correct RBC from the job or the table.

**CTM394S** INVALID PARAMETER - *parm*

**Explanation:** An invalid parameter was specified to the report or utility.
If this message was issued during execution of the CTMBLT utility, it is followed by message BLT895I and/or BLT896I, which identify the problematic job, keyword, and value. This message may be issued by other utilities as well.
The report or utility stops executing with a condition code of 08 or 12.

**Corrective Action:** For the syntax of the parameter for the report or utility, see either the *INCONTROL for z/OS Administrator Guide* or the *INCONTROL for z/OS Utilities Guide*, as appropriate.

**CTM395S** INVALID PARAMETER FORMAT. "yyymmddhhmm" EXPECTED

**Explanation:** The parameter that specifies the date and time does not use the right format.
The report stops executing with a condition code of 08 or 12.

**Corrective Action:** For the correct syntax of the report parameters, see the appropriate user guide.

**CTM396S** MULTIPLE USE OF PARAMETER. ONLY ONE OCCURRENCE IS ALLOWED

**Explanation:** A parameter that should be specified only once was specified multiple times.

**Corrective Action:** Delete the additional occurrences and rerun the job. For more information, see the chapter on job production parameters in the *Control-M for z/OS User Guide*.  

662
CTM397S REPORT START TIME IS GREATER THAN REPORT END TIME

**Explanation:** The date and time specified as the report start time are greater than the date and time specified as the report end time.
The report will stop executing with a condition code of 08 or 12.
**Corrective Action:** Correct the parameters and rerun the report.

CTM398S MISSING OBLIGATORY REPORT/UTILITY PARAMETERS

**Explanation:** Parameters that are required for this report or utility are missing.
The report or utility stops executing with a condition code of 08 or 12.
**Corrective Action:** For the syntax of the report or utility parameters, see the appropriate user guide, the *INCONTROL for z/OS Administrator Guide* or the *INCONTROL for z/OS Utilities Guide*.

CTM399S REDUNDANT SORTBY PARAMETERS

**Explanation:** Too many sort parameters specified in a report command.
The report stops executing with a condition code of 08 or 12.
**Corrective Action:** For the correct syntax of the report parameters, see the appropriate user guide.

Messages CTM400 through CTM4xx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTM400S INVALID RETURN CODE FROM SORT = rc. CHECK THE SORT MANUAL

**Explanation:** A sort program that has been activated internally by a report ended with an unexpected return code (*rc*).
The report stops executing with a condition code of 08 or 12.
**Corrective Action:** To clarify the reason, see the documentation for the sort program and to the sort messages of the job.

CTM401I A KEYSTROKE REPORT STARTED

**Explanation:** This information message is a normal start message of a KeyStroke Language Report.
**Corrective Action:** No action is required.

CTM402I KEYSTROKE REPORT ENDED SUCCESSFULLY

**Explanation:** This information message indicates that a KeyStroke Language Report ended successfully.
The report ended successfully from the point of view of report syntax and execution. A user may set the condition code to any condition code and send a message indicating otherwise. It is recommended to check the condition code as well (using the Control-M or Control-D facilities).
Corrective Action: No action is required.

CTM409E A KEYSTROKE REPORT ENDED WITH ERROR(S)
Explanation: A syntax or execution error occurred during processing of a report. The KeyStroke Language Report will terminate with a condition code of 08 or 12.
Corrective Action: Look for the error in the report listing (the DAKSLOUT DD statement).

CTM411S OPEN OF DDNAME "DAPROG" FAILED
Explanation: This message is issued by the New Day procedure. The data set described by the DAPROG DD statement contains a list of programs to be activated by the New Day procedure. Possible causes are:
1. The DAPROG DD statement is missing.
2. The data set described by the DAPROG DD statement cannot be opened for sequential read.
For more details, see the chapter that discusses implementation issues in the appropriate user guide. The New Day procedure stops executing.
Corrective Action: Correct the JCL for the job and rerun it.

CTM413E PROGRAM pgm WAS NOT FOUND
Explanation: The pgm program was not in the load list of the Daily subsystem. The DAPROG DD statement describes a data set that contains a list of programs to be activated as part of the Daily subsystem.
The Daily subsystem terminates with errors.
Corrective Action: Check whether I OA Load library is concatenated as STEPLIB to the Daily subsystem. Correct the JCL and consult your system programmer about running the Daily subsystem again.

CTM414E INVALID CONDITION CODE FOR PROGRAM pgm
Explanation: The pgm Control-M or Control-D internal program, which was activated by New Day processing, finished with return code higher than the maximum allowed in the program list. Positions 10 through 11 in the program list indicate the highest return code that is still considered OK for this program.
Corrective Action: No action is required.

CTM415I PROGRAM pgm IS BEING INVOKED
Explanation: This information message indicates that an internal Control-M or Control-D program was activated by New Day processing.
Corrective Action: No action is required.

CTM416I {CTMILY | CTDILY} ENDED
Explanation: This information message indicates that New Day processing is finished.
Corrective Action: No action is required.
CTM417E UNRECOGNIZED PARAMETER ON EXEC STATEMENT: expression

**Explanation:** The CTMTDAY procedure was executed with an unsupported or invalid NEWDAY parameter value expression. (For more information on the Control-M CTMTDAY procedure, see the INCONTROL for z/OS Administrator Guide, “CTM,” “New Day Procedure Flow.”)

The CTMTDAY procedure is not executed.

**Corrective Action:** Correct and re-execute the CTMTDAY procedure.

CTM418E UNRECOGNIZED PARAMETER ON EXEC STATEMENT: expression

**Explanation:** The CTMTDAY procedure was executed with the following NEWDAY parameter: date. However, the date format or contents are invalid. For more information regarding the Control-M CTMTDAY procedure, see the INCONTROL for z/OS Administrator Guide, “CTM,” “New Day Procedure Flow.”

The CTMTDAY procedure is not executed.

**Corrective Action:** Correct and re-execute the CTMTDAY procedure.

CTM419I PROCESSING MODE IS mode

**Explanation:** The CTMTDAY procedure was executed with one of the following NEWDAY mode parameters:

1. ORDERONLY[,] date
2. FORMATONLY

Special NEWDAY processing will be performed according to the mode (FORMATONLY or ORDERONLY) specified in the procedure. For more information regarding the Control-M CTMTDAY procedure, see the INCONTROL for z/OS Administrator Guide, “CTM,” “New Day Procedure Flow.”

**Corrective Action:** No response is required.

CTM41AW DATE IGNORED IN ‘FORMATONLY’ REQUEST: xxxxxxx

**Explanation:** The CTMTDAY procedure is executed with the following NEWDAY parameter:

FORMATONLY, xxxxxxx

where the operator probably intended xxxxxxx as a date value. (A date is not valid with the FORMATONLY mode.)

Special NEWDAY processing is performed according to the FORMATONLY mode, ignoring xxxxxxx. (For more information regarding the Control-M CTMTDAY procedure, see the INCONTROL for z/OS Administrator Guide, “CTM,” “New Day Procedure Flow.”)

**Corrective Action:** No response is required.

CTM422S OPEN OF USER DATE CONTROL-RECORD FAILED - DDNAME "DACHK"

**Explanation:** Open of the file containing the User Date Control Record failed (the DACHK DD statement). This message is issued by the CTMCHK, CTDCHK, or CTBCHK program, which is usually activated by the New Day procedure.
Possible causes are:

1. The DACHK DD statement is missing.
2. The data set (member) described by the DACHK DD statement does not exist.

The CTMCHK, CTDCHK, or CTBCHK program ends with errors.

**Corrective Action:** Correct the JCL for the job or CLIST.

**CTM424S INVALID ORIGINAL SCHEDULING DATE IN USER DATE CONTROL-RECORD (POSITIONS 1-6)**

**Explanation:** Invalid original scheduling date in User Date Control Record (positions 1 through 6). This date should be earlier than the current installation working date. The valid format is ddmmyy or mmdyy.

Valid formats are:

1. ddmmyy
2. mmdyy

Possible causes are:

3. The previous run of the CTDCHK or CTMCHK program did not finish OK.
4. Someone has incorrectly modified the contents of the User Date Control Record (DD statement DACHK).

For more information, see the *INCONTROL for z/OS Administrator Guide.*

The New Day procedure ends with errors.

**Corrective Action:** Correct your Date Control Record (DD statement DACHK).

**CTM425S INVALID POST DATE IN USER DATE CONTROL-RECORD POSITIONS 67-72**

**Explanation:** The contents of the Date Control Record for this Daily are invalid.

Valid formats are:

1. ddmmyy
2. mmdyy

This message usually indicates that the User Date Control Record was incorrectly modified. The date should be earlier than or equal to the original scheduling date defined in positions 1 through 6.

The New Day procedure ends with errors.

**Corrective Action:** Correct the Date Control Record (the DACHK DD statement).

**CTM426W {GENERAL /dailytype} "DAILY" DID NOT RUN FOR nnn DAYS**

**Explanation:** Highlighted, unrollable message.

The difference between the current working date and the original scheduling date (positions 1 through 6 in the Date Control Record) is more than one day. The New Day procedure has not run for nnn days. A New Day procedure is expected to run once a day.
This message is usually generated due to one of the following:

1. The computer has not been working for at least one day.
2. The Control-M or Control-D monitor has not been working for over 24 hours.
3. The contents of the Date Control Record were incorrectly modified for this Daily.
4. In the case of the New Day procedure, the computer may have been IPLed with the wrong date.
5. In the case of a User Daily, the Daily has not run for a few days.

The value of `dailytype` can be:

6. GENERAL for the New Day procedure
7. the job name of a regular User Daily job

The system action is determined by the process or procedure:

8. For the New Day procedure, this message appears highlighted on the operator console, together with messages CTM427W or CTD427W and CTM428W or CTD428W. If the operator answers YES, processing continues, taking the RETRO parameter of each job into consideration. If the operator answers NO, the New Day procedure stops executing with an error message.

9. For User Daily jobs, processing continues. Missions are selected according to the RETRO parameter.

**Corrective Action:** If the computer was IPLed with the wrong date, answer NO, correct the problem, and then activate the New Day procedure manually. Control-M or Control-D will not work until the problem is resolved.

**CTM427W IS IT TRUE? (ANSWER "YES" OR "NO")**

**Explanation:** Highlighted, unrollable message.

The last run of the New Day procedure was more than 24 hours ago. This message appears together with the CHK426W, CTM426W, or CTD426W and CHK428W, CTM428W, or CTD428W messages. For more details, see the CHK426W message.

The General New Day procedure waits for the operator response.

**Corrective Action:** If the computer was IPLed with the wrong date, answer NO, correct the problem, and then activate the New Day procedure manually. Control-M or Control-D will not work until the problem is resolved.

**CTM428W YOUR ANSWER IS:**

**Explanation:** Highlighted, unrollable message.

The last run of the New Day procedure was more than 24 hours ago. This message appears together with the CHK426W, CTM426W, or CTD426W and CHK427W, CTM427W, or CTD427W messages. For details, see the CHK426W message.

The New Day procedure waits for the operator response.

**Corrective Action:** If the computer was IPLed with the wrong date, answer NO, correct the problem, and then activate the New Day procedure manually. Control-M or Control-D will not work until the problem is resolved.
CTM429S {CTMCHK | CTDCHK | CTBCHK} ENDED WITH ERRORS

**Explanation:** The CTMCHK, CTDCHK, or CTBCHK program ended with errors. It is activated as part of the New Day procedure. IOA Log should contain an earlier message about the error.

The New Day procedure finishes executing with a condition code of 08.

**Corrective Action:** Check the IOA Log for error messages. If necessary, manually correct the Date Control Record (date-3 and date-5) to allow the next run of the User Daily job. For details, see the *INCONTROL for z/OS Administrator Guide*.

CTM430E POSSIBLE ABEND OF PREVIOUS DAILY RUN!

**Explanation:** A previous run of the same New Day procedure probably abended.

The New Day procedure terminates with errors.

**Corrective Action:** Correct the Date Control Record and rerun the New Day procedure. As a result of the last abend, dates 2, 3 and dates 4, 5, in the Date Control Record are not identical, but they should be. If you correct them to the values of date 3 or date 6, a rerun of the New Day procedure schedules all the jobs in the New Day procedure for the days after dates 2-5 until the date designated in date 1 (the current original scheduling date). Do not schedule the same job twice.

For more information, see the *Control-D and Control-V User Guide*.

CTM431I {CTMCHK | CTDCHK | CTBCHK} STARTED

**Explanation:** This information message indicates that the CTMCHK, CTDCHK, or CTBCHK program, which is activated by the New Day procedure, started executing.

**Corrective Action:** No action is required.

CTM432I {CTMCHK | CTDCHK | CTBCHK} ENDED

**Explanation:** This information message indicates that the CTMCHK, CTDCHK, or CTBCHK program, which is activated by the New Day procedure, ended normally.

**Corrective Action:** No action is required.

CTM433S DIFFERENCE BETWEEN CURRENT AND LAST RUN OF THIS DAILY IS NEGATIVE BY num DAYS

**Explanation:** The current working date in the computer is before the last original scheduling date of this New Day procedure.

This message is issued by the New Day procedure as a result of incorrect dates in the Date Control Record. For more details, see the *Control-M for z/OS User Guide* or the *Control-D and Control-V User Guide*.

The New Day procedure stops executing with an error message.

**Corrective Action:** Correct the contents of the Date Control Record, and rerun the Daily. If this problem occurs under the New Day procedure, call your system programmer. The problem should be resolved immediately as the Control-M or Control-D monitor will not be able to operate. Check whether the computer has been IPLed with the correct date.
CTM434W THIS DAILY HAS ALREADY BEEN RUN TODAY

**Explanation:** The same New Day procedure has already been run today. The current working date in the computer is equal to the last original scheduling date - positions 1 through 6 in the Date Control Record (the DACHK DD statement).

For details, see the *Control-M for z/OS User Guide* or the *Control-D and Control-V User Guide.*

Processing terminates with a return code of 8.

**Corrective Action:** Check the result of the run carefully for possible errors. If the Control-M or Control-D monitor is up and running, there is no need to run the New Day procedure, because it was probably started by accident. In any case, have your INCONTROL administrator look at the problem. It is possible that the computer was IPLed with the wrong date.

CTM435S OPERATOR RESPONDED "NO"

**Explanation:** The operator answered NO to the CHK428W, CTM428W, or CTD428W message.

The New Day procedure stops executing.

**Corrective Action:** Correct the problem, which is usually date-related, and rerun the New Day procedure.

CTM436S USER DATE CONTROL-RECORD IS EMPTY

**Explanation:** The data set described by the DACHK DD statement is empty (the New Day procedure).

The New Day procedure terminates with errors.

**Corrective Action:** Correct the JCL for the job and rerun it.

CTM437E INVALID DATE date SPECIFIED FOR action

**Explanation:** While processing a CMEM or Control-O request for the FORCEJOB, ADDCOND, or DELCOND action, the Control-M monitor encountered an invalid date.

Either the date was not a valid date, or it was not in the format specified by the DATETYP parameter in IOAPARM.

This message is followed by the WKJA59E or WKJC39E message, which identifies the failed action.

No additional action will be taken for the failed job or table order.

**Corrective Action:** Make sure that the date format corresponds to the DATETYP parameter in IOAPARM.

CTM437I date control record content

**Explanation:** This informational message is generated when Newday processing is initiated. In place of **date control record content**, it displays the contents of the first record of the DATEREC member in the CTM PARM library pointed to by ddname DACHK in the Newday procedure. For explanations of the dates displayed, see the *INCONTROL for z/OS Administrator Guide,* “CTM,” “Date Control Records and Enhanced Daily Checkpointing.”

**Corrective Action:** No response required.
INCONTROL for z/OS Messages Manual

CTM438E INTERNAL ERROR ON THE COMMUNICATION FILE. A SNAP IS PRODUCED

Explanation: Control-M has detected mismatches in the communications file while processing SHOUT to Log records from Control-O.

The affected records are not written to the IOA Log. A snap dump is written to the DADUMP DD statement.

Corrective Action: There are two possible causes for this problem. The user response varies according to the cause of the problem.

<table>
<thead>
<tr>
<th>Problem Cause</th>
<th>User Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>The number of subsystem-to-monitor file (S2M) records is not the same in the CTMPARM member and in the FORMSUB2 job, the file allocation and format job.</td>
<td>Compare the CTMCPU statements in CTMPARM with the FORMSUB2 job that was run for each system. If the problem persists, save the snap (dump), prepare the Control-M monitor full output, and contact BMC Customer Support.</td>
</tr>
<tr>
<td>The value of the SMODE parameter in CMMPARM or CTOPARM is not F.</td>
<td>Ensure that the SMODE parameter in CMMPARM or CTOPARM is set to F.</td>
</tr>
</tbody>
</table>

CTM438W REPLY 'U' TO UPDATE DATEREC TO CURRENT DAY EXECUTION OR 'E' TO END

Explanation: Highlighted, unrollable message.

An error condition is detected while processing the first record of the DATEREC member in the CTM PARM library pointed to by ddname DACHK in the Newday procedure. This message is usually preceded by another error message detailing the error encountered. Some reasons that this message might be issued are:

1. Invalid date date1 (see message CHK424S).
2. Invalid dates date2- date7 (see message CHK43BE).
3. The difference between the current working date and the date on which Newday was last run (date7) is negative (see message CHK433S).
4. The current working date is equal to date1 (Newday was already run--see message CHK434W).
5. The DATEREC member is empty (see message CHK436S).
6. An attempt was made to run the New Day procedure twice in the same day (see message FRM454E).
7. date7 is later than date1 (see message FRM455S).
8. date7 is more than 28 days in the past (see message FRS476S or JOB50S).

The Newday procedure waits for the operator response.
Corrective Action: Review the preceding error messages to determine the actions necessary to correct the problem. If the problem can be corrected by setting the dates in the DATEREC record to the current working date, enter U. After Control-M automatically updates the DATEREC record, Newday processing resumes.

Otherwise, enter E and then correct the problem manually. For example, if the computer was IPLed with the wrong date, enter E, correct the computer date, and then reactivate the New Day procedure manually.

**CTM439E MISSING JOB** jobName** IN TABLE** tableName** IN ** lib

**Explanation:** The jobName job was not found in the tableName table.

A FORCEJOB request for the jobName job in the tableName table failed.

This message is followed by the WKJ A59E message, which contains more details about the error.

No additional action will be taken for the failed job order.

Corrective Action: Check that the job exists in the indicated scheduling table. For further actions, see the WKJ A59E message.

**CTM439W REPLY 'C' TO CONTINUE, 'U' TO UPDATE DATEREC TO CURRENT DAY EXECUTION, OR 'E' TO END

Explanation:** Highlighted, unrollable message.

Following initiation of the Newday procedure, Control-M issued message CHK426W (warning that more than a day has passed since the previous run of Newday).

The Newday procedure waits for operator response.

Corrective Action: Examine the explanation of message CHK426W to help determine the situation and then respond according to one of the following situations:

- If the computer has not been working for a few days (for example, a hardware failure or holiday), enter one of the following:
  - C — All conditions in the IOA conditions file whose date corresponds to the intermittent days will be DELETED! Newday processing proceeds, using the existing dates in the Date Control Record (DATEREC). If RETRO is enabled in the scheduling definition, jobs for all intermittent days will also be ordered.
  - U — Control-M automatically updates the Date Control Record (DATEREC) to the current system date and the Newday processing resumes. (Only jobs scheduled for the current working day will be ordered.)
If the computer was IPLed with the wrong date, enter E to end the Newday processing. Check and correct the date on the computer, and then restart the Newday procedure manually.

If the date on the computer is correct and was working the previous day, contact the INCONTROL administrator to check the cause of the problem.

If the Control-M monitor has been down for more than 28 days, the previous working date (the current working date minus 1) must be manually specified as date values 1 through 6.

CTM43AI NEWDAY EXECUTION CONTINUING WITH ODATE odate

Explanation: This informational message is generated when the response to message CTM438W or CTM439W was U. It informs the user that Newday processing continues, using odate as the current working date.

The Newday procedure resumes.

Corrective Action: No response needed.

CTM43BE DATE CONTROL RECORD CONTAINS AN INVALID DATE AT POSITION col

Explanation: During Newday initiation, an invalid date was detected in the first record of the DATEREC member in the CTM PARM library pointed to by ddname DACHK. The date in error is in column col of the record. (For explanations of the dates displayed, see the INCONTROL for z/OS Administrator Guide, “CTM,” “Date Control Records and Enhanced Daily Checkpointing.”)

Message CHK438 is generated.

Corrective Action: Respond to message CHK438.

CTM43CI CONTENTS OF DATE CONTROL RECORD:

Explanation: This message serves as a header for message CTM437I, which follows.

Corrective Action: No response needed.

CTM43DW REQUESTED ODATE IS odate

Explanation: Highlighted, unrollable message.

This message is issued in response to any of the following operator commands:

1. F CONTROL,M,NEWDAY=hhmm [ ,date ]
2. F CONTROL,M,NEWDAY=hhmm,ORDERONLY [ ,date]
3. F CTMTROL,M,NEWDAY=hhmm,RERUN
4. S CTMTDAY,NEWDAY=date
5. S CTMTDAY,NEWDAY='ORDERONLY, date ' 

For more information, see the INCONTROL for z/OS Administrator Guide, “CTM,” “Special Newday Parameters.”

Message CTM43GW is issued.
**Corrective Action:** Respond to message CTM43GW as instructed.

**CTM43EW JOB jobName (O ID=orderId) HUNG IN SUBMISSION**

**Explanation:** The jobName job is used to trigger a Control-O or CMEM ON JOBARRIV rule that contains a DO FORCEJOB command. However, the jobName job has been hung in submission status for several seconds.

Control-M does not order and submit the job identified in the DO FORCEJOB command.

**Corrective Action:** Consider manually forcing the job identified in the DO FORCEJOB command.

**CTM43FI TRIGGER JOB jobName (jobd) NOT FORCED**

**Explanation:** The jobName job is used to trigger a Control-O or CMEM ON JOBARRIV rule that contains a DO FORCEJOB command. However, the jobName job is one of the following:

1. a cyclic job found on the Active Jobs file
2. in Hung in Submission status
3. currently being handled by one of the local sysplex monitors

Control-M does not order and submit the job identified in the DO FORCEJOB command.

**Corrective Action:** Do the following:

4. Check to see if JES is hung. If it is, find out why, and address that problem.
5. Consider how to act in relation to
6. the jobName job, that is, the job that is hung
7. the job identified in the DO FORCEJOB command

**CTM43GW REPLY 'C' TO CONTINUE OR 'E' TO END**

**Explanation:** Highlighted, unrollable message.

Upon entry of the F CONTROLM,NEWDAY=hhmm,date command, message CTM43DW displayed the ODATE entered. The current message asks the operator to either confirm that the Newday procedure continue with the specified ODATE or not continue.

The Newday procedure waits for operator response.

**Corrective Action:** One of the following responses:

1. C --confirm Newday execution using the ODATE displayed by message CTM43DW. (Dates in the first record of the DATEREC member in the CTM PARM library pointed to by ddname DACHK are not modified.)
2. E --cause the NEWDAY command to be ignored.

**CTM440I CONTROL-M MONITOR IS READY TO RECEIVE CMEM REQUESTS**

**Explanation:** This information message indicates that the CMEM facility in the Control-M monitor was successfully initialized and the Control-M monitor is ready to accept requests from Control-O or from CMEM subsystem functions.
Corrective Action: No action is required.

CTM441E CONTROL-M MONITOR CMEM FACILITY IS DEACTIVATED AS A RESULT OF A FAILURE

Explanation: Highlighted, unrollable message.
A severe error has occurred while processing requests from one of the following:
1. Control-O
2. CMEM subsystem functions
3. Control-M DO FORCEJOB

Information about the error that caused the deactivation of the On Spool Jobs Facility was previously displayed on the operator console.

Control-M monitor stops processing requests from:
4. Control-O
5. CMEM subsystem functions
6. Control-M DO FORCEJOB.

Other parts of Control-M monitor will not be affected.

Corrective Action: Look for previous error messages. Correct the error, shut down the Control-M monitor and start it again.

CTM442E ERROR WHILE LOADING CTMJ OB\CTMMEM FOR CMEM PROCESSING

Explanation: Highlighted, unrollable message.
The CTMJ OB or CTMMEM modules could not be loaded by the Control-M monitor for one of the following reasons:
1. There was insufficient storage.
2. The modules could not be found in the libraries specified in the STEPLIB DD statement or in the Linklist.

Control-M monitor will not process requests from:
3. Control-O
4. CMEM subsystem functions
5. Control-M DO FORCEJOB.

Corrective Action: Correct the error, shut down the Control-M monitor and start it again.

CTM443E OPEN ERROR OCCURRED DURING CMEM PROCESSING, DSN=dsn

Explanation: The Control-M monitor has encountered an open error while processing CMEM or Control-O requests.
An open error occurred on one of the Control-M communication data sets. Possible causes are:

1. An incorrect communication file was defined.
2. A security product failed the OPEN request.

Control-M monitor stops processing CMEM or Control-O requests.

**Corrective Action:** Do the following:

3. Check that CTMPARM points to the correct communication file.
4. Check the $dsn$ communication file, and make sure that it is properly defined, formatted, and cataloged.
5. Make sure that no restrictions are imposed by MVS, a security package, and so on.
6. Correct the error, shut down the Control-M monitor and start it again.

**CTM444E I/O ERROR OCCURRED DURING CMEM PROCESSING, DSN=$dsn$**

**Explanation:** The Control-M monitor has encountered an I/O error while processing CMEM or Control-O requests.

An I/O error occurred on one of the Control-M communication data sets.

Control-M monitor stops processing CMEM or Control-O requests.

**Corrective Action:** Do the following:

1. Check the $dsn$ communication file, and make sure that it is properly defined and formatted.
2. Check that CTMPARM points to the correct communication file. If the file and CTMPARM appear correct:
   - Check the MVS LOGREC file for a physical disk error.
   - Reallocate and reformat the $dsn$ communication file.
3. After correcting the error, stop the Control-M monitor and start it again.

**CTM445E DYNAMIC ALLOCATION ERROR, RC=$rc$, REASON CODE=$rsn$, DSN=$dsn$**

**Explanation:** The Control-M monitor has encountered a dynamic allocation error while processing CMEM or Control-O requests.

A dynamic allocation error occurred on one of the Control-M communication data sets. Possible reasons for this failure include:

1. The $dsn$ communication file is not cataloged on the correct disk.
2. The $dsn$ communication file is cataloged in a catalog which cannot be accessed by the Control-M monitor.
3. The wrong communication file name, or no communication file name, was specified in IOACPRM.
4. The MVS allocation exit failed the allocation request.
5. A security product failed the allocation.
For information about the return code ($rc$) and the reason code ($rsn$) see the IBM manual *MVS Programming: Authorized Assembler Services Guide*. Reallocate and format or re-catalog the file if necessary.

The Control-M monitor stops processing CMEM and Control-O requests.

**Corrective Action:** Check the definitions in CTMPARM, and correct them as necessary. After the error is corrected, stop the Control-M monitor and start it again.

**CTM446W SYSPLEX TABLE MISSING - SYSTEM LOGGER INTERFACE DISABLED**

**Explanation:** Control-M attempted to read the Sysplex Table and failed.

Control-M could not find the Sysplex Table or encountered errors while reading the Sysplex Table. This could be due to one of the following:

1. The Sysplex Table is not present in the STEPLIB concatenation of load libraries.
2. The Sysplex Table has an invalid internal format.
3. The Sysplex Table has no valid, active table entries.

Control-M attempts to allocate, open and use the subsystem-to-monitor (S2M) communication files to implement CMEM-Control-M communication.

**Corrective Action:** Check why the Sysplex Table is not in the load library or has an invalid format. Correct the problem and recycle Control-M.

**CTM447E SYSTEM LOGGER REQUEST req FAILED: R15=r15 RETURN=rc REASON=rsn**

**Explanation:** A System Logger request failed.

One of the following System Logger requests failed:

<table>
<thead>
<tr>
<th>Request</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>DEFCFS, IXTINVNT</td>
<td>Define coupling facility structure</td>

</tbody>
</table>

The return code \( rc \) and the reason code \( rsn \) are documented in the IBM manual *MVS Programming: Assembler Services Reference*. Check that publication for the system action relevant to the return code and reason code in the message. Each System Logger request is in a separate section of the guide. The return and reason codes are described in the topic “Return and Reason Codes” for each System Logger request.

**Corrective Action:** When a System Logger error occurs, check the system log or the console that displays error messages for the IXGLOG System Logger address space for further details. If the problem persists, prepare the Control-M monitor full output and contact BMC Customer Support.

**CTM448W CMEM LOST num TRANSACTIONS FROM THE CPU WITH SMFID=smfid**

**Explanation:** Control-M was down, or stopped processing CMEM and Control-O requests.

During the time that the Control-M monitor was inactive (due to a problem or daily maintenance), the CMEM subsystem functions or Control-O wrote to the Communication file more records than its size allowed. Therefore the oldest CMEM or Control-O requests were overwritten and lost.

No additional action is performed.

**Corrective Action:** Take one of the following steps in order to prevent this situation from recurring:

1. Make sure that the Control-M monitor will not remain inactive for a long time.
2. Increase the size of the Communication files.
**CTM449E** MISSING TABLE `tableName` IN `lib`.

**Explanation:** The `tableName` table was not found in the specified library, or the table was empty.
A FORCEJOB request for a scheduling table or a specific job failed.
This message is followed by the WKJ A59E message, which contains more details about the error.
This message may also be issued in the following situations:

1. the library in which the member resides is being compressed
2. the disk volume on which the library resides is being reorganized or defragmented

These actions should be avoided during job ordering periods.
No additional action is taken for the failed job or table order.

**Corrective Action:** Check that the table exists in the indicated library. For further actions, see the WKJ A59E message.

**CTM44AI** SYSTEM LOGGER INTERFACE ACTIVATED

**Explanation:** This information message indicates that Control-M has successfully initialized the System Logger interface.
Control-M can now begin communicating with CMEM.

**Corrective Action:** No action is required.

**CTM44BE** SYSTEM LOGGER NOT SUPPORTED ON THIS OPERATING SYSTEM

**Explanation:** Control-M cannot utilize the System Logger interface on the host operating system.
The host operating system does not support the System Logger interface.
The CMEM facility is deactivated.

**Corrective Action:** Change the parameters in the appropriate IOA PARM library members to use the Subsystem-to-Monitor (S2M) communication files to implement communication between CMEM or Control-O and Control-M.

**CTM44CI** ATTEMPTING TO RECONNECT TO MVS SYSTEM LOGGER

**Explanation:** Control-M has detected an MVS System Logger error, and is attempting to reconnect to the MVS System Logger.
Control-M tries several times to reconnect to the MVS System Logger.

**Corrective Action:** No action is required.

**CTM44DE** ATTEMPT TO RECONNECT TO MVS SYSTEM LOGGER FAILED

**Explanation:** Control-M detected an MVS System Logger error, and attempted several times to reconnect to the MVS System Logger, without success.

**Corrective Action:** No action is required.
CTM44EE MVS SYSTEM LOGGER ERROR - CMEM FEATURE DISABLED

**Explanation:** Control-M detected an MVS System Logger error. Either this error was so severe as not to be recoverable, or Control-M attempted several times to reconnect to the MVS System Logger, without success.

Control-M has stopped attempting to reconnect to the MVS System Logger. The CMEM facility is deactivated.

**Corrective Action:** If and when the MVS System Logger becomes operational, stop and restart the Control-M monitor.

CTM44FI TRIGGER JOB jobName (jobId) FOUND ON AJF. JOB NOT FORCED

**Explanation:** This information message refers to a Control-O or CMEM ON JOBARRIV or ON JOBEND rule with a DO FORCEJOB command. The job used to trigger this DO FORCEJOB was found on the Active Jobs file.

Control-M does not order and submit the DO FORCEJOB.

**Corrective Action:** No action is necessary.

CTM44GA REPLY "ABORT", "CONTINUE", OR "RETRY"

**Explanation:** After displaying a CMEM-related error message, Control-M disables communication between CMEM or the Control-O monitor and Control-M. Control-M then displays message CTM44GA giving the user the choice of how to continue.

The subtask is suspended until a response to this message is received.

**Corrective Action:** Enter one of the following responses:

1. ABORT - terminate the Control-M monitor
2. CONTINUE - disable communication between CMEM or the Control-O monitor and Control-M, but allow the Control-M monitor to continue processing
3. RETRY - retry the failed dynamic allocation request

CTM450S OPEN OF WORK FILE FAILED - DDNAME "DAJ OBLST". PLEASE CHECK THE CONTROL-M MESSAGES AND CODES MANUAL

**Explanation:** The New Day procedure was unable to open the file pointed to by the DAJ OBLST DD name for update.

After reading the list of CDAM files to be deleted from the file pointed to by DAJ OBLST, the New Day procedure empties the file and writes one record indicating that there are no more entries. Possible causes are:

1. file not found on the disk
2. incorrect security authorization

**Corrective Action:** Determine the reason for the problem, and correct it. Reinstall Control-M/Restart.
CTM452I FORMATTING OF activeFile FILE STARTED

**Explanation:** This information message indicates that the Control-M Active Jobs file (AJF) or the Control-D Active Missions file (AMF) is currently being formatted.

**Corrective Action:** No action is required.

CTM453S OPEN OF DATES CONTROL-RECORD FAILED. DDNAME "DACHK"

**Explanation:** Open of the Control-M or Control-D Date Control record failed in the DACHK DD statement. This error message is issued by the CTMFRM (Control-M) or CTDFRM (Control-D) program as part of the New Day procedure. Possible causes are:

1. The DACHK DD statement is missing.
2. The data set (member) described by the DACHK DD statement is not the Control-M or Control-D Date Control Record.

**Corrective Action:** Correct the JCL for the New Day procedure.

CTM454E FORMAT (format_pgm) ALREADY RUN TODAY

**Explanation:** An attempt was made to run the New Day procedure twice in the same day. The New Day procedure issues format_pgm. This program should not run more than once a day.

Possible values of format_pgm:

1. CTMFRM - formats the Active Jobs file (AJF) in Control-M
2. CTDFRM - formats the Active Missions file (AMF) in Control-D

The AJF or AMF is not formatted, but the New Day procedure continues to execute other programs in the program list.

**Corrective Action:** Check why the New Day procedure is being run twice, and whether jobs or missions were accidentally ordered twice because the General Date Control Record was erroneously modified.

CTM455S LAST FORMAT DATE GREATER THAN ORIGINAL SCHEDULING DATE IN CONTROL-M DATES Control-RECORD

**Explanation:** The last format date is later than the original scheduling date in the Control-M Date Control record or the Control-D Date Control record. The New Day procedure issues this message. For more details, see the appropriate user guide.

New Day processing stops.

**Corrective Action:** Correct the Control-M or Control-D Date Control record, and run the New Day procedure again.

CTM456S OPEN OF activeFile FILE FAILED. DDNAME "ddName"

**Explanation:** Open of the Control-M Active Jobs file (AJF) or the Control-D Active Missions file (AMF) defined in the ddName DD statement failed. The New Day procedure calls the program that issues this message.

In Control-M, ddName is DACKPT and activeFile is the Active Jobs file (AJF).
In Control-D **ddName** is DAAMF and **activeFile** is the Active Missions file (AMF).

Possible causes are:
1. The **ddName** DD statement is missing.
2. The data set described by the **ddName** DD statement is not the AJF or the AMF.
3. The data set described by the **ddName** DD statement is the AJF or the AMF, but of another Control-M or Control-D monitor, or of a different version of Control-M or Control-D.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL for the New Day procedure, and rerun it.

**CTM457S OPEN OF BACKUP FILE FAILED. DDNAME "DABKUP"**

**Explanation:** Open of backup file for the Active Jobs file (AJF) or Active Missions file (AMF) defined in the DABKUP DD statement failed. This error message is issued by the CTMFRM (Control-M) or CTDFRM (Control-D) program, which is usually activated as part of the New Day procedure.

Possible causes are:
1. The DABKUP DD statement is missing.
2. The data set described by the DABKUP DD statement is not the Active Jobs Backup file or Active Missions Backup file.
3. The data set described by the DABKUP DD statement is the Control-M Active Jobs Backup file or the Control-D Active Missions Backup file, but of another Control-M or Control-D monitor, or of a different version of Control-M or Control-D.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL for the New Day procedure, and rerun it.

**CTM458S ERROR IN activeFile - RECORD 0. SHOULD BE FORMAT OR FREE**

**Explanation:** Record 0 of the **activeFile** file contains incorrect data. This error message is issued by the CTMFRM (Control-M) or CTDFRM (Control-D) program, which is usually activated as part of the New Day procedure.

In Control-M, **activeFile** is the Active Jobs file (AJF).

In Control-D, **activeFile** is the Active Missions file (AMF).

Possible causes are:
1. The **activeFile** file is corrupt.
2. The data set described by the DACKPT DD statement (Control-M) or the DAAMF DD statement (Control-D) is not the **activeFile** file, but is very similar to it.

Program execution stops with a condition code of 08.

**Corrective Action:** Check the validity of the data set described by the DACKPT or DDAMF DD statement. If necessary, correct the JCL, and rerun the New Day procedure.
If `activeFile` is corrupt, use a standard copy utility, like IEBGENER, to copy `activeFile`, and send it to BMC Customer Support. If necessary, run the FORMCKP utility to reformat the Active Jobs file or the CTDFRAMF utility to reformat the Active Missions file. However, these utilities also erase all the jobs or missions in the respective files.

**CTM459I activeFile IS RESTORED FROM BACKUP**

**Explanation:** This information message indicates the beginning of a rerun of the New Day procedure after an earlier abend during the format of `activeFile`.

In Control-M, `activeFile` is the Active Jobs file (AJF).

In Control-D `activeFile` is the Active Missions file (AMF).

`activeFile` is restored from the appropriate backup file, and processing continues normally.

**Corrective Action:** No action is required.

**CTM460S DATE CONTROL-RECORD IS EMPTY**

**Explanation:** The DACHK DD statement describes an empty data set or member. For more information, see the sections that describe NEW DAY processing in the Control-M and Control-D chapters of the INCONTROL for z/OS Administrator Guide.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the Control-M or Control-D Date Control Record and run the New Day procedure again.

**CTM461S ERROR WHILE FORMATTING IOA CONDITIONS FILE**

**Explanation:** I/O error while formatting the IOA Conditions file.

Possible causes are:

1. The data set described by the DARESF DD statement is not the IOA Conditions file.
2. An I/O error occurred while reading the IOA Conditions file.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct and run the New Day procedure again. In case of an I/O error, you may need to recreate the IOA Conditions file. This erases all the conditions from the file.

**CTM462S INVALID LAST FORMAT DATE IN DATE CONTROL RECORD**

**Explanation:** Invalid format of last format date in the Date Control Record. This message is issued by the CTMFRM or CTDFRM program, which is activated as part of the New Day procedure. The valid format is ddmmyy or mmddyy. Possible causes are:

- Someone has modified the contents of the Date Control Record incorrectly.
- The record described by the DACHK DD statement is not the Control-M Date Control Record or the Control-D Date Control Record.

For more information, see the sections that describe NEW DAY processing in the Control-M and Control-D chapters of the INCONTROL for z/OS Administrator Guide.
Program execution stops with a condition code of 08.

**Corrective Action:** Do one or both of the following, as necessary:
- Correct the JCL for the Daily Subsystem, and rerun it.
- Correct the format date in the Date Control Record, and rerun the New Day procedure.

**CTM463S INVALID ORIGINAL SCHEDULING DATE IN DATE CONTROL RECORD**

**Explanation:** Invalid original scheduling date in the Date Control Record. This message is issued by the CTMFRM (Control-M) or CTDFRM (Control-D) program, which is activated as part of the New Day procedure. The valid format is ddmmyy or mmddyy.

Possible causes are:
- The record described by the DACHK DD statement is not the Control-M General Date Control Record or the Control-D General Date Control Record.
- Someone modified the contents of the General Date Control Record incorrectly.

For more information, see the sections that describe NEW DAY processing in the Control-M and Control-D chapters of the INCONTROL for z/OS Administrator Guide.

Program execution stops with a condition code of 08.

**Corrective Action:** Do one or both of the following, as necessary:
- Correct the JCL for the New Day procedure and rerun it.
- Correct the original scheduling date in the General Date Control Record and rerun the New Day procedure.

**CTM464S FILE ALLOCATED TO DDNAME "ddName" IS NOT YOUR activeFile**

**Explanation:** The data set described by the ddName DD statement is not the file specified by activeFile.

In Control-M, ddName is DACKPT and activeFile is the Active Jobs file (AJF).
In Control-D ddName is DAAMF and activeFile is the Active Missions file (AMF).

Possible causes are:
- The data set described by the ddName DD statement is not the AJF or the AMF.
- The data set described by the ddName DD statement is the AJF or the AMF, but of another Control-M or Control-D monitor, or of a different version of Control-M or Control-D.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the problem in the data set name indicated by the ddName DD statement, and run the New Day procedure again.
CTM465S FILE ALLOCATED TO DDNAME "DABKUP" IS NOT A BACKUP OF activeFile

**Explanation:** The data set described by the DABKUP DD statement is not a backup of activeFile. In Control-M, activeFile is the Active Jobs file (AJF). In Control-D, activeFile is the Active Missions file (AMF).

Possible causes are:
- The data set described by the DABKUP DD statement is not the AJF or the AMF.
- The data set described by the DABKUP DD statement is the AJF or the AMF, but of another Control-M or Control-D monitor, or of a different version of Control-M or Control-D.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the Control-M Date Control Record and rerun the affected procedure.

CTM466S NEED MORE MEMORY TO FORMAT activeFile

**Explanation:** There is not enough memory to format the activeFile file. In Control-M, activeFile is the Active Jobs file (AJF) or the History file (HST). In Control-D, activeFile is the Active Missions file (AMF).

Program execution stops with a condition code of 08. Control-M and Control-D monitors will not start after this error.

**Corrective Action:** To enable monitors to start, set REGION=0M and rerun the affected procedure. If the REGION is already set to 0M, then ensure that the MVS exit IEFUSI allows sufficient virtual storage memory to be allocated above the 16M line. For example, since each record of the above files requires 1024 bytes of storage, a file containing 200,000 records requires 200M of storage above the line.

CTM468I FORMATTING OF activeFile ENDED

**Explanation:** This information message indicates that the New Day procedure finished formatting the activeFile file. This message is issued by the CTMFRM (Control-M) or CTDFRM (Control-D) program, which is activated as part of the New Day procedure.

In Control-M, activeFile is the Active Jobs file (AJF).

In Control-D, activeFile is the Active Missions file (AMF).

**Corrective Action:** No action is required.

CTM469S OPEN OF IOA LOG FILE FAILED

**Explanation:** Open of IOA Log file failed. The message is produced by the New Day procedure. Possible causes are:

1. The DALOG DD statement is missing.
2. The file allocated to the DALOG DD statement is not the IOA Log file.
3. The file allocated to the DALOG DD statement is the IOA Log file, but it is of a different version or of a different IOA monitor.
Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL and run the Daily again.

**CTM470S ERROR WHILE FORMATTING THE activeFile, FILE WAS NOT FORMATTED**

**Explanation:** An error occurred during formatting of the activeFile file. The New Day procedure issues this message.

In Control-M, activeFile is the Active Jobs file (AJF).

In Control-D, activeFile is the Active Missions file (AMF).

Program execution stops with a condition code of 08.

**Corrective Action:** Look for a previous message that describes the type of error. Correct it and rerun the New Day procedure.

**CTM471S OPEN OF IOA CONDITIONS FILE FAILED. DDNAME "DARESF"**

**Explanation:** Open of IOA Conditions file failed (the DARESC DD statement). This error message is issued by either the CTMFRM or the CTDFRM program, which is activated as part of the New Day Procedure. Possible causes are:

1. The DARESC DD statement is missing.
2. The data set described by the DARESC DD statement is not the IOA Conditions file.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL for the Daily Subsystem and rerun it.

**CTM472S OPEN OF IOA SYNCHRONIZATION FILE FAILED. DDNAME "DASINC"**

**Explanation:** Open of IOA Synchronization file failed in the DASINC DD statement. This error message is issued by either the CTMFRM or the CTDFRM program, which is activated as part of the New Day procedure. Possible causes are:

1. The DASINC DD statement is missing.
2. The data set described by the DASINC DD statement is not the IOA Synchronization file.
3. The data set described by the DASINC DD statement is an IOA Synchronization file, but it is of another Control-M or Control-D monitor, or of a different Control-M or Control-D version.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL for the New Day procedure and rerun it.

**CTM475S INVALID LAST FORMAT DATE IN DATE CONTROL-RECORD**

**Explanation:** Invalid format of last format date in the Date Control record. This message is issued by either the CTMFRM or the CTDFRM program, which is activated as part of the New Day procedure. Possible causes are:
1. The record described by the DACHK DD statement is not the Control-M or Control-D Date Control record.

2. Someone modified the contents of the Date Control Record incorrectly.

For more information, see the sections on NEW DAY processing in the Control-M and Control-D chapters of the INCONTROL for z/OS Administrator Guide.

Program execution stops with a condition code of 08.

**Corrective Action:** Do one or both of the following, as necessary:

3. Correct the JCL for the New Day procedure, and rerun it.

4. Correct the format date in the Date Control Record.

---

**CTM476S LAST FORMAT DATE IN DATE CONTROL-RECORD WAS MORE THAN 28 DAYS AGO**

**Explanation:** The difference between the current working date (date-1) and the last format date in the Date Control Record is greater than 28 days. Possible causes are:

1. Someone modified the contents of the Date Control Record incorrectly.

2. The Control-M or Control-D monitor has not been used for more than 28 days. Correct the date to “yesterday.”

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the dates in the Date Control Record in the DACHK DD statement, and rerun the Daily Subsystem.

---

**CTM477S FILE ALLOCATED TO DDNAME "DASINC" IS NOT YOUR IOA SYNCHRONIZATION FILE**

**Explanation:** The data set described by the DACNDF DD statement is not the required IOA Conditions file. The CTMFRM or CTDFRM program issues this error message as part of the New Day procedure when one of the following occurs:

1. The file allocated to the DACNDF DD statement is not the IOA Conditions file.

2. The file allocated to the DACNDF DD statement is an IOA Conditions file, but for a different version, or for a different Control-M or Control-D monitor.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL for the New Day procedure and rerun it.

---

**CTM478I FORMATTING OF IOA CONDITIONS FILE STARTED**

**Explanation:** This information message indicates that the formatting of the IOA Conditions file was started by the New Day procedure. The CTMFRM or CTDFRM program clears all the conditions from the day following the last formatting date until the next working date, that is, the first date in the General Date Control Record.

**Corrective Action:** No action is required.
CTM479I FORMATTING OF IOA CONDITIONS FILE ENDED

Explanation: This information message indicates that the New Day procedure formatted the IOA Conditions file. The CTMFRM or CTDFRM formatting program called by the New Day procedure ended.

Corrective Action: No action is required.

CTM480S ERROR WHILE FORMATTING IOA CONDITIONS FILE.

Explanation: An error occurred while formatting the IOA Conditions file by the New Day procedure. An earlier error message describes the type of error.

Program execution stops with a condition code of 08.

Corrective Action: Check the IOA Log or the utility output for a previous message concerning the error.

CTM481S OPEN OF WORK FILE FAILED - DDNAME "DAJ OBLST". DELETE OF ARCHIVED SYSOUTS FAILED

Explanation: Open for the DAJ OBLST file failed during the execution of the New Day procedure.

This error message is issued by the CTMDAS program, which is usually activated as part of the New Day procedure. The DAJ OBLST DD statement is probably missing.

Program execution stops with a condition code of 16.

Corrective Action: Make sure that CONTROLR is set to Y in CTMPARM.

CTM482S INIT OF RES FILE FAILED

Explanation: The New Day procedure failed to initialize the Control-M Resources file. An accompanying message identifies the reason for the failure.

The New Day procedure stops with an error code of 12.

Corrective Action: Check the accompanying message to determine the reason for the problem, and correct the problem accordingly.

CTM484I FORMAT OF RESOURCE FILE HAS STARTED

Explanation: This information message indicates that the Control-M Resources file is currently being formatted. This procedure is usually part of the New Day procedure.

Corrective Action: No action is required.

CTM488I FORMAT OF RESOURCE FILE HAS ENDED

Explanation: This information message indicates that formatting of the new Control-M Resources file is complete and the resource is available.

Corrective Action: No action is required.

CTM491S OPEN OF DDNAME "DA34F" FAILED

Explanation: Open of the file containing the operator commands failed (the DA34F DD statement). The CTM34F program is usually activated as part of the New Day procedure. Possible causes are:
1. The DA34F DD statement is missing.
2. The data set described by the DA34F DD statement does not exist, or cannot be opened for sequential read, or record length is not 80.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL of the job. For more information, see the *INCONTROL for z/OS Administrator Guide*.

**CTM493I** {IOA34F | CTM34F} STARTS EXECUTING COMMANDS

**Explanation:** This information message indicates that the IOA34F or CTM34F program is ready to execute the operator commands from the supplied list. This program is usually activated as part of the New Day procedure.

**Corrective Action:** No action is required.

**CTM495I** {IOA34F | CTM34F} FINISHED EXECUTING COMMANDS

**Explanation:** This information message indicates that the IOA34F or CTM34F program finished executing the list of operator commands. This program is usually activated as part of the New Day procedure.

**Corrective Action:** No action is required.

**CTM496E** PROGRAM {IOA34F | CTM34F} IS NOT APF-AUTHORIZED

**Explanation:** The MVS operating system rejected the operator commands issued by the CTM34F program. The CTM34F program should reside in an APF-authorized library and must be link edited with the AC attribute set to 1 in order to be able to issue operator commands.

The issued commands are rejected. The CTM34F program terminates with a condition code of 08.

**Corrective Action:** The IOA34F or CTM34F program already has the AC attribute set to 1. The INCONTROL administrator should verify that the library in which CTM34F resides is APF-authorized.

**CTM497S** VM HOST NOT AVAILABLE

**Explanation:** An attempt was made to issue a VM command while MVS was not running under VM. A command whose name starts with the prefix CP was passed to the IOAOPR utility. This prefix signals to Control-M that the command is intended for a host VM operating system, but the IOAOPR utility detected that no VM environment was available.

**Corrective Action:** Verify that a VM environment is running before issuing VM CP commands.

**CTM498S** LOAD OF MODULE IOAVMC FAILED

**Explanation:** The IOAOPR utility could not load the IOAVMC module.

**Corrective Action:** Verify that the IOAVMC module resides in the STEPLIB library.

**CTM499E** INVALID VALUE "val" FOR "RESPONSE" KEYWORD

**Explanation:** The user entered a value other than YES or NO for the Response keyword.

**Corrective Action:** Correct the entry to either YES or NO.
Messages CTM500 through CTM5xx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**CTM501I CTMJOB STARTED**

**Explanation:** This information message indicates that the CTMJOB program has started.

The CTMJOB program is usually activated as part of the New Day procedure.

**Corrective Action:** No action is required.

**CTM502S OPEN OF SCHEDULE DATA FAILED. DDNAME "DAJOB"**

**Explanation:** Open of scheduling tables data set failed (the DAJOB DD statement).

This error message is issued by the CTMJOB program, which is usually activated as part of the New Day procedure, and could be due to one of the following:

- The DAJOB DD statement is missing.
- The data set described by the DAJOB DD statement cannot be opened for sequential read or the record length is not 80.

The CTMJOB program will end with errors.

**Corrective Action:** Correct the JCL for the job/CLIST.

**CTM502E CONVCON INVALID RC=rc REASON =rsn CONSOLE ID=consId CONSOLE NAME=consName**

**Explanation:** A command was issued to a console specified by CONSOLE ID=consId or CONSOLE NAME=consName, and the CONVCON service return code is not 0. When a command is issued to a console, the CONVCON service is called to verify the console. The return code from the CONVCON service that validates the console response is rc.

The command may be rejected depending on the CONVCON action.

**Corrective Action:** To determine the reason for the error, see the Authorized Assembler Services Guide. Correct the error, and reissue the command.

**CTM503S OPEN OF USER DATE CONTROL-RECORD FAILED - DDNAME "DACHK"**

**Explanation:** Open of the file containing the User Date Control Record failed (the DACHK DD statement).

Issued by the CTMJOB program which is usually activated by the New Day procedure.

Possible causes are:

- The DACHK DD statement is missing.
- The data set (member) described by the DACHK DD statement does not exist.

The CTMJOB program will end with errors.

**Corrective Action:** Correct the JCL for the job/CLIST.
CTM504S USER DATE CONTROL-RECORD IS EMPTY

Explanation: The data set described by the DACHK DD statement is empty.
The CTMj OB program will end with errors.
Corrective Action: Correct the JCL for the job/CLIST.

CTM505S PREVIOUS RUN OF CTMj OB DID NOT FINISH OK

Explanation: A previous run of the CTMj OB program did not finish OK. This program is usually activated as part of the New Day procedure.

Date-2 and date-3 (or date-4 and date-5) of the Date Control Record are not equal. Possible causes are:
- The previous run of the CTMj OB program did not finish OK.
- Someone has modified the contents of the User Date Control Record (the DACHK DD statement).

For more information, see the Control-M chapter in the INCONTROL for z/OS Administrator Guide.

The CTMj OB program ends with errors.
Corrective Action: Change date-3 (or date-5), positions 25-30 (or positions 50-55) in the Date Control Record (the DACHK DD statement) to the values of date-2 (or date-4).
To rerun the same Daily, correct all the dates to the value of the day before. Be careful not to order the same job twice during a rerun on the same day. BMC recommends that you delete the ordered jobs from the Active Jobs file and then run the Daily again.

If the previous abend happened after many jobs had been ordered, BMC recommends requesting the remaining jobs manually by means of CLIST CTMj OBRO.

CTM506S SCHEDULING FAILED FOR MEMBER memName

Explanation: Scheduling failed for the memName member. This error message is issued by the CTMj OB program which is usually activated as part of the New Day procedure.
The IOA Log or the job output should contain an additional message concerning the reason for failure.
The job order of member is not placed in the Active Jobs file. Depending on the severity of the problem, the New Day procedure will either continue to the next job order or terminate with the condition code 08.
Corrective Action: Check the IOA Log or the job’s output for the reason.

CTM507S LAST MONTHLY SCHEDULING DATE GREATER THAN THE CURRENT ORIGINAL SCHEDULING DATE

Explanation: Invalid last monthly Scheduling Date.
The last monthly Scheduling Date (positions 18-23) in the User Date Control Record is greater than the current original Scheduling Date (positions 1-6). Possible causes are:
- The previous run of the CTMj OB program did not finish OK.
- Someone has modified the contents of the User Date Control Record (DD statement DACHK).
For more details, see the INCONTROL for z/OS Administrator Guide.
The CTMJOB program will end with errors.

Corrective Action: Correct the User Date Control Record (the DACHK DD statement).

CTM508S LAST MONTHLY SCHEDULING DATE WAS MORE THAN 28 DAYS AGO, CHECK IT

Explanation: The last monthly scheduling date is more than 28 days ago.

Possible causes are:
- The User New Day procedure has not been used for more than 28 days. Correct the dates in the record to “yesterday.”
- Someone has modified the contents of the General Date Control Record incorrectly.

For more details, see the INCONTROL for z/OS Administrator Guide.

Program execution stops with a condition code of 08.

Corrective Action: Correct the dates in the User Date Control Record (the DACHK DD statement).

CTM509S INVALID YEAR IN ORIGINAL SCHEDULING DATE OF USER DATE CONTROL-RECORD

Explanation: Invalid year in the original scheduling date of the User Date Control record. This year is not yet supported by Control-M.

The CTMJOB program will end with errors.

Corrective Action: Please correct the year field (the DACHK DD statement).

CTM510S SEVERE ERROR IN THE SCHEDULING DATA - NOTIFY THE IOA ADMINISTRATOR

Explanation: Severe error in the scheduling data.

This message is produced when the scheduling tables (described by the DAJOB DD statement) contain erroneous data. This can be due to the following:
- The contents of the table were incorrectly modified using an editor or program, and the format of the table is invalid.
- Internal error in Control-M.

The program terminates with a condition code of 08.

Corrective Action: Try to restore the table to its original state. If you cannot, prepare the Control-M monitor full output and have your system programmer contact BMC Customer Support.

If it is a batch Daily using a permanent Date Control Record, correct the contents of the record before running the Daily again. If issued during a User Daily or New Day procedure, see message CTM505S for further details.
CTM513I SCHEDULE FAILED FOR num CONTROL-D CATEGORIES

Explanation: This information message indicates that num Control-D decollating missions categories were not found in the library allocated to the DAREPMIS DD statement. The Control-M New Day procedure continues processing.

Corrective Action: Look at the IOA Log for the failed categories and associated reasons for failure.

CTM514S INSUFFICIENT STORAGE FOR THE JOB

Explanation: Insufficient storage for processing the job order. The program terminates with a condition code of 08.

Corrective Action: Increase the REGION size of the task which issued the request.

CTM515S ERROR IN SCHEDULING DATA - TOO MANY CARDS FOR ONE JOB

Explanation: Too many statements for one job. Scheduling data used to describe the job order are too large to be processed by Control-M.

The job order will not be placed on the Active Jobs file. The New Day procedure will terminate with a condition code of 08.

Corrective Action: Check the contents of the job order, using the Online Scheduling Facility, and remove unnecessary scheduling data. Prepare the Control-M monitor full output and contact BMC Customer Support.

CTM516S ERROR IN SCHEDULING DATA - FIRST CARD SHOULD START WITH "D"

Explanation: Invalid scheduling data in the first data set described by the DAJOB DD statement. The first statement of valid scheduling table should start with D.

Possible causes are

- The data set described by the DAJOB DD statement is not a scheduling table.
- The scheduling data has been manually modified incorrectly.

The CTMJOB program ends with errors.

Corrective Action: Check contents of the data set described by the DAJOB DD statement and if the problem is not solved, check to find the person who may have manually changed the scheduling data.

CTM517S SCHEDULING DATA NOT AVAILABLE

Explanation: The DD statement pointing to the job scheduling tables is empty or missing.

The program ends with errors.

Corrective Action: Correct the JCL for the job/CLIST.
CTM518S INVALID YEAR IN USER DATE CONTROL-RECORD

Explanation: Invalid year in the User Date Control record used by the New Day procedure. This year is not supported by the release of Control-M you are using.

The CTMJOB program ends with errors.

Corrective Action: Please correct the year field (the DACHK DD statement).

CTM519S INVALID PREVIOUS WEEKLY SCHEDULING DATE IN USER DATE CONTROL-RECORD (POSITIONS 43-48)

Explanation: Invalid previous weekly Scheduling Date in the User Date Control record (positions 43-48). This error message is issued by the CTMJOB program, which is usually activated as part of the New Day procedure.

This date (date-4 of User Date Control record) might not be equal to date-5 (positions 50-55) or in invalid format. Valid format is ddmmyy or mmddyy.

Possible causes are:
- The previous run of the CTMJOB program did not finish OK.
- Someone has incorrectly modified the contents of the User Date Control Record (the DACHK DD statement).

For more details, see the INCONTROL for z/OS Administrator Guide.

The New Day procedure will end with errors.

Corrective Action: Correct your Date Control Record (the DACHK DD statement) and rerun the New Day procedure.

CTM522S INVALID ORIGINAL SCHEDULING DATE IN USER DATE CONTROL-RECORD (POSITIONS 1-6)

Explanation: Invalid original scheduling date in the User Date Control Record (positions 1-6). Valid format is ddmmyy or mmddyy.

This error message is issued by the CTMJOB program, which is usually activated as part of the New Day procedure.

Possible causes are:
- The previous run of the CTMJOB program did not finish OK.
- Someone has incorrectly modified the contents of the User Date Control Record (the DACHK DD statement).

For more details, see the INCONTROL for z/OS Administrator Guide.

The New Day procedure will end with errors.

Corrective Action: Correct your Date Control Record (the DACHK DD statement) and rerun the New Day procedure.
CTM523S INVALID PREVIOUS MONTHLY SCHEDULING DATE IN USER DATE CONTROL-RECORD (POSITIONS 18-23)

Explanation: Invalid previous monthly scheduling date in the User Date Control Record (positions 18-23). This date (date-2 of User Date Control Record) should be equal to date-3 (positions 24-29) or in valid format. The valid format is ddmmyy or mmddyy.

This error message is issued by the CTMJOB program which is usually activated as part of the New Day procedure.

Possible causes are:

- The previous run of the CTMJOB program did not finish OK.
- Someone has incorrectly modified the contents of the User Date Control Record (the DACHK DD statement).

For more details, see the INCONTROL for z/OS Administrator Guide.

The CTMJOB program will end with errors.

Corrective Action: Correct your Date Control Record (the DACHK DD statement) and rerun the New Day procedure.

CTM524S CTMJOB ENDED WITH ERRORS

Explanation: The CTMJOB program ended with errors.

The IOA Log usually contains prior messages concerning the errors.

The CTMJOB program finishes executing with a condition code of 08.

Corrective Action: Do the following:

- Check the IOA Log for errors.
- If CTMJOB is being executed from within the New Day procedure or from a User Daily, correct the Date Control Record (date-3 and date-5) manually, if necessary, to allow the next run of the Daily.

For more details, see the INCONTROL for z/OS Utilities Guide.

CTM525I CTMJOB ENDED

Explanation: This information message is a normal message issued when the CTMJOB program terminates. CTMJOB is activated as part of the New Day procedure.

Corrective Action: No action is required.

CTM528I MEMBER memName ID=orderId ODATE odate PLACED ON ACTIVE JOBS FILE-descr

Explanation: This information message is issued when a job order is placed on the Active Jobs file. The task is now on the Active Jobs file in WAIT SCHEDULE state.

Corrective Action: No action is required.
CTM529S LAST WEEKLY SCHEDULING DATE GREATER THAN THE CURRENT ORIGINAL SCHEDULING DATE

**Explanation:** The last weekly scheduling date in the Date Control Record is greater than the current original scheduling date.

This error message is issued by the CTMJOB program which is usually activated as part of the New Day procedure. Date-4 (positions 43-48) should not be greater than date-1 (positions 1-6) in the Date Control Record.

Possible causes are:

- The previous run of the CTMJOB program did not finish OK.
- Someone modified the contents of the User Date Control Record (the DACHK DD statement).

For more details, see the *INCONTROL for z/OS Administrator Guide*.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the User Date Control Record (the DACHK DD statement) and rerun the New Day procedure.

CTM530S LAST WEEKLY SCHEDULING DATE WAS MORE THAN 28 DAYS AGO, CHECK IT

**Explanation:** The last weekly scheduling date is more than 28 days ago.

Possible causes are:

- The User New Day procedure has not been used for more than 28 days. Correct the dates in the record to yesterday.
- Someone has modified the contents of the General Date Control Record incorrectly.

For more details, see the *INCONTROL for z/OS Administrator Guide*.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the dates in the Date Control Record (the DACHK DD statement) and rerun.

CTM531W MEMBER memName ODATE odate - SCHEDULING CANCELLED BY USER EXIT

**Explanation:** Scheduling cancelled by the CTMX001 user exit; the member did not pass user checking. The CTMX001 user exit is activated for each job order before it is placed on the Active Jobs file. The exit can direct the New Day procedure not to place the job order on the Active Jobs file, in which case this message is issued.

The job order is not placed on the Active Jobs file.

**Corrective Action:** Look for additional messages in the IOA Log clarifying the reason for the cancel (usually security). If you cannot find a reason, consult your system programmer.
CTM532S OPEN OF CONTROL-M ACTIVE JOBS FILE FAILED. DDNAME "DACKPT"

Explanation: Open of Control-M Active Jobs file failed.

This error message is issued by the CTMJOB program, which is usually activated as part of the New Day procedure, and is due to one of the following:

- The DACKPT DD statement is missing.
- The data set described by the DACKPT DD statement is not the Control-M Active Jobs file.
- The data set described by the DACKPT DD statement is the Control-M Active Jobs file but of a different version of Control-M, or of a different Control-M monitor.

Program execution stops with a condition code of 08.

Corrective Action: Correct the JCL for the job/CLIST and rerun it.

CTM533S CONTROL-M ACTIVE JOBS FILE IS FULL. NOTIFY THE IOA ADMINISTRATOR

Explanation: Highlighted, unrollable message.

Control-M Active Jobs file is full. There is no more space for new job orders.

The job order is not placed in the Active Jobs file.

Corrective Action: Consult your system programmer immediately. You may need to increase the size of the Active Jobs file.

CTM534S SEVERE ERROR ON CONTROL-M ACTIVE JOBS FILE. NOTIFY THE IOA ADMINISTRATOR

Explanation: Severe error on Control-M Active Jobs file.

This could be due to one of the following:

- An I/O error occurred.
- The file allocated to the DACKPT DD statement is not the Control-M Active Jobs file.
- The Active Jobs file has been corrupted.

The CTMJOB Control-M program, which is activated as part of the New Day procedure, ends with errors.

Corrective Action: Prepare the Control-M monitor full output and have your system programmer contact BMC Customer Support. Check whether the file has been updated from two computers without global ENQ control, or maybe by an unauthorized program.

CTM535S CONTROL-M ACTIVE JOBS FILE IS BEING FORMATTED. TRY AGAIN LATER

Explanation: Control-M Active Jobs file is currently being formatted. This error message is issued by the CTMJOB program, which is usually activated as part of the New Day procedure. The General New Day procedure is currently running and is formatting the file.

Corrective Action: Try again later.
CTM536S SEVERE ERROR IN SCHEDULING DATA CARDS

**Explanation:** A severe error was found in the scheduling data statements. This error message is issued by the CTMJOB program, which is usually activated as part of the New Day procedure. Scheduling fails for the job order. The CTMJOB program terminates with a condition code of 08.

**Corrective Action:** Look for additional messages concerning the error, correct the error and rerun.

CTM537S NO MORE INTERNAL WORK AREA. SEE MESSAGES AND CODES FOR REQUIRED ACTION

**Explanation:** Internal work areas of the New Day procedure have been exhausted. The job order contains more data than can be handled by the current release of Control-M. The New Day procedure will terminate with a condition code of 08.

**Corrective Action:** Prepare the Control-M monitor full output and have your system programmer contact BMC Customer Support.

CTM538S LOADING OF CONTROL-M/ANALYZER INSTALLATION PARAMETERS FAILED

**Explanation:** Loading of Control-M/Analyzer Installation Parameters, which are in the CTBPARM member in the IOA PARM library, failed.

Possible causes are:

- There is insufficient memory to load the IOA Installation Parameters.
- The CTBPARM member does not exist in the IOA PARM library.
- The IOA PARM library was updated while you were working and the position of the CTBPARM member has changed.

The requested function is terminated.

**Corrective Action:** Look in the system log for additional related messages. Try one of the following:

- If loading failed because of lack of memory: increase the REGION size for batch missions; for TSO, try to log on again using a larger SIZE parameter.
- If you are using many IOA screens concurrently, try to exit a few using the END command. This releases memory used by the screens.
- If the PARM library has been modified and you are working under TSO, try to log on again. If you are working under ROSCOE, you may have to shut down ROSCOE and bring it up again.

CTM53AS AJF IS ALMOST FULL AND REACHED THE 'STOP ORDER' THRESHOLD. JOB IS NOT ORDERED.

**Explanation:** When the amount of used space in the AJF increases and reaches the percentage threshold specified in the STOPORDR CTMPARM parameter, Control-M stops ordering jobs.

Control-M stops ordering jobs but all other functions (for example, job submission and post-processing) continue normally.
Corrective Action: The user must compress the AJF.

**CTM53BE JOB CAN NOT BE ADDED BECAUSE THE MOST RECENT GROUP ON THE AJF IS DELETED**

Explanation: An attempt was made to use the DYNAMIC INSERT JOB INTO GROUP option "R" (recent) to add a job to a deleted group.

Corrective Action: No action is required.

**CTM540E ERROR IN CARDS. REASON=rsn, CODE=field**

Explanation: A severe error was found in the scheduling data statements. This message is issued by Control-M (the CTMINP program) when it encounters an invalid value in a data statement.

The variables in this message are:
- **rsn** - a reason code that describes the probable cause of the error
- **field** - the field in which the error was found

Possible values of **rsn** and **field**, with explanations, are shown in the following tables.

<table>
<thead>
<tr>
<th>rsn</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>
<td>Invalid option</td>
</tr>
<tr>
<td>02</td>

</tbody>
</table>

Job order scheduling will fail. The User Daily will terminate with a condition code of 08.

**Corrective Action:** Use the values of `rsn` and `field` to locate the problem in the job definition. Correct the problem and run the User Daily again.
CTM540W LOAD OF SECURITY MODULE modName FAILED. SECURITY CHECKING WILL BE BYPASSED

Explanation: Loading of the modName IOA security module failed. Possible causes are:

- The installation is not using the specified user security module, and has erased the default IOA-supplied module.
- The IOA Load library is not in the load modules search lists of the job (STEPLIB + Linklist).
- There is insufficient memory.
- Another system oriented reason which can be found in the syslog.

As a result, no security checking is performed. For more details, see the sections on Security Interface Modules appropriate security guides.

Corrective Action: Notify the INCONTROL administrator. This is a potentially serious situation. Someone may be attempting to violate security.

CTM543E ID=id TASK=taskName OID=orderId - NOT FORCED OK, JOB IS ALREADY {DELETED | CHANGED | TERMINATED}

Explanation: A request was made to force the taskName task specified in the message. By the time the monitor accepted the request, the job was running, was being changed, or had already been deleted, so the request could not be performed. This message is written to the IOA Log file only.

The user request is ignored.

Corrective Action: If the entry was DELETED, it cannot be forced. If not, wait until the job ends, and if it ends NOTOK, try to force it again.

CTM544E UNABLE TO FORCE OK A CYCLIC JOB

Explanation: The user issued line command O (Force OK) for a cyclic job. Cyclic jobs cannot be Forced OK.

The user request is ignored.

Corrective Action: No action is required.

CTM545E I/O ERROR ON "AJF". CONTROL-M SWITCHES TO DUAL "AJF"

Explanation: An I/O error occurred while the Control-M monitor accessed the Active Job File (AJF). Control-M starts using the Dual AJF (CTM ALTCKP data set) instead of the primary AJF.

The Control-M monitor continues running using the Dual AJF.

Corrective Action: To use the Dual AJF in the Control-M Active Environment screen (Screen 3), reallocate the DACKP DD statement in the online environment so that it specifies the Dual AJF instead of the primary AJF.

To return to using the primary AJF, perform the following steps:

1. Fix the problem that caused the I/O error.
2. Reallocate the AJF file if necessary.
3. Stop the Control-M monitor.
4. Copy the Dual AJF to primary AJF, using the CTMCAJF or IEBGENER utility.
5. Restart the Control-M monitor.

CTM546S "CTMPARM" USED TO FORMAT THE "AJF" DIFFERS FROM YOUR "CTMPARM"

Explanation: The CTMPARM member used by the job that formatted the Active Jobs file (AJF) differs from the online user CTMPARM member. This can occur for a variety of reasons, including the following:

- The user is migrating from one release to another.
- The user is enlarging the AJF using a STEPLIB different from the one used by the online users.
- The QNAME specified in the CTMPARM member does not match the QNAME specified in Record 0 of the AJF.

The Active Environment screen is not updated.

Corrective Action: Exit from the Control-M Online facility and reenter. If the problem recurs, contact your system programmer. Your logon procedure may point to an old CTMPARM member.

CTM547E I/O ERROR ON DUAL "AJF". USAGE OF DUAL "AJF" TERMINATED

Explanation: An I/O error occurred while the Control-M monitor accessed the Dual Active Job File (AJF) (CTM ALTCKP data set).

The Control-M monitor continues running without using the Dual AJF (CTM ALTCKP data set). No mirror AJF is supported; if errors occur in the primary AJF, no valid Active Jobs file will be available.

Corrective Action: Correct the problems that cause the I/O error. Reallocate the Dual AJF file, if needed. Stop and restart the Control-M monitor.

CTM548E SEVERE ERROR IN CALENDAR calName OR YEAR NOT FOUND IN CALENDAR

Explanation: Severe error in the calName IOA calendar. Either the year is not defined in the calendar, or the calendar has been incorrectly modified.

The job order is not issued. Processing of other job orders continues.

Corrective Action: Check the contents of the job order and the calendar.

CTM549E NO AVAILABLE "AJF" EXISTS. Control-M MONITOR SHUTS DOWN

Explanation: Control-M could not access a valid Active Jobs file (AJF) due to one of the following situations:

- An I/O error occurred when the Control-M monitor accessed the Active Job File while no Dual AJF was available.
- An I/O error occurred while the Control-M monitor accessed the Dual AJF, which was being used instead of the primary AJF because of a previous I/O error in the primary AJF.

The Control-M monitor shuts down.
**Corrective Action:** Do the following:
1. Correct the problem that caused the I/O error.
2. Reallocation the AJ F files, if needed.
3. Restart the Control-M monitor.

**CTM54DE MAXIMUM 50 INSTREAM JCL ENTRIES ALLOWED**

**Explanation:** More than 50 lines of Instream JCL were specified in the job scheduling definition.

**Corrective Action:** Reduce the number of Instream JCL lines to 50 or fewer.

**CTM54EE DAYS MUST BE BLANK, OR 000 TO 120**

**Explanation:** This message is produced when specifying a value greater than 120 in the FROM TIME + DAYS, UNTIL TIME + DAYS, or the DUE OUT TIME + DAYS job definition parameters.

The cursor remains positioned on the invalid value.

**Corrective Action:** Correct the + DAYS parameter as required.

**CTM54FE FOR JOB ENDED NOTOK, VALUE MUST BE BLANK OR K (KEEP THE RESOURCE)**

**Explanation:** For the CONTROL job definition parameter, the onFail subparameter was specified with an invalid value.

**Corrective Action:** Specify a valid value of blank or K (keep the resource).

**CTM54GE FOR JOB ENDED OK, VALUE MUST BE BLANK OR D (DISCARD THE RESOURCE)**

**Explanation:** For the RESOURCE job definition parameter, the onOK subparameter was specified with an invalid value.

**Corrective Action:** Specify a valid value of blank or D (discard the resource).

**CTM54LE TO DAYS CAN NOT BE SMALLER THAN FROM DAYS**

**Explanation:** This message is produced when the + DAYS value in the FROM TIME is greater than the + DAYS value in the UNTIL TIME job definition parameter.

The cursor remains positioned on the invalid value.

**Corrective Action:** Correct the + DAYS parameter as required.

**CTM54ME INTERNAL ERROR IN CONTROL-M. ERROR CODE = rsn**

**Explanation:** The AJ F Space Reuse Facility has encountered an internal error.
The possible values of \textit{rsn} are explained in the following table:

<table>
<thead>
<tr>
<th>\textit{rsn}</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>FUNCODE</td>
<td>Undefined or missing function code</td>
</tr>
<tr>
<td>M10MIF0</td>
<td>No index record pointer in AJF record 0</td>
</tr>
<tr>

<td>GETMAIN error</td>
</tr>
<tr>
<td>BADGTM0</td>
<td>GETMAIN error</td>
</tr>
</tbody>
</table>

The AJF Space Reuse Facility is disabled.

\textbf{Corrective Action:} Do the following:

- Contact BMC Customer Support.
- To reactivate the AJF Space Reuse Facility, format or compress the AJF and recycle the Control-M monitor.

\texttt{CTM54NS "CTMPARM" USED TO FORMAT THE "HST" DIFFERS FROM YOUR "CTMPARM"}

\textbf{Explanation:} The CTMPARM member used by the job that formatted the HST differs from the online user CTMPARM member. This can occur for a variety of reasons, including the following:

- The user is migrating from one release to another.
- The user is enlarging the HST using a STEPLIB different from the one used by the online users.
- The QNAME specified in the CTMPARM member does not match the QNAME specified in Record 0 of the HST.

The History Environment screen is not updated.
Corrective Action: Exit from the Control-M Online facility and reenter. If the problem recurs, contact your system programmer. Your logon procedure may point to an old CTMPARM member.

CTM551E INVALID SCROLL AMOUNT
Explanation: Invalid scroll amount specified. The scrolling amount should be PAGE, HALF, CRSR, or MAX. For details, see the chapter that describes online facilities in the user guide for the active INCONTROL product.
Corrective Action: Correct the scroll amount field.

CTM552E INVALID DATE
Explanation: Invalid date specified. Valid date format is usually \textit{ddmmyy} or \textit{mmddyy}. In some screens, the date format is \textit{ddmm} or \textit{mmdd}.
In some cases, the date value may be valid but its value relative to another date is invalid, for example, when a FROM DATE is later than the TO DATE in the date prompt screen of the P (PLAN) option in Screen 2.
Corrective Action: Correct the DATE field or the DATE parameter as appropriate.

CTM552S GETMAIN FAILED IN CTMRSG GROUP PROCESSING
Explanation: The CTMRSG program could not allocate storage.
Group processing is terminated.
Corrective Action: Increase the region size.

CTM553E "UNTIL DATE" IS BEFORE "FROM DATE"
Explanation: UNTIL DATE is before FROM DATE.
Corrective Action: Correct either UNTIL DATE or FROM DATE.

CTM554E READ ERROR ON IOA LOG
Explanation: I/O error while reading the IOA Log file. Possible causes are:
- The file allocated to the DALOG DD statement is not the IOA Log.
- The file allocated to the DALOG DD statement is the IOA Log, but it is of a different version.
- A read disk I/O error occurred.
Corrective Action: Check the TSO log of the job for additional messages. If necessary, correct the JCL for the job or the allocations for the CLIST.

CTM555S OID=orderId INSUFFICIENT STORAGE. INCREASE THE REGION SIZE
Explanation: There was insufficient memory to perform a task.
The action that could not be performed accompanies this message. It may vary depending on the environment in which the message was issued.
**Corrective Action:** For jobs, increase the REGION size. For TSO, log on again using a larger SIZE parameter, or exit one of the screens.

**CTM556I TOP OF DATA REACHED**

**Explanation:** This information message indicates that a FIND PREV command did not find another string from the current position to the top of the scrolled data.

**Corrective Action:** No action is required.

**CTM557I BOTTOM OF DATA REACHED**

**Explanation:** This information message indicates that a FIND command did not find another string from the current position to the bottom of the scrolled data.

**Corrective Action:** No action is required.

**CTM558E INTERNAL ERROR - INVALID PARAMETER TO CTMSROL**

**Explanation:** Internal error in IOA scroll routine.

**Corrective Action:** Have your INCONTROL administrator contact BMC Customer Support.

**CTM559I STRING NOT FOUND**

**Explanation:** The string specified in the FIND command is not found in the list at all in the first search from the current position, or the prefix specified in a LOCATE command is not found in the list.

**Corrective Action:** No action is required.

**CTM55AI INVALID SCROLL AMOUNT HAS BEEN ENTERED, CHANGED TO THE PREVIOUS VALUE**

**Explanation:** An invalid value has been entered in the SCROLL field.

Valid values are:
- **PAGE** - to scroll a full page
- **HALF** - to scroll a half page
- **CRSR** - to scroll by cursor position
- **MAX** - to scroll the maximum amount available

The scroll amount is changed to the last valid value.

**Corrective Action:** No action is required.

**CTM560I PLEASE SPECIFY A VALID FIND STRING**

**Explanation:** A FIND or LOCATE command was specified without a string. The string cannot contain blanks.

**Corrective Action:** No action is required.
CTM561E INTERNAL ERROR - INVALID RETURN CODE FROM CTMSROL

**Explanation:** Internal error in IOA scroll routine.

**Corrective Action:** Have your INCONTROL administrator contact BMC Customer Support.

CTM562E ADD OPTION INVALID FOR NEGATIVE CONDITIONS

**Explanation:** In screen 3.? (Scheduling Analysis), the A (Add) option is not valid for negative (inverted) conditions. Negative conditions may only be deleted.

**Corrective Action:** Correct the option and try again.

CTM563E DELETE OPTION ONLY VALID FOR NEGATIVE CONDITIONS

**Explanation:** In screen 3.? (Scheduling Analysis), the D (Delete) option is only valid for negative (inverted) conditions. Use the A (Add) option for regular conditions.

**Corrective Action:** Correct the option and try again.

CTM564E READ ERROR ON IOA CONDITIONS FILE

**Explanation:** Internal error reading the IOA Conditions file.

**Corrective Action:** Have your INCONTROL administrator contact BMC Customer Support.

CTM566E INVALID OPTION

**Explanation:** Invalid option specified in the field.

**Corrective Action:** Correct the option and try again.

CTM567E USER NOT AUTHORIZED

**Explanation:** The function requested is not authorized for the user. The message is issued by the IOA security mechanism.

**Corrective Action:** Check with your system security administrator.

CTM567I COND cond ODATE odate {ADDED | DELETED | FOUND} BY USER userId / jobName (jobId)

**Explanation:** This information message indicates that the ADD, DELETE, or CHECK option completed successfully and the cond condition with the odate original scheduling date was added to or deleted from, or found in the IOA Conditions file.

In this message, odate is the date on which the message is issued. If the ADD, DELETE, or CHECK option is run by the IOACND utility in batch mode, the user ID (userId), job name (jobName), and job ID (jobId) of the batch file are also displayed.

**Corrective Action:** No action is required.
**CTM568E MISSING PARAMETER OF ADD REQUEST**

**Explanation:** The ADD command was supplied without an additional parameter. At least one parameter is expected after the ADD command. The valid parameters are COND, LCOND, CONDITION, CONTROL, or RESOURCE.

**Corrective Action:** Supply the correct command parameter.

**CTM569E INVALID TYPE IN ADD REQUEST**

**Explanation:** Invalid ADD type supplied. At least one parameter is expected after the ADD command. The valid parameters are COND, LCOND, CONDITION, CONTROL, or RESOURCE.

**Corrective Action:** Specify the requested ADD type.

**CTM571E PFK UNDEFINED**

**Explanation:** You have pressed an undefined PFkey.

**Corrective Action:** Type the SHPF command and press Enter to see the PFkey assignments in the current screen.

**CTM572E AMBIGUOUS COMMAND**

**Explanation:** There is more than one command starting with the specified abbreviation. The abbreviated command is too short to identify a specific command. When the cursor is positioned in the COMMAND field, command abbreviations are represented on the Help line by the highlighted letter or letters.

**Corrective Action:** Specify the correct abbreviation.

**CTM573E INVALID DATA ON PFK MEMBER OR COMMAND MEMBER**

**Explanation:** An error occurred in an IOA command or PFK member. The IOA Online facility is controlled by command members and PFKs members. The members are located in the IOA PARM library. Possible causes are:

- The data set allocated to DD statements DACMDLIB, DAPFLIB is not the IOA PARM library.
- Somebody erroneously modified the IOA command (PFK) members of this screen.
- An internal IOA error. This is not likely.

The current screen is locked. No command can be entered.

**Corrective Action:** Press PA1 or RESET at least 20 times. If this does not abort the IOA online interface, the computer operator will have to cancel the TSO session. To resolve the problem do the following:

1. Correct the allocations of the IOA Allocation Parameter on the IOA PARM library.
2. Ask for help from your INCONTROL administrator, who probably knows what was modified in the command member and how to restore the old copy. For more information, see the *INCONTROL for z/OS Installation Guide*.
3. Try again. If the problem continues, contact BMC Customer Support.
CTM574E UNRECOGNIZED COMMAND

Explanation: The command that appears in the command window is not a valid command under this screen.

Corrective Action: Type the correct command syntax and press Enter.

CTM575E INVALID PARAMETERS - SCREEN DOES NOT EXIST

Explanation: Internal error in Control-M or Control-D screen or commands management routines. Possible causes are:
- The IOA command member of the screen was incorrectly modified. The reserved areas in the command line description were altered.
- Internal IOA error.

The current screen is locked. No command can be entered.

Corrective Action: Press PA1 or RESET at least 20 times. If this does not escape the IOA Online interface, the computer operator must cancel the TSO session. To resolve the problem, do the following:
1. Restore the original command member. For more information, see the INCONTROL for z/OS Installation Guide.
2. Try again. If the problem continues, contact BMC Customer Support.

CTM576E INVALID COMMAND

Explanation: The command in the command window is not valid for this screen.

Corrective Action: Type the correct command syntax and press Enter.

CTM577E UNABLE TO ACCESS PFK MEMBER

Explanation: The IOA Online facility failed to access the PFK member of this screen. The IOA Online facility is controlled by command members and PFKs members. The members are located in the IOA PARM library. Possible causes are:
- The data set allocated to the DAPF DD statement is not the IOA PARM library.
- Someone erroneously modified the IOA PFK member or members of this screen.
- The PFK member of this screen is not in the library described by the DAPFLIB DD statement. It may have been renamed during local adaptation.
- The REGION size is exhausted, during an open command.
- Internal IOA error.

You will be locked in the current screen without the ability to enter any command.

Corrective Action: Press PA1 or RESET at least 20 times. If this does not abort the IOA online interface, the computer operator will have to cancel the TSO session. To resolve the problem, do the following:
1. Correct the allocations of the IOA Allocation Parameter on the IOA PARM library.
2. Have your INCONTROL administrator look at the PFK member to undo what was modified, or restore the old copy. For more information, see the INCONTROL for z/OS Installation Guide.
3. Restore the member from the original IOA PARM library.

4. Increase the size of your TSO logon procedure. If you work with ISPF and IOA on the same terminal concurrently, we recommend a 2-3MB region size.

5. Try again. If the problem continues, contact BMC Customer Support.

**CTM578E UNABLE TO INITIALIZE COMMANDS ENVIRONMENT**

**Explanation:** The IOA Online facility failed to access the command member of this screen. The IOA Online facility is controlled by command members and PFKS members. The members are located in the IOA PARM library. Possible causes are:

- The data set allocated to the DACMD DD statement is not the IOA PARM library.
- Someone has erroneously modified the IOA command member of this screen.
- The command member of this screen does not exist in the library described by the DACMD DD statement. It may have been renamed during local adaptation.
- The REGION size has been exhausted (during an open command).
- Internal IOA error.

The current screen is locked. No command can be entered.

**Corrective Action:** Press PA1 or RESET at least 20 times. If this does not abort the IOA online interface, the computer operator will have to cancel the TSO session. To resolve the problem, do the following:

1. Correct the allocations of the IOA Allocation Parameter on the IOA PARM library.
2. Check that the product parameters in IOAPARM match the products which are installed.
3. Ask your INCONTROL administrator, who probably knows what was modified, to restore the old copy. For more information, see the INCONTROL for z/OS Installation Guide.
4. Restore the member from the original IOA PARM library.
5. Increase the size of your TSO logon procedure. If you are working with ISPF and IOA on the same terminal concurrently, we recommend 2-3MB region size.
6. Try again. If the problem continues, contact BMC Customer Support.

**CTM579E INVALID PARAMETERS TO COMMAND ANALYZER**

**Explanation:** Internal IOA Online facility error.

**Corrective Action:** Press PA1 or RESET at least 20 times. If this does not abort the IOA Online interface, your computer operator will have to cancel the TSO session. Try again. If the problem continues, contact BMC Customer Support.

**CTM57AE CONTROL-M IS ACTIVE IN COMPATIBILITY MODE, OPTION NOT ALLOWED**

**Explanation:** The Control-M compatibility mode in the IOAPARM is 2 (MODECTM=3). This option is new and requires that Control-M be set to no compatibility mode (MODECTM=3).

The option is disabled.
**Corrective Action:** No action is required.

**CTM580E INVALID RETURN CODE FROM COMMAND ANALYZER**

**Explanation:** Internal IOA Online facility error.

**Corrective Action:** Press PA1 or RESET at least 20 times. If this does not abort the IOA Online interface, the computer operator will have to cancel the TSO session.

Try again. If the problem continues, contact BMC Customer Support.

**CTM581S OPEN OF IOA SYNCHRONIZATION FILE FAILED. DDNAME "DASINC"**

**Explanation:** Open of IOA Conditions Synchronization file failed (DD statement DASINC). Possible causes are:

- The DASINC DD statement is missing.
- The file allocated to the DASINC DD statement is not the IOA Synchronization file.
- The file allocated to the DASINC DD statement Synchronization file, but it is of a different version or of a different Control-M monitor.

**Corrective Action:** Correct the JCL for the job or the allocations for the CLIST.

**CTM582S INVALID REQUEST PASSED TO CTMURS ROUTINE**

**Explanation:** The CTMURS IOA internal utility received an invalid request. For example, the CHANGE command was used for an undefined resource.

The requested function is not performed.

**Corrective Action:** Contact your system programmer. If necessary, prepare the Control-M monitor full output and contact BMC Customer Support.

**CTM583S INTERNAL ERROR - INVALID RESOURCE TYPE (CTMURS). NOTIFY THE IOA ADMINISTRATOR**

**Explanation:** Internal error. Invalid resource type passed to the CTMURS IOA internal utility.

The function requested is not performed.

**Corrective Action:** Prepare the Control-M monitor full output and have your system programmer contact BMC Customer Support.

**CTM584E COND cond ODATE odate DOES NOT EXIST**

**Explanation:** The condition marked for deletion (option D) was already deleted from the IOA Conditions file, while you were working on the screen by another IOA user or IOA monitor.

This message may also be issued when:
You are not using an enqueue management product or have not specified a QNAME to the enqueue product. An enqueue product synchronizes requests to the IOA Conditions file.

You enlarged the IOA Conditions file incorrectly. For example, you did not use the IOACCND utility or you failed to update the IOAPARM that indicates that the file was enlarged (CNDREC#).

**Corrective Action:** Correct the condition that caused the error.

CTM585E AT LEAST ONE OF "CONTROL", "RESOURCE" OR "CONDITION" MUST BE "Y"

**Explanation:** None of the CONTROL, RESOURCE, or CONDITION options has been marked as Y.

**Corrective Action:** Mark at least one of the retrieval options as Y.

CTM586S OPEN OF IOA CONDITIONS FILE FAILED. DDNAME "DACNDSF"

**Explanation:** Open of IOA Conditions file failed (the DACNDF DD statement). Possible causes are:

- The DACNDF DD statement is missing.
- The file allocated to the DACNDF DD statement is not an IOA Conditions file.
- The file allocated to the DACNDF DD statement is the IOA Conditions file, but it is of a different version or of a different IOA Installation.

**Corrective Action:** Correct the JCL for the job or the allocations for the CLIST.

CTM587I COND cond ODATE odate ALREADY EXISTS

**Explanation:** A condition added using the ADD command already exists in the file. The addition request is ignored.

**Corrective Action:** No action is required.

CTM589E CONDITIONS FILE IN USE. PLEASE TRY AGAIN LATER

**Explanation:** Another user is currently updating the file. The file is momentarily in use by another user or by one of the IOA monitors. The command requested is not performed.

**Corrective Action:** Try again.

CTM590E PLEASE SPECIFY CONDITION/RESOURCE NAME

**Explanation:** Missing condition or resource name in ADD command window.

**Corrective Action:** Specify the missing condition or resource name.

CTM591I PLEASE USE THE "ADD" COMMAND

**Explanation:** An A line command has been specified for a condition or resource name. Only an ADD primary command can be used to add a condition or resource.

**Corrective Action:** Use the ADD command in the commands window.
CTM592E ONLY ONE OPTION AT A TIME

**Explanation:** More than one option has been specified. Only one option is allowed for each **Enter**.

**Corrective Action:** Select only one option.

CTM593E INVALID OPTION. SPECIFY EITHER "Y" OR "N"

**Explanation:** Invalid retrieval criteria option. The valid options are either Y for Yes, or N for No.

**Corrective Action:** Select Y or N.

CTM594E ONLY TRAILING BLANKS ALLOWED

**Explanation:** The condition or resource name contains embedded blanks. A condition or resource name cannot contain embedded blanks.

**Corrective Action:** Correct the condition or resource name.

CTM595E UNEXPECTED RETURN CODE FROM CTMURS. SEE MESSAGES AND CODES

**Explanation:** Internal error. Invalid return code from the CTMURS IOA internal utility. The function requested is not performed.

**Corrective Action:** Prepare the Control-M monitor full output and have your system programmer contact BMC Customer Support.

CTM596E ADD OF COND cond ODATE odate FAILED. FILE IS FULL

**Explanation:** *Highlighted, unrollable message.*

The Conditions file is full.

The condition is not added to the file.

**Corrective Action:** Try to manually delete conditions from the specified day of the odate, but in other months. If you need all the conditions in the file, ask your system programmer to increase the capacity of the IOA Conditions file. Also, run the IOACLND utility periodically to erase unnecessary conditions from the Conditions file and prevent the problem.

CTM597E INVALID CONTROL-TYPE. USE "E" - EXCLUSIVE OR "S" - SHARED

**Explanation:** Invalid control type specified in the ADD Control-command window. A control type should be E for exclusive or S for shared.

**Corrective Action:** Correct the control type field.

CTM598I CONTROL-RESOURCE resourceName ALREADY EXISTS

**Explanation:** A control resource being added by means of the ADD command already exists in the file. The addition request is ignored.
Corrective Action: No action is required.

CTM599E ADD OF CONTROL-RESOURCE resourceName FAILED. FILE IS FULL

Explanation: Highlighted, unrollable message.

The Control-M Resources file is full.

The control resource is not added to the file.

Corrective Action: Consult your system programmer about the possibility of increasing the capacity of Control-M Resources file. It is not clear to us why a user would want to add a control resource. Call BMC Customer Support for advice.

CTM5A1E OPEN OF CONTROL-M STATISTICS FILE FAILED.
RC=VSAM_return_code ERROR=VSAM_reason_code

Explanation: Error when trying to open the Control-M Statistics File for updating the Jobs Counting data. If the Control-M Statistics File was already successfully opened previously, then the error is considered as recoverable and Control-M tries to later update the Jobs Counting data. However, if it was the first attempt to open the Control-M Statistics File, then the error is considered as unrecoverable and Jobs Counting Facility is terminated (message CTM5A3E issued).

Corrective Action: If the message is issued frequently or the message CTM5A3E is also issued (Jobs Counting Facility is terminated) then contact IOA Technical support.

CTM5A2E ERROR IN operation JOB ACCOUNTING RECORD.
RC=VSAM_return_code ERROR=VSAM_reason_code

Explanation: Error when trying to process the Jobs Counting Record (in the Control-M Statistics File) for accessing/updating the Jobs Counting data. The Jobs Counting Facility is terminated, the message CTM5A3E is issued.

Corrective Action: Contact IOA Technical support.

CTM5A3E JOB ACCOUNTING FACILITY TERMINATED

Explanation: The Jobs Counting Facility is terminated as the result of an error in accessing the Control-M Statistics File or the Jobs Counting Record in that file. It is preceded by the CTM5A1E or CTM5A2E message.

Corrective Action: Contact IOA Technical support.

CTM5A4W JOB ACCOUNTING RECORD NOT FOUND

Explanation: The message is issued by the Jobs Counting Report Utility when it detects that the Jobs Counting Record (which would contain the Jobs Counting Data) does not exist in the Control-M Statistics File. Usually it means that the Jobs Counting Facility was not activated or it was terminated and the corresponding error messages (CTM5A1E / CTM5A2E / CTM5A3E) will be issued by Control-M Monitor.

Corrective Action: Check the job log of Control-M Monitor and contact IOA Technical support.
**CTM5A5W JOB ACCOUNTING RECORD IS EMPTY**

**Explanation:** The message is issued by the Jobs Counting Report Utility when it detects that the Jobs Counting Record (which would contain the Jobs Counting Data) is empty. Usually it means that the Jobs Counting Facility was not activated or it was terminated and the corresponding error messages (CTM5A1E / CTM5A2E / CTM5A3E) will be issued by Control-M Monitor.

**Corrective Action:** Check the job log of Control-M Monitor and contact IOA Technical support.

**CTM5B1I RECOVERY PROCEDURE INVOKED TO PREVENT DUPLICATE JOB PROCESSING**

**Explanation:** During the start of Control-M monitor, it was detected that the previous monitor execution terminated abnormally and there are jobs whose processing might cause duplicate submissions or DO FORCEJOB execution. The Recovery Mode processing is invoked. It will scan the IOA LOG, extract information regarding the jobs whose statuses are ambiguous and set their statuses appropriately. In a CTMPLEX environment, this message can be issued not only during the start of Control-M monitor, but it can also be issued by the Global monitor if it detects a Coupling Facility failure or the abnormal termination of any Local monitor. The message can be also issued by a Local monitor when it switches to Global as a result of an abnormal termination of the previous Global.

For a general description about the Control-M Recovery Facility, see the Recovery Tools sub-section in Chapter 3, Control-M, in the INCONTROL for z/OS Administrator Guide. For more information about the installation parameters, RECENA and RECLEVEL, which control the Recovery Mode processing, see Chapter 2, Customizing Control-M, in the INCONTROL for z/OS Installation Guide: Customizing.

**Corrective Action:** Check the following messages issued by the Recovery Mode processing. Some messages indicate customer analysis and manual intervention might be required.

**CTM5B2I JOB member_name / Order_ID PUT IN SUBMITTED STATUS BY RECOVERY PROCEDURE**

**Explanation:** The Control-M Recovery processing analyzed the job in WAIT SUBMISSION status to prevent duplicate job submission. As a result of the analysis of the IOA LOG, the procedure detected that the job has already been submitted (before the Control-M abnormal termination) and extracted its JOBNAME and JOBID from the IOA LOG. The job is automatically put into SUBMITTED status so that Control-M can continue tracking and performing the regular Post Processing when the job finishes.

For a general description about the Control-M Recovery Facility, see the Recovery Tools sub-section in Chapter 3, Control-M, in the INCONTROL for z/OS Administrator Guide. For more information about the installation parameters, RECENA and RECLEVEL, which control the Recovery Mode processing, see Chapter 2, Customizing Control-M, in the INCONTROL for z/OS Installation Guide: Customizing.

**Corrective Action:** No user action required.

**CTM5B3W JOB member_name / Order_ID PUT IN HOLD BY RECOVERY PROCEDURE TO PREVENT DUPLICATE action**

**Explanation:** Control-M Recovery processing placed the job into HOLD status because it detected the possibility of duplicate submission or DO FORCEJOB execution and the analysis of the IOA LOG did not determine the job status at the moment of the Control-M abnormal termination. 'action' can either be 'SUBMISSION' or 'FORCEJOB'.
For a general description about the Control-M Recovery Facility, see the Recovery Tools sub-section in Chapter 3, Control-M, in the INCONTROL for z/OS Administrator Guide. For more information about the installation parameters, RECENA and RECLEVEL, which control the Recovery Mode processing, see Chapter 2, Customizing Control-M, in the INCONTROL for z/OS Installation Guide: Customizing.

**Corrective Action:** Check the actual status of the indicated job. If the job was not submitted or no DO FORCEJOB executed before the Control-M abnormal termination, then FREE the job so that Control-M can submit the job or execute its DO FORCEJOB.

If the job was already submitted or at least some of its DO FORCEJOB were already executed before the Control-M abnormal termination, more detailed analysis and manual actions are required. Check the results of the job execution (for the job put into HOLD to prevent duplicate submission) or check the DO FORCEJOB executed (for the job put into HOLD to prevent duplicate DO FORCEJOB). The customer might then have to manually make up the Post Processing actions according to the jobs execution results (for example, adding OUT CONDITIONS). In some situations the Force OK request might be applicable here.

CTM5B4W  number  JOBS PUT IN HOLD STATUS BY RECOVERY PROCEDURE TO PREVENT DUPLICATE ACTIONS

**Explanation:** Control-M Recovery processing placed number jobs into HOLD status because it detected the possibility of their duplicate submission or DO FORCEJOB execution and the analysis of the IOA LOG did not determine the job statuses at the moment of the Control-M abnormal termination. The CTM5B3W messages, which were issued before CTM5B4W, indicate the jobs put into HOLD statuses.

For a general description about the Control-M Recovery Facility, see the Recovery Tools sub-section in Chapter 3, Control-M, in the INCONTROL for z/OS Administrator Guide. For more information about the installation parameters, RECENA and RECLEVEL, which control the Recovery Mode processing, see Chapter 2, Customizing Control-M, in the INCONTROL for z/OS Installation Guide: Customizing.

**Corrective Action:** Analyze the previous CTM5B3W messages and handle the jobs listed by these messages as explained in the User Action part for CTM5B3W.

Messages CTM600 through CTM6xx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTM600I CONTROL-RESOURCE resourceName (CONTROL-type) action

**Explanation:** This information message indicates that as a result of an ADD or DELETE option, the resourceName control resource of Control-type was either deleted from the Control-M Resources file, or added to the Control-M Resources file.

**Corrective Action:** No action is required.

CTM601E CONTROL-RESOURCE resourceName (CONTROL-type) DOES NOT EXIST

**Explanation:** The control resource marked for deletion (D option) was already deleted from the Control-M Resources file. While you were working on the screen, another user or one of the IOA monitors deleted the control resource from the Control-M Resources file.

**Corrective Action:** No action is required.
CTM602E QUANTITY MUST BE A FOUR DIGIT NUMBER
Explanation: An invalid quantity specified in the window. Quantity must be a 4-digit number.
Corrective Action: Correct the quantity field.

CTM603E QUANTITATIVE RESOURCE resourceName IN USE - CANNOT DELETE
Explanation: The resourceName quantitative resource is in use by an active job under Control-M. Therefore, the resource cannot be deleted.
The resource is not deleted.
Corrective Action: Wait until the job finishes executing, and try again.

CTM604E FILE IS FULL. CANNOT ADD QUANTITATIVE RESOURCE resourceName
Explanation: Highlighted, unrollable message.
The Control-M Resources file is full.
The resourceName quantitative resource is not added to the file.
Corrective Action: Consult your system programmer about the possibility of increasing the capacity of the Control-M Resources file.

CTM605I QUANTITATIVE RESOURCE resourceName ALREADY EXISTS
Explanation: A quantitative resource (resourceName) being added using the ADD command already exists in the file.
The addition request is ignored.
Corrective Action: No action is required.

CTM606E QUANTITATIVE RESOURCE resourceName DOES NOT EXIST
Explanation: The resourceName quantitative resource that was marked for deletion (the D option) was already deleted from the Control-M Resources file. While you were working on the screen, another Control-M user deleted the quantitative resource from the Control-M Resources file.
Corrective Action: Check who did it and why (by entering the IOA Log screen).

CTM607I QUANTITATIVE RESOURCE resourceName action
Explanation: As a result of an ADD or DELETE option, the resourceName quantitative resource has been deleted from the Control-M Resources file, or added to the Control-M Resources file.
Corrective Action: No action is required.

CTM608E ONLY QUANTITATIVE RESOURCES MAY BE CHANGED
Explanation: A change request was issued for a condition or a control resource. The change option can be specified only in order to change the quantity of a quantitative resource.
The change request is ignored.

**Corrective Action:** No action is required.

**CTM609E SIGN OF QUANTITY MUST BE EITHER "+", "- " OR BLANK**

**Explanation:** Invalid sign of quantity change in the CHANGE window. The quantity sign must be "-" for subtracting the amount from the maximum available quantity, "+" for adding the amount to the maximum available quantity, or blank for setting a new quantity.

**Corrective Action:** Supply the correct sign.

**CTM60AE CONTROL RESOURCE res (E) HELD BY A JOB, OR TYPE MISMATCH**

**Explanation:** This message is issued when the IOACND utility fails to delete control resource res from the Control-M Resources file. The specified control exists in the Control-M Resources file but the IOACND utility cannot delete it for one of the following reasons:

- The control was created by a running job. The IOACND utility can only delete controls added by IOACND or screen 4 (RBA 0000 controls).
- The type specified in the Delete statement (E/S) does not match the type of the control in the file.

**Corrective Action:** No action is required.

**CTM610E VALUE OF CHANGE IS NEGATIVE OR MORE THAN 9999**

**Explanation:** The quantity resulting from the CHANGE operation is either negative, or more than 9999. The change request is ignored.

**Corrective Action:** Try again with a correct value.

**CTM611E INTERNAL ERROR. INVALID RETURN CODE FROM CTMURS**

**Explanation:** Internal error. Invalid return code from the CTMURS IOA internal utility.

**Corrective Action:** Prepare the Control-M monitor full output and have your system programmer contact BMC Customer Support.

**CTM612I QUANTITY OF RESOURCE resourceName CHANGED quant === > snnnn**

**Explanation:** As a result of a change command, the quantity of the resourceName resource changed from quant by snnnn (s is the sign).

**Corrective Action:** No action is required.

**CTM613E DEL OF RESOURCE res FAILED**

**Explanation:** IOACND was asked to delete the res resource, but the resource was not found in the RES file.

The resource is not deleted.
Corrective Action: Check if the correct resource was specified, and if it was not, specify the correct resource.

CTM613I DELETE OF ARCHIVED SYSOUTS STARTED

Explanation: This information message indicates that the New Day procedure started deleting archived SYSDATA sysouts.

Corrective Action: No action is required.

CTM613S modName INTERNAL ERROR, R15=rsn, RC=rc

Explanation: An internal error was detected in the modName module. The Application Server becomes unstable.

Corrective Action: Stop and restart IOAGATE and the Application Server CTOGATE. If the error persists, contact BMC Customer Support.

CTM614I DELETE OF ARCHIVED SYSOUTS ENDED

Explanation: This information message indicates that the New Day procedure finished deleting archived SYSDATA sysouts.

Corrective Action: No action is required.

CTM615W DELETION OF num ARCHIVED SYSOUT DATASET(S) FAILED

Explanation: Some Archived Sysout Data Sets were not deleted by the Control-M New Day procedure or during compression of the Control-M Active Jobs file. This message follows other messages that explain the nature of the error for each archived sysout data set.

The Control-M New Day procedure or CTMCOP utility continues processing.

Corrective Action: See the messages that precede this message for the reasons for deletion failure.

CTM617E INTERNAL ERROR - INVALID NAME OF THE ARCHIVED SYSOUT DATASET. DSNAME=dsn

Explanation: The name of Archived Sysout Data Set does not follow the Control-M/Restart naming conventions for this type of data set. This message is issued either by the Control-M New Day procedure, or by the CTMCOP utility, during compress of the Control-M Active Jobs file.

Corrective Action: Contact BMC Customer Support for assistance.

CTM618E TOO MANY SYSOUT DATASETS SCHEDULED FOR DELETE - SOME WILL BE SKIPPED THIS TIME

Explanation: The number of Archived Sysout Data Sets scheduled for deletion exceeds the permitted number. This message is issued either by the Control-M New Day procedure or by the CTMCOP utility during compress of the Control-M Active Jobs file. The permitted value is one fifth of the Active Jobs file size.
Deletion of Archived Sysout Data Sets will be resumed during the next run of the Control-M New Day procedure or the CTMCOP utility.

**Corrective Action:** No action is required.

**CTM618S** ERROR IN SYSPLEX QUERY, MOD=modName, RC=rc/rsn

**Explanation:** An Sysplex query error was detected in the modName module.

The Application Server becomes unstable.

**Corrective Action:** Stop and restart IOAGATE and the Application Server CTOGATE. If the error persists, contact BMC Customer Support.

**CTM619I** IOANOTE YOU HAVE NOT ENTERED A MESSAGE PARAMETER !

**Explanation:** When executing the IOANOTE utility, no message was specified in the PARM of the JCL EXEC statement or no PARM was specified on the JCL EXEC statement.

The utility terminates with a return code of 4.

**Corrective Action:** Add a message in the PARM of the EXEC JCL statement.

**CTM621E** THE UTILITY CTMRELRS MAY BE ACTIVATED ONLY FROM BATCH JOBS

**Explanation:** The CTMRELRS utility (the CTMRLR program) has been activated from a started task or from a TSO session. The CTMRELRS utility may be activated only from batch jobs which are submitted by the Control-M monitor.

The CTMRELRS utility stops executing with a condition code of 04. The resource is not released.

**Corrective Action:** For usage restriction of the utility, see the INCONTROL for z/OS Utilities Guide.

**CTM622E** THIS JOB WAS NOT SUBMITTED FROM CONTROL-M. THE RESOURCE IS NOT RELEASED

**Explanation:** The CTMRELRS utility (the CTMRLR program) was activated from a job that was not submitted by the Control-M monitor. Only a job that is submitted by the Control-M monitor can release its own quantitative resources.

The CTMRELRS utility stops executing with a condition code of 04. The resource is not released.

**Corrective Action:** For more information on usage restriction of the utility, see the INCONTROL for z/OS Utilities Guide.

**CTM623I** QUANTITATIVE RESOURCE resourceName - quant RELEASED

**Explanation:** This information message indicates that the quant quantity of the resourceName quantitative resource has been released for general use, or has been changed by the CTMRLRES utility. The specified action is either RELEASED or CHANGED.

**Corrective Action:** No action is required.
CTM625S INVALID FUNCTION. USE "RELEASE"

**Explanation:** Invalid function supplied as a parameter to the CTMRELRS utility.
The CTMRELRS utility stops executing with a condition code of 04. The resource is not released or changed.

**Corrective Action:** Specify either the RELEASE or CHANGE function for the utility.

CTM627E YOU CANNOT RELEASE MORE `resourceName` THAN THOSE ALLOCATED TO THIS JOB

**Explanation:** The quantity requested to be released by the job using the CTMRELRS utility is greater than the quantity of the resource currently allocated to the job.
The utility stops executing with a condition code of 04. The resource is not released.

**Corrective Action:** Correct the parameters of the utility.

CTM628E RESOURCE `resourceName` IS NOT ALLOCATED TO THIS JOB

**Explanation:** The quantitative resource to be released by the CTMRELRS utility is not allocated at all to the job that activates the utility.
A job can only release resources which are allocated to it.
The utility stops executing with a condition code of 04. The resource is not released.

**Corrective Action:** For more information on usage restriction of the utility, see the *INCONTROL for z/OS Utilities Guide*.

CTM629S OPEN OF PARAMETER LIST FAILED. DDNAME "DARELIN"

**Explanation:** Open of control statements file failed (the DARELIN DD statement in the CTMRELRS utility).
Possible causes are:
- The DARELIN DD statement is missing.
- The data set described by the DARELIN DD statement does not exist, or cannot be opened for sequential read, or the record length is not 80.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL for the job and run it again.

CTM630E YOU CANNOT INCREASE THE NUMBER OF `quantResourceName` ALLOCATED TO THIS JOB

**Explanation:** The quantity requested to be changed using the CTMRELRS utility is greater than the quantity of the resource currently allocated to the job. The CTMRELRS utility can only be used to decrease the quantity of the resource allocated to a job.
The utility stops executing with a condition code of 4. The resource amount allocated to the job is not changed.

**Corrective Action:** Correct the parameters of the job.
CTM630S OPEN OF PARAMETER LIST FAILED. DDNAME "DACNDIN"

**Explanation:** Open of control statements file failed (the DACNDIN DD statement in the IOACND utility or program).

It may be due to one of the following:
- The DACNDIN DD statement is missing.
- The data set described by the DACNDIN DD statement does not exist, or cannot be opened for sequential read, or the record length is not 80.

Program execution stops with a condition code of 08.

**Corrective Action:** Correct the JCL for the job or the CLIST, and run it again.

CTM631E RESOURCE quantResource WAS NOT FOUND IN THE RESOURCE FILE

**Explanation:** The quantResource Quantitative resource does not exist. The missing resource was named as input to the CTMRLR program.

**Corrective Action:** Ensure that the name of the resource specified as input to the program matches the resource name in the job scheduling definition.

CTM631S INVALID FORMAT OF INPUT PARAMETERS

**Explanation:** Severe syntax error in the parameters to the IOACND or CTMRELRS utility.

The utility stops executing with a condition code of 12. The condition is not added, deleted, or released.

**Corrective Action:** Correct the parameters and reactivate utility.

CTM632S INVALID DATE FORMAT

**Explanation:** Invalid date format in ADD COND or DELETE COND statement (the IOACND utility or program). The date format should be mmdd or ddmm, depending on the site standard.

The utility stops executing with a condition code of 12. The condition is not added or deleted.

**Corrective Action:** Correct the parameters and reactivate utility.

CTM633S INTERNAL ERROR IN IOACNP. NOTIFY THE IOA ADMINISTRATOR

**Explanation:** Internal error in the IOACND and CTMRELRS utilities.

The utility stops executing with a condition code of 12. The condition is not added, deleted, or released.

**Corrective Action:** Call your IOA administrator for assistance.

CTM634S OPEN OF PRINT FILE FAILED. DDNAME "DAPRINT"

**Explanation:** Open of messages file failed in the IOACND and CTMRELRS utilities. Possible causes are:
- The DAPRINT DD statement is missing.
- The data set allocated to the DAPRINT DD statement cannot be opened for sequential write.

The utility stops executing with a condition code of 12.

**Corrective Action:** Correct the JCL for the job or the CLIST and run it again.

**CTM635E INVALID FUNCTION. USE ADD/DELETE/CHECK**

*Explanation:* An invalid function has been passed to the IOACND utility.

Valid functions are ADD, DELETE or CHECK.

The utility stops executing with a condition code of 12. The condition is not added, deleted, or released.

**Corrective Action:** Correct the parameters syntax and reactivate.

**CTM636E INVALID FUNCTION OR FUNCTION NOT SUPPORTED YET**

*Explanation:* An attempt was made to add or delete a Quantitative Resource or Control Resource using the IOACND utility. These are privileged operations for Control-M or Control-D support personnel.

The utility stops executing with a condition code of 12.

**Corrective Action:** Correct the parameters syntax and reactivate.

**CTM637E LOAD OF PROGRAM "CTMRS0" FAILED**

*Explanation:* An attempt to load the CTMRS0 program failed.

**Corrective Action:** Check that the name of the load library is correct. If that does not solve the problem, contact your INCONTROL Administrator.

**CTM638E FUNCTION "RDIF" OF PROGRAM "CTMRS0" FAILED**

*Explanation:* The IOACND utility failed in one of the initialization steps of the Control-M Resources file. Either the file accessed is not a valid Resources file, or the Resources file is being formatted.

The utility stops with a return code of 16.

**Corrective Action:** Ensure that the DARESF DD statement points to a valid resource file, and that the file is not corrupted.

**CTM639E TABLE DOES NOT EXIST - TABLE NOT SAVED**

*Explanation:* You are trying to save a table that does not exist.

The table is not saved.

**Corrective Action:** To save a new production parameters table, erase the Y in the SAVE field, enter Y in the CREATE field, and press Enter.

**CTM639S ACTIVE JOBS FILE (CKP) SIZE - PARM TABLE MISMATCH**

*Explanation:* The CKPSIZE parameter in CTMPARM is not the same as when the Active Jobs file (AJF) referenced by the DACKPT DD statement was formatted. A change was made in the CKPSIZE parameter in CTMPARM after the Active Jobs file was formatted.
The job step or request terminates without performing the requested function.

**Corrective Action:** Adjust the CKPSIZE parameter according to the real size of the AJF, or reformat the AJF.

**CTM639W LOG WRAP AROUND HAS BEEN DETECTED. SOME MESSAGES MAY BE LOST**

**Explanation:** While looking at a certain part of the IOA Log file, an IOA component updated that part of the Log. When the IOA Log file is full, a wraparound is performed and new records are written starting at the top of the Log. If you are at the top of the Log, a wraparound might cause some messages to be lost.

The Online facility issues a warning to inform of the possible loss of messages.

**Corrective Action:** No action is required.

**CTM63BI WISH WI2232 IS ENABLED - UPPERCASING CONDITION NAME**

**Explanation:** This information message is generated by the IOACND utility when optional wish WI2232 is applied.

The IOACND utility translates a condition name from the PARM= parameter in the EXEC card of this utility to upper case.

**Corrective Action:** No action is required.

**CTM640E INVALID VALUE. USE "Y" OR "N"**

**Explanation:** Invalid value specified in the field. The cursor points to the field that contains the invalid value.

**Corrective Action:** Enter either Y for yes, or N for no.

**CTM641E AT LEAST ONE MESSAGE TYPE MUST BE "Y"**

**Explanation:** No MESSAGE TYPE field has been marked for selection (Y). At least one of the MESSAGE TYPES must be marked as Y.

**Corrective Action:** Enter Y for at least one MESSAGE TYPE.

**CTM641S INVALID JOB RECORD DETECTED: jobName**

**Explanation:** A job record with an invalid format was detected during the New Day procedure. If the User Daily is run on a different computer without proper ENQ distribution software, such as GRS or MIM, a faulty record may be created in the Active Jobs file.

The faulty record is erased from the Active Jobs file.

**Corrective Action:** To avoid this problem, run all User Daily procedures on the CPU in which the Control-M monitor is running.

**CTM642E ONLY TRAILING BLANKS ALLOWED IN FIELD**

**Explanation:** The field contains leading blanks or two strings separated by blanks. Leading or embedded blanks are not allowed in this field.
The cursor points to the first blank.

**Corrective Action:** Correct the field contents.

**CTM643E AT LEAST ONE URGENCY TYPE MUST BE "Y"**

**Explanation:** No URGENCY field was marked for selection (Y). At least one of the URGENCY fields must be marked Y.

**Corrective Action:** Enter Y for at least one URGENCY field.

**CTM644E AT LEAST ONE TASK TYPE MUST BE "Y"**

**Explanation:** No TASK TYPE field has been marked for selection (Y). At least one of the TASK TYPEs must be marked Y.

**Corrective Action:** Enter Y for at least one TASK TYPE.

**CTM645I MONITOR USER PGM APPLID TERMINAL START LASTUSED ST**

**Explanation:** After an operator DISPLAY command to one of the Online monitors, this header message for message CTM646I is issued.

**Corrective Action:** No action is required.

**CTM646I monName userId pgm applId terminal start lastUsed st**

**Explanation:** After an operator DISPLAY command to one of the Online monitors, this message is displayed for each active user.

The variables in this message are:

- `monName` - the name of the monitor started task
- `userId` - the user name (ID)
- `pgm` - the program name
- `applId` - the application ID
- `terminal` - VTAM terminal ID
- `start` - user sign-on time
- `lastUsed` - time stamp of last user entry
- `st` - status Valid values are:
  - W - waiting for user data
  - A - active user waiting for response

**Corrective Action:** No action is required.
CTM647E **monName** - LOAD OF *pgm* FAILED. SIGNON OF USER *usr* FAILED

**Explanation:** Load for the requested *pgm* module during user sign-on to the Online facility failed. The user main program as specified by Online monitor sign-on exit or by default (CTMXMAN, CTMXMAND, CTDXMAN, or CTDXMANU) cannot be found in the Online monitor STEPLIB libraries.

Sign-on to the specified IOA Online monitor is terminated.

**Corrective Action:** Contact your INCONTROL administrator to find out why the program is missing. If the problem is not resolved, contact BMC Customer Support for assistance.

CTM647W RBC NAME IS 20 CHARS LONG AND CANNOT BE USED AS AN EXCLUDE RBC

**Explanation:** The maximum number of characters allowed for an RBC name is 20 characters, including the exclamation mark (!) prefix used to specify an Exclude RBC. Since the name of this RBC already consists of 20 characters, an exclamation mark (!) cannot be added as a prefix to this RBC name, in the event it is required for an Exclude RBC.

**Corrective Action:** Rename the RBC with 19 or less characters.

CTM648S **monName** - ONLINE MONITOR ENDED WITH ERROR

**Explanation:** *Highlighted, unrollable message.*

A severe error has occurred. The IOA Online monitor is shutting down.

Detailed information on this error is available in the messages which were previously displayed on the operator console.

The *monName* IOA Online monitor is shutting down.

**Corrective Action:** Check the system log for additional messages.

CTM649E **monName** - INVALID MODIFY PARAMETERS. VALID PARAMETERS ARE:

**Explanation:** An invalid parameter was passed to the *monName* IOA Online monitor by an operator modify command (F). A list of valid modify parameters will appear on the operator console following this message.

The modify command is rejected.

**Corrective Action:** Enter a correct modify parameter.

CTM650S OPEN OF ACTIVE JOBS FILE FAILED. DDNAME "DACKPT" (SENSE=*

**Explanation:** Open of Control-M Active Jobs file failed (the DACKPT DD statement). Possible causes are:
The DACKPT DD statement is missing.
The data set described by the DACKPT DD statement is not the Control-M Active Jobs file.
The data set described by DACKPT DD statement is the Control-M Active Jobs file of another IOA installation, or of a different version of Control-M.

**Corrective Action:** Check the contents of the system log for additional messages which may clarify the picture, or logon again. If the sense code appears in the message, supply it to the INCONTROL administrator when requesting assistance.

**CTM651S READ ERROR ON CONTROL-M ACTIVE JOBS FILE.**
(SENSE=sense_code, RBA=rba)

**Explanation:** I/O error while reading Control-M Active Jobs file. Possible causes are:
- The file allocated to the DACKPT DD statement is not the Control-M Active Jobs file.
- The file allocated to the DACKPT DD statement is the Control-M Active Jobs file, but it is of a different version.
- Real I/O error.
- The Active Jobs file indexes are corrupted.

**Corrective Action:** Check the contents of the system log for additional messages which may clarify the picture, or logon again. If this does not solve the problem, notify the INCONTROL administrator informing him of the sense code and RBA.

**CTM652S INTERNAL ERROR - INVALID REQUEST TO CTMUCK req**

**Explanation:** Internal error. Invalid request to the CTMUCK Control-M internal program.

The function requested is not performed.

**Corrective Action:** Have your system programmer prepare the Control-M monitor full output and contact BMC Customer Support for assistance.

**CTM653E CANNOT action TASK taskName ODATE odate - {NOT HELD | DELETED}**

**Explanation:** Result of DELETE, CHANGE or UNDELETE commands.

For DELETE or CHANGE commands, the taskName task of the original scheduling date (odate) is not in the HELD state and therefore cannot be deleted or changed.

For an UNDELETE command, the task of the original scheduling date was not deleted, therefore cannot be undeleted.

The DELETE, CHANGE or UNDELETE request is ignored.

**Corrective Action:** In the case of DELETE or CHANGE commands, hold the task using the H option. Wait until the REQUESTED HELD status is changed to HELD, and then you can perform the change or delete.

**CTM654E CANNOT action TASK taskName ODATE odate - ALREADY status**

**Explanation:** The taskName task with the odate original date already has the requested status.
The user request is ignored.

**Corrective Action:** No action is required.

**CTM655E** ACTIVE JOBS FILE IS IN USE, TRY AGAIN LATER

**Explanation:** Another user is currently updating the file. The file is currently in use by another user or by the Control-M monitor.

The requested action is not performed.

**Corrective Action:** Try again later.

**CTM656E** action OF TASK *taskName* ODATE *odate* IGNORED - STATUS HAS CHANGED

**Explanation:** Result of HOLD (H), RERUN (R), FREE (F), AESIM (%) (AutoEdit simulation), or CHANGE request for the *taskName* task of the *odate* original scheduling date whose status has already been changed. While you were looking at the screen, another user or Control-M monitor changed the status of the task, or the contents of the production parameters.

The requested action is ignored.

**Corrective Action:** Check the task status and act accordingly.

**CTM657E** CANNOT action TASK *taskName* ODATE *odate* - MAX CHANGES OVER, TRY AGAIN LATER

**Explanation:** Cannot do more actions on the *taskName* task of the *odate* original scheduling date. The maximum number of requests for action has been exceeded. Control-M monitor must accept the requests before another action can be performed.

The user request is ignored.

**Corrective Action:** If the Control-M monitor is up, try again. If it is down, it should be brought up again.

**CTM658S** CANNOT action TASK *taskName* ODATE *odate* - UNEXPECTED CODE FROM CTMUCK

**Explanation:** The CTMUCK Control-M internal utility has issued an unexpected return code.

The user request is ignored.

**Corrective Action:** Have your system programmer prepare the Control-M monitor full output and contact BMC Customer Support.

**CTM659I** action OF TASK *taskName* TABLE *grpname* ODATE *odate* PERFORMED

**Explanation:** This information message indicates the specified action was performed by the *taskName* task to the *grpname* group on the *odate* date.

When this message is produced as the result of an action in screen 2, the date is the current Control-M working date in YYMMDD format.
Corrective Action: No action is required.

**CTM65AI**  
*taskType memName OID=orderId ODATE odate action*

PERFORMED BY *userId*

**Explanation:** This information message indicates that the action action requested by the userId user was performed by the taskName task on the odate date.

This message is issued to the log only.

Corrective Action: No action is required.

**CTM65BE**  
STEP CANNOT BE SELECTED. STEP NAME NOT UNIQUE - MATCHES STEP # *num*

**Explanation:** The selected step has the same name as the step with the number num. A From, To, or Only RESTART was specified in the Control-M/Restart Step List window for a step with a name that is not unique in the job.

The cursor is placed on the line in which the non-unique step was selected.

Corrective Action: Clear the entry and choose another step.

**CTM65CE**  
UNSUPPORTED COMMAND/PFK

**Explanation:** The command that was requested, or the function key that was pressed, is not supported in this screen or this window.

The request is ignored.

Corrective Action: No action is required.

**CTM65DI**  
NO ARCHIVED SYSOUT OR NO MEANINGFUL DATA TO BUILD STEP LIST

**Explanation:** The Step List display requested under Screen 3.R (the Restart window) cannot be built, either because the job has no archived sysout, or because the existing archived sysout contains no steps from which a step list can be built. To build a step list, a meaningful archived sysout must exist.

The step list is not displayed.

Corrective Action: Select FROM and TO steps manually.

**CTM65EE**  
HISTORY FILE ("DAHIST") IS NOT INITIALIZED

**Explanation:** The History command was entered in the Control-M Active Environment (Job Status) screen. However, the DAHIST file is not allocated to the user or could not be accessed.

This message is also generated if Control-M/Restart is not installed.

The command is ignored.

Corrective Action: Make sure the DAHIST DD statement correctly references the History Jobs file.
CTM65FE Option "G" CANNOT BE ISSUED FOR NON-GRP ENTRY/JOB

Explanation: Option G (Group) was requested in the Control-M Active Environment (Job Status) screen for a task that is not part of a Group scheduling table. Option G can only be specified for a Group entity (GRP) or job (JOB) that is part of a Group scheduling table.

The request is ignored.

Corrective Action: Request an option that is valid for the particular line entry in the screen.

CTM660E INVALID VALUE, USE "Y" OR "N"

Explanation: Invalid value specified in the field. The cursor points to the field that contains the invalid value.

Corrective Action: Select Y for yes, or N for no.

CTM661E AT LEAST ONE TASK-TYPE MUST BE "Y"

Explanation: At least one task type must be Y.

Corrective Action: Mark at least one of the task types as Y.

CTM662E AT LEAST ONE MESSAGE TYPE MUST BE "Y"

Explanation: At least one message type must be Y. All of the Y/N options are marked N.

Corrective Action: Mark at least one of the message types as Y.

CTM663E AT LEAST ONE OF THE FIRST TWO TYPES OF JOB STATUS MUST BE "Y"

Explanation: At least one of the first two types of job status must be Y (both are marked NO).

Corrective Action: Mark at least one of the first two types of job status Y.

CTM664S INTERNAL ERROR BEFORE CALLING CTMUCK

Explanation: Internal error.

The function requested is not performed.

Corrective Action: Have your system programmer prepare the Control-M monitor full output and contact BMC Customer Support for assistance.

CTM665E CANNOT RERUN TASK taskName ODATE odate - TASK NOT ENDED

Explanation: The taskName task of the odate original scheduling date did not finish executing, therefore it cannot be rerun.

The rerun request is ignored.

Corrective Action: No action is required.
CTM666S INTERNAL ERROR - UNEXPECTED RETURN CODE FROM CTMTWHY

**Explanation:** Internal error. Invalid return code from the CTMTWHY Control-M internal program (Why screen).

**Corrective Action:** Have your system programmer contact BMC Customer Support for assistance.

CTM667E "WHY" OPTION CAN BE USED ONLY ON TASK IN "WAIT SCHEDULE" STATE

**Explanation:** The WHY ("?"") option is used to determine the reason that a task is waiting to be scheduled; it cannot be used unless the task is in the WAIT SCHEDULE state.

The user request is ignored.

**Corrective Action:** No action is required.

CTM668S INTERNAL ERROR - UNEXPECTED RETURN CODE FROM *pgm*

**Explanation:** Internal error. Invalid return code from the *pgm* Control-M internal program.

The CTMTSVY, CTMTWHY, or IOATOLV programs can return the following return codes:

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>20</td>
<td>Insufficient REGION allocated to online environment</td>
</tr>
<tr>
<td>1008</td>
<td>First CLS entry is an inserted/deleted entry</td>
</tr>
<tr>
<td>1012</td>
<td>No CTDBOX vectors were processed</td>
</tr>
<tr>
<td>1016</td>
<td>Insufficient memory for CTDBOX vector</td>
</tr>
<tr>
<td>1020</td>
<td>Maximum number GETMAINS for CTDBOX vector exceeded</td>
</tr>
<tr>
<td>1024</td>
<td>VSAM record for first CLS entry not found</td>
</tr>
<tr>
<td>1028</td>
<td>VSAM record for first CLS entry is not a primary record</td>
</tr>
<tr>
<td>1032</td>
<td>All compressed data sets were deleted. May also indicate that the SYSOUT file was deleted manually, by a system utility or another program.</td>
</tr>
<tr>
<td>1036</td>
<td>Internal error in page fix environment</td>
</tr>
<tr>
<td>1040</td>
<td>Error in GETMAIN of work areas</td>
</tr>
<tr>
<td>rc</td>
<td>Explanation</td>
</tr>
<tr>
<td>-----</td>
<td>------------------------------</td>
</tr>
<tr>
<td>1044</td>
<td>Error while reading a ruler</td>
</tr>
<tr>
<td>2000</td>
<td>Error in CTDBOX</td>
</tr>
<tr>
<td>2004</td>
<td>End of data sets</td>
</tr>
<tr>
<td>2016</td>
<td>Unrecognized request</td>
</tr>
<tr>
<td>2020</td>
<td>Allocation error</td>
</tr>
<tr>
<td>2024</td>
<td>Open error</td>
</tr>
<tr>
<td>2028</td>
<td>Subsystem not up</td>
</tr>
</tbody>
</table>

**Corrective Action:** When the program identified in the message is CTMTSVY or IOATOLV, try to solve the problem according to the return code. If you are unable to solve the problem, and for all other return codes, record the program name and return code, then contact BMC Customer Support.

**CTM669E ERROR ON ACTIVE JOBS FILE. CANNOT BUILD ZOOM SCREEN**

**Explanation:** Result of the ZOOM (Z) command. Error in the contents of the Active Jobs file. Possible causes are:

- The Active Jobs file has been corrupted, perhaps by incorrect usage of one of the Control-M user exits.
- An internal Control-M error occurred.

**Corrective Action:** Call your system programmer for assistance. A dump of the file will be needed to solve the problem.

**CTM66AE CANNOT ISSUE cmd IN mode DISPLAY**

**Explanation:** The requested command or option (cmd) is not supported in the current display mode. The command or option is ignored.

**Corrective Action:** Request a command or option that is valid in the current display mode.

**CTM66BS ABEND "abCode" OCCURRED IN "imod"**

**Explanation:** Due to an internal error, an abCode abend occurred in the imod module. Execution stops following the abend.

**Corrective Action:** Ask your system programmer to prepare the Control-M monitor full output and contact BMC Customer Support. If requested, issue the command DUMP ON, so that a dump is generated the next time this abend occurs.
CTM66CE ENTER cmd PARAMETER

**Explanation:** The *cmd* command was entered without mandatory parameters.
The command is ignored.

**Corrective Action:** Supply the required parameters and re-enter the command.

CTM66DI STRING NOT FOUND

**Explanation:** This information message indicates that the string specified in a FIND command or the prefix specified in a LOCATE command was not found.

**Corrective Action:** No action is required.

CTM66FE OPTION "F" CANNOT BE ISSUED FOR TASK IN "<GROUP HELD>" STATE

**Explanation:** When the status of a group is Held, the status of all the jobs belonging to that group changes to GRP Held. Individual jobs with the status GRP Held cannot be freed. Only the group itself can be freed.
The status of the job remains unchanged.

**Corrective Action:** If required, you can use the F (Free) option to free the group. This will free all the jobs belonging to the group.

CTM670S INTERNAL ERROR. CANNOT BUILD ZOOM SCREEN

**Explanation:** Internal Control-M error while building the Zoom screen.

**Corrective Action:** Have your system programmer contact BMC Customer Support for assistance.

CTM671E CANNOT action TASK taskName ODATE odate - IN REQUESTED CHANGE MODE

**Explanation:** A user tried to FREE or DELETE a task that is still in the REQUESTED CHANGE mode.
The request is ignored.

**Corrective Action:** Wait until the REQUESTED CHANGE status disappears and then try again.

CTM672E CANNOT SAVE JOB DATA. INSUFFICIENT SPACE IN FILE. USE LESS DATA

**Explanation:** Additional data were added to the job on the Zoom screen and the message appears as a result of the SAVE command. When a job order is placed on the Active Jobs file a certain amount of space is reserved for possible future addition of data by the user. This message appears whenever this space is exhausted.
The new job data are not saved.

**Corrective Action:** Try to delete some data in the Zoom screen. If you are trying to add ON STEP statements, try to delete other ON STEP statements, for OUT conditions, delete unnecessary OUT statements, and the like. Deleting all SHOUT WHEN messages usually releases enough space.
If all the above fail, delete the job order and reissue it manually with the new data (using the CLIST CTMj OBRQ). If the problem persists, contact BMC Customer Support.

CTM673E CANNOT action TASK taskName ODATE odate - TASK IN PROCESS

Explanation: A request to delete a task in process or to Force OK a Group task that is not in ENDED status could not be performed. Only a task that awaits scheduling or has ended can be deleted. Force OK is valid only for a Group Task that has ended (in other words, all its jobs have ended).

The requested action is not performed.

Corrective Action: Depending on the requested action, take the necessary steps and repeat the request if desired.

CTM674E CANNOT action TASK taskName ODATE odate - PATH REQUEST ACTIVE

Explanation: An attempt was made to delete a task in Wait Schedule state, after the task, which is of critical path priority, already reserved the resources for execution. A critical path priority task reserves Control Resources and Quantitative Resources, to obtain all the runtime resources required for its execution. You cannot delete such a task as long as the resources are still reserved.

The request is ignored.

Corrective Action: To delete the task, do the following:

1. HOLD the task, and wait until it is in the HELD status.
2. Enter the Status Zoom screen.
3. Clear the Priority field of the task, and save it.
4. Wait until the REQUESTED CHANGE status disappears.
5. FREE the task, and wait until the REQUESTED FREE status disappears.
6. HOLD the task again, and wait until the REQUESTED CHANGE status disappears indicating that the task is HELD.
7. Delete the task.

CTM675S INTERNAL ERROR - UNEXPECTED RETURN CODE FROM CTMTVEW

Explanation: Internal error. An unexpected return code was received from the CTMTVEW Control-M program (View screen).

Corrective Action: Have your system programmer contact BMC Customer Support for assistance.

CTM676E PLEASE ERASE STEP NAMES WHEN SPECIFYING RESTART=N

Explanation: RESTART was set to N with either FROM stepname or TO stepname. FROM stepname and TO stepname describe how the job is restarted by Control-M/Restart. Therefore, they cannot be specified when RESTART is set to N.
Corrective Action: For restart processing set RESTART to Y. When rerun is needed without restart processing, erase the FROM step and the TO step fields.

CTM677E ACTION IGNORED - STATUS OF TASK CHANGED

Explanation: A CONFIRM (C), or RERUN (R) was issued for a job whose status was already changed. While you were looking at the screen, another user or the Control-M monitor changed the status of the job or the contents of the production parameters.

The requested action is ignored.

Corrective Action: Press Enter again, check the job status, and act accordingly.

CTM678I taskType memName orderId odate MODIFIED: BY userId FROM pgmStepName1.procStepName1 TO pgmStepName2.procStepName2

Explanation: The restart decision was changed from pgmStepName1.procStepName1 to pgmStepName2.procStepName2 during rerunning (R) of the task or confirmation of the restart of the task (C). Restart determines in which steps Control-M/Restart tries to start and end a restarted job. The original restart decision was manually modified, and this message indicates the new restart decision.

If and when this task is restarted, the new restart decision will be used.

Corrective Action: No action is required.

CTM679E TASK IS NOT WAITING FOR CONFIRMATION

Explanation: A request to confirm (C) the restart of a task that is not waiting for confirmation failed. Confirm is valid only for tasks which are in WAIT CONFIRMATION status.

Confirm is ignored.

Corrective Action: No action is required.

CTM67BI "BROWSE" FORCED - JOB DID NOT COMPLETE PROCESSING

Explanation: The customer issued 3.Z (ZOOM) command for the job in HELD ENDED status, but Control-M did not completely finish the processing of the job. The last step of post-processing (the handling of SHOUTs and OUTPUT CONDITIONS) was not completed. In this situation, the SAVE command (under ZOOM) may prevent Control-M from executing DO COND and DO SHOUT actions. For this reason, 3.Z is forced to BROWSE mode, where change/save is not possible.

3.Z is forced to BROWSE mode.

Corrective Action: If the job should be changed (and BROWSE mode is not acceptable), the user should FREE the job, wait several seconds (to enable Control-M to finish processing of the job), then HOLD and ZOOM again.

CTM680E MEMBER memName DOES NOT EXIST IN THE LIBRARY

Explanation: The memName member that was requested is not in the library.

Possible causes are:
New Day procedure - Failure to read a calendar from the data set described by the DACAL DD statement.

Control-M AutoEdit facility - Failure to read a symbols member (%GLOBAL statement, or %LIBSYM %MEMSYM statement).

IOA Online facility - You are trying to save a table, mission, tree, or rule that does not exist.

The system action depends on the cause, as follows:

- New Day procedure - This job order is not scheduled, and the New Day processing ends with errors.
- Control-M AutoEdit facility - Job submission stops.
- IOA Online facility - The table, mission, tree, or rule is not saved.

Corrective Action: The appropriate response depends on the cause, as follows:

- New Day procedure - Correct the name of the calendar in the production parameters table. Correct the contents of the Date Control Record (dates 2,3,4,5), and, if necessary, run the New Day procedure again. If New Day processing already placed job orders on the Active Jobs file, they may be placed there twice. Therefore, add the corrected job order manually, using the CLIST CTMJOBRQ.
- Control-M AutoEdit facility - Correct the JCL of the job and rerun it.
- IOA Online facility - To save a new table, mission, tree, or rule, delete the Y in the SAVE field, type Y in the CREATE field, and press Enter.

CTM681E [[taskType memName] jobName|jobId orderId] DSN dsn - IS NOT A LIBRARY

Explanation: The requested DSN is not a partitioned data set.

Possible causes are:

- New Day procedure - failure to read a calendar from the data set described by the DACAL DD statement.
- Control-M AutoEdit facility - failure to read a symbols member (%GLOBAL statement, or %LIBSYM %MEMSYM statement).
- IOA Online facility - schedule, calendar or rule definition.

The system action depends on the cause, as follows:

- New Day procedure - ends with errors.
- AutoEdit facility - job submission stops.
- IOA Online facility - reading or updating of the table, calendar or rule is not performed.

Corrective Action: The appropriate response depends on the cause, as follows:
New Day procedure - Correct the name of the data set described by the DACAL DD statement to the name of your calendar library.

AutoEdit facility - Correct the JCL for the job and rerun it.

Online facility - Correct the library name and retry.

**CTM682E MEMBER memName ALREADY EXISTS**

**Explanation:** The `memName` member that you are trying to create already exists in the specified library. The `memName` member is not created.

**Corrective Action:** Correct the member name and try again.

**CTM683E ERROR WHILE READING RECORD**

**Explanation:** A problem has occurred during the reading of a record.

**Corrective Action:** Make sure you chose the correct library.

**CTM684E [[taskType memName] jobName|jobId orderId] DSN dsn IN USE (DISP=OLD)**

**Explanation:** The DSN is held exclusively by another user. Possible causes are:

- Control-M AutoEdit facility - failure to read a symbols member (%%GLOBAL statement, or %%LIBSYM %%MEMSYM statement).
- IOA Online facility - schedule, calendar or rule definition.
- Control-O - initialization.
- CMEM - initialization.
- IOA/Control-M utility - schedule definition or calendar definition.

The system action depends on the cause, as follows:

- AutoEdit facility - job submission stops.
- IOA Online facility - reading or updating of the table, calendar or rule is not performed.
- Control-O is not started.
- CMEM is not started.
- IOA/Control-M utility - utility terminates with a nonzero return code.

**Corrective Action:** Try again.

**CTM685E [[taskType memName] jobName|jobId orderId] INTERNAL ERROR ON GETMEM: func. SEE MESSAGES AND CODES**

**Explanation:** Internal Control-M error while trying to read a member from a library.

Possible causes are:
- New Day procedure - failure to read a calendar from the data set described by the DACAL DD statement.
- Control-M AutoEdit facility - failure to read a symbols member (%%GLOBAL statement, or %%LIBSYM %%MEMSYM statement).
- IOA Online facility - schedule, calendar or rule definition.
- IOA/Control-M utility - schedule definition or calendar definition.

The system action depends on the cause, as follows:
- New Day procedure - terminates with errors.
- AutoEdit facility - job submission stops.
- IOA Online facility - reading or updating of the table, calendar or rule is not performed.
- IOA/Control-M utility - utility terminates with a nonzero return code.

**Corrective Action:** Look for additional messages on IOA Log that may clarify the picture. If you can, correct the problem, and continue according to the CTM680 message. Under the Online facility, it may be helpful to log off and log on again.

In any case, prepare the Control-M monitor full output and contact BMC Customer Support. Note the function code (*func*), which will help the BMC support team resolve the problem.

**CTM686E** 

`[[taskType memName] jobName|jobId orderId] DSN dsn IS NOT IN CATALOG`

**Explanation:** The requested DSN (*dsn*) is not in the catalog.

Possible causes are:
- Control-M AutoEdit facility - failure to read a symbols member (%%GLOBAL statement, or %%LIBSYM %%MEMSYM statement).
- IOA Online facility - schedule, calendar or rule definition.
- New Day procedure - failure to read a calendar from the data set described by the DACAL DD statement.

The system action depends on the cause, as follows:
- AutoEdit facility - job submission stops.
- IOA Online facility - reading or updating of the table, calendar or rule is not performed.
- New Day procedure - ends with errors.

**Corrective Action:** The appropriate response depends on the cause, as follows:

1. AutoEdit facility - correct the JCL for the job and rerun it.
2. Online facility - correct the library name and retry.
3. New Day procedure - correct the New Day procedure and retry.
CTM687E [[taskType memName] jobName|jobId orderId] OID=orderId DSN dsn - DYNAMIC ALLOCATION FAILED

**Explanation:** Dynamic allocation for the requested DSN (dsn) failed. Possible causes are:

- Control-M AutoEdit facility - failure to read a symbols member (%GLOBAL statement, or %LIBSYM %MEMSYM statement)
- IOA Online facility - schedule, calendar or rule definition.

This can also happen when the Control-M Online facility is activated under the Control-M Online facility (nesting) and you are trying to access the same library in two screens.

The system action depends on the cause, as follows:

- AutoEdit facility - job submission stops.
- IOA Online facility - reading or updating of the table, calendar or rule is not performed.

**Corrective Action:** Exit the Online facility and retry. If this happens under batch environment or in Control-M AutoEdit facility, prepare the Control-M monitor full output and contact BMC Customer Support for assistance.

CTM688E [[taskType memName] jobName|jobId orderId] INTERNAL ERROR - INVALID REQUEST TO IOAMEM. INFORM IOA ADMINISTRATOR

**Explanation:** Internal IOA error while trying to read a member from a library. Possible causes are:

- New Day procedure - failure to read a calendar from the data set described by the DACAL DD statement.
- IOA AutoEdit facility - failure to allocate or read a symbols member (a %GLOBAL statement, or a %LIBSYM %MEMSYM statement, or a %INCLIB %INCMEM statement). When using the %INCMEM DDNAME= ddn format, ensure that ddn is allocated by the required procedure (Control-M monitor, IOA Logon procedure, and so on).
- IOA Online facility - Schedule, calendar or rule definition.

The system action depends on the cause, as follows:

- New Day procedure - ends with errors.
- AutoEdit facility - job submission stops.
- IOA Online facility - reading or updating of the table, calendar or rule is not performed.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support for assistance.

CTM689E [[taskType memName] jobName|jobId orderId] MAXIMUM NUMBER OF MEMBERS/LINES IN MEMBER EXCEEDED

**Explanation:** An attempt to read a large member from the library failed.

The system action and appropriate user response depend on the circumstances at the time the message is issued, as follows:
If this message was issued during the New Day procedure, the cause is failure to read a calendar from the data set described by the DACAL DD statement. In this case, job submission fails. Increase the REGION size or LOGON size, and try again.

If this message was issued while you were using the Control-M AutoEdit facility, the cause is failure to read one of the following symbols members:
- a %GLOBAL statement
- a %LIBSYM %MEMSYM statement

In this case, job submission fails. Increase the REGION size or LOGON size, and try again.

If this message was issued while you were using the Control-M Online facility, the cause is failure to access a schedule or calendar definition. Increase the REGION size or LOGON size, and try again.

If this message was issued while you were using the CTMTBUPD or CTMXRF Control-M utilities, the cause is failure to access a schedule definition. In this case, utility execution fails. Increase either the SLINMAX or the SCHDMAX utility control statements, as appropriate. For more information, see the INCONTROL for z/OS Utilities Guide.

**Corrective Action:** No action is required.

**CTM68AE** 

```plaintext
[[taskType memName] jobName|jobId] orderId MEMBER NAME IS MISSING
```

**Explanation:** The parameter list passed to IOAMEM must include the requested member name, which is missing.

The request to IOAMEM is terminated.

**Corrective Action:** Notify your INCONTROL administrator.

**CTM68BE** 

```plaintext
[[taskType memName] jobName|jobId] orderId DDNAME ddName HAS ALREADY BEEN ALLOCATED
```

**Explanation:** IOAMEM received a request to allocate a DD name (`ddName`) that has already been allocated.

The request to IOAMEM is terminated.

**Corrective Action:** Notify your INCONTROL administrator.

**CTM68CE** 

```plaintext
[[taskType memName] jobName|jobId] orderId DSN dsn - OPEN FAILED
```

**Explanation:** The open process of the `dsn` data set failed.

The request to IOAMEM is terminated.

**Corrective Action:** Notify your INCONTROL administrator.
CTM68DE [[taskType memName] jobName|jobId] orderId DSN dsn IS NOT FOUND ON VOLUME

**Explanation:** IOAMEM detected that the requested data set \((dsn)\) does not exist on the volume pointed to by the MVS catalog.

The request to IOAMEM is terminated.

**Corrective Action:** Notify your INCONTROL administrator.

CTM68EE [[taskType memName] jobName|jobId] orderId DDNAME ddName IS NOT ALLOCATED TO DSNAME dsn

**Explanation:** IOAMEM received a request to access a data set \((dsn)\) allocated to the \(ddName\) DD name, but that \(dsn\) is not, in fact, allocated to the \(ddName\) DD name.

The request to IOAMEM is terminated.

**Corrective Action:** Notify your INCONTROL administrator.

CTM68FE [[taskType memName] jobName|jobId] orderId LIBRARY NAME IS MISSING

**Explanation:** The parameter list passed to IOAMEM must include a library name, which is missing.

The request to IOAMEM is terminated.

**Corrective Action:** Notify your INCONTROL administrator.

CTM68GE [[taskType memName] jobName|jobId] orderId DATASET dsn IS MIGRATED

**Explanation:** IOAMEM detected that the requested data set \((dsn)\) is migrated by a space management product such as DFSMSHSM, and it cannot be accessed.

The request to IOAMEM is terminated.

**Corrective Action:** Notify your INCONTROL administrator.

CTM68IE FORMCND MUST BE RUN WITH //DACNDF DD DISP=NEW OR DISP=OLD

**Explanation:** This messages is issued by the FORMCND procedure (program IOABCN), which formats the conditions file when it is submitted with DISP=SHR instead of DISP=NEW or DISP=OLD.

The format is not run.

**Corrective Action:** Stop all Control-X monitors and re-run the FORMCND procedure with DISP=OLD.

CTM690E [[taskType memName] jobName|jobId| orderId] INVALID RETURN CODE FORM CTMMEM - INFORM IOA ADMINISTRATOR

**Explanation:** Internal IOA error while trying to read a member from a library. Possible causes are:
New Day procedure - Failure to read a calendar from the data set described by the DACAL DD statement.

IOA AutoEdit facility - Failure to read a symbols member (%GLOBAL statement, or %LIBSYM %MEMSYM statement).

IOA Online facility - Schedule definition or calendar definition.

The system action depends on the cause, as follows:

- New Day procedure ends with errors.
- AutoEdit facility - Job submission stops.
- Online facility - Reading or updating of the table or calendar is not performed.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support for assistance.

**CTM691E** 

```
[ taskType memName ] jobName|jobId orderId ERROR WHILE PROCESSING DIRECTORY OF LIBRARY
```

**Explanation:** Internal Control-M error while trying to read a directory of a library during schedule definition, calendar definition, batch utility, etc.

Online facility - Tables or calendars list is not shown.

**Corrective Action:** For batch utility, correct the error and rerun the job.

**CTM692E** 

```
[ taskType memName ] jobName|jobId orderId LIBRARY OPERATION FAILED. REASON rsn
```

**Explanation:** Internal Control-M error while trying to process a member from a library. Possible causes are shown in the following table:

<table>
<thead>
<tr>
<th>Circumstances</th>
<th>System Action</th>
<th>Possible Cause</th>
</tr>
</thead>
<tbody>
<tr>
<td>New Day procedure</td>
<td>New Day procedure terminates with errors</td>
<td>Failure to read a calendar from the data set described by the DACAL DD statement</td>
</tr>
<tr>
<td>Control-M AutoEdit</td>
<td>Job submission is stopped</td>
<td>Failure to read a symbols member (%GLOBAL statement, or %LIBSYM %MEMSYM statement)</td>
</tr>
<tr>
<td>Control-M Online</td>
<td>Processing of schedule, mission, rule or calendar</td>
<td>Internal failure to process the schedule, mission, rule or calendar definition</td>
</tr>
<tr>
<td>facility</td>
<td>definition is not performed</td>
<td></td>
</tr>
</tbody>
</table>

**Corrective Action:** Examine any prior system message. If there is no such message, prepare the Control-M monitor full output and contact BMC Customer Support for assistance.
INCONTROL for z/OS Messages Manual

CTM693E orderId {TABLE | MISSION | TREE | RULE} DOES NOT EXIST
{TABLE | MISSION | TREE | RULE} NOT SAVED

**Explanation:** You are trying to save a table, mission, tree, or rule that does not exist.
The table, mission, tree, or rule is not saved.

**Corrective Action:** To save a new table, mission, tree, or rule, erase the Y in the SAVE field, mark Y in the CREATE field, and click Enter.

CTM694E orderId {TABLE | MISSION | TREE | RULE} ALREADY EXISTS - CANNOT BE CREATED

**Explanation:** The table, mission, tree, or rule you are trying to create already exists in the specified library.
The table, mission, tree, or rule is not created or saved.

**Corrective Action:** Either specify Y in the SAVE field to replace the existing table, mission, tree, or rule with the changed one, or change its name to a new name.

CTM695I taskType memName odate orderId RESTART DECISION DELETED BY userId. RESTART WILL NOT BE PERFORMED

**Explanation:** While rerunning or confirming the rerun of the job, the user deleted the restart decision of the job.
The job will be rerun without restart processing.

**Corrective Action:** No action is required.

CTM696E DSN RECORD FORMAT DOES NOT MATCH THE REQUESTED RECORD FORMAT

**Explanation:** An error occurred in the CTMMEM module.
The CTMMEM module detected that the record format of the library to be opened differs from the requested record format.
The library or DD name is not allocated.

**Corrective Action:** If the CTMMEM module was invoked from a user-written program or from one of the user exits, check the parameters passed by the calling program to CTMMEM, and ensure that they match the DCB parameters of the library that the user-written program intends to access.
If the call was not made by a user exit or user-written program, prepare the Control-M monitor full output and contact BMC Customer Support for assistance.

CTM697I jobName orderId odate WAS DELETED BECAUSE ITS GROUP ENTITY grp (ID=groupId) DELETED

**Explanation:** This information message indicates that the jobName job with the orderId order ID and odate order date was deleted, because the grp group entity with the groupId order ID, to which this job belongs, was deleted.
Corrective Action: No action is required.

CTM698I grp orderId odate WAS UNDELETED BECAUSE JOB jobName (OID=jobId) UNDELETED

Explanation: This information message indicates that the grp group entity with the odate order date and the orderId order ID was undeleted because the jobName job with the jobId order ID, to which this job belongs, was undeleted by an UNDELETE command.

Corrective Action: No action is required.

CTM699E grp orderId odate NOT DELETED, NOT ALL JOBS ARE ELIGIBLE FOR DELETION

Explanation: A request to delete the grp group entity with the odate order date and the orderId order ID was issued. However, not all jobs in this group are eligible for deletion.

Jobs belonging to the specified group that can be deleted are deleted. Jobs that are not ready for deletion remain in their original queue. The group entity is not deleted.

Corrective Action: Wait until all the jobs that belong to the specified group have finished execution, then try again to delete the group.

CTM69AE NO SPACE LEFT IN THE DIRECTORY

Explanation: The library directory is full.

Corrective Action: Compress or enlarge the appropriate library.

CTM69BI NO MEMBERS MATCH THE MEMBER-NAME FILTER

Explanation: No matching member was found in the library or the library had no members.

Corrective Action: Correct the member-name used in the filter or ensure that the library is not empty, then try again.

CTM69CE "JSORT" MUST BE FOLLOWED BY "RBA" OR "ORDERID"

Explanation: The JSORT command requires either a RBA or ORDERID subparameter. The order in which the jobs are displayed in screen 3 can be controlled by the JSORT command.

Corrective Action: Do one of the following:

- Type JSORT RBA on the command line, to display the jobs in the order of their physical location on the AJF (relative byte address).
- Type JSORT ORDERID on the command line, to display the jobs in order-id sequence.

CTM6A0I ARCHIVED SYSOUTS DO NOT EXIST FOR THIS TASK

Explanation: This information message indicates that there are no sysouts to be viewed. You can only view an existing sysout. Either no sysout was generated, or the existing sysout was manually deleted.

Corrective Action: No action is required.
CTM6A1E LOCATE RBA COMMAND REQUIRES RBA AS PARAMETER

**Explanation:** A Locate RBA command (RBAL) was specified with no, or more than one, RBA parameter. Only one RBA parameter, consisting of from 1 through 6 hexadecimal digits, must be specified for the Locate RBA command.

The Locate RBA command is not executed.

**Corrective Action:** Specify the Locate RBA command correctly.

CTM6A2E RBA INVALID

**Explanation:** An invalid RBA value was specified in the Locate RBA command (RBAL). The value specified for the RBA parameter in the Locate RBA command must contain from 1 through 6 hexadecimal digits.

The Locate RBA command is not executed.

**Corrective Action:** Enter the Locate RBA command with a valid RBA value.

CTM6A3E RBA OUT OF RANGE

**Explanation:** The Locate RBA command was specified with an RBA parameter which exceeded the highest RBA in the Active Jobs file.

The Locate RBA command is not executed.

**Corrective Action:** Enter the Locate RBA command with a correct RBA value.

CTM6A4S INITIALIZATION OF MAIN LIB FAILED. DDNAME "DALIB"

**Explanation:** An attempt was made to edit the JCL of a job by using line command J in the Control-M Active Environment screen or the Schedule Setup screen. The job in question had MEMLIB set to GENERAL, but the DALIB is not allocated to the user.

**Corrective Action:** Allocate DALIB to the user, and reenter line command J.

CTM6A5S AN ERROR OCCURRED (REASON=rsn, RBA=rba) INDEXING FORCED OFF

**Explanation:** An error occurred while trying to process the indexing in the Control-M Active Environment screen. The displayed reason code (rsn) indicates the reason for the error.

Possible values for rsn are:

- 01 through 03 - The record the program tried to read was not an index record.
- 04 - GETMAIN for the indexing area failed.
- 05 - Loading of the CTMHSR module failed.

The Active Environment screen response time may slow significantly.

**Corrective Action:** Press Enter to return to the Active Environment screen. Inform the INCONTROL administrator, indicating the reason code and the RBA specified in the message. The INCONTROL administrator should proceed according to the reason code, as follows:
01 through 03 - Ensure that the Active Jobs file (AJF) is not corrupted, and run the CTMCAJF COMPRESS utility to rebuild the indexes. This action can be delayed, but until it is performed, online response may be slow.

04 - Enlarge the user region.

05 - Ensure that the CTMHSR load module appears in the IOA load library.

CTM6ACE "RSORT" MUST BE FOLLOWED BY "FLOW" OR "NAME"

**Explanation:** The RSORT command requires either a FLOW or NAME subparameter. The order in which the Rerun Flow jobs are displayed in screen 3 can be controlled by the RSORT command.

**Corrective Action:** Do one of the following:

- Type RSORT FLOW on the command line, to display the jobs in the order of the flow(with predecessor jobs displayed before their successors).
- Type RSORT NAME on the command line, to display the jobs in alphabetical order.

CTM6ADE SUMMARY HAS MORE THAN 128 CHARACTERS

**Explanation:** The total number of characters in the summary exceeds 128 characters.

**Corrective Action:** Shorten the summary so that it contains fewer than 128 characters. Each line of the summary may contain up to 70 characters.

CTM6AEE DESCRIPTION HAS MORE THAN 1024 CHARACTERS

**Explanation:** The total number of characters in the description exceeds 1024 characters.

**Corrective Action:** Shorten the description so that it contains fewer than 1024 characters.

CTM6AFE DO REMEDY IS NOT SUPPORTED IN THIS RELEASE

**Explanation:** The DO REMEDY parameter is only supported in INCONTROL for z/OS version 6.2.18 and later.

**Corrective Action:** Install version 6.2.18 or later.

CTM6AGE SUMMARY AND DESCRIPTION LINES MUST BE ENTERED

**Explanation:** The summary and description lines have been left blank.

**Corrective Action:** Enter information into the summary and description lines.

CTM6AHE URGENCY MUST BE L, M, H, U, OR BLANK

**Explanation:** The URGENCY parameter must be set to one of the following values:
L - Low
M - Medium
H - High
U - Urgent
Blank - Default, which is equivalent to Low urgency

**Corrective Action:** Enter a valid value.

---

**Messages CTM700 through CTM7xx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**CTM700E PLEASE FILL IN LIBRARY NAME**

**Explanation:** The library name is missing.

**Corrective Action:** Specify the library name.

**CTM701E PLEASE FILL IN TABLE NAME OR OMIT JOB NAME**

**Explanation:** The job name is specified, but the table name is missing. A job must be defined in a table.

**Corrective Action:** To get a list of tables in the library, either fill in a table name, or omit the job name.

**CTM703E ELAPSE VALUE CANNOT EXCEED 1440 MINUTES (ONE DAY)**

**Explanation:** An invalid value is specified in the ELAPSE parameter. The maximum ELAPSE time for a job is 1440 minutes.

**Corrective Action:** Enter a value not greater than 1440.

**CTM704E MAXIMUM NUMBER OF STEP RANGE LINES EXCEEDED**

**Explanation:** More than 100 STEP RANGE lines were specified on the Job Scheduling Definition screen or on the Job Zoom screen. The maximum number of STEP RANGE lines permitted on a Job Scheduling Definition screen is 100.

**Corrective Action:** Remove the excess STEP RANGE lines.

**CTM705E INVALID OPTION FOR GROUP DEFINITION**

**Explanation:** The line command is invalid for a group definition. The command is not executed.

**Corrective Action:** Either choose a line command that is valid for group definitions, or select a job definition for which the line command is valid.
CTM706E ORDER COMMAND NOT ALLOWED FOR GROUP TABLE

**Explanation:** The O (ORDER) line command was entered for a job that is part of a group. The O line command is valid only for jobs that do not belong to a group.

Control-M prompts for a new line command.

**Corrective Action:** Change the line command.

CTM707E INVALID CALENDAR REFERENCE OR SCHEDULING ERROR

**Explanation:** The P option was used to view the scheduling dates of a job containing an error in its basic scheduling criteria. The basic scheduling criteria of this job had at least one parameter that could not be correctly evaluated by the CTMRPLN utility.

Possible causes are:

- The DCAL or WCAL parameter points to a member that does not exist in the calendar library.
- The calendar member does not contain the date range specified by the user. Both the current and next year following the end date should be defined in the calendar.

The P option is not executed for this job.

**Corrective Action:** Check the DCAL and WCAL parameters in the basic scheduling criteria for the job. Check the date range in the calendar member. Correct accordingly, and reactivate the P option.

CTM708E DELETE COMMAND NOT ALLOWED FOR LAST JOB IN GROUP TABLE

**Explanation:** An attempt to delete the last remaining job definition in a group table failed. Every group table must have at least one job definition.

The D (Delete) option is not executed for this job definition.

**Corrective Action:** Delete the entire group table.

CTM709I COPY CANCELLED DUE TO USER REQUEST

**Explanation:** A copy process was cancelled by the PF03 key. A window is displayed when a request is submitted to copy a job definition.

The copy process is terminated.

**Corrective Action:** No action is required.

CTM70AE REQUIRED FIELD IS MISSING

**Explanation:** The user failed to specify a mandatory field. Values must be specified for several fields, for example, the destination table name.

The copy request is not processed.

**Corrective Action:** Press PF03 to cancel the copy request or fill in the required data.
CTM70BE CANNOT COPY TO THE SAME TABLE

Explanation: The specified destination table is the table that currently contains the job definition. An attempt to copy a job definition from a table into the same table failed. The copy request is not processed.
Corrective Action: Press PF03 to cancel the copy request or specify a different destination table name.

CTM70CI COPY WAS EXECUTED SUCCESSFULLY

Explanation: The message is issued when one of the following components has been successfully copied:
- IOA component job definition
- CTO rule
- CMEM rule
- CTT rule
- CTD mission definition
- IOA calendar definition
Corrective Action: No action is required.

CTM70DE SPECIFIED LIBRARY DOES NOT EXIST

Explanation: The user tried to copy a job definition into a destination data set that does not exist. The copy process is not implemented.
Corrective Action: Allocate the destination data set and try again to copy the job definition.

CTM70EE THIS ENTRY TYPE CANNOT BE COPIED

Explanation: An attempt to copy a group job into another table failed. A job that is part of a group cannot be copied into another table. The copy process is not implemented.
Corrective Action: No action is required.

CTM70FE GENERAL ERROR DURING COPY PROCESS RC = rc

Explanation: Usually, an error has occurred during the copy process, causing a return code (rc) of 004 to be generated.
The copy process is terminated.
Corrective Action: Contact BMC Customer Support.

CTM70GE CANNOT COPY TO THE SAME RBC

Explanation: The current RBC definition is specified as the RBC destination. The copy request is not processed.
Corrective Action: Cancel the copy request or specify a different RBC definition.

CTM70HI RBC RENAMED SUCCESSFULLY
Explanation: An RBC definition has been successfully renamed.
Corrective Action: No response needed.

CTM70II RENAME CANCELLED DUE TO USER REQUEST
Explanation: A rename process was cancelled by the PF03 key. A window is displayed when a request is submitted to rename an RBC definition. The rename process is terminated.
Corrective Action: No response needed.

CTM710E PLEASE FILL IN A VALID OPTION - "Y" OR "N"
Explanation: An invalid exit option was specified. The cursor points to the invalid value.
Valid options are:
- Y (Yes)
- N (No)
Corrective Action: Type Y (Yes) or N (No) in one of the exit options.

CTM711E ONE (AND ONLY ONE) EXIT OPTION MUST BE MARKED AS "Y" OR "N"
Explanation: Both exit options were marked either as Y or N. One exit option must be marked Y the other N.
Corrective Action: Change one of the exit options to Y or N accordingly.

CTM712E MISSING CONTINUATION CONDITION NAME
Explanation: The first dateref field contains CONT, which specifies a long condition. However, the continuation condition field is empty. In this case, the continuation condition field must contain at least one character.
Corrective Action: Do one of the following:
- For a short condition, remove CONT from the first dateref field.
- For a long condition, type at least one character in the continuation condition field.

CTM713E LENGTH OF CONTINUATION CONDITION MAY NOT EXCEED 19 CHARACTERS
Explanation: The continuation condition field contains more than 19 characters, which is the maximum allowed.
Corrective Action: Ensure that the text of the continuation condition contains at least one, but no more than 19 characters.
CTM714E INVALID DATE REF 'CONT' - COND NAME MUST BE 20 CHAR

**Explanation:** The first dateref field contains CONT, which specifies a long condition. However, the first condition field has less than 20 characters. In this case, all 20 spaces in the first condition field, and at least one in the continuation condition field, must be used.

**Corrective Action:** Do one of the following:

- For a short condition, remove CONT from the first `dateref` field.
- For a long condition, use all 20 spaces in the first condition field, and at least one in the continuation condition field.

CTM715E RIGHT PARENTHESIS IS NOT VALID IN CONTINUATION CONDITION

**Explanation:** The first dateref field contains CONT, which specifies a long condition. However, the first condition field contains a Boolean right (closing) parenthesis character `)`. In this case, the condition must continue into the continuation condition field. A Boolean closing parenthesis may not end the condition in the first condition field.

**Corrective Action:** Do one of the following:

- For a short condition, remove CONT from the first `dateref` field.
- For a long condition, remove the closing parenthesis from the first condition field, use all 20 spaces in the first condition field, and use at least one space in the continuation condition field.

CTM716E LEFT PARENTHESIS IS NOT VALID IN CONTINUATION CONDITION

**Explanation:** The first dateref field contains CONT, which specifies a long condition. However, the continuation condition field contains a Boolean left (opening) parenthesis character `. In this case, the condition must begin in the first condition field. A Boolean opening parenthesis may not start the condition in the continuation condition field.

**Corrective Action:** Do one of the following:

- For a short condition, remove CONT from the first dateref field and clear the continuation condition field.
- For a long condition, move the opening parenthesis to the beginning of the first condition field and use all 20 spaces in the first condition field, and use at least one space in the continuation condition field.

CTM717E OR SIGN `|` IS NOT VALID IN CONTINUATION CONDITION

**Explanation:** The first dateref field contains CONT, which specifies a long condition. However, the continuation condition field of a long condition contains a logical OR symbol `|`. In this case, the condition must begin in the first condition field. The logical OR symbol is valid only at the beginning of the first condition field of a long condition.

**Corrective Action:** Do one of the following:
For a short condition, remove CONT from the first dateref field and clear the continuation condition field.

For a long condition, move the logical OR symbol to the beginning of the first condition field, use all 20 spaces in the first condition field, and use at least one space in the continuation condition field.

CTM718E ONLY BLANK ALLOWED IN CONTINUATION CONDITION DATE-REF OPTION

**Explanation:** The first dateref field contains CONT, which specifies a long condition. However, the first opt field for the condition is not blank. In this case, the first opt field must be blank and the second opt field, after the continuation condition and the second dateref field, controls condition handling at the end of the job.

For short conditions, the value in the first opt field controls whether the condition is added to the Conditions file at the end of the job (+) or removed from it (-).

**Corrective Action:** Do one of the following:

- For a short condition, remove CONT from the first opt field and clear the continuation condition field.
- For a long condition, clear the first opt field and enter a valid value (+ or -) in the second one.

CTM719E TOO MANY "DO COND" - ONLY 245 ARE ALLOWED

**Explanation:** There are more that 245 DO COND statements in a single job scheduling definition. The maximum number of DO COND statements in each job scheduling definition is 245.

**Corrective Action:** Remove any extra DO COND statements.

CTM71AE PLEASE FILL IN AT LEAST ONE ADDRESS IN THE "TO" FIELD

**Explanation:** No address was entered in the TO field of a DO MAIL statement.

**Corrective Action:** Enter at least one address in the TO field of the DO MAIL statement.

CTM71BE TOO MANY DO MAIL "TO" LINES - ONLY 255 ARE ALLOWED

**Explanation:** More than 255 lines were entered in the TO field of a DO MAIL statement.

**Corrective Action:** Correct the contents of the TO field in the DO MAIL statement so that the field contains no more than 255 lines.

CTM71CE TOO MANY DO MAIL "CC" LINES - ONLY 255 ARE ALLOWED

**Explanation:** More than 255 lines were entered in the CC field of a DO MAIL statement.

**Corrective Action:** Correct the contents of the CC field in the DO MAIL statement so that the field contains no more than 255 lines.

CTM71DE TOO MANY DO MAIL TEXT LINES - ONLY 255 ARE ALLOWED

**Explanation:** More than 255 lines were entered in the TEXT field of a DO MAIL statement.

**Corrective Action:** Correct the contents of the TEXT field in the DO MAIL statement so that the field contains no more than 255 lines.
CTM71EE PLEASE FILL IN A VALID OPTION - "Y" OR "N" OR "D"

Explanation: An invalid value was entered for ATTACH SYSOUT.
Corrective Action: Correct the field contents.

CTM720E PLEASE FILL IN MEMBER NAME

Explanation: Missing MEMBER NAME. The MEMNAME field is obligatory.
Corrective Action: Fill in the name of the member you wish to submit in the MEMNAME field. In the case of a started task, fill in its name.

CTM721E INVALID TASK TYPE

Explanation: Invalid tasktype.
Valid values for the TASKTYPE parameter are:
- JOB - batch job (default)
- CYC - cyclic job
- STC - started task (STC)
- CST - cyclic STC
- EMR - emergency job
- ECJ - emergency cyclic job
- EST - emergency STC
- ECS - emergency cyclic STC
- WRN - warning message
For more details, see the job production parameters chapter in the Control-M for z/OS User Guide.
Corrective Action: Correct the value in the TASKTYPE field.

CTM722E INVALID OPTION (USE "Y", "N" OR BLANK)

Explanation: An invalid option has been entered in the NCT2 field.
Valid options for running NCT2 (NOT CATALGD2) are:
- Y (Yes) - Prevent errors by removing old data sets. This option is not valid for started tasks (STCs).
- N (No) - Do not prevent errors.
- Blank (Default) - Use the site-defined default, which is set during Control-M/Restart installation.
Corrective Action: Specify Y or N, or leave the field blank to use the site default.

CTM723E MAXWAIT SHOULD BE 00-98 OR 99

Explanation: An invalid value was entered for the MAXWAIT parameter.
The value of MAXWAIT should be from 00 through 98, meaning the number of extra days that the job can wait to be executed, or 99, meaning that the job remains in the Active Jobs file forever, even after executing).

**Corrective Action:** Correct the value in the MAXWAIT field.

**CTM724E FIELD MUST BE BLANK OR NUMERIC WITH LEADING ZEROES**

**Explanation:** The field contains data which are neither numeric characters nor blank. If numeric values are used, then no trailing (or preceding) blanks are allowed. The cursor points to the invalid field value.

**Corrective Action:** Correct field contents.

**CTM725E INVALID FORMAT OF DAYS PARAMETER**

**Explanation:** An invalid format was set for the DAYS parameter.

The DAYS parameter should contain 1 through 31, ALL, +1, +3, and so on. For more details, see the job production parameters chapter in the Control-M for z/OS User Guide.

**Corrective Action:** Correct field contents.

**CTM726E "ALL" PARAMETER MIXED WITH SPECIFIC - CORRECT**

**Explanation:** The ALL parameter was specified together with specific days in the DAYS parameter or the WDGAYS parameter. You cannot use specific WDAYS or DAYS together with the ALL option.

**Corrective Action:** Omit either the ALL option or the specific days options.

**CTM727E INVALID FORMAT OF WDAYS PARAMETER**

**Explanation:** Invalid format of WDAYS parameter. WDAYS parameter should contain 0 through 6, ALL, +1, and so on. For more details, see the job production parameters chapter in the Control-M for z/OS User Guide.

**Corrective Action:** Correct the value in the WDAYS field.

**CTM728E INVALID CONDITION DATE REFERENCE**

**Explanation:** An invalid condition date reference has been specified. Date reference should be ODAT, PREV, ****, or mmdd (or ddmm, depending on the site standard). For more details, see the job production parameters chapter in the appropriate user guide.

**Corrective Action:** Correct the date reference.

**CTM729E MISSING/INVALID CONTROL-TYPE. USE "E" - EXCLUSIVE OR "S" - SHARED**

**Explanation:** A CONTROL resource was specified, but the CONTROL type is invalid or missing. The CONTROL type should be E (Exclusive) or S (Shared). For more details, see the job production parameters chapter in the appropriate user guide.

**Corrective Action:** Type E or S in the CONTROL type field.
CTM72AE DESCRIPTION LENGTH CAN'T EXCEED 4000 CHARACTERS

**Explanation:** The length of the description cannot exceed 4000 characters.

**Corrective Action:** Shorten the description.

CTM72BE INVALID OPTION (USE "Y", "N", "L", "F" OR BLANK)

**Explanation:** An invalid option has been entered in the NCT2 field.

Valid options for running NCT2 (NOT CATALGD2) are:

- **Y** (Yes) - Prevent errors by removing old data sets. This option is not valid for started tasks (STCs).
- **N** (No) - Do not prevent errors.
- **L** (List) - List GDG data sets with the corresponding level from the original job in the SYSOUT file using CTR301I messages.
- **F** (Flush) - Upon finding an error, prevent further processing.
- Blank (Default) - Use the site-defined default, which is set during Control-M/Restart installation.

**Corrective Action:** The only value that is valid for a started task is N, or leave the field blank.

CTM72CE INTERVAL LIMIT IS EITHER 45 DAYS, 1080 HOURS, OR 64,800 MINUTES

**Explanation:** An interval specification exceeded one of the following:

- 64,800 minutes
- 1080 hours
- 45 days

For more information, see the INTERVAL parameter in the job production parameters chapter in the Control-M for z/OS User Guide.

**Corrective Action:** Correct the value in the INTERVAL field.

CTM72DE VALID DISPLAY VALUES ARE 'M' MINUTES, 'H' HOURS, OR 'D' DAYS

**Explanation:** An interval type specification was invalid. The valid interval types are:

- **M** - minutes
- **H** - hours
- **D** - days

For more information, see the INTERVAL parameter in the job production parameters chapter in the Control-M for z/OS User Guide.

**Corrective Action:** Correct the type.
CTM72EE VALID SYSTEM ID FORMATS ARE: XXXX OR /XXXX

Explanation: The length of the system ID value may be up to 4 characters. In a JES3 system this value may be preceded by a slash character, indicating NOT.

Corrective Action: Correct the value in the SYSID field according to the format indicated in the message.

CTM72FE DUPLICATE CONTROL RESOURCE NAMES ARE NOT ALLOWED

Explanation: Two CONTROL resources with the same name are not allowed.

Corrective Action: Remove one of the CONTROL resources.

CTM72GE 5 CHARACTER SYSID VALUE NOT ALLOWED IN COMPATIBILITY MODE

Explanation: Compatibility mode implies conformity to previous Control-M versions in which a maximum of 4 characters could be specified for the SYSID field.

Corrective Action: Specify a maximum of 4 characters in the SYSID field.

CTM730E QUANTITY MUST BE A FOUR DIGIT NUMBER

Explanation: Invalid quantity (for a quantitative resource). Quantity should be a non-zero, 4-digit number. For more details, see the job production parameters chapter in the appropriate user guide.

Corrective Action: Correct the quantity field.

CTM731E INVALID TIME

Explanation: Invalid time specified. The format of the TIME parameter should be hhmm. For more details, see the job production parameters chapter in the appropriate user guide.

Corrective Action: Correct the TIME field (FROM or UNTIL).

CTM732E MISSING/INVALID CONDITION OPTION. TRY "+" TO ADD OR "-" TO DELETE

Explanation: Invalid or missing condition option. The value of the condition option should be + for add, or - for delete. For more details, see the job production parameters chapter in the appropriate user guide.

Corrective Action: Specify + or - in the condition option field.

CTM733E INVALID SYSOUT OPTION

Explanation: An invalid sysout option was specified.

Valid SYSOUT option are:
Some SYSOUT options require additional sysdata.
For more details see the job production parameters chapter in the Control-M for z/OS User Guide.

**Corrective Action:** Correct the SYSOUT field.

**CTM734E MAXRERUN LIMIT IS 255**

**Explanation:** More than 255 reruns were specified. The maximum number of times a cyclic job may be rerun or restarted is 255. For more information, see MAXRERUN in the job production parameters chapter in the Control-M for z/OS User Guide.

**Corrective Action:** Correct the value in the MAXRERUN field.

**CTM735E INVALID FINISH CODE**

**Explanation:** An invalid job or step finish code was specified. For valid codes, see the job production parameters chapter in the Control-M for z/OS User Guide.

**Corrective Action:** Correct the finish code field.

**CTM736E INVALID ACTION**

**Explanation:** An invalid action was specified in a DO statement. For valid actions, see the job production parameters chapter in the Control-M for z/OS User Guide. This message can also be produced when specifying DO statements valid only if certain products are installed, for example, specifying DO IF RERUN when Control-M/Restart is not installed.

**Corrective Action:** Correct the DO action field.

**CTM737E INVALID URGENCY. USE "R" - REGULAR, "U" - URGENT OR "V" - VERY URGENT**

**Explanation:** An invalid value was specified for the SHOUT URGN (urgency) subparameter.

Valid values for SHOUT URGN are:

- R - regular
- U - urgent
- V - very urgent.

For more details, see the job production parameters chapter in the Control-M for z/OS User Guide.

**Corrective Action:** Type R, U, or V in the SHOUT urgency field.
CTM738E INVALID "WHEN" ATTRIBUTE

Explanation: An invalid WHEN attribute was specified in a SHOUT statement. For valid values, see the job production parameters chapter in the Control-M for z/OS User Guide.
Corrective Action: Correct the value in the WHEN field.

CTM739E PLEASE FILL IN USER ID

Explanation: Missing user ID. The USER ID field is obligatory.
Corrective Action: Insert a user ID.

CTM73AE Finish code must be Cnnnn/Uunnnn, where nnnn is asterisk or 0000 to 4095

Explanation: Finish code was not correctly defined.
Corrective Action: Correct the finish code.

CTM73BE Finish code must be Shhh, where hhh are hex digits (0 to F) or asterisk

Explanation: Finish code was not correctly defined.
Corrective Action: Correct the finish code.

CTM73CE INVALID OPTION, SPECIFY "W" (WORD), "C" (CHAR) OR BLANK

Explanation: An invalid option was specified.
Corrective Action: Specify W for word, C for character, or leave blank.

CTM73DE INVALID VALUE. SPECIFY A NUMERIC VALUE (00-255)

Explanation: An invalid value was specified.
Corrective Action: Specify a numeric value in the range from 0 to 255.

CTM73FE INVALID VALUE. SPECIFY A NUMERIC VALUE (00-99999999)

Explanation: An invalid value was specified.
Corrective Action: Specify a numeric value in the range from 0 to 99999999.

CTM73GE INVALID VALUE. SPECIFY A BLANK OR NUMERIC VALUE (00-44)

Explanation: An invalid value was specified.
Corrective Action: Specify a blank or a numeric value in the range from 0 to 44.
CTM73HE PLEASE SPECIFY AN AUTO-EDIT VARIABLE NAME (%VARNAME)

Explanation: An invalid AutoEdit name was specified.
Corrective Action: Specify a valid AutoEdit name beginning with the % characters.

CTM73JE CAPTURED VARIABLE NAME LENGTH CANNOT EXCEED 18 CHARACTERS.

Explanation: The variable name that was specified is too long.
Corrective Action: Specify a variable name with not more than 18 characters.

CTM73KE POOL NAME LENGTH CANNOT EXCEED 20 CHARACTERS.

Explanation: The pool name that was specified is too long.
Corrective Action: Specify a pool name with not more than 20 characters.

CTM740E EXPECTED CONTINUATION NOT RECEIVED (AFTER ",")

Explanation: The DAYS or WDAYS parameter ended with a comma. Additional data is expected after comma.
Corrective Action: Correct the parameter.

CTM741E INVALID SHOUT DESTINATION CODE

Explanation: Invalid SHOUT destination code.
For valid destination codes, see the job production parameters chapter in the Control-M for z/OS User Guide.
Corrective Action: Correct the SHOUT destination field.

CTM742E CANNOT MIX DAYS OPTION WITH WDAYS OPTION

Explanation: Values were set for the DAYS parameter and the WDAYS parameter. The DAYS parameter conflicts with the WDAYS parameter.
Corrective Action: Delete either the value in the DAYS parameter or the value in the WDAYS parameter.

CTM743E DATES PARAMETER CONFLICTS WITH DAYS OR DCAL OPTION

Explanation: Both the DATES parameter and the DAYS, WDAYS or MONTHS parameters were specified. The DATES parameter must appear alone.
Corrective Action: Erase any data in the DAYS, WDAYS and MONTHS parameters.

CTM744E CANNOT MIX DATES OPTION WITH CALENDAR OPTION

Explanation: The DATES parameter and the DCAL, WCAL or CONFCAL parameters were specified simultaneously.
The DATES parameter cannot be specified if the DCAL or WCAL or CONFCAL parameter is specified.  
Corrective Action: Delete the value in the DATES field or in the DCAL, WCAL and CONFCAL fields.

CTM745E CANNOT MIX MINIMUM/PDS WITH OPTIONS DAYS, WDAYS, MONTH, DATES OR CALENDAR  
Explanation: The MINIMUM or PDS parameter was specified simultaneously with the DAYS, WDAYS, MONTHS, DATES or CALENDAR parameters.  
The MINIMUM and PDS parameters cannot be specified with date-related parameters.  
Corrective Action: Specify either the MINIMUM and PDS parameters or one of the date-related parameters.

CTM746E MINIMUM AND PDS MUST BE FILLED IN TOGETHER  
Explanation: A value was set for the MINIMUM parameter, but the PDS field is empty (or vice versa).  
The MINIMUM and PDS parameters must be filled in together.  
Corrective Action: Fill in both the MINIMUM and PDS fields.

CTM747E PLEASE FILL IN THE "IN" PREREQUISITE CONDITION NAME  
Explanation: There is no IN prerequisite condition name.  
The condition date reference was specified without a corresponding prerequisite condition name.  
Corrective Action: Fill in the IN prerequisite condition name field.

CTM748E PLEASE FILL IN THE "CONTROL" RESOURCE NAME  
Explanation: Missing control resource name. The control resource type was specified without a corresponding control resource name.  
Corrective Action: Fill in the control resource name field.

CTM749E PLEASE FILL IN THE "QUANTITATIVE" RESOURCE NAME  
Explanation: Missing quantitative resource name. The quantitative resource quantity was specified without a corresponding quantitative resource name.  
Corrective Action: Fill in the quantitative resource name field.

CTM750E PLEASE FILL IN THE PREREQUISITE CONDITION NAME  
Explanation: Missing prerequisite condition name in DO COND statement.  
At least one condition is expected in DO COND statement.  
Corrective Action: Fill in the prerequisite condition name.

CTM751E PLEASE FILL IN NEW CLASS (ONE LETTER)  
Explanation: Missing new class on SYSOUT option C.
When you specify C (Change sysout class) as the SYSOUT option, a 1-letter new class parameter is needed.

**Corrective Action:** Fill in the new class (one letter).

**CTM752E PLEASE FILL NEW DESTINATION (1-8 LETTERS)**

**Explanation:** Missing new destination on SYSOUT option N. When SYSOUT option N is specified to change the sysout destination, a destination code is needed. Maximum length is 8 characters.

**Corrective Action:** Fill in the new destination (1-8 characters).

**CTM753E PLEASE FILL IN FILE NAME**

**Explanation:** Missing file name on SYSOUT option F. When SYSOUT option F is specified to copy the sysout to a file, a file name is needed. Maximum length is 44 letters.

**Corrective Action:** Fill in the file name.

**CTM754E REDUNDANT TEXT IN SYSOUT DATA FIELD**

**Explanation:** The sysout data field contains data which is not relevant to the sysout option specified.

**Corrective Action:** Erase the redundant text.

**CTM755E USE OF PREV/NEXT DATE REFERENCE CONFLICT PDS/MINIMUM OPTIONS**

**Explanation:** A PREV (or NEXT) date reference has been specified for a job scheduled by the PDS parameter. There is no next date or previous date when the job is scheduled according to the status of the library.

**Corrective Action:** Use another valid date reference.

**CTM756E ONLY CODE OPTION "-" ALLOWED FOR DATE REFERENCE $$$$$/******

**Explanation:** Code option + specified for a generic date reference. It is impossible to ADD a prerequisite condition on all possible dates of the year.

**Corrective Action:** Either enter "+" in the code option or use a different date reference.

**CTM757E RERUN OPTION CONFLICTS WITH CYCLIC TASK TYPE**

**Explanation:** The RERUN option has been specified for a CYCLIC task type. You cannot use the RERUN option for a CYCLIC task type.

**Corrective Action:** Omit the RERUN option.

**CTM758E PLEASE FILL IN STEP NAME BEFORE THE FINISHING CODE**

**Explanation:** A job or step finishing code appears without a step name. A step name is obligatory in an ON STEP CODES statement. For more details, see the job production parameters chapter in the *Control-M for z/OS User Guide*.
Corrective Action: Fill in the step name or erase the finishing code.

CTM759E MAXIMUM 245 FINISHING CODES FOR ONE STEP
Explanation: Too many finishing codes for one step. The maximum number of finishing codes for one step is 245.
Corrective Action: If you want to use more finishing codes, you can open a new ON STEP statement.

CTM760E AT LEAST ONE FINISHING CODE IS EXPECTED AFTER PREVIOUS STEP NAME
Explanation: A step name is not followed by at least one finishing code. For more details, see the job production parameters chapter in the Control-M for z/OS User Guide.
Corrective Action: Specify a finishing code.

CTM761E PLEASE FILL IN THE PREVIOUS STEP/CC LINE
Explanation: A DO statement is filled in, but the previous STEP/CC line is empty. The ON STEP CODES line is obligatory in CODES statement.
Corrective Action: Fill in the previous ON STEP CODES line or erase the DO statement.

CTM762E REDUNDANT TEXT IN SHOUT PARAMETER
Explanation: The SHOUT WHEN statement contains data which is not relevant to the shout option specified.
Corrective Action: Erase the redundant text.

CTM763E PLEASE FILL IN PREREQUISITE NAME FOR SHOUT OPTION "COND"
Explanation: A prerequisite name for a SHOUT option is missing. For more details, see the job production parameters chapter in the Control-M for z/OS User Guide.
Corrective Action: Fill in a prerequisite name.

CTM764E INVALID SHOUT REFERENCE. USE "- " OR BLANK
Explanation: A SHOUT reference is invalid.
Valid SHOUT references are:
- " " (Blank) - for checking the existence of a condition
- "- " - for checking the absence of a condition.
Corrective Action: Type "- " in the SHOUT reference field, or leave the field blank.

CTM765E PLEASE FILL IN THE SHOUT LINE BEFORE THIS MESSAGE LINE
Explanation: A message is filled in, but the SHOUT line that precedes it is empty.
Corrective Action: Fill in the SHOUT WHEN field. If necessary, fill in the TO destination field also.
INCONTROL for z/OS Messages Manual

CTM766E PLEASE FILL IN THE MESSAGE
Explanation: There is no message in the SHOUT statement.
Corrective Action: Fill in the message.

CTM767E CONFLICT BETWEEN "OK", "NOTOK" AND "RERUN" FOR THE SAME STEP
Explanation: There is a conflict of actions for the same ON STEP statement. A job cannot at the same time be OK and NOTOK, or OK and RERUN.
Corrective Action: Select one of the options: OK, NOTOK and RERUN, and omit the rest.

CTM768I TOP OF JOBS LIST
Explanation: This information message indicates that the current job is the first job in the jobs list. The message may appear after entering the command PREVJOB in the Job Zoom screen.
Corrective Action: No action is required.

CTM769I BOTTOM OF JOBS LIST
Explanation: This information message indicates that the current job is the last job in the jobs list. The message may appear after entering the command NEXTJOB in the Job Zoom screen.
Corrective Action: No action is required.

CTM770E PLEASE FILL IN LIBRARY NAME
Explanation: In Control-M, this message indicates that the library name is missing. LIBRARY name is obligatory.
Corrective Action: Fill in a LIBRARY name. For started tasks type the computer ID and started task parameters.

CTM770I INVALID TRACE LEVEL WAS SPECIFIED: xxxxxxxxxxxxxxxx
Explanation: This information message is issued when TRACE is turned on for the IOA online monitor and the trace level is invalid.
When the $IOA-monName, TRACE is set to nnn, the command ON or OFF is used to turn TRACE ON or OFF, and the TRACE level is invalid, this message is issued. The TRACE level may be set to any value from 1 through 256.
The system ignores the command and continues processing.
Corrective Action: Reset the TRACE level to a valid value and try again.

CTM771E PROC STEP MUST BE PRECEDED BY PGM STEP
Explanation: A PROCST (proctep) name has been filled in, but the PGMST field is empty. A PGMST name is obligatory when using PROCST.
Corrective Action: If you really want to reference all the steps in the procedure designated in the PROCST field, insert ANYSTEP in the PGMST field.
CTM771I FORMATTING OF CONTROL-D COMMUNICATION FILE STARTED

**Explanation:** This information message indicates that the Control-D Communication file is currently being formatted.

**Corrective Action:** No action is required.

CTM772E OK, NOTOK AND EXERR CANNOT BE SPECIFIED FOR A SPECIFIC STEP NAME

**Explanation:** OK, NOTOK, or EXERR events have been specified in the same ON STEP statement.

**Corrective Action:** To specify any event (in any case), use the event *****.

CTM772I FORMATTING OF CONTROL-D COMMUNICATION FILE ENDED

**Explanation:** This information message indicates that the formatting of Control-D Communication file by the CTDFRCOM utility has ended.

**Corrective Action:** No action is required.

CTM773E REQUIRED CALENDAR DEFINITION IS MISSING

**Explanation:** The option used in the DAYS or WDAYS parameter requires a name of a calendar to work with.

**Corrective Action:** Either correct the DAYS or WDAYS definition, or enter a calendar name.

CTM773S FORMATTING OF CONTROL-D COMMUNICATION FILE - WRITE I/O ERROR

**Explanation:** An I/O error occurred during formatting of the Control-D Communication file. This may occur when there is incompatibility between the definition of the Communication file in the Installation Parameters (COMSIZE in CTDPARM) and the JCL SPACE or DCB parameters.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct either the JCL or the Installation Parameters.

CTM774E PERIOD IDENTIFIER SPECIFIED IS INVALID

**Explanation:** The period identifier specified in a DnPi date selection is invalid. It must be A-Z, 0-9, or * (except Y and N).

**Corrective Action:** Specify a valid period identifier.

CTM774S CONTROL-D COMMUNICATION FILE WAS NOT BUILT

**Explanation:** The CTDFRCOM utility failed.

**Corrective Action:** Look for previous error messages that describe the type of error.
**CTM775I  monName - validModifyParm**

**Explanation:** This information message follows the CTM649E message, which is issued when a MODIFY command parameter is invalid.

**Corrective Action:** No action is required.

**CTM776I  monName - SHUT DOWN UPON REQUEST FROM OPERATOR**

**Explanation:** This information message indicates that the specified Online monitor is shutting down because of an operator’s request.

**Corrective Action:** No action is required.

**CTM777E  "FROM" FIELD SHOULD BE BLANK**

**Explanation:** A value was specified in the FROM field, but the field should be blank. The FROM field indicates how the next run time of the job should be calculated. A value should only be specified in one of the following circumstances:

- The TASKTYPE value is CYC, indicates a cyclic job (valid values are CYC, CST, ECJ, or ECS)
- The MAXRERUN field contains a value

Neither of these criteria applies to this job. Therefore, no value should be specified.

**Corrective Action:** Delete the value in the FROM field.

**CTM777I  monName - ONLINE MONITOR INITIALIZATION STARTED**

**Explanation:** This information message indicates that the specified Online monitor was started and is currently building the required internal environment.

**Corrective Action:** No action is required.

**CTM778E  VALID VALUES ARE 'TRGT', 'STRT', OR 'END'**

**Explanation:** Either an incorrect value or no value was specified in the FROM field. This message displays available valid values, one of which should be specified.

The FROM field indicates how the next run time of the job should be calculated. A valid value must be specified when TASKTYPE is set to CYC, indicating a cyclic job, or if the MAXRERUN field contains a value. This job satisfies one of those criteria.

Valid values are:

- **STRT** - The interval between runs from the start of execution of a job.
- **END** - The interval between runs from the end of the job run.
- **TRGT** - The interval between runs from the start of the previous interval.

**Corrective Action:** Specify one of the above values for the job.

**CTM778I  monName - ONLINE MONITOR INITIALIZATION COMPLETED**

**Explanation:** The monName Online monitor is ready to serve the user’s sign-on request.
Corrective Action: No action is required.

CTM779E monName - ONLINE MONITOR INITIALIZATION FAILED RC rc IN STEP step#

Explanation: The specified Online monitor initialization has encountered an internal error. The following step and return codes can appear in the message:

<table>
<thead>
<tr>
<th>Step Code</th>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>0001</td>
<td>04</td>
<td>IOA component already active.</td>
</tr>
<tr>
<td></td>
<td>08</td>
<td>Subsystem name not supplied.</td>
</tr>
<tr>
<td></td>
<td>12</td>
<td>Subsystem executor not found.</td>
</tr>
<tr>
<td></td>
<td>16</td>
<td>Insufficient storage.</td>
</tr>
<tr>
<td></td>
<td>20</td>
<td>Subsystem already active for a different IOA release.</td>
</tr>
<tr>
<td></td>
<td>24</td>
<td>IOAOMON already active for a different IOA release.</td>
</tr>
<tr>
<td></td>
<td>28</td>
<td>Invalid parameters passed to the initialization routine.</td>
</tr>
<tr>
<td></td>
<td>32</td>
<td>Internal error.</td>
</tr>
<tr>
<td>0002</td>
<td></td>
<td>ECBLIST could not be obtained in CSA/ECSA</td>
</tr>
<tr>
<td>0003</td>
<td></td>
<td>Cross-memory environment establishment error AXSET).</td>
</tr>
<tr>
<td>0004</td>
<td></td>
<td>Cross-memory environment establishment error (LXRES).</td>
</tr>
<tr>
<td>0005</td>
<td></td>
<td>(ETCRE).</td>
</tr>
<tr>
<td>0006</td>
<td></td>
<td>(ETCON).</td>
</tr>
<tr>
<td>0007</td>
<td></td>
<td>IOAOMON could not be made non-swappable.</td>
</tr>
<tr>
<td>0009</td>
<td>08</td>
<td>IOAOMON own ASCB not found.</td>
</tr>
</tbody>
</table>

The specified online monitor will shut down.
**Corrective Action:** Act according to the step number and return code as follows:

<table>
<thead>
<tr>
<th>Step Code</th>
<th>Return Code</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>0001</td>
<td>08</td>
<td>Verify that the subsystem name is defined.</td>

<td>Try again.</td>
</tr>
<tr>
<td></td>
<td>20</td>
<td>Verify that the subsystem is used solely by the current IOA version of IOAOMON.</td>
</tr>
<tr>
<td></td>
<td>24</td>
<td>Verify that the subsystem is used solely by the current IOA version of IOAOMON.</td>
</tr>
<tr>
<td></td>
<td>28</td>
<td>Forward problem to IOA representative.</td>
</tr>
<tr>
<td></td>
<td>32</td>
<td>Forward problem to IOA representative.</td>
</tr>
<tr>
<td>Step 0002</td>
<td></td>
<td>Try again.</td>
</tr>
<tr>
<td>From 0003 through 0009</td>
<td></td>
<td>Forward problem to your INCONTROL representative.</td>
</tr>
</tbody>
</table>

**CTM77AI USER userId WAS CANCELED DUE TO TIMEOUT**

**Explanation:** This information message indicates that the communication session with the specified user was terminated because no data was transmitted during a period of time which exceeded the timeout interval.

This message is generated by the CTMXSND program, which communicates with the OMON cross-memory monitor.

**Corrective Action:** No action is required.

**CTM77BE VALID VALUES ARE 'S' 'R' 'N' OR 'A'**

**Explanation:** An invalid value was specified in the DYNAMIC INSERT JOB INTO GROUP field of the Confirmation Window for a FORCE/ORDER option in a Job List Screen.

Valid value for this field are:
S - This opens a panel with a list of all group entities, and allows the user to select the group entity to force the job into the Active Job File. The Order ID of each group is displayed.

R - Add the job to the group entity (in the Active Job File) that was most recently ordered.

N - Force a job belonging to a group entity, and the group entity itself, to the Active Jobs File.

A - Default value. Force a job or a group entity to the Active Jobs File.

Corrective Action: Specify a valid value.

CTM77DE VALUE 'N' NOT ALLOWED FOR REGULAR JOB

Explanation: The value specified in the DYNAMIC INSERT JOB INTO GROUP field of the Confirmation window for the FORCE/ORDER option for a regular job definition is invalid.

Corrective Action: Specify one of the following values:

S - Selects the group entity to force the job into the Active Jobs file.

R - Adds the job to the group entity that was most recently ordered.

A - Forces the job into the Active Jobs file.

CTM77FE VALID VALUES ARE 'STRT' AND 'END'

Explanation: For CYCLIC type 'V' (Varying intervals), the FROM value must be either STRT or END.

Corrective Action: Correct the field contents.

CTM780I monName - NO USER IS SIGNED ON TO THIS ONLINE MONITOR

Explanation: This information message is displayed when the operator inquires about active users in the specified Online monitor, but there are none.

Corrective Action: No action is required.

CTM781E monName - INSUFFICIENT STORAGE FOR USER usr: SIGN ON FAILED

Explanation: There is insufficient virtual storage in the Online monitor address space. The user sign-on request is terminated.

Corrective Action: Do the following:

1. Increase the REGION size of the Online monitor.
2. If the problem persists, reduce the number of users allowed to sign on to the Online monitor by lowering the value of the MAXSESS parameter of the specific monitor in IOAXPRM. For more details, see the description of installing the IOA Online monitor in the INCONTROL for z/OS Installation Guide.

CTM782E monName - INSUFFICIENT STORAGE FOR INITIALIZATION

Explanation: Highlighted, unrollable message.

There is insufficient memory for the online monitor. The monName online monitor will shut down.
Corrective Action: No action is required.

CTM783W monName - CONTROLM YES PARAMETER WILL BE IGNORED
Explanation: There is a contradiction between the CONTROLM parameter in Control-D Installation Parameters (CTDPARM) and the parameters file (member) allocated by the DAXMMIN DD statement. The CONTROLM YES parameter is ignored.
Corrective Action: Correct the parameters file allocated to the DAXMMIN DD statement and correct CTDPARM.

CTM784E monName - AN ONLINE MONITOR WITH THE SAME STC NAME IS ALREADY ACTIVE
Explanation: The operator entered a START command in order to activate a monitor. Control-D and Control-M online monitors may work simultaneously provided that each monitor uses a unique name. The newly started online monitor terminates.
Corrective Action: If an additional online monitor is needed, define another JCL procedure with a different name to support it.

CTM785I EXISTING USERS (IF ANY) ARE NOT USING A TREE
Explanation: A DISPLAY TREES inquiry has been made, but no users are using a Control-D Recipient Tree.
Corrective Action: No action is required.

CTM786I monName - NEW TREE LOADED. NEW USERS WILL BE SIGNED ON TO THE NEW TREE
Explanation: This information message indicates that the operator has modified the Online monitor with the LOADTREE command. A new tree was loaded from the data set (member) allocated to the DATREE DD statement. The new tree will be in effect for all users who sign on from this point in time.
Corrective Action: No action is required.

CTM787W monName - MAXIMUM NUMBER OF TREES LOADED. A TREE MUST BE FREED IN ORDER TO LOAD A NEW ONE
Explanation: The operator entered a LOADTREE command but there are already five trees in storage. Only five tree copies can be loaded.
Corrective Action: Wait and retry. A tree is freed when the last user session working with that tree leaves the user screen, or is cancelled.
CTM788I  monName - THE FOLLOWING USERS ARE SIGNED ON TO TREE NUMBER num

Explanation: This information message is the result of a DISPLAY TREES inquiry to one of the online monitors. It acts as a header for the CTM789I message. The message is displayed for each Recipient Tree that is loaded in the online monitor.

Corrective Action: No action is required.

CTM789I  monName - userId1 userId2 ...

Explanation: This information message displays the result of a DISPLAY TREES inquiry to one of the online monitors. It is displayed for each group of six users.

The variables in this message are:
- monName - the name of the online monitor started task
- userId - the user ID of the person that is using the Recipient Tree

Corrective Action: No action is required.

CTM78AE  ioamon stc name INITIALIZATION OF THE LIBRARY ddName FAILED

Explanation: The IOA online monitor could not process the library referenced by the ddName DD statement. The error occurred when the IOA online monitor address space attempted to initialize processing for the library or a member within the library.

The IOA online monitor terminates with a return code of 8.

Corrective Action: Check for the presence of the ddName DD statement, the library referenced by it, and the member name in the ALC allocation member and in the JCL for the monitor. Add the missing entry or correct the entry in error. Restart the IOA online monitor.

CTM78BE  ioamon stc name MEMBER PRMXMM WITH COMMON COMMANDS AND PFKEYS IS NOT FOUND

Explanation: The IOA online monitor did not find the PRMXMM member in the IOA PARMCMD library. The library referenced by the DACMDCU DD statement under the IOA online monitor does not contain the PRMXMM member, which internally defines common COMMANDS and PFKEYS.

The IOA online monitor terminates with a return code of 8.

Corrective Action: Ensure that the DACMDCU DD statement correctly refers to the IOA PARMCMD library. Ensure that the PRMXMM member exists in the library. If the problem persists, contact BMC Customer Support.
**CTM78CI ioaomon stc name MEMBER memName WITH COMMANDS OR PFKEYS IS NOT FOUND**

**Explanation:** The IOA online monitor did not find the COMMAND or PFKEYS member in the IOA PARMCMD library. The libraries referenced by the DACMDCU and DAPFCMD DD statements under the IOA online monitor do not contain the COMMAND member or the PFKEYS associated with the currently displayed screen.

The IOA online monitor continues execution. Problems may occur when attempting to execute commands entered on the user’s screen.

**Corrective Action:** Do the following:

- Ensure that the DACMDCU and DAPFCMD DD statements correctly refer to the IOA PARMCMD library.
- Ensure that all necessary COMMAND and PFKEYS members exist in the library.
- If the problem persists, contact BMC Customer Support.

**CTM78DE jobName JOBNAME NOT DEFINED IN IOAXPRM**

**Explanation:** When starting up, the jobName IOA Online monitor was not found in IOAXPRM (either explicitly, or by mask).

The IOA Online monitor terminates.

**Corrective Action:** Use a valid job name, or make the necessary changes to IOAXPRM, and restart the monitor.

**CTM78EE jobName WRONG LEVEL OF IOAXPRM**

**Explanation:** The eye-catcher of the IOAXPRM member was not found in storage. The probable cause is that the eye-catcher was overwritten by another module.

The startup of the IOA monitor stops.

**Corrective Action:** Contact your INCONTROL administrator. If no solution can be found for the problem, contact BMC Customer Support.

**CTM790E SECURITY VIOLATION details**

**Explanation:** where details is PASSWORD IS NOT AUTHORIZED or PASSWORD HAS EXPIRED.

An invalid or expired password has been specified in the IOA Online Entry Panel.

The logon request is denied.

**Corrective Action:** If details is PASSWORD IS NOT AUTHORIZED, reenter your password (three attempts to enter the correct password are allowed). If details is PASSWORD HAS EXPIRED, renew your password and try again.

**CTM791S USER IS NOT AUTHORIZED TO ENTER IOA ENVIRONMENT**

**Explanation:** The IOAX006 or IOAX009 IOA user exit indicated that the user cannot use the IOA Online facility.

The IOA Online facility terminates.
Corrective Action: No action is required.

CTM792E PLEASE FILL IN THE USER ID AND PASSWORD AND PRESS ENTER

Explanation: Either the USER ID or PASSWORD field in the IOA Online Entry Panel is empty.
Corrective Action: Fill in the missing information, either USER ID field or PASSWORD field.

CTM793I monName - ONLINE MONITOR SHUTTING DOWN

Explanation: Highlighted, unrollable message.
The monName Online monitor is shutting down.
Corrective Action: No action is required.

CTM794I monName - USER usr NOT FOUND

Explanation: A DISPLAY USER=usr inquiry was entered with a user name (usr) which is not active in the specified Online monitor.
Corrective Action: No action is required.

CTM795I monName - USER usr CANCELLED

Explanation: The usr Online user was cancelled upon operator's request. The usr user session will be terminated.
Corrective Action: No action is required.

CTM796E INVALID "ON STEP CODES" ARGUMENTS FOR A "DUMMY" JOB

Explanation: Arguments are specified in the ON PGMST statement of a DUMMY job. The ON PGMST, PROCST and CODES fields in the ON PGMST statement must be blank for a DUMMY job. Since DUMMY jobs are not actually submitted, you cannot check how they finished. They always finish OK.
Corrective Action: Clear the ON PGMST, PROCST and CODES fields for this DUMMY job.

CTM797E ONLY ONE IF RERUN STATEMENT IN EACH "ON PGMSTEP"

Explanation: A second DO IF RERUN action was entered for the same ON PGMSTEP. Only one DO IF RERUN action is allowed per ON PGMSTEP.
Corrective Action: Use the existing DO IFRERUN for defining the requested restart processing for this ON PGMSTEP.

CTM798E "IFRERUN" CANNOT BE USED WITH "RERUNMEM"

Explanation: A DO IFRERUN action was entered for a task that has a recovery member defined in the RERUNMEM field. RERUNMEM and DO IFRERUN are mutually exclusive. Restart is only allowed for the same member.
Corrective Action: Decide whether RERUNMEM or restart processing is needed and define the job accordingly.
CTM799E {IF RERUN | CTBSTEP | OVERLIB} IS NOT SUPPORTED FOR A STARTED TASK

**Explanation:** The user has typed a DO IF RERUN, DO IF OVERLIB, or DO IF CTBSTEP action for a started task (STC) task type. STC and DO IF RERUN, DO IF OVERLIB, DO IF CTBSTEP are mutually exclusive.

**Corrective Action:** Decide whether STC type or restart processing is needed and define the task accordingly.

CTM79AE "STOPCYCL" OPTION IS VALID FOR CYCLIC TASK TYPE ONLY

**Explanation:** A DO STOPCYCL post-processing parameter was specified in the job scheduling definition for non-cyclic job or task. DO STOPCYCL can only be specified for cyclic jobs or cyclic started tasks.

**Corrective Action:** Delete the DO STOPCYCL parameter.

CTM7A0I monName - VTAM MONITOR INITIALIZATION STARTED

**Explanation:** This information message indicates that the monName VTAM monitor started, and is currently building the required internal and external environments. This is a normal start message for the VTAM monitor initialization process.

**Corrective Action:** No action is required.

CTM7A1I monName - VTAM MONITOR INITIALIZATION COMPLETED

**Explanation:** This information message indicates that the monName VTAM monitor is ready to serve the user's sign-on requests.

**Corrective Action:** No action is required.

CTM7A2E monName - VTAM MONITOR INITIALIZATION FAILED IN STEP stepName

**Explanation:** The monName VTAM monitor initialization has encountered an internal error. The monName VTAM shuts down.

**Corrective Action:** Check the contents of the IOA Log and the system log for prior messages to determine the reason for the failure. If you cannot determine the reason, and the problem recurs whenever you start the VTAM monitor, contact BMC Customer Support.

CTM7A3S monName - VTAM MONITOR ENDED WITH ERROR

**Explanation:** A severe error has occurred. The monName IOA VTAM monitor is shutting down. Detailed information on this error is available in the messages which were previously displayed on the operator console.

The monName IOA VTAM monitor shuts down.

**Corrective Action:** Check the system log for additional messages.
CTM7A4I  monName - VTAM MONITOR SHUTTING DOWN

Explanation: This information message is displayed when the monName VTAM monitor is shutting down.
Corrective Action: No action is required.

CTM7A5E  monName - VTAM ACB FOR APPLID applId IS NOT DEFINED TO VTAM OR IT IS NOT CURRENTLY ACTIVE

Explanation: The monName VTAM monitor is unable to open the ACB for the specified application ID, such as, CTMS. The VTAM monitor opens the ACB as part of its initialization. This action is required before a LOGON can be issued. Possible causes are:
- VTAM is down.
- The VTAM application ID is inactive.
- The application is not defined to VTAM.

Corrective Action: Check that the application ID is defined, and that it is active. The command VARY NET,ACT,ID=applId activates the application. Start the VTAM monitor again.

CTM7A6E  monName - VTAM MONITOR CANNOT OPEN THE VTAM ACB. CHECK THE VTAM APPLICATION DEFINITION

Explanation: The monName VTAM monitor is unable to open the VTAM ACB. The VTAM monitor opens the ACB as part of its initialization. This action is required before a LOGON can be issued. Generally, this message is issued when the cause of the error is not one described in CTM7A5E. Possible causes are:
- VTAM is down.
- The VTAM application ID is inactive.
- The application is not defined to VTAM.

Corrective Action: Check the application definition in VTAM. The command D NET,ID=applId displays the status of the application.

CTM7A7E  monName - VTAM MONITOR CANNOT ISSUE THE SETLOGON COMMAND

Explanation: The monName VTAM monitor is unable to start the logon process. The VTAM monitor cannot accept any logon until the SETLOGON operation completes successfully. Possible causes are:
- A temporary shortage of storage exists for VTAM.
- Some other VTAM problem has occurred.
- A problem exists in the application definition.

Corrective Action: Check the application definition in VTAM. The command D NET,ID=applId displays the status of the application.
**Corrective Action:** Check the application definition in VTAM. The command D NET,ID=applId displays the status of the application.

**CTM7A8I monName - VTAM MONITOR SHUT DOWN UPON REQUEST FROM OPERATOR**

**Explanation:** This information message indicates that the monName VTAM monitor is shutting down based on an operator’s request.

**Corrective Action:** No action is required.

**CTM7A9E monName - VTAM MONITOR UNABLE TO CLOSE ACB**

**Explanation:** The monName VTAM monitor is unable to close the VTAM ACB. During shutdown processing, the VTAM monitor closes the ACB to ensure successful future initialization.

The monName VTAM monitor shuts down.

**Corrective Action:** Refer to prior messages in the system log to determine cause of the VTAM monitor shutdown.

**CTM7AAE monName - INVALID MODIFY PARAMETER. VALID PARAMETERS ARE:**

**Explanation:** An invalid parameter was passed to the monName IOA VTAM monitor by an operator modify command (F). A list of valid modify parameters appear on the operator console following this message. This is a header message for message CTM7ABI.

The modify command is rejected.

**Corrective Action:** Enter a correct modify parameter.

**CTM7ABI monName - validModifyParm(s)**

**Explanation:** This message is issued when an invalid modify parameter has been entered. The header for this message is message CTM7AAE.

**Corrective Action:** No action is required.

**CTM7ACI monName ACCEPTING LOGONS TO access_ctrl_blk**

**Explanation:** This information message indicates that the monName IOA VTAM monitor started successfully and is accepting logons to the access_ctrl_blk access control block.

**Corrective Action:** No action is required.

**CTM7AEI monName - NO USER IS SIGNED ON TO THIS VTAM MONITOR**

**Explanation:** This information message is issued if the operator inquires about active users in the monName VTAM, but there are none.

**Corrective Action:** No action is required.
CTM7AFI  monName SETLOGON GNAMEADD FAILED FOR gname
RTNCD=rtcnd,FDB2=fdb2

**Explanation:** The VTAM generic resource name was not added at logon.

The variables in this message are

- **monName** - the identity of the VTAM monitor
- **gname** - generic resource name
- **rtcnd** - VTAM return code
- **fdb2** - VTAM FDB2

The monName IOA VTAM monitor ignores the failure and proceeds.

**Corrective Action:** Check the VTAM return code and FDB2 in the IBM manuals and correct the problem.

CTM7B0I  monName - TERMINAL TRANSID

**Explanation:** This information message is issued as the result of an operator DISPLAY command to the monName VTAM monitor. This is a header for message CTM7B1I.

**Corrective Action:** No action is required.

CTM7B1I  monName - terminal transid

**Explanation:** This information message is the result of an operator DISPLAY command to the monName VTAM monitor. It is displayed for each active user.

The variables in this message are

- **monName** - the identity of the VTAM monitor
- **terminal** - the identity of the VTAM terminal
- **transid** - the identity of the current transaction supplied as the DATA parameter of the LOGON command.

**Corrective Action:** No action is required.

CTM7B2E  monName - VTAM MONITOR SHUT DOWN UPON VTAM FAILURE OR VTAM OPERATOR COMMAND

**Explanation:** The monName VTAM monitor is shutting down due to VTAM failure or upon operator request. When VTAM fails, or an operator closes the application, such as, by using an INACT command, the VTAM monitor shuts down.

The monName VTAM shuts down.

**Corrective Action:** Refer to prior messages in the system log to determine the cause of the VTAM monitor shutdown.
CTM7B3W stc - VTAM MONITOR, WAITING FOR VTAM STARTUP TO COMPLETE

Explanation: Highlighted, unrollable message.

The VTAM monitor (IOAVMON) cannot be initialized because VTAM is not active. This message is displayed on the console if the VTAM monitor (IOAVMON) is started before VTAM is active, usually at IPL time. When VTAM becomes available, the VTAM monitor will start its initialization process and this message will be deleted.

Wait for VTAM startup to be completed.

Corrective Action: No action is required.

CTM7B5I oper FROM TERMINAL terminal FAILED, WAITING TIME IS OVER

Explanation: This information message is issued if there is a delay of 30 seconds or more in either the IOAVMON logon or the IOAVMON logoff process. The process terminates.

The variables in this message are:
- **oper** -- the identity of the IOAVMON logon or the IOAVMON logoff process
- **terminal** -- the identity of the VTAM terminal

Corrective Action: If the delay occurs in the IOAVMON logon process, determine the reason for the delay and then try to logon again.

Messages CTM800 through CTM8xx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTM800E COMMAND NOT FOUND

Explanation: Invalid TSO command supplied.

Corrective Action: Correct the command and re-enter.

CTM801S PROGRAM pgm ABEND CODE abCode

Explanation: The pgm TSO program, which has been activated by the IOA Online interface, abended with the abend code abCode.

Corrective Action: You can continue working on any of the IOA screens.

CTM802S BLDL/LOAD FAILED FOR CTMTCON - "CTxTTRA" FACILITY NOT AVAILABLE

Explanation: BLDL/LOAD for the CTMTCON module failed (the DATRA DD statement). The DATRA DD statement should describe the IOA MINILOAD library which is used by the IOA screen transfer facility.

Corrective Action: Press Enter to enter the TSO command. To return to other IOA screens, exit the TSO command or application. Trying to use the TSO CTMTTRA or CTDTTRA command causes an error.
Correct the CLIST used to enter the IOA online interface so that you will not have to enter or exit TSO applications, such as ISPF, in an inconvenient way.

**CTM803S PROGRAM pgm ACTIVE, CANNOT EXIT**

**Explanation:** You entered an X command in one of the IOA screens, but the TSO program is still active. IOA expects you to exit the TSO application in an orderly manner.

**Corrective Action:** Press Enter to enter the TSO application. Exit from the TSO application. You will exit the IOA online interface. You cannot return to one of the IOA screens after you have entered the X command.

**CTM804S OPEN FAILED FOR DDNAME "DATRA"- "CTxTTRA" FACILITY NOT AVAILABLE**

**Explanation:** Opening of IOA MINILOAD file failed (the DATRA DD statement) during activation of a TSO application.

Activation of the IOA Online Transfer Facility requires loading of a special module from the IOA MINILOAD library. When this module is not loaded, the transfer facility does not function, but the TSO command is executed normally.

Possible causes are:
- The DATRA DD statement is missing.
- There is insufficient memory.

**Corrective Action:** Press Enter and you will enter the TSO command. To return to other IOA screens, exit the TSO command or application. Trying to use the CTMTTRA or CTDTTRA TSO command causes an error.

Correct the CLIST used to enter the IOA online interface so that you will not have to enter or exit TSO applications, such as ISPF, in an inconvenient way.

**CTM805I CLISTS NOT SUPPORTED YET**

**Explanation:** This information message states that CLISTS are not yet supported by Control-M or Control-D.

**Corrective Action:** Perform the CLIST under ISPF.

**CTM806E MISSING OR INVALID TRANSFER PARAMETER**

**Explanation:** A missing or invalid transfer parameter was supplied to the CTMTTRA or CTDTTRA TSO command. The transfer parameter should be one of the IOA screens or X. It must be specified in the command line of the TSO application (for example, ISPF).

Transfer is not performed.

**Corrective Action:** Press Enter to return to the TSO command, and enter a correct parameter.
CTM807E MAXIMUM TSO LEVELS EXCEEDED. CANNOT OPEN "CTxTTRA" ENVIRONMENT

Explanation: More than four levels of IOA Online interface have been opened, one under the other. Only four TSO levels are allowed for the transfer facility.

You can open more than four TSO levels, but the system will not allow a transfer between them.

Corrective Action: Either use the END command to exit at least one TSO level, or do not transfer between TSO levels.

CTM808E MEMBER $$ID IS IN USE BY ANOTHER USER (RC=rc)

Explanation: The $$ID member in the JCL library that was specified in the //*CONTROLM statements is being held by you or another user. This member is being held for editing. It must be released if the job is to be ordered.

The job is not ordered.

Corrective Action: Try to resubmit the job. If it fails again, find out who is holding the member, and have the member released.

CTM809E DYNAMIC ALLOCATION OF DDNAME "DAINTRDR" FAILED, RC=rc,errorCode

Explanation: Dynamic allocation of internal reader (INTRDR) by the Control-M Quick Submit command failed. This message appears while trying to submit a job under ISPF by the Control-M Quick Submit command.

The variables in this message are:

- rc - the return code of the failed allocation
- errorCode - the error code and information code that were returned from that SVC

The job is not submitted.

Corrective Action: Refer to IBM documentation on dynamic allocation. Compare with the data in the message and correct accordingly.

CTM810E SUBMIT FAILED - OPEN OF DDNAME "DAINTRDR" FAILED

Explanation: Open of the DAINTRDR dynamically allocated DD statement failed (Control-M Quick Submit command).

The job is not submitted.

Corrective Action: Look for additional information that will clarify the reason for the problem, for example, the console log, TSO sysout, and the like.

CTM811E INTERNAL ERROR IN CTMQSB - NOTIFY THE IOA ADMINISTRATOR error_code,rc

Explanation: An internal error occurred in either the Quick Submit program (CTMQSB) or a user program that calls the CTMAJO Control-M routine.
The job is not ordered.

**Corrective Action:** If `error_code,rc` is `SELECTAB`, **xx** the CTMAJO routine returned an unknown return code (**xx**) to the calling program.

- If this error was encountered during an ISPF submit command, call the INCONTROL administrator.
- If it occurred in a user program, correct it to support all the possible return codes that the CTMAJO routine can return.
- Otherwise, call your INCONTROL administrator.

---

**CTM812E** **MISSING/INVALID INFORMATION IN "/*CONTROLM" CARDS (RC=rc)**

**Explanation:** The "/*CONTROLM" statement or statements in the job contain invalid or insufficient information for performing the job-order (Control-M Quick Submit Command).

Return codes values:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>04</td>
<td>Only one type of Control-M statement has been found; there should be two: TABLE and JCL.</td>
</tr>
<tr>
<td>08</td>
<td>Invalid keyword as the first parameter in a /*CONTROLM statement.</td>
</tr>
<tr>
<td>12</td>
<td>Missing tables scheduling library parameter.</td>
</tr>
<tr>
<td>16</td>
<td>Missing table name parameter.</td>
</tr>
<tr>
<td>20</td>
<td>Missing JCL library parameter.</td>
</tr>
</tbody>
</table>

The job is not ordered.

**Corrective Action:** Correct the error and submit again.

---

**CTM813E** **UNABLE TO READ TABLE tableName (RC=rc)**

**Explanation:** The Control-M Quick Submit command failed to locate the table member specified in the /*CONTROLM TABLE statement.

Valid values for `rc` are:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>8</td>
<td>There is insufficient memory.</td>
</tr>
<tr>
<td>12</td>
<td>The <code>tableName</code> table member was not found in the specified scheduling library.</td>
</tr>
<tr>
<td>36</td>
<td>The library specified was not found.</td>
</tr>
</tbody>
</table>
The job is not ordered.

**Corrective Action:** Correct the error and submit the job again.

**CTM814E UNABLE TO READ THE $$ID MEMBER. (RC=rc)**

**Explanation:** Open or read of the $$ID member in the JCL library failed. (Control-M Quick Submit command).

Possible return code values, and their explanations, are:

- 12 - The $$ID member is not in the library specified in the /*CONTROLM JCL statement.
- 36 - The library specified in the /*CONTROLM JCL statement was not found.

The job is not submitted.

**Corrective Action:** Look for additional information that will clarify the reason (for example, the console log, TSO sysout, and so on).

**CTM815E ERROR WHILE UPDATING THE $$ID MEMBER. (RC=rc)**

**Explanation:** Update of the $$ID member in the JCL library failed (Control-M Quick Submit command). A return code of 56 indicates a D37 abend on the library specified in the /*CONTROLM JCL statement.

The job is not submitted.

**Corrective Action:** Look for additional information that will clarify the reason. For a return code of 56, compress or enlarge that library.

**CTM816E ERROR WHILE SAVING THE JOB. (RC=rc)**

**Explanation:** Writing the job to the JCL library failed (Control-M Quick Submit command).

Possible values of rc, and their explanations, are:

- 56 - There is insufficient space (abend D37) in the library specified in the /*CONTROLM JCL statement. Possible reasons are:
  - The directory is full in the library specified in the /*CONTROLM JCL statement.
  - The data set needs a secondary extent, but DASD space is not available.
  - A security violation has occurred.
  - 64 - The member already exists or there is no space in the directory.

The job is not submitted.

**Corrective Action:** Do one of the following:
- If the return code is 56, compress or enlarge the appropriate library.
- If the return code is 64, there is a member in that library with the same name. Determine the reason and correct the problem.

**CTM817E INVALID ID-NUMBER IN THE $$ID MEMBER**

**Explanation:** The five characters in the first line of the $$ID member in the JCL library are not numeric. There should be one line containing the current ID. It should be five numeric digits, and left-justified.

The job is not submitted.

**Corrective Action:** Correct the $$ID member accordingly.

**CTM821I MANUAL-COND cond ODATE odate action**

**Explanation:** This information message displays the results from NEW or ERASE command. The condition cond of the odate original scheduling date was either erased from the Manual Conditions file or added to the Manual Conditions file.

**Corrective Action:** No action is required.

**CTM822E MISSING PARAMETER OF NEW REQUEST**

**Explanation:** The NEW command was supplied without any additional parameter. At least one parameter is expected after the NEW command. Valid parameters are COND, LCOND or CONDITION.

**Corrective Action:** Supply the correct command.

**CTM823E INVALID TYPE IN NEW REQUEST**

**Explanation:** Invalid NEW type supplied. At least one parameter is expected after the NEW command. Valid parameters are COND, LCOND or CONDITION.

**Corrective Action:** Specify the requested NEW type.

**CTM824I MANUAL-COND cond ODATE odate EXISTS**

**Explanation:** This information message indicates that the condition added by the NEW command already exists in the file.

Addition request ignored.

**Corrective Action:** No action is required.

**CTM825E NEW FOR cond ODATE odate FAILED. FILE IS FULL**

**Explanation:** The Manual Conditions file is full.

The condition is not added to the file.

**Corrective Action:** Try to delete conditions from the specified day in other months of the year. If you need all the conditions in the file for all the months, then consult your system programmer about the possibility of increasing the capacity of the IOA Manual Conditions file.
CTM826E CONDITIONS FILE OR MANUAL CONDS FILE IN USE, PLEASE TRY AGAIN LATER

Explanation: Another user or another IOA component is currently updating the file. The command requested is not performed.
Corrective Action: Try again.

CTM828E UNEXPECTED RETURN CODE FROM CTMUNR

Explanation: Internal error. Invalid return code from the CTMUNR Control-M internal utility. The function requested is not performed.
Corrective Action: Have your system programmer prepare the Control-M monitor full output and contact BMC Customer Support.

CTM829S INTERNAL ERROR - INVALID REQUEST TO CTMUNR

Explanation: Internal error. Invalid request to the CTMUNR IOA internal utility. The function requested is not performed.
Corrective Action: Have your system programmer prepare the Control-M monitor full output and contact BMC Customer Support.

CTM830S INTERNAL ERROR - INVALID RESOURCE TYPE (CTMUNR)

Explanation: Internal error. Invalid resource type passed to the CTMUNR IOA internal utility. The function requested is not performed.
Corrective Action: Have your system programmer prepare the Control-M monitor full output and contact BMC Customer Support.

CTM831E MANUAL-COND cond ODATE odate IS NOT IN THE FILE

Explanation: The cond condition that was marked for addition (the A option) has been deleted from the Manual Conditions file. While you were working on the screen, another IOA user deleted the condition from the Manual Conditions file. The condition is not added to the Conditions file.
Corrective Action: Manually add the deleted condition to the Manual Conditions file using Screen 4.

CTM832E AT LEAST ONE OF "PENDING" OR "ADDED" MUST BE "Y"

Explanation: Neither the PENDING nor the ADDED option is marked as Y.
Corrective Action: Mark one retrieval option as Y.

CTM833S INTERNAL ERROR. INVALID RETURN CODE FROM CTMUNR

Explanation: Internal error. Invalid return code from the CTMUNR Control-M internal utility.
**Corrective Action:** Have your system programmer prepare the Control-M monitor full output and contact BMC Customer Support.

CTM834S OPEN OF IOA MANUAL CONDITIONS SYNC FILE FAILED

**Explanation:** Open of the IOA Manual Conditions Synchronization file failed. Possible causes are:

- The DANSINC DD statement is missing.
- The file allocated to the DANSINC DD statement is not the IOA Manual Conditions Synchronization file.
- The file allocated to the DANSINC DD statement is the IOA Manual Conditions Synchronization file, but is a different version or for a different IOA installation.

**Corrective Action:** Correct the JCL for the job or the allocations of the CLIST.

CTM835S FILE ALLOCATED TO DDNAME "DANSINC" IS NOT THE MANUAL SYNC FILE

**Explanation:** The file allocated to the DANSINC DD statement is not the Manual Conditions Synchronization file. Possible causes are:

- The file allocated to the DANSINC DD statement is not the IOA Manual Conditions Synchronization file.
- The file allocated to the DANSINC DD statement is the IOA Manual Conditions Synchronization file, but it is a different version or for a different IOA installation.

**Corrective Action:** Check your TSO user allocations, and check for specific messages on the system log.

CTM836E VALID VALUES ARE 'P' 'N' '-' OR '+'

**Explanation:** The SAC job scheduling parameter for a Group entity scheduling definition contains an invalid value.

Valid values for SAC for a group entity job definition are:

- P - previous day
- N - next day
- - (minus sign) - previous day only
- + (plus sign) - next day only

**Corrective Action:** Correct the value.

CTM837E VALID VALUES ARE 'P' OR 'N'

**Explanation:** The SAC job scheduling parameter for a job scheduling definition contains an invalid value.

Valid values for SAC for a job scheduling definition are:

- P - previous day
- N - next day

**Corrective Action:** Correct the value.
CTM846S INSUFFICIENT SPACE FOR type cond odate

Explanation: The output IOA Conditions file has insufficient space for all the prerequisite conditions from
the input file. The combination of the LRECL parameter with the CNDREC# parameter is smaller in the
output file than in the input file, and some prerequisite conditions in the input file could not be copied to
the output file.

The variables in this message are:

- **type** - the type of condition
- **cond** - the condition name
- **odate** - the original date

Conversion or copying of the file stops. The content of the output file is unpredictable.

Corrective Action: Create a larger output file and run the utility again.

CTM850S modName BLDL FAILED FOR MODULE

Explanation: BLDL for the modName module failed.

Probable causes are:

- The module is not in one of the load module libraries used by the IOA Online Facility (Linklist, STELIB or invoked CALL library).
- There is insufficient memory to load the program.

The modName module is not activated. Control is returned to the calling program. The IOA Online
Facilities may abend on initialization.

Corrective Action: Verify whether the module appears in IOA Load library or any other concatenated
load module library.

CTM855S INVALID PARAMETER SUPPLIED TO MODULE mod-name - parm

Explanation: Either an input parameter was omitted from, or an invalid input parameter (parm) was
supplied to, the modName main IOA online module.

The variables in this message are:

- **modName** - the name of the main IOA online module
- **parm** - the identity of the missing or invalid parameter

The modName module expects a series of parameters to be input, describing the environment in which it
is to be activated. The expected parameters are:

```
APPLTYPE=type,APPLID=id
```

In this expression:

- **type** is S (for TSO), R (for KSL), I (for ISPF) or X (for OMEGAMON)
- **id** is the user application ID

The IOA online environment is not built.
**Corrective Action:** Check for errors in the CLIST which activates the IOA online interface.

**CTM856S DDNAME ddName NOT ALLOCATED**
**Explanation:** Highlighted, unrollable message.
The DD name specified in the error message was not allocated before the user entered IOA.
The IOA Online facility terminates.
**Corrective Action:** Allocate the specified DD name and reenter IOA.

**CTM857S PRODUCT productName NOT RECOGNIZED**
**Explanation:** Highlighted, unrollable message.
A user tried to enter IOA using a user-defined transaction member which contained a definition of a product not recognized by IOA.
The IOA Online facility stops.
**Corrective Action:** Correct the product definition in the transaction member and reenter IOA.

**CTM858S MEMBER NAME - memName IN TRANID transMem NOT FOUND IN PARM LIBRARY**
**Explanation:** Highlighted, unrollable message.
A user tried to enter IOA using a user-defined transaction. The TRANID refers to a member which pointed to a PGM member name that did not exist in the parameter library referenced by the DD name DAONLPRM.
The Online facility terminates.
**Corrective Action:** Check that the PGM member is correctly specified in the transaction member. If it is correctly specified in this member, add it to the parameter library. Reenter IOA.

**CTM859E INVALID RC rc FROM routineName ROUTINE**
**Explanation:** The program ended with unexpected return code.
If the CTMRCAL utility is running, rc is 16, and routineName is IOABSR. In this case, the REPTYPE utility control statement is probably missing the S subparameter.
System action depends on the calling program. Execution may continue, or it may stop with a condition code of 08 or 12.
**Corrective Action:** If the REPTYPE utility control statement is missing the S subparameter, specify it with the S subparameter as REPTYPE nS, where n is 0, 1 or 2. Otherwise, notify your INCONTROL administrator.

**CTM859S TRANID MEMBER NOT FOUND - transMem**
**Explanation:** The user tried to enter IOA using a user-defined transaction. TRANID refers to a member that does not exist in the parameter library referenced by the DAONLPRM DD statement.
The IOA Online facility stops.
Corrective Action: Add the transaction member identified in the message to the parameter library and reenter IOA.

CTM85AS INVALID KEYWORD FOUND IN - transMem

Explanation: The user tried to enter IOA using a user-defined transaction. The TRANID refers to a member which contained an invalid keyword.

The Online facility stops.

Corrective Action: Check the keywords in the transaction member and correct them accordingly. See the section on transaction members in the INCONTROL for z/OS Administrator Guide. Reenter the IOA Online facility.

CTM85BS PLEASE CHECK THE TRANID MEMBER - transMem.

Explanation: An internal error occurred when a user tried to enter IOA using a user-defined transaction. The internal error occurred when the IOA Online facility tried to initiate the IOA session using the transaction member identified in the message.

The IOA Online facility stops.

Corrective Action: Supply BMC Customer Support with a printout of the transaction member identified in the message.

CTM85CS ERROR OCCURRED DURING ALLOCATION PROCESS. PLEASE CHECK THE ALC MEMBERS

Explanation: IOA online system failed to allocate a file.

When the IOA Online facility starts up, it allocates all the files needed for the current session. At least one of these files could not be allocated.

Preceding messages detail the files that could not be allocated.

The IOA Online system stops.

Corrective Action: Correct the ALC xxx members according to information from the preceding messages and reenter IOA.

CTM85DS ddName DDNAME IS ALLOCATED. PLEASE FREE IT AND TRY AGAIN

Explanation: The ddName file was already allocated to the IOA Online environment when the IOA Online facility started up.

When the IOA Online facility starts up, certain files are dynamically allocated by it to the IOA environment. In this case, the ddName file identified in the message was already allocated to the IOA environment when IOA started up.

The Online facility terminates.

Corrective Action: Deallocate this DD name from the IOA environment.
CTM85ES MODULE *moduleName* RETURNED WITH RC=*rc*

**Explanation:** A severe error occurred in the *moduleName* module when the user tried to enter an IOA option. In most cases, the called program could not issue an error message.

Valid values for *rc* are:

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>08</td>
<td>There is no region below the line for the application.</td>
</tr>
<tr>
<td>12</td>
<td>There is no region above the line for the application.</td>
</tr>
<tr>
<td>16</td>
<td>A severe error occurred. The called program issued an error message.</td>
</tr>
<tr>
<td>20</td>
<td>A severe error occurred. An error message could not be issued.</td>
</tr>
</tbody>
</table>

The called program abends.

**Corrective Action:** The user response depends on the return code, as follows:

- 08 / 12 - In case of TSO, log off and log on again. In case of IOAOMON, stop and restart IOAOMON. If this does not help, reduce the number of IOAOMON users by modifying the MAXSESS parameter in the IOAXPRM member.
- 16 - Follow the instructions in the error message issued by the called program.
- 20 - Contact BMC Customer Support.

CTM85FS MAXIMUM NUMBER OF IOA SESSIONS REACHED

**Explanation:** TSO user tried to activate a fifth IOA session in his TSO address space.

In the TSO environment, the user can activate IOA sessions by executing the IOATSO or IOAISPF CLISTs. IOA allows a maximum of four sessions to be activated. If the user tries to activate a fifth session, this error message is generated.

The fifth session is not established.

**Corrective Action:** Terminate one of the previous sessions in order to initiate a new session.

CTM85IS GLOBAL PROFILE VARIABLES (*PROFILE*) COULD NOT BE ACCESSED

**Explanation:** An attempt to access the *PROFILE* member in the IOAENV library failed.

The most common cause is that the member is held by another user or program. The IOA Online facility is not entered.

**Corrective Action:** Determine which user or program is holding the member, and try to obtain its release.
CTM860E OPTION NOT SUPPORTED YET

Explanation: The requested option is not yet supported. The option will be available in future IOA releases.

Corrective Action: No action is required.

CTM861I PLEASE SELECT OPTION

Explanation: No option selected.

Corrective Action: Select one option.

CTM862S ERROR IN COMMAND MEMBER - CALL SYSTEM PROGRAMMER

Explanation: Each IOA screen is controlled by an external command member that contains a list of all the commands and synonyms supported by the screen. Command members reside in IOA parameter libraries. They should be named TscrCMD1, where scr is the screen name.

Possible causes for this error message are:

- Somebody incorrectly changed the contents of the command member.
- The DACMD xx DD statement is allocated to the wrong library.

For more information on command members, see the section that describes how to define new application types in the IOA chapter of the INCONTROL for z/OS Installation Guide.

Corrective Action: To exit, press PA1 a few times. Allocate the parameters library to the DACMD xx DD statement, where xx is the application ID. If necessary, call your system programmer for assistance.

CTM863W THE CONTROL-M ACTIVE JOBS FILE IS NEARLY FULL

Explanation: Highlighted, unrollable message.

This message is issued when the threshold value specified by the AJFTHRSH CTMPARM parameter is reached. The message is issued in conjunction with message CTML17I, which displays the percentage of the Active Jobs file currently utilized.

Corrective Action: Contact your INCONTROL administrator immediately. It may be necessary to compress the Active Jobs file or to increase its size.

CTM864I PLEASE NOTIFY THE IOA ADMINISTRATOR

Explanation: Highlighted, unrollable message.

This message is usually issued after a severe Control-M error that must be handled by an experienced Control-M person.

Corrective Action: Contact your INCONTROL administrator immediately.

CTM865E PLEASE FILL IN FROM STEP

Explanation: Possible causes for this message are:
- **RESTART** is set to Y in the rerun or confirmation window, but the **FROM** field is blank.
- A **TO** step name is specified in the restart decision line in the Zoom screen (Screen 3), but the **FROM** step field is blank.
- **STEP RANGE** name is specified, but the **FROM** field in this **STEP RANGE** line is blank.

**Corrective Action:** Specify a step name in the **FROM** field, or set **RESTART** to N, erase the **TO** step name, and erase the **STEP RANGE** name.

**CTM866E PLEASE FILL IN A VALID SET STATEMENT. FORMAT "%%VARNAME=VALUE"**

**Explanation:** Invalid specification of an AutoEdit assignment in a DO SET statement.

The correct syntax for the **SET** statement line is: DO SET %%VARNAME=VALUE (for example, DO SET %%THISRUN=RERUN).

**Corrective Action:** Correct the AutoEdit variable assignment.

**CTM867E INSUFFICIENT MEMORY, UNABLE TO PROCESS**

**Explanation:** There is insufficient memory to perform the requested action.

The request is ignored.

**Corrective Action:** Have your system programmer prepare the Control-M monitor full output and contact BMC Customer Support.

**CTM868E TABLE "dsn (tableName)" IS IN USE. TRY AGAIN LATER**

**Explanation:** The specified member from an IOA definition library is currently in use by another user.

The variables in this message are:
- **dsn** - the name of the data set containing the requested table
- **tableName** - the name of the requested table

The request is ignored.

**Corrective Action:** Wait until the requested member is freed, then retry the request.

**CTM869E TABLE "tableName " IS NOT A VALID SCHEDULING TABLE (CARD NUMBER stmtNum)**

**Explanation:** The job table that was to be downloaded to Control-M/Enterprise Manager is not a valid scheduling table, for example, because the format of a statement is incorrect.

The variables in this message are:
- **tableName** - the name of the problematic job table
- **stmtNum** - the line number of the problematic statement within the job table

The download request is ignored.
Corrective Action: Either correct the errors in the scheduling table or specify the name of a valid scheduling table, then retry the download request.

CTM870E CTMMEM FAILED. TABLE=tableName, FUNCTION=func, RC=rc
Explanation: The CTMMEM internal service routine ended with an error.
The variables in this message are:
- tableName - the name of the table for which CTMMEM was issued
- func - the name of the relevant function
- rc - the return code of the error

For more information about CTMMEM functions and return codes, see the DOCIMEM member in the IOAP DOC library.

The download request is ignored.
Corrective Action: Note the values of tableName, func, and rc, prepare the Control-M monitor full output, and contact BMC Customer Support.

CTM871S CTMDUL INITIALIZATION FAILED: descr
Explanation: The initialization of the CTMDUL internal program failed.
In this message, descr is a brief description of the reason for the failure. Possible values for descr are:
- LOAD FAILED FOR MODULE modName
- GETMAIN FAILED

No tables are downloaded.
Corrective Action: Have your system programmer prepare the Control-M monitor full output and contact BMC Customer Support.

CTM872E TABLE tableName HAS BEEN CHANGED SINCE LAST DOWNLOAD. UPLOAD FAILED
Explanation: Uploading of a table to the mainframe was attempted. However, the table was changed following the last download to the Control-M/Desktop. Jobs can be uploaded to a table after another being downloaded by another user. However, this wipes out any jobs updated to the mainframe since the last download.

The upload utility terminates with a return code of 12.
Corrective Action: Either force the table to be uploaded or save the table under another table name. Force uploading a table will overwrite any earlier version currently on the mainframe. Use great caution with a forced upload. If a forced upload is used, jobs updated to the mainframe since the last download will be lost.

CTM873E ERROR CONVERTING TABLE "tableName" JOB "jobName": descr
Explanation: The job could not be downloaded or uploaded.
The variables in this message are:

- `tableName` - the identity of the problematic table
- `jobName` - the identity of the problematic job
- `descr` - a short description of the cause of the failure

The download or upload request is ignored.

**Corrective Action:** Proceed on the basis of the information contained in descr.

**CTM874S NEW TABLE "tableName" IS TOO BIG (MORE THAN 200,000 CARDS)**

**Explanation:** The job table could not be uploaded to Control-M because it would require more than 200,000 statements.

The maximum size of a job table is 200,000 statements.

In this message, `tableName` is the name of the problematic job table.

The upload request is ignored.

**Corrective Action:** Correct the contents of the `tableName` job table so that it requires less than 200,000 statements when uploaded to Control-M.

**CTM875E PLEASE FILL IN CALENDAR NAME OR OMIT YEAR**

**Explanation:** A year was specified, but the calendar name is missing. A year can be defined only in a calendar.

**Corrective Action:** Either fill in a calendar name or omit the year to get a list of calendars in the library.

**CTM880E CANNOT ADD MORE YEARS TO CALENDAR (MAXIMUM 10)**

**Explanation:** The calendar is full. The maximum number of years in a calendar is 10. You cannot add more years.

**Corrective Action:** Split the calendar into two calendars, or delete unnecessary years.

**CTM881E CALENDAR TOO LARGE. ERASE UNNECESSARY YEARS**

**Explanation:** The calendar is too large to be handled by IOA Online.

Possible causes are:

- Insufficient storage to process the calendar.
- The calendar is too large.

**Corrective Action:** Do one of the following:
Log on again using a larger size parameter.
If you are using many IOA screens concurrently, exit some of them using the END command.
Split the calendar into two calendars.
Erase redundant years from the calendar.

**CTM885**E INVALID YEAR (OR YEAR NOT IN VALID RANGE)

**Explanation:** The specified year is not a valid year, or is not in the range supported in IOA.

**Corrective Action:** Specify a valid year.

**CTM886**I TOP OF YEARS LIST

**Explanation:** This information message indicates that the current year is the first year in the years list. The message may appear after entering the command PREVYEAR in the Year screen.

**Corrective Action:** No action is required.

**CTM887**I BOTTOM OF YEARS LIST

**Explanation:** This information message indicates that the current year is the last year in the years list. The message may appear after entering the command NEXTYEAR in the Year screen.

**Corrective Action:** No action is required.

**CTM888**E VALID OPTIONS ARE "Y", "+", "+", "-", "N" OR BLANK

**Explanation:** An invalid day selection option has been specified. The cursor points to the invalid day value.

Valid day selection options are:
- Y - Yes
- N - No
- ' ' (blank) - No
- + (plus) - the next date in a relative calendar
- - (minus) - the previous date in a relative calendar

**Corrective Action:** Specify Y, N, +, -, or blank.

**CTM891**E OPTION SPECIFIED IS INVALID IN CASE OF A PERIODIC CALENDAR

**Explanation:** The characters Y, N, +, and - are not supported under periodic calendars.

**Corrective Action:** Use another period identifier.

**CTM899**E REDUNDANT PARAMETER

**Explanation:** The number of occurrences of the fields listed below exceeds the maximum number allowed:
Corrective Action: Delete the additional occurrences and rerun the job.

CTM89AS LIBRARY NAME IS NOT SPECIFIED

Explanation: Either the LIBRARY parameter was not specified, or the specified library does not exist.

Corrective Action: Depending on the cause, either correct the specification or create the specified library; then rerun the job.

CTM89BE PLEASE SPECIFY parm

Explanation: The parm parameter is missing. At least one TABLE parameter is required after the LIBRARY parameter. At least one MEMNAME parameter is required for each TABLE parameter.

Corrective Action: Add any missing statements, and rerun the job.

If an attempt is being made to create a group scheduling table with only a group entity and no job scheduling definitions, then set the EMPTYGRP parameter to Y in the CTMPARM member of the IOA PARM library, and then rerun the job.

CTM89CE SPECIFIED SUB-PARAMETER IS OUT OF SEQUENCE

Explanation: The parameter or subparameter specified is out of sequence.

The sequence in which certain parameters and subparameters appear in a CTMBLT input file is important. For more information on this sequence, see the Control-M chapter in the INCONTROL for z/OS Utilities Guide.

This message is accompanied by other messages that provide additional information, including a message that identifies the parameter or subparameter that was not coded in the correct sequence.

Corrective Action: Correct the sequence of the parameters and subparameters and rerun the job.

Messages CTM900 through CTM9xx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTM902E INVALID OPTION (TRY "Y", "N" OR BLANK)

Explanation: The user entered an invalid value into a field which may only contain Y, N, or blank.

Corrective Action: Correct the input field and press Enter.
CTM903E "FORCE" CODE MUST BE ALONE.

**Explanation:** Another code is entered with the FORCE code in the same ON PGMST statement. No other code may be specified with FORCE in the same ON PGMST statement.

**Corrective Action:** Remove any other code from the current statement and put it in a different ON PGMST statement or remove the FORCE code.

CTM904E "FORCE" CODE VALID ONLY ON ANYSTEP

**Explanation:** The step name is not ANYSTEP. When the code is FORCE, the step name in an ON PGMST statement must be ANYSTEP.

**Corrective Action:** Correct the step name or remove the FORCE code.

CTM905E "FORCE" CODE NOT VALID WITH PROC

**Explanation:** There is data in the PROC field, but the code is FORCE. When the code is FORCE, the PROC field in an ON PGMST statement must be empty and the step name must be ANYSTEP.

**Corrective Action:** Clear the PROC field or remove the FORCE code.

CTM906S ACCUMULATION STOPPED BECAUSE OF A REQUEST FROM USER EXIT 005

**Explanation:** The CTMX005 Control-M user exit issued a return code to stop the run of the CTMJ SA utility.

The utility stops executing with a condition code of 12.

**Corrective Action:** Check for messages from the user exit that will clarify the reason.

CTM907E "FORCE" CODE NOT VALID IN MULTIPLE ON STATEMENTS

**Explanation:** The FORCE code is in an ON PGMST statement that is connected by AND or OR to another ON PGMST statement. When the code is FORCE, no other ON PGMST statement may have an AND or OR relationship with it.

**Corrective Action:** Separate the ON PGMST statement containing it from other ON PGMST statements or remove the FORCE code.

CTM908E INVALID DO ACTION FOR "FORCE" CODE

**Explanation:** Invalid DO actions follow an ON PGMST statement that has a code of FORCE. When the code is FORCE, only COND, FORCEJOB, SET VAR and SHOUT actions are allowed.

**Corrective Action:** Remove the invalid DO actions from the ON PGMST statement containing the FORCE code and put them in a separate statement or remove the FORCE code.

CTM909E JOB LEVEL CODES VALID ONLY ON ANYSTEP

**Explanation:** A job level code was specified for a specific job step or range of steps in the job scheduling definition. Examples of job level codes are: JNRUN, JLOST, OK, and NOTOK. Job level codes relate to the overall result of the entire job execution, not to specific steps. They can only be specified with ON PGMSTEP ANYSTEP.
Corrective Action: Do not specify job level codes for specific steps or step ranges.

CTM90AE ON +EVERY IS VALID ONLY FOR CNNNN, SXXX, UNNN, FLUSH, SNRUN AND *****

Explanation: An ON step value of ON PGMSTEP +EVERY can only be specified with codes C nnnn, S xxx, U nnnn, FLUSH, SNRUN and *****.

Corrective Action: Correct the Step value or the Codes value in the job scheduling definition to a valid combination.

CTM90BE "SNRUN" CODE NOT VALID ON ANYSTEP

Explanation: Code SNRUN is not valid for an ON PGMSTEP ANYSTEP statement.

Corrective Action: Correct the Step value or the Codes value in the job scheduling definition to a valid combination.

CTM911S IOA LOG FILE - WRITE ERROR

Explanation: I/O error while writing on IOA Log file.

Possible causes are:
- The file allocated to the DALOG DD statement is not the IOA Log file.
- The file allocated to the DALOG DD statement is the IOA Log, but it is of a different version of Control-M.
- Real I/O error on the IOA Log.

Corrective Action: Check the contents of the computer log for additional messages which may clarify the picture.

CTM912S ERROR IN CONTROL-\x INSTALLATION PARAMETERS - INVALID DAYTIME

Explanation: Invalid format of the DAYTIME Control-\x installation parameter. DAYTIME is the start time of the Control-M work day in your installation. Valid formats are +hhmm or -hhmm.

For more details see the section that describes installation parameters in the chapter for the appropriate products in the INCONTROL for z/OS Installation Guide.

The requested function terminates.

Corrective Action: Call your system programmer to correct the DAYTIME parameter in the CT \x:PARM member.

CTM913S OPEN OF DDNAME "SYSPRINT" FAILED

Explanation: The opening of the print file failed. Possible causes are:
- The DD statement SYSPRINT is missing.
- The data set described by the DD statement SYSPRINT cannot be accessed for sequential write.

The program stops executing.
Corrective Action: Correct the JCL and submit again.

**CTM914S ERROR IN IOA INSTALLATION PARAMETERS - INVALID DATETYP**

Explanation: *Highlighted, unrollable message.*

The DATETYP IOA Installation Parameter is invalid. DATETYP is the type of date format used in the installation. Valid formats are:

- **A** - mmddyy
- **W** - ddmmyy
- **J** - yymmdd

For more details, see the section that describes how to set IOA installation parameters in the IOA chapter of the *INCONTROL for z/OS Installation Guide*.

The requested function stops.

Corrective Action: Call your system programmer to correct the DATETYP parameter in the IOAPARM member.

**CTM916W PROGRAM pgm WAITING FOR resourceName**

Explanation: One of the IOA monitor internal programs detected an IOA resource in use by a TSO user or batch job. This message normally appears a few times a day.

The variables in this message are:

- **pgm** - the name of the internal program that is waiting for the resource that is in use
- **rname** - the name of the resource that is in use

Valid values are:

<table>
<thead>
<tr>
<th>rname</th>
<th>Meaning</th>
</tr>
</thead>
<tbody>
<tr>
<td>CNDF</td>
<td>The IOA Conditions file</td>
</tr>
<tr>
<td>RESF</td>
<td>The Control-M Resources file</td>
</tr>
<tr>
<td>LOG</td>
<td>The IOA Log file</td>
</tr>
<tr>
<td>Control-M/D</td>
<td>The Control-M/D New Day procedure</td>
</tr>
<tr>
<td>AMFT</td>
<td>Control-D Active Missions file</td>
</tr>
<tr>
<td>JES_SSRQ</td>
<td>A JES subsystem request</td>
</tr>
<tr>
<td>CKPT</td>
<td>The Control-M Active Jobs file or the Control-D Active Missions file</td>
</tr>
</tbody>
</table>

The message is displayed on the operator console.
Corrective Action: The user response depends on the circumstances, as follows:

- If the message appears many times every few seconds, the file may be hung. This situation must be resolved by determining which program is holding the specified `rname`. Look for the IOA QNAME that is specified in the IOA Installation Parameter and take appropriate corrective action.

- If `pgm` is CTMFRM/CTDFRM and the `rname` is CONTROLM/CONTROLD, some possible reasons are:
  - there are several Control-M/D monitors running with the same QNAME
  - there is a user daily job running that has a date control record in which columns 60 through 65 are not blank, meaning that it is acting as the Control-M/D New Day procedure and therefore Control-M/D has been enqueued
  - the Control-M/D New Day procedure was started externally (manually) rather than being started by the monitor, and as a result waits for the monitor to be suspended
  Take appropriate corrective action.

- If the program name `pgm` is CTMJES and the `resourceName` is JES_SSRQ, then Control-M (in its postprocessing phase) has called the JES2 interface using IEFSSREQ (a JES2 subsystem request) and is waiting for some function to be executed by JES2, but the execution of that function is being delayed in JES2. If the message persists in this situation, prepare the Control-M monitor full output and contact BMC Customer Support.

CTM918S INSUFFICIENT MEMORY TO RUN CONTROL-x

Explanation: Highlighted, unrollable message.
More memory is required for the INCONTROL monitor.
The specified monitor will shut down.

Corrective Action: Increase the REGION size of the specified monitor.

CTM919S INTERNAL ERROR IN CONTROL-M MONITOR

Explanation: Highlighted, unrollable message.
An internal error occurred in the Control-M monitor.
The Control-M monitor abends with the user abend 0008.

Corrective Action: Try to start the Control-M monitor again. In any case, prepare the dump and contact BMC Customer Support.

CTM91ES ENVIRONMENT ERROR. CONTROL-M MONITOR INITIALIZATION ABORTED.

Explanation: The Control-M monitor detected an environment initialization error at startup.
Control-M monitor initialization is aborted.

Corrective Action: Verify that Control-M is fully installed, and notify the INCONTROL administrator.
CTM91FS CONTROL-M NOT FULLY INSTALLED. MONITOR INITIALIZATION ABORTED.

**Explanation:** At startup, the Control-M monitor detected that Control-M is not fully installed, and cannot initialize the IOA environment.

Control-M monitor initialization is aborted.

**Corrective Action:** Verify that Control-M is fully installed, and notify the INCONTROL administrator.

CTM920S AJF SIZE IS NOT EQUAL TO AJFSIZE PARAMETER SPECIFIED IN CTMPARM.

**Explanation:** Highlighted, unrollable message.

The value of the AJFSIZE parameter in the CTMPARM file used by a Control-M monitor is different from the value of the AJFSIZE parameter in the Active Jobs file (AJF).

The AJF was formatted using an AJFSIZE parameter from a specific CTMPARM file. The Control-M monitor also uses an AJFSIZE parameter from a CTMPARM file, which is not necessarily the same CTMPARM file used to format the AJF. The value of the AJFSIZE parameter used by the Control-M monitor must match the value of AJFSIZE in the AJF.

The Control-M monitor shuts down.

**Corrective Action:** Ask the INCONTROL administrator to do one of the following:

- Change the value of AJFSIZE in the CTMPARM file used by the Control-M monitor to the value of AJFSIZE in the AJF.
- Reformat the AJF using a CTMPARM file in which AJFSIZE has the same value as the AJFSIZE used by the Control-M monitor.

Once one of these has been performed, restart the monitor.

CTM921I ACCUMULATION OF JOB EXECUTION STATISTICS STARTED

**Explanation:** This information message is a normal starting message of the CTMJ SA utility.

**Corrective Action:** No action is required.

CTM922I ACCUMULATION OF JOB EXECUTION STATISTICS ENDED WELL

**Explanation:** This information message is a normal ending message of the CTMJ SA utility.

**Corrective Action:** No action is required.

CTM923S OPEN OF PARAMETERS FILE FAILED. DDNAME "DAJSAIN"

**Explanation:** Open of parameters file for the CTMJ SA utility failed.

This can be due to one of the following:

- The DAJSAIN DD statement missing.
- The data set described by the DAJSAIN DD statement cannot be opened for sequential read.

The utility stops executing with a condition code of 12.
**Corrective Action:** Correct the JCL of the job and rerun it.

**CTM92CS INVALID PARAMETER, VALID PARAMETERS ARE ACT=R/W, TYPE=F/V**

**Explanation:** An invalid parameter was passed to the IOADIG utility. Valid ACT parameter values are:
- R - Perform a read-only check. Do not correct detected errors.
- W - If an error is detected, correct it.

Valid TYPE parameter values are:
- F - Fixed length records in data file.
- V - Variable length records in data file.

The utility terminates with a return code of 24.

**Corrective Action:** Rerun the IOADIG utility after setting its parameters to valid values.

**CTM92TE SIZE OF CKPJNL FILE DIFFERS FROM SIZE OF AJF -- JOURNALING DISABLED**

**Explanation:** The size of the Active Jobs file (AJF) base image file differs from the size of the production AJF.

The CKPJNL base image file in the AJF is created after New Day processing and is used by the CTMRSTR restore utility. The size of this file must be identical to that of the production AJF.

The Control-M monitor halts processing and waits for instructions as described in message CTML12W.

**Corrective Action:** Reply C, I, or E to message CTML12W.

**CTM92UE ALLOCATION OF FILE fileName FAILED RC rc**

**Explanation:** The Control-M monitor failed to allocate the fileName file. The reason for the failure is described by a return code value of rc.

The Control-M monitor deallocates the file and waits for instructions as described in message CTML12W.

**Corrective Action:** Reply C, I, or E to message CTML12W. Note the message, including return code, prepare the Control-M monitor full output, and contact BMC Customer Support.

**CTM931I CLEAN FOR IOA CONDITIONS FILE STARTED**

**Explanation:** This information message indicates that the IOACLND utility started.

**Corrective Action:** No action is required.

**CTM932I CLEAN FOR IOA CONDITIONS FILE ENDED**

**Explanation:** This information message indicates that the cleaning of the IOA Conditions file by the IOACLND utility ended successfully.

**Corrective Action:** No action is required.
CTM933S FILE ALLOCATED TO DDNAME "DASINC" IS NOT IOA SYNCHRONIZATION FILE

Explanation: The data set described by the DASINC DD statement is not IOA Synchronization file. This message is produced by the IOACLCND IOA utility.

Possible causes are:
- The file allocated to the DASINC DD statement is not the Synchronization file.
- The file allocated to the DASINC DD statement is the Synchronization file, but it is of a different version or of a different IOA installation.

The utility stops executing.

Corrective Action: Correct the JCL for the job.

CTM934E INVALID PARAMETER: - parm

Explanation: An invalid parameter (parm) was passed to the IOACLCND utility. In this message, parm identifies the invalid parameter.

For a list of valid parameters, see the IOACLCND utility in the INCONTROL for z/OS Utilities Guide.

The utility stops executing with a condition code of 08.

Corrective Action: Correct the parameter line.

CTM935E MISSING PARAMETER AFTER: - parm

Explanation: A subparameter of a parameter of the IOACLCND utility is missing. A subparameter is expected after the parm parameter.

For valid syntax, see the IOACLCND utility in the INCONTROL for z/OS Utilities Guide.

The utility stops executing with a condition code of 08.

Corrective Action: Correct the parameter line.

CTM936E REDUNDANT PARAMETER: - parm

Explanation: There is a redundant parameter in a parameter line for the IOACLCND utility.

For details, see the IOACLCND utility in the INCONTROL for z/OS Utilities Guide.

The utility stops executing with a condition code of 08.

Corrective Action: Correct the parameter line.

CTM937S IOA CONDITIONS FILE WAS NOT CLEANED

Explanation: Result of a previous error in the IOACLRES utility. A previous message should appear, containing the reason for not cleaning the Conditions file.

The utility stops executing.

Corrective Action: Correct the problem and rerun the utility.
CTM939E DATE RANGE IS GREATER THAN ONE YEAR

**Explanation:** The date range specified in the FROM and TO parameters is greater than one year (the IOACLRES utility). The TO date is greater than the FROM date by more than a year. There is no way to IGNORE more than one year.

The utility will stop executing with a condition code of 08.

**Corrective Action:** Correct the parameters and rerun.

CTM942S OPEN OF IOA MANUAL CONDITIONS FILE FAILED

**Explanation:** Open of the IOA Manual Conditions file failed. Possible causes are:

- The DANRES DD statement is missing.
- The file allocated to the DANRES DD statement is not the IOA Manual Conditions file.
- The file allocated to the DANSINC DD statement is the IOA Manual Conditions Synchronization file, but it is of a different version or of a different IOA installation.

**Corrective Action:** Correct the JCL for the job or the allocations of the CLIST.

CTM943S OPEN OF IOA MANUAL CONDITIONS SYNCHRONIZATION FILE FAILED

**Explanation:** The IOAFRNRS utility, which is used to allocate and format the file, failed to open the file for formatting.

Possible causes are:

- The DACKPT DD statement is missing.
- There is insufficient memory for the job.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL, and rerun the job.

CTM944I BUILDING OF IOA MANUAL CONDITIONS FILE STARTED

**Explanation:** This information message indicates that the IOAFRNRS utility, which allocates and formats the Manual Conditions file, started.

**Corrective Action:** No action is required.

CTM945I BUILDING OF IOA MANUAL CONDITIONS FILE ENDED

**Explanation:** This information message indicates that the IOAFRNRS utility, which allocates and formats the Manual Conditions file, ended normally.

**Corrective Action:** No action is required.
CTM945W <resource name>/<resource amount> RELEASED BY CTMRLR, WILL BE FREED FROM WORKLOAD <workload name> AFTER JOB ENDS

**Explanation:** The resource name was released by the CTMRLR utility, and will be freed from the specified workload after the job ends.

**Corrective Action:** No action is required.

CTM946S IOA MANUAL CONDITIONS FILE WAS NOT BUILT

**Explanation:** The IOAFRNRS utility failed.

**Corrective Action:** Look for previous error messages which will describe the type of the error.

CTM947E INSUFFICIENT MEMORY IN CONTROL-M MONITOR - TOO MANY STCS WITH SAME NAME

**Explanation:** This message is also displayed on the output of the monitor.
There are too many STCs with the same name.
The STC will end NOTOK.

**Corrective Action:** Purge the unneeded STCs with the duplicate names from the spool.

CTM950S OPEN FAILED FOR DDNAME "DARESF"

**Explanation:** Open of Control-M Resources file failed (the DARESF DD statement). Possible causes are:
- The DARESF DD statement is missing.
- The data set described by the DARESF DD statement is not the Control-M Resources file.
- The data set described by the DARESF DD statement is the Control-M Resources file of a different version or a different Control-M monitor.

The Control-M monitor shuts down.

**Corrective Action:** Correct the JCL for the Control-M procedure, and start it again.

CTM955I OID=orderId ORPHAN CONTROL contResource MODE {E | S} WAS AUTOMATICALLY DELETED BY THE MONITOR

**Explanation:** This information message indicates that the monitor released the contResource Control resource, with the mode Exclusive (E) or Shared (S), because there is no job that controls it.

**Corrective Action:** No action is required.

CTM956I OID=orderId ORPHAN CONTROL quant-res QUANTITY num WAS AUTOMATICALLY DELETED BY THE MONITOR

**Explanation:** This information message indicates that the monitor released the specified number (num) of the indicated Quantitative resource (quant-res), because there are no jobs that control them.

**Corrective Action:** No action is required.
CTM95BE OPEN OF CONTROL-M HISTORY FILE (DDNAME "DAHIST") FAILED. RC=rc

**Explanation:** The user entered the HISTORY command followed by the name of a History file, but there is an error in opening the specified history file.

**Corrective Action:** Verify that the specified History file is valid. Contact BMC Customer Support and report the received return code.

CTM95CE CLOSE OF CONTROL-M HISTORY FILE (DDNAME "DAHIST") FAILED. RC=rc

**Explanation:** The user entered the HISTORY command followed by the name of a History file, but there is an error in closing the specified history file.

**Corrective Action:** Verify that the specified History file is not being used by another application. Contact BMC Customer Support and report the received return code.

CTM95DE PARAMETER FOR "HIST" COMMAND IS NOT SUPPORTED UNDER ONLINE MONITOR

**Explanation:** The HISTORY command followed by the name of a History file cannot be used with the online monitor.

**Corrective Action:** No action is required.

CTM95ES RESOURCE FILE INTERNAL ERROR

**Explanation:** Severe Control-M internal error in the Resource file.
A snap dump is written to the DATRACE DD statement, and the monitor shuts down.

**Corrective Action:** Do the following:

1. Send the following to BMC Software Customer support:
   a. the complete sysout from the Control-M monitor
   b. the Resource file
   c. the CKP file
   d. IOAPARM
   e. CTMPARM
   f. IOA Log file
2. Re-start the Control-M monitor.

CTM95FS INTERNAL ERROR: ACTUAL NUMBER OF BASE SLOTS GREATER THAN REOBASE#

**Explanation:** Severe Control-M internal error in the Resource file.
A snap dump is written to the DATRACE DD statement, and the monitor shuts down.

**Corrective Action:** Do the following:
1. Send the following to BMC Software Customer support:
   a. the complete sysout from the Control-M monitor
   b. the Resource file
   c. the CKP file
   d. IOAPARM
   e. CTMPARM
   f. IOA Log file
2. Re-start the Control-M monitor.

**CTM95GE POST PROCESSING ERROR. INSUFFICIENT FREESPACE FOR ’SET VAR’ STATEMENTS**

**Explanation:** Control-M failed to handle a DO SETVAR post processing statement because there was not enough space in the corresponding job record in the AJF. The indicator POST-PROCESSING FAILED is set for the job.

**Corrective Action:** Contact IOA administrator to consider increasing the FREESPAC= installation parameter in CTMPARM. If it is not suitable or does not help, contact IOA Technical support.

**CTM971S OPEN OF CONTROL-M {ACTIVE | HISTORY} JOBS FILE FAILED**

**Explanation:** Either the FORMCKP utility (which allocates and formats the Active Jobs file) or the FORMHST utility (which allocates and formats the Active History file) failed to open the file for formatting.
Possible causes are:
- The DACKPT DD statement (for the Active Jobs file) or the DAHIST DD statement (for the History Jobs file) is missing.
- There is insufficient memory for the job.

The utility ends with a condition code of 08.

**Corrective Action:** If a DD statement is missing, add the correct DD statement and rerun the job. If the problem is memory, specify a higher value for the REGION parameter.

**CTM972I BUILDING OF CONTROL-M {ACTIVE | HISTORY} JOBS FILE STARTED**

**Explanation:** This information message indicates the normal start of the FORMCKP utility or the FORMHST utility. The FORMCKP utility allocates and formats the Active Jobs file. The FORMHST utility allocates and formats the Active History file.

**Corrective Action:** No action is required.
CTM973I BUILDING OF CONTROL-M {ACTIVE | HISTORY} JOBS FILE ENDED

**Explanation:** This information message indicates the normal termination of either the FORMCKP utility or the FORMHST utility. The FORMCKP utility allocates and formats the Active Jobs file. The FORMHST utility allocates and formats the Active History file.

**Corrective Action:** No action is required.

CTM974S Control-M {ACTIVE | HISTORY} JOBS FILE WAS NOT BUILT

**Explanation:** Either the FORMCKP utility, which allocates and formats the Active Jobs file, or the FORMHST utility, which allocates and formats the Active History file, failed.

**Corrective Action:** Check the previous error messages which describe the type of error, and correct the problem accordingly.

CTM975S Control-M {ACTIVE | HISTORY} JOBS FILE WRITE ERROR

**Explanation:** An I/O error occurred while formatting the Control-M Active Jobs file or History Jobs file. This error may be caused by an incompatibility between the installation parameters (CTMPARM) that define the Active Jobs file or History Jobs file, and the JCL SPACE and/or DCB parameters.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct either the JCL or the Installation Parameters file.

CTM982S OPEN OF IOA CONDITIONS FILE FAILED

**Explanation:** The IOAFRRES IOA utility, which is used to allocate and format the IOA Conditions file, failed to open the file for formatting.

Possible causes are:

- The DARESC DD statement is missing.
- There is insufficient memory for the job.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.

CTM983S OPEN OF IOA SYNCHRONIZATION FILE FAILED

**Explanation:** The IOAFRRES IOA utility, which is used to allocate and format the Control-M Resources Synchronization file, failed to open the file for formatting.

Possible causes are:

- The DASINC DD statement is missing.
- There is insufficient memory for the job.

The utility stops executing with a condition code of 08.

**Corrective Action:** Correct the JCL and rerun the job.
CTM984I  BUILDING OF IOA CONDITIONS FILE STARTED  
**Explanation:** This information message indicates that the IOAFRRES utility, which allocates and formats the IOA Conditions file, has started.  
**Corrective Action:** No action is required.

CTM985I  BUILDING OF IOA CONDITIONS FILE ENDED  
**Explanation:** This information message indicates that the IOAFRRES utility, which allocates and formats the IOA Conditions file, has ended normally.  
**Corrective Action:** No action is required.

CTM986S  IOA CONDITIONS FILE WAS NOT BUILT  
**Explanation:** The IOAFRRES utility failed.  
**Corrective Action:** Look for previous error messages that describe the type of error.

CTM988S  DATE SHOULD NOT BE GREATER THAN YESTERDAY  
**Explanation:** Invalid date specified for archival or backup (the CTMLGC utility). The archive date should not be greater than yesterday's date.  
The utility stops execution with a condition code of 08.  
**Corrective Action:** Correct the date field.

CTM989S  OPEN OF DDNAME "DALOGHIS" FAILED. LOG ARCHIVAL NOT PERFORMED  
**Explanation:** Open of the log archival data set failed (the CTMLGC utility).  
Possible causes are:  
- The DALOGHIS DD statement missing.  
- The DALOGHIS DD statement describes a file which is not in the format of the IOA Log.  
The utility stops execution with a condition code of 08.  
**Corrective Action:** Correct JCL for the job. You should run the CTMFROLOG utility to allocate and format an archival file in exactly the same format as the IOA Log.

CTM990I  action OF IOA LOG STARTED  
**Explanation:** This information message is a normal message which is issued when starting to backup the IOA Log (the CTMLGC utility).  
**Corrective Action:** No action is required.

CTM991I  action OF IOA LOG ENDED  
**Explanation:** This information message is a normal message which is issued when the backup of the IOA Log ends (the CTMLGC utility).
Corrective Action: No action is required.

CTM992W OPEN OF DDNAME "DALOGBKP" FAILED, BACKUP OF IOA LOG NOT TAKEN

Explanation: Open of the data set described by the DALOGBKP DD statement failed.
Possible causes are:
- The DALOGBKP DD statement missing.
- The data set described by the DALOGBKP DD statement cannot be opened for sequential write.
Backup of IOA Log not taken. Processing continues.
Corrective Action: If you want to backup the entire Log file, correct the JCL for the job.

CTM993S OPEN OF DDNAME "DALGCIN" FAILED. LOG ARCHIVAL NOT PERFORMED

Explanation: Open of the data set described by the DALGCIN DD statement failed.
Possible causes are:
- The DALGCIN DD statement missing.
- The data set described by the DALGCIN DD statement cannot be opened for sequential read.
Log archival is not performed.
Corrective Action: Correct the JCL for the job.

CTM994S FILE CONNECTED TO DDNAME "DALGCIN" IS EMPTY

Explanation: The data set described by the DALGCIN DD statement is empty.
Log archival is not performed.
Corrective Action: Correct the JCL for the job.

CTM995S RECORD LENGTH OF DDNAME "DALGCIN" IS NOT 80

Explanation: Record length of data set described by the DALGCIN DD statement must be 80 bytes.
Log archival is not performed.
Corrective Action: Check the contents of data set described by the DALGCIN DD statement.

CTM996S "UNTIL DATE" OF LOG ARCHIVAL IS NOT A VALID DATE

Explanation: Invalid parameter for UNTIL date.
Corrective Action: Correct the UNTIL date parameter of the Log archival utility.

CTM997S NUMBER OF DAYS TO KEEP IN LOG FILE IS NOT NUMERIC

Explanation: Invalid number of days to keep in the Log file.
The number of days to keep in the Log file must be numeric.
**Corrective Action:** Correct the number of days.

**CTM998S ARCHIVAL FILE ALLOCATED TO "DALOGHIS" IS FULL**

**Explanation:** Archival file allocated to the DALOGHIS DD statement is full.
Archival will not be executed.

**Corrective Action:** No action is required.

**CTM999S NOTHING TO DO. NEITHER BACKUP NOR ARCHIVAL IS NEEDED**

**Explanation:** Neither file DALOGHI $ nor file DALOGBKP has been opened by the CTMLGC utility.
The utility terminates with a return code of 12.

**Corrective Action:** No action is necessary.

**CTM9B1E SYSTEM LOGGER CONNECT REJECTED, DASD-ONLY LOG STREAM IS ALREADY CONNECTED TO BY ANOTHER LOG STREAM IN THE SYSPLEX**

**Explanation:** The System Logger rejected an attempt to connect to a DASD-only log stream because another log stream in the Sysplex is already connected. Only applications from the same system (LPAR) can connect simultaneously to the DASD-only log streams. If you are using DASD-only log streams, then Control-M, CMEM or Control-O, and IADDC (the CONNECT DIRECT interface) must all be running in the same LPAR.
The attempt to connect is rejected.

**Corrective Action:** Determine which system you want to connect to the log stream, and rerun the component that failed in the correct system.

If you want all members in a Sysplex to have access to the log stream, use coupling facility log streams rather than DASD-only log streams. For more information, see the description of sysplex configuration parameters in the *INCONTROL for z/OS Installation Guide*.

**Messages CTMA00 through CTMAxx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/R (Restart) products.

**CTMA06E STATISTICS DO NOT EXIST FOR MEMBER memName GROUP grp**

**Explanation:** There was an attempt to view statistics of a job for which no statistics are available. The Statistics file is updated only by the CTMJ SA JCL procedure. If a job is run for the first time in this system, job statistics may not yet exist. If the job was previously run on this system, CTMJ SA is probably not run regularly at your site.

**Corrective Action:** Check whether or not CTMJ SA is runs regularly at your site. To get job statistics, run CTMJ SA regularly.
CTMA07S VIEWING OF ARCHIVED SYSOUTS FAILED. RC=rc

**Explanation:** An error occurred in the CTMTSYV or CTRTSTP Control-M internal module. There was an attempt to perform a view (V) function or a step list display on the Active Jobs file. However, a problem indicated by the return code occurred in the module, and the SYSDATA could not be retrieved:

Valid values for rc are:

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>12</td>
<td>The name of Archived Sysout Data set does not follow the Control-M/Restart naming convention for this type of data set.</td>
</tr>
<tr>
<td>16</td>
<td>The Archived Sysout data sets (which are accessed to retrieve SYSDATA for viewing) belong to another job.</td>
</tr>
<tr>
<td>20</td>
<td>The loading of an internal module failed. Message CTM046S which preceded this message specifies the module in question.</td>
</tr>
<tr>
<td>24</td>
<td>The CTRTSTP module encountered an internal CDAM error.</td>
</tr>
<tr>
<td>28</td>
<td>ATTACH for the CTRTSTP module failed, probably because of insufficient memory.</td>
</tr>
<tr>
<td>32</td>
<td>The CTRTSTP module abended. A symptom dump probably exists in the JOBLOG or the SYSLOG.</td>
</tr>
</tbody>
</table>

Archived SYSDATA is not displayed.

**Corrective Action:** Record the return code, prepare the Control-M monitor full output, and contact BMC Customer Support.

CTMA08E INSUFFICIENT MEMORY TO VIEW ARCHIVED SYSOUTS

**Explanation:** The CTMTSYV or CTRTSTP internal module failed to perform the view or step list display function on the Active Jobs file due to insufficient storage allocated to the Control-M online environment. The archived SYSDATA is not displayed.

**Corrective Action:** Notify your INCONTROL administrator. The storage allocated to the online environment by the REGION parameter must be enough for all Control-M processing.

CTMA09E MEMNAME IS A REQUIRED PARAMETER

**Explanation:** The user issued a JOBSTAT command without specifying a member name. The JOBSTAT command, which displays job statistics, needs the name of the member whose statistics are to be displayed.

**Corrective Action:** Try again. Specify the member name with the JOBSTAT command.
CTMA10E PARAMETER LENGTH EXCEEDS MAXIMUM

Explanation: A parameter (JOBNAME or GROUPNAME) specified in the JOBSTAT command exceeded the maximum allowable length. The maximum length for the JOBNAME parameter is eight characters. This parameter is required for the JOBSTAT command. The maximum length for the GROUPNAME optional parameter is 20 characters. If this parameter is omitted, the group name is assumed to be blank.

Corrective Action: Correct the command and try again.

CTMA11E OPEN OF STATISTICS FILE FAILED. DDNAME "DASTAT"

Explanation: The Statistics file could not be opened. When you use option 3.S to view job statistics, Control-M attempts to open the Statistics file pointed to by the DASTAT DD statement. This message is displayed when the attempt fails.

Corrective Action: Check that the data set described by the DASTAT DD statement is allocated to the Statistics file. See the Control-M installation procedure for details.

CTMA12E CANNOT REACT JOB jobName ODATE odate - JOB NOT DISAPPEARED/FAILED

Explanation: Option A (Reactivate) was specified for a job that did not have a status of DISAPPEARED or FAILED REASON UNKNOWN. The Reactivate option can only be specified for jobs having a status of DISAPPEARED or FAILED REASON UNKNOWN. This option allows the search for the sysout to continue.

Corrective Action: No action is required.

CTMA13E INVALID AUTO REFRESH INTERVAL

Explanation: An invalid AutoRefresh interval was specified. The number of seconds specified for the interval in the AUTO command must be between 1 and 99.

AutoRefresh mode is not activated.

Corrective Action: Re-enter the AUTO command followed by a number between 1 and 99.

CTMA14I AUTO REFRESH EVERY num SECONDS - counter

Explanation: This information message displays the current AutoRefresh interval and counter value. It is displayed whenever the screen is in AutoRefresh mode to indicate that the screen display is being updated automatically every num seconds. The counter value indicates the number of times the screen was refreshed.

Corrective Action: No action is required.

CTMA15I AUTO REFRESH CANCELED

Explanation: This information message indicates that AutoRefresh mode was terminated. AutoRefresh mode is cancelled by a user request, or if an attempt is made to activate AutoRefresh mode in an environment that does not support it.

For more information, see the description of AutoRefresh mode in the online facilities chapter in the Control-M for z/OS User Guide.

Corrective Action: No action is required.
CTMA16E STORAGE SHORTAGE. UNABLE TO action
Explanation: The action requested in the Active Environment screen cannot be performed due to storage shortage.
The requested action is not performed.
Corrective Action: Increase the REGION size and try again.

CTMA16I TSO CMD ENDED WITH RC=0
Explanation: This information message indicates that a TSO command entered from the command line of an IOA screen was performed successfully.
Corrective Action: No action is required.

CTMA16S OPEN OF STATISTICS FILE FAILED. RC=rc ERROR=errCode
Explanation: The Control-M Statistics file (DD name DASTAT) failed to open. The return and error codes are VSAM codes.
Control-M will not accumulate statistics, and as a result deadline scheduling calculations may be inaccurate.
Corrective Action: Check the return and error codes in the IBM manual for DFP macro instructions for data sets under VSAM macro return and reason codes, and correct accordingly.

CTMA17E TSO CMD ERROR. R15=r15, RET-CODE=rc, RS-CODE=rsn, AB-CODE=ab_code
Explanation: An unsuccessful attempt was made to perform a TSO command entered from the command line of an IOA screen. A TSO command can only be activated from an IOA screen when running the IOA Online facility under ISPF or TSO. The variables displayed in the message are returned by TSO.
Corrective Action: Verify that you entered the command when running the IOA Online facility under ISPF or TSO. If the command was activated under one of these environments then the problem lies in TSO. Have the INCONTROL administrator correct the problem using the TSO codes appearing in the message and try the command again.

CTMA17I NO DEPENDENCIES EXIST FOR THIS JOB
Explanation: This information message indicates that the N line command in the Active Environment screen was used to display the net of dependencies for a specific job, but the job had neither predecessors nor successors.
Corrective Action: No action is required.

CTMA18W JOBS ADDED TO THE AJF. "REFRESH" MAY BE NEEDED
Explanation: Jobs have been added to the Active Jobs file (AJF). The Net file might have to be refreshed to display all the dependent jobs.
Corrective Action: Refresh the Net file by issuing command REFRESH NET using Screen 3.
CTMA19W NET FILE IS NOT UPDATED, "REFRESH" IS NEEDED

Explanation: The request to display net dependencies of a job cannot be performed because the Net file has not been updated.

Only the root job is displayed.

Corrective Action: Refresh the Net file by issuing command REFRESH NET using Screen 3.

CTMA1AE VALUE MUST BE TBL OR CTM

Explanation: When defining a SCHEDULE RBC parameter in a Smart Table Entity, either TBL (a SCHEDULE RBC defined in a Smart Table Entity and used by jobs in this Smart Table) or CTM (a SCHEDULE RBC defined by IOA Calendars Facility and can be used by any job) must be specified in the LEVEL field.

Corrective Action: In the LEVEL field, specify either TBL or CTM.

CTMA1BE PLEASE FILL IN RBC NAME

Explanation: Displayed under IOA Calendars Screen for RBC calendars when either a SAVE RBC or COPY RBC request is issued without specifying an RBC name. The SAVE or COPY request does not proceed.

Corrective Action: Either enter the RBC name to proceed or cancel the request.

CTMA1CE A VALUE OF "*" IS VALID ONLY IN A JOB THAT BELONGS TO A SMART TABLE

Explanation: The asterisk ("*") wild card character, which indicates all the RBCs of the Smart Table entity, can only be used to specify the SCHEDULE RBC scheduling parameter for a job that belongs to a Smart Table.

Corrective Action: Use * only for Schedule RBCs defined in Smart Tables.

CTMA1DE EXCLUDE RBC WITH NO INCLUDE RBC IS NOT A VALID DEFINITION

Explanation: A schedule cannot be defined with only Exclude RBCs. At least one Include RBC must be part of the schedule definition, besides the Exclude RBCs.

Corrective Action: Define or make reference to at least one include RBC, besides the Exclude RBC.

CTMA20W "REFRESH" IN PROGRESS, PLEASE WAIT

Explanation: The request to display net dependencies of a job cannot be performed because the Net file is being refreshed.

Only the root job is displayed.

Corrective Action: Wait a short while, then press Enter again. Repeat this until the refresh process is completed and the dependent jobs are displayed.
CTMA21W NET FILE IS BUSY, PLEASE TRY LATER

**Explanation:** The request to display net dependencies of a job cannot be performed because the Net file is busy.

Only the root job is displayed. No dependent jobs are displayed.

**Corrective Action:** Wait a short while and then press **Enter** again. Repeat this until the Net file is released and the dependent jobs are displayed.

CTMA21W NET FILE IS BUSY, PLEASE TRY LATER

**Explanation:** The request to display net dependencies of a job cannot be performed because the Net file is busy.

Only the root job is displayed. No dependent jobs are displayed.

**Corrective Action:** Wait a short while and then press **Enter** again. Repeat this until the Net file is released and the dependent jobs are displayed.

CTMA22E MODULE=modName, FUNCTION=func, RC=rc - text

**Explanation:** An error occurred during display of the net dependencies of a job. If rc is 28, the QNAME in the GRF file in the first record, just after the constant JD0, differs from the QNAME specified in IOAPARM.

The variables in this message are:

- **mod-name** - the module that caused the error.
- **func** - the function requested.
- **rc** - the code returned by the function.
- **text** - the explanation of the error, such as LOAD FAILED and GETMAIN FAILED.

The Net screen is not displayed.

**Corrective Action:** Notify your INCONTROL administrator or system programmer, who should take required actions based on the information in the message. For example, depending on the type of error, the requested load module can be made accessible, or the region size can be enlarged.

If rc is 28, reformat the GRF file with the QNAME specified in IOAPARM.

CTMA23E INVALID "REFRESH" PARM - parm

**Explanation:** The user specified the REFRESH command in the Net screen (screen 3.N) with an invalid parameter.

The REFRESH process is not performed.

**Corrective Action:** Re-issue the REFRESH command with a valid parameter.

CTMA24W CONTROL-M IS DOWN - REFRESH PENDING

**Explanation:** The REFRESH NET command was issued but the Control-M monitor was down, so some jobs may not have been displayed in the Net Display screen.
Corrective Action: Wait until Control-M comes up again, then continue work as usual.

**CTMA25I** REFRESH "refresh_type" ISSUED

Explanation: This information message indicates that the REFRESH command was successfully submitted in the Net screen (screen 3.N).

The Refresh process starts.

Corrective Action: Wait until the refresh is complete, then continue working.

**CTMA26E** USER NOT AUTHORIZED

Explanation: The function requested is not authorized for the user. The message is issued by the IOA security mechanism.

Corrective Action: Check with your system security administrator.

**CTMA27I** THE NEW LANGUAGE WILL BE USED FROM THE NEXT LOGON TO IOA

Explanation: This information message is a response to the use of the SET command to set a language. It indicates that the newly-set language will begin to be used when you next log on to IOA.

Corrective Action: No action is required.

**CTMA29E** INVALID TRACE LEVEL. USE: SET TRACE=trace-lvl

Explanation: Either the value or the setting of the specified trace is not valid. The trace level may be any value from 1 through 256. The trace level setting must be ON or OFF.

The system ignores the command and continues processing.

Corrective Action: Enter a valid value and/or a valid setting for the trace level, and try again.

**CTMA2AI** TRACE LEVEL nnn WAS SET {ON | OFF}

Explanation: This information message indicates that a trace level was turned ON or OFF, where nnn is the TRACE level number.

Corrective Action: No action is required.

**CTMA2CE** ONLINE TRACING IS NOT ALLOWED, PLEASE CONTACT YOUR IOA ADMINISTRATOR

Explanation: A user issued the SET TRACE command in order to turn on the trace, and the tracing is not allowed.

The trace is not turned on.

Corrective Action: Contact your IOA administrator in order to enable the online tracing.
CTMA30I OLD AJF NEEDED #recs RECORDS FOR #jobs JOBS

**Explanation:** The AJF conversion utility issues this information message to show the number of jobs on the old Active Jobs file, and the number of old Active Jobs file records that were needed to store these jobs.

**Corrective Action:** No action is required.

CTMA31I NEW AJF NEEDS #recs RECORDS FOR #jobs JOBS

**Explanation:** The AJF conversion utility issues this information message to show the number of jobs on the new Active Jobs file, and the number of new Active Jobs file records that are now needed to store these jobs.

The variables in this message are:
- `#recs` - the number of new AJF records required to store #jobs
- `#jobs` - the number of jobs on the new AJF

**Corrective Action:** No action is required.

CTMA32I PERCENTAGE OF RECORDS RELEASED IN NEW JOBS FILE: nn %

**Explanation:** The AJF conversion utility issues this information message to show the percentage of unused records in the new Active Jobs file (AJF).

In this message, `nn%` is the percentage of unused records in the new AJF.

**Corrective Action:** No action is required.

CTMA33I AVERAGE NUMBER OF RECORDS PER JOB IN NEW AJF: nn.nn

**Explanation:** The AJF conversion utility issues this information message to show the average number of records used to store one job on the new Active Jobs file.

**Corrective Action:** No action is required.

CTMA34I AVERAGE NUMBER OF FREE BYTES PER JOB IN NEW AJF: #bytes

**Explanation:** The AJF conversion utility issues this information message to show the average number of unused bytes in the records used to store one job on the new Active Jobs file.

**Corrective Action:** No action is required.

CTMA3AS OLD STEPLIB AND NEW STEPLIB ARE THE SAME

**Explanation:** The CTMCAF utility cannot convert the file from one version to another because only one Load library was indicated. The STEPOLD DD statement should point to the Load library of the previous version, but it points to the Load library of the new version.

The CTMCAF utility terminates with a return code of 08.

**Corrective Action:** Correct the STEPOLD DD statement so that it points to the Load library of the previous version, and rerun the job.
CTMA3BS SIZE OF OLD AJF/HST DIFFERS FROM SIZE OF NEW ONE

Explanation: The CTMCAF utility cannot convert the file from one version to another because the AJF or HST file sizes are not identical. The conversion requires the same size files for the new version and the old version. The file size should match the size specified in CTMPARM.

The CTMCAF utility terminates with a return code of 08.

Corrective Action: Correct the file sizes so that they are identical for both versions, and rerun the job.

CTMA3CS LOAD MODULE CTMLOGR FAILED

Explanation: An internal error occurred during the load of the CTMLOGR module.

The CTMCAF utility terminates with a return code of 08.

Corrective Action: Have your INCONTROL administrator record the return code, prepare the Control-M monitor full output, and contact BMC Customer Support.

CTMA3DS DELETE MODULE CTMLOGR FAILED

Explanation: An internal error occurred during deletion of the CTMLOGR module.

The CTMCAF utility terminates with a return code of 08.

Corrective Action: Have your INCONTROL administrator notify your INCONTROL administrator.

CTMA40I ACTIVE JOBS FILE CONVERSION STARTED

Explanation: This information message indicates that the process of converting or copying an Active Jobs file has started.

Corrective Action: No action is required.

CTMA41S OPEN OF OLD ACTIVE JOBS FILE FAILED. DDNAME "DAOLDAJF"

Explanation: The Active Jobs file conversion utility failed to open the input Control-M Active Jobs file. The conversion is terminated. No changes are made to the output file.

Corrective Action: Look at the JCL for the specific file and see if it contains a valid Control-M Active Jobs file. If it does not, correct and rerun the job.

CTMA42S OPEN OF NEW ACTIVE JOBS FILE FAILED. DDNAME "DANEWAJF"

Explanation: The Active Jobs file conversion utility failed to open the output Control-M Active Jobs file.

Corrective Action: Look at the JCL for the specific file and see if it contains a valid Control-M Active Jobs file. If it does not, correct and rerun the job.

The conversion is terminated. No changes are made to the output file.
CTMA43S FILE ALLOCATED TO DD STATEMENT "DAOLDAJF" IS NOT AN OLD FORMAT ACTIVE JOBS FILE

Explanation: The Active Jobs file (AJF) conversion utility opened the input Control-M Active Jobs file and found its format invalid.

The conversion is terminated. No changes are made to the output file.

Corrective Action: Check the JCL for the specific file and see if it contains a valid Control-M file from an earlier release. If it does not, correct and rerun the job.

CTMA44S GENERAL DAILY IS CURRENTLY WORKING ON THE OLD ACTIVE JOBS FILE

Explanation: The Active Jobs file conversion utility opened the input Control-M Active Jobs file and found it in the middle of formatting by the Control-M New Day procedure, or that a previous run of the New Day procedure has failed.

The conversion is terminated. No changes are made to the output file.

Corrective Action: Check whether the New Day procedure is currently running. After it finishes executing, shut down the old Control-M and rerun the job.

CTMA47S FILE ALLOCATED TO DD STATEMENT "DANEWAJF" IS NOT EMPTY

Explanation: The Active Jobs file conversion utility opened the output Control-M Active Jobs file and found it not to be empty.

The conversion is terminated. No changes are made to the output file.

Corrective Action: The file must be empty. Format the new file using the FORMCKP utility.

CTMA48E FILE ALLOCATED TO DD STATEMENT "DAOLDAJF" IS EMPTY

Explanation: The Active Jobs file conversion utility opened the input Control-M Active Jobs file and found it to be empty.

The conversion is terminated. No changes are made to the output file.

Corrective Action: Look at the JCL for the specific file and see if it contains the right Active Jobs file. If it does, no conversion is necessary.

CTMA49S OPEN OF OLD STEPLIB FAILED

Explanation: Open of library allocated to the STEPOLD DD statement failed.

Possible causes are:

- The STEPOLD DD statement is missing.
- The file allocated to the STEPOLD DD statement is not a load module library.

The conversion program terminates with a condition code of 08.

Corrective Action: Check that the STEPOLD DD statement is allocated to a load module library.
CTMA50S INTERNAL ERROR WHILE CONVERTING RESOURCES

Explanation: The Active Jobs file conversion utility started executing but encountered an invalid format of job entries in the input file.

The conversion program has encountered a job which has invalid entries in the Control-M Active Jobs file.

The conversion is terminated at the job definitions which are invalid.

Corrective Action: Do the following:

1. Look in the new Active Jobs file for the last job converted. The next job in the old Active Jobs file is the problem job.
2. Supply your ICONTROL administrator with a dump of the old Active Jobs file, stating the job on which the error occurred.
3. Delete the job entry using the Control-M Online Facility.
4. Compress the old Active Jobs file.
5. Rerun the job.

CTMA51S {OLD | NEW} CTMPARM DOES NOT FIT {OLD | NEW} ACTIVE JOBS FILE

Explanation: IOAPARM of the old or new version does not fit the Active Jobs file of that version.

Probable cause is that STEPLIB (or STEPOLD) does not point to the library containing the appropriate CTMPARM, or that the file allocated to the DD name DAOLDAJF or DANEWAJF is not of the correct version.

The conversion program terminates with a condition code of 08.

Corrective Action: Check that the library allocated to the DD name DAOLDAJF or DANEWAJF contains the correct IOAPARM, and check that the file allocated to the DD name DAOLDAJF or DANEWAJF is the correct file.

CTMA52S INTERNAL ERROR OCCURRED DURING CONVERSION. RC=rc

Explanation: An internal error has occurred during the execution of the conversion program.

The conversion program terminates with a condition code of 08.

Corrective Action: Notify your ICONTROL administrator.

CTMA53I CONVERSION OF ACTIVE JOBS FILE ENDED WELL

Explanation: This information message indicates that the process of converting or copying the Active Jobs file ended OK.

Corrective Action: No action is required.

CTMA54S CONTROL-M/RESTART WAS INSTALLED IN PREVIOUS VERSION, AND IS NOT INSTALLED NOW

Explanation: Control-M/Restart was installed in the old version, but not in the newly defined version.

The conversion program terminates with a condition code of 08.
**Corrective Action:** Check why Control-M/Restart is not installed in new version, and make sure that it is installed before rerunning the conversion program.

**CTMA55E** TASK IS NOT APF AUTHORIZED

**Explanation:** A started task (STC) requiring APF authorization was not APF authorized. Certain STCs (for example, CTMVMON) must be run from APF authorized libraries.

The task stops after issuing the error message.

**Corrective Action:** Change the JCL or authorize the library so that the STC will be run from an authorized library.

**CTMA56E** MEMBER *memName* READ ERROR RC=*rc* IN *dsn*

**Explanation:** While processing a Control-M DO FORCEJOB, CMEM or Control-O request, the Control-M monitor encountered an error while reading table *memName* in data set *dsn*.

This message is followed by additional messages which identify the failed action.

No additional action will be taken for the failed job/table order.

**Corrective Action:** For information about the return code *rc*, see the DOCIMEM member in the IOA DOC library.

**CTMA57E** MEMBER *memName* IS EMPTY IN *dsn*

**Explanation:** While processing CMEM or Control-O request, the Control-M monitor encountered an empty table *memName* in data set *dsn*.

This message is followed by message WKJA59E which identifies the failed action.

No additional action will be taken for the failed job/table order.

**Corrective Action:** Make sure that table *memName* contains valid scheduling information.

**CTMA58E** ABEND *abCode* WHILE PROCESSING *dsn*

**Explanation:** While processing a CMEM or Control-O request for data set *dsn*, the Control-M monitor encountered an abend condition *abCode*.

This message is followed by message WKJA59E which identifies the failed action.

No additional action will be taken for the failed job/table order.

**Corrective Action:** Record the abend code, prepare the Control-M monitor full output, and contact BMC Customer Support.

**CTMA59E** FORCEJOB FAILED FOR JOB *jobName* IN TABLE *tableName* FROM *dsn*

**Explanation:** An error occurred while processing a FORCEJOB request for job *jobName*, or, in the case where *jobName* is blank, for the complete scheduling table *tableName*.

The source of the request may be:
Control-O request for a DO FORCEJOB
Control-M request for a DO FORCEJOB
CMEM FORCEJOB action

This message is preceded by another message, which gives more details of the cause of the error.

Control-M may try again to execute the job or table, depending on the values set for the FORCE#RT and FORCE#WI installation parameters. For more information, see the customization chapter of the INCONTROL for z/OS Installation Guide.

**Corrective Action:** Correct the error as detailed in the preceding message. If scheduling is still required for the job or table for which the error occurred, then the job or table should be ordered manually. If the specification in the original request was incorrect, correct it and reload, if necessary. Reload the CMEM table or reorder the Control-O rule.

---

**CTMA5AE** ANOTHER MONITOR ALREADY READING FROM LOG STREAM
**STR=**structureName **L/S=logStreamName**

**Explanation:** This error message is issued when an attempt is made to read an MVS System Logger log stream which is currently being read by another Control-M monitor.

To avoid a loop of FORCEJOB jobs, the same MVS System Logger log stream should not be read simultaneously by more than one Control-M monitor. Should a second Control-M monitor attempt to read the same log stream, this error message is issued.

The CMEM facility is deactivated for this Control-M monitor.

**Corrective Action:** Make sure only one Control-M monitor is reading the same MVS System Logger log stream simultaneously.

---

**CTMA5BE** FREEMAIN \((storage\_add / len)\) FAILED AT POINT \(ref\_point\)

**Explanation:** A Control-M component attempted to free a block of working storage, but failed to do so.

The variables in this message are:
- **storage_add** - the working storage address
- **len** - the length of the working storage
- **ref_point** - the reference point in the Control-M component

No additional action is performed.

**Corrective Action:** If this is a recurring problem, prepare the Control-M monitor full output and contact BMC Customer Support. If ignored, this may cause severe insufficient storage problems.

---

**CTMA5CI** CONTROL-M WILL RETRY PERFORMING THE FORCEJOB REQUEST FOR JOB **jobName** TABLE **tableName** IN **dsn**

**Explanation:** Control-M failed to execute a DO FORCEJOB request because a scheduling table was in use.

The source of the DO FORCEJOB request may be any of the following:
DO FORCEJOB a Control-O request for a DO FORCEJOB
DO FORCEJOB a Control-M request for a DO FORCEJOB
aa CMEM DO FORCEJOB action

Control-M queues the DO FORCEJOB request, and may try again to execute it, depending on the values set for the FORCE#RT and FORCE#WI installation parameters.

For more information on the FORCE#RT and FORCE#WI installation parameters, see the customization chapter of the INCONTROL for z/OS Installation Guide.

Corrective Action: No action is required.

CTMA5DI FORCEJOB SUCCEEDED AFTER RETRIES FOR JOB jobName IN TABLE tableName FROM dsn

Explanation: After failing to execute a DO FORCEJOB request because a scheduling table was in use, Control-M retried the request and succeeded in executing it, in accordance with the values set for the FORCE#RT and FORCE#WI installation parameters.

The source of the DO FORCEJOB request was one of the following:
- a Control-O request for a DO FORCEJOB
- a Control-M request for a DO FORCEJOB
- a CMEM DO FORCEJOB action

No additional action is taken.

Corrective Action: No action is required.

CTMA5EI CONTROL-M WILL RETRY PROCESSING DATASET TRIGGER: trigger_dsn

Explanation: During the processing of a CONNECT DIRECT request, no successfully triggered events were processed, and a data set-in-use condition occurred.

The probable source of the CONNECT DIRECT request is the IOADCC utility.

Control-M queues the DO FORCEJOB request, and will try again to execute it, in accordance with the values set for the FORCE#RT and FORCE#WI installation parameters.

For more information on the FORCE#RT and FORCE#WI installation parameters, see the customization chapter of the INCONTROL for z/OS Installation Guide.

Corrective Action: No action is required.

CTMA5FE SCHEDULE LIBRARY schedLib IS MIGRATED

Explanation: A DO FORCEJOB command was issued for a table in the schedLib scheduling library, which has been migrated. An attempt was made to RECALL the library. An additional message follows describing whether the RECALL action was successful or not.

Corrective Action: Look for the following messages, which inform about the success of the RECALL action.
CTMA5IE CONTROL-M WILL NO LONGER RETRY THE REQUEST

**Explanation:** When a schedule table is not available because the data set is in use by another address space, Control-M retries the request several times based on the FORCE#RT parameter in CTMPARM. When this number of retries is exhausted and Control-M no longer retries the request, this message is displayed.

Control-M no longer retries the request.

**Corrective Action:** Determine why the data set is in use and retry the request manually. Messages CTMC53E and CTMA59E give details about the job name, table name, and schedule library name.

CTMA60I EXCEPTIONAL CONDITION RC=rc, ERROR=err, FEEDBACK=feedback, APPLID=applId

**Explanation:** This information message indicates that an exceptional VTAM condition was encountered during the execution of a KOA communication command.

This informational message is issued by the KOA Facility. Return code, error and feedback information are detailed in an appendix to the Control-O User Guide.

The KOA script continues processing. If an ON SCREENERROR statement was specified, the processing resumes at the label specified in the ON statement.

**Corrective Action:** Analyze the specific VTAM error, and take the corresponding corrective actions. Make sure that the error is handled correctly by the KOA script.

CTMA64E KEYSTROKE UTILITY DETECTED INTERNAL ABEND abCode

**Explanation:** An internal abend was intercepted by the KeyStroke utility.

The KSL/KOA script is terminated.

**Corrective Action:** Check the associated error messages. Correct the KOA script accordingly, and resubmit.

CTMA70E THERE IS AN ERROR IN IOAKPRM MEMBER. PLEASE CHECK THE SMFID FIELD.

**Explanation:** The SMF ID of the CPU to which the KSL job was submitted does not appear in the IOAKPRM member in the IOA PARM library.

The KSL stops running.

**Corrective Action:** Add the SMFID by making the appropriate entry in the IOAKPRM member. The best way of doing this is by means of the INCONTROL Installation and Customization Engine (ICE). For more information on ICE, see the INCONTROL for z/OS Installation Guide.

CTMA86I CTMUDR STARTED

**Explanation:** This informational message indicates that the initial program invoked by the CTMEMUDL procedure has begun processing.

**Corrective Action:** No action is required.
CTMA87I  CTMUDR ENDED

Explanation: This information message indicates the normal termination of the initial program invoked by the CTMEMUDL procedure.

Corrective Action: No action is required.

CTMAE1I  LOADING AUTO-EDIT CACHE USING MEMBER: memName

Explanation: This information message indicates the start of Control-M AutoEdit cache initialization. The message is issued on starting the Control-M monitor if the AECACHL parameter is defined, or when the command F CONTROLM,AECACHE=RELOAD... is processed.

In this message, memName identifies the member that contains the list of members that should be loaded into AutoEdit cache.

Corrective Action: No action is required.

CTMAE2I  textLine

Explanation: This information message displays a non-comment line from the member indicated in message CTMAE1I, as follows:

- This message is issued for each line in that member that is processed.
- This message is also issued, if an error occurs, to display the line associated with the error. The error can occur in the line itself, or it can occur in the member pointed to by the line.

Corrective Action: No action is required.

CTMAE3E  ERROR READING MEMBER memName RSN/RC = rsn rc

Explanation: An error occurred during the reading of the member referenced by the DD statement identified in message CTMAE2I. The return code (rc) and reason code (rsn) are returned by the IOAMEM utility.

Loading of Auto-Edit cache is terminated.

Corrective Action: Correct the error. Recycling of the Control-M monitor is not necessary; refresh the Auto-Edit cache by entering the operator command F CONTROLM,AECACHE=RELOAD[(memName)].

CTMAE4E  INTERNAL ERROR LOADING AUTO-EDIT CACHE. CACHING CANCELLED. RC = rc

Explanation: An internal error occurred during the loading of AutoEdit cache. The cause may have been a shortage of storage.

Loading of Auto-Edit cache is terminated.

Corrective Action: Correct the error. Recycling of the Control-M monitor is not necessary; refresh the Auto-Edit cache by entering the operator command F CONTROLM,AECACHE=RELOAD[(memName)].
CTMAE5E SYNTAX ERROR IN MEMBER *memName*. LOADING OF AUTO-EDIT CACHE TERMINATED

**Explanation:** An AutoEdit syntax error was detected either in the line identified in message CTMAE2I, or in the member referenced by that line.

Loading of Auto-Edit cache is terminated.

**Corrective Action:** Correct the syntax error. Recycling of the Control-M monitor is not necessary; refresh the Auto-Edit cache by entering the operator command `F CONTROLM,AECACHE=RELOAD[(memName)]`.

CTMAE7E ERROR CODE RETURNED BY IOAGLB. FUNCTION: *func* RC = *rc*

**Explanation:** An error occurred when trying to access the IOA AutoEdit database.

If the problem occurred during JCL processing during submission, and `%%RESOLVE NO` was not previously set, job submission is cancelled. Otherwise, the variable remains as is, that is, unresolved.

**Corrective Action:** The following actions are recommended:

- Check if the Control-O or CMEM monitor is up.
- Use screen IV to check that the IOAVAR database is defined.
- Check that the IOAVAR database is defined in the IOAprefix IOAENV(IOAGLBVL) member.

Messages CTMB00 through CTMBxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTMB01S ISPF MESSAGE: *msgText*

**Explanation:** ISPF generates this message when an ISPF service returns an invalid return code of 12 or higher. The message text describes the specific problem.

The ISPF service is abnormally terminated.

**Corrective Action:** Check the information provided in the error message. Note that many problems can be resolved by exiting and reentering ISPF.

CTMB03S INTERNAL ERROR *descr*. EXIT ISPF AND RETRY

**Explanation:** ISPF returned an invalid return code, usually an RC less than 12. This general message may be issued for any ISPF service, such as TBADD, TBPUT, VCOPY, and so on.

The ISPF service is abnormally terminated.

**Corrective Action:** Many problems can be solved by exiting and reentering ISPF.

CTMB04E LOCATE FAILED FOR - *string*

**Explanation:** The LOCATE command failed to find the required parameter.

The lines on the screen remain in their original position.

**Corrective Action:** No action is required.
CTMB05E INVALID COMMAND - cmd

**Explanation:** The command entered is not a valid command.

The command is ignored.

**Corrective Action:** Correct the command entry. You may use the Help command (PF1) to display a list of the available commands.

CTMB06I CHANGES NOT SAVED DUE TO A CANCEL REQUEST

**Explanation:** This information message indicates that a CANCEL command was entered. The user requested that all changes made to the current table or plan be ignored.

The changes are not kept in the library.

**Corrective Action:** No action is required.

CTMB07E VALID OPTIONS: " " (UPDATE) D (DELETE) A/R (ADD) I (INSERT)

**Explanation:** An invalid value was entered in the OPTION field.

The invalid option is ignored.

**Corrective Action:** Enter a valid option. Valid options are listed in the error message. Use the Help command (PF1) to display a list and explanation of the available options.

CTMB10E {TABLE | PLAN} {table|planid} NOT CREATE. RC=rc

**Explanation:** The facility could not create a new Master Table or Plan. The ISPF service TBADD failed with the return code `rc` specified in the message.

The table or plan is not created.

**Corrective Action:** Check the return code of the TBADD service. Many problems are solved by exiting and reentering ISPF.

CTMB11I {TABLE | PLAN} {table|planid} CREATED AND PLACED IN lib

**Explanation:** This information message indicates that a new table or plan was added to the library.

**Corrective Action:** No action is required.

CTMB12E MASTER {TABLE | PLAN} {table|planid} ALREADY EXISTS. USE ANOTHER NAME

**Explanation:** The facility found an existing table or plan with the same name. Each Master Table or Plan must have a unique name in the system.

The Master Table or Plan is not created.

**Corrective Action:** Assign another name to the table you want to create.
CTMB13E INTERNAL ERROR - MEMORY ALLOCATION FAILED

**Explanation:** An internal error occurred during the Display Type definition syntax check. The User Report List is not displayed.

**Corrective Action:** Contact BMC Customer Support.

CTMB14E MASTER {TABLE | PLAN} {table|planid} NOT FOUND. YOU MAY CREATE IT, OR EXIT

**Explanation:** The facility could not find the specified Master Table or Plan. It can be created now.

**Corrective Action:** To create a new Master Table or Plan, fill in the required details. To exit and return to the previous menu, press PF03 or PF15.

CTMB20E UPDATING OF MEMBER memName FAILED. COMPRESS LIBRARY lib

**Explanation:** The facility cannot update the AutoEdit member in the library because the AutoEdit parameters library is full.

The parameters member will not be created or updated.

**Corrective Action:** Compress the AutoEdit library.

CTMB21S UNABLE TO ALLOCATE DATASET dsn DDNAME ddName

**Explanation:** The facility cannot perform dynamic allocation for the data set. The most probable cause is that the data set is held by another user or job.

The operation is terminated immediately.

**Corrective Action:** Check what prevented the dynamic allocation. If it was because another user held the data set, try again later.

CTMB22S IOACND ERROR - COND cond NOT ADDED. RC=rc

**Explanation:** The facility received an invalid return code from IOACND. The facility tried to add the condition to the IOA Conditions file by using the IOACND program. The operation failed.

The condition is not added.

**Corrective Action:** Check the messages produced by IOACND and proceed accordingly.

CTMB23I PARM parm UPDATED IN MEM memName LIBRARY lib

**Explanation:** This information message indicates that the AutoEdit member was updated in the library. The facility updated the parameter in the AutoEdit member.

**Corrective Action:** No action is required.
CTMB25S UNABLE TO FIND THE LOG FILE. CHECK THE SPECIFIED CONTROL-M PREFIX

Explanation: The facility cannot find the IOA Log file having the specified prefix. The facility uses the IOA Log file, and other files to add a condition to the Conditions file. Only the log file is checked, since all the files have the same prefix.

The operation stops immediately.

Corrective Action: Check the IOA files prefix in the Primary Menu.

CTMB26E TABLE PROMPTB NOT FOUND - DEFINE AT LEAST ONE TABLE IN OPTION 1

Explanation: The facility cannot find any tables in the Master Table List. The PROMPTB Table, which contains the Master Table List, is not found. The reason may be that a user specified Option 2 of the facility before defining at least one Master Table.

The facility returns to the Primary Menu.

Corrective Action: Define at least one Master Table in Option 1.

CTMB27E PLEASE FILL IN A VALID OPTION - "Y" OR "N"

Explanation: You tried to close the Save/Create Window without specifying whether or not to save or create the defined parameters and conditions. When exiting the Define Parameters and Conditions screen in the Parameter Prompting Facility Type 1, the Save/Create Window is opened. Option Y or N must be specified to save or create.

Corrective Action: No action is required.

CTMB28I TABLE tableName DELETED

Explanation: This information message confirms that the specified table will be deleted from the table list displayed by the Parameter Prompting facility (PPF) (Type 1) and from the table prompt library, as requested. The system issues this message after the user confirms the delete request.

As soon as the system finishes deleting the table, it redisplays the PPF Table Selection screen.

Corrective Action: No action is required.

CTMB30E PLEASE ENTER: SAVE (SAVE THE CHANGES) OR CANCEL (DO NOT KEEP CHANGES)

Explanation: Changes to the table were not saved or cancelled. After making changes in a table, you must enter SAVE or CANCEL to leave the table. SAVE saves the changes; CANCEL leaves the table unchanged.

Corrective Action: Enter SAVE or CANCEL.

CTMB31E PLEASE {SPECIFY THE PLAN NAME | FILL IN THE TABLE NAME PREFIX}

Explanation: There is no table name prefix or plan name.
Corrective Action: Enter the table name prefix or plan name.

CTMB32E TABLE tableName NOT FOUND IN LIB lib
Explanation: The facility cannot find the tableName table in the lib library.
Corrective Action: Do one of the following:
- For the PROMPT facility, create a new master table with the appropriate table name prefix.
- For the End User Job Order interface, ask your INCONTROL administrator to do one of the following:
  - Modify the @@USRTBL administration member
  - Create the tableName table in the lib library

CTMB33E THE PARAMETER IS NOT CORRECTLY DEFINED. DEFINE IT IN OPTION 1
Explanation: The parameter name is missing from the Daily or Master Table, so the facility cannot update the parameter.
Corrective Action: Define the parameter using Option 1.

CTMB34E TABLE IN USE BY ANOTHER USER OR UNABLE TO CREATE A NEW TABLE
Explanation: The facility cannot read the existing Daily Table or create a new one. The table is probably in use by another user.
The Daily Table is not displayed.
Corrective Action: Try again later.

CTMB37E master_table NOT FOUND IN LIBRARY lib
Explanation: The table list contains the name of a Master Table that the facility cannot find in the library.
The facility returns the Master Table List to the user.
Corrective Action: Delete the Master Table name from the Master Table list.

CTMB38E MEMBER memName MAY ALREADY EXIST IN lib
Explanation: The facility cannot copy the Master Table to Daily Table. When a member cannot be copied from one library to another, it may be because a member with the same name already exists in the target library.
The facility returns the Master Table List to the user.
Corrective Action: Check the Table library.
CTMB41I COND cond ODATE odate ADDED, AND PARM parm UPDATED

Explanation: This information message indicates that the specified parameter was successfully updated, and the specified prerequisite condition was added to the IOA Conditions file.

Corrective Action: No action is required.

CTMB42I PARM UPDATED, BUT COND cond ODATE odate ALREADY EXISTS

Explanation: This information message indicates that the specified parameter was updated, but the specified prerequisite condition was not added to the IOA Conditions file, because the condition already existed in the file. While the requested parameter change was successful (that is, the facility updated the parameter), it was unnecessary to add the condition to the Conditions file because the parameter had already been updated that day.

Corrective Action: No action is required.

CTMB48S INSUFFICIENT STORAGE. EXIT ISPF AND RETRY

Explanation: The facility cannot get enough virtual storage to create or read an AutoEdit member because the REGION size is too small.

The member is not created or updated.

Corrective Action: Exit ISPF and try to re-enter; or increase the REGION size.

CTMB49E READING AUTOEDIT MEMBER memName FAILED. CHECK LIBRARY lib

Explanation: The facility can not read the AutoEdit member from the library. There is probably a general system problem with the library file.

The member is not created or updated.

Corrective Action: Check the AutoEdit library file for general systems problems.

CTMB50E type - IS AN INVALID TYPE

Explanation: Invalid TYPE specified.

Corrective Action: Correct the TYPE field.

CTMB51E TYPE - type - ALREADY IN USE FOR THIS PARAMETER TYPE

Explanation: This type has already been defined for this parameter.

Corrective Action: Enter a correct TYPE combination.

CTMB52E INVALID TYPE COMBINATION - type

Explanation: This type conflicts with the previous types in the TYPE definition for the parameter. The combination is invalid.

Corrective Action: Enter a correct TYPE combination.
CTMB53E A VALID NUMBER IS EXPECTED AFTER MINL/MA XL

**Explanation:** An invalid value was entered after MINL or MAXL, which specifies the length limit. Valid values are number between 1-99.

**Corrective Action:** Enter a valid number after MINL or MAXL.

CTMB54E SPECIFIED PARAMETER INVALID FOR TYPE - *type*

**Explanation:** The parameter does not match the type specified in the message.

**Corrective Action:** Enter a value which is appropriate to the TYPE.

CTMB60S INTERNAL ERROR - UNABLE TO CALL VALIDATION ROUTINE CTMTVAL

**Explanation:** The facility cannot call the validation routine CTMTVAL. The CTMTPRP program, which is operated from CTMEXEC, failed to call the CTMTVAL validity check routine.

CTMEXEC terminates abnormally.

**Corrective Action:** Check the IOA Load library.

CTMB61E DATE FORMAT SHOULD BE *ddmmyy* (INTERNATIONAL) OR *mmddyy* (USA)

**Explanation:** The date format is invalid. The date field contains data, but the format of the date is not ddmmyy or mmddyy.

The panel is redisplayed with an error message.

**Corrective Action:** Enter date in the correct format.

CTMB62E UNABLE TO ALLOCATE LIBRARY *lib*

**Explanation:** The facility cannot allocate the *lib* library. The facility failed to allocate an existing library, or to create a new Daily library.

The current operation is abnormally terminated.

**Corrective Action:** If the library already exists, try displaying it. If the library is a new library, check to see if there is sufficient free space on the disk.

CTMB63E SCHEDULING TABLE *tableName* NOT FOUND IN LIBRARY *lib*

**Explanation:** The facility cannot find the *tableName* Scheduling Table in the *lib* library.

The current operation is terminated.

**Corrective Action:** Add the Scheduling Table to the library.

CTMB69E THE PARAMETER *parm* DOES NOT HAVE A DEFAULT VALUE

**Explanation:** There is no default value for this parameter. There is a request for the default value of the parameter to be used; however, this parameter does not have a default value.
No value is set for the parameter.

**Corrective Action:** Enter the value for the parameter.

**CTMB70I AUTOEDIT MEMBER *memName* HAS BEEN UPDATED IN THE DAILY LIBRARY**

**Explanation:** This information message indicates the facility updated the AutoEdit member. The facility does not order the jobs of the Daily Plan more than once. However, the AutoEdit member is updated with the current value of the parameters in the plan.

**Corrective Action:** No action is required.

**CTMB71I PLAN *planid* CONTAINS PARAMETERS WITHOUT A VALUE. CANNOT BE ORDERED**

**Explanation:** This information message indicates that the plan contains parameters without values. Therefore, the plan cannot be ordered by Control-M. A plan is ordered by Control-M only when all the parameters contain values.

The plan is not ordered.

**Corrective Action:** Enter values for the parameters.

**CTMB72E THE REMAIN OPTION IS BEING USED. TRY AGAIN LATER**

**Explanation:** Another user is probably performing an EXEC using the REMAIN option.

The EXEC phase is not performed.

**Corrective Action:** Try again later.

**CTMB73S CANNOT OPEN PLAN *planid*. EXIT ISPF AND RETRY**

**Explanation:** The facility cannot read the parameters from the plan.

The plan will not be ordered by Control-M, and the AutoEdit member will not be created.

**Corrective Action:** Exit, and then re-enter, ISPF.

**CTMB74I END OF PLAN LIST**

**Explanation:** This informational message indicates that the user specified YES in the REMAIN option of CTMEXEC, and CTMEXEC finished processing all the plans in the Daily library.

**Corrective Action:** No action is required.

**CTMB75E AUTOEDIT MEMBER *memName* ALREADY EXISTS IN *lib***

**Explanation:** The facility tried to create a new member in the AutoEdit library, but a member with the specified name already exists in the library.

The AutoEdit member is not created and the plan is not ordered by Control-M.

**Corrective Action:** Check the AutoEdit library.
CTMB77I PLAN planid HAS BEEN PLACED ON ACTIVE JOBS FILE

Explanation: This informative message indicates that the plan was ordered by Control-M.

Corrective Action: No action is required.

CTMB78E INDEX TABLE NOT FOUND. EXECUTE CTMFETCH BEFORE CTMEXEC

Explanation: The facility cannot find the Index Table in the Daily library that is created during the FETCH phase. The Index Table, which is created during the FETCH phase, contains information on all the Daily Plans that were fetched for that day.

The EXEC is not performed.

Corrective Action: Perform the FETCH again, and then execute CTMEXEC.

CTMB79S INTERNAL ERROR - PLAN planid WAS NOT FETCHED CORRECTLY

Explanation: This is an internal facility error. The FETCH phase was not completed. Due to previous errors during the FETCH, the Daily libraries do not contain all the information required to perform the EXEC.

The EXECUTE phase for the plan is terminated.

Corrective Action: Execute the FETCH for the plan again.

CTMB80I PLAN STATUS WAS CHANGED. SELECT IT AGAIN

Explanation: This information message indicates that the status of the plan was changed while the user was in the Plan Selection screen. The plan was probably executed by another user while the list of plans was displayed.

The list of plans is redisplayed.

Corrective Action: Select the plan again.

CTMB81I PLAN planid FETCHED TO THE DAILY LIBRARY

Explanation: This informative message indicates that the facility has successfully performed the FETCH phase for the plan.

Corrective Action: No action is required.

CTMB83E BAD RC FROM CTMMEM. COMPRESS THE SCHEDULING LIBRARY

Explanation: The facility received a non-zero return code when trying to read or update the Scheduling Table. The CTMMEM program returned a non-zero return code when the facility accessed the Scheduling library. The Daily Scheduling library may need to be compressed.

The FETCH phase is not completed.

Corrective Action: Compress the Daily Scheduling library, and perform the FETCH again.
CTMB84E MASTER PLAN planid NOT FOUND IN LIBRARY lib

Explanation: The facility cannot find the Master Plan in the Master Plan library. During the FETCH phase, the facility copies the Master Plan to the Daily library, but the Master Plan does not exist in the Master Plan library.

The FETCH phase is not completed.

Corrective Action: Create the Master Plan, or correct the name of the Master Plan or library.

CTMB85E DAILY SCHEDULING TABLE DOES NOT CONTAIN JOBS

Explanation: No jobs in this Scheduling Table are scheduled to be run today, according to their scheduling definitions. Therefore, there are no parameters in this plan that require prompting.

The Daily Scheduling Table is not created.

Corrective Action: Check whether or not jobs from this plan should have been fetched today.

CTMB86I ALLOCATING lib AS A NEW DAILY LIBRARY

Explanation: This informative message indicates that the facility is allocating a new Daily library. The first time, on a given day, that a user tries to perform a FETCH, the library against which the FETCH is performed is allocated as the Daily library for that day.

Corrective Action: No action is required.

CTMB87E PLEASE SPECIFY "YES" TO OVERRIDE THE DAILY PLAN, OR USE SUFFIX

Explanation: A Daily Plan with the same name was already fetched. Each Daily Plan must have a unique name in the Daily library. If a plan with the same name already exists in the Daily library, override the existing plan, or use a suffix to create a new plan.

The FETCH is not performed.

Corrective Action: Specify YES to override the plan or use a suffix to create a new Daily Plan.

CTMB93E PLAN planid NOT FOUND IN LIBRARY lib

Explanation: The facility cannot find the plan in the library. The plan should have been created earlier.

Corrective Action: Check to see if there is a physical problem with the library.

CTMB94E PLAN IS BEING UPDATED. TRY AGAIN LATER

Explanation: The plan is probably in use by another user. A plan can be updated by only one user at a time. A second user trying to update the same plan receives this message.

The plan is not displayed.

Corrective Action: Try again later.
CTMB95E PROMPTING MESSAGE IS REQUIRED WHEN SPECIFYING PROMPT IND=Y

Explanation: The user set PROMPT IND to Y, but the MESSAGE field is empty. Setting PROMPT IND to Y means that the user will be prompted for a value for this parameter during the EXEC phase. In such a case, a prompting message must be displayed at the time the EXEC is performed. The parameter is not accepted.

Corrective Action: Enter the text of the message, or set PROMPT IND to N.

CTMB96E DEFAULT VALUE IS REQUIRED WHEN SPECIFYING PROMPT IND=N

Explanation: PROMPT IND was set to N, but the DEFAULT field is empty. Setting PROMPT IND to N assigns the value of this parameter in the Master Plan, and prevents it from being modified during the EXEC phase. In this case, the value must be supplied.

Corrective Action: Enter the default value, or set PROMPT IND to Y.

CTMB97E OCCURRENCE NUMBER MUST BE TWO DIGITS (01, 02, 31, ETC.)

Explanation: Invalid format of the OCCUR NO. field. It should be two digits.

Corrective Action: Enter the value in correct format.

CTMBA0E PLEASE FILL IN TABLE NAME

Explanation: In the Control-M Quick Schedule Definition screen, the name of the scheduling table to be created was not entered. It is a required entry.

A prompt asks for a valid table name.

Corrective Action: Enter the name of the scheduling table to be created.

CTMBA1E SKELETON SCHEDULING TABLE tableName DOES NOT EXIST IN lib

Explanation: In the Control-M Quick Schedule Definition screen, the skeleton scheduling table tableName was not found in library lib.

A prompt requests the name of a skeleton scheduling table.

Corrective Action: Enter the name of a skeleton scheduling table that exists in library lib.

CTMBA2E GROUP NAME REQUIRED FOR THIS OPTION

Explanation: In the Control-M Quick Schedule Definition screen, the group name was not entered. If the format of the inter-job prerequisite conditions is GROUP-FROMJOB-SUFFIX, the group name is a required entry.

A prompt asks for a group name.

Corrective Action: Enter a group name of 1 to 20 non-blank characters.
CTMBA3E PLEASE FILL IN SKELETON SCHEDULING TABLE NAME

Explanation: In the Control-M Quick Schedule Definition screen, the name of the skeleton scheduling table was not entered.

A prompt asks for the name of a skeleton scheduling table.

Corrective Action: Enter the name of the skeleton scheduling table to be used.

CTMBA4E PREREQUISITE CONDITION PREFIX REQUIRED FOR THIS OPTION

Explanation: In the Control-M Quick Schedule Definition screen, a prerequisite condition prefix was not entered. If the format of the inter-job prerequisite conditions is PREFIX-FROMJOB-TOJOB, the prefix is a required entry.

A prompt asks for a prefix.

Corrective Action: Enter a one or two character prefix.

CTMBA6E PREREQUISITE CONDITION SUFFIX REQUIRED FOR THIS OPTION

Explanation: In the Control-M Quick Schedule Definition screen, a prerequisite condition suffix was not entered. If the format of the inter-job prerequisite conditions is FROMJOB-TOJOB-SUFFIX or GROUP-FROMJOB-SUFFIX, the suffix is a required entry.

A prompt requests a suffix.

Corrective Action: Enter the suffix. For FROMJOB-TOJOB-SUFFIX, the suffix is limited to one or two characters.

CTMBA9E ONE (AND ONLY ONE) OPTION MUST BE MARKED AS "Y"

Explanation: In the Control-M Quick Schedule Definition screen, either none of the options for prerequisite condition format was marked Y, or more than one was marked Y. Only one format for the inter-job prerequisite conditions may be used to create a scheduling table.

A prompt requests entry of valid Y and N values for the three prerequisite condition format options.

Corrective Action: Ensure that one of the three choices is marked Y, and the other two choices are marked N.

CTMBA9E ITEM MUST REFERENCE A MEMBER NAME IN THIS TABLE

Explanation: In the Control-M Quick Schedule Definition Jobs List screen, an entry in the DEPENDS ON field refers to a member that was not found in the table. Entries in the DEPENDS ON field must refer only to members in the table being created. One of the following was found:
A reference was made by member name, and no entry was found in the table with that name.

A reference was made by line number, and the line number was either greater than the last line in the table, or the line referenced has a blank member name.

On the first line of the table, a minus sign (-) was used to indicate the previous line. There is no previous line.

A prompt requests correction of the DEPENDS ON field.

**Corrective Action:** Correct the invalid reference, as follows:

- For a reference by member name, ensure that the spelling of the member name is correct, or that the referenced member is entered into the table.
- For a reference by line number, either enter a member name on the numbered line, or correct the reference so that it points to a line in the table with a non-blank member name.
- Remove the minus sign (-) reference from the first line.

**CTMBAEB** ONLY ONE "MOVE" OR "COPY" OPERATION ALLOWED

**Explanation:** In the Control-M Quick Schedule Definition Jobs List screen, more than one member has Option C or Option M selected.

Each time the Enter key is pressed, only one member may be moved or copied.

A prompt requests removal of one of the duplicate M or C options.

**Corrective Action:** Enter the M or C option on one line only.

**CTMBACE** ONLY ONE "BEFORE" OR "AFTER" ALLOWED

**Explanation:** In the Control-M Quick Schedule Definition Jobs List screen, more than one member has Option A or Option B selected. The target of a move or copy line operation must be a specific line, indicated with the A or B option.

A prompt requests removal of one of the duplicate A or B options.

**Corrective Action:** Enter option A or B on one line only.

**CTMBAED** BEFORE/AFTER IS REQUIRED WITH MOVE/COPY

**Explanation:** In the Control-M Quick Schedule Definition Job List screen, a Move or Copy operation was requested, but no line was marked with either an A (after) or B (before).

A prompt requests entry of option A or B.

**Corrective Action:** Enter either the A or B option to define where the data is to be moved or copied, or remove the Move or Copy option.

**CTMBAEE** MOVE/COPY IS REQUIRED WITH BEFORE/AFTER

**Explanation:** In the Control-M Quick Schedule Definition Jobs List screen, a Before or After was indicated, but no Move or Copy operation was requested.

A prompt asks for specification of an M or C option.

**Corrective Action:** Either enter a Move or Copy option, or remove the Before or After option.
CTMBAFE PLEASE ENTER DESCRIPTION

Explanation: In the Control-M Quick Schedule Definition Jobs List screen, the Description for a member was not entered.
A prompt requests a description.
Corrective Action: Enter the member description.

CTMBB0E A MEMBER MAY NOT DEPEND ON ITSELF

Explanation: In the Control-M Quick Schedule Definition Job List screen, a member refers to itself. A reference was found that is either a job name that is identical to the member name, or a line number that is the same as the line number the member is on.
A prompt requests correction of the DEPENDS ON field.
Corrective Action: Correct the reference in error.

CTMBB1E DEPENDENCY CAN BE: MEMNAME, LINE NUMBER, "- " OR *CONDNAME

Explanation: The DEPENDS ON field in the Quick Schedule Definition Job List screen contains data in an invalid format, such as an embedded blank in a member name, or two commas with no data between them. The DEPENDS ON field may consist of any number of subfields separated by commas. Each subfield may be either:

- The name of another member in the table
- The number of a line on which a member is defined
- A minus sign (- ), indicating the previous job in the table
- An asterisk (*) followed by a prerequisite condition name

If a prerequisite condition name is used, it must be the last subfield in the DEPENDS ON area. Only one condition name is allowed per line.
A prompt requests correction of the DEPENDS ON field.
Corrective Action: Correct the invalid data in the DEPENDS ON field.

CTMBB2E MEMBER NAME MAY APPEAR ONLY ONCE IN THE TABLE

Explanation: In the Control-M Quick Schedule Definition Job List screen, a member name appears more than once. A member name in a schedule produced by the Quick Schedule Definition must appear only once in the table.
A prompt requests removal of the duplicate members.
Corrective Action: Delete the duplicate entry.
CTMBBB3E LINE IS A PREREQUISITE FOR ANOTHER MEMBER - CANNOT BE DELETED

Explanation: In the Control-M Quick Schedule Definition Job List screen, option D (Delete) was entered for a member that is a prerequisite to another member. This line cannot be deleted, since this would cause the member that depends on it to refer to a member that does not exist.

A prompt requests removal of the reference to the line marked for deletion.

Corrective Action: Delete the references to the member to be deleted. Then the deletion will be accepted.

CTMBB4I TABLE tableName CREATED IN LIBRARY lib

Explanation: This information message indicates that scheduling table tableName has been built successfully and placed in library lib.

Corrective Action: No action is required.

CTMBB5W UPDATE CANCELLED BY USER

Explanation: In the Control-M Quick Schedule Definition Exit Option Window, the user entered N for the Save or Create option.

The scheduling table is not updated.

Corrective Action: No action is required.

CTMBB6I TABLE tableName REPLACED IN LIBRARY lib

Explanation: This information message indicates that a scheduling table has been successfully built and has replaced table tableName in library lib.

Corrective Action: No action is required.

CTMBB7E MEMBER IS NOT A VALID SKELETON SCHEDULING TABLE

Explanation: In the Control-M Quick Schedule Definition screen, the skeleton scheduling table specified is not a valid skeleton scheduling table, or it contains definitions for more than one job. The skeleton scheduling table must be a valid Control-M scheduling table, and must contain a definition for one and only one job.

The user is prompted to enter the name of a valid scheduling table.

Corrective Action: Either modify the skeleton scheduling table using the Control-M Online Schedule Definition - screen 2, and retry the request to use this skeleton scheduling table, or enter the name of a valid skeleton scheduling table.

CTMBB8E "S" IS THE ONLY OPTION PERMITTED

Explanation: In the End User Job Order Interface (CLIST CTMJBINT), a value other than S (select this job for submission) was specified in the OPTION field. Only S may be specified in the OPTION field, other than leaving the OPTION field blank.

Corrective Action: Ensure that the OPTION field for each job in the list either contains S or is blank, and then press Enter.
CTMBB9E DATE MUST BE IN FORMAT {MMDDYY | DDMMYY | YYMMDD}

**Explanation:** An invalid date was specified in the End User Job Order Interface (CLIST CTMJBINT). The format shown in the message text depends on the standard in use at the site. The specified date was not valid according to this standard.

**Corrective Action:** Specify a date that is valid according to the indicated site standard, and press Enter.

CTMBBAS ERROR ALLOCATING LIBRARY. PLEASE CONTACT YOUR IOA ADMINISTRATOR

**Explanation:** An internal error occurred while allocating the library for the End User Job Order Interface (CLIST CTMJBINT). The system was unable to allocate a required library. Possible causes are:

- Control-M was not installed, or was incorrectly installed.
- CLIST CTMJBINT was modified to point to a library other than the default library, and the modification is incorrect.
- The library indicated by USRLIB is currently allocated to another address space with DISP set to OLD or MOD or NEW.

The CLIST is terminated without any further processing.

**Corrective Action:** Notify your INCONTROL administrator who, depending on the cause of the error, should perform the appropriate action, as follows:

- Examine CLIST CTMJBINT. If the USRLIB parameter contains percent signs (%), there is a problem with the installation of Control-M. Install Control-M correctly.
- Ensure that the USRLIB parameter points to a cataloged data set.
- Resolve any outstanding allocation conflicts.

CTMBBBS ERROR OPENING LIBRARY. PLEASE CONTACT YOUR IOA ADMINISTRATOR

**Explanation:** An internal error occurred while opening the library for the End User Job Order Interface (CLIST CTMJBINT). The system cannot open the library indicated in the USRLIB parameter in CLIST CTMJBINT.

The CLIST is terminated without any further processing.

**Corrective Action:** Notify your IOA administrator. The IOA administrator should determine why the system was not able to open the library. For example, ensure that the library exists, and resides on the volume to which the MVS catalog points.

CTMBBCE THIS FUNCTION HAS NOT BEEN PREPARED FOR USE AT YOUR INSTALLATION

**Explanation:** The user attempted to use the Control-M End User Job Order Interface (CLIST CTMJBINT), but the End User Job Order Interface has not been implemented at your site.

The CLIST is terminated without any further processing.
**Corrective Action:** Request that the INCONTROL administrator implement the End User Job Order Interface at your site. Implementation instructions are in the Control-M chapter of the *INCONTROL for z/OS Administrator Guide.*

**CTMBBDE NO JOB LIST DEFINED FOR *usr.* CONTACT YOUR IOA ADMINISTRATOR**

**Explanation:** A user (*usr*) attempted to use the Control-M End User Job Order Interface (CLIST CTMJBINT), but no job list is defined for that user.

The CLIST is terminated without any further processing.

**Corrective Action:** Notify your IOA administrator that you are unable to use the End User Job Order Interface. Implementation instructions for the End User Job Order Interface are provided in the chapter that describes JCL and the AutoEdit facility in the *Control-M for z/OS User Guide.*

**CTMBBEE RENAME/DELETE DUPLICATE JOB *jobName* IN SCHEDULING TABLE *tableName***

**Explanation:** The user requested the M6 Control-M ISPF utility or executed the CLIST CTMJOBRQ command. However, the *tableName* Control-M Job Scheduling table contains job names that are duplicates.

A list of the job names in the *tableName* Job Scheduling table is displayed, but this list contains only one entry for each set of duplicated job names.

**Corrective Action:** Ask your INCONTROL administrator to delete or rename the jobs in the *tableName* scheduling table that have names that duplicate other job names.

**Messages CTMC00 through CTMCxx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**CTMC04I CTO SUBSYSTEM *subsys* INACTIVE. TD MESSAGES NOT PROCESSED**

**Explanation:** This information message indicates that the Control-O CICS Interface was activated but cannot process Transient Data (TD) messages because the Control-O monitor is not active. The Control-O CICS Interface can automate Transient Data messages only when the Control-O monitor is active.

The processing of Transient Data messages is discontinued. It will be resumed when Control-O becomes active.

**Corrective Action:** Start the Control-O monitor.

**CTMC05I CTO SUBSYSTEM *subsys* IS NOW ACTIVE. TD MESSAGES ARE PROCESSED**

**Explanation:** This informative message indicates that the processing of Transient Data (TD) messages resumes because the Control-O monitor has been activated. The Control-O CICS Interface can automate Transient Data messages only when the Control-O monitor is active.
Processing of Transient Data messages resumes.

**Corrective Action:** No action is required.

**CTMC07E CICS FUNCTION** `func` **RESOURCE** `res` **ERROR** `resp1` **RESPONSE** `resp2`

**Explanation:** The Control-O CICS initialization interface module of the IOA environment failed due to a CICS service error.

The Control-O CICS interface initialization fails. No rule is triggered for messages written to CICS transient data queues.

**Corrective Action:** Notify the CICS or INCONTROL administrator.

**CTMC0AE BLDL/LOAD FAILED FOR MODULE** `modName`

**Explanation:** The CTOCTDT Control-O CICS interface initialization module failed to load the `modName` module.

The Control-O CICS interface initialization fails. No rule is triggered for messages written to CICS transient data queues.

**Corrective Action:** Do the following:

1. Verify that the IOA load library is concatenated to CICS STEPLIB. If it is not, do the following, in sequence:
   - Add the IOA load library to the CICS STEPLIB.
   - Stop and restart the CICS.
2. Restart the Control-O CICS interface.

**CTMC0BE CONTROL-O IS NOT INSTALLED. IOAPARM MUST BE SET TO CTO=Y**

**Explanation:** The Control-O CICS interface module initialization of the IOA environment failed, because Control-O is not installed, that is, CTO is not set to Y.

The Control-O CICS interface initialization fails. No rule is triggered for messages written to CICS transient data queues.

**Corrective Action:** Notify the INCONTROL administrator.

**CTMC0CE CTOPARM WAS NOT INITIALIZED. CHECK ERROR MESSAGES ON THE JOBLOG/SYSLOG**

**Explanation:** The Control-O CICS interface module initialization of the IOA environment failed because CTOPARM is not initialized.

The Control-O CICS interface initialization fails. No rule is triggered for messages written to CICS transient data queues.

**Corrective Action:** Notify the INCONTROL administrator.
CTMC11I CONTROL-O CICS INTERFACE INITIALIZATION COMPLETED FOR SUBSYSTEM

Explanation: This information message is issued upon successful completion of the Control-O CICS Interface initialization for the specified subsystem.

Corrective Action: No action is required.

CTMC12E ERROR IN SEND TO CICS TERMINAL. EIBRESP=errCode

Explanation: The Control-O CICS Interface could not send a message to the terminal during initialization or termination. Command EXEC CICS SEND failed with error code errCode.

Corrective Action: Check the error code. If the problem is related to CICS customization, or to storage violations due to user transactions, correct the problem. Otherwise, prepare the Control-M monitor full output and contact BMC Customer Support.

CTMC14E ERROR WHILE TRYING TO DETERMINE CICS LEVEL. EIBRESP=errCode

Explanation: The Control-O CICS Interface could not determine the level of the CICS release. Command EXEC CICS INQUIRE SYSTEM RELEASE failed with error code errCode.

Corrective Action: Check the error code, and correct accordingly. If necessary, contact BMC Customer Support.

CTMC15E ERROR IN RECEIVE FROM TERMINAL. EIBRESP=errCode

Explanation: The Control-O CICS Interface could not receive from the terminal during initialization or termination. Command EXEC CICS RECEIVE failed with the error code errCode.

Corrective Action: Check the error code. If the problem is related to CICS customization, or to storage violations due to user transactions, correct the problem. Otherwise, contact BMC Customer Support.

CTMC16W INIT REQUEST INVALID. INTERFACE ALREADY INITIALIZED

Explanation: An initialization request was issued, but the Control-O CICS Interface is already initialized. The request is not processed.

Corrective Action: No action is required.

CTMC19E ONLINE MONITOR IS ACTIVE FOR ANOTHER RELEASE. IOA SESSION NOT ESTABLISHED. RC=rc

Explanation: This is one of two messages with the same ID, but different text.

Valid values for rc, and the appropriate responses, are shown in the following table.

The IOA online session is not started.
Corrective Action:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
<th>User Response</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>An internal error was detected.</td>
<td>Contact BMC Customer Support.</td>
</tr>
<tr>
<td>3</td>
<td>An internal error was detected.</td>
<td>Contact BMC Customer Support.</td>
</tr>
</tbody>
</table>

CTMC19E "PGMIDERR" ERROR IN LOADING CTOCTDP

**Explanation:** This is one of two messages with the same ID, but different text.

Load of the CTOCTDP program failed due to a program ID error. Command EXEC CICS LOAD failed. The probable cause of the error is that the CTOCTDP program is not defined in the CICS tables.

The Control-O CICS Interface is not initialized.

**Corrective Action:** Make sure that the CTOCTDP program was defined and copied correctly to CICS. For details, see the instructions for installing the Control-O CICS Interface, in the Control-O chapter of the *INCONTROL for z/OS Installation Guide*.

CTMC20E UNAUTHORIZED TO LOAD CTOCTDP

**Explanation:** Load of the CTOCTDP program failed because the user is unauthorized to load the program.

The Control-O CICS Interface is not initialized.

**Corrective Action:** Perform the necessary CICS customization, or see your CICS security administrator.

CTMC21I CONTROL-O CICS INTERFACE INITIALIZATION STARTED

**Explanation:** This informative message is issued at the start of the Control-O CICS Interface initialization.

**Corrective Action:** No action is required.

CTMC22E ERROR IN OBTAINING CSA ADDRESS

**Explanation:** Command EXEC CICS ADDRESS failed.

The Control-O CICS Interface is not initialized.

**Corrective Action:** Contact BMC Customer Support.

CTMC24E ERROR IN EXTRACT EXIT FOR CTOCTDX. EIBRCODE(BYTES 1-2)=errCode

**Explanation:** Command EXEC CICS EXTRACT failed with error code *errCode*.

The Control-O CICS Interface is not initialized.

**Corrective Action:** Check the error code and correct the problem accordingly; then try to initialize the interface again. If necessary, contact BMC Customer Support.
CTMC25E INTERFACE NOT INITIALIZED. SHUT REQUEST INVALID

**Explanation:** A SHUT request was issued, but it was invalid since the Control-O CICS Interface was not initialized.

The request is not processed.

**Corrective Action:** No action is required.

CTMC26I CONTROL-O CICS INTERFACE SHUTDOWN STARTED FOR SUBSYSTEM

**Explanation:** This information message is issued at start of the Control-O CICS Interface shutdown for the specified subsystem.

**Corrective Action:** No action is required.

CTMC27I CONTROL-O CICS INTERFACE SHUTDOWN COMPLETED

**Explanation:** This information message is issued upon completion of the Control-O CICS Interface shutdown.

**Corrective Action:** No action is required.

CTMC30I CMEM IS ALREADY ACTIVE FOR THIS JOB - REQUEST FROM subsys IGNORED

**Explanation:** This information message indicates that another subsystem already processes CMEM events for this job. CMEM and/or Control-O are trying to process the same job, but DATASET and NCT2 (NOT CATLGD 2) event processing can be activated by one subsystem only.

DATASET and NCT2 events for this job will not be managed by the CMEM subsystem identified in the message, but by the other subsystem.

**Corrective Action:** Define DATASET or NCT2 events for a job in one CMEM table only.

CTMC31E "PGMIDERR" ERROR IN RELEASING CTOCTDP

**Explanation:** Command EXEC CICS RELEASE failed due to a program ID error.

The Control-O CICS Interface is not shut down.

**Corrective Action:** Activate and deactivate the Control-O CICS Interface. If the problem persists, contact BMC Customer Support.

CTMC32E UNAUTHORIZED TO RELEASE CTOCTDP

**Explanation:** Command EXEC CICS RELEASE failed because the user is unauthorized to release the CTOCTDP program.

The Control-O CICS Interface is not shut down.

**Corrective Action:** Perform the necessary CICS customization so that the user is authorized to release the CTOCTDP program, or contact your CICS security administrator.
CTMC33E UNRECOGNIZED REQUEST

**Explanation:** A request was not recognized. The probable cause is a syntax error in a Control-O CICS Interface command issued by the user.

The command is not processed.

**Corrective Action:** Reissue the request correctly. For further information, see the instructions for installing the Control-O CICS Interface, in the Control-O chapter of the *INCONTROL for z/OS Installation Guide*.

CTMC35E ERROR IN ENABLING CTOCTDX FOR XTDOUT EXIT.
EIBRCODE(BYTES 1-2)=errCode

**Explanation:** Command EXEC CICS ENABLE failed with error code `errCode`.

The Control-O CICS Interface is not initialized.

**Corrective Action:** Check the error code and correct the problem accordingly; then try to initialize the interface again. If necessary, contact BMC Customer Support.

CTMC36E ERROR IN DISABLING CTOCTDX FOR XTDOUT EXIT.
EIBRCODE(BYTES 1-2)=errCode

**Explanation:** Command EXEC CICS DISABLE failed with the error code `errCode`.

The Control-O CICS Interface is not shut down.

**Corrective Action:** Check the error code and correct the problem accordingly; then try to initialize the interface again. If necessary, contact BMC Customer Support.

CTMC38E INTERFACE NOT INITIALIZED. DBG REQUEST INVALID

**Explanation:** A DBG request was issued, but it was invalid since the Control-O CICS Interface was not initialized.

The request is not processed.

**Corrective Action:** No action is required.

CTMC39E action FAILED FOR COND cond

**Explanation:** An error occurred while processing a request to add/delete the condition.

The source of the request may be:

- Control-O request for a DO COND.
- CMEM ADDCOND/DELCOND action.

This message is preceded by another message, which gives more details of the cause of the error.

No additional action will be taken for the failed add/delete condition request.

**Corrective Action:** Correct the error as detailed in the preceding message. If addition/deletion of the condition is still required, it should be added or deleted manually. If the specification in the original request was incorrect, correct it and reload if necessary. Reload the CMEM table or reorder the Control-O rule.
CTMC39I  DBG REQUEST ACCEPTED

Explanation: Informative message issued in response to DBG request.
Corrective Action: No action is required.

CTMC41E  JOB TERMINATED BY {CMEM | CONTROL-O} DUE TO STOPJOB REQUEST for "disposition" ON:

Explanation: The job was stopped due to a STOPJOB request for a DSNEVENT event. This message is followed by message CTMC42E, which contains additional details about the event.

In this message, disposition is the dataset disposition that triggered the event. Valid values are:

- NOT CATLGD x - x is the number from the NOT CATALGD message
- DISP= x. Valid values for x are:
  - C - cataloged
  - D - deleted
  - R - retained
  - S - scratched
  - U - uncataloged
  - K - kept

The job is stopped after the current step. All subsequent steps (including steps having COND set to EVEN/ONLY) will not be executed.

Corrective Action: No action is required.

CTMC42E  STEP=stepName PROCSTEP=procStep DSNAME=dsn

Explanation: This message follows message CTMC41E when a job is stopped due to an NCT2 (NOT CATLGD 2) event. The NCT2 event occurred for the dsn data set in the stepName step in the procStep procedure step.

Corrective Action: No action is required.

CTMC43E  ERROR IN PROCESSING A CMEM EVENT - CODE=code. SOME EVENTS MIGHT BE LOST

Explanation: An internal error occurred when CMEM or Control-O tried to process a CMEM event. This message is followed by message CTMC44E with the event that caused the error.

The event is ignored.

Corrective Action: Prepare the Control-M monitor full output and contact BMC Customer Support.

CTMC44E  MESSAGE: text

Explanation: This message follows message CTMC43E and CTMC4AE when an internal error occurs during event processing.
Corrective Action: No action is required.

CTMC45W CMEM PROCESSING STOPPED AT STEP=stepName PROCSTEP=procStep DUE TO SUBSYSTEM DEACTIVATION

Explanation: CMEM subsystem functions or Control-O subsystem functions were stopped. Some or all events for the specified stepName procstep might not be processed because the subsystem was stopped.

Corrective Action: Activate the subsystem functions (CMEM or Control-O).

CTMC46I CMEM PROCESSING RESUMED AT STEP=stepName PROCSTEP=procStep

Explanation: This information message indicates that CMEM or Control-O subsystem functions were reactivated. This message appears when a CMEM subsystem function or Control-O was stopped and restarted during job execution. Message CTMC45W was issued for this job. Events that occurred between these two messages are ignored.

CMEM events for this job from stepName procstep are processed.

Corrective Action: No action is required.

CTMC47E CMEM PROCESSING STOPPED FOR THIS JOB DUE TO AN INTERNAL ABEND:

Explanation: An abend occurred during processing of CMEM events for this job. This message is followed by message CTMC48E with details about the abend.

CMEM event processing stops for this job and a dump is written to a system dump data set.

Corrective Action: Format and save the dump, prepare the Control-M monitor full output, and contact BMC Customer Support.

CTMC48E ABEND-CODE=abCode MODULE=modName LOAD-POINT=modAddr OFFSET=offset

Explanation: This message follows message CTMC47E when an internal abend occurs in CMEM event processing. It contains details about the abend: subsystem name, abending module name, abending load module load point and offset of the abending instruction in the module.

A system dump is produced. The title of the dump contains this message.

Corrective Action: No action is required.

CTMC49E CMEM PROCESSING STOPPED FOR THIS JOB DUE TO AN INTERNAL ERROR. ERROR CODE = code

Explanation: An internal error occurred when CMEM or Control-O tried to process a CMEM event. This message is followed by message CTMC44E, which specifies the event that caused the error.

CMEM event processing stops for this job.

Corrective Action: Prepare the Control-M monitor full output and contact BMC Customer Support.
CTMC4AW CONTROL-O 'ON SYSOUT' PROCESSING STOPPED FOR DD ddName DUE TO SUBSYSTEM DEACTIVATION

**Explanation:** Control-O SYSOUT processing for the SYSOUT allocated to the ddName DD statement was stopped.

Some or all events for this SYSOUT might not be processed because Control-O was stopped.

**Corrective Action:** Activate Control-O.

CTMC4BI CONTROL-O 'ON SYSOUT' PROCESSING RESUMED FOR DD ddName

**Explanation:** This information message indicates that SYSOUT processing for SYSOUT allocated to the ddName DD statement was reactivated. This message appears when Control-O was stopped and restarted during application SYSOUT processing. Message CTMC4AW was issued for this SYSOUT. Events that occurred between these two messages are ignored.

SYSOUT events for this SYSOUT are processed.

**Corrective Action:** No action is required.

CTMC4CE CONTROL-O 'ON SYSOUT' PROCESSING STOPPED FOR DD ddName DUE TO UNSUPPORTED FALLBACK

**Explanation:** Control-O fallback to a lower version was performed while processing a SYSOUT allocated to the ddName DD statement. Fallback is not allowed in the following cases:

- Fallback to a Control-O version earlier than 6.0.15 or 6.1.15.
- Fallback to Control-O version 6.0. xx or 6.1. xx for SYSOUT processed in key other than 8.

Control-O processing stops for the SYSOUT allocated to the ddName DD statement.

**Corrective Action:** Restart the job to resume SYSOUT processing.

CTMC4DE CMEM PROCESSING STOPPED FOR THIS JOB DUE TO UNSUPPORTED FALLBACK

**Explanation:** Control-O or CMEM fallback to an earlier version was performed while processing DSNEVENT or STEP events. Fallback is not allowed to Control-O or CMEM versions earlier than 6.0.15 or 6.1.15.

Control-O or CMEM processing stops for the job.

**Corrective Action:** Restart the job to resume DSNEVENT and STEP events processing.

CTMC50E INSUFFICIENT STORAGE FOR CMEM PROCESSING

**Explanation:** *Highlighted, unrollable message.*

Insufficient storage for CMEM processing initialization in the Control-M monitor.

The Control-M monitor stops processing CMEM/Control-O requests.

**Corrective Action:** Increase the REGION size specified for the Control-M monitor.
CTMC50W CONTROL-M MONITOR CMEM FACILITY IS NOT INSTALLED

Explanation: Control-M has determined that the CMEM facility is not installed.
Communication between CMEM or the Control-O monitor and Control-M is not established, but the Control-M monitor continues processing.
Corrective Action: No action is required.

CTMC51E INSUFFICIENT STORAGE FOR TABLE tableName FROM lib

Explanation: Insufficient storage for loading table tableName into storage.
This message is followed by the WKJA59E message, which contains more details about the error. Job order fails. No additional action taken.
Corrective Action: Increase the REGION size specified for the Control-M monitor; or define a smaller table if possible (for example, if only one job is ordered from the table). For further actions, see the WKJA59E message.

CTMC52E DATASET IS NOT A LIBRARY, DSN=dsn

Explanation: While processing a CMEM or Control-O request, the Control-M monitor encountered a data set dsn which is not a partitioned data set.
This message is followed by the WKJA59E or WKJC39E message, which identifies the failed action.
No additional action will be taken for the failed job or table order.
Corrective Action: Specify the name of a partitioned data set containing one or more valid scheduling tables.

CTMC53E DATASET IN USE, DSN=dsn

Explanation: While processing a CMEM or Control-O request, the Control-M monitor encountered a data set dsn which is currently used by another job.
This message is followed by message WKJA59E which identifies the failed action.
No additional action will be taken for the failed job/table order.
Corrective Action: Determine which job has allocated the data set with disposition OLD and resolve the conflict.

CTMC54E DATASET IS NOT CATALOGED, DSN=dsn

Explanation: While processing a Control-M DO FORCEJOB, CMEM or Control-O request, the Control-M monitor encountered a data set dsn which is not cataloged.
This message is followed by additional messages which identify the failed action.
No additional action will be taken for the failed job or table order.
Corrective Action: Make sure that the SCHLIB library specified in the CMEM table entry refers to a cataloged data set.
CTMC55E DYNAMIC ALLOCATION ERROR, DSN=dsn

Explanation: While processing a CMEM or Control-O request, the Control-M monitor encountered a dynamic allocation error.

This message is followed by message WKJA59E which identifies the failed action.

No additional action will be taken for the failed job/table order.

Corrective Action: Record the problem, prepare the Control-M monitor full output, and contact BMC Customer Support.

CTMC56E M2S FILE IS FOR QNAME qName. IT DOES NOT MATCH IOA QNAME qName DSN=dsn

Explanation: Control-M could not allocate the monitor to the Monitor-to-Subsystem (M2S) file of another IOA environment.

During initialization the Control-M monitor compares the QNAME in the IOA environment with the QNAME in the M2S file. They should match.

Message CTM441E is issued.

Corrective Action: Check the IOACPRM member and do one of the following:

- If it points to the wrong file, correct the name and start a new monitor.
- If there is no problem in the IOACPRM member, the M2S file was created in a different IOA environment. Delete the file and create a new M2S file using the correct IOA environment.

CTMC56S PREVIOUS FORMAT OF ACTIVE JOBS FILE ABENDED

Explanation: The source Active Jobs file is either currently being formatted, or an abend occurred during the previous formatting.

The Active Jobs file is formatted daily as part of the New Day process. It may also be formatted by the CTMCAJF utility.

Copy program terminates with a condition code of 08.

Corrective Action: If the Active Jobs file is currently being formatted, wait until the formatting is completed. If the previous formatting abended, determine the reason. Resubmit the copy job only after successful formatting.

CTMC57E S2M FILE IS FOR SMFID smfid QNAME qName. IT DOES NOT MATCH IOA QNAME qName DSN=dsn

Explanation: The Control-M monitor could not allocate the subsystem to the Subsystem-to-Monitor (S2M) file of another IOA environment.

During initialization the Control-M monitor compares the qname in the IOA environment with the qname in the S2M file. They should match.

Message CTM441E is issued.

Corrective Action: Check the IOACPRM member and do one of the following:
If it points to the wrong file, correct the name and start a new monitor.

If there is no problem in the IOACPRM member, the S2M file was created in a different IOA environment. Delete the file and create a new S2M file using the correct IOA environment.

**CTMC57S TARGET ACTIVE JOBS FILE IS NOT A NEWLY FORMATTED FILE**

*Explanation:* The target Active Jobs file should not be used before it is formatted by the FORMCKP procedure.

Copy program terminates with a condition code of 08.

**Corrective Action:** Format the Active Jobs file using the FORMCKP procedure.

**CTMC58I M2S FILE FOR IOA QNAME qName. DSN=dsn**

*Explanation:* This information message identifies the Monitor-to-Subsystem (M2S) file that the Control-M monitor allocated for communication with the Control-O or the CMEM monitor.

qName is defined in the M2S file with the data set name dsn.

**Corrective Action:** No action is required.

**CTMC58S TARGET ACTIVE JOBS FILE IS NOT LARGE ENOUGH**

*Explanation:* Target Active Jobs file is not large enough to contain the source Active Jobs file.

Copy program terminates with a condition code of 08.

**Corrective Action:** Reallocate and reformat the new Active Jobs file.

**CTMC59I num JOBS WERE DELETED FROM THE ACTIVE JOBS FILE**

*Explanation:* This is one of two messages with the same ID, but different text.

This information message displays the number of jobs deleted from the Active Jobs file during a run of the CLEANUP function of the CTMCAJF utility. The CLEANUP function of the CTMCAJF utility deletes jobs from the Active Jobs file according to the same criteria as the New Day procedure.

**Corrective Action:** No action is required.

**CTMC59I S2M FILE FOR SMFID smfid QNAME qName DSN=dsn**

*Explanation:* This is one of two messages with the same ID, but different text.

This information message identifies the Subsystem-to-Monitor (S2M) file that the Control-M monitor allocated for communication with the Control-O or the CMEM monitor.

qName is defined in the S2M file with the dsn DSN.

**Corrective Action:** No action is required.

**CTMC5AE SMFID smfid NOT FOUND IN M2S DSN=dsn**

*Explanation:* The SMFID is not in the Monitor-to-Subsystem (M2S) file.

During initialization the Control-M monitor checks that every SMFID required for CMEM functions is defined in the M2S file.
Control-O issues the CTM441E message and CMEM functions become inactive.

**Corrective Action:** Add the missing SMFID to the M2S file, and restart the Control-M monitor.

For more information on adding the SMFID to the M2S file, see the section on reformatting communication files for only one SMFID in the INCONTROL for z/OS Installation Guide.

**CTMC68E VALUE OF CNDREC# PARAMETER IN IOAPARM IS NOT EQUAL TO ACTUAL FILE SIZE**

**Explanation:** The CNDREC# parameter in the IOAPARM member has been changed, but the IOA Conditions file has not been rebuilt. A difference between the length of the IOA Conditions file and the CNDREC# value specified in the IOAPARM member of the PARM library was detected.

This is usually caused by using the IOAPARM member for the wrong monitor.

The Control-M monitor shuts down.

**Corrective Action:** Correct the problem and restart the monitor.

**CTMC69E UPDATE OF QUANTITATIVE RESOURCE resourceName FAILED**

**Explanation:** The action specified in a Control-O DO RESOURCE statement failed, because it would have produced either a negative quantity or a quantity greater than the maximum of 9999. Therefore it was rejected.

The system ignores the illegal statement and continues processing.

**Corrective Action:** Check and correct, if necessary, the definition of the quantitative resource to be updated and/or the rule defining how to update it.

**CTMC69S EXECUTION STOPS DUE TO CONTROL-M MONITOR NOT RUNNING**

**Explanation:** The CLEANUP function of the CTMCAJF utility stops because the Control-M monitor is not running. The CLEANUP function of the CTMCAJF utility should run only when the Control-M monitor is running.

The CTMCAJF utility terminates.

**Corrective Action:** BMC recommends the following:

- If Control-M is down, run the CTMCAJF utility with the COMPRESS function.
- If Control-M is up, run the CTMCAJF utility with the CLEANUP function.

**CTMC70E PLEASE FILL IN STEPRANGE NAME**

**Explanation:** When you define a STEP RANGE by specifying either FROMSTEP or TOSTEP, the STEP RANGE must have a name.

**Corrective Action:** Fill in the STEP RANGE field.

**CTMC70I PROBABLE LOGMODE DEFINITIONS ERROR**

**Explanation:** This information message indicates that an IOA Gateway attempted to establish a connection with another IOA Gateway. However, the LOGMODE definitions of the partners do not match.
When IOA Gateways try to establish a connection with each other, both send LOGMODE during the bind process. If the LOGMODEs do not match, the connections fail. Message COMG98W, COMG90E or COMG95E precedes this message and explains the error.

The connection between the IOA Gateways fails.

**Corrective Action:** Check the LOGMODE definitions for each partner in your SYS1.VTAMLIB. Make sure that they are defined according to the recommendations in the IOA installation chapter of the INCONTROL for z/OS Installation Guide.

**CTMC70S ACTI<ckejobs file (CKP) SIZE - PARM TABLE MISMATCH**

**Explanation:** The value for the CKPSIZE parameter being used by the CTMCAJF utility is different from the CKPSIZE value used to format the Active Jobs file. The parameter is defined in the CTMPARM member in the IOA PARM library. The values used must be identical.

The CTMCAJF utility terminates. The requested action is not performed.

**Corrective Action:** Ask the INCONTROL administrator to determine the cause of the discrepancy in the CKPSIZE value and correct the error.

**CTMC71E PLEASE FILL IN FROMSTEP OR TOSTEP**

**Explanation:** You must fill in either FROMSTEP or TOSTEP or both. To create a STEP RANGE, you must specify either FROMSTEP or TOSTEP or both. STEP RANGE without additional parameters has no meaning.

**Corrective Action:** Add FROMSTEP or TOSTEP or both.

**CTMC71I PROBABLE ALLOCATION FAILURE - NO RETRY**

**Explanation:** This information message indicates that when an IOA Gateway attempted to establish a connection with another IOA Gateway, a local IOA gateway made a VTAM LU6.2 allocation request. However, the request failed.

A local IOA Gateway attempted to allocate a session with a partner gateway. The attempt failed. Message COMG98W, COMG90E or COMG95E precedes this message and explains the failure.

**Corrective Action:** Check that the partner gateway LU is active in VTAM, and that it is defined as explained in IOAGATE installation in the INCONTROL for z/OS Installation Guide.

**CTMC72E THIS STEPRANGE IS NOT DEFINED FOR THIS JOB**

**Explanation:** There is a reference to a STEP RANGE that is not defined. ONPGMSTEP refers to a STEPRANGE (*XXXXXXX) that is not defined for this job.

**Corrective Action:** Specify a STEP RANGE that is defined for this job.

**CTMC72I PROBABLE ALLOCATION FAILURE - RETRY**

**Explanation:** This information message indicates that a local IOA Gateway attempted to allocate a partner gateway session. The attempt failed.

The failed request was a VTAM LU6.2 allocation request. Messages COMG98W, COMG90E or COMG95E precede this message and explain the failure.

Connection will be reattempted in 1 minute.
INCONTROL for z/OS Messages Manual

Corrective Action: Make sure that Logical Unit (LU) of the partner gateway is active in VTAM and that it is defined as explained in the IOA installation chapter in the INCONTROL for z/OS Installation Guide.

CTMC73E OPERANDS ","","<", "N" ARE INVALID FOR THIS TYPE OF CODE

Explanation: You cannot specify this operand for this type of code. Some of these operands are not allowed for various types of codes. For example, >Sxxx, <Sxxx are not allowed.

Corrective Action: Use only the valid operands for this type of code.

CTMC73I PROBABLE MISMATCH IN VTAM DEFINITIONS

Explanation: This information message indicates that an IOA Gateway attempted to establish a connection with another IOA Gateway. However, IOA Gateway detected a mismatch in the IOA Gateway LU definitions. The VTAM LU was defined incorrectly.

Messages COMG98W, COMG90E and COMG95E precede this message, and explain the error.

The connection to the partner LU fails, and the IOA Gateway terminates.

Corrective Action: Define the IOA Gateway VTAM LU as explained in the IOA installation chapter of the INCONTROL for z/OS Installation Guide.

CTMC74E CONFLICT BETWEEN "OK", "NOTOK" AND "EXERR" CODES

Explanation: The combination of status codes is not valid. Some combinations are not acceptable. For example, EXERR and NOTOK, because the NOTOK code already covers the EXERR code.

Corrective Action: Check and correct the specification in the CODES field.

CTMC76E SEARCH COUNTER SHOULD BE 00000-32767 OR 99999

Explanation: Invalid SEARCH COUNTER value. The SEARCH COUNTER counts the number of times Control-M looks for a job. When this value equals the maximum number of searches allowed defined by the INCONTROL administrator, the job status changes to DISAPPEARED. You can change the value of the counter manually.

Valid search values:

- 00000 through 32767
- 99999 - This value causes a DISAPPEARED status, and stops further searches.

Corrective Action: Correct the SEARCH COUNTER parameter.

CTMC77E "NCT2-PREVENT" IS NOT SUPPORTED FOR A STARTED TASK

Explanation: PREVENT-NCT2 was requested for a started task (STC). PREVENT-NCT2 handling may not be requested for a started task (STC).

Corrective Action: Change the value of PREVENT-NCT2 to N or leave the value blank, or change the task type.

CTMC78I JOB DOCUMENTATION NOT FOUND

Explanation: This information message indicates that a user entered command DOC in the Zoom screen but the job has no documentation.
Corrective Action: No action is required.

CTMC79E INSUFFICIENT STORAGE TO SAVE DOCUMENTATION
Explanation: Insufficient storage to save the documentation lines into the library or member specified in the DOCLIB or DOCMEM fields of the Job Scheduling Definition screen.
Corrective Action: The user can either delete the additional documentation lines and save the Job Scheduling Definition, or cancel the Job Scheduling Definition changes. The user should then log on again using a larger SIZE parameter (under TSO).

CTMC80E INTERNAL ERROR - INVALID INPUT PARAMETERS FOR CTMDOC
Explanation: The Online facility called routine CTMDOC with an invalid parameter list when the DOC command was entered in either the Job Scheduling Definition screen or the Zoom screen.
Corrective Action: Notify the INCONTROL administrator.

CTMC81E INTERNAL ERROR - INVALID FUNCTION FOR CTMDOC
Explanation: The Online facility called routine CTMDOC with an invalid function when the DOC command was entered in the Job Scheduling Definition screen or in the Zoom screen.
Corrective Action: Notify the local INCONTROL administrator.

CTMC82E INTERNAL ERROR - INVALID RETURN CODE FROM CTMDOC
Explanation: The Online facility received an invalid return code from routine CTMDOC.
Corrective Action: Notify the INCONTROL administrator.

CTMC83E CHARACTERS "^*" AND "?" ARE NOT ALLOWED FOR DOC MEMBER NAME
Explanation: User entered the * character, or the ? character in the DOCMEM field in the Job Scheduling Definition screen (or in the Zoom screen). These are invalid characters for this field.
Corrective Action: Enter a valid value in the DOCMEM field.

CTMC84E ONLY 8 PERIODIC REQUESTS ARE ALLOWED
Explanation: More than eight requests for a periodic calendar were specified in the DAYS field in the Job Scheduling Definition screen. Only eight requests for a periodic calendar may be kept in a job scheduling definition.
Corrective Action: Decrease the number of periodic calendar requests.

CTMC85E INVALID BOOLEAN EXPRESSION: UNPAIRED PARENTHESES
Explanation: The Boolean expression that is specified in the IN field in the Job Scheduling Definition screen or in the Job Zoom screen contains unpaired parentheses.
Corrective Action: Correct the Boolean expression in the IN field.
CTMC86E INVALID BOOLEAN EXPRESSION: EMBEDDED PARENTHESES

**Explanation:** The Boolean expression that is specified in the IN field in the Job Scheduling Definition screen or in the Job Zoom screen contains parentheses within a condition name. IN conditions may be specified as a Boolean expression with parentheses. Use the parentheses only before or after the condition name.

**Corrective Action:** Correct the Boolean expression in the IN field.

CTMC87E DUPLICATE PIPE NAME IS NOT ALLOWED

**Explanation:** The job scheduling definition contains duplicate entries with the same pipe name. The names of the pipes in a job must be unique.

The scheduling definition cannot be saved and the job cannot be ordered.

**Corrective Action:** Change one or more pipe names so that all pipes in the job have a unique name.

CTMC88E NESTING IS NOT ALLOWED FOR BOOLEAN EXPRESSION

**Explanation:** The Boolean expression that is specified in the IN field in the Job Scheduling Definition screen or in the Job Zoom screen contains two or more open or close parentheses in succession. Control-M Online facility does not support nesting for a Boolean expression in the IN field.

**Corrective Action:** Correct the Boolean expression in the IN field.

CTMC89E NOT MORE THAN 20 CONDITIONS CAN BE CONTAINED IN BOOLEAN EXPRESSION

**Explanation:** A Boolean expression in the Job Scheduling Definition screen or Job Zoom screen contains more than 20 conditions.

The job scheduling definition cannot be saved.

**Corrective Action:** Modify the Boolean expression so that it contains not more than 20 conditions.

CTMC8AE REQUESTED RBC DOES NOT EXIST IN THE SMART TABLE DEFINITION OR THE MAXIMUM NUMBER (5000) HAS BEEN EXCEEDED

**Explanation:** This message is displayed in the following cases:

- A rule-based calendar was specified in the job scheduling definition, but it was not defined in the SMART Table Entity definition. A rule-based calendar for a group of jobs must be defined in the SMART Table Entity definition.
- A user attempted to define more than 5,000 rule-based calendar definitions in the definition of a SMART Table Entity

**Corrective Action:** Do one of the following, as appropriate:
Either replace the rule-based calendar with one defined in the SMART Table Entity definition, or define the requested rule-based calendar in the SMART Table Entity definition. To display a list of the defined rule-based calendars, exit the job scheduling definition, and enter the SMART Table Entity definition.

Delete rule-based calendar definitions from the SMART Table Entity definition until the number is less than 5,000.

CTMC8BE "DAYS" AND "GENERATIONS" ARE MUTUALLY EXCLUSIVE

Explanation: There are retention values for both # OF DAYS TO KEEP and # OF GENERATIONS TO KEEP, but these fields are mutually exclusive.

The request is ignored.

Corrective Action: Delete one of the specified values.

CTMC8CE MAXIMUM 255 PIPES IN COLLECTION IS ALLOWED

Explanation: The job has more than 255 pipe definitions in the scheduling table. This message may be issued when editing a job definition with more than 255 pipe definitions. The maximum number of pipes per collection is 255.

The scheduling definition is not saved, and the job is not ordered.

Corrective Action: Reduce the number of pipe entries in the job scheduling definition.

CTMC8EE VALUE 'Y' VALID ONLY WHEN JOB STATUS 'WAIT SCHEDULE'

Explanation: An attempt was made to change the value of the data in a job's WAIT CONFIRMATION field, via screen 3.Z, when the job was not in WAIT SCHEDULE state.

Corrective Action: No action is required.

CTMC8FE A SLASH ('/') IS AN NOT ALLOWED

Explanation: In order to be compatible with the nested containers feature in Control-M/Enterprise Manager, a slash (/) is not allowed in this field.

Corrective Action: Correct the field contents.

CTMC90E INVALID POSITION OF THE BOOLEAN OPERATOR "I"

Explanation: The Boolean expression specified in the IN field in the Job Scheduling Definition screen or in the Job Zoom screen contains the operator I in an invalid position. The Boolean operator I may be specified only in the first position of the condition name, or immediately after the open parentheses.

Corrective Action: Correct the Boolean expression in the IN field.

CTMC91E INVALID VALUE. USE "O"(OR) "A"(AND), OR BLANK

Explanation: An invalid value is specified in the A/O field of the ON PGMST line in the Job Scheduling Definition screen or in the Job Zoom screen. Valid values for the A/O field are O, A, or blank.

Corrective Action: Specify a valid value in the A/O field.
CTMC92E INVALID VALUE. USE "<", ",", ",", "+", ",@" OR BLANK

**Explanation:** An invalid character was specified in the SHIFT field of the job scheduling definition.

**Corrective Action:** Specify a valid value.

CTMC93E UNNECESSARY DATA - FIELD MUST BE CLEARED

**Explanation:** A field that should be left empty in the current context has a value.

**Corrective Action:** Clear the field.

CTMC94E INVALID VALUE ENTERED. ENTER ONLY text

**Explanation:** Invalid data was specified.

**Corrective Action:** Change the entry in the field with the help of the text displayed in the message, or with the assistance of the HELP command.

CTMC95I JOB NOT HELD - CHANGES WILL NOT BE SAVED

**Explanation:** A user entered the Zoom screen (3.Z) of a job from the Control-M Active Environment screen, but the status of the job was not HELD. In such a case, any changes made in the Zoom screen cannot be saved on exit.

Changes made to the current job in the Zoom screen are ignored.

**Corrective Action:** To change the job, do the following:

1. Exit from the Zoom screen.
2. Change the status of the job to HELD.
3. Redisplay the job in the Zoom screen.
4. Make the required changes.

CTMC97E DOC MEMBER IS USED BY ANOTHER USER

**Explanation:** The DOC command was entered to access the job documentation member in the Job Scheduling Definition screen. However the member is in use by another user either by the Control-M Online facility or the ISPF Editor.

**Corrective Action:** Attempt the DOC command later.

CTMC98E VALUES "GENERAL" AND "USER=" ARE INVALID

**Explanation:** GENERAL or USER was specified in the OVERLIB field in the Job Scheduling Definition screen or in the Job Zoom screen. GENERAL and USER are not permitted in the OVERLIB field.

**Corrective Action:** Specify a valid value in the OVERLIB field.
CTMC99E PLEASE FILL IN THE REQUIRED FIELD text

Explanation: Missing APPLICATION or GROUP name in the Job Scheduling Definition screen or in the Job Zoom screen. The APPLICATION and GROUP fields may be designated as mandatory in the IOA profile. By default they are optional. See the chapter that discusses online facilities in the Control-M for z/OS User Guide for a description of these fields.

Corrective Action: Fill in the requested field with the help of the text in the message, or correct the appropriate variable in the IOA profile.

CTMC9AE VALID OPTIONS ARE "OK" OR "NOTOK" ONLY

Explanation: A value other than OK or NOTOK is specified in a field than can only take either one of these values.

Corrective Action: Specify either OK or NOTOK.

CTMC9BE INVALID ACTION FOR SMART TABLE ENTRY

Explanation: The user entered an action that is invalid for SMART tables.

Corrective Action: Enter an action that is valid for SMART tables.

CTMC9CE "OK" AND "NOTOK" ARE MUTUALLY EXCLUSIVE DO ACTIONS

Explanation: Both OK and NOTOK were entered as a DO action for a SMART table. OK and NOTOK are mutually exclusive DO actions.

Corrective Action: Delete either OK or NOTOK.

CTMC9DE PLEASE FILL IN "DO" ACTION

Explanation: No DO action after an ON PGMSTEP/ON GROUP-END line.

Corrective Action: Fill in at least one DO action.

CTMC9EW ENTRY IN USE BY ANOTHER USER. "BROWSE" FORCED

Explanation: There was an attempt to zoom a job that is currently being zoomed by another user. The Zoom screen is displayed in the forced browse mode.

Corrective Action: If the job data must be updated, continue trying to zoom the job in Edit mode, until it is released by the other user.

CTMC9FE "SAVE" IS NOT VALID IN "BROWSE" MODE

Explanation: The SAVE was entered in the Zoom screen in the browse mode. The job is not saved.

Corrective Action: Exit the screen without trying to save the changes.
Messages CTMD00 through CTMDxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTMD001 BROWSE MODE IS FORCED FOR DOC LINES

**Explanation:** This information message indicates that the requested job documentation is displayed in browse mode. Display of job documentation was requested using the DOC command. Normally, when requested, documentation can be edited. However documentation displayed in Browse mode cannot be updated. The documentation is in Browse mode for one of the following reasons:

- The data set that contains the job documentation is not an MVS library (PDS).
- One of the documentation lines has non-blank characters after column 71, and has therefore been truncated.
- One of the documentation lines contains an unprintable character.

Documentation lines are displayed in browse mode.

**Corrective Action:** No action is required.

CTMD01E Cannot find host host in dsHosts table

**Explanation:** The host host name, referred to by in the –host input parameter, is not defined in the DSHOSTS member, located in the Control-M PARM library.

**Corrective Action:** Check that that the value of –host parameter is correct, or add a definition of the host host name to DSHOSTS member.

CTMD02E User mf user id does not have permission to work with host host as user DS user id

**Explanation:** The User mf user id does not have permission to work with host host as user DS user id.

**Corrective Action:** Ensure that the User mf user id has permission to work with host host as user DS user id.

CTMD03E Cannot get ip of host. Host name = host. Error code = code

**Explanation:** The error occurs when the utility tries to get the IP address of the host host. The error message and the error code are described in the following IBM documents: XL C/C++ Run-Time Messages, z/OS Language Environment Run-Time Messages, and XL C/C++ Run-Time Library Reference.

**Corrective Action:** Perform the appropriate action, based on the error code and the error message.

CTMD04E Parameter param is not defined.

**Explanation:** Parameter param is mandatory, but not defined in the input stream of the utility.

**Corrective Action:** Add the param parameter to the input and rerun the utility.
CTMD05E  request  request ended with error. Error code = code Error message

Explanation: Request request ended with an error. The error message and the error code are described in the following IBM documents: XL C/C++ Run-Time Messages, z/OS Language Environment Run-Time Messages, and XL C/C++ Run-Time Library Reference.

Corrective Action: Refer to the Control-M Workload Automation documentation for details.

Corrective Action: Add the param parameter to the input and rerun the utility.

CTMD06E Error creating file 'file name' on the remote host. Error code = code Error message

Explanation: The utility cannot create the file name file on the remote host. The error message and the error code are described in the following IBM documents: XL C/C++ Run-Time Messages, z/OS Language Environment Run-Time Messages, and XL C/C++ Run-Time Library Reference.

Corrective Action: Refer to the Control-M Workload Automation documentation for details.

CTMD07E Error opening file 'file name'. Error code = code Error message

Explanation: The utility cannot open the file name file. The error message and the error code are described in the following IBM documents: XL C/C++ Run-Time Messages, z/OS Language Environment Run-Time Messages, and XL C/C++ Run-Time Library Reference.

Corrective Action: Perform the appropriate action, based on the error code and the error message.

CTMD08E build_upload: Size of data to upload is too large - number of bytes

Explanation: Internal error.

Corrective Action: Perform the following:
1. Update the EXEC statement in the problematic job as follows: EXEC PGM=CTMDSRN,PARM='7'
2. Rerun the utility.
3. Call BMC Software Customer Support and send the full output of the job to support.

CTMD09E Error creating socket. Error code = code Error message

Explanation: The error occurred when the utility tried to create a socket. The error message and the error code are described in the following IBM documents: XL C/C++ Run-Time Messages, z/OS Language Environment Run-Time Messages, and XL C/C++ Run-Time Library Reference.

Corrective Action: Perform the appropriate action, based on the error code and the error message.

CTMD10E Cannot connect to remote host. Error code = code Error message

Explanation: The error occurred when the utility tried to connect to a remote host. The error message and the error code are described in the following IBM documents: XL C/C++ Run-Time Messages, z/OS Language Environment Run-Time Messages, and XL C/C++ Run-Time Library Reference.
Corrective Action: Perform the appropriate action, based on the error code and the error message.

CTMD11E Data transmission failure. Error code = code Error message

Explanation: The error occurred when the utility tried to send data to a remote host. The error message and the error code are described in the following IBM documents: XL C/C++ Run-Time Messages, z/OS Language Environment Run-Time Messages, and XL C/C++ Run-Time Library Reference.

Corrective Action: Perform the appropriate action, based on the error code and the error message.

CTMD12E Request to upload file 'file name' ended with error. Error code = code Error message

Explanation: The error occurred when the utility tried to upload the file name file to a remote host. The error message and the error code are described in the following IBM documents: XL C/C++ Run-Time Messages, z/OS Language Environment Run-Time Messages, and XL C/C++ Run-Time Library Reference.

Corrective Action: Refer to the Control-M Workload Automation documentation for details. Perform the appropriate action, based on the error code and the error message.

CTMD13E Error deleting file 'file name' on the remote host. Error code = code Error message

Explanation: The error occurred when the utility tried to delete the file name file on a remote host. The error message and the error code are described in the following IBM documents: XL C/C++ Run-Time Messages, z/OS Language Environment Run-Time Messages, and XL C/C++ Run-Time Library Reference.

Corrective Action: Refer to the Control-M Workload Automation documentation for details. Perform the appropriate action, based on the error code and the error message.

CTMD14E Reception failure. Error code = code Error message

Explanation: The error occurred while the utility was receiving data from a remote host. The error message and the error code are described in the following IBM documents: XL C/C++ Run-Time Messages, z/OS Language Environment Run-Time Messages, and XL C/C++ Run-Time Library Reference.

Corrective Action: Perform the appropriate action, based on the error code and the error message.

CTMD15E Parameter param is too long - length. Max length is max_length

Explanation: The value of the param input parameter is too long. The maximum length of this parameter is max_length bytes.

Corrective Action: Correct the value of this input parameter.

CTMD16E Invalid param parameter

Explanation: The value of the param input parameter is incorrect.

Corrective Action: Correct the value of this input parameter.

CTMD17E Unsupported agent version - ver. num

Explanation: The utility cannot work with a Control-M Agent of version ver. num
Corrective Action: Check the value of the –host input parameter. If the host name is correct, contact
the Control-M administrator to install the correct version of Control-M agent.

CTMD18E Error during load module CTMX006. Error code = code Error
message
Explanation: The error occurred while the utility was trying to load user exit CTMX006. Usually this error
occurs when the load module CTMX006 does not exist in the STEPLIB libraries. The error message and
the error code are described in the following IBM documents: XL C/C++ Run-Time Messages, z/OS
Language Environment Run-Time Messages, and XL C/C++ Run-Time Library Reference.
Corrective Action: Perform the appropriate action, based on the error code and the error message.

CTMD19E Invalid param parameter. Value = value
Explanation: The value of the param input parameter is incorrect.
Corrective Action: Correct the value of this input parameter.

CTMD21E ENHANCED SHIFT EXCEEDS MAXIMUM NUMBER OF WORKDAYS
Explanation: An invalid value was specified for the SHIFT parameter. The enhanced SHIFT algorithm
allows the scheduling date to be shifted forward or backward a maximum of 62 working days.
The scheduling definition is not saved.
Corrective Action: Specify a valid value for the SHIFT parameter. For more information, see the
CONFCAL parameter in the chapter that describes job production parameters of the Control-M for z/OS
User Guide.

CTMD22E INVALID VALUE. "-" , "+" OR BLANKS EXPECTED
Explanation: An incorrect value was specified for the second character of the SHIFT subparameter. The
SHIFT subparameter has two fields. The first is a 1-character field that designates the shift direction (< or
>). The second is an optional 3-character field that contains a + or - followed by a two digit integer. This
field designates how much to move the scheduling date forward (if plus) or backward (if minus).
The scheduling definition is not saved.
Corrective Action: Specify a valid value for the SHIFT parameter. For more information, see the
CONFCAL parameter in the chapter that describes job production parameters of the Control-M for z/OS
User Guide.

CTMD23E INVALID VALUE
Explanation: An invalid value was specified in the last three characters of the SHIFT subparameter. The
format of the last three characters of the SHIFT subparameter must be +nn or -nn, where nn is an
integer between 01 and 62.
The scheduling definition is not saved.
Corrective Action: Specify a valid value for the SHIFT subparameter. For more information, see the
CONFCAL parameter in the chapter that describes job production parameters of the Control-M for z/OS
User Guide.
CTMD24E SHIFT VALUE CAN BE BETWEEN 1 AND 62

**Explanation:** An invalid value was specified in the last two characters of the SHIFT subparameter. The last two characters of the SHIFT subparameter must be an integer between 01 and 62.

The scheduling definition is not saved.

**Corrective Action:** Specify a valid value for the SHIFT subparameter. For more information, see the CONFCAL parameter in the chapter that describes job production parameters of the *Control-M for z/OS User Guide*.

CTMD25E ENTRY IN USE BY ANOTHER USER

**Explanation:** This information message is displayed if a user performs a HOLD of a job on the Active Environment screen (Screen 3) or the Active Environment Zoom screen (Screen 3.Z), and a second user then attempts to delete or free that job.

**Corrective Action:** No action is required.

CTMD30E IOASINIT CANNOT BE USED TO START CMEM ANYMORE. CMEM SHOULD BE STARTED USING CTMCMEM

**Explanation:** There was an attempt to start CMEM using the IOASINIT procedure. CMEM is now started using the CTMCMEM procedure.

IOASINIT terminates. CMEM initialization fails.

**Corrective Action:** Start CMEM using the `S CTMCMEM` command.

CTMD31E IOA SUBSYSTEM *subsys* IS ACTIVE FOR ENVIRONMENT (IOA QNAME)

**Explanation:** The *subsys* subsystem is already active for another IOA environment. The same subsystem name cannot be used for two IOA environments in parallel.

IOA subsystem initialization fails for the *subsys* subsystem.

**Corrective Action:** Either choose another subsystem name for the current environments of the IOA products, or deactivate the IOA online monitor and all the subsystem components of the old IOA environment and restart the subsystem.

CTMD32E LOAD OF SUBSYSTEM EXECUTOR *name* FAILED

**Explanation:** Subsystem initialization process failed while trying to load the subsystem executor program specified in the message.

IOA subsystem initialization fails.

**Corrective Action:** Verify the module name exists in the STEPLIB library.

CTMD33E *funcName* IS ACTIVE. BRING IT DOWN BEFORE RUNNING THIS PROCEDURE AGAIN

**Explanation:** An attempt was made to start CMEM when Control-O was up, or vice versa. CMEM and Control-O procedures cannot work concurrently. If one already started, the other must be down.
Note:
Control-O performs all the functions of CMEM.
The requested CMEM or Control-O initialization fails.

**Corrective Action:** If you want to run the initialization procedure, first stop the Control-O or CMEM monitor identified in the message text.

**CTMD34E NOT ENOUGH STORAGE IN (EXTENDED) CSA. CANNOT LOAD TABLES FOR IOA SUBSYSTEM subsys**

**Explanation:** Insufficient storage in ECSA or CSA for the subsystem tables and modules.
Subsystem initialization fails.

**Corrective Action:** If the storage defined for ECSA or CSA is not large enough, increase the size of ECSA or CSA.

**CTMD35E INVALID SUBSYSTEM NAME IN "DISCONNECT SUBSYSTEM" REQUEST**

**Explanation:** Length of the subsystem name specified for the disconnect subsystem request is incorrect. It is either less than, or greater than four characters.
The disconnect subsystem function is not performed.

**Corrective Action:** Restart the disconnect subsystem function using a valid, four-character subsystem name.

**CTMD36I SUBSYSTEM subsys DISCONNECT STARTED**

**Explanation:** This information message indicates that subsys subsystem is being disconnected.

**Corrective Action:** No action is required.

**CTMD37I SUBSYSTEM subsys DISCONNECT COMPLETED SUCCESSFULLY**

**Explanation:** This information message indicates that subsys subsystem is inactive and no longer used by Control-O.

**Corrective Action:** No action is required.

**CTMD38E IOA ONLINE MONITOR IS ACTIVE WITH SSNAME "subsys" FOR ANOTHER ENVIRONMENT (IOA QNAME)**

**Explanation:** The subsys subsystem is already active for the IOA Online monitor of another IOA environment. The same subsystem cannot be specified for two IOA environments in parallel.
IOA subsystem initialization fails for the subsys subsystem.

**Corrective Action:** Either choose another subsystem name for the current environment of the IOA products, or deactivate the IOA online monitor and all the subsystem components of the old IOA environment and restart the subsystem.
CTMD3AE ERROR IN INITIALIZATION CONTROL-D SUBSYSTEM "xxxx"

Explanation: Initialization of the CDAM subsystem failed. Additional system messages are issued before this message.
The job or STC terminated with a return code other than zero.
Corrective Action: Correct the error and try again.

CTMD41E MISSING OBLIGATORY KEYWORD keyName IN ORDER REQUEST

Explanation: The keyName keyword was not given in the order request. Some keywords are obligatory in each order request. Failing to specify one produces this message.
The CTMJOB program ends with errors.
Corrective Action: Supply the missing keyword.

CTMD45E AT LEAST ONE VALID COND MUST BE SPECIFIED IN THE ISCPARM MEMBER

Explanation: No conditions to be passed to the other CPU were specified in the ISCPARM member allocated to one of the Control-M monitors. The DAISCPRM DD name should point to a library containing the ISCPARM member. This member should contain at least one COND parameter, set to cond, where cond is a condition name up to 20 characters. Masking characters * and ? are allowed. Only these conditions are passed to the other CPU.

CTMISR routine returns a return code of 24 to the calling IOA Exit 7. No conditions are passed to the other CPU.
Corrective Action: Add at least one COND=cond statement in the ISCPARM member and then shut down and restart the monitor. COND=* is valid for passing all the conditions.

CTMD46S CTMBLT ENDED WITH ERRORS

Explanation: The CTMBLT utility ended due to errors. CTMBLT creates Control-M scheduling tables. If CTMBLT ended with errors, messages in the Error Messages file DAPRINT DD statement explain the reasons. The Error Table Definitions file DATABERR DD statement contains the input definition statements that have the errors.
The utility ends with a non-zero return code.
Corrective Action: Correct all problems, and rerun the job.

CTMD48I CTMBLT ENDED OK

Explanation: This information message indicates that the CTMBLT utility ended normally. The CTMBLT utility creates Control-M scheduling tables.
Corrective Action: No action is required.
CTMD50S READING JOB DATA BY subsystem_request FAILED nnnn TIMES. LAST RC rc fileName jobName/jobId

Explanation: This message is issued after the number of unsuccessful attempts to read job data by subsystem request reaches the defined maximum. After searching for the job data the maximum number of times, Control-M changes the job status to DISAPPEARED and stops searching.

The job status changes to DISAPPEARED.

Corrective Action: For the appropriate action, refer to the section on the Control-M monitor and JES in the INCONTROL for z/OS Administrator Guide.

CTMD51S NO MORE SPACE FOR SYSOUT ARCHIVING (SB37)

Explanation: No space is available on the designated volumes to archive SYSDATA syssouts.

Archiving of SYSDATA is not completed due to lack of the space on the volumes designated for allocation of the Archived Sysout data sets.

Control-M issues additional messages describing the nature of the problem and terminates.

Corrective Action: Please do the following before attempting to restart the Control-M monitor:

1. Make sure that there is sufficient free space on the volumes defined by the AMVOL parameter of the CTRPARM member.
2. If it is not possible to provide enough space on the volumes defined by the AMVOL parameter of the CTRPARM member, please add another volume to the list of volumes designated for allocation of the Archived Sysout Data Sets.
3. If it is not possible to add more volumes to the AMVOL parameter of the CTRPARM member, remove all of them. Then the Archived Sysout Data Sets will be allocated only according to the AMUNIT parameter of the CTRPARM member.
4. Start the Control-M monitor.
5. If the problem persists, prepare the Control-M monitor full output and contact BMC Customer Support.

CTMD53S UNABLE TO ALLOCATE COMPRESSED DATASET FOR SYSDATA SYSOUT ARCHIVING. LAST RC=rc

Explanation: Dynamic allocation of an Archived Sysout Dataset has failed.

This message will be preceded by other messages detailing the nature of the problem, DD name, RC and reason code.

The Archived Sysout Dataset is not allocated. The job is processed and an ENDED NOTOK message is displayed, with the status FAILED REASON UNKNOWN.

Corrective Action: Record all relevant messages, prepare the Control-M monitor full output, and contact BMC Customer Support.

CTMD55S SYSOUT ARCHIVING FAILED

Explanation: Highlighted, unrollable message.

The Control-M monitor failed to archive SYSDATA for the job. This message is preceded by other messages detailing the nature of the error.
The job is processed and an ENDED NOTOK message is displayed, with the status FAILED REASON UNKNOWN.

**Corrective Action:** Do the following:

1. Examine the preceding messages, and follow the steps recommended in the description of those messages.
2. Start the Control-M monitor again. If the problem persists, report it to your INCONTROL administrator, who should prepare the Control-M monitor full output and contact BMC Customer Support.

**CTMD60E FILL IN THE NEW PASSWORD TWICE**

**Explanation:** A normal prompt of the IOA Entry Panel. The user is asked to write the value of the new password twice (to confirm the user choice).

**Corrective Action:** Enter the same value of the new password in the two provided fields.

**CTMD67S ORDERING CHECKPOINT RECORD IS INVALID FOR THIS DAILY**

**Explanation:** The Ordering Checkpoint Record contains recovery information which is invalid for this Daily run.

The Ordering Checkpoint Record, which is in the same member as the User Date Control Record, contains data specifying recovery for the CTMJOB program, but these data are incorrect for the jobs that were ordered in this run of CTMJOB.

The CTMJOB program ends with errors.

**Corrective Action:** Either run CTMJOB with the same data (ordered jobs) as were in the last (abending) run, or blank out the values of the keywords in the Ordering Checkpoint Record, and run CTMJOB without recovery.

**CTMD68S STRUCTURE OF ORDERING CHECKPOINT RECORD IS INVALID**

**Explanation:** The Ordering Checkpoint Record contains invalid keywords, or valid keywords in invalid offsets. The Ordering Checkpoint Record, which is in the same member as the User Date Control Record, contains keywords in an unexpected structure.

The CTMJOB program ends with errors.

**Corrective Action:** Either correct the Ordering Checkpoint Record, or delete the Ordering Checkpoint Record, and run CTMJOB without recovery.

**CTMD69I NO JOBS WERE SCHEDULED DURING SCHEDULING REQUEST**

**Explanation:** This information message indicates that no jobs matched the ordering criteria during a scheduling request. This message is issued after the scheduling request has been processed, and no jobs were ordered.

**Corrective Action:** If you think a job should have been ordered in this scheduling request, check and correct the scheduling parameters as required, and rerun the scheduling request.
CTMD6AI RETRO SCHEDULING BYPASSED FOR JOBS WITHIN GROUP

Explanation: This information message indicates that Y was specified in the RETRO field in a group entity or in one of the group jobs. RETRO processing is not supported in GROUPS. Setting RETRO to Y in a group can cause jobs to be scheduled on inappropriate ODATES.

The RETRO field is ignored in group processing.

Corrective Action: Set the RETRO field to N and retry.

CTMD6BI NUMBER OF JOBS ORDERED - numJobs

Explanation: This information message indicates the number of jobs ordered by the present invocation of CTMJOB.

Corrective Action: No action is required.

CTMD70E OPTION IS VALID UNDER ISPF ONLY

Explanation: ISPF environment is missing. This option can be used only under ISPF.

Corrective Action: To use the option, invoke Control-M under ISPF.

CTMD71E EDIT NOT PERFORMED. MEMLIB IS EITHER DUMMY OR CONTAINS "USER="

Explanation: Editing was attempted when the MEMLIB or OVERLIB field contained either DUMMY or USER. When the MEMLIB or OVERLIB field contains DUMMY or USER, editing cannot be performed.

Corrective Action: No action is required.

CTMD72E ONLY JOBS MAY BE EDITED (NOT STARTED TASKS OR GROUP ENTITIES)

Explanation: An attempt was made to edit a group entity or the JCL of a started task. Only the JCL of regular jobs can be edited.

Corrective Action: No action is required.

CTMD73E ISPF/EDIT FAILED FOR text

Explanation: Execution of the ISPF EDIT command failed.

If the variable text is of the form lib(memname), then ISPF was unable to edit the library or member specified in MEMLIB and MEMNAME of the job. The ISPF profile or the directory in which the profile is contained may be full or the library (specified in the MEMLIB field) does not exist.

If the variable text is of the form DDNAME= xxx, then ensure that Control-M exit CTMX014G is installed, which provides support for online editing of members specified via the MEMLIB DDNAME= xxx format. See the explanation of the MEMLIB parameter in the Control-M for z/OS User Guide for further details.

If the variable text is of the form EDIT DENIED BY [USER EXIT]-moduleName, then the edit command was failed by the IOA Editor or by the specified user exit.
Corrective Action: Check the parameters specified in MEMLIB and MEMNAME of the job. If the reason that ISPF could not edit the library or member is not obvious, then invoke the ISPF EDIT DATASET library or member to clarify the problem.

CTMD74E MEMLIB AUTOEDIT RESOLUTION FAILED. ENDED WITH RC=rc
Explanation: The MEMLIB field contained AutoEdit variables which could not be resolved.
Corrective Action: Correct the problematic AutoEdit variable.

CTMD75E EDIT NOT PERFORMED SINCE MEMNAME CONTAINS EITHER "*" OR "?"
Explanation: MEMNAME contains an invalid parameter for the EDIT option. When the MEMNAME field contains either * or ?, editing cannot be performed.
Corrective Action: Correct the parameter in the MEMNAME field.

CTMD90E RECOVERY RECORD INCOMPATIBLE WITH DATE RECORD
Explanation: The Date Control Record indicates that recovery is not necessary, but the recovery record, that is, the second record of the Date Control Record member used for Enhanced Daily Checkpointing, indicates that recovery is needed.

This error message is issued by the CTMJOB program, which is usually activated as part of the New Day procedure. In the Date Control Record, date-2 (columns 18-23) is equal to date-3 (columns 25-30) and date-4 (columns 43-48) is equal to date-5 (columns 50-55). However, the recovery record contains non-blank values for the recovery parameters.

For more details, please see the description of the Date Control Record in the INCONTROL for z/OS Administrator Guide.

The program terminates with a condition code of 08.
Corrective Action: If recovery is required, set date-3 to the day before date-2, and date-5 to the day before date-4. If recovery is not required, replace the values in the recovery record with blanks.

CTMD91E INVALID PREVIOUS MONTHLY SCHEDULING DATE IN USER DATE CONTROL-RECORD (POSITIONS 25-30)
Explanation: Invalid previous monthly scheduling date in the User Daily Date Control Record date-3 (columns 25-30). This error message is issued by the CTMJOB program, which is usually activated as part of the New Day procedure.

Valid formats for the date are:
- ddmmyy
- mmddyy
- yymmdd

Possible causes are:
The previous run of the CTMJOB program did not complete successfully.

The contents of the User Daily Date Control Record (the DACHK DD statement) have been incorrectly modified manually.

For more details, please see the description of the Date Control Record in the INCONTROL for z/OS Administrator Guide.

The program terminates with a condition code of 08.

**Corrective Action:** Correct the Date Control Record (the DACHK DD statement) and rerun the New Day procedure.

---

**CTMD92S FILE ALLOCATED TO DDNAME "DACKPT" IS NOT THE EXPECTED ACTIVE JOBS FILE**

**Explanation:** Highlighted, unrollable message.

The Active Jobs file specified for the Control-M monitor is not the correct Active Jobs file for this monitor. The QNAME specified in CTMPARM does not match the QNAME specified in Record 0 of the Active Jobs file.

The Control-M monitor shuts down.

**Corrective Action:** Correct the data set name referenced by the DD name DACKPT, or format the Active Jobs file using the same IOA Load library used by the Control-M monitor.

---

**CTMD93S BUILD OF RESOURCE FILE ENDED WITH ERRORS**

**Explanation:** The procedure that builds a new Control-M Resources file encountered an error. The next message describes the error.

The system stops without building the Control-M Resources file, and issues a return code of 12.

**Corrective Action:** Correct the error described in the next message and try again.

---

**CTMD94S RECORD 0 CONTAINS ILLEGAL CONTROL OR QUANTITATIVE COUNTERS**

**Explanation:** The counters in record 0 have illegal values. Record 0 of the Control-M Resources file contains counters and parameters that define the file. The maximum value of each counter is 100.

The system stops and issues a return code of 12.

**Corrective Action:** Ensure that there are no more than 100 Quantitative resource records and no more than 100 Control resource records.

---

**CTMD95S NUMBER OF BASE SLOTS TO BE DEFINED IN THE NEW RESOURCE FILE BUILD PROGRAM EXCEEDS MAXIMUM**

**Explanation:** You tried to define too many base slots in the new Control-M Resources file. The new Control-M Resources file build program can define a maximum of 1160 base slots.

The system stops without defining any base slots, and issues a return code of 12.
Corrective Action: Change the value of the RESBQNT parameter to a value that is less than 1160. For more information, see the section on MVS procedures and configuration in the Control-M chapter of the INCONTROL for z/OS Installation Guide.

CTMD96S COPY OF RESOURCES OR CONDITIONS FILE ENDED WITH AN ERROR

Explanation: An error interrupted copying of the Control-M Resources file or the IOA Conditions file. The next message describes the cause of the error.
The system stops without copying the file, and issues return code 12.
Corrective Action: Correct the error described in the next message and try again.

CTMD97S NEW RES FILE IS TOO SMALL FOR MIGRATION OF RESOURCES

Explanation: Copying failed because the new Control-M Resources file is not big enough to contain all of the resource data, whether relating to quantitative or control resources or both, in the old Control-M Resources file.
The system stops without copying the file, and issues a return code of 12.
Corrective Action: Try again with a larger new Control-M Resources file.

CTMD98E FAILED TO UPDATE RESOURCE FILE WITH THESE JOB RESOURCES. JOB=jobName OID=orderId

Explanation: The program that builds the new Control-M Resources file could not update it from the Active Jobs File (AJF). The program detected new jobs data in the AJF that should be updated in the Control-M Resources file, but it could not do the update.
The system continues building the Control-M Resources file, without adding the new data.
Corrective Action: Check and correct the definitions of the AJF, the Control-M Resources file, and the data, as necessary, and try again. If necessary, update the Control-M Resources file manually.

CTMD9AS RESBQNT# (FOR NEW RES FILE) IS SMALLER THAN VALUE IN THE OLD RES FILE.

Explanation: This message is issued if the RESBQNT# parameter in the new resource file is less than the value of RESBQNT# in the old file.
Corrective Action: Refer to the Control-M Utilities guide, utility CTMCRES, section "Copy or Resize the Control-M Resources File". Part of the procedure involves changing parameter RESBQNT#, which is the maximum number of Quantitative resources to be defined in the Control-M Resources file.

CTMD9BE TABLE CONTAINS A MIX OF M/F AND DISTRIBUTED JOBS

Explanation: During the execution of the CTMTLB utility, a scheduling table was encountered which contained a combination of both mainframe and distributed job definitions. This is not supported by the utility.
The program terminates with a return code of 8.
Corrective Action: To overcome this situation, the CTMTLB utility must be executed twice, once using the EXCLUDE MF control statement and once using the EXCLUDE NONMF control statement so that two separate XMLs are created, one for the mainframe datacenter and one for the distributed datacenter. The DATACENTER control statement for each execution must be appropriately changed.

CTMD9DW CURRENT TABLE IS EMPTY. THE TABLE IS IGNORED

Explanation: During the execution of the CTMTLB utility, an empty scheduling table was encountered. The program ignores the empty table, continues processing and terminates with a return code of 4.

Corrective Action: No action is required.

Messages CTME00 through CTMExx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTME01I type BASED JOB TRACKING INITIALIZED SUCCESSFULLY

Explanation: The type variable indicates the type of job tracking method used, either ENF or JES.

- ENF based tracking. The most efficient job tracking method available for Control-M beginning with version 8.0.00. It is based on 'Job Status Change' events, which is supplied by z/OS Events Notification Facility (ENF) since z/OS 1.11. It is only available in JES2. The ENF based job tracking is the default method used by Control-M, unless ENF is unavailable or deactivated by setting the ENFENA installation parameter to N (in which case the CTME06W message is also issued). In a SYSPLEX environment Control-M uses this method only when the z/OS level for all SYSPLEX members is z/OS 1.11 or later.

- JES based tracking. This is the only method available in versions of Control-M earlier than 8.0.00. The jobs tracking handled by Control-M is based on periodical issuing the JES 'STATUS' Subsystem Request.

Corrective Action: No action is required.

CTME02E ERROR IN ESTABLISHING LISTENER FOR JOB STATE CHANGES. REASON error reason CODE error code

Explanation: An internal error occurred while Control-M attempted to initialize the ENF based job tracking method. Control-M monitor continues working, using JES based job tracking. See the explanation for CTME01I for more information about ENF and JES based job tracking methods.

Corrective Action: Save the Control-M monitor system log and contact IOA or Control-M technical support for assistance.

CTME03E ERROR IN RESUME LISTENING FOR JOB STATE CHANGES. REASON error reason CODE error code

Explanation: An internal error occurred while Control-M attempted to resume the ENF based job tracking method after it was temporary disabled. Control-M monitor continues working, using JES based job tracking. See the explanation for CTME01I for more information about ENF and JES based job tracking methods.
**Corrective Action:** Save the Control-M monitor system log and contact IOA or Control-M technical support for assistance.

**CTME04E** LISTENING FOR JOB STATE CHANGES ENDED ABNORMALLY AND TERMINATED. LAST POINT *internal name of last check point passed*

**Explanation:** Control-M monitor detected the abnormal termination of the ENF 'Job Status Change' events listening exit (established by Control-M for ENF Based Job Tracking). The ENF based job tracking is disabled because of the abnormal termination, but Control-M monitor continues working, using JES based job tracking. See the explanation for CTME01I for more information about ENF and JES based job tracking methods.

**Corrective Action:** Save the Control-M monitor system log and contact IOA or Control-M technical support for assistance.

**CTME05E** INTERNAL QUEUE ERROR IN LISTENING FOR JOB STATE CHANGES. REQUEST *internal queue request CODE error code*

**Explanation:** An internal queue error occurred while processing the ENF 'Job Status Change' events passed to Control-M monitor from the events listening exit (established by Control-M for ENF Based Job Tracking). The ENF based job tracking is disabled because of the abnormal termination, but Control-M monitor continues working, using JES based job tracking. See the explanation for CTME01I for more information about ENF and JES based job tracking methods.

**Corrective Action:** Save the Control-M monitor system log and contact IOA or Control-M technical support for assistance.

**CTME06W** ENF BASED JOB TRACKING IS DISABLED BY INSTALLATION PARAMETER

**Explanation:** The ENFENA Control-M installation parameter is set to N, specifying JES based job tracking instead of ENF based job tracking. See the explanation for CTME01I for more information about ENF and JES based job tracking methods.

**Corrective Action:** No action is required.

**CTME07W** UNKNOWN LEVEL OF NON-ACTIVE SYSPLEX MEMBER *system name*

**Explanation:** Control-M did not recognize the z/OS level of the SYSPLEX member. As a result, Control-M does not activate the ENF based jobs tracking, but uses JES based jobs tracking instead. See the explanation for CTME01I for more information about ENF and JES based job tracking methods.

**Corrective Action:** If the ENF based job tracking method is required, and the actual z/OS levels of the SYSPLEX members displayed in the message are not lower than z/OS 1.11, do the following: Locate the ENFENA installation parameter in the 'Monitor Parameters' section of the CTMPARM installation member and set it to F.

**CTME80S** STATEMENT PARSING ERROR. RC= rc. EXECUTION WILL TERMINATE

**Explanation:** Highlighted, unrollable message.
An internal error occurred while building the online environment.
The online environment is not started.

**Corrective Action:** Try to reenter the online environment after logging out and reconnecting. If this is unsuccessful, record the message and contact BMC Customer Support.

**Messages CTMF00 through CTMFxx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**CTMF51I** LOC SNDR *loc_sendr* INIT SESSION WITH RMT RCVR *rmt_recvr*

**Explanation:** The *loc_sendr* local sender is trying to initiate a session with the *rmt_recvr* remote receiver. A session starts when the remote Gateway comes up.

**Corrective Action:** No action is required.

**CTMF52I** LOC RCVR *loc_recvr* AWAITING SESSION WITH RMT SNDR *rmt_sendr*

**Explanation:** The *loc_recvr* local receiver is waiting for a session to be initiated with the *rmt_sendr* remote sender. A session starts when the remote Gateway comes up.

**Corrective Action:** No action is required.

**CTMF53I** LOC SNDR *loc_sendr* NOW IN SESSION WITH RMT RCVR *rmt_recvr*

**Explanation:** The *loc_sendr* local sender is now in a session with the *rmt_recvr* remote receiver. Communication is established.

**Corrective Action:** No action is required.

**CTMF54I** LOC RCVR *loc_recvr* INIT SESSION WITH RMT SNDR *rmt_sendr*

**Explanation:** The *loc_recvr* local receiver is now in a session with the *rmt_sendr* remote sender. Communication is established.

**Corrective Action:** No action is required.

**CTMF55E** SERVER TYPE *x* FAILED IN *yyy*. RC=rc

**Explanation:** An Application Server of type *x* has failed to perform service *yyy*.

The variables in this message are:
INCONTROL for z/OS Messages Manual

- **x** - the type of Application Server
- **yyy** - the problematical service Valid values are:
  - PUT
  - GET
- **rc** - the return code A value of 28 indicates communication recovery and is allowed. All other return codes are indicative of internal errors.

**Corrective Action:** If the value of rc is not 28, consult your INCONTROL administrator.

**CTMF90S** OPEN OF DDCARD **ddName** FAILED

**Explanation:** Open for the specified DD statement pointing to password member failed.
Possible causes are:
- The **ddName** DD statement is missing.
- The file allocated to the **ddName** DD statement is not a sequential file nor a member in a PDS.
Authorization to access the product is denied.

**Corrective Action:** Correct the JCL statement for the procedure or the allocations for the CLIST.

**CTMF91S** PASSWORD MEMBER TOO LARGE (DD **ddName**)

**Explanation:** Password member (or sequential data set) has too many lines.
In this message, **ddName** is the identity of the DD statement that points to the password member.
Authorization to access the product is denied.

**Corrective Action:** Remove unnecessary lines from the member.

**CTMF92S** SYNTAX ERROR IN PASSWORD MEMBER (DD **ddName**)

**Explanation:** A syntax error was found in the password member. When this message is issued by the monitor, it is generally followed by message CTMF9DS, which describes the erroneous line in the member.
In this message, **ddName** is the identity of the DD statement that points to the password member.
Authorization to access the product is denied.

**Corrective Action:** Correct the text in the password member.

**CTMF93S** VALUE ERROR IN PASSWORD MEMBER (DD **ddName**)

**Explanation:** A field in the password member contains invalid data. When this message is issued by the monitor, it is generally followed by message CTMF9DS, which describes the erroneous line in the member.
In this message, **ddName** is the identity of the DD statement that points to the password member.
Authorization to access the product is denied.

**Corrective Action:** Correct the text in the password member.
CTMF94S PASSWORD INVALID, PLEASE RECHECK PASSWORD MEMBER (DD \textit{ddName})

**Explanation:** Data in the password member was not consistent with the specified password. In this message, \textit{ddName} is the identity of the DD statement that points to the password member. Authorization to access the product is denied.

**Corrective Action:** Check the contents of the password member against the text received from BMC Customer Support. If it checks, contact the representative.

CTMF95S PASSWORD FOR CONTROL-\textit{x} IS ABOUT TO EXPIRE IN \textit{n} DAYS

**Explanation:** Highlighted, unrollable message. Password expiration period is about to end. An expiration date is specified in the password member for the product.

**Corrective Action:** Contact BMC Customer Support for a new password.

CTMF96S PASSWORD FOR CONTROL-\textit{x} HAS EXPIRED

**Explanation:** Highlighted, unrollable message. Password expiration period has ended. An expiration date is specified in the password member for the product. Authorization to access the product is denied.

**Corrective Action:** Contact BMC Customer Support for a new password.

CTMF97S INTERNAL ERROR OCCURRED ON DD \textit{ddName}, PLEASE NOTIFY THE IOA ADMINISTRATOR

**Explanation:** An internal error has occurred while analyzing the password member pointed to by the \textit{ddName} DD statement. Authorization to access the product is denied.

**Corrective Action:** Notify the IOA administrator.

CTMF98S OBLIGATORY FIELD MISSING FROM PASSWORD MEMBER (DD \textit{ddName})

**Explanation:** An obligatory field is missing from a password member. The \textit{ddName} DD statement points to the password member. The PROD, START, CPUID, PASS, and TYPE fields should appear at least once in a password member. Authorization to access the product is denied.

**Corrective Action:** Check the contents of the password member against the text received from your INCONTROL administrator.
CTMF9AS PASSWORD FOR CONTROL-x NOT DEFINED IN MEMBER (DD ddName)

**Explanation:** The member pointed to by the `ddName` DD statement does not contain the password for the appropriate product.

In this message, `ddName` is the identity of the DD statement that points to the password member. Authorization to access the product is denied.

**Corrective Action:** Check that the specified password member is the correct member for this product.

CTMF9BS AUTHORIZATION PERIOD HAS NOT STARTED YET (DD ddName)

**Explanation:** The start date of the password has not yet arrived.

In this message, `ddName` is the identity of the DD statement that points to the password member. The START field contains the starting date of the password. Authorization to access the product is denied.

**Corrective Action:** Check that the specified password member is the correct member for this period.

CTMF9CS CPUID/MODEL NOT FOUND IN AUTHORIZED CPU LIST (DD ddName)

**Explanation:** The current CPU is not defined in the CPU list.

In this message, `ddName` is the identity of the DD statement that points to the password member. Each entry in the CPU list in the password member contains the CPUID of the CPU and its model. Authorization to access the product is denied.

**Corrective Action:** Check that the specified password member is the correct member for this CPU.

CTMF9DS CARD = text

**Explanation:** This message supplies additional information for a previous error message.

This message may appear after message CTMF92S or CTMF93S which indicates an error has occurred in one of the lines of the password member. Message CTMF9DS displays the erroneous line.

**Corrective Action:** See messages CTMF92S or CTMF93S.

CTMF9ES PASSWORD DDCARD ddName POINTS TO A NON EXISTING MEMBER (ABEND S013-18)

**Explanation:** The `ddName DD statement` is allocated to a nonexisting member in a PDS file.

In this message, `ddName` is the identity of the DD statement that points to the password member. Authorization to access the product is denied.

**Corrective Action:** Correct the name of the member in the DD statement or create a member with the specified name.
CTMF9FS PASSWORD FOR CONTROL-\(x\) EXPIRED, TEMPORARY AUTHORIZATION GRANTED

**Explanation:** The password for Control-x has expired. Nonetheless, Control-x can be run on the current date.

Despite password expiration, Control-x can be run on the 28th, 29th, 30th, 31st, 1st, 2nd, and 3rd days of each month for special purposes.

Control-x processing continues.

**Corrective Action:** Contact BMC Customer Support to obtain password renewal.

CTMFBO\(S\) PARAMETER \(parm\) NOT RECOGNIZED

**Explanation:** The parameter specified for the IOATEST utility is invalid.

IOATEST terminates with a condition code of 08.

**Corrective Action:** Correct the syntax of the parameters to IOATEST.

CTMF\(B1\)S PARAMETER SHOULD BE NUMERIC \((parm)\)

**Explanation:** The value of a parameter that should be numeric is nonnumeric.

The IOATEST utility terminates with a condition code of 08.

**Corrective Action:** Make sure the value of the parameter is numeric.

CTMF\(B2\)S NUMERIC PARAMETER OUT OF RANGE \((parm)\)

**Explanation:** Numeric parameter is not within the defined range.

The utility terminates with a condition code of 08.

**Corrective Action:** Make sure the value of the parameter is within the defined range.

CTMF\(B3\)S A MAXIMUM OF TEN MINOR LINES ARE ALLOWED FOR A MULTI-LINE MESSAGE

**Explanation:** More than 10 minor lines were specified for a multi-line message; 10 is the maximum allowed.

The IOATEST utility terminates with a condition code of 08.

**Corrective Action:** Make sure that no more than 10 minor lines are specified.

Messages CTMG00 through CTMGxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTMG00I ENTERPRISE/CS MAINFRAME GATEWAY STARTED

**Explanation:** This information message indicates a normal start of MVS Gateway for Enterprise Controlstation.
Corrective Action: No action is required.

CTMG01I ENTERPRISE/CS MAINFRAME GATEWAY TRACE LEVEL IS SET TO debugLevel

Explanation: This information message indicates that the Enterprise Controlstation Mainframe Gateway DEBUG level was set by an operator modify command (F).

The TRACE level is set to a new level. Each TRACE level activates the trace option on different components of the Enterprise Controlstation Mainframe Gateway.

Corrective Action: No action is required.

CTMG02E ENTERPRISE/CS MAINFRAME GATEWAY NOT APF-AUTHORIZED

Explanation: The Enterprise Controlstation Mainframe Gateway is not APF-authorized. The CTWGTW module is not in an APF-authorized library or does not have the AC attribute set to 1.

The Enterprise Controlstation Mainframe Gateway shuts down.

Corrective Action: Either add the library name in which CTWGTW resides to the IEAAPF00 member in SYS1.PARMLIB, or relink the module with the AC attribute set to 1.

CTMG03E INVALID MODIFY PARAMETER. VALID PARAMETERS ARE:

Explanation: An operator modify command (F) passed an erroneous parameter to the Enterprise Controlstation Mainframe Gateway. One or more GTWG25I messages are displayed on the operator console after this message, each containing a valid modify parameter.

The modify command is rejected.

Corrective Action: Enter a valid modify parameter.

CTMG04E BLDL/ATTACH FAILED FOR TASK modName

Explanation: Initialization of an IOA Gateway internal task failed. The system code indicating the exact reason can be found in the system log. Possible causes are:

- The modName module is not in the IOA Gateway Load library.
- Insufficient storage is available for the IOA Gateway.

The IOA Gateway shuts down.

Corrective Action: Call your system programmer for assistance. If necessary, increase the IOA Gateway REGION size.

CTMG05E UNRECOVERABLE ERROR ENCOUNTERED

Explanation: An unrecoverable error occurred in the operation of the Enterprise Controlstation Mainframe Gateway. The IOA Log, or the Enterprise Controlstation Mainframe Gateway JES messages file or SYSPRINT file, should contain a message with more details about the error. See also, CTWA01W.

The Enterprise Controlstation Mainframe Gateway shuts down.

Corrective Action: Call your system programmer for assistance. If the problem is not resolved, contact BMC Customer Support.
CTMG07I  SHUT DOWN UPON REQUEST FROM OPERATOR

**Explanation:** This information message confirms that an operator command (P) was issued, requesting shutdown of MVS Gateway for Enterprise Controlstation. This message is followed by message GTWG20I, indicating completion of the shutdown.

MVS Gateway for Enterprise Controlstation starts to shut down.

**Corrective Action:** No action is required.

CTMG10E  TRACE LEVEL MUST BE A NUMBER BETWEEN 0 AND 255

**Explanation:** An invalid TRACE level was entered, either in the operator modify command (F) or in the operator start command (S). When activating the Enterprise Controlstation trace facilities, specify a number from 0 through 255, inclusive, for the TRACE level. 0 specifies no tracing.

**Corrective Action:** Issue the command again with the correct TRACE level. The required TRACE level should be supplied by BMC Customer Support.

CTMG11I  SERVICE ID "id" IS {ENABLED | DISABLED}

**Explanation:** This information message confirms the current enable or disable status of service ID, after the operator has issued an operator modify command (F) that enables or disables it.

**Corrective Action:** No action is required.

CTMG24E  INTERVAL MUST BE A TWO-DIGIT NUMBER BETWEEN 03 AND 99 SECONDS

**Explanation:** Invalid Enterprise Controlstation Mainframe Gateway sleeping interval specified in an operator modify command (F). The Enterprise Controlstation Mainframe Gateway sleeping interval must be a two-digit number from 03 to 99 seconds.

The modify command is rejected.

**Corrective Action:** Enter a valid sleeping interval.

CTMG51E  COMM GATEWAY INTERNAL ERROR. RC=rc

**Explanation:** An internal error occurred. A call to internal routine ECAPUT failed with return code rc.

The IOA Gateway shuts down.

**Corrective Action:** Contact your INCONTROL administrator.

CTMG52E  INTERNAL ERROR: ASID=asid NOT FOUND

**Explanation:** An internal error occurred.

In this message, asid is the internal sequence number assigned to the server address space in which the error occurred.

The IOA Gateway shuts down.

**Corrective Action:** Contact your INCONTROL administrator.
CTMG53E OPEN OF DDNAME *ddName* FAILED

**Explanation:** An attempt to open a data set failed. The data set allocated by the specified DD name does not exist.

IOA Gateway shuts down.

**Corrective Action:** Determine why the data set allocated by the DD name in the startup procedure does not exist, fix the problem, and restart IOA Gateway.

CTMG63I DEALLOCATE SENT TO WORKSTATION GATEWAY ID=*id* APPLID=*applId* LU=*luName*

**Explanation:** This information message is issued during IOA Gateway shutdown or communication recycling. The deallocation was issued by the IOA Gateway APPLID *applId*. The corresponding partner or client LU is *luName*.

**Corrective Action:** No action is required.

CTMG65I DEALLOCATE RECEIVED FROM WORKSTATION GATEWAY ID=*id* APPLID=*applId* LU=*luName*

**Explanation:** This information message indicates that deallocation was issued by partner or client LU *luName* during communication re-cycling or shutdown initiated by the IOA Gateway. The corresponding IOA Gateway APPLID is *applId*.

**Corrective Action:** No action is required.

CTMG66W TPEND EXIT INVOKED. WORKSTATION GATEWAY ID=*id* APPLID=*applId* LU=*luName* REASON=*rsn*

**Explanation:** The connection between IOA Gateway APPLID *applId* and partner or client LU *luName* is being taken down by the VTAM operator. Exit TPEND is invoked with a reason code of *rsn*. An attempt is made to recycle communication.

**Corrective Action:** See the VTAM programming manual for an explanation of TPEND reason codes. Take appropriate action based on the reason code.

CTMG67W ATTN LOSS EXIT INVOKED. WORKSTATION GATEWAY ID=*id* APPLID=*applId* LU=*luName*

**Explanation:** The connection between partner or client LU *luName* and IOA Gateway APPLID *applId* was lost. This message is followed by message COMG68I containing VTAM information.

The IOA Gateway attempts to restart communication.

**Corrective Action:** With message COMG68I, determine the cause of the connection disruption. Correct it, if possible. If necessary, call your VTAM system programmer for assistance.
CTMG68I  RPL6SNSI=snsi RPL6RC=rc RPL6DETP=dept RPLSONCD=soncd

**Explanation:** This information message follows message COMG67I. It indicates that the connection between IOA Gateway and the partner/client was lost.

This message provides VTAM information for the VTAM system programmer. RPL6 fields are documented in the *VTAM Programming for LU 6.2* manual, as follows:

- **RPL6SNSI snsi** - the section on VTAM sense codes
  See also the VTAM messages and codes manual.
- **RPL6RC rc** - the appendix on return codes
- **RPL6DEPT dept** - at the end of ISTRPL6X DSECT (VTAM 3.3 and up)
- **RPLSONCD soncd** - the UNBIND Type Code, documented in the VTAM programming manual under the SCP exit routine

**Corrective Action:** Determine the cause of the connection disruption and correct it.

CTMG71I  PROBABLE VTAM IS HALTING

**Explanation:** This information message follows a message which indicates that a request from VTAM, such as an APPC command or an OPEN ACB command, failed. This message indicates that the probable reason for the failure is that VTAM is going down.

This message is followed by message COMG81I, COMG84I or COMG85I, which indicates the action that will be taken by IOA Gateway.

**Corrective Action:** No action is required.

CTMG72I  PROBABLE APPLID NOT DEFINED

**Explanation:** This information message indicates that the probable reason for a VTAM request failure is that the APPLID specified in the OPEN ACB command is unknown to VTAM. It follows message COMG91W, which indicates that an OPEN ACB command has failed.

Possible causes are:

- The Major Node where the APPLID is defined was not activated.
- The APPLID defined to VTAM does not match the APPLID defined to IOA Gateway in the ECAPARM member.

This message is followed by message COMG83E, which indicates the action that will be taken by IOA Gateway.

**Corrective Action:** Activate the Major Node or correct the APPLID specification.

CTMG73I  PROBABLE APPLID NOT DEFINED PROPERLY

**Explanation:** This information message indicates that the probable reason for the VTAM request failure is that the APPLID specified in the OPEN ACB is not a valid application definition, although it is known to VTAM. This could happen, for instance, if the APPLID defined to the IOA Gateway in the ECAPARM member is incorrect, but happens to match the name of another resource known to VTAM.

This message follows message COMG91W, which indicates that an OPEN ACB command has failed. It is followed by message COMG83E, which indicates the action that will be taken by the IOA Gateway.
Corrective Action: Correct the definition of the APPLID in the ECAPARM member.

CTMG74I PROBABLE ACB HAS ALREADY BEEN OPENED

Explanation: This information message indicates that the probable reason for the VTAM request failure is that the APPLID specified in the OPEN ACB command is already open and in use by another application.

Possible causes are:
- Another IOA Gateway with the same APPLID is already up.
- The APPLID defined to the IOA Gateway in the ECAPARM member is incorrect, but matches another APPLID definition.

This message follows message COMG91W, which indicates that an OPEN ACB command has failed. It is followed by message COMG85I, which indicates the action that will be taken by the IOA Gateway.

Corrective Action: Correct the definition of the APPLID in the ECAPARM member, or take down one of the address spaces with the same APPLID.

CTMG75I PROBABLE APPLID DEACTIVATED

Explanation: This information message indicates that the probable reason for a VTAM request failure is that the APPLID was deactivated by a VARY NET,INACT command.

This message follows a message that indicates that a request from VTAM, such as an APPC command or an OPEN ACB command, failed. This message is followed by message COMG81I, which indicates the action that will be taken by the IOA Gateway.

Corrective Action: Activate the APPLID.

CTMG76I PROBABLE VTAM IS NOT ACTIVE

Explanation: This information message indicates that the probable reason for a VTAM request failure is that VTAM is down.

This message follows message COMG91W, which indicates that an OPEN ACB command failed. It is followed by message COMG85I, which indicates the action that will be taken by the IOA Gateway.

Corrective Action: No action is required.

CTMG77I PROBABLE PARTNER DISCONNECTED

Explanation: This information message indicates that the probable reason for a VTAM request failure is that the conversation was lost due to abend or disconnection of the partner or client.

This message follows message COMG90E, which indicates that an APPC command has failed. It is followed by message COMG81I, which indicates the action that will be taken by the IOA Gateway.

Corrective Action: Check the message issued by the partner or client and proceed accordingly.

CTMG78I PROBABLE CONNECTION LOST

Explanation: This information message indicates that the probable reason for a VTAM request failure is a communication disruption. This may be due to a resource failure on the route to the partner or client.
This message follows message COMG90E, which indicates that an APPC command has failed. It is followed by message COMG81I, which indicates the action that will be taken by the IOA Gateway.

**Corrective Action:** Try to determine the cause of the communication disruption and correct it.

**CTMG79I PROBABLE SESSION TERMINATED**

**Explanation:** This information message indicates that the probable reason for a VTAM request failure is that a VTAM session termination occurred.

This message follows message COMG90E, which indicates that an APPC command has failed. It is followed by message COMG81I, which indicates the action that will be taken by the IOA Gateway.

**Corrective Action:** Contact your INCONTROL administrator.

**CTMG81I RE-START COMMUNICATION WILL BE ATTEMPTED**

**Explanation:** This information message indicates that an attempt will be made to restart communication. Restarting communication involves preparing to receive a conversation allocation request from the partner or client LU, including opening the ACB if it is not already open.

This message follows other messages that provide details about an error that occurred.

The IOA Gateway attempts to restart communication.

**Corrective Action:** No action is required.

**CTMG82I RE-CYCLE COMMUNICATION WILL BE ATTEMPTED**

**Explanation:** This information message indicates that an attempt will be made to recycle communication. Communication is recycled when VTAM is going down or when the retry limit is exceeded. Recycling communication involves deallocating the conversation (if there is any), closing and then reopening the ACB, and preparing to receive a conversation allocation request from the partner or client LU.

This message follows other messages that provide details about an error that occurred.

The IOA Gateway attempts to recycle communication.

**Corrective Action:** No action is required.

**CTMG83E THE COMM GATEWAY WILL BE SHUT DOWN**

**Explanation:** This message indicates that the IOA Gateway will shut down. This message follows other messages that provide details about an error that occurred.

The IOA Gateway shuts down.

**Corrective Action:** If the shutdown is due to an error in the IOA Gateway, contact your INCONTROL administrator.

**CTMG85I OPERATION WILL BE RE-ATTEMPTED AFTER ONE MINUTE**

**Explanation:** This information message indicates that a failed operation will be retried until the retry limit is reached. This message follows other messages that provide details about an error that occurred.

The failed operation is retried. When the retry limit is exceeded, an attempt is made to recycle communication.
Corrective Action: No action is required.

CTMG90E APPCMD appcmd FAILED. APPLID=applId R15=r15 R0=r0 RPL6RC=rc PARTNER LU=partner_lu

Explanation: An APPC command failed.
This message is followed by a message indicating the action that will be taken by the IOA Gateway. This message may be preceded by another message that provides more information about the error that occurred.

The following information in this message is for the VTAM system programmer:
- **appccmd** - Command that failed
- **applId** - APPLID that issued the failing command
- **r15** - Register 15 returned by VTAM
- **r0** - Register 0 returned by VTAM
- **rc** - RPL6RC returned by VTAM

The following fields are documented in the VTAM Programming for LU 6.2 Guide:
- **APPCCMD** - in the section on LU 6.2 macro instruction syntax and operands.
- **RPL6RC** - in the appendix on return codes.
- **RO and R15** - in the section on handling errors.

Corrective Action: If a second message gives a probable cause for the error, proceed according to the recommended User Response in that message. Otherwise, contact your VTAM system programmer.

CTMG91W OPEN ACB FAILED. APPLID=applId ACBERFLG=erflg

Explanation: An OPEN ACB command failed.
The following information in this message is for the VTAM system programmer:
- **applId** - APPLID that issued the failing command
- **erflg** - ACBERFLG returned by VTAM

Note:
ACBERFLG is documented in OPEN - Open One or More ACBs, ERROR Field, in the VTAM programming manual.

This message is followed by a message which indicates the action that will be taken by the IOA Gateway. This message may be preceded by another message which provides additional information about the error that occurred.

Corrective Action: If a second message gives a probable cause for the error, proceed according to the recommended user action for that message. Otherwise, contact your VTAM system programmer.

CTMG93W CLOSE ACB FAILED. APPLID=applId ACBERFLG=erflg

Explanation: A CLOSE ACB command has failed.
The following information in this message is for the VTAM system programmer:

- **applId**: APPLD that issued the failing command
- **erflg**: ACBERFLG returned by VTAM

Note:
ACBERFLG is documented in "CLOSE - Close One or More ACBs, ERROR Field", in the VTAM programming manual.

This message is followed by a message that indicates the action taken by the IOA Gateway.

**Corrective Action:** Determine the cause of the failure from ACBERFLG. If necessary, contact your VTAM system programmer.

**Example:**

CTMG94W SETLOGON FAILED. **APPLD=applId R15=r15 R0=r0**
**RPLRTNCD=rtncd RPLFDBK2=fdbk2**

**Explanation:** A SETLOGON command failed. The following information in this message is for the VTAM system programmer:

- **applId**: APPLD that issued the failing command.
- **r15**: Register 15 returned by VTAM.
- **r0**: Register 0 returned by VTAM.
- **rtncd**: RPLRTNCD returned by VTAM.
- **fdbk2**: RPLFDBK2 returned by VTAM.

The following fields are documented in the VTAM programming manual:

- **RPLRTNCD**
- **RPLFDBK2**
- **R0, R15**: Chapter on handling errors and special conditions.

This message is followed by a message which indicates the action that will be taken by the IOA Gateway.

**Corrective Action:** Determine the cause of the failure from RPLRTNCD and RPLFDBK2. If necessary, contact your VTAM system programmer.

**Example:**

CTMG95E APPCCMD **appc_cmd FAILED AFTER nn RETRIES. ****APPLD=applId PARTNER LU=partner_lu**

**Explanation:** An APPC command failed after nn retries. The following information in this message is for the VTAM system programmer:

- **appc_cmd**: Command that failed.
- **applId**: APPLD that issued the failing command.

This message is followed by a message which indicates the action that will be taken by IOA Gateway. This message may be preceded by another message providing additional information about the error that occurred.
The IOA Gateway attempts to recycle communications.

**Corrective Action:** If a second message gives a probable cause for the error, proceed according to the user action in that message. Otherwise, contact your VTAM system programmer.

CTMG96E APPCCMD SEND NOT COMPLETED WITHIN num MINUTES.
APPLID=applId PARTNER LU=partner_lu

**Explanation:** A SEND operation was not completed within the specified number of minutes.
The IOA Gateway attempts to recycle communication.

**Corrective Action:** Contact BMC Customer Support.

CTMG97E GENCB FAILED. APPLID=applId R15=r15 R0=r0
RPLRTNCD=rplrc RPLFDBK2=fdbk2

**Explanation:** The IOA Gateway issued a GENCB macro to generate a control block, but the operation failed.
The following information in this message is for the VTAM system programmer:

- **applId** - APPLID that issued the failing command
- **r15** - Register 15 returned by VTAM
- **r0** - Register 0 returned by VTAM
- **rtncd** - RPLRTNCD returned by VTAM
- **fdbk2** - RPLFDBK2 returned by VTAM

The following fields are documented in the VTAM Programming manual:

- **RPLRTNCD**
- **RPLFDBK2**
- **R0, R15** - Chapter on handling errors and special conditions

The IOA Gateway shuts down.

**Corrective Action:** Use the diagnostic information in the message to determine the cause of the failure. Correct the problem accordingly.

**Messages CTMH00 through CTMHxx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTMH01I CONTROL-M HEALTH CHECKER TASK STARTED

**Explanation:** This information message indicates that the Health Checker task has begun.

**Corrective Action:** No action is required.
CTMH02I CONTROL-M HEALTH CHECKER TASK DISABLED IN CTMPARM

**Explanation:** This information message indicates that the Control-M parameter Use Health Checker (HCHEKER) is set to N.

**Corrective Action:** Enable the Health Checker task by setting the Control-M parameter Use Health Checker (HCHEKER) to Y.

CTMH03E HEALTH CHECKER IS NOT SUPPORTED IN CURRENT ZOS VERSION

**Explanation:** This error message indicates that the operating system does not support the IBM Health Checker component.

**Corrective Action:** No action is required.

CTMH04E CONTROL-M SUBTASK subtask HANGING

**Explanation:** This error message indicates that one or more Control-M subtasks has been processing the job (displayed as part of the preceding CTMH05I message) for an unreasonably long period of time. Refer to the preceding CTMH05I message lists for additional information pertaining to the job.

The Control-M Monitor continues processing as usual. The subtask continues processing the job. The delay, however, may indicate a more severe problem.

**Corrective Action:** Review the system log for additional messages related to the job. Then report the problem to the Control-M administrator.

If the reason for the problem is unclear, take the following actions:

1. Take a system (SVC) dump of the Control-M monitor's address space, using the DUMP console command. Specify the parameter SDATA=(CSA,GRSQ,SUM,RGN,TRT).

2. Prepare the Control-M monitor full output and contact BMC Customer Support.

If the reason for the problem is outside of Control-M, holding the job being processed and restarting the Control-M monitor may have only a temporary effect.

CTMH05I CONTROL-M SUBTASK STATUSES

**Explanation:** This information message indicates the start of the status information displayed by the Health Checker task. This message is followed by additional information on subtasks being monitored and either CTMH06I or CTMH04E.

**Corrective Action:** No action is required.

CTMH06I CURRENT STATUS OF CONTROL-M MONITOR IS OK

**Explanation:** This information message indicates that all tasks being monitored are processing normally. This message is preceded by CTMH05I.

**Corrective Action:** No action is required.
CTMH07I CONTROL-M AJF FILE CONDITION

Explanation: This information message indicates that what follows is the current status of the Active Jobs File (AJF). The following information on the AJF is listed:

- Number of entries - maximum number of entries permitted in the AJF
- Size in Bytes - the amount of space used by the AJF
- Free entries - the number of additional entries permitted in the AJF
- Percentage used - the number of entries currently in use, expressed as a percentage of the maximum number of entries
- Threshold - the Control-M monitor starts to notify the operator about AJF utilization when the number of used entries reaches this percentage of the maximum allowed

Corrective Action: No action is required.

CTMH08A HEALTH CHECKER INTERFACE IS DEACTIVATED AS RESULT OF A FAILURE. REPLY CONTINUE OR RETRY

Explanation: This message indicates that the Health Checker task has encountered a problem and has stopped processing.

The Health Checker task stops processing and waits for a reply.

Corrective Action: Enter one of the following responses:

- CONTINUE - disable communication between the Health Checker interface and Control-M monitor, allowing the Control-M monitor to continue processing.
- RETRY - retry the failed Health Checker task

CTMH09E CONTROL-M ACTIVE JOBS FILE UTILIZATION THRESHOLD IS REACHED

Explanation: This information message indicates that the use of the Active Jobs File (AJF) has reached the threshold. This message is preceded by CTMH07I, which lists information on the size of the AJF. For more information, see the Explanation of message CTMH07I.

When the number of entries used in the AJF reaches the threshold percentage Control-M could stop ordering jobs. The threshold percentage is specified in the Control-M parameter AJFTHRSH.

Control-M could stop ordering jobs but all other functions (such as, job submission and post-processing) continue normally.

Corrective Action: Contact your INCONTROL administrator. It may be necessary to compress the Active Jobs file or to increase its size.

CTMH0AI CURRENT STATUS OF CONTROL-M AJF FILE IS OK

Explanation: This information message indicates that the use of the Active Jobs File (AJF) has not reached the threshold. This message is preceded by CTMH07I, which lists information on the size of the AJF. For more information, see the Explanation of message CTMH07I.

Corrective Action: No action is required.
CTMH0BI  THE CONTROL-M MONITOR RUNNING WITH CURRENT SET OF PARAMETERS

Explanation: This message indicates there are no differences between the parameter settings currently in use and those in the CTMPARM member.

Corrective Action: No action is required.

CTMH0CE  FOUND SOME DIFFERENCES IN CURRENT PARAMETERS SET AND CTMPARM

Explanation: This message indicates that one or more Control-M parameters, in the CTMPARM member, are not equal to the parameter setting in the running Control-M Monitor. This message precedes CTMH0DI.

The running Control-M Monitor continues processing, however, the inconsistency between the Control-M parameters could cause unpredictable results.

Corrective Action: Review the output of the message CTMH0DI and check for unexpected parameter changes.

If the differences in the parameter settings are known, perhaps as a result of using the MODIFY command, you can ignore this exception. However, if the differences are not expected, you may need to restart the Control-M monitor or refresh the Control-M parameter settings using the following command:

F CTM_monitor,NEWPARM

CTMH0DI  CTMPARM COMPARATION DETAIL REPORT

Explanation: This message precedes the listing of the Control-M parameters where differences were found between the current settings and those saved in the CTMPARM member. The listing includes the following columns:

- CTM parameter - the name of the Control-M parameter
- Current value - parameter setting in the running Control-M monitor
- CTMPARM value - parameter setting saved in the CTMPARM member

Corrective Action: No action is required.

CTMh30E  HEALTH CHECKER REQUEST FAILED: IBM HEALTH CHECKER IS NOT ACTIVE

Explanation: This error message indicates that the Health Checker task could not be processed because the IBM Health Checker component is not running.

Corrective Action: No action is required.

CTMh31W  IBM HEALTH CHECKER TERMINATED

Explanation: This warning message indicates that the IBM Health Checker was stopped or ended abnormally.

Corrective Action: No action is required.
CTMh32E IBM HEALTH CHECKER REMOTE CHECK checkName FAILED;
REASON=nn

Explanation: This error message indicates that one of the following remote checks, identified by checkName in the message string, failed to process correctly.

- CTMHCKPR - check for job processing delays
- CTMHCKTR - report on the status of the Active Jobs File
- CTMHCKMR - report on comparison of current session parameters and the parameters in CTMPARM.

The cause of the failure can be identified by the reason code, represented by nn in the message string. The following table shows possible values for nn:

<table>
<thead>
<tr>
<th>Reason</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>01</td>
<td>OPSTART failed</td>
</tr>
<tr>
<td>02</td>
<td>OPCOMPLETE failed</td>
</tr>
<tr>
<td>03</td>
<td>ADD CHECK failed</td>
</tr>
<tr>
<td>04</td>
<td>Obtain PAUSE</td>
</tr>
<tr>
<td>05</td>
<td>Pause Request failed</td>
</tr>
<tr>
<td>06</td>
<td>Failed to load CTMPARM</td>
</tr>
</tbody>
</table>

Corrective Action: No action is required.

Messages CTMI00 through CTMIxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTMI01S pgm UNABLE TO OPEN FILE ddName

Explanation: The pgm program is unable to open the ddName file referenced by the specified DD name. The ddName file may be missing. This message is accompanied by a system message explaining the cause of the problem. The program terminates.

Corrective Action: Supply the required DD name if it is missing. Otherwise, see the accompanying system message and take appropriate action.

CTMI02S pgm UNABLE TO LOAD modName

Explanation: The pgm program is unable to load the modName module. The modName module is probably missing from the IOA Load library.
The program is terminated.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support.

**CTMI03I** AJF/CONDITIONS JOURNAL INITIALIZED: BLOCKSIZE *num*

**Explanation:** This information message indicates that the Control-M journal file was successfully initialized during New Day processing.

The first record of the journal file contains information relevant to the Control-M current working day.

In this message, *num* is the blocksize of the journal file.

**Corrective Action:** No action is required.

Messages **CTMJ 00 through CTMJ xx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**CTMJ02E** *ddName* BEING FORMATTED. TRY AGAIN LATER

**Explanation:** The *ddName* file is currently being formatted.

This error message may be issued as part of the New Day procedure, or some other component that formats the file. It is also possible that a component attempted to format the file, but failed, leaving the file unusable (in status "FORMAT").

**Corrective Action:** Try again later. If no component is currently formatting the file, the file must be reformatted before it can be used.

**CTMJ03E** *ddName* - PARM QNAME *qName1* DIFFERENT THAN IN FILE *qName2*

**Explanation:** QNAME *qName1* defined in CTMPARM differs from QNAME *qName2* specified in the file pointed to by the *ddName DD statement*. The QNAMEs of the files must be identical to the QNAME specified in CTMPARM.

Processing of the current command stops with a return code of 8.

**Corrective Action:** Reformat the file pointed to by the *ddNameDD statement*, using the proper installation procedures.

**CTMJ81I** UTILITY IOADDR STARTED

**Explanation:** This information messages indicates that the IOADDR utility started.

**Corrective Action:** No action is required.

**CTMJ82I** UTILITY IOADDR ENDED

**Explanation:** This information message indicates that the IOADDR utility ended.

**Corrective Action:** No action is required.
CTMJ 83S INVALID PARAMETER SPECIFICATION

**Explanation:** The parameter passed to the IOADDR utility was either invalid or missing. The IOADDR utility terminates.

**Corrective Action:** Verify that a valid DSNAME was passed as a parameter to the IOADDR utility.

CTMJ 84S OPEN OF FILE "SYSPRINT" FAILED

**Explanation:** Opening of the print file failed. Possible causes are:

- The SYSPRINT DD statement is missing from the step.
- The file allocated to the SYSPRINT DD statement is not a valid print file.

The IOADDR utility terminates.

**Corrective Action:** Correct the JCL for the IOADDR utility so that it contains a valid SYSPRINT DD statement.

CTMJ 85S OPEN OF CONTROL-FILE FAILED. DDNAME "ddName"

**Explanation:** The IOADDR utility failed to open one of its control files.

The IOADDR utility terminates.

**Corrective Action:** Correct the JCL for the IOADDR utility so that it has a correct control member allocated to it.

CTMJ 86S ALLOCATION FOR MEMBER *memName* LIBRARY *lib* FAILED

**Explanation:** Allocation of the specified member failed because the member does not exist in the specified library or is inaccessible.

The IOADDR utility terminates.

**Corrective Action:** Verify that the @IDCNTL control member contains a valid library and member name for each user.

CTMJ 87S ALLOCATION FOR TABLE FAILED

**Explanation:** Allocation of one of the IOADDR members failed, because one of the members pointed to by @IDCNTL does not exist or is inaccessible.

The missing member is skipped. Processing continues for the following members.

**Corrective Action:** Verify that the @IDCNTL control member contains a valid library and member name for each user.

CTMJ 88S BAD OP-CODE "op_code"

**Explanation:** A user table contained an invalid operation code.

The event definition with the bad OP-CODE is skipped. Processing continues with the following entries.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support.
CTMJ 89S LOAD FAILED FOR MEMBER "memName"

**Explanation:** Load of one of the IOA modules failed. The IOADDR utility terminates.

**Corrective Action:** Verify that your STEPLIB DD statement points to the IOA LOAD library.

CTMJ 90S ACCESS RC=rc FOR LIBRARY lib MEMBER memName

**Explanation:** An error occurred in the IOADDR utility when reading a member from a PDS library. The return code describes the reason for the error.

Valid values for the return code \( rc \) are:

<table>
<thead>
<tr>
<th>rc</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>4</td>
<td>Premature end of file.</td>
</tr>
<tr>
<td>8</td>
<td>Storage allocation error.</td>
</tr>
<tr>
<td>12</td>
<td>Member not found.</td>
</tr>
<tr>
<td>16</td>
<td>The data set name is not the name of a PDS library.</td>
</tr>
<tr>
<td>20</td>
<td>The data set is not a fixed format data set.</td>
</tr>
<tr>
<td>24</td>
<td>Logical record length of the file is not 80.</td>
</tr>
<tr>
<td>28</td>
<td>The data set in use.</td>
</tr>
<tr>
<td>32</td>
<td>Internal error.</td>
</tr>
<tr>
<td>36</td>
<td>The data set is not cataloged.</td>
</tr>
<tr>
<td>40</td>
<td>The data set allocation failed.</td>
</tr>
<tr>
<td>44</td>
<td>Invalid request.</td>
</tr>
<tr>
<td>48</td>
<td>Internal error.</td>
</tr>
<tr>
<td>52</td>
<td>Error accessing the directory.</td>
</tr>
</tbody>
</table>

The entry that caused the error is skipped.

**Corrective Action:** Correct the cause of the error, and retry the operation. In case of an internal error, supply BMC Customer Support with a copy of the input file and the parameters specified for the IOADDR utility.

CTMJ 91S INSUFFICIENT STORAGE FOR PROCESS

**Explanation:** The IOADDR utility failed to allocate storage for its operation.
The IOADDR utility terminates.

**Corrective Action:** Increase the REGION size.

**CTMJ 92S** JOB jobName NOT FOUND IN TABLE tableName OF LIB lib

**Explanation:** A request to order a job could not be fulfilled because the job did not exist in the scheduling table.

The event definition pointing to the missing job is skipped. Processing continues with the subsequent entries.

**Corrective Action:** Add the missing definition to the specified scheduling table.

**CTMJ 93S** BAD DATE date SPECIFIED

**Explanation:** The order date specified in the event definition is invalid.

The event definition with the bad date is skipped. Processing continues with the subsequent entries.

**Corrective Action:** Correct the date in the event definition.

**CTMJ 94I** USER: userId TABLE: tableName LIBRARY: lib

**Explanation:** This information message completes a preceding message stating the reason for the error.

**Corrective Action:** Use this information to locate the cause of the error.

**CTMJ 9CE** QNAME TABLE ENTRY ERROR. FLAG=num STC=stcName STR=structName LSN=logStreamName HLQ=hiLevelQualifier

**Explanation:** The IOADDC program found an invalid entry in the QNAME table for the QNAME specified by the IOADDC request.

The variables in this message are:

- **num** - a hexadecimal number representing the communication method used to transfer the IOADDC input trigger to Control-M Possible values are:
  - 40 - use the MVS system logger
  - 20 - call the IOADDR routine directly

- **stcName** - the name of the started task

- **structName** - the name of the CF structure

- **logStreamName** - the name of the log stream

- **hiLevelQualifier** - the high-level qualifier of the log stream file

The IOADDC request is aborted.

**Corrective Action:** Rerun the IOADDI job for the specified IOA installation, and verify that it was successful.
CTMJ 9DE  
**cbName** CONTROL BLOCK NOT FOUND - DATA SET TRIGGERING REQUEST ABORTED

**Explanation:** The IOADDC program was unable to find the **cbName** system-wide control block. The IOADDC request is aborted.

**Corrective Action:** Run the IOADDI job for each IOA installation that requires it.

CTMJ 9EE  
**qName** QNAME TABLE ENTRY NOT FOUND - DATA SET TRIGGERING REQUEST ABORTED

**Explanation:** The IOADDC program was unable to find an entry in the QNAME table that matched the **qName QNAME**.

The IOADDC request is aborted.

**Corrective Action:** Rerun the IOADDI job for the specified IOA installation, and verify that it was successful.

CTMJ A11  
IOADDS: **dsn**

**Explanation:** This information message indicates that the IOADDC utility was activated in an environment with no authorization to issue modify commands to the IOADDS started task. It can be used to issue a MODIFY command to IOADDS by a console automation product, for example, Control-O.

Execution continues.

**Corrective Action:** If you have already defined this message to your console automation software, no intervention is required. Otherwise, make sure that either IOADDC is activated in an APF-authorized environment, or that measures have been taken to handle this message.

CTMJ A2S  
IOADDS FUNCTIONAL SERVER IS NOT OPERATIONAL. DATASET TRIGGERING REQUESTS MAY BE LOST

**Explanation:** The IOADDS started task was not operational during an IOADDC-related data set event. The IOADDC utility attempted to start the IOADDS started task automatically, but IOADDS was not initialized.

The event that triggered this action is not processed.

**Corrective Action:** Check the output of the IOADDS utility. It should point to the problem which prevented the initialization. Proceed accordingly.

CTMJ A3I  
AJF IS BEING FORMATTED. IOADDS WILL WAIT TILL FORMAT FINISHES.

**Explanation:** The CONNECT DIRECT interface module has attempted to order a job as a result of a user request but the Active Jobs file is currently being formatted.

The interface module waits until the formatting has been completed, then retries the request.

**Corrective Action:** No action is required.
CTMJ A4S SYSPLEX TABLE MISSING - DATA SET TRIGGERING REQUEST ABORTED

Explanation: The CONNECT DIRECT interface module has attempted to read the Sysplex table and failed.

Possible causes are:
- the Sysplex table is not present in the PARM library
- the internal format of the table is invalid

The interface module aborts the request.

Corrective Action: Check why the Sysplex table is not in the PARM library, or why its internal format is invalid. Correct the problem and retry the request.

CTMJ A5S CMMPLEX TABLE MISSING - DATA SET TRIGGERING REQUEST ABORTED

Explanation: The CONNECT DIRECT interface module has attempted to read the CMMPLEX table and failed.

Possible causes are:
- The CMMPLEX table is not present in the PARM library.
- The internal format of the table is invalid.

The interface module aborts the request.

Corrective Action: Check why the CMMPLEX table is not in the PARM library, or why its internal format is invalid. Correct the problem and retry the request.

CTMJ A6S SYSTEM LOGGER REQUEST xxxxxx FAILED: R15=rc15 RETURN=rcx REASON=rsn

Explanation: One of the following System Logger requests failed:
- DEFCFS, IXGINVNT (define coupling facility structure)
- DEFLGS, IXGINVNT (define log stream)
- CONLGS, IXGCONN (connect to log stream)
- WRTIEL, IXGWRITE (write a log stream log block)
- DISLGS, IXGCONN (disconnect from log stream)
- DELLGS, IXGINVNT (delete log stream)
- DELCFS, IXGINVNT (delete coupling facility structure)

rc15 is the return code in Register 15 that identifies the error, and is one of the following:

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>08</td>
<td>Minor System Logger request error.</td>
</tr>
<tr>
<td>Return Code</td>
<td>Explanation</td>
</tr>
<tr>
<td>-------------</td>
<td>--------------------------------------------------</td>
</tr>
<tr>
<td>12</td>
<td>Intermediate System Logger request error.</td>
</tr>
<tr>
<td>16</td>
<td>Major System Logger request error.</td>
</tr>
<tr>
<td>20</td>
<td>Permanent System Logger request error.</td>
</tr>
<tr>
<td>28</td>
<td>Operating system does not support System Logger interface.</td>
</tr>
</tbody>
</table>

The return code `rcx` and reason code `rsn` are documented in the IBM manual *MVS Programming: Assembler Services Reference*, which contains the relevant system action. Each of the System Logger requests identified by the return code `rc15` is in a separate section of that publication, which also contains the possible values for the return code `rcx` and the reason code `rsn` for that System Logger request.

**Corrective Action:** If you have any difficulty interpreting the IBM publication, contact your INCONTROL administrator.

**CTMJ A7E NAME/TOKEN SERVICES REQUEST xxxxxxxx FAILED: R15=rc**

**Explanation:** One of the following MVS name/token services requests failed:
- CREATE, IEANTCR (name/token create)
- RETRIEVE, IEANTRT (name/token retrieve)
- DELETE, IEANTDL (name/token delete)

The return code `rc` is documented in the IBM manual *MVS Programming: Assembler Services Reference*, which contains the relevant system action. Each of the name/token services requests `xxxxxxxx` is in a separate section of the publication, which also contains the possible values for the return code `rc` for that request.

**Corrective Action:** If you have any difficulty interpreting the IBM publication, contact your INCONTROL administrator.

**CTMJ A8E PARAMETER (DATA SET NAME) LENGTH ERROR - DATA SET TRIGGERING REQUEST ABORTED**

**Explanation:** The data set name used as a CONNECT DIRECT interface trigger was not specified, or was longer than 44 characters.

The interface module aborts the request.

**Corrective Action:** Specify an appropriate data set name trigger, then retry the request.

**CTMJ A9S IOACPRM TABLE MISSING - DATA SET TRIGGERING REQUEST ABORTED**

**Explanation:** The CONNECT DIRECT interface module attempted to read the IOACPRM table, and failed.
Possible causes are:

- the IOACPRM table is not present in the PARM library
- the internal format of the table is invalid

The interface module aborts the request.

**Corrective Action:** Check why the IOACPRM table is not in the PARM library, or why its internal format is invalid. Correct the problem and retry the request.

**Explanation:**

CTMJAAS SYSTEM LOGGER INTERFACE NOT ENABLED BY USER - DATA SET TRIGGERING REQUEST ABORTED

The system logger interface in the IOACPRM table was not enabled.

**Corrective Action:** Change the value of SYSTLOGR in the IOACPRM table to Y.

**Explanation:**

CTMJABW SYSTEM LOGGER INTERFACE NOT OPERATIVE - DATA SET TRIGGERING REQUEST PROCESSED BY IOADDR

The System Logger interface is not enabled (SYSTLOGR parameter value in the IOACPRM parameters member is set to 'N') so IOADDC cannot pass the data set name argument to Control-M by the System Logger.

Instead of passing the data set name argument to Control-M using the System Logger, IOADDC directly calls to IOADDR to trigger the corresponding data set event. For more information, see the Control-M chapter in the *INCONTROL for z/OS Administration Guide*.

**Corrective Action:** If required, set up the System Logger interface. For information on setting up the System Logger, see the Control-M chapter in the *INCONTROL for z/OS Installation Guide*.

**Explanation:**

CTMJACI qName QNAME TABLE ENTRY SUCCESSFULLY REGISTERED

The IOADDI job successfully registered the *qName* QNAME table entry.

**Corrective Action:** No action is required.

**Explanation:**

CTMJADE cbName CONTROL BLOCK CREATION ERROR - REGISTRATION ABORTED

The IOADDI job was unable to build the *cbName* system-wide control block.

The IOADDI job does not register the required IOA installation.

**Corrective Action:** Rerun the IOADDI job for the required IOA installation, and verify that it was successful.

**Explanation:**

CTMJ AEE NO AVAILABLE ENTRIES IN QNAME TABLE - REGISTRATION ABORTED

The IOADDI job was unable to register the required IOA installation because no remaining QNAME table entries are available.
The IOADDI job does not register the required IOA installation.

**Corrective Action:** Delete any entries in the QNAME table that are no longer required. If all existing entries are required, prepare the Control-M monitor full output and contact BMC Customer Support.

**Messages CTMK00 through CTMKxx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**CTMK40I PRIORITY PROPAGATION PROCESS STARTED**

**Explanation:** This information message indicates that the Priority Propagation process has been started by the Control-M monitor.

**Corrective Action:** No action is required.

**CTMK41I PRIORITY PROPAGATION PROCESS ENDED**

**Explanation:** This information message indicates that the Priority Propagation process has ended.

**Corrective Action:** No action is required.

**CTMK41S FILE ALLOCATED TO DDNAME "DAG2M" IS NOT YOUR CONTROL-M COMMUNICATION FILE**

**Explanation:** The data set described by the DAG2M DD statement is not the communication file of this IOA installation. The file allocated to the DAG2M DD statement contains a different queue name from the one specified by IOA Installation Parameters.

Sysout transmission is suspended.

**Corrective Action:** Correct the problem and restart the job.

**CTMK42E INSUFFICIENT STORAGE FOR CALCULATION**

**Explanation:** The Control-M monitor did not have enough storage for either the Deadline Scheduling Calculation process or for the Priority Propagation process.

The process is aborted.

**Corrective Action:** Increase the storage for the Control-M monitor.

**CTMK43W WAITING FOR DEPENDENCIES FILE. DDNAME "ddName"**

**Explanation:** The Control-M monitor cannot access a file because it is being used by another component. The monitor requires exclusive access to the file.

The monitor waits for the file to be released.

**Corrective Action:** Check who is holding the file and have it released.
CTMK44E CANNOT ISSUE ENQ FOR COMMUNICATION FILE. DDNAME "DAG2M"

**Explanation:** ENQ for the remote sysout tracking communication file failed. The communication file allocated to this DD name is allocated to another tracker, or another IOA installation uses the same qname.

Sysout tracking is suspended.

**Corrective Action:** Correct the problem, and restart the task again.

CTMK44S QNAME MISMATCH IN DEPENDENCIES FILE

**Explanation:** The Dependencies file allocated to the Control-M monitor does not belong to the current installation.

The process is aborted.

**Corrective Action:** Verify that the correct Dependencies file is allocated to the Control-M monitor through the DAGRAPH DD statement.

CTMK45I *numRecd* JOBS RECEIVED HIGHER PRIORITY. *numHeld* JOBS HELD

**Explanation:** This is one of two messages with the same ID, but different text.

This information message is issued when the Priority Propagation process ends. The message indicates the number of jobs that received higher priority, and the number of jobs whose priority was not changed, that is, were held.

**Corrective Action:** No action is required.

CTMK46I DEADLINE SCHEDULING PROCESS STARTED

**Explanation:** This information message indicates that a request to resolve all deadline scheduling requests was received either from a modify command, or from a user entering command REFRESH in the Jobs Dependencies screen.

The Control-M monitor resolves all deadline scheduling definitions.

**Corrective Action:** Wait for message JDLK47I or CTMK47I, to signal the end of the process.

CTMK47E INVALID RC FROM CTMG2M, FUNCTION=func RC=rc

**Explanation:** Invalid return code from the CTMG2M internal module. The return code was not one typically expected after the particular routine.

The variables in this message are:

- `func` - the function in which the error occurred
- `rc` - the return code from CTMG2M

Sysout transmission is suspended.

**Corrective Action:** Notify your INCONTROL administrator.
CTMK47I DEADLINE SCHEDULING PROCESS ENDED

Explanation: This information message indicates that the Control-M monitor successfully finished resolving all deadline scheduling definitions. This message is accompanied by message JDLK48I or CTKM48I which displays the number of updated jobs.

Corrective Action: No action is required.

CTMK48I num1 JOBS DUE OUT TIME UPDATED. num2 JOBS HELD/FINISHED

Explanation: This information message indicates that the Control-M monitor successfully finished resolving all deadline scheduling definitions.

The variables in the message are:
- num1 - the number of jobs with DUE OUT times that were updated
- num2 - the number of jobs that were not updated, because
  - the job was held
  - the job ended
  - the job record was not available for change

This message follows the CTKM47I message.

Corrective Action: No action is required.

CTMK48S LOADING OF CTMCSI FAILED

Explanation: Loading of the CTMCSI module failed. Possible causes are:
- The IOA LOAD library is not in the load modules search list.
- Insufficient memory is available to load the CTMCSI member.
- The CTMCSI module does not exist in the LOAD library.

Sysout transmission is suspended.

Corrective Action: Correct the problem and restart the job.

CTMK49E DEADLINE SCHEDULING FACILITY IS DISABLED. PROCESSING STOPPED

Explanation: This is one of two messages with the same ID, but different text.

A request has been made to resolve deadline scheduling, but the Deadline Scheduling Facility has not been enabled in the Control-M defaults member.

Deadline scheduling is not performed.

Corrective Action: Ask your INCONTROL administrator to enable the Deadline Scheduling Facility in the Control-M default parameters member.
CTMK50I INITIALIZATION OF DEPENDENCIES FILE COMPLETED

Explanation: This information message indicates that the Dependencies file was successfully formatted and is ready for use. The current dependencies between jobs can be viewed after entering the REFRESH command from the appropriate screen.

Corrective Action: No action is required.

CTMK50S CONTROL-M COMMUNICATION FILE WAS NOT BUILT

Explanation: Control-M communication file could not be created.

The job terminates with errors.

Corrective Action: Look for a earlier error message that describes the cause of the error.

CTMK51I BUILDING OF CONTROL-M COMMUNICATION FILE ENDED

Explanation: This information message is the normal termination message issued after formatting the Control-M communication file.

Corrective Action: No action is required.

CTMK52E OPEN OF CONTROL-M COMMUNICATION FILE FAILED. DDNAME "DAG2M"

Explanation: Open of data set referenced by the DAG2M DD statement failed. The data set described by the DAG2M DD statement is the communication file between the Receiver and Control-M monitor.

If the message occurred under the Receiver address-space, the sysout transmission is suspended. If the message occurred under Control-M monitor, the monitor shuts down.

Corrective Action: Correct the problem, and restart the job.

CTMK53E I/O ERROR IN CONTROL-M COMMUNICATION FILE. DDNAME "DAG2M"

Explanation: I/O error occurred while working with the Control-M communication file. The data set described by the DAG2M DD statement is the communication file between the Receiver and Control-M monitor. This error is issued when an error occurred during a read or write operation.

If the message occurred under the Receiver address space, the sysout transmission is suspended. If the message occurred under the Control-M monitor, the monitor shuts down.

Corrective Action: Verify that the JCL for the data set is referred to by the DAG2M DD statement. If so, format the data set. To build the FORMG2M job, use the TAILOR JOB option, available from ICE by selecting MAINTAIN YOUR ENVIRONMENT => ICE REFRESH=> OPTION 3.

CTMK53S TOO MANY INTERJOB CONNECTIONS

Explanation: The number of prerequisite conditions for dependency calculations exceeds the maximum number supported. The maximum number of conditions is ten times the maximum number of records in the Active Jobs file.

The dependency calculation process is aborted.
**Corrective Action:** Increase the size of the Active Jobs file.

**CTMK55W DEADLINE SCHEDULING INTERNAL ERROR - DIAGNOSTIC DUMP PRODUCED**

**Explanation:** The Control-M monitor encountered an internal error during REFRESH processing in the Control-M Active Environment screen.

The system produces a diagnostic dump, and continues processing.

**Corrective Action:** Ask your system programmer to record the error message, the diagnostic dump, and the Control-M monitor full output; and contact BMC Customer Support.

**CTMK56E "DACOMPRM" CONTAIN INVALID CARD sequential_num DATA=data**

**Explanation:** The $GTWMPRM member in the IOA COMMCTRL library, which was referenced by the DACOMPRM DD statement, contains an invalid statement. This member contains SYSDATA sysout tracking and transfer parameters.

The variables in this message are:
- `sequential_num` - the relative number of the invalid statement in the member
- `data` - the contents of the invalid statement

Sysout transmit is suspended.

**Corrective Action:** Correct the invalid statement, and restart the job.

**CTMK56S INVALID INPUT TO SHIFT. DATA SHOULD BE +NNN/-NNN**

**Explanation:** The user specified invalid parameters for operator command SDOUT.

The operator command is ignored.

**Corrective Action:** Specify valid parameters for operator command SDOUT. See the Control-M chapter of the INCONTROL for z/OS Administrator Guide for a details about this operator command.

**CTMK57E "DACOMPRM" CONTAINS DUPLICATE CARD sequential_num DATA=data**

**Explanation:** The $GTWMPRM member in the IOA COMMCTRL library, which was referenced by the DACOMPRM DD statement, contains a duplicate statement. This member contains SYSDATA sysout tracking and transfer parameters.

The variables in this message are:
- `sequential_num` - the relative number of the duplicate statement in the member
- `data` - the contents of the duplicate statement in the member

Sysout transmit is suspended.

**Corrective Action:** Correct the problem, and restart the job.
CTMK57I  *shiftnum* JOBS DUE-OUT TIME SHIFTED.  *heldnum* JOBS HELD

**Explanation:** This information message is issued after successful execution of operator command SDOUT.

The variables in this message are:

- *shiftnum* - the number of jobs for which the DUE OUT time was shifted the requested number of minutes
- *heldnum* - the number of jobs that are currently in HELD status and were therefore not shifted

**Corrective Action:** No action is required.

CTMK58E UNABLE TO OPEN PARAMETER FILE. DDNAME "DACOMPRM"

**Explanation:** Unable to open the $GTWMPRM member in the IOA COMMNTL library, which was referenced by the DACOMPRM DD statement. This member contains SYSDATA sysout tracking and transfer parameters.

Sysout transmit is suspended.

**Corrective Action:** Correct the problem, and restart the job.

CTMK59E PARAMETER FILE IS EMPTY. DDNAME "DACOMPRM"

**Explanation:** The $GTWMPRM member in the IOA COMMNTL library, which was referenced by the DACOMPRM DD statement, is empty. This member should contain SYSDATA sysout tracking and transfer parameters.

Sysout transmit is suspended.

**Corrective Action:** Correct the problem, and restart the job.

CTMK60E PARAMETER parm DOES NOT EXISTS IN "DACOMPRM" FILE

**Explanation:** The parm mandatory parameter does not exist in the $GTWMPRM member in the IOA COMMNTL library, which was referenced by the DACOMPRM DD statement. This member contains SYSDATA sysout tracking and transfer parameters. The parm parameter is mandatory.

Sysout transmission is suspended.

**Corrective Action:** Add the missing parameter to the $GTWMPRM member in IOA COMMNTL library, and restart the job.

Messages CTML00 through CTMLxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTML00I  CONTROL-M MONITOR monName PROCESSING SUSPENDED

**Explanation:** This information message indicates that the Control-M monitor has stopped processing jobs temporarily to allow the New Day procedure to begin execution.

Control-M suspends processing at the time specified in CTMPARM to allow the New Day procedure to run.
The Control-M monitor remains suspended until the New Day procedure ends. At the successful completion of the New Day procedure, the monitor resumes normal execution.

**Corrective Action:** No action is required.

**CTML01I CONTROL-M MONITOR monName PROCESSING RESUMED**

**Explanation:** In general, this message indicates that the Control-M monitor resumed processing jobs after the New Day procedure completed successfully. However, under the Control-M monitor operator command `/F CTMTRLM,NEWDAY=NOW,ORDERONLY`, this message can appear before the Newday procedure ends.

**Corrective Action:** No action is required.

**CTML02I CONTROL-M MONITOR monName NEW DAY PROCEDURE COMPLETE**

**Explanation:** This message indicates that all phases of New Day Processing for the specified monitor ended successfully. However, under the Control-M monitor operator command `/F CTMTRLM,NEWDAY=NOW,ORDERONLY`, this message can appear before the Newday procedure ends.

The Control-M monitor resumes execution.

**Corrective Action:** No action is required.

**CTML03W START OF NEW DAY PROCEDURE NOT DETECTED**

**Explanation:** Highlighted, unrollable message.

The Control-M monitor received no indication that the New Day procedure began processing.

The Control-M monitor requests the start of the New Day procedure, and periodically checks the progress of the procedure. This message is issued when the monitor does not receive any indication that the New Day procedure started executing.

A common cause for this message is that the CTMCHK program, which runs at the beginning of the New Day procedure, has detected that the New Day procedure has already been run.

The Control-M monitor issues message CTML06W or RUNL06W to ask the operator how to proceed.

**Corrective Action:** No action is required.

**CTML04W NEW DAY END OF AJF FORMATTING NOT DETECTED**

**Explanation:** Highlighted, unrollable message.

The Control-M monitor detected that the formatting of the Active Jobs file (AJF) did not complete successfully within a specified time interval.

The Control-M monitor issues message CTML06W or RUNL06W to ask the operator how to proceed.

**Corrective Action:** No action is required.

**CTML05W NEW DAY PROCEDURE ERROR - PHASE phase_num**

**Explanation:** Highlighted, unrollable message.
During follow-up of the New Day procedure, the Control-M monitor detected an abnormal condition. The Control-M monitor issues message CTML06W or RUNL06W to ask the operator how to proceed.

**Corrective Action:** Reply R for retry. If the message is reissued, note the phase number and reply E to terminate the monitor. To reactivate the monitor, run the Control-M New Day procedure, and when it completes successfully, restart the monitor. Give BMC Customer Support the phase number specified in this message and the Control-M monitor full output.

**CTML06W REPLY "R" FOR RETRY OR "E" FOR END**

**Explanation:** Highlighted, unrollable message.

While checking the progress of the New Day procedure execution, the Control-M monitor detected an error.

This message is accompanied by a message explaining the cause of the problem.

The Control-M monitor waits for a reply to this message.

**Corrective Action:** Type R or E and press Enter, with the following results:

- R - the Control-M monitor waits an additional interval. Issue this reply after all problems with the New Day procedure are resolved so that the monitor will resume normal execution.
- E - the Control-M monitor stops execution

**CTML07W CONTROL-M MONITOR monName WAITING FOR NEW DAY PROCEDURE**

**Explanation:** Normal message of Control-M monitor when it stops processing jobs temporarily to allow the New Day procedure to begin execution.

Control-M suspends processing at the time specified in CTMPARM to allow the New Day procedure to run. The Control-M monitor remains suspended until the New Day procedure is successfully completed. Upon successful completion of the New Day procedure, the monitor resumes normal execution.

**Corrective Action:** No action is required.

**CTML08W END OF NEW DAY PROCEDURE NOT DETECTED**

**Explanation:** Highlighted, unrollable message.

Control-M monitor found no indication that New Day procedure completed execution. The Control-M monitor issues message CTML06W or RUNL06W to ask the operator how to proceed.

**Corrective Action:** No action is required.

**CTML09E DUAL FILES ALLOCATION ERROR. PROCESSING CONTINUES DUE TO SYSTEM PARAMETERS**

**Explanation:** Highlighted, unrollable message.

Allocation of the dual IOA Conditions file or the dual Active Jobs file (AJF) failed, but processing continues because system parameters have indicated that this condition should be ignored.
Wish WM1944 in the IOADFLTS member of the DOC library was activated to allow an allocation error for dual files to be ignored. (If the wish has not been applied when an allocation error occurs, Control-M terminates execution.)

The Control-M monitor continues normal execution.

**Corrective Action:** If you require dual file processing:

- Bring down the Control-M monitor;
- Determine the cause of the allocation error and correct it;
- Bring up and reactivate the Control-M monitor.

**CTML0AI RUNL0AI NEWDAY PARAMETERS SET:** *expression*

**Explanation:** This message is issued in response to the following operator command:

\[ F \text{ CONTROLM, NEWDAY=} expression \]

Special NEWDAY processing is performed as specified in *expression*. For more information, see the *INCONTROL for z/OS Administrator Guide*, “CTM,” “Special Newday Parameters.”

**Corrective Action:** No response required.

**CTML0BI NEWDAY PROCESS SCHEDULED FOR hh:mm WILL BE BYPASSED**

**Explanation:** In response to the \[ F \text{ CONTROLM, NEWDAY=} SKIP \] operator command, Newday processing is skipped.

NEWDAY processing normally scheduled to begin at *hh:mm* is bypassed due to the special NEWDAY command. For more information regarding the special NEWDAY commands, see the *INCONTROL for z/OS Administrator Guide*, “CTM,” “Special Newday Parameters.”

**Corrective Action:** No response required.

**CTML0CI NEWDAY PROCESS HAS BEEN BYPASSED**

**Explanation:** This informational message is issued at the time scheduled for Newday processing (according to the DAYTIME parameter in CTMPARM). Newday processing is skipped as a result of one of the following commands:

- \[ F \text{ CONTROLM, NEWDAY=} SKIP \]
- \[ S \text{ CONTROLM, NEWDAY=} SKIP \]

Newday processing is skipped. For more information regarding the special NEWDAY commands, see the *INCONTROL for z/OS Administrator Guide*, “CTM,” “Special Newday Parameters.”

**Corrective Action:** No response required.

**CTML0DE NEWDAY COMMAND NOT 'SKIP' - IGNORED**

**Explanation:** The \[ S \text{ CONTROLM, NEWDAY=} expression \] command was entered with an invalid value of *expression*. In this command, the only valid value for *expression* is SKIP. For more information, see the *INCONTROL for z/OS Administrator Guide*, “CTM,” “Special Newday Parameters.”

The command is ignored.
**Corrective Action:** Correct and re-enter the NEWDAY command.

**CTML10I RESUME REQUEST ACCEPTED**

**Explanation:** This information message indicates that the RESUME request submitted by the user has been accepted.

**Corrective Action:** No action is required.

**CTML11W AJ F/CONDITION JOURNALING DISABLED**

**Explanation:** The Control-M monitor stopped journaling updates to the Active Jobs file due to a detected error.

The error which caused journaling to be terminated is described in earlier messages.

WTOR message CTML12W is displayed, enabling the user to continue without the Journal facility or to shut down the Control-M monitor.

**Corrective Action:** Respond to message CTML12W.

**CTML12W REPLY ‘C’ CONTINUE WITHOUT JOURNALING, ‘I’ INITIALIZE, OR ‘E’ END**

**Explanation:** This WTOR message is displayed when the Control-M Journaling facility is shut down.

This message may be preceded by messages explaining the reason for Journaling facility shutdown. This message also appears after running the restoration utility successfully to provide an opportunity to reset the journal file. The user can run the restoration utility repeatedly (perhaps to different endtimes) before initializing the journal file.

Responses to this WTOR message allow the user to continue Control-M without journaling, or to shut down Control-M so that a problem can be fixed.

The Control-M monitor waits for a reply to this message.

**Corrective Action:** See preceding messages for information describing why journaling was stopped.

Specify one of the following values as a response to this message:

- **C** - Continue normal execution without updating the Journal file. Restoration of the Active Jobs file will not include updates made after Journaling was stopped.
- **I** - Re-initialize the journal file. The Control-M monitor continues normal processing, including journaling.
- **E** - Stop execution of the Control-M monitor.

**CTML13I CONTROL-M MONITOR CONTINUING WITHOUT JOURNALING**

**Explanation:** This information message is issued when the user specified C in response to WTOR message CTML12W.

The Control-M monitor continues normal execution. The Journal file is no longer updated.

**Corrective Action:** No action is required.
CTML14E JOURNAL FILE IS NOT SYNCHRONIZED WITH NEWDAY PROCESSING

**Explanation:** During Control-M monitor startup, the Control-M monitor found records in the journal file that have no corresponding data in the Active Jobs file.

The Control-M monitor stops journaling, and displays message CTML12W to enable continuation without the Journaling facility, shut down of the Control-M monitor, or re-initialization of the journal file.

**Corrective Action:** Reply to message CTML12W. If the error persists after the Control-M monitor is restarted, contact your INCONTROL administrator.

CTML15E OID=orderId BAD MIJ POINTER. MIJ RBA: rba ERROR: errCode

**Explanation:** The pointer to the sysout information for a job is incorrect. This is probably caused by corrupt data on the Active Jobs File (AJF).

The incorrect pointer is cleared.

**Corrective Action:** Have your system programmer prepare the Control-M monitor full output and contact BMC Customer Support.

CTML16E COMMAND IGNORED - CURRENT fileName STATUS: fileStatus

**Explanation:** The user attempted to enable/disable the Control-M Journal or History allocation for space reuse functions. However, the current `fileStatus` status of this facility already complies with the user request.

The command is ignored.

**Corrective Action:** No action is required.

CTML16I FOLLOWING BYPASS OPTIONS SET FOR THIS JOB:
bypassOptions

**Explanation:** This information message indicates that the job's Bypass options have been changed by an online user, and lists the Bypass options that are currently set for this job (or NONE if no Bypass options are currently set).

**Corrective Action:** No action is required.

CTML17I CURRENT ACTIVE JOBS FILE UTILIZATION: nnn%

**Explanation:** This information message is issued in conjunction with message CTM863W, which indicates that the Active Jobs file (AJF) is nearly full. Both messages are issued when the threshold value specified by the AFTHRSH CTMPARM parameter is reached.

**Corrective Action:** Increase the size of the AJF using the CTMCAJF utility.

CTML18I COMMAND RECEIVED: cmd

**Explanation:** This information message displays the MODIFY command entered for the Control-M monitor.

**Corrective Action:** No action is required.
CTML19I QUIESTIME IS SET: yyyy

Explanation: This information message displays the current value of QUIESTIME (the Control-M monitor planned shutdown time), where yyyy is one of the following values:

- hhmm - the planned shutdown time set by the QUIESTIME command
- NOW - the submission of any job has been stopped
- OFF - all QUIESTIME requests have been cancelled

This message is added to the IOA Log.

Corrective Action: No action is required.

CTML31E NO SPACE FOR QUANTITATIVE RESOURCE resourceName. NOTIFY YOUR IOA ADMINISTRATOR

Explanation: A resource (resourceName) could not be acquired because the Quantitative Resource List is full.

Resource acquisition is delayed until enough space is regained in the Quantitative Resource List in the Control-M Resources file. This message is not issued more often than once a minute.

Corrective Action: Ask your INCONTROL administrator to increase the logical record length of the Control-M Resources file. If the logical record length is already set to the maximum length allowed, wait until previously acquired quantitative resource entries are freed when jobs end. A third alternative is to have the INCONTROL administrator make more room available by deleting unused quantitative resource definitions.

CTML32E INVALID "SNRSDRNG" PROFILE VALUE. DEFAULT USED

Explanation: The value of profile variable SNRSDRNG is invalid. Profile variable SNRSDRNG is used to establish a different date range in the Manual Conditions file.

The default value for the variable is used.

Corrective Action: Correct the value of this variable to ALL, MONTH, or ddd, where ddd is a number of days.

CTML33E INVALID "SRESDRNG" PROFILE VALUE. DEFAULT USED

Explanation: The value of profile variable SRESDRNG is invalid. Profile variable SRESDRNG establishes a different date range in the IOA Conditions file.

The default value for the variable is used.

Corrective Action: Correct the value of this variable to ALL, MONTH, or ddd, where ddd is a number of days.

CTML38S ERROR READING MEMBER tbl_mem FROM DATASET lib. RC=rc.

Explanation: Reading the tbl_mem table member failed.

The order request could not be done either because the library did not exist, or could not be allocated, or the table member was not found.
The CTMJOB program ends with errors.

**Corrective Action:** Check that the order request is given to an existing 80-bytes record length library, and the member can be accessed. If the problem persists, prepare the Control-M monitor full output and contact BMC Customer Support.

**CTML39E INVALID DATE date IN ORDER REQUEST**

**Explanation:** The date specified in the order request is not a valid date.

The CTMJOB program ends with errors.

**Corrective Action:** Check that the specified date is specified correctly according to your installation standards.

**CTML40E JOB jobName NOT FOUND IN TABLE tbl_mem DSN lib**

**Explanation:** The jobName job was not found in the member specified in the order request.

The keyword job causes a selective order to be made for one job from the table member. This message is issued if the specified job cannot be found.

The CTMJOB program ends with errors.

**Corrective Action:** Check that the specified job exist inside the table member.

**CTML41E MISSING OBLIGATORY PARAMETER keyName IN ORDER REQUEST**

**Explanation:** The specified parameter was not given in the order request.

Some parameters are obligatory in each order request. Failing to specify one of them results in this message being issued.

The CTMJOB program ends with errors.

**Corrective Action:** Supply the missing parameter.

**CTML42E MUTUALLY EXCLUSIVE KEYWORDS SPECIFIED IN ORDER REQUEST**

**Explanation:** Two keywords which are mutually exclusive where given in the same order request.

Certain keywords, such as DSNAME and DDNAME, cannot appear together on the same order request.

The CTMJOB program ends with errors.

**Corrective Action:** Specify one of the keywords.

**CTML43I NEW DAY PROCEDURE COMPLETED SUCCESSFULLY**

**Explanation:** This information message indicates that the New Day procedure ended successfully. The CTMEDA program is executed as the last step in the New Day procedure to inform the Control-M monitor that the procedure ended successfully.

The Control-M monitor resumes execution.

**Corrective Action:** No action is required.
CTML43W DASTAT DD CARD MISSING

Explanation: The DASTAT DD statement is missing from the file allocation of the job step.
This warning message is issued by the CTMJOB program.
The Automatic Tape Adjustment facility is skipped. Jobs are ordered, but required resource quantities are not computed for these jobs.
Corrective Action: Add the DASTAT DD statement for future runs.

CTML44E NEW DAY PROCEDURE ENDED WITH ERRORS

Explanation: Highlighted, unrollable message.
The last phase in the New Day procedure, the CTMEDA program, ended with errors. This message follows a message that describes the specific cause of the error.
The Control-M monitor remains in a suspended state.
Corrective Action: Correct the error according to the description in the previous message and rerun the New Day procedure to invoke the CTMEDA program.

CTML44W AUTO TAPE DRIVE RESOURCE ADJUSTMENT IS BYPASSED DUE TO PREVIOUS MESSAGE

Explanation: This warning message indicates that the Automatic Tape facility cannot adjust resources for jobs currently being processed.
This is a summary message. It is preceded by a message that describes the reason for the error.
The Automatic Tape Adjustment facility is skipped. Jobs are ordered without computing the quantity of required resources.
Corrective Action: View the error message that precedes this message and correct the problem described there.

CTML45E ERROR ANALYZING PARM MEMBER "UNITDEF" AT LINE lineNum

Explanation: An invalid definition was found in the UNITDEF parameter member.
The UNITDEF parameter member associates logical names to physical resources.
In this message, lineNum is the line number in the UNITDEF parameter member where the error occurred.
Resource definition example in the UNITDEF file:
CARTRIDGE=(0480-0483,0440-0445,0300-031F,0552-0553,0556-0557),DESC=3490 RANGE
The Automatic Tape Adjustment facility is skipped. Jobs are ordered without computing the required amount of resources.
Corrective Action: Correct the error at the specified line. View the description in the UNITDEF file supplied during the installation.

CTML46W DAUNITDF DD CARD MISSING

Explanation: The UNITDF DD statement is missing.
This warning message is issued by the CTMJOB program.
The Automatic Tape Adjustment facility is skipped. Jobs are ordered without computing the required amount of resources.

**Corrective Action:** Add the UNITDEF DD statement to the JCL stream.

**CTML47S GETMAIN FAILED IN CTMATD AUTO TAPE PROCESSING**

**Explanation:** The Control-M Daily Subsystem stopped due to insufficient memory.
The Daily job stops execution.

**Corrective Action:** Increase the region size defined in the Daily job and rerun the job.

**CTML49W NOT ALL CONDITIONS IN JOB COULD BE ADJUSTED**

**Explanation:** The requirement for prerequisite conditions for a job which is part of a group were not deleted.

This message accompanies message JOBL48W.
The job is ordered prerequisite condition requirement intact.

**Corrective Action:** Determine if the condition prevents the job from running. If so, add the required condition manually in screen 4 or erase the requirement for the condition from the job in zoom screen 3.Z.

**CTML56E SPECIFY EITHER JCL LIBRARY OR SCHEDULE LIBRARY INFORMATION**

**Explanation:** Parameters were specified for both the JCL library mode and the scheduling library mode. Only one mode can be used at a time. The AutoEdit simulation program processes only one mode per invocation. The mode is determined by the first type of input parameter encountered.

**Corrective Action:** Delete all parameters pertaining to the mode to be ignored.

**CTML61E COPY TO HISTORY FILE FAILED: rsn REASON CODE: rc**

**Explanation:** An error occurred while copying records from the Active Jobs file to the History Jobs file.
The variables in this message are:
- *rsn* - the cause of the error.
- *rc* - the reason code, containing additional information in certain cases

The Control-M New Day procedure terminates.

**Corrective Action:** Correct the cause of the error and rerun the Control-M New Day procedure. The enhanced checkpoint record can be used to continue the New Day procedure processing from the point at which the error occurred.
CTML63E HISTORY FILE PROCESSING MODULE NOT FOUND

**Explanation:** The attempt to load the CTMHCP or CTMFRH module failed. The name of the module that was not loaded appears in a previous error message. The load may have failed because the module does not exist in the IOA Load library.

The Control-M New Day procedure terminates.

**Corrective Action:** If History Jobs file processing is specified in the CTMPARM member, verify that the IOA Load library contains the required module.

CTML64I CTMFRM IS RUNNING IN HISTORY FILE CLEANUP MODE

**Explanation:** This information message indicates that the CTMFRM utility is currently cleaning the History Jobs file.

**Corrective Action:** No action is required.

CTML65W HISTORY FILE FREESPACE THRESHOLD REACHED

**Explanation:** This message is issued during New Day processing when there is insufficient free space in the History file to accommodate the entire Active Jobs file (AJF). The History file becomes full and New Day processing stops.

New Day processing stops.

**Corrective Action:** Do the following:
1. Use the CTMHCLN utility to clean the History file.
2. If the error message is still displayed, use the CTMHCOP utility to increase the size of the History file.

CTML66S OPEN OF CONTROL-M HISTORY FILE FAILED. DDNAME "DAHIST"

**Explanation:** The Control-M History Jobs file (HST) defined in the DAHIST DD statement could not be opened. The New Day procedure calls the program that issues this message. A possible cause of this message is that the DAHIST DD statement is missing.

Program execution stops with a condition code of 08.

**Corrective Action:** Add the statement KEY=DAHIST to the ALCMDAS member in the IOA ENV library, and rerun the DELARCH step of the New Day procedure.

CTML67S INTERNAL ERROR - ARCHIVED SYSOUT POINTER IS INVALID. ORDERID: jobId

**Explanation:** During the New Day procedure, the Control-M Active Jobs file (AJF) was found to be corrupt, due to an internal error. The archived sysout of a job cannot be read.

In this message, **jobId** is the identity of the job that produced the archived sysout that cannot be read.

The New Day procedure does not delete the archived sysout for the **jobId** job.

**Corrective Action:** No action is required.
CTML71E  INVALID RECORD FOUND ON AJF - FILE USAGE VERIFICATION SKIPPED

**Explanation:** The CDAM file deletion utility detected an invalid record type when verifying the CDAM records in the Active Jobs file (AJF). Before deleting a CDAM file, the CDAM file deletion utility verifies that the file names in the JOBLIST file are not referenced by any jobs in the AJF.

Verification of the AJF is aborted, and deletion of CDAM files proceeds based on previous checks of the AJF.

**Corrective Action:** Check the integrity of the AJF with the IOAVERFY utility.

Messages CTMM00 through CTMMxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTMM01W  AJF/CONDITIONS JOURNALING TERMINATED - RESTORATION BEYOND THIS TIME NOT POSSIBLE

**Explanation:** Logging to the journal file was terminated due to a detected error.

This message is preceded by a message indicating the cause of the error.

The Control-M monitor terminates the Journal facility and displays WTOR message CTML12W, which asks the operator how the monitor should proceed.

**Corrective Action:** Respond to message CTML12W.

CTMM02I  AJF/CONDITIONS JOURNALING STARTED

**Explanation:** This information message indicates that Control-M started logging updates to the Journal file.

Changes made to the Active Jobs file and to prerequisite conditions in the IOA Conditions file are recorded in the Journal file.

**Corrective Action:** No action is required.

CTMM03E  text

**Explanation:** This message is produced if an abend occurs while Control-M is writing to the Journal file.

The Control-M monitor displays data about the abend. (meaning the text in this message).

The Control-M monitor terminates the Journaling facility and displays WTOR message CTML12W.

**Corrective Action:** Respond to message CTML12W.

CTMM04I  AJF/CONDITIONS JOURNALING CLOSED NORMALLY

**Explanation:** This information message indicates that Control-M Journaling ended normally.

The Journaling facility was terminated in response to an operator command, or as part of Control-M shutdown.
Corrective Action: No action is required.

CTMM05S AJF/CONDITIONS JOURNALING INITIALIZATION FAILURE

Explanation: The Control-M journaling facility could not be started because the Journal file or another file required for journaling could not be opened.

The above message describes the reason for the problem.

The Control-M monitor terminates the Journaling facility and displays WTOR message CTML12W, which asks the operator whether to continue without journaling or shut down the Control-M monitor.

Corrective Action: Respond to message CTML12W.

CTMM06S JOURNAL FILE RECORD 0 FORMAT ERROR

Explanation: The record length of the Control-M journal file was incorrect.

This message is preceded by a message describing the specific cause of the problem.

The Control-M monitor terminates the Journaling facility and displays WTOR message CTML12W, which asks the operator whether to continue without journaling or to shut down the Control-M monitor.

Corrective Action: Respond to message CTML12W.

CTMM07S JOURNAL/AJF MISMATCH: FIELD=fldname

Explanation: The Control-M Journaling facility could not be started because the specified journal file does not match the Active Jobs file used by the Control-M monitor.

In this message, fldname is the name of the field in the Active Jobs file that does not match the corresponding field in the Journal file.

The Control-M monitor terminates the Journaling facility and displays WTOR message CTML12W.

Corrective Action: Respond to message CTML12W.

CTMM08S GETMAIN FAILURE IN PROGRAM progname

Explanation: Sufficient storage could not be obtained for Journal file processing.

The Control-M monitor terminates the Journal facility and displays WTOR message CTML12W. CTML12W asks the operator to either continue without journaling or shut down the Control-M monitor.

Corrective Action: Respond to message CTML12W.

CTMM09S BUFFER OVERFLOW ERROR

Explanation: An internal error was detected during Journal file processing.

The Control-M monitor terminates the Journal facility and displays WTOR message CTML12W.

Corrective Action: Respond to message CTML12W. Prepare the Control-M monitor full output and contact BMC Customer Support.

CTMM10S LUW RECORD GENERATION ERROR

Explanation: A error occurred while writing the LUW syncpoint record to the Journal file.
The LUW syncpoint record is the last synchronization point in the Journal file and verifies the completion of all records previously recorded in the Journal file. Without the LUW syncpoint record, records in the Journal file cannot be verified as complete.

The Control-M monitor terminates the Journal facility and displays WTOR message CTML12W.

**Corrective Action:** Respond to message CTML12W.

CTMM12E JOURNAL FILE DCB ABEND EXIT INVOKED: SYSTEM CC='sys', RC=rc

**Explanation:** An abend occurred while writing to the Journal file.

In this message, sys and rc are the system codes and return codes which describe the abend.

The Control-M monitor terminates the Journal facility and displays WTOR message CTML12W.

**Corrective Action:** Respond to message CTML12W.

CTMM15I AJF/CONDITIONS JOURNALING ACTIVITY SUSPENDED

**Explanation:** This information message indicates that journaling has been suspended due to New Day processing.

During New Day processing, Control-M always suspends writing to the Journal file.

Journaling is automatically resumed after completion of New Day processing.

**Corrective Action:** No action is required.

CTMM16I AJF/CONDITIONS JOURNALING ACTIVITY RESTORED

**Explanation:** This information message indicates that Control-M resumed writing to the Journal file after completing New Day processing.

**Corrective Action:** No action is required.

CTMM16S INSUFFICIENT MEMORY FOR IOA FUNCTIONAL MONITOR

**Explanation:** The available storage is insufficient for execution of the Functional monitor.

The Functional monitor shuts down.

**Corrective Action:** Increase the region size and restart the Functional monitor.

CTMM17S AJF/CONDITIONS JOURNAL SEARCH FAILURE

**Explanation:** An error was encountered during a search of the Control-M Journal file.

During Control-M monitor startup, the journal file is searched for data that may have been added to the Active Jobs File while the Control-M monitor was down.

The Control-M monitor stops journaling and displays WTOR message CTML12W.

**Corrective Action:** Reply to message CTML12W, which follows.
CTMM20S  INTERNAL ERROR IN FUNCTIONAL MONITOR.  RC=rc

**Explanation:** The Functional monitor encountered a severe internal error.
The Functional monitor shuts down.

**Corrective Action:** Have your system programmer contact BMC Customer Support.

Messages CTMO00 through CTMOxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTMO001E  ERROR IN SENDING COMMAND TO CONTROL-M MONITOR.
REASON 'rsn1' CODES text1, text2 / text3

**Explanation:** The Control-M Local monitor or Control-M Application Server did not successfully issue an operator command to another Control-M monitor.
The command is not processed by the target Control-M monitor.

**Corrective Action:** Keep the REASON and CODES displayed by the message and contact BMC technical support for assistance. The required operator command may be usually issued manually for the target Control-M monitor.

Messages CTMR00 through CTMRxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTMR001W  Control-M AJF SPACE REUSE FACILITY WILL BE ACTIVATED AFTER NEWDAY, AJF FORMAT OR COMPRESS

**Explanation:** The AJF Space Reuse Facility was enabled by the user, but the AJF has not yet been formatted to include the special index records required to manage the AJF Space Reuse Facility.
The AJF Space Reuse Facility will be activated automatically by Control-M after the upcoming New Day process.

**Corrective Action:** No action is required.

CTMR002E  CONTROL-M AJF SPACE REUSE FACILITY DISABLED.  REASON rsn

**Explanation:** Internal facility-wide errors were encountered in the AJF Space Reuse Facility.
The possible values of *rsn* are explained in the following table:

<table>
<thead>
<tr>
<th>rsn</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>WRONG MIF</td>
<td>Invalid index record detected</td>
</tr>
</tbody>
</table>
The AJF Space Reuse Facility is disabled.

**Corrective Action:** Do the following:
- Contact BMC Customer Support.
- To reactivate the AJF Space Reuse Facility, format or compress the AJF and recycle the Control-M monitor.

CTMR03I JOB jobName ORDERID orderId PERMANENTLY DELETED FROM AJF

**Explanation:** This information message indicates that the AJF Space Reuse Facility is active and, as expected, deleted an entry from the AJF.

**Corrective Action:** No action is required.

CTMR04E INTERNAL ERROR IN AJF SPACE REUSE PROCESSING FOR JOB jobName1 ORDER1d CODE rsn

**Explanation:** Internal errors were encountered in the AJF Space Reuse Facility for this job.

The possible values of `rsn` are explained in the following table:

<table>
<thead>
<tr>
<th>rsn</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>GROUP JOB</td>
<td>error in removing a job from a group</td>
</tr>
<tr>
<td>END TIME</td>
<td>error in extracting the job's end time</td>
</tr>
</tbody>
</table>

The indicated job will not be deleted from the AJF.

**Corrective Action:** No action is required.
CTMR05E AJ F SPACE REUSE FACILITY IS NOT ACTIVATED BECAUSE AJ F IS FULL

Explanation: The user formatted or compressed the AJ F, but there is no room for the special index records required to manage the AJ F Space Reuse Facility.

The AJ F Space Reuse Facility is not activated.

Corrective Action: To reactivate the AJ F Space Reuse Facility, format a larger AJ F and recycle the Control-M monitor.

CTMR06E ATTEMPTING TO REUSE ACTIVE AJ F ENTRY. AJ F SPACE REUSE FACILITY DISABLED.

Explanation: When Control-M attempted to reuse an unused job entry in the AJ F, a last-moment check indicated that the job entry slot in the AJ F was an active entry. This is an unexpected internal error.

The AJ F Space Reuse Facility is disabled.

Corrective Action: Do the following:
- Contact BMC Customer Support.
- To reactivate the AJ F Space Reuse Facility, format a larger AJ F and recycle the Control-M monitor.

CTMR07E activeJobEntrySlot

Explanation: This message displays the first 65 characters of the active job entry slot referenced by message CTMR06E.

Corrective Action: No action is required.

CTMR09E userExit CANNOT BE RELOADED BY THE RELOAD COMMAND (reason)

Explanation: The RELOAD= userExit operator command was issued by the user, but it aborted because of one of these reasons:

<table>
<thead>
<tr>
<th>reason</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>NOT 123415</td>
<td>The user attempted to reload a module which is not CTMX001, CTMX002, CTMX003, CTMX004, or CTMX015</td>
</tr>
<tr>
<td>LINK-EDITED</td>
<td>The user attempted to reload CTMX001 but it has been link-edited by the user into CTMJOB, or the user attempted to reload CTMX002 but it has been link-edited by the user into CTMSUB</td>
</tr>
<tr>
<td>NOT FOUND</td>
<td>The user attempted to reload a user exit but it was not found in the STEPLIB concatenation</td>
</tr>
</tbody>
</table>

The RELOAD command is aborted.
Corrective Action: No action is required.

CTMR0AI userExit RELOADED. OLD=mm/dd/yy-hh.mm
NEW=mm/dd/yy-hh.mm

Explanation: This information message indicates that the userExit user exit was successfully reloaded as a result of the RELOAD= userExit operator command. The date and time of the 'old' and 'new' user exits are only accurate when the IOAEXNM userExit macro is used to provide standard entry linkage in the user exit.

Corrective Action: No action is required.

CTMR0BW taskname INT. ERR, MAYBE DELETE:
grpname appl order_id odate

Explanation: This warning message indicates that there was an internal error in taskname during the New Day procedure. As a result of this error, grpname might be deleted from the Active Jobs file.

The variables in this message are:
- grpname--the group entity name
- appl--the application to which the group entity belongs
- order_id--the order ID of the group entity
- odate--the ODATE of the group entity

Corrective Action: Send the Control-M Backup Active Jobs file and the output of the New Day procedure to technical support.

CTMR0CE 'DO REMEDY' ERROR: error

Explanation: Control-M encountered an error when attempting to execute a DO REMEDY request.

The possible values of error that can appear are explained in the following table:

<table>
<thead>
<tr>
<th>error</th>
<th>Explanation</th>
</tr>
</thead>
<tbody>
<tr>
<td>INIT FUNCTION FAILED RC = rc</td>
<td>The initialization function failed with a return code of rc.</td>
</tr>
<tr>
<td>SEND FUNCTION FAILED RC = rc</td>
<td>The send function failed with a return code of rc.</td>
</tr>
<tr>
<td>FEATURE DISABLED</td>
<td>The feature has previously been disabled.</td>
</tr>
<tr>
<td>TICKET ALREADY OPEN FOR JOB</td>
<td>A REMEDY problem ticket has already been opened for this job.</td>
</tr>
<tr>
<td>SUMMARY LINE TRUNCATED</td>
<td>The summary line was too large and was truncated.</td>
</tr>
</tbody>
</table>
**Description Line Truncated**
- The description line was too large and was truncated.

**Error in Do Remedy Codes**
- An internal error was encountered in the schedule definition.

**Corrective Action:** The following table has valid return code ($rc$) values for the error SEND FUNCTION FAILED, together with their explanations and the appropriate corrective action.

<table>
<thead>
<tr>
<th>Return Code</th>
<th>Explanation</th>
<th>Corrective Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>64</td>
<td>Can not load IOAMAIL.</td>
<td>Contact BMC Customer Support.</td>
</tr>
<tr>
<td>68</td>
<td>Can not load IOAMEM.</td>
<td>Contact BMC Customer Support.</td>
</tr>
<tr>
<td>72</td>
<td>At REMTMPLx one of the variables which are surround by double %% are not defined, a valid variables are: SUMM, DESC, URGENCY, USER</td>
<td>Check REMTMPLx for invalid variable.</td>
</tr>
<tr>
<td>76</td>
<td>REMCONF or REMTMPLx member at IOA.PARM does not exist.</td>
<td>Check the existence of REMCONF member or REMTMPLx at IOA.PARM library or the file REMTMPS at REMCONF to suits one of the REMTMPLx.</td>
</tr>
<tr>
<td>80</td>
<td>REMCONF member at IOA.PARM is corrupted.</td>
<td>Check REMCONF member for missing single quotes or undefined fields.</td>
</tr>
</tbody>
</table>

The DO REMEDY request is aborted (or sent truncated if the summary or description was too large). Contact BMC Customer Support.

**CTMRDE 'DO REMEDY' Feature Is Disabled**

**Explanation:** Control-M encountered an error during the initialization or send function of a DO REMEDY request.

All DO REMEDY requests are aborted until Control-M is recycled.

**Corrective Action:** Contact BMC Customer Support.

**CTMR0FW INT. ERR, JOB HLD: tasknamegrpnameapplorder_idodate**

**Explanation:** This warning message indicates that there was an internal error in taskname during the New Day procedure.
The variables in this message are:

- **grpname**--the group entity name
- **appl**--the application to which the group entity belongs
- **order_id**--the order ID of the group entity
- **odate**--the ODATE of the group entity

As a result of this error, the job is put on hold and the job is longer part of group **grpname**.

**Corrective Action:** Send the Control-M Backup Active Jobs file and the output of the New Day procedure to technical support.

**CTMR11I** JOB/GROUP name ORDERID orderId COPIED TO HISTORY AJF

**Explanation:** This information message indicates that job **name**, whose order ID is **orderId**, was successfully copied to the History AJF. The job records are now available for space reuse.

**Corrective Action:** No action is required.

**CTMR12E** COPY TO HISTORY FILE FAILED: rsn REASON CODE: rc

**Explanation:** An error occurred while copying records from the AJF to the History AJF. The variables in this message are:

- **rsn** - the cause of the error
- **rc** - the reason code, which may contain additional information

History processing for space reuse jobs is disabled. Jobs having a retention period will no longer be eligible for space reuse.

**Corrective Action:** No action is required.

**CTMR13E** JOB/GROUP name ORDERID orderId

**Explanation:** This message accompanies message CTMR12E and indicates that job **name**, whose order ID is **orderId**, was being processed when the error occurred.

**Corrective Action:** No action is required.

**CTMR14E** ALLOCATION OF FILE fileName FAILED RC rc

**Explanation:** The Control-M Monitor failed to allocate the **fileName** file. The reason for the failure is described by a return code value of **rc**.

The Control-M monitor continues normal processing. Since the History file is not allocated to the Control-M monitor, jobs having a retention period will no longer be eligible for space reuse.

**Corrective Action:** Use the return code (**rc**) to determine the cause of the allocation error and use the modify command HISTALOC=ENABLE to try and allocate the History file again.
CTMR15E DEALLOCATION OF FILE fileName FAILED RC rc

Explanation: The Control-M Monitor failed to deallocate the fileName file. The reason for the failure is described by a return code of rc.

The Control-M monitor continues normal processing.

Corrective Action: Use the return code (rc) to determine the cause of the allocation error and use the modify command HISTALOC=D|ABLE to try and deallocate the History file.

CTMR16E VALUE MUST BE C(DEFAULT), V(VARYING), OR S(RUN AT SPECIFIC TIMES)

Explanation: An invalid option has been entered in the CYCLIC type field. The valid values are:
- C - A cyclic job can be submitted only at fixed intervals (such as every 5 minutes or every hour).
- V - Varying intervals when a cyclic job can be submitted (such as every 30 minutes, and every hour, and every 3 days).
- S - Specific times when a cyclic job can be submitted (such as at 9 AM, or at 2 PM).

Corrective Action: Specify C or V or S, or leave the field blank (same as entering a value of C).

CTMR21I CTMRSMF STARTED

Explanation: This information message indicates that the CTMRSMF utility has begun.

Corrective Action: No action is required.

CTMR22I CTMRSMF ENDED

Explanation: This information message indicates that the CTMRSMF utility has ended normally.
The utility terminates normally with a return code of zero.

Corrective Action: No action is required.

CTMR23S UNABLE TO OPEN SMF INPUT FILE

Explanation: The CTMRSMF utility was unable to open the input SMF file.
The utility terminates with a return code other then zero.

Corrective Action: Check the JCL to ensure that the dd statement DASMF is pointing to a valid SMF file.

CTMR24S UNABLE TO OPEN CSV OUTPUT FILE

Explanation: The CTMRSMF utility was unable to open the output .CSV file.
Processing terminates with non-zero return code

Corrective Action: Check the JCL to ensure that the dd statement DACSV is present pointing to a valid CSV file.
CTMR25S INVALID SMF RECORD - SEE SNAP

**Explanation:** During execution of the CTMRSMF utility, an invalid SMF record was encountered in the DASMF file.

The utility terminates with a return code other than zero.

**Corrective Action:** Send all the output from the CTMRSMF job to BMC technical support.

Messages CTMS00 through CTMSxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

**CTMS001 INVALID DATE**

**Explanation:** N was specified for the CURRENT AJF option, but no alternative date was specified for the creation of a new Active Jobs file (AJF). An alternative date must be specified when the date of the current AJF is not utilized.

**Corrective Action:** Specify a valid alternate date for the generation of a simulation AJF.

**CTMS001 SIMULATION PARAMETERS ARE IGNORED WHEN "RUN SIMULATION=N"**

**Explanation:** N was specified for the RUN SIMULATION option but simulation parameters were specified. If N is specified for the simulation option, parameters specified for this option are ignored.

**Corrective Action:** If you want to generate a simulation file, select the RUN SIMULATION option.

**CTMS002 INVALID FROM-DATE. SHOULD BE YYMDDHHMM**

**Explanation:** The user specified a date in the FROM-DATE field that was not valid or not in the format yymmdhhmm.

**Corrective Action:** Enter a valid date in the format indicated.

**CTMS003 INVALID UNTIL-DATE. SHOULD BE YYMDDHHMM**

**Explanation:** The user specified a date in the UNTIL-DATE field that was not valid or not in the format yymmdhhmm.

**Corrective Action:** Enter a valid date in the format indicated.

**CTMS004 UNTIL-DATE IS EARLIER THAN FROM-DATE**

**Explanation:** The date specified in the UNTIL-DATE field precedes the date specified in the FROM-DATE field.

**Corrective Action:** Specify a valid date range.
CTMS005 "ANOTHER DAY" IS VALID ONLY WHEN "N" IS SPECIFIED FOR CURRENT AJF

Explanation: A date was specified in the ANOTHER DAY field when Y was specified for the current AJF. Either the current AJF may be used for the simulation run, or a simulation AJF may be generated for another working day. Either option may be chosen, but not both.

Corrective Action: Specify N in the CURRENT AJF field, or delete the date in ANOTHER DAY field.

CTMS006 SKELETON skelName IS NOT FOUND IN THE LIBRARY ALLOCATED TO DD "ISPSLIB"

Explanation: The skeleton libraries referenced by the ISPSLIB DD statement does not contain the skelName member.

Corrective Action: The skelName skeleton name should have been placed in the ISPSLIB concatenation during the IOA ISPF installation process. Review the installation procedure and correct accordingly.

CTMS007 SKELETON skelName IS ALREADY IN USE BY ANOTHER USER

Explanation: Skeleton skelName is currently being used by another user to generate simulation JCL.

Corrective Action: Wait until the other user has generated the JCL and try again.

CTMS008 "ORDER DAILY JOBS" AND "NEW AJF" ARE VALID ONLY WHEN "CURRENT AJF=N"

Explanation: The ORDER DAILY JOBS and CREATE NEW AJF fields are mutually exclusive with the CURRENT AJF field. Either the current AJF can be used for the simulation run, or options can be specified for a new AJF to be generated.

Corrective Action: Specify N in the CURRENT AJF field or specify N in the other two fields identified in the message.

CTMS009 INVALID COMBINATION OF PARAMETERS IN JOBSCAN SECTION

Explanation: The combination of options for JOBSCAN processing is not valid. Certain JOBSCAN options are mutually exclusive, and may not be used together. For example, JCL Listing lists the JCL along with the errors, while JCL-Listing-Errors lists only the errors.

Corrective Action: Enter a valid combination of options.

CTMS010 JOBS LEFT REPORT REQUIRE THAT "Y" BE SPECIFIED FOR "KEEP OUTPUT AJK"

Explanation: User requested the Jobs Left KSL report, but did not specify Y in the KEEP OUTPUT AJF field. When requesting the Jobs Left report from the Control-M Simulation Facility (CLIST CTMCSIM), the Active Jobs file that is output from the simulation (SIMOAJF) must be kept to run the report.

Corrective Action: Specify Y in the KEEP OUTPUT AJF field, or specify N in the JOBS LEFT field.
Messages CTMT00 through CTMTxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTMT01E TIME ZONE DEFINITION MEMBER NOT FOUND. TIME ZONES ARE NOT AVAILABLE.

Explanation: No Time Zone definition member can be found in the IOA PARM library.

If this message is displayed during job or group definition, the program waits for the Time Zone field to be cleared. If this message is displayed during job or group scheduling, the job is not scheduled.

Corrective Action: Do the following:
1. Define a Time Zone member.
2. Log off TSO.
3. Log on to TSO again.
4. Enter the NEWPARM monitor command.
5. Reschedule the job.

CTMT02E THE FOLLOWING INVALID TIME ZONE DEFINITIONS ARE IGNORED:

Explanation: The Time Zone specified is not defined in the Time Zone definition member in the IOA PARM library.

This message is followed by the CTMT03E message, which identifies the Time Zones that were found to be undefined.

The job is not scheduled.

Corrective Action: No action is required.

CTMT03E text

Explanation: This information message follows the CTMT02E message.

In this message, text lists the individual Time Zones that were specified in the job scheduling definition but were found not to be defined in the Time Zone definition member in the IOA PARM library.

Corrective Action: No action is required.

CTMT04E THE TIME ZONE SPECIFIED IS INVALID

Explanation: The Time Zone specified in the job or group definition is not defined in the Time Zone member in the IOA PARM library.

The program waits for the Time Zone specification to be corrected or deleted.

Corrective Action: Correct or delete the Time Zone specification. If you modify the Time Zone member, you must also do the following:
1. Log off TSO.
2. Log on to TSO again.
3. Enter the NEWPARM monitor command.

CTMT05E JOB NOT SUBMITTED DUE TO TIME ZONE PROCESSING INACTIVE

Explanation: The job contains a Time Zone specification, but no Time Zone definition member can be found in the IOA PARM library. The job is not submitted.
Corrective Action: Do the following:
1. Define a Time Zone member.
2. Log off TSO.
3. Log on to TSO again.
4. Enter the NEWPARM monitor command.
5. Reschedule the job.

CTMT06E JOB NOT SUBMITTED DUE TO INVALID TIME ZONE timeZone

Explanation: The job contains a Time Zone specification, but the specified Time Zone is not defined in the Time Zone definition member in the IOA PARM library. The job is not submitted.
Corrective Action: Do the following:
1. Modify the Time Zone member.
2. Log off TSO.
3. Log on to TSO again.
4. Enter the NEWPARM monitor command.
5. Reschedule the job.

CTMT07E JOB NOT SUBMITTED DUE TO TIME ZONE PROCESSING FAILURE

Explanation: An internal error occurred while the Time Zone specification was being processed. The job is not submitted.
Corrective Action: Prepare the Control-M monitor full output and contact BMC Customer Support.
1. job.

CTMT02E THE FOLLOWING INVALID TIME ZONE DEFINITIONS ARE IGNORED:

Explanation: The Time Zone specified is not defined in the Time Zone definition member in the IOA PARM library.
This message is followed by the CTMT03E message, which identifies the Time Zones that were found to be undefined. The job is not scheduled.

**Corrective Action:** No action is required.

*CTMT08I TIME HAS CHANGED IN ACCORDANCE TO THE DST SETTING IN TIMEZONE xxx*

**Explanation:** This informational message indicates that Control-M has detected a change in the Daylight Saving Time setting in timezone xxx.

**Corrective Action:** No action is required.

*CTMT09I CTM HAS DETECTED A DYNAMIC MODIFICATION IN THE SYSTEM TIME.*

**Explanation:** This informational message indicates that Control-M has detected a change in a local time performed by an operator command.

**Corrective Action:** No action is required.

**Messages CTMU00 through CTMUxx**

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

*CTMU01I AJF/CONDITIONS RESTORATION STARTED*

**Explanation:** This information message indicates that the CTMRSTR restoration utility has begun processing.

**Corrective Action:** No action is required.

*CTMU02I AJF/CONDITIONS RESTORATION ENDED*

**Explanation:** This information message indicates that the CTMRSTR restoration utility has completed processing.

**Corrective Action:** No action is required.

*CTMU22W AJF/CONDITIONS RESTORATION UTILITY WAITING FOR ACTIVE JOBS FILE*

**Explanation:** The restore utility could not access the Active Jobs File because it was being used by another job. The restoration utility waits until the file is accessible.

**Corrective Action:** No action is required.
Messages CTMW00 through CTMWxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Restart products.

CTMW00E INVALID PARAMETER PASSED TO CTMWLM; WLM SRVCLASS REQUEST ABORTED

**Explanation:** CTMWLM, the Control-M workload management service class processing module, received an incomplete or incorrect parameter list.

The specific service class request is aborted.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support.

CTMW01E IOAMEM GETMEM ERROR. RETURN=rc REASON=rsn

**Explanation:** CTMWLM, the Control-M workload management service class processing module, was unable to read the WLMSCTBL table in the CTM PARM library.

The specific service class request is aborted.

**Corrective Action:** Note the values of $rc$ and $rsn$, prepare the Control-M monitor full output, and contact BMC Customer Support.

CTMW02E GETMAIN FOR INTERNAL TABLE FAILED. LEN=len R15=r15

**Explanation:** CTMWLM, the Control-M workload management service class processing module, was unable to acquire enough storage to build the internal table which represents the WLMSCTBL table in the CTM PARM library.

The specific service class request is aborted.

**Corrective Action:** Note the values of $len$ and $r15$, prepare the Control-M monitor full output, and contact BMC Customer Support.

CTMW03E FREEMAIN OF OLD INTERNAL TABLE FAILED. LEN=len PTR=ptr

**Explanation:** CTMWLM, the Control-M workload management service class processing module, was unable to free previously-acquired storage.

**Corrective Action:** Note the values of $len$ and $ptr$, prepare the Control-M monitor full output, and contact BMC Customer Support.

CTMW04I WLM SRVCLASS TABLE {LOADED | RELOADED} SUCCESSFULLY WITH num ENTRIES

**Explanation:** CTMWLM, the Control-M workload management service class processing module, successfully loaded or reloaded the WLMSCTBL table from the CTM PARM library.

**Corrective Action:** No action is required.
CTMW05W INTERNAL WLM SRVCLASS TABLE HAS NO VALID ENTRIES

**Explanation:** CTMWLM, the Control-M workload management service class processing module, successfully loaded or reloaded the WLMSCTBL table from the CTM PARM library but found no valid entries.

All subsequent service class requests are effectively ignored.

**Corrective Action:** Correct or add entries to the WLMSCTBL table in the CTM PARM library.

CTMW06E ENTRY rec PARSING ERROR: jobNameapplNamefromTime toTime

**Explanation:** CTMWLM, the Control-M workload management service class processing module, detected a parsing error in this entry in the WLMSCTBL table in the CTM PARM library.

The variables in this message are:
- *rec* - the record number
- *jobName* - the name of the job in the WLMSCTBL table entry
- *applName* - the name of the application in the WLMSCTBL table entry
- *fromTime* - the start time of the range
- *toTime* - the end time of the range

The table entry is ignored.

**Corrective Action:** Correct the entry in the WLMSCTBL table in the CTM PARM library.

CTMW07I {COMMAND | MACRO} ISSUED TO RESET JOB TO SRVCLASS servClass

**Explanation:** CTMWLM, the Control-M workload management service class processing module, attempted to reset the service class of the job to *servClass*.

**Corrective Action:** No action is required.

CTMW08E IWMRESET MACRO ERROR. SRVCLASS=servClass RETURN=rc REASON=rsn

**Explanation:** CTMWLM, the Control-M workload management service class processing module, attempted to reset the service class of the job to *servClass* but failed.

The specific service class request is unsuccessful.

**Corrective Action:** For information about the return and reason codes, see the explanation of IWMRESET in the IBM manual *MVS Programming: Workload Management Services.*
CTMWL1I CONTROL-M STARTED REBUILDING WORKLOAD DATA

**Explanation:** Control-M uploaded the new workload definitions from Control-M/Enterprise Manager and has started updating the workload data for the jobs. For each job that is associated with at least one workload, a CTMWL9I message is issued, followed by a set of CTMWLAI messages - one for each workload that is associated with the job.

**Corrective Action:** No action is required.

CTMWL2I CONTROL-M FINISHED REBUILDING WORKLOAD DATA. nnnnn JOBS UPDATED

**Explanation:** Control-M has completed rebuilding the workload data of the jobs; the data for nnnnn jobs were changed.

**Corrective Action:** No action is required.

CTMWL3E ERROR WHEN TRYING TO ADD A NEW WORKLOAD TO THE JOB WITH ORDERID order_id

**Explanation:** The available memory in the job record for the order_id job is insufficient for the new workload data. The job record is not partially updated, but instead the workload data for the job remains unchanged, as it was before.

**Corrective Action:** To avoid this problem in the future, increase the memory for job records by increasing the value specified for the FREESPAC parameter in the CTMPARM member.

CTMWL4I WORKLOAD NAME: RESOURCE NAME: LIMIT UTILIZATION

**Explanation:** This message is issued in response to the WLLIST Control-M monitor operator command. It is the first message of a series, forming a resource utilization report, which consists of a list of workload names with their required resource types, the maximum permitted number of resources, and the current number of resources being used. This message serves as a header for the CTMW5I messages that follow it.

**Corrective Action:** No action is required.

CTMWL5I Work_Load_name Resource_name Limit Utilization

**Explanation:** This message is part of a series of messages, initiated by the WLLIST Control-M monitor operator command. The messages form a resource utilization report, which consists of a list of workload names with their required resource types, the maximum permitted number of resources, and the current number of resources being used. The series of messages is preceded by the CTMW4I header message.

**Corrective Action:** No action is required.

CTMWL6W WORKLOAD POLICY DEFINITIONS DO NOT EXIST

**Explanation:** A member containing the workload definitions has not been defined. Control-M will run without the workload facility.

**Corrective Action:** Determine if workload policies are required. If so, apply the workload policies. For more information, see the Workload Management topic in Chapter 1 of the Control-M for z/OS User Guide.
CTMWL7E INVALID DATA IN WORKLOAD POLICY DEFINITIONS

**Explanation:** The member with the workload policies contains a technical error. If there were previously defined valid workload policies, the CTMWL8W message is issued after this message. If no previously defined valid workload policies existed, the CTMWL8W message is not issued, and Control-M continues to run without the workload facility.

**Corrective Action:** Correct the error in the workload policies definitions.

CTMWL8W PREVIOUS WORKLOAD POLICY DEFINITIONS WILL BE USED

**Explanation:** This message is issued only after the CTMWL7E error message. Since there is an error, the workload policy is not redefined. Instead, the previous workload policy remains active.

**Corrective Action:** Determine if the previous workload policy is still valid. If not, redefine the workload policy.

CTMWL9I JOB job_name ORDERID order_id WORKLOADS CHANGED DUE TO reason

**Explanation:** This message is displayed for each job (indicated by job_name and order_id) that satisfies a workload policy. The cause that initiates the workload data change is indicated by reason, which can be one of the following:

- JOB ORDER - a workload was assigned to the newly ordered job while the Control-M monitor is active.
- MONITOR INIT - a workload was assigned or changed for the job during the start of the Control-M monitor or its resume after NEWDAY processing.
- FREE - a workload policy that affects a job was changed while the job was in Held status. As soon as the job is freed, the workload data is updated according to the new policy.
- FREE TABLE - a workload policy that affects a SMART Table was changed while the SMART Table was in Held status. As soon as the SMART Table is freed, the workload data is updated according to the new policy.
- REBUILD - the workload policy was changed, requiring the workload data to be updated.

**Corrective Action:** No action is required.

CTMWLAI JOB job_name ORDERID order_id IS NOW IN WORKLOAD work_load_name

**Explanation:** The work_load_name workload is assigned to the job_name job, with order ID order_id. This message is displayed for each workload that is assigned to the job. A set of one or more CTMWLAI messages is preceded by the CTMWL9I message.

**Corrective Action:** No action is required.

Messages CTMX00 through CTMXxx

This group includes messages for the Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, and Control-M/Rota products.
CTMX01I CONTROL-M GLOBAL SYSPLEX MONITOR STARTED ON SYSTEM systemId

**Explanation:** This information message indicates that the Control-M monitor that was started on system systemId will operate as the global Sysplex monitor. This monitor is the first Control-M monitor started in the CTMPLEX environment.

**Corrective Action:** No action is required.

CTMX02I CONTROL-M LOCAL SYSPLEX MONITOR STARTED ON SYSTEM systemId

**Explanation:** This information message indicates that the monitor started on system systemId operates as a local Sysplex monitor. All monitors in the CTMPLEX environment, except the first monitor, which acts as the global Sysplex monitor, are local monitors.

**Corrective Action:** No action is required.

CTMX03I SHUT DOWN REQUEST RECEIVED BY CONTROL-M LOCAL MONITOR ON SYSTEM systemId

**Explanation:** This information message indicates that the global monitor issued a shut down request to the local monitor on system systemId. The shutdown is in response to a STOP CONTROLM command that was issued to the global monitor. The entire CTMPLEX is stopped. All local monitors are shut down.

Shutdown of the Control-M local monitor begins.

**Corrective Action:** No action is required.

CTMX04I SUSPEND REQUEST RECEIVED BY CONTROL-M LOCAL MONITOR ON SYSTEM systemId

**Explanation:** This information message indicates that activity of the local monitor on system systemId is suspended until the end of New Day Processing as a result of a SUSPEND request issued before the New Day procedure began.

The Control-M local monitor stops its activity till end of New Day processing.

**Corrective Action:** No action is required.

CTMX05E GLOBAL MONITOR FAILED. THE LOCAL IS SWITCHING TO GLOBAL ON SYSTEM systemId

**Explanation:** In response to the global monitor failing or being stopped by operator command, the local monitor on system systemId is now the global monitor. In a CTMPLEX environment, there must always be a global monitor.

The local monitor switches to Global mode.

**Corrective Action:** If the global monitor failed, prepare the Control-M monitor full output and contact BMC Customer Support.
CTMX06I NEW LOCAL MONITOR CONNECTED TO CONTROL-M SYSPLEX

Explanation: This information message indicates that the global monitor detected a new local monitor connected to CTMPLEX.

Corrective Action: No action is required.

CTMX07I LOCAL MONITOR DISCONNECTED FROM CONTROL-M SYSPLEX

Explanation: This information message indicates that the global monitor detected that a local monitor is disconnected from CTMPLEX.

CTMPLEX continues running, and no jobs are lost. Jobs that were being processed by the disconnected local monitor are passed to the global monitor, and from there to other local monitors.

Corrective Action: A new local monitor can be started on the system where the local monitor disconnected, or on any other system that has no Control-M monitor.

CTMX08E ERROR IN COUPLING FACILITY REQUEST

Explanation: An error occurred during access of the CTMPLEX coupling facility. This message is generally accompanied by other messages that explain the exact type of error and system actions.

The system action depends on the type of error. If the error is an environmental error, Control-M switches from CTMPLEX to regular mode. All local monitors shut down, and the global monitor continues working in regular, not CTMPLEX, mode. If the error is an internal or program error in handling the Coupling facility request, the whole CTMPLEX shuts down.

Corrective Action: Prepare the Control-M monitor full output and contact BMC Customer Support. In case of environmental errors, Control-M can be switched back to CTMPLEX mode by STARTPLEX operator command.

CTMX09E THERE IS ANOTHER CONTROL-M MONITOR ON THE SYSTEM systemId

Explanation: System systemId has more than one Control-M monitor. Only one Control-M monitor, either global or local, may run on any SYSPLEX member.

Only the first Control-M monitor on system systemId continues to operate. The other monitors on the system shut down.

Corrective Action: Ensure that only one Control-M monitor runs on any system in the CTMPLEX. If desired, use LISTPLEX operator command to display the current CTMPLEX environment.

CTMX0AE SYSTEM systemId NOT FOUND IN CTMPLEX PARAMETERS TABLE

Explanation: An attempt was made to start a Control-M monitor in system systemId, which is not defined in a CTMPLEX parameter member. For the monitor to be started in the system, the system must be defined in the CTMPLEX parameter member.

The Control-M monitor is not started in system systemId.

Corrective Action: Ensure that all systems that should be available for Control-M monitors are identified in the CTMPLEX parameter member.
CTMX0BE INTERNAL ERROR IN CTMPLEX PROCESSING. *error*

**Explanation:** An internal error occurred in CTMPLEX processing.

CTMPLEX shuts down.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support.

CTMX0DE NO LOCAL MONITOR FOUND FOR PROCESSING OF A JOB

**Explanation:** As a result of an internal error in CTMPLEX processing, no local Control-M monitor was found for processing a job.

The job is processed by the global monitor.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support.

CTMX0EE STRUCTURE NAME *structName* IS ALREADY IN USE BY ANOTHER CTMPLEX

**Explanation:** The same Coupling facility structure name is being used by another CTMPLEX environment. The structure name of the Coupling facility must be unique to the CTMPLEX environment.

CTMPLEX does not start.

**Corrective Action:** Specify another name for the Coupling Facility structure in the CTMPLEX parameter member.

CTMX11E ERROR IN *reqType* REQUEST FOR CTMPLEX COUPLING FACILITY. RC *rc* REASON *rsn*

**Explanation:** An error occurred while accessing the CTMPLEX coupling facility. This message is usually accompanied by other messages that explain system actions.

The system action depends on the type of error in the Coupling Facility. For environmental errors, Control-M switches from CTMPLEX to regular mode. All local monitors shut down and the global monitor continues working in regular, not CTMPLEX, mode. For internal or program errors, the entire CTMPLEX shuts down.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support. For environmental errors, Control-M can be switched back to CTMPLEX mode by STARTPLEX operator command.

CTMX12I THE COMMAND IS ROUTED TO BE HANDLED BY GLOBAL MONITOR

**Explanation:** This information message indicates that the Local monitor received an operator command that may only be processed by the Global monitor. In this situation the Local monitor routes the command to the Global monitor.

**Corrective Action:** No action is required.
CTMX13E MAXIMUM NUMBER OF CTMPLEX LOCAL MONITORS EXCEEDED

**Explanation:** An attempt was made to start more than the allowable number of Control-M monitors. A maximum of 32 Control-M monitors, one global and the rest local, are allowed in the CTMPLEX environment.

Additional monitors beyond the first allowed maximum of 32 are not started.

**Corrective Action:** To add additional monitors, stop an active local monitor for each new monitor to be added. Use the LISTPLEX operator command to display a current CTMPLEX environment.

CTMX14I THE COMMAND IS NOT VALID FOR A LOCAL MONITOR

**Explanation:** This information message indicates that a local monitor received an operator command that is valid for a global monitor only.

The operator command is ignored.

**Corrective Action:** Issue the operator command to the global monitor only. Operator command WHOGLOBAL, which is valid for each monitor, can be used to display information about the global monitor.

CTMX15I WORK BALANCING MODE ACTIVATED ON CTMPLEX ENVIRONMENT

**Explanation:** This information message indicates that Work Balancing mode was activated by the operator command F CONTROLM,BALANCE=YES.

CTMPLEX works in Work Balancing mode.

**Corrective Action:** No action is required.

CTMX16I WORK BALANCING MODE DEACTIVATED ON CTMPLEX ENVIRONMENT

**Explanation:** This information message indicates that Work Balancing mode was deactivated by the operator command F CONTROLM,BALANCE=NO.

CTMPLEX stops working in Work Balancing mode.

**Corrective Action:** No action is required.

CTMX17I CTMPLEX COMMANDS ARE NOT AVAILABLE WHEN CTMPLEX=N IN CTMPARM

**Explanation:** This information message indicates that a CTMPLEX operator command was issued while the CTMPLEX facility is not available. The facility is not available because the CTMPLEX parameter is set to N in the CTMPARM member in the IOA PARM library.

CTMPLEX operator commands are ignored.

**Corrective Action:** To activate the CTMPLEX facility, set the CTMPLEX parameter to Y in the CTMPARM member, and restart the Control-M monitor.
CTMX18I GLOBAL CTMPLEX MONITOR IS WAITING FOR THE LOCAL MONITORS TO SHUT DOWN

**Explanation:** This information message indicates that as part of CTMPLEX shut down, the global monitor passed STOP requests to all local monitors, and is waiting for them to shut down.

The global monitor waits for the local monitors to shut down. When all local monitors are shut down, the global monitor updates the Active Jobs file with the last changes, and shuts down.

**Corrective Action:** No action is required.

CTMX19E NO ACTIVE LOCAL MONITOR FOUND ON SYSTEM `systemId`

**Explanation:** CTMPLEX operator command `F CONTROLM,STOPGSM,systemId` was issued to stop the global monitor, and to pass global functions to the local monitor on system `systemId`, but, no active local monitor was found on system `systemId`.

The command is ignored.

**Corrective Action:** Ensure that the correct system identifier is specified in the operator command. Operator command `LISTPLEX` can be issued to display a current CTMPLEX configuration.

CTMX1AI `mon_type - jobName_of_mon.stepName_of_mon` ON SYSTEM `systemId`. ACTIVE JOBS `numActiveJobs`, CAPACITY `systemCapacity`

**Explanation:** This information message displays the current CTMPLEX configuration in response to a `LISTPLEX` operator command. This message is issued for each monitor in the CTMPLEX.

The list of Control-M global and local monitors is displayed.

**Corrective Action:** No action is required.

CTMX1BI JOB WAS HANDLED BY LOCAL MONITOR ON SYSTEM `systemId`

**Explanation:** This information message is a statistics message issued to IOA log any time a job is handled by a local monitor. It indicates the system on which the job was handled.

**Corrective Action:** No action is required.

CTMX1CI SUCCESSFUL RECOVERY AFTER LOCAL MONITOR DISCONNECTED

**Explanation:** This information message indicates that the global monitor successfully finished a recovery after a local monitor disconnected.

CTMPLEX continues working. All jobs processed by disconnected local monitor were passed to the global or other local monitors.

**Corrective Action:** An additional local monitor can be activated on any suitable SYSPLEX member where no such monitor runs.
CTMX1DE UNSUCCESSFUL RECOVERY AFTER LOCAL MONITOR DISCONNECTED

**Explanation:** Errors occurred in during recovery by the global monitor following a local monitor disconnect.

CTMPLEX continues working, but some jobs from the disconnected local monitor may be not passed to the global or other local monitors, and therefore may remain unprocessed.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support.

CTMX1EI SUCCESSFUL COMPLETION OF LOCAL-TO-GLOBAL SWITCHING

**Explanation:** This information message indicates that a local monitor was successfully switched to Global mode. The switch to Global mode is generally performed if the global monitor fails, or stops in response to a STOPGSM operator command.

CTMPLEX continues working; the local monitor is now the global monitor.

**Corrective Action:** If the global monitor failed, prepare the Control-M monitor full output and contact BMC Customer Support. An additional local monitor can be activated on any suitable SYSPLEX member where no such monitor runs. Operator command LISTPLEX can be issued to display a current CTMPLEX configuration.

CTMX1FE ERRORS ENCOUNTERED DURING LOCAL-TO-GLOBAL SWITCHING

**Explanation:** Errors occurred in the local monitor during switching to Global mode. The switch to Global mode is generally performed if the global monitor fails, or stops in response to a STOPGSM operator command.

The local monitor shuts down.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support.

CTMX1GE LOCAL MONITOR TERMINATING DUE TO CTMPLEX COUPLING FACILITY FAILURE

**Explanation:** The local monitor is shutting down due to CTMPLEX Coupling Facility environmental failures, or internal or program errors in the CTMPLEX facility. This message is usually accompanied by other messages explaining the reason for the failure.

The local monitor shuts down. Its jobs are passed to the global monitor and other local monitors. CTMPLEX continues working.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support.

CTMX21E ERROR IN PROPAGATING OPERATOR COMMAND TO LOCAL MONITORS. THE COMMAND IS IGNORED

**Explanation:** The global monitor failed to propagate an operator command to the local monitors. This message is usually accompanied by other messages explaining a reason of failure.

The operator command is ignored.
Corrective Action: Try to repeat the operator command. If the problem persists, prepare the Control-M monitor full output and contact BMC Customer Support.

CTMX22E PREVIOUS COMMAND WAS NOT PROCESSED BY A LOCAL MONITOR. RETRY THE CURRENT COMMAND LATER

Explanation: The previous operator command was not yet extracted and/or processed by all of the local monitors. In the CTMPLEX environment, a new operator command can be processed only after a previous command was processed by all active local monitors.

The operator command is ignored.

Corrective Action: Try to repeat the operator command. If the problem persists, prepare the Control-M monitor full output and contact BMC Customer Support.

CTMX23I GLOBAL CTMPLEX MONITOR IS jobName.stepName ON SYSTEM systemId

Explanation: This information message displays information about the current global monitor in response to the WHOGLOBAL operator command.

Corrective Action: No action is required.

CTMX24E CONTROL-M CONTINUES WORKING IN STAND-ALONE MODE BECAUSE OF COUPLING FACILITY FAILURE

Explanation: Control-M switched from CTMPLEX mode to regular Standalone mode because the global monitor detected an environmental error while accessing the CTMPLEX Coupling Facility structure. The message is accompanied by a message supplying additional information about the Coupling Facility failure.

All local monitors shut down. The global monitor continues working in regular Standalone mode, not CTMPLEX mode.

Corrective Action: Fixing the problem caused by the Coupling Facility environmental error. Then, return to CTMPLEX mode by issuing the STARTPLEX operator command.

CTMX25E LOCAL CTMPLEX MONITOR SHUTS DOWN ON SYSTEM systemId BECAUSE OF COUPLING FACILITY FAILURE

Explanation: The local monitor shut down because an environmental error in accessing the CTMPLEX Coupling Facility structure was detected either by the global monitor or by the local monitor.

If a failure in accessing the Coupling Facility is detected by the global monitor, then all local monitors shut down, and the global monitor continues working in Standalone mode, not CTMPLEX mode. If a failure in accessing Coupling Facility is detected by a local monitor, then only this monitor shuts down.

Corrective Action: Search the job log of the global and local monitors for a message supplying additional information about the Coupling Facility failure. Fixing the problem caused by the Coupling Facility environmental error. Then return to CTMPLEX mode by issuing a STARTPLEX operator command. Additional local monitors can then be activated.
CTMX26I CONTROL-M IS CURRENTLY IN STAND-ALONE MODE DUE TO COUPLING FACILITY FAILURE

**Explanation:** This information message indicates that a requested CTMPLEX operator command could not be processed, or a local monitor could not be started, because Control-M is running in Standalone mode due to Coupling Facility failure.

While Control-M works in Standalone mode, it ignores the CTMPLEX operator command, and no local monitors can be activated.

**Corrective Action:** Fix the problem caused by the Coupling Facility environmental error. Then return to CTMPLEX mode by issuing a STARTPLEX operator command.

CTMX27I USE 'STARTPLEX' COMMAND TO REACTIVATE CTMPLEX PROCESSING

**Explanation:** This information message indicates that CTMPLEX processing can be reactivated by issuing a STARTPLEX operator command. This message is usually issued following a CTMPLEX operator command request, or an attempt to start a local monitor while Control-M runs in Stand-alone mode due to a Coupling Facility failure.

**Corrective Action:** No action is required.

CTMX28I CTMPLEX IS ALREADY ACTIVE

**Explanation:** This information message indicates that a STARTPLEX operator command was issued while Control-M already works in CTMPLEX mode. Command STARTPLEX is used to place Control-M in CTMPLEX mode. Since CTMPLEX mode is already active, the STARTPLEX command is unnecessary.

The STARTPLEX operator command is ignored.

**Corrective Action:** No action is required.

CTMX29E CTMPLEX COUPLING FACILITY STRUCTURE IS FULL

**Explanation:** The CTMPLEX Coupling Facility structure is full.

CTMPLEX continues running. New active jobs are processed by the global monitor, but the jobs are not passed to local monitors. Control-M waits until some active jobs have finish and the Coupling facility shortage is relieved.

**Corrective Action:** Increase the value of the MAXENTRY parameter in the CTMPLEX parameter member, and restart CTMPLEX.

CTMX2AE THE MONITOR RUNNING ON SYSTEM systemId IS ALREADY A GLOBAL

**Explanation:** The system specified in operator command STOPGSM sys is the system in which the global monitor is already running. This is not allowed because this command is used to stop the global monitor and pass global function to the monitor running on the specified system (systemId).

The STOPGSM operator command is ignored.
Corrective Action: Reissue the STOPGSM command, but ensure that the system specified in the command is not the system with the current global monitor. Operator command. LISTPLEX can be issued to display the current CTMPLEX environment.

CTMX2BW MAXIMUM JOBS NUMBER num SET FOR LOCAL ON SYSTEM systemId

Explanation: There is a conflict in the MAXCAP (maximum capacity) and RELCAP (relative capacity) definitions for the indicated system in the CTMPLEX parameter table. MAXCAP is, but should not be, less than RELCAP.

The value for MAXCAP is set equal to the RELCAP value for the system entry.

Corrective Action: If these values should not be equal increase the MAXCAP value, or decrease the RELCAP value for the system, in the CTMPLEX parameter member. Then stop and restart CTMPLEX.

CTMX2CW WARNING: COUPLING FACILITY STRUCTURE IS num% FULL

Explanation: The CTMPLEX Coupling facility structure is nearly full. CTMPLEX continues running, and will continue to run even after the Coupling facility becomes full. However, once the Coupling facility becomes full, new active jobs are processed by the global monitor, but are not passed to local monitors. After the Coupling facility shortage is relieved, Control-M continues sending jobs to local monitors.

Corrective Action: Increase the value of the MAXENTRY parameter in CTMPLEX parameter member, and restart CTMPLEX.

CTMX2DI COUPLING FACILITY SPACE PROBLEM ALLEVIATED

Explanation: This information message indicates that the CTMPLEX Coupling Facility structure space problem was alleviated. This message is issued after message CTMX2CW is reissued. CTMPLEX once again sends new active jobs to local monitors.

Corrective Action: No action is required.

CTMX2EI COUPLING FACILITY STRUCTURE IS num% FULL

Explanation: This information message is a part of the CTMPLEX response to a LISTPLEX operator command.

Corrective Action: No action is required.

CTMX31W NO ACTIVE LOCAL MONITORS FOUND IN CTMPLEX

Explanation: The user issued a STOPGSM command to stop the Control-M global monitor and pass global functions to one of local monitors, but there are no active local monitors.

The STOPGSM command is ignored.

Corrective Action: Use the STOP command to stop the global monitor, or activate a local monitor and then issue the STOPGSM command.
CTMX32W STOP COMMAND RECEIVED BY GLOBAL MONITOR. WOULD YOU LIKE TO STOP ENTIRE CTMPLEX?

**Explanation:** The user issued a STOP command to the Control-M global monitor while there are still active local monitors.

Message CTMX33W is issued after this message.

**Corrective Action:** Respond to message CTMX33W.

CTMX33W ANSWER Y(YES)-STOP CTMPLEX, N(NO)-IGNORE, G(GSM)-STOP GLOBAL ONLY

**Explanation:** The user issued a STOP command to the Control-M global monitor while there are still active local monitors. This message appears after message CTMX32W.

The system action depends on the user response.

**Corrective Action:** Select one of the available responses:

- **YES** - the whole CTMPLEX is stopped (that is, all monitors are stopped)
- **NO** - the STOP command is ignored
- **GSM** - only the global monitor is stopped

CTMX34I STOP COMMAND IS IGNORED

**Explanation:** The user issued a STOP command for the Control-M global monitor while there are still active local monitors, and answered **NO** to message CTMX33W.

The STOP command is ignored.

**Corrective Action:** Repeat the STOP command to stop the global monitor, or activate a local monitor and then issue the STOPGSM command.

CTMX35I GLOBAL MONITOR SHUTS DOWN UPON REQUEST FROM OPERATOR

**Explanation:** The user issued a STOPGSM command, or a STOP command for the Control-M global monitor while there are still active local monitors. After messages CTMX32W and CTMX33W were issued, the user answered **GSM** to message CTMX33W.

The global monitor shuts down and one of active local monitors switches to global mode.

**Corrective Action:** No action is required.

CTMX36W STRUCTURE SIZE size WAS USED INSTEAD OF MAXENTRY SIZE

**Explanation:** This message may be displayed during Control-M CTMPLEX environment initialization. If the MAXENTRY parameter value in the CTMPLEX PARM member or the SIZE/INITSIZE parameter value in the CFRM policy is too small for CTMPLEX requirements, Control-M attempts to automatically recover from this 'invalid structure size' error by using the minimum required structure size, `size`. The value of `size`, which is displayed in the message, is equal to the minimum required number of 4K blocks.
If this retry attempt is successful, Control-M displays this message with the structure size used instead of the user-specified MAXENTRY value.

**Corrective Action:** No action is required.

**CTMX37I ALL LOCAL MONITORS STOPPED. CONTROL-M WILL OPERATE IN STAND-ALONE MODE**

**Explanation:** The user issued a STOPPLEX command, or the CTMPLEX mode changed to the regular standalone (no-CTMPLEX) mode as a result of a Coupling Facility failure.

As a result of the STOPPLEX command or a Coupling Facility failure, all local monitors are stopped. The global monitor disconnects from the Coupling Facility, releases all CTMPLEX resources and continue running as a regular Control-M monitor.

**Corrective Action:** Issue the STARTPLEX command to return to CTMPLEX mode.

**CTMX38I CONTROL-M IS CURRENTLY IN STAND-ALONE MODE DUE TO STOPPLEX REQUEST**

**Explanation:** The operator issued a command valid only in the CTMPLEX environment, while Control-M is currently in regular standalone mode (that is, not CTMPLEX) due to a STOPPLEX request or a Coupling Facility failure.

Any CTMPLEX operator command is ignored if Control-M is not currently in CTMPLEX mode.

**Corrective Action:** Issue the STARTPLEX command to return to CTMPLEX mode.

**CTMX39E GLOBAL MONITOR NOT FOUND. LOCAL MONITOR TERMINATES ON THE SYSTEM sysName**

**Explanation:** The local monitor detected that the global monitor terminated while the Control-M New Day procedure was running.

The local monitor shuts down.

**Corrective Action:** Check the reason for the global monitor termination, and restart Control-M.

**CTMX3AI GLOBAL MONITOR WAITS UNTIL ALL LOCAL MONITORS ARE SUSPENDED BEFORE STARTING NEWDAY**

**Explanation:** The global monitor intends to invoke the Control-M New Day procedure. Before doing this, the global monitor sends SUSPEND requests to all active local monitors, and waits until they confirm their suspension.

The global monitor waits for the local monitors to suspend their processing before invoking the New Day procedure.

**Corrective Action:** No action is required.
CTMX3BW LOCAL MONITOR IS WAITING FOR THE GLOBAL CTMPLEX MONITOR TO SHUT DOWN

**Explanation:** The global monitor is in the process of terminating. The local monitor should switch to the global mode, but waits until the global monitor completely terminates.

The local monitor waits until the global monitor completely terminates.

**Corrective Action:** Check the reason for termination of the global monitor, and check whether the global monitor is hanging during this termination. If it hangs, then cancel the Global monitor with the dump, prepare the Control-M monitor full output and contact BMC Customer Support.

CTMX3CE SYSTEM sysname ALREADY REGISTERED IN CTMPLEX

**Explanation:** This is an internal CTMPLEX error. The local monitor starts on a particular system, but detects that another local monitor on the same system is already registered in the CTMPLEX environment. The local monitor shuts down.

**Corrective Action:** Prepare the Control-M monitor full output and contact BMC Customer Support.

CTMX3DE RESOURCE SERIALIZATION INACTIVE

**Explanation:** The local monitor detects that global resources serialization is not active in the SYSPLEX environment. The local monitor shuts down.

**Corrective Action:** Check the status of global resources serialization. It should be active in order to use CTMPLEX in the SYSPLEX environment.

CTMX3FE MINIMUM STRUCTURE SIZE IS size; INCREASE CFRM POLICY VALUES ACCORDINGLY

**Explanation:** This message may be displayed during Control-M CTMPLEX environment initialization. If the MAXENTRY parameter value in the CTMPLEX PARM member or the SIZE/INITSIZE parameter value in the CFRM policy is too small for CTMPLEX requirements, Control-M will attempt to automatically recover from this ‘invalid structure size’ error by using the minimum required structure size, size. The value of size, which is displayed in the message, is equal to the minimum required number of 4K blocks.

If this retry attempt is successful, Control-M displays message CTMX36W. However, if the retry attempt is unsuccessful because the structure size is too small, Control-M displays this message with the minimum required structure size.

Control-M is activated in stand-alone mode (not in CTMPLEX mode).

**Corrective Action:** Contact your system programming group and have them increase the structure size in the CFRM policy to the minimum required structure size specified in the message. When increasing the size in the CFRM policy, ensure that the size is specified in Kilobytes (not to be confused with the value of size in the message text, which indicates the number of 4K blocks.)
CTMX41I LOCAL MONITOR SUSPENDED AWAITING RECONNECT TO CTMPLEX. ONLY STOP COMMAND AVAILABLE

**Explanation:** The Local Monitor is in SUSPEND mode due to Coupling facility failure. In this mode, the Local Monitor does not receive any operator commands except for STOP.

The operator command is ignored.

**Corrective Action:** Issue the operator command to the Global Monitor or wait until the Coupling Facility recovers, and resumes CTMPLEX processing.

CTMX42W LOCAL CTMPLEX MONITOR (SYSTEM `sysName`) PROCESSING SUSPENDED DUE TO COUPLING FACILITY FAILURE

**Explanation:** The Local Monitor is in SUSPEND mode due to Coupling Facility failure detected by the Global Monitor. The Local Monitor waits for the recovery of the Coupling Facility and the request of Global Monitor to reconnect to CTMPLEX, and resumes processing.

Automatic CTMPLEX recovery is controlled by two CTMPLEX installation parameters:

- **RECOVERT** - Frequency of attempts to recover CTMPLEX after Coupling Facility failures
- **RECOVERM** - Maximum number of attempts to recover CTMPLEX after Coupling Facility failures.

The Local Monitor does not handle any jobs. It only waits for the request of Global Monitor to reconnect to CTMPLEX, and resumes processing.

**Corrective Action:** Check the system log and job logs of Control-M Monitors, and try to find the reason for the Coupling Facility failure.

CTMX43I LOCAL MONITOR (SYSTEM `sysName`) ATTEMPTING TO RECONNECT CTMPLEX

**Explanation:** The Local Monitor received the request from the Global Monitor to reconnect to CTMPLEX, and resumes the processing. Before this, the Local Monitor was in SUSPEND mode due to Coupling facility failure detected by the Global Monitor.

The Local Monitor attempts to reconnect to CTMPLEX and to start processing the jobs. If the Local Monitor does not succeed in reconnecting, it stops immediately.

**Corrective Action:** No action is required.

CTMX44I LOCAL MONITOR (SYSTEM `sysName`) RECONNECTED TO CTMPLEX. PROCESSING RESUMED

**Explanation:** The Local Monitor reconnected to CTMPLEX after it was in SUSPEND mode due to Coupling facility failure detected by the Global Monitor.

The Local Monitor resumes processing the jobs.

**Corrective Action:** No action is required.
CTMX45I GLOBAL MONITOR WILL ATTEMPT TO RESUME CTMPLEX PROCESSING LATER

**Explanation:** The Global Monitor stopped the CTMPLEX facility and switched to Standalone mode due to Coupling Facility failure. During some time interval, the Global Monitor will attempt to recover the CTMPLEX facility, that is, it will try to reconnect to the Coupling Facility and resume CTMPLEX processing.

Automatic CTMPLEX recovery is controlled by two CTMPLEX installation parameters:

- **RECOVERT** - Frequency of attempts to recover CTMPLEX after Coupling Facility failures
- **RECOVERM** - Maximum number of attempts to recover CTMPLEX after Coupling Facility failures.

The Global Monitor continues working in Standalone mode. After some time interval (the number of seconds specified by the RECOVERT installation parameter of CTMPLEX), the Global Monitor will attempt to recover the CTMPLEX facility, that is, it will try to reconnect to the Coupling Facility and resume CTMPLEX processing.

**Corrective Action:** Check the system log and job logs of Control-M Monitors, and try to find the reason for the Coupling Facility failure.

CTMX46I GLOBAL MONITOR ATTEMPTING TO RESUME CTMPLEX PROCESSING

**Explanation:** The Global Monitor tries to reconnect to the Coupling Facility and resume CTMPLEX processing. Before this, the Global Monitor was working in Standalone mode due to Coupling Facility failure.

If the Global Monitor succeeds in reconnecting to the Coupling Facility, it sends the request to reconnect to the Coupling Facility and resume processing to Local monitors (which are in SUSPEND mode).

If the Global Monitor does not succeed in reconnecting to the Coupling Facility (the Global monitor fails again), then after some time interval (the number of seconds specified by the CTMPLEX installation parameter RECOVERT), the Global Monitor performs another attempt to recover CTMPLEX. The maximum number of attempts is defined in the CTMPLEX installation parameter RECOVERM.

**Corrective Action:** No action is required.

CTMX47I GLOBAL MONITOR SUCCESSFULLY RECONNECTED TO COUPLING FACILITY. LOCAL MONITORS WILL RESUME PROCESSING

**Explanation:** The Global Monitor successfully reconnected to the Coupling Facility and resumed CTMPLEX processing. Before this, the Global Monitor was working in Standalone mode due to Coupling Facility failure.

After the Global Monitor successfully reconnects to the Coupling Facility and resumes CTMPLEX processing, it sends to Local Monitors the request to reconnect to the Coupling Facility and resume processing the jobs (before this the Local Monitors were in SUSPEND mode due to Coupling Facility failure.

**Corrective Action:** No action is required.
CTMX48E CONTROL-M OPERATING IN STAND-ALONE MODE DUE TO CTMPLEX INITIALIZATION FAILURE

Explanation: The Control-M monitor did not successfully activate the CTMPLEX facility. The Control-M monitor continues working in Standalone (regular) mode.

Corrective Action: Investigate the job log of the Control-M monitor and clarify the reason for the CTMPLEX initialization failure. After fixing the problem, the CTMPLEX facility may be activated with the STARTPLEX operator command.

CTMX49E MAXIMUM NUMBER OF ATTEMPTS TO REACTIVATE CTMPLEX EXCEEDED. ALL LOCAL MONITORS WILL TERMINATE.

Explanation: The Global Monitor did not successfully reconnect to the Coupling facility and recover CTMPLEX. The maximum number of attempts to recover CTMPLEX (CTMPLEX installation parameter RECOVERM) was exhausted.

The Global monitor stops all Local monitors and continues working in Standalone (regular) mode.

Corrective Action: Investigate the job log of the Control-M monitor and clarify the reason for the CTMPLEX recovery failures. After fixing the problem, the CTMPLEX facility may be activated with the STARTPLEX operator command.

CTMX4AE LOCAL MONITOR TERMINATED DUE TO FAILURE OF THE GLOBAL MONITOR TO REACTIVATE CTMPLEX

Explanation: The Local monitor received a termination request from the Global monitor, because the Global monitor could not successfully reconnect to the Coupling facility and recover CTMPLEX. The maximum number of attempts to recover CTMPLEX (CTMPLEX installation parameter RECOVERM) was exhausted by the Global monitor.

Local monitors terminate and the Global monitor continues working in Standalone (regular) mode.

Corrective Action: Investigate the job log of the Control-M Global monitors and clarify the reason for the CTMPLEX recovery failures. After fixing the problem, the CTMPLEX facility may be activated with the STARTPLEX operator command.

CTMX4BI *** START OF GLOBAL RESPONSE TO ROUTED OPERATOR COMMANDS ***

Explanation: The Local monitor received an operator command that may only be processed by the Global monitor. In this situation the Local monitor routes the command to the Global monitor. This message indicates the start of the Global monitor’s response to the routed operator command.

The Global monitor’s response records to the operator command are issued after this message.

Corrective Action: No action is required.
CTMX4CI *** END OF GLOBAL RESPONSE TO ROUTED OPERATOR COMMANDS ***

**Explanation:** The Local monitor received an operator command that may only be processed by the Global monitor. In this situation the Local monitor routes the command to the Global monitor. This message indicates the end of the Global monitor's response to the routed operator command.

The Global monitor's response records to the operator command are issued before this message.

**Corrective Action:** No action is required.

CTMX51I LOCAL CTMPLEX MONITOR (SYSTEM system_name) SWITCHES TO GLOBAL BECAUSE IT HAS THE HIGHEST PRIORITY

**Explanation:** The Local Monitor switches to Global because it has the highest PRIORITY (in the CTMPLEX parameters member) among all active Control-M monitors.

**Corrective Action:** No action is required.

CTMX52I GLOBAL CTMPLEX MONITOR (SYSTEM system_name) SWITCHES TO LOCAL BECAUSE IT FOUND A MONITOR WITH A HIGHER PRIORITY

**Explanation:** The Global Monitor switches to Local because it detected that the active Local monitor has a higher PRIORITY (in the CTMPLEX parameters member) than the Global Monitor.

**Corrective Action:** No action is required.

CTMX53I SUCCESSFUL FINISH OF GLOBAL - LOCAL SWITCH

**Explanation:** The Global Monitor successfully switched to Local. The Global Monitor made the switch because it detected that the active Local monitor has a higher PRIORITY (in the CTMPLEX parameters member) than the Global Monitor.

**Corrective Action:** No action is required.

CTMX54I Control-M MONITOR STARTED ON SYSTEM system_name WAITING TILL ANY LOCAL SWITCHES TO GLOBAL

**Explanation:** The Global Monitor was restarted a very short time after it was stopped or terminated, before any Local Control-M monitor could detect the termination of the Global Monitor and switch to Global status. The restarted monitor delays until any Local monitor successfully switches to Global status, after which the restarted monitor continues initialization as a Local monitor.

**Corrective Action:** No action is required.

CTMX61W ERROR IN NEWDAY - MONITOR CROSS MEMORY TRANSFER OF AJF. REASON ‘rsn’

**Explanation:** Control-M encountered errors when trying to implement the New Day in Memory facility (activated by the NEWDAYIM=Y installation parameter). This facility uses synchronous cross-memory to copy the AJF between the New Day procedure and Control-M monitor address spaces.
The New Day in Memory facility is deactivated. The AJF is always read from DASD by the New Day procedure and by the Control-M monitor.

**Corrective Action:** Investigate the cause of the error according to reason code `rsn`. If necessary, contact Control-M technical support for assistance. To reactivate the New Day in Memory facility, stop and then restart the Control-M monitor.

**CTMX62W** NEWDAY - MONITOR CROSS MEMORY TRANSFER OF AJF NOT AVAILABLE

**Explanation:** The Control-M New Day procedure failed to implement the New Day in Memory facility (activated by the NEWDAYIM=Y installation parameter). This facility uses synchronous cross-memory to copy the AJF between the New Day procedure and Control-M monitor address spaces. This message is issued if the New Day procedure detects that the cross-memory environment (to be set by the Control-M monitor) is unavailable.

Possible causes are:

- not running the Control-M monitor on the same system where the New Day procedure runs
- the Control-M monitor failed to establish the cross-memory environment.

The New Day in Memory facility is deactivated. The AJF is read from DASD by the New Day procedure and by the Control-M monitor.

**Corrective Action:** Check if Control-M runs on the same system as the New Day procedure. If so, look at the Control-M monitor’s system log to find the reason for not establishing the cross-memory environment. If necessary, contact Control-M technical support for assistance.

**CTMX63W** MONITOR FAILED DURING NEWDAY AJF COMPRESS

**Explanation:** The Control-M New Day procedure failed to implement the New Day in Memory facility (activated by the NEWDAYIM=Y installation parameter). This facility uses synchronous cross-memory to copy the AJF between the New Day procedure and the Control-M monitor address spaces. The message is issued when the New Day procedure should be copying the compressed AJF to the Control-M monitor’s memory, but detects that the monitor is inactive.

The New Day procedure continues its processing. When the Control-M monitor restarts, it reads the AJF from DASD.

**Corrective Action:** No action is required.

**CTMX64I** AJF COPIED FROM MONITOR MEMORY

**Explanation:** This information message indicates that the Control-M New Day procedure copied the AJF from the Control-M monitor’s memory. The New Day does this to implement the New Day in Memory facility (activated by the NEWDAYIM=Y installation parameter). This facility uses synchronous cross-memory to copy the AJF between the New Day procedure and Control-M monitor address spaces.

The New Day procedure continues its processing. The compressed AJF is copied back to the Control-M monitor’s memory.

**Corrective Action:** No action is required.
CTMX65I COMPRESSED AJF RETURNED TO MONITOR

**Explanation:** This information message indicates that the Control-M New Day procedure copied the compressed AJF back to the Control-M monitor's memory. The New Day procedure does this to implement the New Day in Memory facility (activated by the NEWDAYIM=Y installation parameter). This facility uses synchronous cross-memory to copy the AJF between the New Day procedure and Control-M monitor address spaces.

When Control-M resumes processing after completing the New Day procedure, it uses the AJF that was copied from the New Day procedure, and does not need to read the compressed AJF from DASD.

**Corrective Action:** No action is required.

CTMX66I CROSS MEMORY ENVIRONMENT SET TO EXPEDITE NEWDAY PROCESSING

**Explanation:** This information message indicates that the Control-M monitor established the cross-memory environment used by the New Day in Memory facility (activated by the NEWDAYIM=Y installation parameter). This facility uses synchronous cross-memory to copy the AJF between the New Day procedure and Control-M monitor address spaces. The New Day procedure extracts the AJF from the Control-M monitor memory. After compressing the AJF, the New Day procedure copies the compressed AJF back to the Control-M monitor's memory.

The New Day in Memory facility is activated.

**Corrective Action:** No action is required.

CTMX67I COMPRESSED AJF RECEIVED BY MONITOR

**Explanation:** This information message indicates that the Control-M monitor received AJF that was compressed by the New Day procedure. This is done by New Day in Memory facility (activated by the NEWDAYIM=Y installation parameter), which uses synchronous cross-memory to copy the AJF between the New Day procedure and Control-M monitor address spaces. The New Day procedure extracts the AJF from the Control-M monitor's memory. After compressing the AJF, the New Day procedure copies the compressed AJF back to the Control-M monitor's memory.

When Control-M resumes processing after completing the New Day procedure, it uses the AJF that was copied from the New Day procedure, and does not need to read the compressed AJF from DASD.

**Corrective Action:** No action is required.
CTO - CTT

This group includes messages for the Control-O Control-M for z/OS, Control-M/Assist, Control-M/Links for z/OS, Control-M/Restart and Control-M/Tape products.

CTO messages

This group includes messages for the Control-O product.

Messages CTO0 through CTO0xx

This group includes messages for the Control-O product.

CTO001I \{CONTROL-O | CTMCMEM\} monitor TIMER SUBTASK STARTED.

**LEVEL string**

**Explanation:** This information message indicates the start of the Control-O TIMER task, which controls the product timer and cleanup processing.

**Corrective Action:** No action is required.

CTO002I \{CONTROL-O | CTMCMEM\} TIMER SUBTASK ENDED.

**Explanation:** This information message indicates the normal termination of the Control-O TIMER task which controls the product timer and cleanup processing.

**Corrective Action:** No action is required.

CTO004I SVCDUMP WAS CAPTURED SUCCESSFULLY.

**Explanation:** The Control-O or CMEM monitor successfully captured an SVC dump as a result of an internal process request. The monitor continues to operate normally.

**Corrective Action:** Verify that the dump has been successfully written to the system dump files.

CTO005E SVCDUMP WAS FAILED. A PARTIAL DUMP WAS TAKEN BECAUSE THE DUMP DATA SET DID NOT HAVE SUFFICIENT SPACE.

**Explanation:** The Control-O or CMEM monitor tried to dump the monitor and ECSA. The dump request failed because the dump dataset is too small to contain all the areas that are dumped. The monitor continues to operate normally.

**Corrective Action:** Increase the dump files, since they are too small for Control-O or CMEM requirements. Take into account that the ECSA is also dumped by the request.
CTO006E SVC Dump Captured Failed RC 8 Reason= reason (HEX).

**Explanation:** The Control-O or CMEM monitor tried to dump the monitor and ECSA storage areas. The dump request failed. The SDUMPX system service returns a return code of 8.

The monitor continues to operate normally.

**Corrective Action:** Refer to SDUMPX Reason Codes for Return Code 08 in IBM's *MVS Programming Authorized Assembler Services Reference*.

CTO007W Releasing Dead WSC At address JOBNAME= jobName ASID= number

**Explanation:** The Control-O or CMEM monitor found that the WSC block is marked as in use, but it is not in use.

The monitor continues to operate normally. It may issue an SVCDUMP request.

**Corrective Action:** If a SVCDUMP is taken, save it. If the message is issued often, send the following information to BMC Software Customer Support:

- The SVCDUMP file
- The monitor's SYSOUTs

BMC Software Customer Support will analyze the dump to find why the WSC was not released.

CTO008W Releasing WSC At address JOBNAME= jobName ASID= number

**Explanation:** The Control-O or CMEM monitor found that the WSC block has been marked as being in use for a very long time. Normally, the Control-O or CMEM process should hold the WSC block only for a very short time.

The monitor continues to operate normally. It may issue an SVCDUMP request.

**Corrective Action:** If a SVCDUMP is taken, save it. If the message is issued often, send the following information to BMC Software Customer Support:

- The SVCDUMP file
- The monitor’s SYSOUTs

BMC Software Customer Support will analyze the dump to find why the WSC was not released.

CTO009I Timeout WSC At address JOBNAME= jobName ASID= number

**Explanation:** The Control-O or CMEM monitor found that the WSC block has been marked as being in use for a very long time. Normally, the Control-O or CMEM process should hold the WSC block only for a very short time.

The monitor continues to operate normally. The monitor will check the WSC again in subsequent cycles and then decide what action to take.

**Corrective Action:** If a SVCDUMP is taken, save it. If the message is issued often, send the following information to BMC Software Customer Support:
The SVCDUMP file
The monitor’s SYSOUTs
BMC Software Customer Support will analyze the dump to find why the WSC was not released.

CTO046S BLDL/LOAD FAILED FOR THE MODULE "modName"

Explanation: Loading of the modName module failed.

Possible causes are:
- The IOA Load library is not in the load modules search list (STEPLIB + Linklist).
- There is insufficient memory.
- There is some other system-oriented reason, which may be found in the syslog.

Execution might stop.

Corrective Action: Prepare the Control-M monitor full output and contact BMC Customer Support.

Messages CTO100 through CTO1xx
This group includes messages for the Control-O product.

CTO100I {CONTROL-O | CTMCMEM} RELEASE x.x.xx MONITOR STARTED

Explanation: This information message is a normal message issued when the Control-O or CMEM monitor is started. The version of the monitor that is starting (x.x.xx) is indicated in the message text.

Corrective Action: No action is required.

CTO101S MONITOR STARTED WITH INCORRECT STORAGE KEY. CHECK PPT DEFINITION

Explanation: During initialization self-checks, the Control-O or CMEM monitor discovered that a storage key was specified that was not in the range from 1 through 7. The Control-O or CMEM monitor only works using storage keys 1 through 7.

The monitor terminates.

Corrective Action: Perform the following steps:
1. Define the CTOMTO7 in SYS1.PARMLIB(SCHED xx) with a key in the range from 1 through 7.
2. Refresh the SCHED xx using the MVS SET command.
3. Stop the Control-D subsystem by means of the command S IOASTERM,TYPE=D
4. Disconnect the IOA subsystem by means of the command S IOASDISC,SSNAME=ioa_subsystem
5. Start the Control-O or CMEM monitor.
6. Start the Control-D monitor and subsystem.
CTO102I CONTROL-D FUNCTIONS ENABLED

**Explanation:** This information message indicates that during Control-O monitor startup, an installed Control-D was detected. Therefore, Control-D functionality using DO CTD REQ was enabled.

**Corrective Action:** No action is required.

CTO102S {CONTROL-O | CTMCMEM} MONITOR IS NOT APF-AUTHORIZED

**Explanation:** The Control-O or CMEM monitor has lost APF-authorization. Possible causes are:

- The IOA Load library is not authorized.
- An internal error.

The Control-O or CMEM monitor shuts down.

**Corrective Action:** Make sure that the IOA Load library is authorized, and restart Control-O or CMEM.

CTO103E INVALID MODIFY PARAMETER. VALID PARAMETERS ARE:

**Explanation:** An invalid parameter was passed to the Control-O or CMEM monitor by an operator modify (F) command. This is a header message for message CTO125I. A list of valid modify parameters is displayed on the operator console in message CTO125I.

The modify command is rejected.

**Corrective Action:** Enter a valid modify parameter.

CTO103W CONTROL-D FUNCTIONS DISABLED. "DO CTD REQ." WILL BE REJECTED

**Explanation:** During Control-O monitor startup, no installed Control-D was detected. Therefore, Control-D functionality using DO CTD REQ was disabled.

Monitor startup continues.

**Corrective Action:** Notify your INCONTROL administrator.

CTO104S BLDL/ATTACH FAILED FOR TASK taskName

**Explanation:** Initialization of one of the Control-O or CMEM monitor internal tasks failed.

Possible causes are:

- The task is not found in the IOA Load library.
- There is insufficient storage for the Control-O or CMEM monitor.

The Control-O or CMEM monitor shuts down.

**Corrective Action:** Call your systems programmer for assistance. If necessary, increase the Control-O or CMEM REGION size.

CTO105S UNRECOVERABLE ERROR ENCOUNTERED

**Explanation:** An unrecoverable error occurred in the operation of the Control-O or CMEM monitor.

The IOA Log usually contains a previous message concerning the error.
The Control-O or CMEM monitor shuts down with user abend 0006.

**Corrective Action:** Call your systems programmer for assistance. If the problem is not resolved, call BMC Software Customer Support for assistance.

CTO106S SUBTASK *taskName* ABENDED *abCode*

**Explanation:** The Control-O or CMEM monitor internal *taskName* has abended.

The Control-O or CMEM monitor shuts down.

**Corrective Action:** Call your system programmer for assistance. If the problem is not resolved, contact BMC Software Customer Support for assistance.

CTO107I SHUT DOWN UPON REQUEST FROM OPERATOR

**Explanation:** This information message indicates that the Control-O or CMEM monitor is shutting down upon operator request.

The Control-O or CMEM monitor is shut down.

**Corrective Action:** No action is required.

CTO108S UNABLE TO ESTABLISH THE CROSS MEMORY ENVIRONMENT. STEP *stepName*

**Explanation:** Control-O or CMEM monitor could not establish the cross memory environment required for its operation.

**Corrective Action:** Call your systems programmer for assistance. If the problem is not resolved, call BMC Software Customer Support for assistance and provide the step name indicated in the message.

CTO109I CONTROL-O MONITOR IS SHUTTING DOWN. A NEW MONITOR WAS STARTED

**Explanation:** This information message indicates that a new Control-O or CMEM monitor has been started. This message is issued by the previous Control-O or CMEM monitor to indicate that it is shutting down.

The Control-O or CMEM monitor that was operating previously shuts down.

**Corrective Action:** No action is required.

CTO10A1 CONTROL-M FUNCTIONS ENABLED

**Explanation:** This information message indicates that during Control-O or CMEM monitor startup, Control-M was detected, and therefore, Control-M functions DO FORCEJOB and DO RESOURCE were enabled.

**Corrective Action:** No action is required.
CTO10BW CONTROL-M FUNCTIONS DISABLED. "DO FORCEJOB / RESOURCE" WILL BE REJECTED

**Explanation:** During Control-O or CMEM monitor startup, Control-M functions DO FORCEJOB and DO RESOURCE were disabled because no installed Control-M was detected. Monitor startup continues.

**Corrective Action:** Notify the INCONTROL administrator.

CTO10DW CTOPARM PARAMETER DAYTIMEO (cto_time) SHOULD BE EQUAL TO DAYTIMEM (ctm_time) OF CTMPARM.

**Explanation:** During the startup of the Control-O monitor, it was found that the value of the DAYTIMEO Control-O parameter was not identical with the value of the DAYTIMEM Control-M parameter.

The DAYTIMEO Control-O parameter sets the start of the work day for Control-O. The DAYTIMEM Control-M parameter sets the start of the work day for Control-M. Any discrepancy between these two parameters may result in the same time being interpreted differently by Control-O and Control-M.

The variables in this message are:
- **cto_time** - the value of the DAYTIMEO Control-O parameter
- **ctm_time** - the value of the DAYTIMEM Control-M parameter

Monitor startup continues.

**Corrective Action:** Contact your INCONTROL administrator.

CTO111E INVALID DATE IN ORDER/FORCE MODIFY COMMAND

**Explanation:** An invalid date was specified in the ORDER or FORCE modify command. If a date (D) is specified in the ORDER or FORCE modify (F) operator command, it must have a valid site-dependent format.

Valid formats are:
- **mmddyy**
- **ddmmyy**

The command is not executed.

**Corrective Action:** Issue the command with the correct date.

CTO112E SMFID smfid IS NOT DEFINED IN IOACPRM INSTALLATION PARAMETERS

**Explanation:** The Control-O or CMEM subsystem initialization routine is running under a CPU that was not defined in the IOACPRM member.

Possible causes are:
The CPU in which Control-O or CMEM runs is not defined in the IOACPRM member.

The computer in which Control-O or CMEM runs is a multi-CPU computer, and the SID parameter in the SMFPRMxx member in SYS1.PARMLIB does not define all the CPUs correctly.

The Control-O or CMEM monitor shuts down.

**Corrective Action:** Do the following:

1. Check that the SMF ID of the computer in which Control-O or CMEM is being initialized is defined in the list of SMF IDs in the IOACPRM member.
