Creating a Stable Future for Your IT Organization.

Frictionless Migrations from Broadcom/CA to BMC
The Modern IT Landscape is Changing. Are You Ready to Move Your Organization Away from Broadcom/CA?

Is your business facing a price increase to renew your existing contracts with Broadcom/CA, impacting your bottom line and creating future uncertainty? Due to its product bundling approach, it may be, since your contract renewal is directly tied to all other solutions in the Broadcom/CA offering—whether you use them or not.

If you’re exploring alternative solutions to Broadcom/CA, you might be concerned about the ability to adopt best-of-breed solutions that enhance and accelerate your business’s digital transformation. BMC can solve for that, delivering not only the latest solutions that keep your business running at optimal performance, but also becoming a partner in your success.

To accelerate your business with frictionless migration, BMC provides the most robust solution set, recognized for its speed, agility, efficiency, and most of all, value, spanning mainframe management, automation, operation, multi-cloud, and IT service management (ITSM). BMC has over 40 years of enterprise-level expertise and is used by 84 percent of the Forbes 100, with over 10,000 customers worldwide. Your best move forward may be to switch to BMC.

Solid platform and solutions. Good experiences over two decades with BMC.”

—IT Manager, Large Enterprise Telecom - BMC Software Customer Satisfaction Survey
The Tough Decision of Making a Change

Changing any system or solution in an IT organization or technology stack can be painstaking and riddled with risk. BMC ensures your business will experience minimal business disruption while migrating to our solutions. BMC Mainframe Services offers the expertise, agility, and flexibility to keep your business running through the entire process, ensuring your migration project is delivered on-time and that your team is fully trained.

Nearly 60% of customers surveyed identified the ability to improve business-critical application performance as an important requirement for switching from Broadcom/CA to BMC

– BMC Software Customer Satisfaction Survey
Any and All Broadcom/CA Products Can be Replaced.

Your business should not be at the mercy of a single vendor leveraging an “all or nothing” bundled contract approach. If you are shocked by the year-over-year pricing increase, consider what the pricing for that product will be in the next five or even ten years. If you are losing trust in that vendor, you are not alone. BMC has helped hundreds of companies migrate away from Broadcom/CA, move forward again, and embrace breakthrough innovation that aligns with their budget.

Can Consolidating Vendors Amplify Your Business-Critical Applications?

As part of your migration, BMC will recommend the right approach for your specific business. And BMC Services will work with our federation of partners to develop a comprehensive solution that meets your organization’s business and technical needs—and ensures a seamless migration.
Vendor Consolidation Approach

Changing any system or solution in an IT organization or technology stack can be painstaking and riddled with risk. BMC ensures your business will experience minimal business disruption while migrating to our solutions. BMC Mainframe Services offers the expertise, agility, and flexibility to keep your business running through the entire process, ensuring your migration project is delivered on-time and that your team is fully trained.
Replace Broadcom/CA When and How You Want.

BMC provides multiple pathways to break away from Broadcom/CA. You can replace all of your solutions at once, or take a more scaled approach with individual or staggered migrations—whichever works best for your individual business requirements.

**Immediate Replacement**

BMC will assist you with developing the best migration path, and BMC Services can complete the migration for you or work in tandem with your IT resources. When replacing all Broadcom/CA products at once, BMC will still ensure a frictionless migration with minimal business disruption.

**Scaled Replacement**

With a scaled replacement approach, BMC will work seamlessly with your IT resources and business users to define and develop the best migration path, taking an individual look at each Broadcom/CA product being replaced. The developed migration roadmap will act as the guiding principle behind the Broadcom/CA migration inside your organization to make the process easy for your people and your business, and will provide training to your IT resources.
BMC Has the Solutions to Break Broadcom/CA’s Hold on Your Business.

BMC provides a solutions-oriented set of IT Operations (ITOps) and IT Service Management (ITSM) products that leverage automation with advanced Artificial Intelligence (AI) and Machine Learning (ML) capabilities for distributed and mainframe platforms. We can help you move forward and away from Broadcom with a powerful solution suite while also lowering your total cost of ownership and increasing your return on investment.

Achieve Agility with Application Workflow Orchestration

Complex application workflows are no problem with Control-M, which simplifies application and data workflow orchestration on premises or as a service with BMC Helix Control-M. Both solutions make it easy to build, define, schedule, manage, and monitor production workflows to ensure visibility and reliability and improve service level agreements (SLAs). Manage hundreds of integrations, eliminate automation blind spots, and embed your application workflow orchestration in your DevOps toolchain with the Control-M API.

Deliver advanced operational capabilities that are easily consumed by development, operations, and lines of business with:

- End-to-end workflow connectivity of any application and data source and all your critical systems of record
- Simple, scalable data pipelines and application workflow orchestration across hybrid and multicloud environments
- SLA management with intelligent predictive analytics
- Orchestration of file transfers alongside related application workflows
Run and Reinvent Your Mainframe with Intelligent Automation

BMC AMI solutions draw on decades of expertise and innovation to leverage AI, machine learning, and predictive analytics to achieve a self-managing mainframe.

**BMC AMI Ops:**

Transform mainframe systems management with a unified, AI-powered mainframe observability suite that:

- Improves performance and availability through intelligent automation and remediation driven by AI/ML-powered analytics to find and fix problems before business services are impacted
- Increases operational resiliency through actionable intelligence, embedded expertise, and simplified management
- Simplifies systems management with a customizable interface that provides a single view and control of all resources

**BMC AMI Data:**

Leverage world-class data and transaction management with a solution designed for Db2® and IMS™ that also:

- Ensures stability with always-available data and applications that run smoothly
- Quickly backs up and recovers critical data assets to ensure greater data resiliency for your business
- Automates database changes for higher quality and improved performance
**BMC AMI Security:**

Only BMC AMI Security can automatically detect and respond to threats on the mainframe and is continuously informed by real-world penetration testing as new threats and indicators of compromise are unearthed. The solution monitors and automatically responds to threat events and has the industry’s largest library of Indicators of Compromise for the mainframe. BMC AMI Security also:

- Integrates with leading SIEM systems for real-time visibility
- Delivers actionable intelligence for incident responders
- Addresses compliance mandates with alerts, audits, and reporting

**BMC Compuware:**

Modernize and mainstream your mainframe application development with BMC Compuware solutions that:

- Empower developers at all experience levels to increase the quality, velocity, and efficiency of mainframe application development and delivery
- Builds resiliency into your business to minimize disruption with testing and diagnostic tools
- Enable cross-platform teams to manage mainframe applications, data, and operations with one process, one culture, and leading tools of choice
Operations Solutions

Businesses achieve real value when using BMC Helix Operations Management with AIOps, which leverages ML to identify, analyze, and resolve application and infrastructure problems quickly. Identify root cause of issues and reduce mean time to repair (MTTR) with expedited troubleshooting and automated remediation made simple with hundreds of integrations.

The solution aligns IT resources with the services demanded by your business to help you plan, manage, and optimize on-premises and cloud resources. This unified approach provides a single view of the health of business services as well as insights that reduce risk and increases efficiency. Other benefits includes:

- Eliminating the need to manage thousands of traditional, static thresholds for event generation
- Reducing false alarms and associated incidents
- Minimizing the need to manually define, configure, and maintain correlation rules and policies
- Grouping events for better visibility by role, geography, or technology

¹The Total Economic Impact of BMC Helix, Gartner, 2021.
BMC Helix ITSM is a powerful, people-centric solution that leverages emerging technologies such as AI/ML to create and resolve incidents faster with intelligent, context-aware, and proactive incident matching, while delivering a seamless service experience across multicloud environments. Companies making the switch to BMC Helix ITSM have experienced a 361 percent ROI in three years, with a 45 percent increase in service desk efficiency.

Next-Generation Service Management

The Helix ITSM suite delivers:

- Incident and problem management
- Knowledge management
- Multicloud service management
- Smart reporting
- Change management
- Release management
- Asset management
- Configuration management
- Service request management
- Service level management
Why Stop at Replacement? Why Not Automate Everything, Everywhere?

To keep pace with the competition and successfully evolve from legacy approaches, organizations must deliver applications and capabilities quickly with a DevOps approach, manage and maximize big data, and orchestrate complex, new digital services in multicloud environments.

By automating workflows, file transfers, application deployment, data center functions, database activities, and more, organizations can rededicate their efforts toward business innovations and growth rather than daily operations. Automation also:

- Streamlines the orchestration of business applications to deliver better apps faster—by embedding workflow orchestration into the CI/CD pipeline
- Extends DevOps collaboration with a Jobs-as-Code approach
- Simplifies workflows across hybrid and multicloud environments with AWS, Azure, and Google Cloud Platform integrations
- Delivers data-driven outcomes faster, managing big data workflows in a scalable way
- Enables intelligent file movement and enhanced visibility
- Orchestrates file transfers alongside related application workflows
Today’s digital economy demands innovative solutions for your entire ecosystem, from mainframe to hybrid to cloud and beyond. With the freedom of choice, you get to choose which product and solutions work best for your business and technology environment.

And BMC has curated a federation of industry-leading technology companies to ensure a seamless integration. We put our customers’ needs first with a focus on ITOM-ITSM, transparent pricing, a wide range of solution choices—and over 250 combined years of experience with complex IT solutions.
