

Accelerate Multi-Cloud Adoption

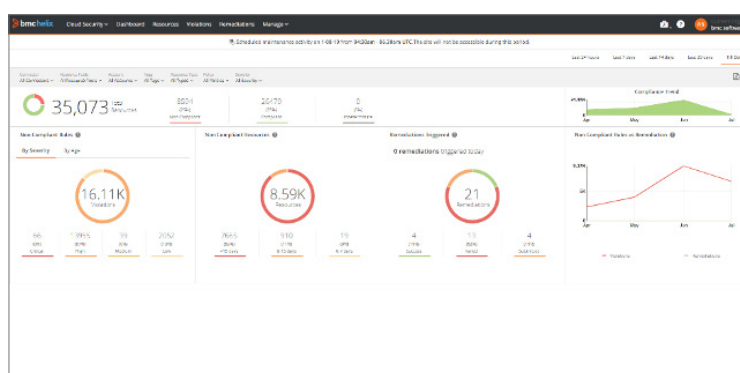

End-to-end solution to improve speed and success of cloud migrations and cloud-native application deployments

SOLUTION DESCRIPTION

BMC's Accelerate Multi-Cloud Adoption solution is a suite of offerings that combine to solve challenges associated with multi-cloud deployments. It is an industry-leading, end-to-end solution that includes application discovery and dependency mapping, migration planning, capacity optimization, controlling cloud costs, automating cloud security, increasing performance and availability, and intelligent IT service management.

BUSINESS CHALLENGE

Multi-cloud provides benefits that include low-cost, efficiency, performance, availability, agility, and avoidance of vendor lock-in. For these reasons, many organizations are working on accelerating their adoption of multi-cloud, but inhibitors are standing in the way. These include lack of visibility to applications and dependencies, insufficient migration planning, purchasing too much capacity, incurring excess costs, concerns about security, sub-optimal performance and availability, and lack of integrations with IT service management. As a result, many application migrations and deployments have been unsuccessful, causing some IT leaders to state they have failed to realize notable benefits from cloud computing.

KEY FEATURES

- **Automated discovery** for visibility to applications, dependencies, and business services supported
- **Capacity optimization** to simulate migrations, reserve the right IT resources, and scale up or down to meet changing service demands
- **Cloud cost management** that provides automated cost optimization recommendations, detects anomalies, predicts budget over-runs, and sends alerts for corrective action
- **Cloud security** for automated “find and fix” of misconfigured cloud resources and ITSM integration for change management
- **Monitoring and event management** that can automatically open an incident in ITSM

KEY BENEFITS

- **Successfully implement “lift and shift”** application migrations
- **Deploy native cloud applications** on-time with positive results
- **View applications** from a business service perspective
- **Cloud migration planning** to improve speed and success
- **Optimize cloud capacity** and minimize costs
- **Strengthen the security** of cloud resources
- **Achieve service levels** and eliminate monitoring blind spots
- **Obtain a seamless IT service experience** across multi-cloud environments

BMC SOLUTION

BMC's solution leverages the strength of the BMC Helix portfolio, and solves challenges organizations face with multi-cloud adoption. It supports migrations of existing applications (“lift and shift”) to the cloud along with the deployment of cloud-native apps.

SOLUTION DETAILS

For migrating existing applications to the cloud:

BMC Helix Discovery for visibility to applications, dependencies, and business services involved.

BMC Helix Capacity Optimization forecasts, models, simulates, reserves, and adjusts IT resources as needed to meet changing service demands.

BMC Helix Cloud Cost provides automated optimization recommendations, predicts budget over-runs, and sends alerts so proactive corrective action can be taken.

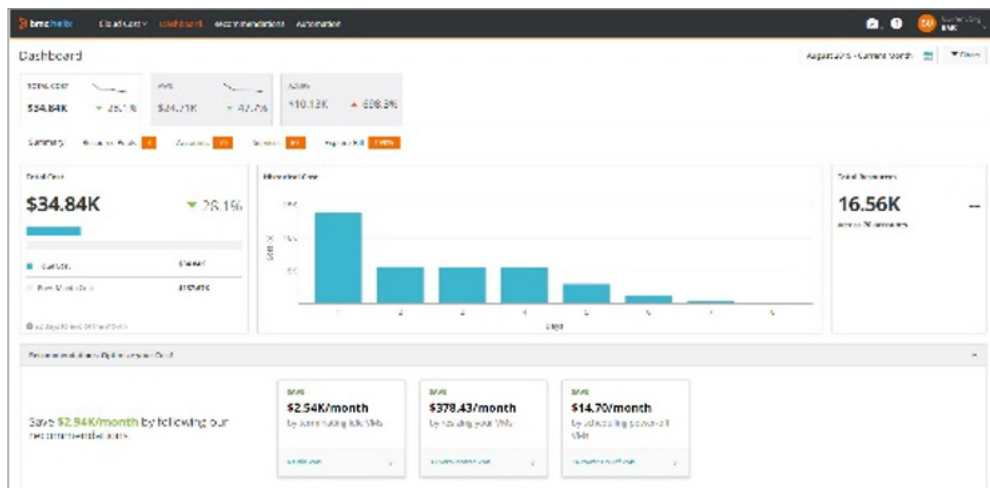

BMC Helix Cloud Security uses automation to find and fix misconfigured cloud resources and integrates with ITSM if a change is needed.

BMC Helix Monitor manages performance and availability, gives visibility to blind spots, opens incidents in ITSM.

BMC Helix ITSM delivers a secure and seamless service experience across multi-cloud environments.

For cloud-native application deployments:

BMC Helix Cloud Cost, BMC Helix Cloud Security, BMC Helix Monitor, and BMC Helix ITSM all work together to ensure cloud-native application deployment success.

Eliminate wasted spend with continuous and automated cloud cost recommendations
