

## CAPABILITIES

### Control-M Conversion Tool

Guides users through the conversion process. Inputs into the conversion tool include scheduling data from the source third-party solution. Output is an import file in XML format that contains the converted scheduling data for easy uploading into Control-M. The tool offers a flexible, step-by-step approach that allows users to complete a phase, refine the results (if necessary), and then continue to the next step. The major phases include discovery, data capturing, data evaluation, conversion, import into Control-M.

### Control-M Self Conversion Tool

Allows users to build their own conversion rules using Control-M's web interface or, for more sophisticated rule logic, Control-M's Automation API and code. The tool supports input data that can be extracted or transformed into an XML file format (such as .json or .csv file). At the heart of the self-conversion process is Control-M's APIs. Control-M conversion APIs are also exposed through GitHub to external parties and customers, creating an extensible platform ecosystem where everyone can participate.

- Control-M Self-Conversion Tool has a simple, intuitive web interface that allows you to create a tailored conversion in few clicks or simple code.
