BMC Control-M
Workload Automation
for Informatica

Streamline and optimize Informatica workflows with enterprise workload automation

**PRODUCT DESCRIPTION**

BMC Control-M for Informatica is an application module that allows you to manage all your Informatica workflows in an enterprise workload automation solution. Now you can create, test, deploy, and manage Informatica services in the same familiar environment used for all enterprise workflows.

**BUSINESS CHALLENGE**

Your business relies on many applications to provide services to your customers. Those services require enterprise applications to integrate, but in reality, they don’t work well together. Informatica® PowerCenter® and other applications each have their own methodology and interface for managing workflows. Managing interactions manually through scripts is difficult because it requires specialized development knowledge and any scripting error will cause the job to fail. In addition, scripting limits enterprise agility because new scripts and workflows are time consuming to develop, test, and deploy.

**BMC SOLUTION**

Control-M for Informatica allows you to easily integrate your Informatica workflows with other enterprise applications, including Apache® Hadoop® and SAP®, to produce a complete, end-to-end view of activity that enables you to make informed decisions. By managing workflows at the service level, you can further increase the value of your services.

**KEY FEATURES**

Get a comprehensive view of your Informatica workflows and enterprise applications.

- **Single Point of Control** – Easily integrate your Informatica workflows with the rest of the applications in your IT environment.
- **Self Service** – Allow users to see status and interact with the workflows they’re responsible for in a simple yet powerful web and mobile interface.
- **Forecasting** – Determine the effect changes and disruptions will have on the ability to complete jobs and services on time.

**KEY BENEFITS**

- **Collaboration** – Give multiple teams the ability to work together to create, submit, and monitor workflows.
- **Service Levels** – Manage what matters to the business by interacting with workflows at the service level instead of the individual job level.
- **Audit and Compliance** – Maintain compliance with full audit capabilities and myriad reporting options.

BMC Control-M for Informatica provides a single point of control to manage jobs and workflows for Informatica and all other business-critical workloads in your environment.
BMC delivers software solutions that help IT transform digital enterprises for the ultimate competitive business advantage. We have worked with thousands of leading companies to create and deliver powerful IT management services. From mainframe to cloud to mobile, we pair high-speed digital innovation with robust IT industrialization—allowing our customers to provide amazing user experiences with optimized IT performance, cost, compliance, and productivity. We believe that technology is the heart of every business, and that IT drives business to the digital age. BMC – Bring IT to Life.

**PRODUCT DETAILS**

**Easy integration:** Integrates Informatica workflows with other applications (such as Hadoop or SAP). Informatica and all other enterprise workflows are managed from a single point of control with an intuitive interface.

**Secure:** Connects using LDAP authentication and secures the authentication and connection criteria required for Informatica workflow submission.

**Reliable:** Includes automated SLA management features that maximize uptime by providing advance notification of potential problems.

**Comprehensive:** Supports a wide range of platforms and versions, including Informatica PowerCenter v9.6, Linux 64-Bit, Microsoft Windows 8, Microsoft Windows Server 2012, and others.

**Supports self-service:** Business users can check the status of their jobs from mobile devices and via the web.

**Compliant:** Provides easy access to session logs and statistics.

**Flexible workflows:** Enables starting and re-running Informatica workflows from a specific task as well as concurrent execution of workflows.

**FOR MORE INFORMATION**
