

Control-M

End-to-end orchestration across multi-cloud

End-to-end orchestration of complex workflows across hybrid cloud environments

Complete workflow orchestration functionality – All Control-M features for workflow development, scheduling, management, and integration can run in the cloud

Native support for popular services such as AWS Lambda, AWS Step Functions, AWS Batch, Amazon S3, Azure Logic Apps, Azure Functions and Azure Batch. Easy and intuitive integration with additional AWS, Azure and Google Cloud Platform (GCP) services via Control-M Application Integrator.

Automated provisioning – Organizations that want to run Control-M on AWS or Azure can have it configured and ready in minutes

BENEFITS

End-to-end visibility of workflows across hybrid cloud environments

Standardized and simplified automation no matter which cloud technology is used

Faster deployment of cloud with a workflow orchestration solution across on-premises, public and private clouds

Run Control-M on leading public cloud platforms—at the speed of business. Control-M environments are provisioned on cloud platforms within minutes

DESCRIPTION

Control-M integrates, automates and orchestrates application workflows across on-premises, private and public cloud environments, so your jobs get delivered on time, every time. With a single unified view you can orchestrate all your workflows, including file transfers, applications, data sources and infrastructure with a rich library of plug-ins. Easily provisioned in the cloud, Control-M leverages the ephemeral capabilities of cloud-based services.

BUSINESS CHALLENGE

Companies today are increasingly challenged with delivering digital services faster than ever before. This need for speed has driven companies to shorten the time for delivering the applications that power modern digital services. Public cloud providers have innovated to provide services that allow provisioning of platform and infrastructure in virtually a single-click operation, with unmatched scalability and flexibility. With infrastructure provisioning down to minutes, companies are now looking for ways to achieve the same level of agility to install and configure applications that need to run on the cloud platform.

BMC SOLUTION

Control-M simplifies workflow orchestration across hybrid cloud environments. Configure and run on Amazon Web Services® (AWS), and Microsoft® Azure® with fast and easy provisioning and with native support for popular services such as AWS Lambda, AWS Step Functions, AWS Batch, Amazon S3, Azure Logic Apps, Azure Batch and more. Users get full Control-M capabilities, including file transfer management, plus the elasticity, scalability, and high availability of leading cloud platforms.

CAPABILITIES

Hybrid cloud support

Orchestrate workflows across on-premises datacenters, hybrid, and public, private, and multi-cloud environments

Integration with AWS services

Native support for AWS Lambda, AWS Step Functions, AWS Batch, Amazon S3 and AWS SQS and SNS. Easy and intuitive access to additional AWS services via Control-M Application Integrator.

Integration with Microsoft Azure services

Native support for Azure Logic Apps, Azure Functions, and Azure Batch. Easy and intuitive access to additional Azure services via Control-M Application Integrator.

Control-M Application Integrator authentication

For Google Cloud Platform (GCP), AWS and Microsoft Azure.

Amazon Web Services support

Quick setup and deployment of Control-M core components via AWS Marketplace include EC2 machine and Postgres RDS.

Azure support

Run Control-M on the Azure public cloud using a simple VM extension.

Support diverse configurations

Start from applications (agents) to Control-M fully deployed on the cloud.

Full Control-M functionality

Control-M offers customers running their workflows in the cloud all the advanced orchestration features of Control-M. You get an enterprise-class workflow orchestration product for complete lifecycle management.
