

PRODUCT DETAILS

Automated Asset Discovery

Identify new assets that connect to your network and report on these devices. This can be used in conjunction with directory synchronization to identify blind spots. Once the agent is installed, as long as it has internet access, inventory information can be retrieved and updated.

IT Asset Management

Gather detailed hardware and software inventory information, which can be used to make informed decisions about the assets within network. For example, BMC Client Management can show which devices should be retired or upgraded and keeps track of device lifecycle. It also provides asset information to guide the budget process, with the ability to import administrative data, such as purchasing cost, suppliers, or warranties.

Dashboards

Allow users to quickly create dashboards to provide an overview of assets, including software and hardware inventory.

Reporting

Provides the ability to tailor and schedule reports for various audiences, such as summary reports for executives and more in-depth reports to management and technicians.

Service Anywhere

Discover and manage assets as long as those assets are connected to the internet.
